Statement of Confidentiality

Some of the descriptive materials and related information in this proposal contain information that is considered proprietary, trade secret, or confidential to EDS. Following the guidance of RFP 30-DHHS-1228-08-R Section 30.27 Confidentiality Related to Competitive Bidding Process and Post-Award Vendor Business Records, we have identified the information that we consider proprietary, trade secret, or confidential by marking the top and bottom of each page containing such information **CONFIDENTIAL**. This information is submitted for use by the State of North Carolina Department of Health and Human Services (the State) and its designees with the express understanding that it will be held in strict confidence and will not be disclosed, duplicated, or used, in whole or in part, for any purpose other than evaluation of this proposal or otherwise in connection with the resulting contract. The release, use, or distribution of this information to organizations outside the State would subject EDS to harm and the loss of competitive advantage.

Technical Proposal – Volume II

50.2.1 Section A—Transmittal Letter and Execution Page

RFP Reference: 50.2.1 Section A—Transmittal Letter and Execution Page, Pages 271-272

In compliance with the RFP, the following section contains the Transmittal Letter and Execution Page for this proposal, followed by the required signed forms, as itemized in the Transmittal Letter.

December 20, 2007

Ms. Susan W. Lewis
Department of Health and Human Services
DHHS Procurement and Contracting
801 Ruggles Drive, Hoey Building
Raleigh, NC 27603-2001

RE: Bid Number 30-DHHS-1228-08-R

Dear Ms. Lewis:

Knowledge. Commitment. Innovation. Results. These words describe EDS' pledge to the North Carolina Department of Health and Human Services (the State) and the new era in healthcare support that will start with the implementation of the Replacement Medicaid Management Information System (MMIS). In response to the request for proposal (RFP) for the Replacement MMIS, EDS proposes **interChange**, which was designed for n-tier technology and interactive, online claims processing for all claim types and meets the principles described in North Carolina's Statewide Technical Architecture. The flexible interChange platform is operational in five states and is being implemented in seven more. Initially, this single platform will serve the healthcare processing needs of the Division of Medical Assistance (DMA), the Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH), the Division of Public Health (DPH), and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC), but it brings the flexibility to support any or all of the remaining DHHS divisions. The Web-enabled features will transform the way State personnel, State stakeholders, providers, and recipients interact with the MMIS.

EDS has served DMA since 1977 and DMH since 2001. We consider ourselves an extension of the State, sharing your goal to "*enhance the quality of life of North Carolina individuals and families so that they have opportunities for healthier and safer lives....*" Our staff members in the Raleigh area are your fellow citizens and proud residents of North Carolina. Please accept this proposal as our expressed desire to continue serving you and the recipients of your healthcare programs.

In accordance with RFP section 50.2.1 Section A—Transmittal Letter and Execution Page, we provide the following information.

1. Itemization of all materials and enclosures forwarded in response to the RFP:

- Five (5) certified signed originals of the Technical Proposal
- Twenty-seven (27) copies of the Technical Proposal, each with a signature facsimile
- Ten (10) electronic copies of the Technical Proposal, each on a separate CD
- Twenty-two (22) DVD discs, each containing a copy of the Technical Proposal

2. Listing of all addenda

We acknowledge receipt of RFP 30-DHHS-1228-08-R Addendum 1 on 12/6/07.

We acknowledge receipt of RFP 30-DHHS-1228-08 Addendum 1 on 8/9/07, Addendum 2 on 8/17/07, Addendum 3 on 9/4/07, Addendum 4 on 9/11/07, Addendum 5 on 9/17/07, Addendum 6 on 9/24/07, Addendum 7 on 10/26/07, Addendum 8 on 10/26/07, Addendum 9 on 11/5/07, Addendum 10 on 11/28/07, Addendum 11 on 12/3/07, Addendum 12 on 12/5/07, and Addendum 13 on 12/5/07.

3. A statement confirming that the Offeror has read, understands, and agrees to all the provisions of the RFP, without qualification, including the addenda

EDS has read, understands, and agrees to all the provisions of the RFP without qualification, including any and all addenda.

4. through 8. Signed Attachments A, B, C, D, and H

The signed certifications from Appendix 30 (Attachments A, B, C, and D) and from Appendix 50 (Attachment H) follow the Transmittal Letter and Execution Page.

9. A statement that identifies the corporate entity that is the prime Vendor

Electronic Data Systems Corporation (EDS) is the prime Vendor.

10. A statement identifying any and all subcontractors

Health Information Designs (HID) will perform the Retrospective Drug Utilization Review (Retro-DUR) function. HID will provide the technology and the processing support for Retro-DUR.

SunGard will perform data capture, Optical Character Recognition/Intelligent Character Recognition (OCR/ICR), and data correction.

11. Exclusive responsibility statement for EDS

As the prime Vendor, EDS will assume sole and exclusive responsibility for all of the fiscal agent responsibilities and work indicated in this RFP (including any and all RFP addenda) without regard to whether the work is assigned to EDS or a subcontractor.

12. Interest in assuming the role of *system integrator* for the addition of other functional groups

EDS will gladly assume the role of system integrator for the addition of other functional groups to the Replacement MMIS.

13. The name, address, telephone number, and e-mail address of a contact person regarding the Proposal

John Fortuna, Client Sales Executive
Address: 4405 Cox Road, Glen Allen, VA, 23060
Office telephone: 1 804 965 7011
Cell phone: 1 804 640 9436
E-mail address: john.fortuna@eds.com

14. Completed and signed Execution Page (Page 1 of 3 of RFP Cover Page)

The completed and signed Execution Page follows this Transmittal Letter.

15. A statement that the offer is valid for a minimum of 330 days from the proposal's submission date

EDS' offer will remain valid for 330 days from the proposal's submission date.

Thank you for the opportunity to continue our long-standing relationship with North Carolina. I speak for the entire Raleigh-based EDS team and the newest members of our proposed team when I say we would be proud to continue serving the State of North Carolina. If you have questions regarding our proposal, please contact me or my representative, John Fortuna.

We look forward to working closely with you in this endeavor.

Sincerely,

Barbara Anderson

Vice President, EDS Government Health & Human Services

CERTIFICATION REGARDING LOBBYING

Certification for Contracts, Grants, Loans and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid by or on behalf of the undersigned to any person for influencing or attempting to influence an officer or employee of any Federal, State, or local government agency, a member of Congress, a member of the General Assembly, an officer or employee of Congress, an officer or employee of the General Assembly, an employee of a member of Congress, or an employee of a member of the General Assembly in connection with the awarding of any Federal or State contract, the making of any Federal or State grant, the making of any Federal or State loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal or State contract, grant, loan, or cooperative agreement.
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any Federal, State, or local government agency, a member of Congress, a member of the General Assembly, an officer or employee of Congress, an officer or employee of the General Assembly, an employee of a member of Congress, or an employee of a member of the General Assembly in connection with the awarding of any Federal or State contract, the making of any Federal or State grant, the making of any Federal or State loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal or State contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.
3. The undersigned shall require that the language of this certification be included in the award documents for all sub-awards at all tiers (including subcontracts, sub-grants, and contracts under grants, loans, and cooperative agreements) and that all sub-recipients shall certify and disclose accordingly.
4. This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by Section 1352, Title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

Notwithstanding other provisions of Federal OMB Circulars A-122 and A-87, costs associated with the following activities are unallowable.

PARAGRAPH A

1. Attempts to influence the outcomes of any Federal, State, or local election, referendum, initiative, or similar procedure, through in kind or cash contributions, endorsements, publicity, or similar activity;

2. Establishing, administering, contributing to, or paying the expenses of a political party, campaign, political action committee, or other organization established for the purpose of influencing the outcomes of elections;
3. Any attempt to influence: (i) The introduction of Federal or State legislation; or (ii) the enactment or modification of any pending Federal or State legislation through communication with any member or employee of the Congress or State legislature (including efforts to influence State or local officials to engage in similar lobbying activity), or with any government official or employee in connection with a decision to sign or veto enrolled legislation;
4. Any attempt to influence: (i) The introduction of Federal or State legislation; or (ii) the enactment or modification of any pending Federal or State legislation by preparing, distributing, or using publicity or propaganda, or by urging members of the general public or any segment thereof to contribute to or participate in any mass demonstration, march, rally, fundraising drive, lobbying campaign, or letter writing or telephone campaign; or
5. Legislative liaison activities, including attendance at legislative sessions or committee hearings, gathering information regarding legislation, and analyzing the effect of legislation, when such activities are carried on in support of or in knowing preparation for an effort to engage in unallowable lobbying.

The following activities as enumerated in Paragraph B are excepted from the coverage of Paragraph A.

PARAGRAPH B

1. Providing a technical and factual presentation of information on a topic directly related to the performance of a grant, contract, or other agreement through hearing testimony, statements, or letters to the Congress or a State legislature, or subdivision, member, or cognizant staff member thereof, in response to a documented request (including a Congressional Record notice requesting testimony or statements for the record at a regularly scheduled hearing) made by the recipient member, legislative body or subdivision, or a cognizant staff member thereof, provided such information is readily obtainable and can be readily put in deliverable form, and further provided that costs under this section for travel, lodging, or meals are unallowable unless incurred to offer testimony at a regularly scheduled Congressional hearing pursuant to a written request for such presentation made by the chairman or ranking minority member of the committee or subcommittee conducting such hearing
2. Any lobbying made unallowable by subparagraph A (3) to influence State legislation in order to directly reduce the cost or to avoid material impairment of the organization's authority to perform the grant, contract, or other agreement
3. Any activity specifically authorized by statute to be undertaken with funds from the grant, contract, or other agreement

PARAGRAPH C

1. When an organization seeks reimbursement for indirect costs, total lobbying costs shall be separately identified in the indirect cost rate proposal and thereafter treated as other unallowable activity costs in accordance with the procedures of subparagraph B (3).
2. Organizations shall submit, as part of the annual indirect cost rate proposal, a certification that the requirements and standards of this paragraph have been complied with.
3. Organizations shall maintain adequate records to demonstrate that the determination of costs as being allowable or unallowable pursuant to this section complies with the requirements of this circular.
4. Time logs, calendars, or similar records shall not be required to be created for purposes of complying with this paragraph during any particular calendar month when: (1) the employee engages in lobbying (as defined in subparagraphs (a) and (b)) 25 percent or less of the employee's compensated hours of employment during that calendar month, and (2) within the preceding five-year period, the

organization has not materially misstated allowable or unallowable costs of any nature, including legislative lobbying costs. When conditions (1) and (2) are met, organizations are not required to establish records to support the allowability of claimed costs in addition to records already required or maintained. Also, when conditions (1) and (2) are met, the absence of time logs, calendars, or similar records will not serve as a basis for disallowing costs by contesting estimates of lobbying time spent by employees during a calendar month.

5. Agencies shall establish procedures for resolving in advance, in consultation with OMB, any significant questions or disagreements concerning the interpretation or application of this section. Any such advance resolution shall be binding in any subsequent settlements, audits or investigations with respect to that grant or contract for purposes of interpretation of this circular, provided, however, that this shall not be construed to prevent a contractor or grantee from contesting the lawfulness of such a determination.

PARAGRAPH D

Costs incurred in attempting to improperly influence either directly or indirectly, an employee or officer of the Executive Branch of the Federal Government to give consideration or to act regarding a sponsored agreement or a regulatory matter are unallowable. Improper influence means any influence that induces or tends to induce a Federal employee or officer to give consideration or to act regarding a federally sponsored agreement or regulatory matter on any basis other than the merits of the matter.

CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY, AND VOLUNTARY EXCLUSION—LOWER-TIER COVERED TRANSACTIONS

Certification for Contracts, Grants, Loans and Cooperative Agreements

1. By signing and submitting this proposal, the prospective lower-tier participant is providing the certification set out below.
2. The certification in this clause is a material representation of the fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective lower-tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department or agency with which this transaction originated may pursue available remedies, including suspension and/or debarment.
3. The prospective lower-tier participant will provide immediate written notice to the person to which the proposal is submitted if at any time the prospective lower-tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
4. The terms "covered transaction," "debarred," "suspended," "ineligible," "lower-tier covered transaction," "participant," "person," "primary-covered transaction," "principal," "proposal," and "voluntarily excluded," as used in this clause, have the meanings set out in the Definitions and Coverage sections of rules implementing Executive Order 12549. You may contact the person to which this proposal is submitted for assistance in obtaining a copy of those regulations.
5. The prospective lower-tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter any lower-tier covered transaction with a person who is debarred, suspended, determined ineligible, or voluntarily excluded from participation in this covered transaction unless authorized by the department or agency with which this transaction originated.
6. The prospective lower-tier participant further agrees by submitting this proposal that it will include this clause titled "Certification Regarding Debarment, Suspension, Ineligibility, and Voluntary Exclusion—Lower-Tier Covered Transaction," without modification, in all lower-tier covered transactions and in all solicitations for lower-tier covered transactions.
7. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not debarred, suspended, ineligible, or voluntarily excluded from covered transaction, unless it knows that the certification is erroneous. A participant may decide the method and frequency of which it determines the eligibility of its principals. Each participant may, but is not required to, check the Non-procurement List.
8. Nothing contained in the foregoing shall be construed to required establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

9. Except for transactions authorized in paragraph 5 of these instructions, if a participant in a covered transaction knowingly enters into a lower-tier covered transaction with a person who is suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal Government, the department or agency with which this transaction originated may pursue available remedies, including suspension, and/or debarment.

   a) The prospective lower-tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency.

   b) Where the prospective lower-tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

Contract #
(EDS Corp.)

DEPARTMENT OF HEALTH AND HUMAN SERVICES
DIVISION OF *(FILL IN DIVISION NAME)*

CERTIFICATION REGARDING DRUG-FREE WORKPLACE REQUIREMENTS

Certification for Contracts, Grants, Loans and Cooperative Agreements

I. By execution of this Agreement the Contractor certifies that it will provide a drug-free workplace by:

A. Publishing a statement notifying employees that the unlawful manufacture, distribution, dispens ing, possession, or use of a controlled substance is prohibited in the Contractor's workplace and specifying the actions that will be taken against employees for violation of such prohibition;

B. Establishing a drug-free awareness program to inform employees about:

(1) The dangers of drug abuse in the workplace;

(2) The Contractor's policy of maintaining a drug-free workplace;

(3) Any available drug counseling, rehabilitation, and employee assistance programs; and

(4) The penalties that may be imposed upon employees for drug abuse violations occurring in the workplace;

C. Making it a requirement that each employee engaged in the performance of the agreement be given a copy of the statement required by Paragraph A;

D. Notifying the employee in the statement required by Paragraph A that, as a condition of employ ment under the agreement, the employee will:

(1) Abide by the terms of the statement; and

(2) Notify the employer of any criminal drug statute conviction for a violation occurring in the workplace no later than five (5) days after such conviction;

E. Notifying the Department within ten (10) days after receiving notice under subparagraph D(2) from an employee or otherwise receiving actual notice of such conviction;

F. Taking one of the following actions, within thirty (30) days of receiving notice under subparagraph D(2), with respect to any employee who is so convicted:

(1) Taking appropriate personnel action against such an employee, up to and including termina- tion; or

(2) Requiring such employee to participate satisfactorily in a drug abuse assistance or rehabilitation program approved for such purposes by a Federal, State, or local health, law enforcement, or other appropriate agency; and

G. Making a good faith effort to continue to maintain a drug-free workplace through implementation of paragraphs A, B, C, D, E, and F.

The site(s) for the performance of work done in connection with the specific agreement are listed below:

1 2610 Wycliff Road, Suite 401

(Street address)

Raleigh, Wake, NC 27607

(City, county, state, zip code)

2 5400 Legacy Drive

(Street address)

Plano, Collin, TX 75024

(City, county, state, zip code)

The Contractor will inform DHHS of any additional sites for performance of work under this agreement.

False certification or violation of the certification shall be grounds for suspension of payment, suspension or termination of grants, or government-wide Federal suspension or debarment (Section 4 CFR Part 85, Section 85.615 and 86.620).

CERTIFICATION REGARDING ENVIRONMENTAL TOBACCO SMOKE

Certification for Contracts, Grants, Loans and Cooperative Agreements

Public Law 103-227, Part C-Environmental Tobacco Smoke, also known as the Pro-Children Act of 1994 (Act), requires that smoking not be permitted in any portion of any indoor facility owned or leased or contracted for by an entity and used routinely or regularly for the provision of health, day care, education, or library services to children under the age of 18, if the services are funded by federal programs either directly or through state or local governments, by federal grant, contract, loan, or loan guarantee. The law does not apply to children's services provided in private residences, facilities funded solely by Medicare or Medicaid funds, and portions of facilities used for inpatient drug or alcohol treatment. Failure to comply with the provisions of the law may result in the imposition of a civil monetary penalty of up to $1,000 per day and/or the imposition of an administrative compliance order on the responsible entity.

By signing and submitting this application, the Contractor certifies that it will comply with the requirements of the Act. The Contractor further agrees that it will require the language of this certification be included in any sub-awards which contain provisions for children's services and that all subgrantees shall certify accordingly.

Barbara Anderson
Vice President, EDS Government
Title: Health & Human Services

Date: December 20, 2007

NORTH CAROLINA DEPARTMENT OF HEALTH AND HUMAN SERVICES
BUSINESS ASSOCIATE ADDENDUM TO REPLACEMENT MMIS CONTRACT

This Business Associate Agreement is ancillary to the Replacement MMIS Contract to which it is attached. This Agreement shall become effective upon the State's fully executed acceptance of the Contractor's bid with respect to the Replacement MMIS Contract. For purposes of this Addendum, the term "Business Associate" refers to the Contractor; the term "Covered Entity" refers to the healthcare component of the NC DHHS on whose behalf the Contractor is performing covered functions.

1. Background

Covered Entity and Business Associate are parties to a contract entitled "Replacement MMIS Contract" (the Contract), whereby Business Associate agrees to perform certain services for or on behalf of Covered Entity.

Covered Entity is an organizational unit of the North Carolina Department of Health and Human Services (the Department) that has been designated in whole or in part by the Department as a health care component for purposes of the HIPAA Privacy and Security Rules.

The relationship between Covered Entity and Business Associate is such that the Parties believe Business Associate is or may be a Business Associate within the meaning of the HIPAA Privacy and Security Rules.

The Parties enter into this Business Associate Addendum to the Contract with the intention of complying with the HIPAA Privacy and Security Rules provision that a Covered Entity may disclose electronic protected health information or other protected health information to a Business Associate and may allow a Business Associate to create or receive electronic protected heath information or other protected health information on its behalf if the covered entity obtains satisfactory assurances that the business associate will appropriately safeguard the information.

2. Definitions

Unless some other meaning is clearly indicated by the context, the terms below shall have the following meaning in this Agreement.

A. "Electronic Protected Health Information" shall have the same meaning as the term "electronic protected health information" in 45 CFR 160.103, limited to the information created or received by Business Associate from or on behalf of Covered Entity.

B. "HIPAA" means the Administrative Simplification Provisions, Sections 261 through 264, of the Federal Health Insurance Portability and Accountability Act of 1996, Public Law 104-191.

C. "Individual" shall have the same meaning as the term "individual" in 45 CFR160.103 and shall include a person who qualifies as a personal representative in accordance with 45 CFR 164.502(g).

D. "Privacy and Security Rules" shall mean the Standards for Privacy of Individually Identifiable Health Information and the Security Standards for the Protection of Electronic Protected Health Information set out in 45 CFR part 160 and part 164, subparts A and E.

E. "Protected Health Information" shall have the same meaning as the term "protected health information" in 45 CFR 160.103, limited to the information created or received by Business Associate from or on behalf of Covered Entity.

F. "Required By Law" shall have the same meaning as the term "required by law" in 45 CFR 164.103.

G. "Secretary" shall mean the Secretary of the United States Department of Health and Human Services or designee.

H. "Security Incident" shall have the same meaning as the term "security incident" in 45 CFR 164.304.

I. Unless otherwise defined in this Agreement, terms used herein shall have the same meaning as those terms have in the Privacy and Security Rules.

3. Obligations of Business Associate

A. Business Associate agrees to not use or disclose electronic protected health information or other protected health information other than as permitted or required by this Agreement or as required by law.

B. Business Associate agrees to implement administrative, physical, and technical safeguards that reasonably and appropriately protect the confidentiality, integrity, and availability of the electronic protected health information and other protected health information that it creates, receives, maintains, or transmits on behalf of Covered Entity, as required by the Privacy and Security Rules.

C. Business Associate agrees to mitigate, to the extent practicable, any harmful effect that is known to Business Associate of a use or disclosure of electronic protected health information or other protected health information by Business Associate in violation of the requirements of this Agreement.

D. Business Associate agrees to report to Covered Entity: (i) any use or disclosure of electronic protected health information or other protected health information not provided for by this Agreement of which it becomes aware; and (ii) any security incident of which it becomes aware.

E. Business Associate agrees to ensure that any agent, including a subcontractor, to whom it provides electronic protected health information and/or other protected health information received from, or created or received by Business Associate on behalf of Covered Entity: (i) agrees to be bound by the same restrictions and conditions that apply through this Agreement to Business Associate with respect to such information; and (ii) agrees to implement reasonable and appropriate safeguards to protect such information.

F. Business Associate agrees to provide access, at the request of Covered Entity, to electronic protected health information and other protected health information in a Designated Record Set to Covered Entity or, as directed by Covered Entity, to an individual in order to meet the requirements under 45 CFR 164.524.

G. Business Associate agrees, at the request of Covered Entity, to make any amendment(s) to electronic protected health information and other protected health information in a Designated Record Set that Covered Entity directs or agrees to pursuant to 45 CFR 164.526.

H. Unless otherwise prohibited by law, Business Associate agrees to make internal practices, books, and records, including policies and procedures concerning electronic protected health information and other protected health information, relating to the use and disclosure of electronic protected health information and other protected health information received from, or created or received by Business Associate on behalf of Covered Entity, available to the Covered Entity, or to the Secretary, in a time and manner designated by the Secretary, for purposes of the Secretary determining Covered Entity's compliance with the Privacy and Security Rules.

I. Business Associate agrees to document such disclosures of electronic protected health information and other protected health information related to such disclosures as would be required for Covered Entity to respond to a request by an individual for an accounting of disclosures of electronic-protected health information and other protected health information in accordance with 45 CFR 164.528, and to provide this information to Covered Entity or an individual to permit such a response.

4. Permitted Uses and Disclosures

Except as otherwise limited in this Agreement or by other applicable law or agreement, if the Contract permits, Business Associate may use or disclose electronic protected health information and other protected health information to perform functions, activities, or services for, or on behalf of, Covered Entity as specified in the Contract, provided that such use or disclosure:

A. would not violate the Privacy and Security Rules if done by Covered Entity; or

B. would not violate the minimum necessary policies and procedures of the Covered Entity.

Except as otherwise limited in this Agreement or by other applicable law or agreements, if the Contract permits, Business Associate may use electronic protected health information and other protected health information as necessary for the proper management and administration of the Business Associate or to carry out the legal responsibilities of the Business Associate.

Except as otherwise limited in this Agreement or by other applicable law or agreements, if the Contract permits, Business Associate may disclose electronic protected health information and other protected health information for the proper management and administration of the Business Associate, provided that:

- disclosures are required by law; or
- Business Associate obtains reasonable assurances from the person to whom the information is disclosed that it will remain confidential and will be used or further disclosed only as required by law or for the purpose for which it was disclosed to the person, and the person notifies the Business Associate of any instances of which it is aware in which the confidentiality of the information has been breached.

Except as otherwise limited in this Agreement or by other applicable law or agreements, if the Contract permits, Business Associate may use electronic protected health information and other protected health information to provide data aggregation services to Covered Entity as permitted by 45 CFR 164.504(e)(2)(i)(B).

Notwithstanding the foregoing provisions, Business Associate may not use or disclose electronic protected health information or other protected health information if the use or disclosure would violate any term of the Contract or other applicable law or agreements.

5. Term and Termination

Term: This Agreement shall be effective as of the effective date stated above and shall terminate when the Contract terminates.

Termination for Cause: Upon Covered Entity's knowledge of a material breach by Business Associate, Covered Entity may, at its option:

- provide an opportunity for Business Associate to cure the breach or end the violation, and terminate this Agreement and services provided by Business Associate, to the extent permissible by law, if

Business Associate does not cure the breach or end the violation within the time specified by Covered Entity;

- □ immediately terminate this Agreement and services provided by Business Associate, to the extent permissible by law; or
- □ if neither termination nor cure is feasible, report the violation to the Secretary as provided in the Privacy and Security Rules.

Effect of Termination: Except as provided in paragraph (2) of this section or in the Contract or by other applicable law or agreements, upon termination of this Agreement and services provided by Business Associate, for any reason, Business Associate shall return or destroy all electronic protected health information and other protected health information received from Covered Entity, or created or received by Business Associate on behalf of Covered Entity. This provision shall apply to electronic protected health information and other protected health information that is in the possession of subcontractors or agents of Business Associate. Business Associate shall retain no copies of the electronic protected health information or other protected health information.

In the event that Business Associate determines that returning or destroying the electronic protected health information or other protected health information is not feasible, Business Associate shall provide to Covered Entity notification of the conditions that make return or destruction not feasible. Business Associate shall extend the protections of this Agreement to such electronic protected health information and other protected health information and limit further uses and disclosures of such electronic protected health information and other protected health information to those purposes that make the return or destruction infeasible, for so long as Business Associate maintains such electronic protected health information and other protected health information.

6. General Terms and Conditions

This Agreement amends and is part of the Contract.

Except as provided in this Agreement, all terms and conditions of the Contract shall remain in force and shall apply to this Agreement as if set forth fully herein.

In the event of a conflict in terms between this Agreement and the Contract, the interpretation that is in accordance with the Privacy and Security Rules shall prevail. In the event that a conflict then remains, the Contract terms shall prevail so long as they are in accordance with the Privacy and Security Rules.

A breach of this Agreement by Business Associate shall be considered sufficient basis for Covered Entity to terminate the Contract for cause.

50.2.2 Section B—Proposal Submission Requirements Checklist

RFP Reference: 50.2.2 Section B—Proposal Submission Requirements Checklist, Page 272

In compliance with RFP section 50.2.2, this section contains our completed Replacement MMIS Proposal Submissions Requirements Checklist, provided in Appendix 50, Attachment A of the RFP.

Replacement MMIS Proposal
Submission Requirements Checklist

This appendix identifies the requirements for the Proposal responding to RFP 30-DHHS-1228-08-R. Failure to respond in whole or in part to a specific requirement may result in rejection of the Proposal during the evaluation process.

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
1. (RFP Section 50.1) Was the Technical Proposal submitted by the date and time specified in the RFP Cover Letter?	Yes	
2. (RFP Section 50.1) Was the Technical Proposal package(s) labeled as indicated in the RFP Cover Letter?	Yes	
3. (RFP Section 50.1) Are number of originals, copies, and electronic versions of the Technical Proposal as indicated in the RFP Cover Letter included?	Yes	
4. (RFP Section 50.1) Are the originals clearly marked as such?	Yes	
5. (RFP Section 50.1) Did the Offeror include a table of contents in its proposal?	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
6. (RFP Section 50.1) Did the Offeror use 8-1/2 X 11 paper and 12-point font, single-spaced with 6 point spacing between rows?	Yes	
7. (RFP Section 50.2) Is the Technical Proposal comprised of the following eleven (11) separate sections, individually tabbed, in the following sequence: • Section A—Transmittal Letter and Execution Page (Page 1 of 2 of RFP Cover Page) • Section B—Proposal Submission Requirements Checklist • Section C—Executive Summary • Section D—Proposed Solution Details • Section E—Project Management Plan • Section F—Operations Management Approach • Section G—Contract Data Requirements List (CDRL) • Section H—Security Approach • Section I—Turnover Approach • Section J—Corporate Capabilities • Section K—Oral Presentations and Demonstrations	Yes	
8. (RFP Section 50.2) Did the Offeror provide the Subsection Number preceding its response explaining its fulfillment in the Technical Proposal?	Yes	
9. (RFP Section 50.2.1) Was a Transmittal Letter and Execution Page (Page 1 of 3 of RFP Cover Page) included in the Proposal as Section A?	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
10. (RFP Section 50.2.1) Is the Transmittal Letter within the limit of three (3) pages, excluding the attached copies of the required certifications and representations from the Appendices and excluding the attached copies of the RFP Addenda issued by the State?	Yes	
11. (RFP Section 50.2.1) Is the Transmittal Letter on official business letterhead of the prime Vendor and signed by an individual authorized to legally bind the company?	Yes	
12. (RFP Section 50.2.1) Does the Transmittal Letter include the 15 items listed?	Yes	
13. (RFP Section 50.2.2) Was a completed Proposal Submission Requirements Checklist included in the Proposal as Section B?	Yes	
14. (RFP Section 50.2.3) Was an Executive Summary included in the Technical Proposal as Section C?	Yes	
15. (RFP Section 50.2.3) Is the Executive Summary within the limit of fifteen (15) pages?	Yes	
16. (RFP Section 50.2.3) Is the completed High-Level System Functionality Matrix (Appendix 50, Attachment B) included in the Technical Proposal as a part of Section C?	Yes	
17. (RFP Section 50.2.4.1) Is the Proposed System Solution and Solution for DDI included in the Technical Proposal as Section D?	Yes	
18. (RFP Section 50.2.4.1.1) Is the Overview of System Solution and Solution for Design,	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
Development and Installation included in Section D?		
19. (RFP Section 50.2.4.1.1) Is the Overview of System Solution and Solution for Design, Development and Installation within the limit of 500 pages?	Yes	
20. (RFP Section 50.2.4.1.2) Is the Software Development and Systems Engineering Methodology included in Section D?	Yes	
21. (RFP Section 50.2.4.1.2) Is the Software Development and Systems Engineering Methodology within the limit of 50 pages?	Yes	
22. (RFP Section 50.2.4.1.3) Is the Data Conversion and Migration Approach included in Section D?	Yes	
23. (RFP Section 50.2.4.1.3) Is the Data conversion and Migration Approach within the limit of 20 pages?	Yes	
24. (RFP Section 50.2.4.1.4) Is the Deployment/Rollout Approach included in Section D?	Yes	
25. (RFP Section 50.2.4.1.4)Is the Deployment/Rollout Approach within the limit of 20 pages?	Yes	
26. (RFP Section 50.2.4.1.5) Did the Offeror complete appendix 50, Attachment C, Part I, DDI Requirements Matrix, as required?	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
27. (RFP Section 50.2.4.1.6) Did the Offeror complete Appendix 50, Attachment C, Part II, Adjusted Function Point Count, as required?	Yes	
28. (RFP Section 50.2.4.2.1) Did the Offeror describe how it plans to meet the Operations Requirements outlined in RFP section 40 in its Section D?	Yes	
29. (RFP Section 50.2.4.2.1) Is the Proposed Solution for Operations within the limit of 150 pages?	Yes	
30. (RFP Section 50.2.4.3) Is the Offeror's Statement of Work included in Section D?	Yes	
31. (RFP Section 50.2.4.3) Is the Offeror's Statement of Work formatted per Appendix 50, Attachment D?	Yes	
32. (RFP Section 50.2.4.4) Is the Offeror's Training Approach provided in Section D?	Yes	
33. (RFP Section 50.2.4.4) Is the Offeror's Training Approach limited to 20 pages?	Yes	
34. (RFP Section 50.2.5) Did the Offeror include a Project Management Plan?	Yes	
35. (RFP Section 50.2.5) Is the Project Management Plan within the limit of 50 pages excluding the IMP and IMS and other elements of this Plan with page limitations assigned?	Yes	
36. (RFP Section 50.2.5.1) Did the Offeror submit its Integrated Master Plan?	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
37. (RFP Section 50.2.5.2) Did the Offeror submit its Integrated Master Schedule?	Yes	
38. (RFP Section 50.2.5.3) Did the Offeror describe its Master Test Process and Quality Assurance Approach?	Yes	
39. (RFP Section 50.2.5.3) Is the Master Test Process and Quality Assurance Approach within the limit of 20 pages?	Yes	
40. (RFP Section 50.2.5.4.1) Did the Offeror provide its comprehensive Organizational Chart for DDI and a description of its organization?	Yes	
41. (RFP Section 50.2.5.4.1) Did the Offeror propose the positions and staff to be designated as key personnel for DDI and provide its Corporately Certified Position descriptions for the key personnel and resumes and references for any key personnel currently identified?	Yes	
42. (RFP Section 50.2.5.4.1) Did the Offeror limit its Organization Chart for DDI to 2 pages?	Yes	
43. (RFP Section 50.2.5.4.1) Did the Offeror limit its position descriptions to 1 page each and its resumes, including references, to 3 pages each?	Yes	
44. (RFP Section 50.2.5.4.2) Did the Offeror provide its comprehensive Organizational Chart for Operations?	Yes	
45. (RFP Section 50.2.5.4.2) Did the Offeror	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
propose the positions and staff to be designated as key personnel for Operations and provide its Corporately Certified Position descriptions for the key personnel and resumes and references for any key personnel currently identified?		
46. (RFP Section 50.2.5.4.2) Did the Offeror limit its Organization Chart for Operations to 2 pages?	Yes	
47. (RFP Section 50.2.5.4.2) Did the Offeror limit its position descriptions for Operations to 1 page each and its resumes, including references, to 3 pages each?	Yes	
48. (RFP Section 50.2.5.5) Did the Offeror describe its communications approach?	Yes	
49. (RFP Section 50.2.5.5) Did the Offeror limit its Communications Approach to 15 pages?	Yes	
50. (RFP Section 50.2.5.6) Did the Offeror submit its Risk and Issue Management Plan?	Yes	
51. (RFP Section 50.2.5.6) Did the Offeror limit its Risk and Issue Management Plan to 30 pages?	Yes	
52. (RFP Section 50.2.5.7) Did the Offeror submit an Initial Risk Assessment, including known risks associated with the implementation of the proposed solution?	Yes	
53. (RFP Section 50.2.5.7) Did the Offeror limit its Initial Risk Assessment to no more than 1 page per identified risk?	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
54. (RFP Section 50.2.5.8) Did the Offeror submit its Change Management Approach?	Yes	
55. (RFP Section 50.2.5.8) Did the Offeror limit its Change Management Approach to 20 pages?	Yes	
56. (RFP Section 50.2.6) Did the Offeror provide its Operations Management Approach in Section F?	Yes	
57. (RFP Section 50.2.6) Did the Offeror limit its Operations Management Approach to 30 pages?	Yes	
58. (RFP Section 50.2.6.1) Did the Offeror include its Change and Configuration Management approach for Operations in its Change Management Approach (see RFP Section 50.2.5.8)	Yes	
59. (RFP Section 50.2.6.2) Did the Offeror's Risk and Issue Management Plan include Operations as well as Systems and DDI? (see RFP Section 50.2.5.6)	Yes	
60. (RFP Section 50.2.6.3) Did the Offeror submit its Business Continuity/Disaster Recovery Approach?	Yes	
61. (RFP Section 50.2.6.3) Did the Offeror limit its Business Continuity/Disaster Recovery Approach to 15 pages?	Yes	
62. (RFP Section 50.2.6.4) Did the Offeror include a description of its approach for Ongoing Training in its Training Approach (see RFP Section 50.2.4.4)	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
63. (RFP Section 50.2.6.5) Did the Offeror include a description of its communications approach for Operations in its Operations Management Approach (see RFP Section 50.2.6)	Yes	
64. (RFP Section 50.2.7) Did the Offeror provide the CDRL, updated with additional data requirements in Section G?	Yes	
65. (RFP Section 50.2.8) Did the Offeror describe its approach to security in Section H of the Technical Proposal?	Yes	
66. (RFP Section 50.2.8) Did the Offeror limit its Security Approach to 30 pages?	Yes	
67. (RFP Section 50.2.9) Did the Offeror describe its Turnover Approach in its Technical Proposal, Section I?	Yes	
68. (RFP Section 50.2.9) Did the Offeror limit its Turnover Approach to 20 pages?	Yes	
69. (RFP Section 50.2.10) Is the response to Corporate Capabilities included in the Proposal as Section J?	Yes	
70. (RFP Section 50.2.10) Is the response to Corporate Capabilities within the limit of 40 pages?	Yes	
71. (RFP Section 50.2.10.) Are the five (5) sections specified in RFP Section 50.2.10.2 for Corporate Capabilities included in Section J?	Yes	
72. (RFP Section 50.2.11) Did the Offeror	Yes	

Proposal Submission Requirements	Acknowledgement "Yes" or "No"	For NC DHHS Use Only
acknowledge in Section K that it understands and agrees to perform the requirements of the Oral Presentations and System Demonstrations?		
73. (RFP Section 50.2.11.2) Did the Offeror identify the state(s) where its "baseline system" is installed?	Yes	
74. (RFP Section 50.2.11.2) Did the Offeror sign the statement in Appendix 50, Attachment H representing that its baseline system for the system demonstration complies with the description of a "baseline" solution as described in this RFP Section?	Yes	

50.2.3 Section C–Executive Summary

RFP Reference: 50.2.3 Section C–Executive Summary, Pages 272-273

North Carolina is facing one of the most challenging economic periods in its history. The rising cost of medical care, the growing number of recipients in the State's healthcare programs, and the need to contain expenses is placing enormous pressure on the State to work harder, smarter, and more cost-effectively than ever before. Healthcare providers are feeling the same strain. Lower reimbursements and higher costs have created an environment where timely payments are necessary to pay the bills and stay in business.

You have responded to this challenge by developing a strategy to improve operational efficiencies. This strategy will establish clear performance standards intended to improve overall program efficiency, strengthen program integrity, and enable maximum levels of federal funding. With improved access to data, the ability to make required changes to policy rapidly and efficiently, real-time claims adjudication, and the ability to accurately forecast projected expenses, you will have a powerful suite of MMIS tools to accomplish your goals and meet your financial challenges.

EDS, your Medicaid fiscal agent for three decades, is responding to this challenge by offering **interChange**—the nation's leading Medicaid Management Information System (MMIS) application—supported by a project team that includes personnel with North Carolina Medicaid experience and interChange implementation experience.

EDS' interChange, already operational in Pennsylvania, Kansas, Oklahoma, Tennessee, and Kentucky and CMS-certified in the first four of these states (Kentucky's certification should occur in 2008), is the best choice for North Carolina. It closely matches the State's business requirements, satisfies statewide technical architecture standards, and provides a flexible system with an architecture that allows changes to be deployed quickly, accurately, and efficiently.

This combination of proven technology and experienced people provides the change that North Carolina is asking for. By enabling change that is securely based on proven technology, experienced people, and project management practices designed for large-scale projects, we are bringing a low-risk, innovative solution that will serve the North Carolina Department of Health and Human Services (the State) for many years to come.

Our Understanding of the Project

RFP Reference: 50.2.3 Section C–Executive Summary, Paragraph 2, Page 273

The services provided by the State are vitally important to millions of people throughout North Carolina, as demonstrated by the following facts:

- The program serves one out of every eight citizens of North Carolina, or about 18.5 percent of the total population.
- More than 1.6 million individuals received a service during the most recently completed state fiscal year.
- The two largest eligibility categories—Pregnant Women and Children and Aid to Families With Dependent Children—protect and nurture North Carolina families.
- Two of the most vulnerable categories—the elderly and the disabled—comprise 12.5 percent and 15.9 percent of total recipients, respectively.
- Nearly 17,000 Medicaid recipients receive home healthcare.
- An average of 80,000 Medicaid recipients receive dental services through the program each month.
- More than 340,000 individuals (duplicated count) were helped by the programs and services sponsored by the Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH).

As these numbers indicate, the State's health and human services programs improve the health and quality of life for program recipients. EDS—with 30 years of service to the Division of Medical Assistance (DMA) and seven years of service to DMH—understands the vital role of the State's programs in the lives of North Carolinians. We know that the systems, services, and people we provide are of critical importance to the efficient administration of these services, and we take our responsibility seriously.

In the new contract, the fiscal agent's role will be even more critical, as the State prepares to implement a multi-payer system that will support the Division of Public Health (DPH) and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC), in addition to DMA and DMH. **With this expansion, the State is in fact procuring a "DMMS" (Department Medical Management System) that will support these four divisions and be able to support others in the future.** Selecting the right vendor will be a critical factor in the project's success.

As we will demonstrate in this executive summary, throughout our technical proposal, and in the oral presentations and system demonstrations, we bring a deep understanding of the programs to be served by the Replacement MMIS.

Summary of Technical Proposal Contents

RFP Reference: 50.2.3 Section C—Executive Summary, Paragraph 2, Page 273

We summarize the contents of our proposal in the following sections:

- Understanding That the Procurement Is for a Multi-Payer MMIS
- Understanding of the Requirement to Allow for Additional Divisions
- Understanding of the Procurement Library
- EDS Commitments to the State
- Overall Approach to Implementation and Operations
- Proposed System's High-Level Functionality

Understanding That the Procurement Is for a Multi-Payer MMIS

RFP Reference: 50.2.3 Section C—Executive Summary, Bullet 1, Page 273

The Replacement MMIS' multi-payer technical and operational structure will allow the State to successfully administer multiple benefit programs through one environment. The common environment will be used to manage the claims processing and reimbursement to support health coverage plans for DMA, DMH, DPH, and ORHCC.

The State's definition of a multi-payer MMIS is clear. For the Replacement MMIS, multi-payer means an MMIS with multiple payment sources and multiple programs for services that cross various lines of State business and can be paid from one claim.

EDS is fully aware of the complex nature of the multi-payer design, and we know that "multi-payer" must not be confused with "multi-program." In 2001, we collaborated with the State to implement North Carolina's multi-payer claims processing concept. As a result of this implementation, DMH became the first additional payer of the MMIS+, and we learned valuable lessons in modifying an MMIS to support additional State programs. Through this experience, we understand that the Legacy MMIS+ is a multi-payer system for DMA and DMH.

However, the current approach will be greatly expanded with the implementation of the Replacement MMIS and the extension of multi-payer capabilities to include two additional State divisions, DPH and ORHCC. The following list identifies critical factors that must be considered when designing a multi-payer system for the distinctive benefit plans managed by the four divisions:

- Providers will not be familiar with the multitude of State-defined benefit plans available within the system and therefore will be unable to determine the best benefit plan for claim submission. EDS' solution will allow the system to receive a single claim from the provider and then automatically determine recipient eligibility and assign the benefit plan based on a State-defined hierarchy of benefit plans according to the specific payer.
- Recipient enrollment may occur in multiple eligibility systems. The Replacement MMIS must be able to consolidate it into a single recipient in the paying system.
- Benefit programs are funded in different ways and have different budgets. The Replacement MMIS must verify that the budget has sufficient funds to pay the claims it is responsible for, draw down funds from the identified budget, and pay back funds to budgets on an adjustment or cash receipt.

- The Replacement MMIS must make sure security exists to protect the recipients' protected health information (PHI) by only permitting viewing and updating of recipients and recipient claims based on users' roles and the defined payer group.

The Replacement MMIS must accommodate these—and other—complex technical and program issues.

EDS understands the State's need to implement a system that not only will meet today's needs, but one that is expandable and adaptable for additional State benefit plans. Our proposed Replacement MMIS will support this future need. Our technical and operational environment will give the four stated payers and future payers the flexibility to define coverage and processing rules for their benefit plans, which could be consistent with or different from other plans depending on their own policies and programs. Each payer's business requirements will dictate the level of consistency or uniqueness necessary in defining their rules in the multi-payer environment. Processing rules may vary among payers, yet the system and operational interface with providers, recipients, and critical State systems will be coordinated and consistent for the four divisions and any future payers served by the Replacement MMIS.

Understanding of the Requirement to Allow for Additional Divisions

RFP Reference: 50.2.3 Section C—Executive Summary, Bullet 2, Page 273

The State's investment in our solution will provide benefits throughout the life of the contract as additional divisions are added. Our interChange-based Replacement MMIS will have the flexibility to add functions and processing for additional State divisions, as well as other healthcare programs.

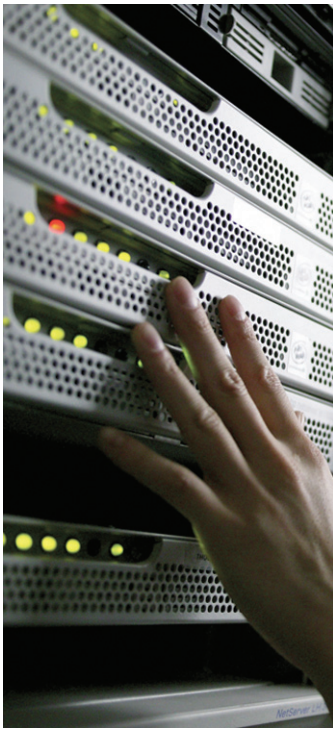
The EDS design team has architected a solution that will modify the baseline MMIS to support the processing needs of all four divisions. While this will require some modifications and configuration to our baseline interChange product to meet specific North Carolina business requirements, our product meets the majority of the requirements. This proves that interChange brings the flexibility to support the work of any of the State's component divisions. By following the software development and systems engineering methodology and the change management approach described in our responses to RFP sections 50.2.4.1.2 and 50.2.5.8, we will be able to expand the Replacement MMIS' capability to support additional divisions.

Understanding of the Procurement Library

RFP Reference: 50.2.3 Section C—Executive Summary, Bullet 3, Page 273

We have received and reviewed the Procurement Library information, and we are aware that updates will continue to be made available. We have used the data and information provided to supplement our knowledge of current operations.

EDS Commitments to the State



RFP Reference: 50.2.3 Section C—Executive Summary, Bullet 4, Page 273

The State has a plan to bring the most technologically advanced system available in the market to North Carolina. The Replacement MMIS will improve service to providers and recipients, reduce administrative costs, maximize federal funding, and prepare for the future to consolidate multiple divisions under one multi-payer system. We welcome this challenge, and we commit to the following:

- Delivering an on-time implementation
- Delivering an on-budget implementation
- Delivering personnel who bring experience with interChange and with DMA and DMH programs
- Delivering a corporate commitment to the success of this project
- Keeping pace with Medicaid Information Technology Architecture (MITA) principles as they are developed
- Delivering the most advanced multi-payer system in the MMIS market

These commitments to the State are demonstrated by our long-term presence in North Carolina, our people, and our investment in interChange.

Commitment: Long-Term Presence

EDS has been supporting state government in North Carolina for three decades, providing stable employment and job opportunities for nearly 300 people on the DMA and DMH accounts. Our commitment to the State is as strong now as ever, as we plan to commit additional resources needed to install and operate the multi-payer Replacement MMIS, while maintaining the same level of service excellence in current operations that you have come to expect from EDS.

Commitment: People

Our commitment is shown in the project staff we are dedicating to the Design, Development, and Implementation (DDI) Phase and Operations Phase of the Replacement MMIS project. This leadership team combines two critical factors required to lower risk and enable success: 1) Familiarity with North Carolina systems, policies, and procedures and 2) significant interChange implementation expertise.

The DDI staff blends the best of our current staff with interChange experts. The local team, which brings extensive understanding of Medicaid and Mental Health policy, will be supported by the corporate resources of EDS and the nationwide network of interChange personnel.

We have increased the key positions and also are proposing other important leadership resumes. In our response to RFP section 50.2.5.4, we are providing resumes for the following key staff:

- Account Manager Melissa Robinson
- Implementation Manager Dean Taunton
- Operations/Claims Processing Manager Tammy Wheeler
- Medical Director Margaret Martin, M.D.
- Pharmacy Director Sharon Greeson, R.Ph.
- Dental Director David Brooks, D.D.S, M.S.

Key Personnel Qualifications

Melissa Robinson, Account Manager

We are pleased to propose Melissa Robinson as the account manager for the new contract. A veteran member of EDS' North Carolina team, Melissa brings the following qualifications:

- 14 years of North Carolina leadership, including her current position as the deputy account manager
- Experience in all aspects of account management for the North Carolina multi-payer environment
- Key player in the development of the multi-payer Legacy MMIS+
- Strong, positive working relationship with her peers at DMA and DMH
- In-depth understanding of program policy, with specialized understanding of the finance subsystem and the buy-in, drug rebate, and Health Check programs
- Key player in recent critical modifications: Preadmission Screening and Annual Resident Review (PASARR), National Provider Identifier (NPI), and Health Insurance Portability and Accountability Act (HIPAA)
- Wealth of experience in working with the State to modify, update, and expand MMIS services through added services, contract extensions, and amendments

Dean Taunton, Implementation Manager

Dean returns to North Carolina, bringing experience with interChange implementations in Kentucky and Tennessee. Dean brings the following qualifications:

- Eight years of technical leadership positions at EDS Medicaid projects in North Carolina, Kentucky, and Tennessee
- Implementation manager for interChange in Kentucky, directing activities of more than 220 technical personnel and successfully managing and delivering 443,000 hours of effort in 27-month implementation
- Project manager for development of the interChange .NET interface
- Five years of experience with the North Carolina Legacy MMIS+, with leadership roles in key implementations including the Customer Information Control System (CICS)-to-Web interface, the implementation of a new data center, and the HIPAA remediation
- 18 years of design, development, and leadership experience with the United States Navy

Tammy Wheeler, Operations/Claims Processing Manager

Tammy is another North Carolina veteran, proposed for this key leadership position that will take advantage of her experience and leadership skills on the new contract. Tammy's qualifications include the following:

- 28 years of service—her entire professional career—devoted to the North Carolina Medicaid Program
- Progressively responsible leadership positions, from clerk to supervisor to medical policy manager
- Experience with the North Carolina program, which covers electronic and paper claims management with direct responsibility in medical policy, reference and adjustments, and experience in provider services and systems

Margaret Martin, M.D., Medical Director

Dr. Martin joined the EDS team in 2006 and brings the credentials and established reputation for this influential position. Her qualifications include the following:

- 30 years of professional medical experience
- Experience as current Medicaid director, responsible for assessing Medicaid claims for approval or denial and approving or denying prior approval requests for covered surgical procedures
- Licensed to practice medicine and certified by the Pediatric Board in North Carolina since 2000

Sharon Greeson, R.Ph., Pharmacy Director

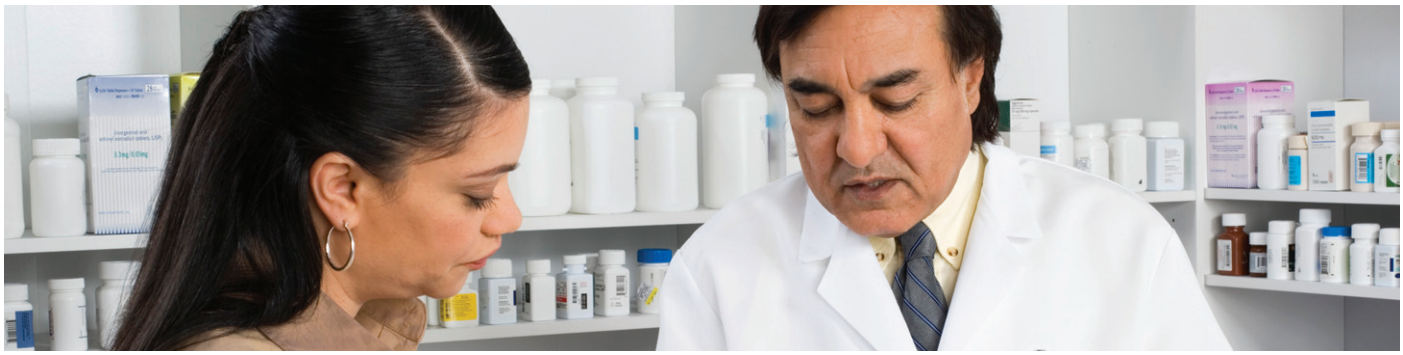
With long-term experience as EDS' staff pharmacist and as a pharmacist in North Carolina, Sharon is the perfect choice as pharmacy director. Her qualifications include the following:

- 23 years of pharmacy experience in North Carolina
- 11 years as the staff pharmacist on EDS' North Carolina project team
- Management of the drug rebate program, including invoicing, receipt of checks, and dispute resolution
- Development of pharmacy-related cost-avoidance edits for the Medicare Part D plans, claims that should be covered under hospice, pharmacy TPL cost avoidance, and Medicare cost-avoidance, leading to millions of dollars in savings each year
- Responsible for defining, developing, and implementing many changes for the pharmacy program, such as the online Point-of-Sale (POS) system and prospective drug utilization review (Pro-DUR)

David Brooks, D.D.S, M.S., Dental Director

Dr. Brooks is joining the EDS team, bringing nearly three decades of dental experience in North Carolina. His qualifications include the following:

- 29 years of dental experience in North Carolina
- Licensed to practice dentistry in North Carolina since 1976
- Past president of Dental Foundation of North Carolina and board member for seven years



Our experience has shown that it takes much more than the key leaders to consistently deliver high quality customer service. For a project of this size and complexity, it also takes the other leaders on the project team who are not considered "key" in contract terms but who are critical to project success. For this reason, we are naming and providing resumes for additional leadership and technical positions in both DDI and operations positions. Many of these professionals, listed in the following table, Additional Leader Qualifications, are people with whom you work each day, and your feedback over the years has demonstrated that you trust and value them.

Additional Leader Qualifications

Mike Frost, Senior Technical Analyst and SME for MMIS and Multi-Payer
Mike Frost brings experience and proven leadership ability to the Replacement MMIS operations. He has 19 years of experience with three government healthcare programs: Medicare Part B and North Carolina's Medicaid and Mental Health programs. As a technical leader during the Integrated Payment and Reporting System (IPRS) development and implementation, he guided the work of 25 systems engineers and developed and learned the new system by designing, developing, testing, and implementing it. His well-rounded background has been enhanced with leadership roles in critical projects such as the HIPAA implementation and the Data Base/2 (DB2) conversion. He also managed the schedule and resources for several highly visible projects that support the State's program reform: Direct Provider Enrollment and Enhanced Services.
Stacey Barber, Senior Technical Analyst and SME for HIPAA
Stacey brings 12 years of experience designing complex MMIS solutions, including nearly 10 years' knowledge of HIPAA Administrative Simplification. With her in-depth HIPAA and North Carolina Medicaid experience, she will provide HIPAA expert-level advice, planning, and recommendations about the effects of HIPAA changes as federal changes are initiated.
Terry Hensley, Database Administrator
Terry brings eight years of experience in creating and maintaining databases, along with 21 years of systems engineering experience and 17 years of technical North Carolina MMIS experience. Well-known and respected by DMA, he is actively involved in creating and maintaining database schemas and scripts to yield better response times and streamline workload.
Tim Sullivan, Technical Director/Systems Programming Manager
Tim brings 17 years' experience managing or performing software engineering activities, of which more than 11 years were dedicated to performing MMIS DDI. As the systems manager for the Legacy MMIS+, he provided leadership to critical projects such as DB2, the remediation of the system for HIPAA compliance, PASARR, modifications to Part B processing, and the development of the PS&R Reporting.

Scott Lowry, Senior Systems Architect
Scott comes to the North Carolina DDI directly from the interChange implementation for Kentucky, where he was the implementation solution architect. He brings more than 20 years of experience working with software development teams in complex, large-scale system implementations.
Anthony Perkins, Senior State Business Liaison
Anthony brings five years of experience with the North Carolina program in analysis, programming, and operations. As a business analyst for the State, he monitors, maintains, and implements policy initiatives for mental health and substance abuse reform.
Sharlene Bryant, Prior Approval Manager
Sharlene is an excellent example of the depth and breadth of experience EDS brings to the North Carolina leadership team. She brings 23 years of technical support for EDS' federal and state healthcare clients, including 13 years with our Medicaid projects, mostly in North Carolina. She was one of the first choices for the IPRS project team when that major project was starting up. She was a key resource for the Integrated Payment and Reporting System (IPRS), Y2K, HIPAA, and DB2 implementations, as well as other successful projects.
Chris Ferrell, Provider/Recipient Relations Manager
Chris brings nine years of experience with the provider services team and, before that, experience with a wider perspective of the insurance industry, with licenses in life, health, and property and casualty. He frequently presents at conferences and meets with DMA. He has developed internal training programs for call center staff and started rehearsals for seminars for travel representatives. He has developed a strong bond with DMA and the provider community through his seminars, onsite visits, and weekly DMA meetings.
Jamie Herubin, Finance Manager
Jamie brings seven years of business analysis and financial operations experience in support of federal and state technology systems. In his current role, he makes sure every area of the IPRS Operations Department, including Adjustments, File Maintenance, Provider Services, ECS, and Security, provide exceptional support to DMH and the local management entities (LMEs).

Commitment: Corporate Focus on interChange

EDS is committed to the healthcare industry in the United States and worldwide. For our state healthcare clients, we have made the commitment to focus resources on the ongoing development of interChange. A product development team of more than 240 personnel (including leaders, architects, developers, and testers) develop and maintain the interChange baseline MMIS, working to keep interChange current with the needs of the Medicaid programs across the country. The results of their ongoing work are seen in the various releases of interChange, which are made available to operational accounts as well as new instances of interChange. In addition, the EDS Global Testing Organization is providing test personnel and methods to support all phases of the intensive testing process in DDI. EDS has identified interChange as the MMIS we will bid on all projects, and we are committed to its ongoing development and deployment.

The baseline product also will keep pace with the requirements of MITA. The common and recurring themes in health-care administration today—sharing information and technology and standardizing data—are the foundation for MITA. The implementation of these principles is a critical factor in the ongoing enhancement of interChange, and the architecture we are bringing to North Carolina supports these concepts.

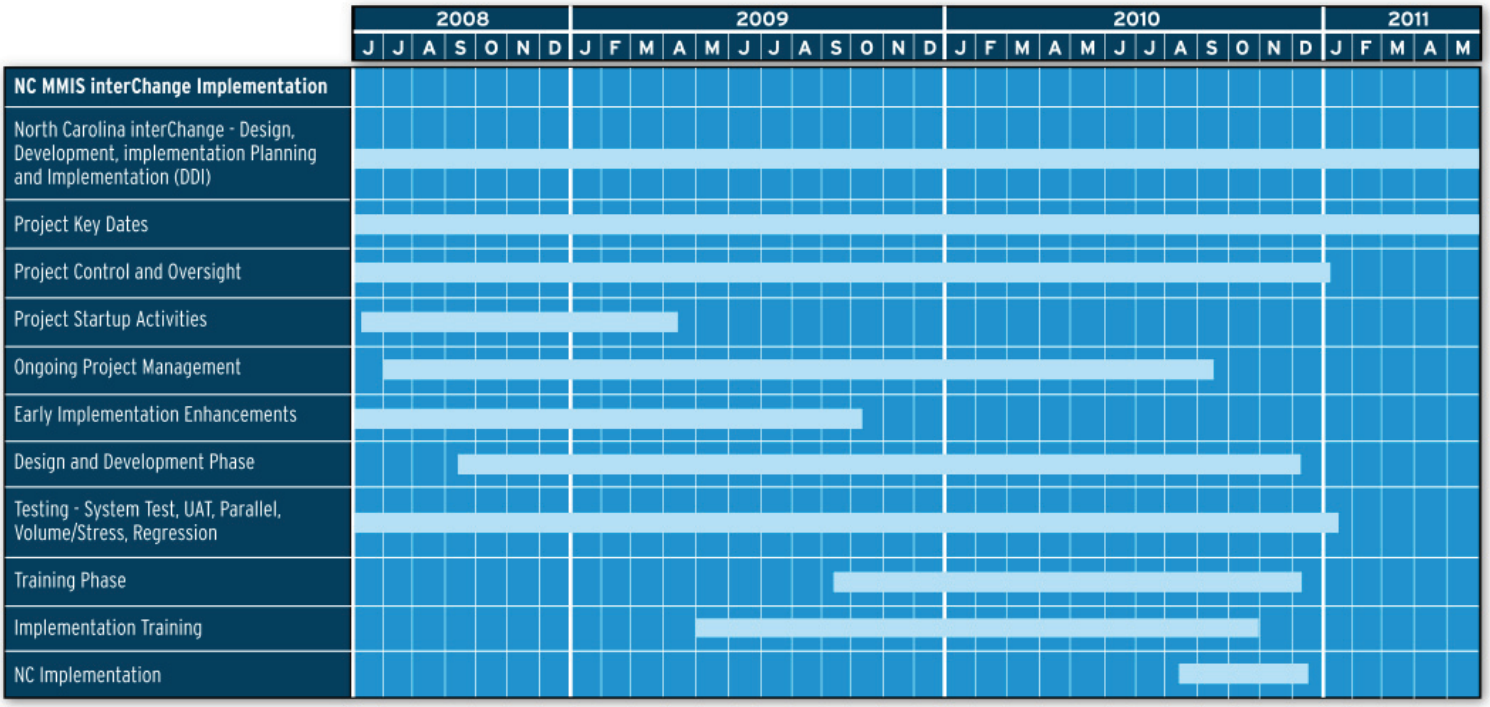
Overall Approach to Implementation and Operations

RFP Reference: 50.2.3 Section C–Executive Summary, Bullet 5, Page 263

Implementation Time Line

Proposal section 50.2.5.2 Integrated Master Schedule shows an implementation time line of 27 months. The following exhibit, DDI Summary, shows the major phases of the DDI and their begin and end dates.

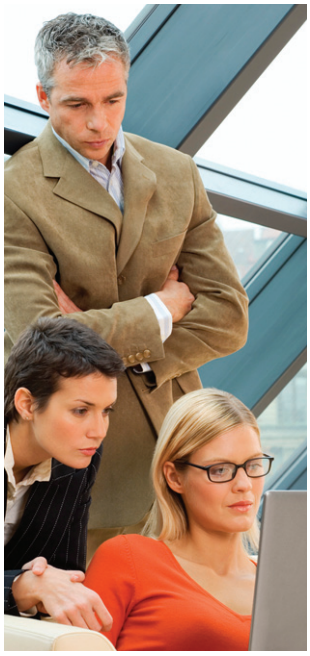
DDI Summary



The EDS DDI time line for the Replacement MMIS reflects considerations such as its need to serve four divisions, its expanded test phase, and its North Carolina–specific functions.

This time line was driven by many considerations of this complex design and development project, including the following:

- **Multi-payer MMIS for four divisions—**The four divisions each have unique provider, recipient, and claims file layouts. Therefore, the data conversion for the project is nearly four times the effort of a stand-alone Medicaid MMIS DDI. In planning for the data conversion, great care must be taken with the analysis and design of the attribute mappings.
- **Definition of the policy unique to four divisions—**Defining policy is a major driver of the timeline, and our comparison with other states where we are implementing interChange shows that this North Carolina task will be about four times greater than in those other states. Furthermore, the Replacement MMIS DDI effort will require additional policy definition work for DMH, DPH, and ORHCC.



- **Greatly expanded test phase required**—The extensive North Carolina policy defined over the past 30 years in the Legacy MMIS+ has an effect on both the effort associated with test case creation and execution. A standard MMIS implementation requires between 8,000 and 10,000 test cases. North Carolina's additional MMIS edits and audits, as well as the number of benefit plans needed to cover the four divisions, have increased the estimated test case number for the Replacement MMIS to 16,000 test cases.
- **State-specific functions**—Functions specific to North Carolina include DPH Eligibility functionality, interfaces to the State Medicaid Accounting System, the expanded Health Check requirements, DPH eligibility user interface, and the ability to process premium payments that are not found in the general MMIS system design application. Implementing these capabilities affects the scope of analysis, development, and testing.
- **Function point analysis confirming complexity of the project**—A function point analysis was performed to help the design team estimate the scope of the project. A function point is a report, panel, batch process, data query, table update, or table reference. interChange contains approximately 17,500 function points. However, our analysis of RFP requirements for the completed multi-payer Replacement MMIS shows that we will need to add 5,300 function points to existing functionality, and yet another 5,800 function points to create new functionality. Based on this analysis, there is still significant work to define, design, implement, and test the added functionality for the four divisions.

Implementation Approach—Business-Centric and Proven

Our approach to the implementation of the Replacement MMIS is based solidly on project management approaches, implementation approaches, work plans, and software development methodologies that have been developed and deployed for the five operational interChange installations and the seven current implementations. Through this recent, intensive effort, we have developed an implementation approach that is proven to work for large-scale, complex MMIS implementations. Over the course of the 27-month implementation, our implementation approach will make sure the technology we are bringing satisfies the business needs of the four DHHS divisions and that, together, we are establishing a platform that will serve the State for many years to come.

The implementation approach starts with the requirements validation (RV) process. Through RV, EDS will review our technical and business assumptions with teams from the four divisions and confirm that our assumptions are correct. The joint teams will review RFP requirements and their mapping to the technical solution and agree when changes need to be made and when our solution's existing functionality meets the requirement. Following the RV sessions, we will move forward into design and development, during which the agreed-upon, finalized requirements are added to the interChange baseline MMIS. An intensive testing process will verify that the completed Replacement MMIS satisfies the business needs of the four divisions.

Our approach to the implementation of the Replacement MMIS brings the ideal blend of a proven core application, customized development, and the integration of commercial off-the-shelf (COTS) products. As one of the nation's most experienced MMIS contractors, we know that a COTS MMIS does not exist. There is no off-the-shelf MMIS because each state's program is highly specialized and different from any other state's Medicaid program. For example, the Replacement MMIS must incorporate nearly 4,500 edits and audits as well as North Carolina program policy for four separate divisions. EDS' solution, interChange, is configurable to meet the State's specific policy requirements for DMA, DMH, DPH, and ORHCC.

Because EDS brings experience with installing the interChange baseline product in other states, we will have a much shorter learning curve as we prepare to install interChange for North Carolina, which translates directly into lower risk for the State. In short, proven management practices for implementing interChange coupled with North Carolina experience produces an implementation approach that is the lowest risk for North Carolina.

Our approach was streamlined by the State's product list and its Oracle enterprise license. Our solution developers were happy to find 17 Oracle products on this list that are required by the interChange solution.

Operations

The first priority of operations is a smooth transition from the outgoing legacy fiscal agent contract and from the DDI Phase to the new fiscal agent contract supported by the Replacement MMIS. As the incumbent fiscal agent for two of the divisions, this task will be much easier for the EDS team than for any other vendor. Following the successful implementation of the Replacement MMIS, we will continue to provide the same high level of fiscal agent services to the DMA and DMH programs, while expanding this service to DPH and ORHCC. We will blend our years of North Carolina knowledge of policies and procedures with the expanded program management capabilities and create a smooth transition to the Replacement MMIS.

In the new Operations Phase, we understand that the checks will still need to get to the providers on time and that recipients will still need to receive healthcare services without disruption. With our successful implementations in many states, our relationships with North Carolina providers, and our unmatched knowledge of North Carolina policies and procedures, we are confident that this will be done right the first time with no disruption to providers and recipients. Because we are offering a staff with decades of Medicaid program knowledge and experience, there will be no risk to providers and recipients through knowledge loss or long learning curves.

In the new Operations Phase, providers will be delighted with fast, accurate, and interactive claims processing. With interactive claims processing, healthcare providers can correct any failed edits and process the entire claim in one transaction. The system will allow providers to immediately see the status of claims. If a claim is denied, providers will be informed and can correct them online.

The State will maximize potential cost savings through the following:

- **Maximum federal funding—**interChange is a federally certified, HIPAA-compliant system that will allow the State to receive the maximum federal funding available.
- **Reduced administrative expenses—**By implementing an efficient multi-payer system that can serve multiple divisions, the State can reduce administrative expenses and achieve operational efficiencies.
- **Better access to program data—**The Replacement MMIS will allow the State to access and manipulate program data. Improved forecasting and trending capabilities will allow the State to more accurately predict the financial impact of policy changes and legislative mandates.
- **Additional flexibility—**The State will benefit from the ability to adapt to changing requirements without expensive investments in new technology.

The critical distinguishing factor in operations is our people. EDS brings three decades of North Carolina program knowledge. The EDS account staff members in Raleigh are an unmatched resource. They bring hundreds of years of combined experience working with the programs, providers, and recipients in North Carolina. Both EDS and the State have made an investment in people who provide comprehensive knowledge of the programs' policies and procedures.

Proposed System's High-Level Functionality

RFP Reference: 50.2.3 Section C—Executive Summary, Bullet 6, Page 273

EDS is committed to meeting 100 percent of the State's requirements. interChange is a system that is in production and has been implemented successfully in Pennsylvania, Oklahoma, Kansas, Tennessee, and Kentucky.

Our Replacement MMIS will bring the following benefits to the State:

- **Interactive claims processing—**The Replacement MMIS will accept every claim type and fully adjudicate it in real time. Timely claims processing will enable faster payments to providers, which will relieve their financial strains while increasing the State's access to current claims processing information.
- **Configurable, table-driven design—**The Replacement MMIS will provide the ability to establish benefit plans or new programs by defining what procedure codes will be covered, what edits and audits will be applied, and what price will be in effect for a specific plan, all without program changes.
- **Integrated call tracking and document workflow management—**This will allow the users to access an image of the document and tie the specific document to the transaction it generated.
- **Distributed processing with n-tier architecture—**interChange is based on a .NET framework design, which separates the distributed processing components from the presentation components. This increases flexibility by enhancing the ability to integrate new applications or subsystems at various levels in the architecture. Our enhanced Web-based, service-centric architecture, recently implemented in Kentucky, is aligned with the principles of MITA and positions the State to leverage the MITA vision as it evolves.
- **Full compliance with all applicable guidelines in the State's technical architecture strategy—**The Replacement MMIS is a client/server platform with n-tier design and relational database for all subsystems. We will implement a Web browser-based (rather than Windows) environment that fully supports the State's strategic preferences. This will maintain consistency within State applications, leverage existing platform technology, and maintain conformance with State initiatives relating to interoperability.

The completed Appendix 50, Attachment B, "High Level System Functionality Matrix," follows this executive summary. For a detailed look at system functionality, please refer to proposal sections 50.2.4.1 Proposed System Solution and Solution for DDI and 50.2.4.2 Operations.

Why EDS?

EDS provides the low-risk solution for your Replacement MMIS with innovative and proven technology that includes real-time adjudication and workflow, the right people, and a strong and longstanding commitment to North Carolina.

The Low-Risk Solution

When you select interChange, you will be purchasing a trusted, proven product. The interChange MMIS will be operating in 12 states by the time the Replacement MMIS is implemented. We understand how important it is to you and your stakeholders that EDS implement the Replacement MMIS without any disruption to the providers, recipients, and agencies. Our proposal will demonstrate that we understand the challenges of modifying an MMIS to support additional divisions. It also will demonstrate that we have the plans, the technology, and the team to accomplish the job. To further mitigate the risks associated with a complex project, the core of our leadership team includes individuals who already have a detailed knowledge of North Carolina Medicaid and our interChange solution.

Innovative and Proven Technology

The clearest difference between EDS and our competitors is our innovative technology solution—interChange—that is installed and operational in five states and is CMS-certified back to the first day of operations in four of these states (Kentucky, the fifth interChange implementation, has just become operational and will undergo the certification process in the future). Other MMIS vendors might describe innovative solutions, but because they cannot point to an installation base that compares to EDS, their solutions are high risk. The choices are: Do you select an MMIS solution that reads well on paper and might even perform well in a demonstration, or do you select a baseline system, EDS interChange, that is already reliably supporting the delivery of healthcare in five states.

The Right People With the Right Experience

Our commitment to you and your success is exemplified in the caliber, experience, and knowledge of North Carolina that our proposed leadership team brings to the project. And behind the leaders of EDS stand a cadre of employees with a depth and breadth of experience that no other vendor can match. The team you'll work with throughout the DDI and Operations phases brings established relations with DMA and DMH, three decades of experience with Medicaid policies, and extensive interChange implementation experience. As with the proven technology and procedures, this experienced team means a successful implementation with the lowest degree of risk.

Committed to North Carolina and Medicaid

As demonstrated in proposal section 50.2.10.1 Relevant Experience, EDS has supported North Carolina's Medicaid program in every step of the program's evolution. Now, the State is planning to implement the next step in healthcare support for North Carolina: a single platform that will initially support the programs of four divisions and potentially support all DHHS divisions. As with other major initiatives (such as the IPRS modification that created the multi-payer Legacy MMIS+ or the current National Provider Identification enhancement), EDS stands committed to North Carolina. We will bring the people, the technology, and the proven processes and tools needed to make this challenging project a success. EDS embraces this challenge and looks forward to continuing our service to one of our most valued customers, working with you to enhance the quality of life of North Carolina individuals and families through healthier and safer lives.

HIGH-LEVEL SYSTEM FUNCTIONALITY MATRIX

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
General/COTS Integration	AXIO	The AXIO data conversion commercial off-the-shelf (COTS) tool by Informatica provides an efficient means of data attribute mapping, data profiling, and conversion—increasing the level of accuracy of the data conversion for the four divisions of this multi-payer system.	This proven approach and tool for conversion field mapping are standardized on EDS' MMIS implementations. AXIO logs the outcomes of the mapping and conversion process and provides consolidated documentation of data mappings. This approach and documentation enable successful completion of one of the most difficult processes within an implementation conversion.
General/COTS Integration	BizTalk	The BizTalk COTS tool is used for data integration of file and data transaction interfaces. It provides file tracking and process auditing as well as data attribute translation when processing the files. BizTalk enables the translation of data formats, including extended binary-coded decimal interchange code (EBCDIC) packed and binary data into ASCII-based XML. The product provides 26 predefined conversion protocols.	BizTalk provides a solid foundation for service-oriented architecture (SOA) data exchanges. It allows for controlled, documented, and consistent means of transferring data with interfaces through the auditing and tracking tools and creates interface configurations and protocols through consistently hard-coded interfaces.
General/COTS Integration	BusinessObjects Dashboard Manager	BusinessObjects Dashboard Manager is used to provide managers a browser-based window into key operational performance metrics for increased system and operational performance monitoring.	This online tool increases efficiency of communication with key stakeholders regarding contract performance and program metrics. It enables healthcare program leadership to focus on the critical information forthcoming from the MMIS that matters most to them in managing the healthcare programs going forward.

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
General/COTS Integration	BusinessObjects Query and Reporting	BusinessObjects Query and Reporting is used in support of direct data access, MMIS ad hoc reporting, and user-generated reporting. It provides security to allow only authorized individuals to see their particular "universes" of data. It uses a drag-and-drop method of report generation that empowers users to create reports without the need for technical intervention.	With this tool, users can quickly query, pull, and review the data they need to do their jobs and improve their work efficiencies. It provides an industry-leading platform for data mining that allows authorized users to hone their reports to exactly what is necessary to address the issues and tasks at hand and to save the report for rerun or reuse, as necessary.
General/COTS Integration	DOC1	The DOC1 correspondence COTS tool from Pitney Bowes is used for letter generation and storage. It is used for letter generation in all interChange subsystems, including recipient, prior approval (PA), provider, and financial. The DOC1 correspondence repository stores a retrievable copy of every piece of correspondence it generates and can be configured to generate that correspondence to several types of media, including paper, e-mail, or HTML. Multiple languages are supported.	This tool provides integration of standard and defined letter templates to facilitate quick and efficient communication with stakeholders. Integration of the DOC1 letter generation tool will help standardize and automate correspondence while providing capability and flexibility to create letter templates with free-form text to meet business requirements. Each version of standard and ad hoc letters is retained and properly versioned for reference and proper use. Integration with Documentum and the document management system provides one source and one repository for the capture of correspondence history incoming and outgoing. Integration with the workflow process allows for output of specific documents and letter templates to provide timely communication to providers, recipients, and other stakeholders, integrated fully into the outcome of the workflow process.

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
General/COTS Integration	EDIFECS	EDIFECS, a COTS product, is used for EDI compliance verification and transaction mapping. EDIFECS compliance software validates the structure of the electronically submitted files to defined standards, providing an up-front check on the quality of files submitted to the MMIS for processing.	This tool provides and maintains standard Health Insurance Portability and Accountability Act (HIPAA) data transmission format verification and compliancy checking for higher accuracy in data interface processing.
General/COTS Integration	EMC|Documentum	Documentum, a COTS product from EMC, provides secure report management and image delivery for scanned documents, including claim attachments, PA requests, and written correspondence.	This tool will migrate the State to a paperless environment. With our document management system, the operation uses one repository for claims, documents, communication, reports, and other stakeholder filings. This repository is linked and integrated in the business users' environment, pushing the Replacement MMIS enterprise to a paperless workplace that is more secure and HIPAA-compliant. Integration with interChange and the Documentum client provides online, efficient access to documents for faster research and review.
General/COTS Integration	ERwin	The ERwin All Fusion Data COTS product by Computer Associates (CA) is used to define, store, and report the physical data models used by Oracle and enable the controlled change management of those models.	This tool allows product architects to provide controlled schema solution versioning. It provides a source for dynamic iTRACE database structure lookups.
General/COTS Integration	FormWorks	The FormWorks COTS product from SunGard, formerly Recognition Research Inc. (RRI), is used	This product improves claims input processing efficiency through highly accurate document scanning and

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
		for optical character recognition/intelligent character recognition (OCR/ICR) scanning and key from image (KFI) of claims and claims data.	transition to OCR/ICR for form images, reducing the time to put data into the system and maintain high accuracy levels, which are benefits to the provider community. It provides one software foundation and source for scanned documents in the document repository Documentum. For example, it will provide for scanning and imaging of claims and nonclaims documents, which are critical to retaining a complete history of provider and recipient data.
General/COTS Integration	GeoStan	GeoStan from Pitney Bowes is used for ZIP+4 address validation, as well as geospatial, longitude, and latitude calculations for provider and recipient addresses and mapping the distance between them.	This tool improves the accuracy of mailings to providers and recipients and increases the effectiveness in obtaining the best available postal rates on mailings to reduce State postage costs.
General/COTS Integration	HP	The HP COTS testing suite of tools, LoadRunner, Test Director, and Quality Center, is used for test case creation, tracking, and reporting of system, operational readiness, and performance testing activities.	As a test case repository, HP LoadRunner provides a clear window into the status of every test case and allows specified test cases to be run repeatedly in a regression to verify continued compliance with software specification.
General/COTS Integration	InRule	The InRule COTS product is used as the business rules definition tool and repository for automated PA processing.	This tool brings the business rule maintenance activities directly to the business analysts for long-term support of the Replacement MMIS programs, pulling work from the software engineers to focus on new enhancements into the hands of the business teams for maintenance and more efficient workflow and system maintenance.

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
General/COTS Integration	iTRACE	Designed and developed by EDS, the information Tracking Repository And Collaboration Exchange (iTRACE) documentation repository is used to store and maintain the Design, Development, and Implementation (DDI) system documentation—from requirements analysis to development, testing, implementation, production, and business operations.	The EDS iTRACE tool provides a one-stop location for Replacement MMIS documentation for State and EDS users. Providing the documentation centrally and electronically enables consistent updates and distribution so users are viewing the current and official versions of documentation. Functioning as an enterprise and project knowledge center, iTRACE gives stakeholders access to system documentation, operations training documentation, operational desktop procedures, project metrics, project plans, change control, requirements traceability, program metrics, test cases, and more.
General/COTS Integration	K2 workflow engine	The K2 workflow engine COTS tool from Microsoft is used to author and define workflow integration with the interChange application.	The K2 workflow engine tracks the status of every "in flight" transaction and allows authorized users to monitor work queues and reassign work for efficiency and throughput. It forms the foundation for creating and maintaining workflows in areas such as provider enrollment and PA that require a clear and documented workflow for accuracy and efficiency.
General/COTS Integration	Oracle	Oracle's relational database is used for the transactional MMIS data content repository and the MMIS reporting repository.	The Oracle relational database provides a highly reliable data store for the transaction and reporting database stores of the MMIS. It is broad enough to support transaction third normal form structures and report friendly dimensional modeling to serve user data access.

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
Recipient	EDS interChange Recipient	The interChange recipient module by EDS provides a central store of the recipient demographic, eligibility, TPL, and managed care information for recipients served by the four divisions as data is passed from the Eligibility Information System (EIS) or gathered from the DPH eligibility panels, which will be created as part of the DDI effort or through CNDS. Major features include the ability to store and research the history segments of a recipient's eligibility and the ability to "lock in" a recipient to a given provider for tighter control of services rendered.	interChange evaluates sophisticated relationships across many elements, including aid category, managed care participation, Medicare participation, and level of care to appropriately establish each of the benefit plans for which a recipient is eligible. Multiple, concurrent benefit plans form the basis of the multi-payer system and give the State tremendous flexibility and functional capability to support the most effective and efficient program administration possible within the Replacement MMIS.
Eligibility Verification System – EVS	interChange Web Portal	The interChange eligibility verification features are presented to users through multiple HIPAA-compliant methods. The status of a recipient's eligibility can be researched through the interChange Web portal or the Automated Voice Response System (AVRS). Both systems use the same real-time data store when querying the recipient's status, providing a high degree of consistency of information being presented to providers and recipients. The eligibility verification system presents users with the status of coverage dates and for which health programs the recipient is eligible.	The HIPAA-compliant responses process exactly the same transaction, whether queried from the Web, by telephone, or electronic data interchange (EDI). Available information that can be returned on an ANSI X12 271 transaction is presented. This includes eligibility, TPL, Medicare, level of care, managed care, and patient obligation (spend-down or patient liability) information. Today, eligibility verification methods are independent systems and can sometimes produce different responses, causing frustration and confusion among the provider community. interChange eliminates this confusion while providing multiple access methods. Consistent and accurate information delivered quickly will support an efficient claims processing function, clearly communicate timely

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
			and accurate information to the provider and recipient, and facilitate the State's service goals.
Automated Voice Response System (AVRS)	AVAYA, Media Telephone Core	The AVAYA COTS voice response system automates several call-in capabilities of the MMIS, allowing recipients and providers to check on eligibility status, claim payment status, and PA submission. It also helps efficiently direct them to specialized support personnel, such as provider or electronic data exchange support to assist with issues that require personal interaction for resolution.	Using our AVRS, providers and recipients can select the type of inquiry desired and can use the telephone keypad or speak to provide their responses to the programmed questions asked by the AVRS. The system is fully integrated with interChange to receive and process the formatted query and properly format the electronic return data that the AVRS will use to vocalize its response to the caller. If necessary, callers can shift to a telephone queue to receive an EDS customer service representative. In doing so, some of the data already entered will be transferred to the representative's screen to facilitate a dialogue to diagnose and answer the questions quickly and accurately. The provider self-service feature, available for numerous standard transactions, frees the call center representatives to research more challenging provider questions when direct personal contact is needed.
Reference	interChange Reference	The interChange reference module is the central location for the storage and maintenance of valid code sets used during claims adjudication. Industry-standard data such as the diagnosis, procedure, and drug files are systematically updated. The reference	interChange allows updates in reference data to be effective in real time or at some future date by the use of effective and end dates on most tables. Industry-standard code sets provide consistency to the provider community, while State-defined code-sets—such as explanation of

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
		module also enables support personnel to maintain other State-defined code sets through online pages, such as provider types, recipient aid categories, and revenue codes.	benefits—allows State-specific business practices to be supported.
Reference	interChange Benefit Plan Administration (BPA)	The EDS interChange BPA module is an integrated rules engine that defines the policy to apply to the claims from each division. Within the BPA module, the provider contracts are defined, listing which services a given provider can perform. The recipient groupings and benefit plans are defined to provide allocation for groupings of recipients to receive care from specific providers.	This module migrates program policy maintenance work to the business analyst community, increasing the efficiency and timeliness of policy definition implementations that shorten the time frame to deliver new healthcare programs to the State's recipient community, while supporting the rapid implementation of state, federal, or legislative changes. The module provides automated verification of conflicting rules during the definition process, which keeps the defined policy cleaner and easier to maintain. Through BPA, authorized users can maintain and view the following: **Benefit classification—** Defines the various classifications of benefits (for example, ambulatory surgery or dental), with like codes grouped to ease plan development **Benefit plan—**Defines the payer and covered services for specific benefit plans **Financial payer—**Defines the organization responsible for funding the plan

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
			Provider contract— Determines what types of providers can bill for and receive reimbursement from a specific plan **Other insurance—**Defines the types of other insurance a recipient can have and still be covered by a specific benefit plan **Reimbursement agreement—**Determines how a service billed by the plan will be reimbursed **Rule catalog—**Provides a quick reference to the rules maintained through BPA **Plan hierarchy—**Defines the order of plans for adjudication when a recipient is covered by multiple plans for a single date or service
Prior Approval (including Pharmacy PA)	interChange Prior Approval (PA)	The EDS interChange PA module will combine our inherent PA features with two COTS packages discussed in the following entries.	The interChange PA capabilities enforce the requirement of State policy when reviews of procedures are required. This feature helps control benefit spending and control the quality of care administered. Our Replacement MMIS will provide the framework to support PA objectives, along with the optimized K2 workflow engine for workflow management, in combination with the InRule rules engine to define and document the State's PA business rules.
Prior Approval (including Pharmacy PA)	InRule	The InRule COTS rules engine will enable the definition of PA business rules for auto-adjudication of	InRule brings the business rule maintenance activities directly to the business analysts for long-term,

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
		requests, speeding up the process of common request processes.	efficient, and timely support of the State's healthcare programs.
Prior Approval (including Pharmacy PA)	K2 workflow engine	The K2 workflow engine organizes the review and processing of PAs when manual intervention is required. This capability provides a pictorial view of the processing steps and where a given request is in the process. It also enables management features such as work queue assignment and monitoring.	This tool standardizes the application of defined business workflows in support of the programs, as well as efficient work efforts to review and finalize PA requests in support of providers and recipients. It increases the system adoption time of new employees because they can follow defined flows as part of their job work pattern.
Claims Processing (with Pricing and Payment) – Pharmacy and Non-Pharmacy	BizTalk	The processing of electronic claims is handled by the data integration tool, Microsoft BizTalk. BizTalk handles file tracking and file translations to the XML schema used to pass data from the input electronic file to the internal format used and stored in the interChange relational database.	BizTalk enables the translation of data formats, including EBCDIC packed and binary data, into ASCII-based XML. It includes 26 predefined conversion protocols, which enable a high degree of transaction validation and verification, thereby maximizing the successful throughput of claims entering the system for processing.
Claims Processing (with Pricing and Payment) – Pharmacy and Non-Pharmacy	interChange BPA	The EDS interChange BPA module is an integrated rules engine that defines the policy to apply to the claims from each division. Within the BPA module, the provider contracts are defined, listing which services a given provider can perform. The recipient groupings and benefit plans are defined to provide allocation for groupings of recipients to receive care from specific providers.	Please see the preceding "Reference" section. With this system capability, millions of claims will be processed as efficiently as technology provides and, as a result, shorten the adjudication to provider payment time frame.

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
Claims Processing (with Pricing and Payment) – Pharmacy and Non-Pharmacy	interChange Claims Processing	After files are validated and translated, the EDS interChange Claims Engine performs editing, auditing, and pricing based on the defined healthcare policy and associated benefit plans defined within the applicable agency for the claim submitted. Editing is used for data consistency, while auditing applies the medical rules defined for the programs for appropriate administration of care and use of benefit dollars. Claims that pass edits and audits are then priced based on the defined pricing methodology for the claim form type, such as pharmacy, professional, and dental.	The interChange claims solution will provide strict enforcement of the capture, control, editing, and auditing of claims and encounter data from receipt to final disposition, in accordance with State guidelines and policies. interChange controls and processes encounter claims in a similar manner as fee-for-service (FFS) claims, except encounters do not generate payments. The rules-based, table-driven design and real-time processing for every claim type in interChange provides unparalleled efficiency and flexibility for the support of the State's programs. State users can quickly and easily change business rules and update tables that will immediately affect the way claims process. The interChange Claims Engine is a transaction-based solution that enables real-time claim adjudication as the claim is submitted. Providers can get immediate feedback through the claim data entry feature of the Web portal. If there is a claim error, the provider is given the specific error reference interactively, and the provider can correct the data issue and resubmit. This decreases the claim payment window for successful processing as compared to more traditional batch processing claims engines. The images of paper claims and the relevant attachments are stored in the document management system. The

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
			ability to recall these images is integrated through hyperlinks within the interChange user interface, providing fast and easy reference to this material.
Managed Care	interChange Managed Care	The interChange managed care module by EDS provides support for primary care case management (PCCM) and capitated managed care healthcare models. The managed care function also includes the ability to generate monthly rosters and determine capitation payments based on the defined recipient rate cells.	The interChange managed care module gives the State's divisions options and flexibility in terms of how to manage the care of services within the State during the life of the contract. The interChange application controls and processes encounter claims in a similar manner as FFS claims, except encounters do not generate payments.
Managed Care	GeoStan	Managed care capabilities include auto-assignment of recipients to local primary care physicians (PCPs) through the integrated GeoStan software, which calculates the distance from recipient to provider locations, allowing for logical recipient assignment for care by the nearest PCP open to new recipients.	The integration of GeoStan provides a direct benefit to recipients by identifying the closest PCPs who can accept new case loads. GeoStan helps alleviate one of the more persistent issues within state healthcare programs—nearby access to care.
Health Check	interChange EPSDT	The interChange Early and Periodic Screening, Diagnosis, and Treatment Program (EPSDT) module supports tracking recipients compared to the defined screenings.	interChange will be expanded to meet the county Health Check workers and associated State requirements. The Web portal will provide county workers secure browser access to the following functions at their desktops, making data entry easy to perform: • Ability to process screening and immunization billings on one claim

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
			• Automatic and centralized updating of the AINS data for each county • Online letter generator templates in English and Spanish • Interactive Web pages, including online audit trail features • A Web-based process for maintaining, updating, generating, and distributing the Monthly Accounting of Activities Report (MAAR)
TPL	interChange TPL	The interChange Third-Party Liability (TPL) module enables identification and tracking of recipients' third-party coverage, which should be the primary responsible payment authority. The TPL module gathers information from the carriers and coverage information that may come in during recipient enrollment. This information is used to identify claim payment cases that should be recovered by having the appropriate insurance party pay for the claim in terms of reimbursement to the State. The TPL subsystem supports flexibility in the benefit plans for Medicaid and non-Medicaid recipient groups in administering TPL rules for a subset of the population. For example, if a group of individuals was assigned to a benefit plan associated with a developmental disability	The TPL function works using cost avoidance (claim denial) and cost recovery (post-payment billing to insurers). interChange uses automated processes, as much as possible, for cost avoidance. Cost recovery will be used as a backup to the avoidance process, and the two working in tandem will assist the State in proper net payment to the provider (for example, payer of last resort, as applicable). The interChange TPL subsystem includes the flexibility to configure and optimize third-party coverage data through easy-to-use browser pages, real-time access to information, and the automation of tasks, including the following: • Policy maintenance • Accounts receivable (A/R) posting

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
		program, the TPL configuration could be tailored specifically for that benefit plan.	• Rebilling and recovery notices and other TPL notices • Non-covered services bypass logic
TPL	Microsoft Reporting Services	Microsoft Reporting Services is integrated within the TPL online features to enable direct user reporting requests through defined, parameter-driven requests, with the results presented back to the users through their browsers. This enables faster research and quicker insight into the TPL processing details.	Integration of Microsoft Reporting Services enables user-directed, on-demand reports. Users, through their own browsers, can request and filter the reporting results as needed, making research and analysis faster for quicker, appropriate recovery of funds.
Drug Rebate	interChange Drug Rebate	The interChange drug rebate module by EDS provides the ability to process rebate requests based on the CMS-negotiated rates. The capabilities include generating invoices and tracking recoveries.	Using the interChange drug rebate capabilities directly assists the State with the collection of funds, which has a material impact on the bottom line of the State's healthcare program expenditures. It assists in the timely identifying, invoicing, and collection of these drug rebate funds for the State.
MARS	interChange Management and Administrative Reporting (MAR)	The interChange MAR module provides direct insight into the program in a way that logically groups the data for research into policy application within the State, as well as how specific providers are doing in terms of claims submission processing. MAR provides CMS-defined reporting, including the MSIS files and 372 Waiver reporting. The MAR solution also provides State-specific reports on the program processing.	The interChange approach to the MAR subsystem has taken a typical back office, paper-intensive MMIS module and transformed it into a direct user data access module providing timely and meaningful metrics of the State's healthcare programs. The interChange MAR online query system is a set of 27 browser-based, online parameter-driven reports. The reports are snapshots of financial, eligibles, participation, and filing

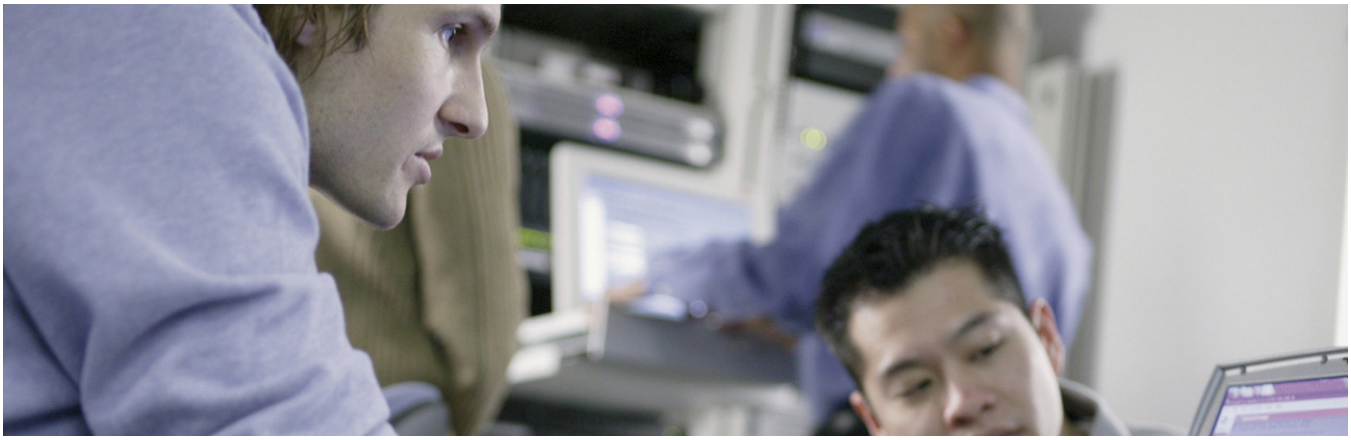
Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
			statistics. These snapshots are stored in a summary datamart so users can refer to prior periods for historical views and the comparison of data. Users customize the online reports they want through search criteria displayed in drop-down lists. Users also can specify the output format of the report, choosing HTML, Excel, or PDF. They can specify the time period for the report and produce multiple online reports, which they can toggle between to compare data from different time periods. These online MARS reports support fast research and analysis, which in turn assist many business groups, including budgeting, policy assessment, and provider relations.
MARS	Microsoft Reporting Services	The Microsoft Reporting Services COTS tool is integrated with the interChange MAR module, with online parameter-driven reports to help users drill into the data. From program payment statistics to provider error status codes to timely filing reports, users can quickly get program-wide or provider-specific reports at their desktops.	The error code analysis and timely filing statistics by provider can be used for direct provider feedback and education, increasing the success rate of claims submission for the provider community.
MARS	BusinessObjects Query and Reporting	EDS provides ad hoc reporting access to the detailed MMIS data through BusinessObjects Query and Reporting software for free-form research using the data attributes, as needed.	This tool gives State analysts faster access to detailed MMIS data for reporting to be performed without the need for technical support. Authorized users will use this powerful tool to assist in their daily work efforts.

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
MARS	BusinessObjects Dashboard Manager	The contract performance area of the MMIS MAR reporting will be enhanced through the integration of the BusinessObjects Dashboard Manager package, which brings to the healthcare program manager's browser the key performance metrics needed to monitor contract performance.	This tool increases efficiency of performance communication with key stakeholders. It enables leaders to focus on the portions of the business that matter to them most and to redirect that focus if the business needs change. The Alerts feature can prompt a review of a metric that is out of the defined performance range.
Financial	interChange Financial	The interChange financial module performs the payment processing features of the MMIS, including the generation of electronic funds transfers (EFTs), physical checks, and the associated RAs. The output of the financial module provides the ability to electronically distribute output material for fast and efficient distribution. While payments are made directly through EFTs, the RAs are delivered to the providers' private inboxes within the secure portion of the interChange Web portal, where providers can log on and pull the RAs. The financial module also writes out the processed claims to the history database for long-term storage of the service rendered and the payment made. Besides processing the claims data, the interChange financial module also processes financial transactions such as capitation payments, refunds, and ARs.	This interChange subsystem has been architected to delineate funding sources and apply each payer's unique funding process. It provides a centralized system, allowing multiple payers to process claims and receive payment to accommodate the multiple divisions represented. Financial management and accounting has many processes orchestrated within interChange as a single solution that brings maximum flexibility and configurability to the State. The following financial processes provide a baseline for each part of our Replacement MMIS: • Funding sources • State program funding • Payment estimation reporting • Payment withholds • Provider payments • RA

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
			• Liens and levies • Accounts receivable • Returned checks and provider refunds • Financial transactions • Tax reporting and transactions • Financial cycle balancing
Provider	interChange Provider	The EDS interChange provider module manages the enrollment, credentialing, and maintenance of the providers eligible to provide services to State recipients. It supports every provider type and enables multiple correspondence addresses per provider and effective dates of their participation. The Provider Web Portal will allow the State's providers to enroll faster and begin rendering services to recipients earlier. Internal and external entities will use the portal to verify a provider's status. Provider data will be maintained in one database. Inputs into the database will be through automated interfaces with outside entities such as providers, the State, licensing agencies, and other government agencies. The provider database will be fully integrated with reference, claims, TPL, financial, and other data in a single integrated data model.	This module will provide the following benefits: • **Improved provider service—**Field and call center representatives can review related claims history pertaining to a provider, eliminating the need for providers to repeat their original inquiry if they need additional information. • **Improved performance—**The Replacement MMIS will provide a more streamlined approach to responding to questions in the call center by eliminating the need to rekey information provided at the beginning of the AVRS call. • **Improved operations and reduced manual processes—**Data to research a provider or recipient issue will be housed in our Contact Tracking Management System (CTMS), as will the history surrounding

Business Area	System Product(s)	High Level Functionality Overview	Additional Benefits
		This integration will allow automatic updates to be fed to and from the provider business area to other business areas within the Replacement MMIS.	the issue. • **Provider empowerment—** Providers can conduct their own service authorization, enrollment, and claim status research on the Provider Web Portal, further reducing calls to the call center. • **Flexibility to address future changes—**The CTMS enables the user, without technical intervention, to document call conversations and track emerging issues. • **Tighter quality control through credentialing—** Through provider credentialing, a consistent, high-quality method of reviewing provider qualifications is established and maintained.
Provider	K2 workflow engine	interChange has integrated the COTS K2 workflow engine into the provider enrollment process, enabling a controlled step-by-step order of business and managed workflows.	Integration of the K2 workflow engine, along with the ability to store and retrieve provider applications in the Documentum document management system, streamlines the provider enrollment function and takes the processes to the paperless office environment. Having the orchestrated workflow tool enables closer management of the enrollment office, staff productivity, and the long-term storage of enrollment forms.

Note: if the Offeror is proposing a separate but integrated POS, the Offeror may add a row to address.



50.2.4 Section D—Proposed Solution Details

RFP Reference: 50.2.4 Section D—Proposed Solution Details, Page 273

In Section 50: Proposal Submission Requirements, the RFP states the following: "Offerors may refer to their pre-existing solutions by their proprietary, marketplace names for purposes such as describing how other states have used their solutions and for identifying the systems to be featured in the Offerors' demonstrations. However, Offerors shall consistently refer to the solution they propose to develop, implement and operate for the State of North Carolina as the 'Replacement MMIS.'"

In compliance with this requirement, we have described our base system as interChange throughout this proposal, and we have described the system that will be developed, implemented, and operated for North Carolina as the Replacement MMIS.

Almost 70 percent of the Replacement MMIS will be a direct reuse of interChange, which has already been delivered, configured, and proven multiple times in support of state healthcare programs. When describing such reused features and functions, reviewers of our proposal will find that we refer to our proposed solution as interChange and not the Replacement MMIS, because the features and functions being described already exist and are operational today. However, when describing features and functions that will be modified or customized in interChange to meet specific State requirements, we refer to our proposed solution as the Replacement MMIS.

There is a significant advantage for the State to start with a proven MMIS that meets as many of the healthcare processing needs as interChange does. Our **interChange-based Replacement MMIS** will reduce risk for the State divisions, providers, and recipients.

This section contains a detailed description of our proposed solution, our approach to implementation, our solution for operating the Replacement MMIS, our statement of work, and our approach to training users of the new system. This section maps directly to the requirements of the RFP, as follows:

- 50.2.4.1 Proposed System Solution and Solution for Design, Development, and Installation
- 50.2.4.2 Operations
- 50.2.4.3 Statement of Work
- 50.2.4.4 Training Approach

The following table, EDS Compliance With RFP Page Limitations, demonstrates that we have complied with the required page limitations of this section:

EDS Compliance With RFP Page Limitations

Proposal Section	Page Range	Number of Pages	RFP Page Limit	EDS Complies

50.2.4.1 Proposed System Solution and Solution for Design, Development, and Installation

RFP Reference: 50.2.4.1 Proposed System Solution and Solution for Design, Development, and Installation, Page 273

This section contains the following RFP-specified subsections:

- 50.2.4.1.1 Overview of System Solution and Solution for DDI
- 50.2.4.1.2 Software Development and Systems Engineering Methodology
- 50.2.4.1.3 Data Conversion and Migration Approach
- 50.2.4.1.4 Deployment/Rollout Approach
- 50.2.4.1.5 State Requirements Matrix
- 50.2.4.1.6 Adjusted Function Point Count

50.2.4.1.1 Overview of System Solution and Solution for DDI

RFP Reference: 50.2.4.1.1 Overview of System Solution and Solution for Design, Development, and Installation, Pages 273-274

The multi-payer Medicaid Management Information System (MMIS) described in the RFP will present a unified positive shift in the way work is performed by the North Carolina Division of Medical Assistance (DMA), Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH), Division of Public Health (DPH), and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC). As the leader in building and operating MMISs, EDS has embraced an initiative to replace the past view of healthcare systems with a recipient-centric view of healthcare, as illustrated in the following exhibit, A New Paradigm: Recipient-Centric Healthcare. We are in line with the State in its commitment to transform healthcare through this multi-payer system that supports the many related aspects of care provided to the recipient community of North Carolina.

Data Transfer and Conversion (40.1.1.15)

This requirement was deleted by RFP 30-DHHS-1228-08-R.

Response to Data Transfer and Conversion Requirement

The following table, EDS Response to Data Transfer and Conversion Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Data Transfer and Conversion Requirement

RFP No.	RFP Requirement	EDS Response
40.1.1.15	~~Provides capability to make all historic and new electronic documents available to Fiscal Agent and State staff from implementation of any and all Replacement MMIS capabilities~~	Cancelled. This requirement was deleted by RFP 30-DHHS-1228-08-R.

Interfaces (40.1.1.16)

EDS understands the importance of incorporating relevant program data with data from other information systems in the most efficient, accurate mechanism possible. Furthermore, EDS has first-hand experience with the State's various outside entities that will need to interact with the Replacement MMIS. The State depends on accuracy and availability of the crucial input and output data that these interfaces will provide through the Replacement MMIS. Based on information in the RFP and information researched by EDS, we have identified approximately 257 individual interfaces that will need to be developed or shared within the Replacement MMIS environment in support of the North Carolina healthcare program.

To address this connectivity challenge, EDS will use an optimal mix of integration methods. The first method, for interfaces that are specific to the North Carolina programs or do not benefit from being service-enabled, will use custom point-to-point code for integration. The second method, for more standard MMIS interfaces that either can be reused across the Replacement MMIS solution or interfaces that benefit from being service-enabled, will use the Microsoft's BizTalk Server 2006 service-oriented architecture (SOA) to handle integration to

internal and external entities. With either method, data that is being transmitted will be encrypted as necessary to meet security mandates to maintain the PHI security requirements.

EDS has selected the Microsoft BizTalk Server 2006 COTS solution because it is flexible enough to be used in most integration scenarios. Whether it is as simple as a file transfer or as sophisticated as a fully integrated business process between multiple applications on various servers between different business entities, BizTalk Server 2006 can support the interaction. Further, BizTalk Server 2006 enables the State to incorporate future integration strategies among its four agencies with great ease and fully supports current MITA initiatives.

BizTalk Server 2006 will handle integration and interface requirements with its ability to support various protocols and message formats. BizTalk was designed to work well with the emerging standard Web services and numerous applications already in place. Because the BizTalk engine must interface with other software, it relies on several adapters to make this possible. An adapter is an implementation of a communication mechanism, such as a particular protocol. BizTalk Server provides built-in adapters, and adapters have been created for many popular applications. The following table, Adapters Included With BizTalk Server 2006, is a list of the standard adapters supported by BizTalk Server 2006.

Adapters Included With BizTalk Server 2006

Adapter	Description	Supported Versions
ODBC Adapter for Oracle Database	Enables reading and writing information from and to an Oracle Server database	Oracle 8i (8.1.6.0), 9i (9.2.0.1), or 10g
Host Applications	Enables data exchange between BizTalk Server and IBM mainframe zSeries (CICS and IMS) and midrange iSeries (AS/400) server programs	IBM CICS TS for VSE/ESA V2R3 IBM CICS TS for z/OS V2.2, V2.3, V3.1 IBM IMS V8.1 with IMS Connect 2.1, 2.2 IBM OS/400 V5R2, OS/400 V5R3, i5/OS V5R4
IBM DB2	Enables reading and writing information from and to IBM mainframe DB2 for z/OS, IBM midrange DB2/400, and IBM DB2 Universal Database for open platforms (AIX, Linux, Solaris, and Windows)	IBM DB2 V7 and V8 for z/OS IBM OS/400 V5R2, OS/400 V5R3, i5/OS V5R4 IBM DB2 UDB for Windows, Linux, AIX, Solaris V7.2, V8.2, V9
Host Files	Enables data exchange between BizTalk Server and IBM mainframe zSeries VSAM datasets and IBM midrange iSeries AS/400 physical files	IBM DFM V1R4, V1R5, V1R6, V1R7 IBM OS/400 V5R2, OS/400 V5R3, i5/OS V5R4
WebSphere MQ	Enables exchange of messages between BizTalk Server and IBM WebSphere MQ using the WebSphere MQ Base Client	5.3 with Fix Pack 10 or higher and 6.0 with Fix Pack 1.1 or

Adapter	Description	Supported Versions
(Client Based)	(nontransactional) or WebSphere MQ Transaction Extended Client APIs	higher
WebSphere MQ	Enables exchange of messages between BizTalk Server and IBM WebSphere MQ	5.3 with Fix Pack 10 or higher and 6.0 with Fix Pack 1 or higher
MSMQ/MSMQT	Enables sending and receiving messages by using BizTalk Message Queuing (MSMQT), an implementation of the Microsoft Message Queue (MSMQ) protocol that sends and receives MSMQ messages to and from the Message Box database	2.0 and 3.0
Base EDI	Enables sending and receiving messages by using the American National Standards Institute (ANSI) X-12 and Electronic Data Interchange for Administration, Commerce, and Trade (EDIFACT) standards	Not applicable
FILE	Enables reading from and writing to files in the Microsoft Windows file system	Not applicable
FTP	Enables exchange of files between BizTalk Server and File Transfer Protocol (FTP) servers	Not applicable
HTTP	Enables sending and receiving information by using HTTP as the BizTalk Server 2004 engine exposes one or more Uniform Resource Locators (URLs) to enable other applications to send data to it so that it can use this adapter to send data to other URLs	Not applicable
POP3	Enables receiving messages from a Post Office Protocol 3 (POP3) mailbox into BizTalk Server by using the POP3 protocol	Not applicable
SMTP	Enables sending messages between BizTalk Server and an SMTP gateway by using SMTP	Not applicable
SOAP	Enables sending and receiving messages by using SOAP over HTTP enabling BizTalk Server to interact in a Web services world	Not applicable
SQL	Enables reading and writing information from and to a Microsoft SQL Server database	Not applicable
Web Services Enhancements (WSE) 2.0	Enables more secure Web services (WS-Security, WS-Trust, WS-SecureConversation, WS-SecurityPolicy, and WS-Policy) with BizTalk Server 2004 and 2006	WSE 2.0
Windows Communication Foundation (WCF)	Includes seven adapters and wizards that enable easy communication to and from BizTalk Server and Web services-based applications through the WCF, adapters that are available for BizTalk Server 2006 R2 only	.NET Framework 3.0
Windows SharePoint Services	Enables the exchange of XML and binary messages between BizTalk Server and SharePoint document libraries	Windows SharePoint Services 3.0

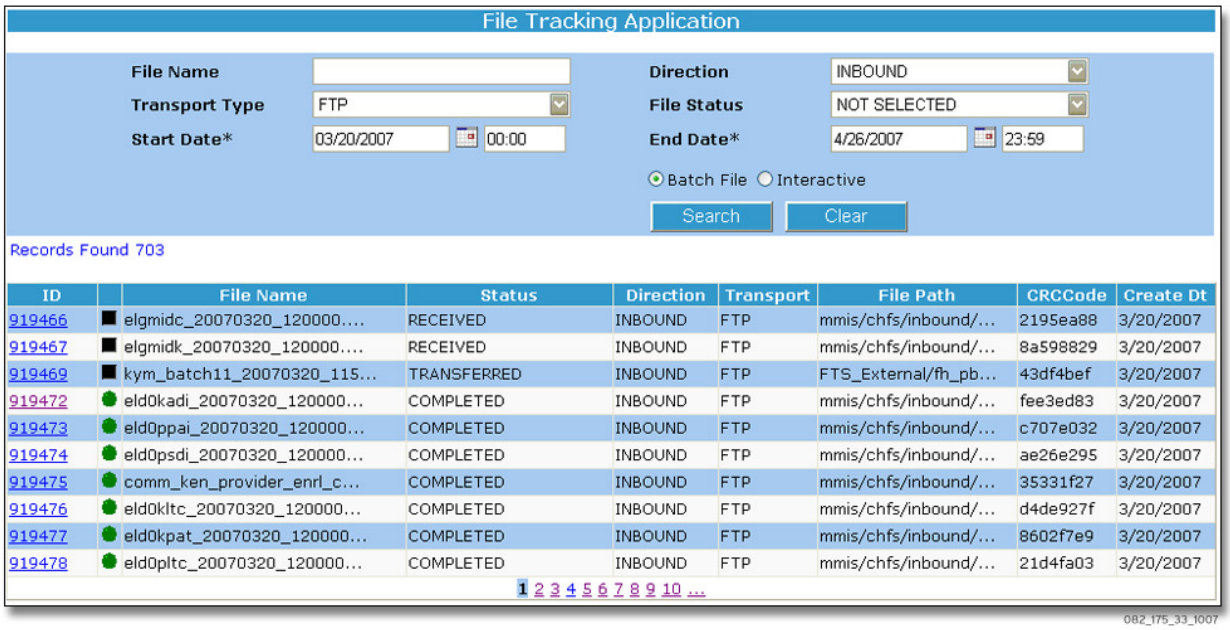
File Transfer Service

For those interfaces where custom point-to-point integration makes the most sense, EDS will use our File Transfer Service (FTS) to transfer files to and from various end-points of the Replacement MMIS and its trading partners. FTS can transfer files using different transport types such as FTP, Secure FTP using SSL (FTPS), and Uniform Naming Convention (UNC).

The FTS has several features that are explained in the following sections. These features can be configured from FTS's configuration file.

- **Tracking FTS—**While transferring files can track file information and file movement events and log them in an Oracle or Microsoft SQL Server database. These tracking records can be viewed using the FTS Web site.
- **Archiving—**If configured to archive, FTS can archive files to the North Carolina location given in its archive path configuration.
- **Duplicate check—**While transferring files, FTS calculates each file's hash value (CRC32) and stores it in a database. If configured, FTS can determine if the file is a duplicate file by checking its hash value against the already persisted hash values of older files.
- **Compress and uncompress files—**FTS can zip or unzip the file before it transfers it to its destination depending on the configured values in the configuration file.
- **File renaming—**FTS can rename a file while delivering to some preset formats. Renaming can include the unique System-Assigned Key (SAK), transport type, CRC32 value, system date, system time, or some constant string value.
- **Multiple file delivery—**FTS can deliver a copy of the file to as many as three different locations. FTS also can be configured to overwrite a file if the file with the same name already exists at the destination location, and is required by the process.
- **Exception handling—**If there is any technical or business exception while accessing or transferring file, the errors are tracked along with other tracking data and an e-mail is generated describing the issue and sent to configured e-mail address.
- **FTS user interface—**The FTS Web interface provides a detailed view into batch and interactive data transfers to, from, and within interChange. Data transmissions can be located and tracked using various data such as trading partner ID, file name, status, direction and date, as seen is the following exhibit, FTS File Tracking Interface.

FTS File Tracking Interface



The FTS Web interface provides a detailed view into batch and interactive data transfers.

The File Tracking Service application provides rapid identification of file transfer status, allowing the EDI team to isolate potential issues quickly. The dashboard indicators, in the second column of the table, provide a quick visual analysis of the status of every file transaction taking place, with drill-down capabilities to diagnose any issues. Thus, the operational monitoring of the overall MMIS and its many interfaces is made easier over the life of the contract.

Approach to Customization and Modifications

While most of the existing external interfaces will involve relatively straightforward file exchanges using either the FTS or the FTP/FTPS and file adapters within BizTalk Server 2006, EDS anticipates having an opportunity to work with select outside entities to define data exchanges that will be more sophisticated. EDS will look for opportunities to use a service-oriented approach within the Replacement MMIS solution. Interfaces that can be reused or shared within other areas of the Replacement MMIS solution are typically the best candidates for service enablement.

This data-sharing and exchange process permits computer-to-computer exchange of formatted business transactions between systems or business partners and makes it possible for organizations to generate, receive, and process large volumes of information swiftly with limited human intervention. This function enhances trading partner customer service, improves effectiveness.

Besides these communication and protocol adapters, BizTalk Server 2006 functions can be extended using accelerators. BizTalk Server accelerators

accelerate deployment and industry-specific implementation of integrated technology systems by delivering specific product enhancements, tools and utilities, detailed documentation, and industry-specific samples.

BizTalk Server 2006 also includes a Trading Partner Management (TPM) component. This component relies on a TPM database that stores information about trading relationships. Profiles, agreements, and addenda are stored in the TPM database. EDS can use the TPM component to configure them directly. This capability enables the State to establish and change new partner relationships without relying on developers. Using the common Business Activity Services interface, State staff members can create and change agreements with trading partners. Each agreement describes the relationship between two parties and contains information including the following:

- A profile for each of the partners, with each profile containing business information about the organization, such as a contact person and address, and technical information such as the protocol—which BizTalk Server 2006 adapter—that should be used to communicate with that partner
- The business process itself, implemented as one or more orchestrations, along with the role that each of the partners plays
- An addendum with parameters for the business process that controls the behavior of the partner coordination

EDS will implement audit procedures to track every inbound and outbound file and generate reports. These reports will contain information such as date and time of inbound or outbound file, type of activity, and identification of submitter or receiver of the file. These reports can be generated on demand and may be reviewed by any systems administrator.

EDS understands that no one solution can address the needs of each integration requirement. In those cases where BizTalk Server 2006 does not make sense, EDS will opt instead to create point-to-point interfaces. These interfaces will be created in a manner that allows them to be monitored and managed similarly to the way these activities are done using BizTalk Server 2006 and will be developed using industry-standard programming languages.

Enhancements to Functional Requirements

The EDS solution will provide the capability to use an integrated SOA environment that combines integration, messaging, and business process management capabilities into a single, unified framework. Interfaces developed within this framework have the unique benefit of invoking any combination of the capabilities within the SOA layer from anywhere within interChange. This framework meets many of the State's requirements and MITA. It is this unique synergy between the different components of the SOA environment that will help "future-proof" the EDS solution for the Replacement MMIS.

Response to Interfaces Requirement

The following table, EDS Response to Interfaces Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Interfaces Requirement

RFP No.	RFP Requirement	EDS Response
40.1.1.16	Provides capability to interface in a timely manner "To" and "From" all external interfaces, to include, without limitation, those listed in Appendix 40, Attachment H of this RFP	Met through COTS integration. We will meet this requirement with BizTalk Server 2006 and custom point-to-point code. This approach will provide the State with a low-cost integration framework that can be used to support the future integration strategies in support of the four divisions.

EDS has reviewed the list of existing or new interfaces provided by the State, and we have included recommendations for which interfaces will use Microsoft BizTalk 2006 for integration, and which will be done using direct point-to-point integration. The basis for our recommendations is made on the benefit derived by service-enabling interfaces versus the cost of doing so. Our experience of running the Legacy MMIS+ and managing the interfaces for DMA and DMH has helped shape our suggestions for this solution definition. The following table, MMIS Interfaces, is an updated version of Appendix 40, showing the technology solution that is included in our proposal for each of these interfaces.

MMIS Interfaces

MMIS Area	Input/ Output	Transfer Method	Entity	Interface
Transfer Method Legend A = Direct Point to Point Connected Network, State Agencies, File Transfer Service; B = FTP/S High-Volume Transfers, VPN Tunnel, File Transfer Service; C = FTP/S Low-Volume Transfers, VPN Tunnel, File Transfer Service; D = BizTalk/EDIFECS; E = Online Web Service; F = Interface deemed unnecessary; M = Other Media

To demonstrate our approach to managing interfaces, we provide a sample excerpt from the Kentucky MMIS Interoperability Plan following this page. As stated in RFP section 50.2 Technical Proposal Requirements, this sample does not count toward any page limit.

New KY MMIS Interoperability Plan

Kentucky MMIS Project

Cabinet for Health and Family Services
Kentucky Medicaid Office

March 31, 2006

SAMPLE EXCERPT

Cabinet for Health and Family Services Kentucky Medicaid Office		
Role:	Name:	
Author	Bill Ponder	
Reviewer	EDS Implementation leads, PMO	
EDS Management	Ricky Pope	
Client	Commissioner Shannon Turner, J.D. Deputy Commissioner Jan Howell, J.D. Lorna S. Jones Sandeep Kapoor	
DELIVERABLE TITLE: New KY MMIS Interoperability Plan	DATE SUBMITTED: 3/31/2006	
LOCATION and FILE NAME: New_KY_MMIS_InterOperability_Plan.doc		AUTHORING TOOL: MSWord2002

Document Change Log

Version	Changed Date	Changed By	Reason
1.0	3/6/2006	Bill Ponder	Creation of document – 1st Draft.
2.0	3/27/2006	Bill Ponder	Added record layouts for items not yet designed when 1st Draft was created.
3.0	3/31/2006	Bill Ponder	Implemented changes from 3/27 review

Table of Contents

1 Introduction

This document is the interChange New KY MMIS Interoperability Plan.

1.1 Purpose

The Interoperability Plan complements the Project Workbook (PWB), technical design by providing details on external interfaces, within each interChange functional area.

1.2 Scope

The Interoperability Plan is intended to reflect every external interface to be incorporated into interChange and the design of that interface.

2 Interfaces by Functional Area

This section explains the interfaces within each interChange functional area. The following hierarchy is utilized for each functional area.

2.X - Functional Area

2.X.1 - Functional Area Interface Diagram

2.X.2 - Functional Area Entity List

2.X.2.X - Entity Interface List

2.X.2.X.1 - Interface

2.X.2.X.1.1 - Transition Technical Design

2.X.2.X.1.2 - New KYMMIS Technical Design

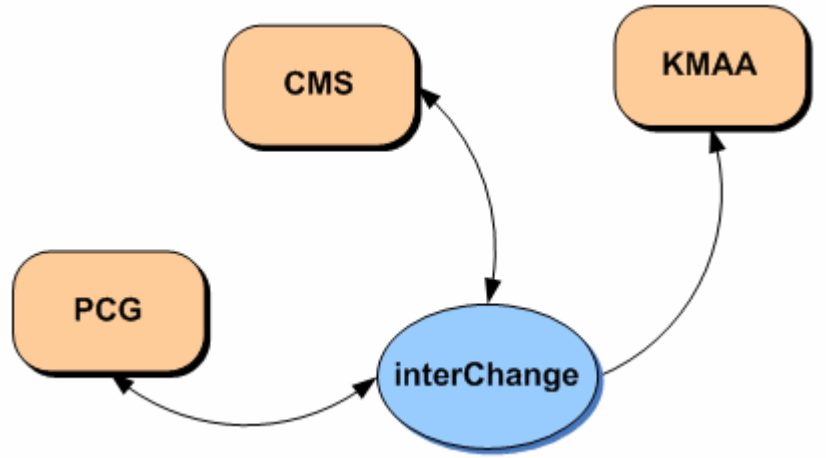
2.X.2.X.1.3 - Transition/New KYMMIS Gap Analysis

2.1 Buy-in Data Functional Area Interfaces

2.1.1 Buy-in Data Interface Diagram

A context diagram for entities within the functional area is shown

below.



2.1.2 Buy-in Data Entities

Name	Description
CMS	Centers for Medicare and Medicaid Services
KMAA	First Health Kentucky Medicaid Administrative Agent
PCG	Public Consulting Group

2.1.2.1 CMS Input

Name	Interface Type	Description	Subsystems Impacted	System Entry Point	Data Owner
Buy-in Billing	File	The Buy-in Billing Files come from CMS. They are sent to the Commonwealth Data Center where they are forwarded to PCG. PCG scrubs the file and sends it to interChange.	Buy-in	interChange	CMS
Buy-in Part D	File	The Buy-in Part D file from CMS is routed to interChange from the Commonwealth Data Center.	Buy-in	interChange	CMS

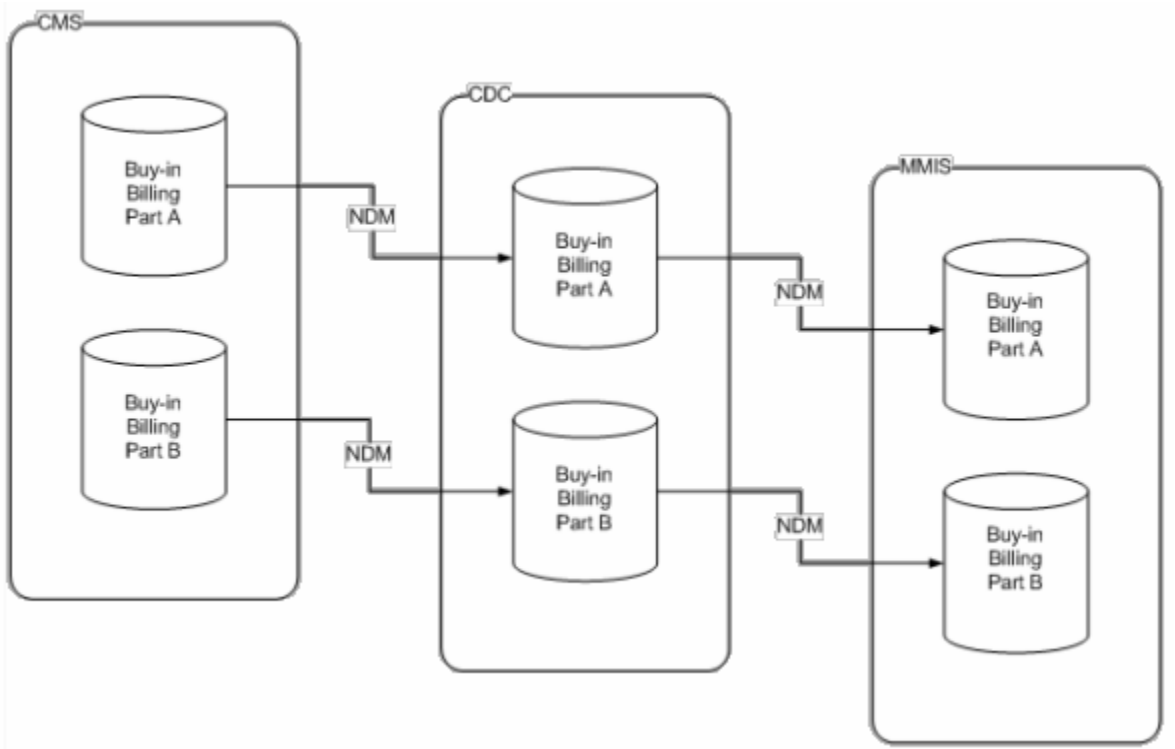
Name	Source System	Source Contact Name	Source Contact Phone Number	Source Contact Email Address	EDS Contact Name	EDS Contact Phone Number	EDS Contact Email Address	Escalation Procedure
Buy-in Billing	CMS through Commonwealth Data Center	Greg Whitt	(502) 564-0105 ext. 10234	Greg.Whitt@ky.gov	Bill Ponder	(502) 209-3145	Bill.Ponder@eds.com	During the day contact Cliff Robey at (502) 564-5183. After hours call (502) 564-7946
Buy-in Part D	CMS through Commonwealth Data Center	Greg Whitt	(502) 564-0105 ext. 10234	Greg.Whitt@ky.gov	Bill Ponder	(502) 209-3145	Bill.Ponder@eds.com	During the day contact Cliff Robey at (502) 564-5183. After hours call (502) 564-7946

Name	Source System	Transaction Type	Transmission Type	Frequency	Record Format	Record length	Batch or Real-time	Peak Volume	Archive Requirements	Allowable Latency	Tested	Verified
Buy-in Billing	CMS through Commonwealth Data Center	Flat file	FTP	Monthly	Fixed width	160	Batch		1 year			
Buy-in Part D	CMS through Commonwealth Data Center	Flat file	FTP	Monthly	Fixed width	180	Batch		1 year			

2.1.2.1.1 Buy-in Billing

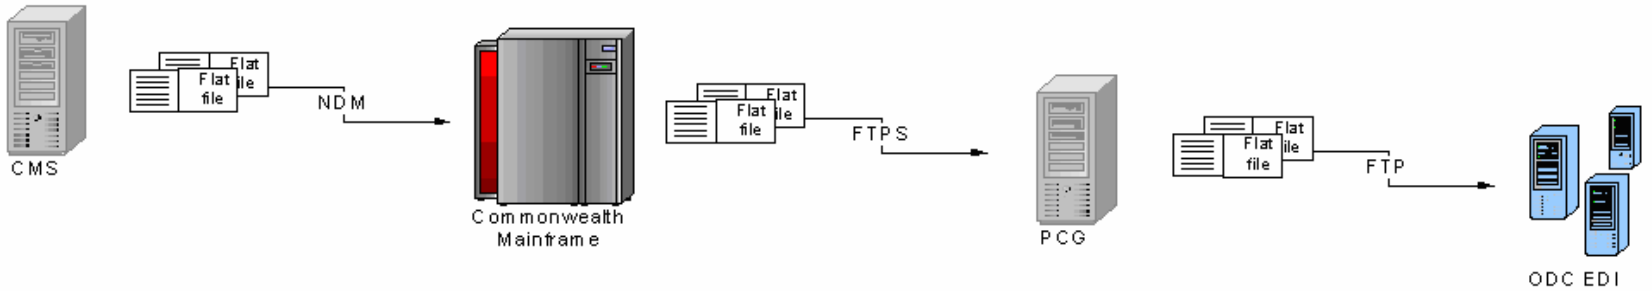
2.1.2.1.1.1 Transition Technical Design

The Buy-in Billing files for Part A and Part B come from CMS. They are delivered via NDM to the Commonwealth Data Center where they are transmitted to the MMIS.



2.1.2.1.1.2 New KYMMIS Technical Design

The Buy-in Billing files for Part A and Part B come from CMS. They are delivered to the Commonwealth Data Center and then re-transmitted to PCG. PCG will cleanse this data and then send it to interChange.



Buy-in Part A Billing file structure

FIELD NAME	TYPE	START	END	LENGTH
Medicare Claim Number	Alphanumeric	1	12	12
Surname	Alphanumeric	13	36	24
Given Name	Alphanumeric	37	51	15
Middle Initial	Alphanumeric	52	52	1
Sex Code	Alphanumeric	53	53	1
Date of Birth	Date (CCYYMMDD)	54	61	8
Social Security Number	Numeric	62	70	9
Reduced Part A Indicator	Alphanumeric	71	71	1
Part A Premium Surcharge Indicator	Alphanumeric	72	72	1
Agency Code	Alphanumeric	73	75	3
Record Identification Code (“B”)	Alphanumeric	76	76	1
Transaction Code	Alphanumeric	77	80	4
Transaction Sub-code	Alphanumeric	81	81	1
Billing Period Start Date	Date (CCYYMM)	82	87	6
Billing Period Stop Date	Date (CCYYMM)	88	93	6
Premium Amount Due or Refund	Numeric (2 dec plcs)	94	101	8
Bill Date	Date (CCYYMM)	102	107	6
Current Monthly Premium Rate	Numeric (2 dec plcs)	108	113	6
Filler	Alphanumeric	114	116	3
Credit Indicator	Alphanumeric	117	117	1
Filler	Alphanumeric	118	126	9
Zip Code of Residence	Alphanumeric	127	135	9
County Code of Residence	Alphanumeric	136	138	3
Filler	Alphanumeric	139	140	2
Agency Client Identification Number	Alphanumeric	141	160	20

Buy-in Part B Billing file structure

FIELD NAME	TYPE	START	END	LENGTH
Medicare Claim Number	Alphanumeric	1	12	12
Surname	Alphanumeric	13	36	24
Given Name	Alphanumeric	37	51	15
Middle Initial	Alphanumeric	52	52	1
Sex Code	Alphanumeric	53	53	1
Date of Birth	Date (CCYYMMDD)	54	61	8
Social Security Number	Numeric	62	70	9
Buy-in Eligibility Code	Alphanumeric	71	72	2
Agency Code	Alphanumeric	73	75	3
Record Identification Code (“B”)	Alphanumeric	76	76	1
Transaction Code	Alphanumeric	77	80	4
Transaction Sub-code	Alphanumeric	81	81	1
Billing Period Start Date	Date (CCYYMM)	82	87	6
Billing Period Stop Date	Date (CCYYMM)	88	93	6
Premium Amount Due or Refund	Numeric (2 dec plcs)	94	101	8
Bill Date	Date (CCYYMM)	102	107	6
Current Monthly Premium Rate	Numeric (2 dec plcs)	108	113	6
Reduced Monthly Premium Amount	Numeric (2 dec plcs)	114	119	6
Credit Indicator	Alphanumeric	123	123	1
Filler	Alphanumeric	124	126	3
Zip Code of Residence	Alphanumeric	127	135	9
County Code of Residence	Alphanumeric	136	138	3
Filler	Alphanumeric	139	140	2
Agency Client Identification Number	Alphanumeric	141	160	20

2.1.2.1.1.3 Transition/New KYMMIS Gap Analysis

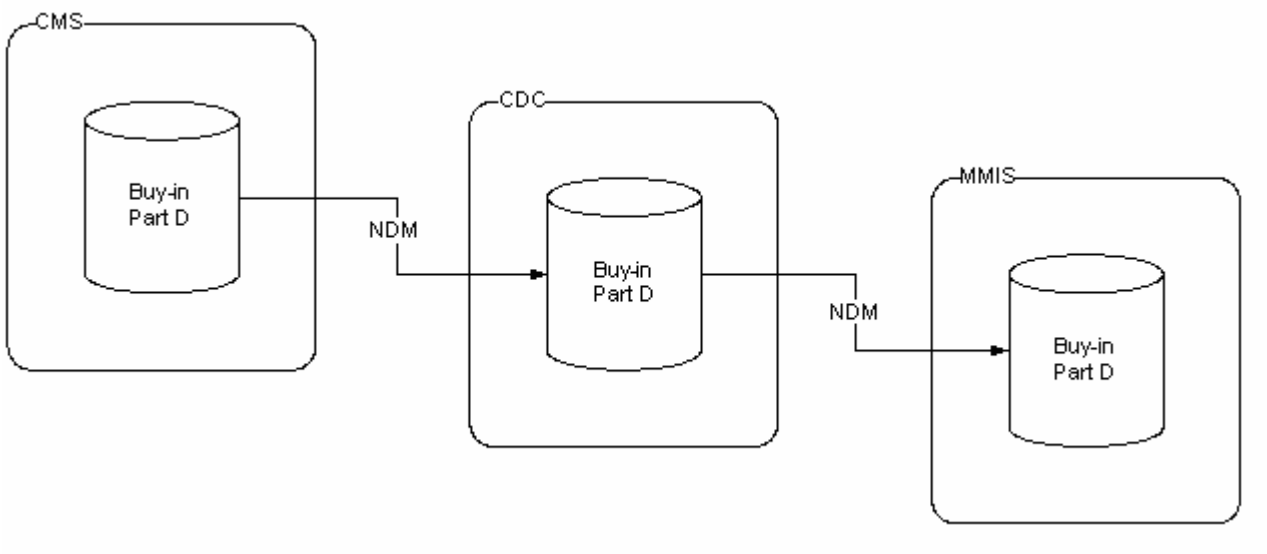
The Buy-in billing files originate from CMS. The Commonwealth Data Center forwards the files to PCG where they are processed. New billing files are then sent to interChange from PCG. The MMIS Transition system receives the files from the Commonwealth Data Center directly to the MMIS Mainframe via NDM. For interChange the files will get to interChange by traveling from the Commonwealth Data Center to PCG systems and then FTP'd to the Orlando Data Center.

File transfer that is currently NDM will be converted to secure FTP (SSL).

2.1.2.1.2 Buy-in Part D

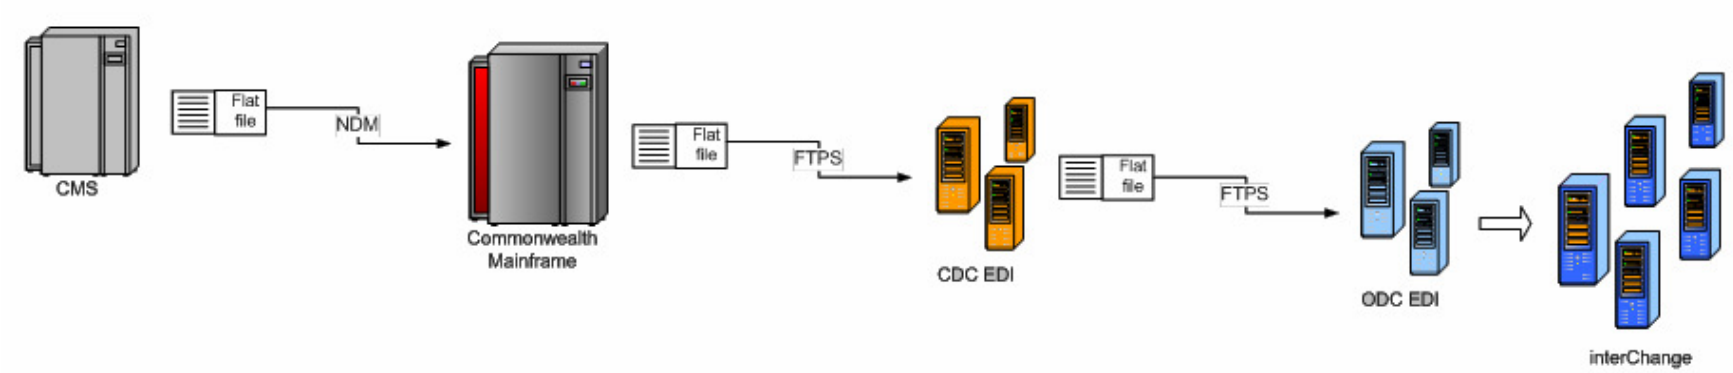
2.1.2.1.2.1 Transition Technical Design

CMS sends the Buy-in Part D file to MMIS through the Commonwealth Data Center where it is forwarded to the MMIS.



2.1.2.1.2.2 New KYMMIS Technical Design

CMS sends the Buy-in Part D file to interChange through the Commonwealth Data Center using the interChange (ODC) EDI environment and Commonwealth Data Center EDI environment.



Buy-in Part D Header Record

FIELD NAME	TYPE	START	END	LENGTH
Record ID (“MMA”)	Alphanumeric	1	3	3
State Code	Alphanumeric	4	5	2
Create Date	Date (MMCCYY)	6	11	6
Filler	Alphanumeric	12	180	169

Buy-in Part D Detail Record

FIELD NAME	TYPE	START	END	LENGTH
Record ID (“DET”)	Alphanumeric	1	3	3
Eligibility Date	Alphanumeric	4	9	6
Eligibility Status	Alphanumeric	10	10	1
HIC Number	Alphanumeric	11	25	15
RRB Indicator	Alphanumeric	26	26	1
Social Security Number	Alphanumeric	27	35	9
SMA Identifier	Date (CCYYMMDD)	36	55	20
Given Name	Alphanumeric	56	67	12
Surname	Alphanumeric	68	87	20
Middle Name	Alphanumeric	88	102	15
Name Suffix	Alphanumeric	103	106	4
Sex	Alphanumeric	107	107	1
Date of Birth	Date (CCYYMM)	108	115	8
Dual Status Code	Numeric	116	117	2
FPL Percent	Numeric	118	118	1
Drug Coverage Indicator	Numeric	119	119	1
Inst Status	Alphanumeric	120	120	1
Subsidy Approval Indicator	Alphanumeric	121	121	1
Subsidy Approval Date	Date (MMDDCCYY)	122	129	8

FIELD NAME	TYPE	START	END	LENGTH
Subsidy Start Date	Date (MMDDCCYY)	130	137	8
Subsidy Stop Date	Date (MMDDCCYY)	138	145	8
Part D FPL Percent	Numeric	146	148	3
Subsidy Level	Numeric	149	151	3
Income Detail Indicator	Alphanumeric	152	152	1
Resource Level	Alphanumeric	153	153	1
Denial Basis	Alphanumeric	154	154	1
Appeal Result	Alphanumeric	155	155	1
Change Determination	Alphanumeric	156	156	1
Cancel Determination	Alphanumeric	157	157	1
Filler	Alphanumeric	158	180	23

Buy-in Part D Trailer Record

FIELD NAME	TYPE	START	END	LENGTH
Record ID (“TRL”)	Alphanumeric	1	3	3
Record Count	Numeric	4	11	8
State Code	Alphanumeric	12	13	2
Create Date	Date (MMCCYY)	14	19	6
Filler	Alphanumeric	20	180	161

2.1.2.1.2.3 Transition/New KYMMIS Gap Analysis

CMS sends the Buy-in Part D file to interChange through Commonwealth Data Center using the interChange (ODC) EDI environment and Commonwealth Data Center EDI environment. The change from transition to interChange is the introduction of the EDI environment to facilitate file transfer.

File transfer that is currently NDM will be converted to secure FTP (SSL).

2.1.2.2 CMS Output

Name	Interface Type	Description	Subsystems Impacted	System Entry Point	Data Owner
Buy-in Input Data	File	The Buy-in Input file is sent to CMS through the Commonwealth Data Center. The original input file is created by PCG and sent to interChange through Commonwealth Data Center. The file is used to update interChange Buy-in Data, then forwarded to CMS.	Buy-in	CMS	PCG
EDB Finder	File	The Eligibility Database finder file is created and sent to CMS through the Commonwealth Data Center	Buy-in	CMS	interChange

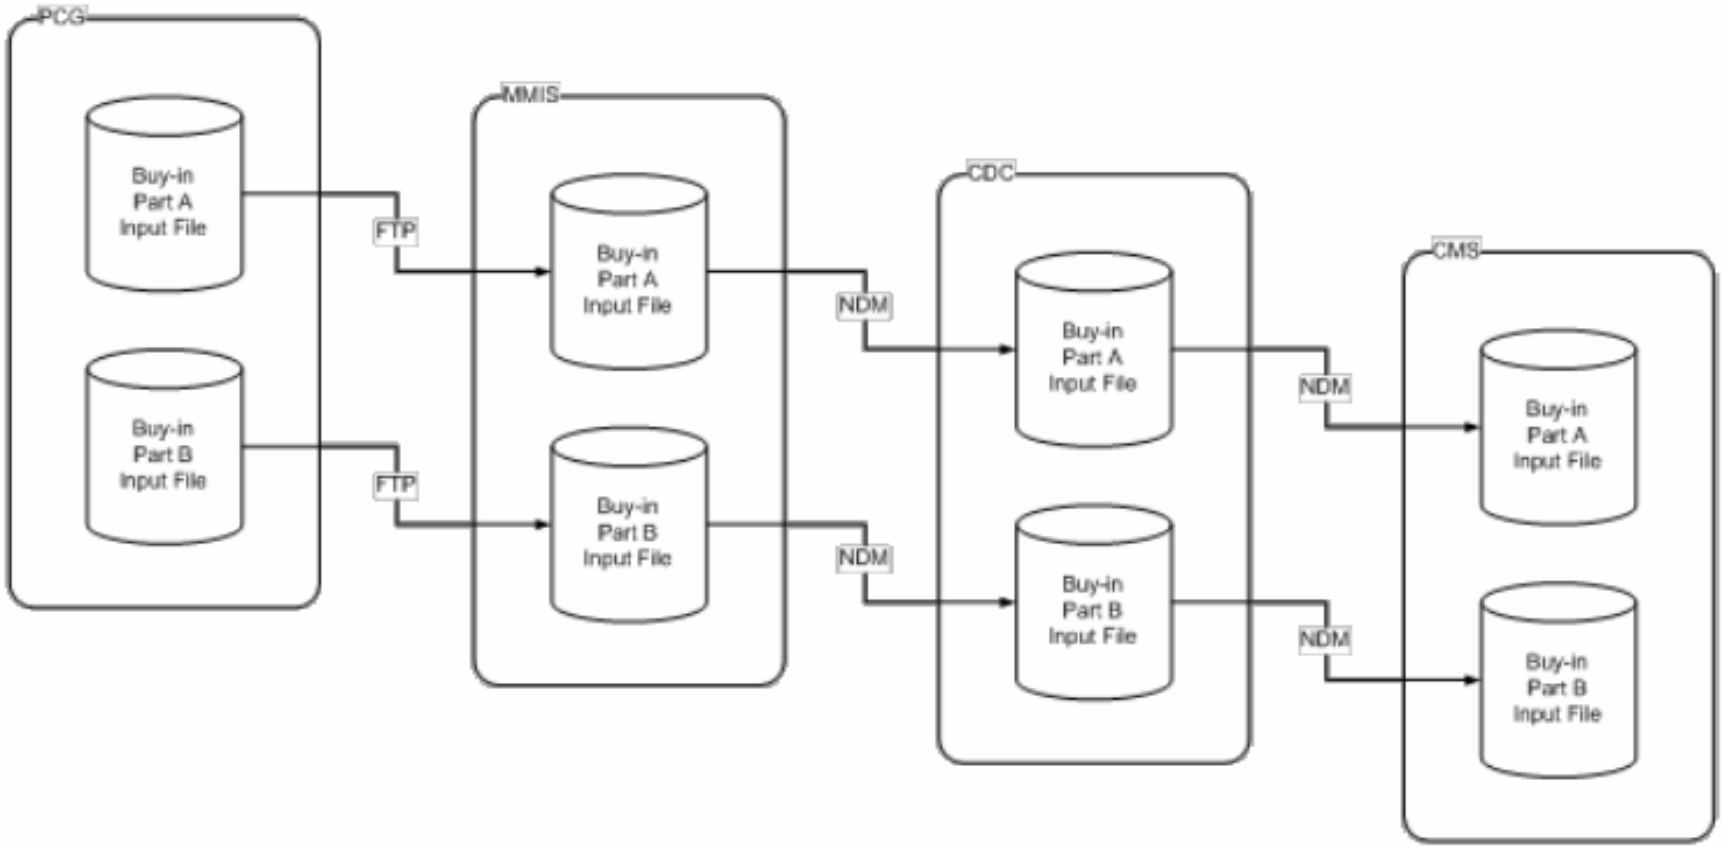
Name	Destination System	Destination Contact Name	Destination Contact Phone Number	Destination Contact Email Address	EDS Contact Name	EDS Contact Phone Number	EDS Contact Email Address	Escalation Procedure
Buy-in Input Data	CMS through Commonwealth Data Center	Greg Whitt	(502) 564-0105 ext. 10234	Greg.Whitt@ky.gov	Bill Ponder	(502) 209-3145	Bill.Ponder@eds.com	During the day contact Cliff Robey at (502) 564-5183. After hours call (502) 564-7946
EDB Finder	CMS through Commonwealth Data Center	Greg Whitt	(502) 564-0105 ext. 10234	Greg.Whitt@ky.gov	Bill Ponder	(502) 209-3145	Bill.Ponder@eds.com	During the day contact Cliff Robey at (502) 564-5183. After hours call (502) 564-7946

Name	Destination System	Transaction Type	Transmission Type	Frequency	Record Format	Record length	Batch or Real-time	Peak Volume	Archive Requirements	Allowable Latency	Tested	Verified
Buy-in Input Data	CMS through Commonwealth Data Center	Flat file	FTP	Monthly	Fixed width	120	Batch		1 year			
EDB Finder	CMS through Commonwealth Data Center	Flat file	FTP	Monthly	Fixed width	80	Batch		1 year			

2.1.2.2.1 Buy-in Input Data

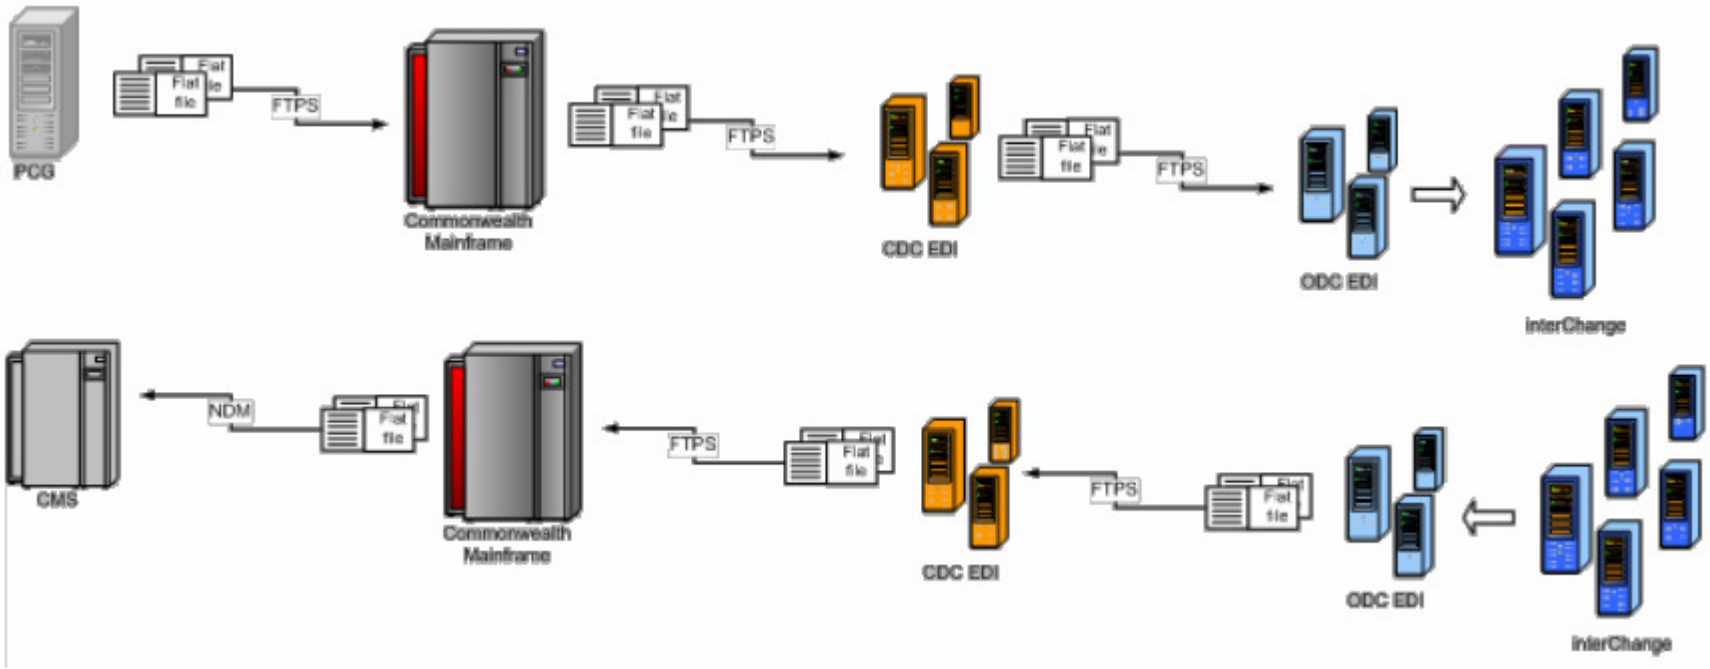
2.1.2.2.1.1 Transition Technical Design

The Buy-in Input Part A file and Part B file is created by PCG and sent to the MMIS. On the MMIS, the buy-in master is updated and reports are produced. Then the files are sent to CMS through the Commonwealth Data Center.



2.1.2.2.1.2 New KYMMIS Technical Design

The Buy-in Input Part A and Input Part B files are created by PCG and sent to the interChange through Commonwealth Data Center including the Commonwealth Data Center EDI Environment. The interChange (ODC) EDI Environment is the point of entry into interChange. In interChange the buy-in tables are updated and reports are produced. Then the file is sent to CMS through the Commonwealth Data Center.



Buy-in Input File structure

FIELD NAME	TYPE	START	END	LENGTH
Medicare Claim Number	Alphanumeric	1	12	12
Surname	Alphanumeric	13	36	24
Given Name	Alphanumeric	37	51	15
Middle Initial	Alphanumeric	52	52	1
Sex Code	Alphanumeric	53	53	1
Date of Birth	Date (CCYYMMDD)	54	61	8
Social Security Number	Alphanumeric	62	70	9
Buy-in Eligibility Code	Alphanumeric	71	72	2
Agency Code	Alphanumeric	73	75	3
Transaction Code	Alphanumeric	76	77	2
Filler	Alphanumeric	78	82	5
Transaction Effective Date	Date (CCYYMM)	83	88	6
Code 75 Stop Date	Date (CCYYMM)	89	94	6
Filler	Alphanumeric	95	100	6
Agency Client Identification Number	Alphanumeric	101	120	20

2.1.2.2.1.3 Transition/New KYMMIS Gap Analysis

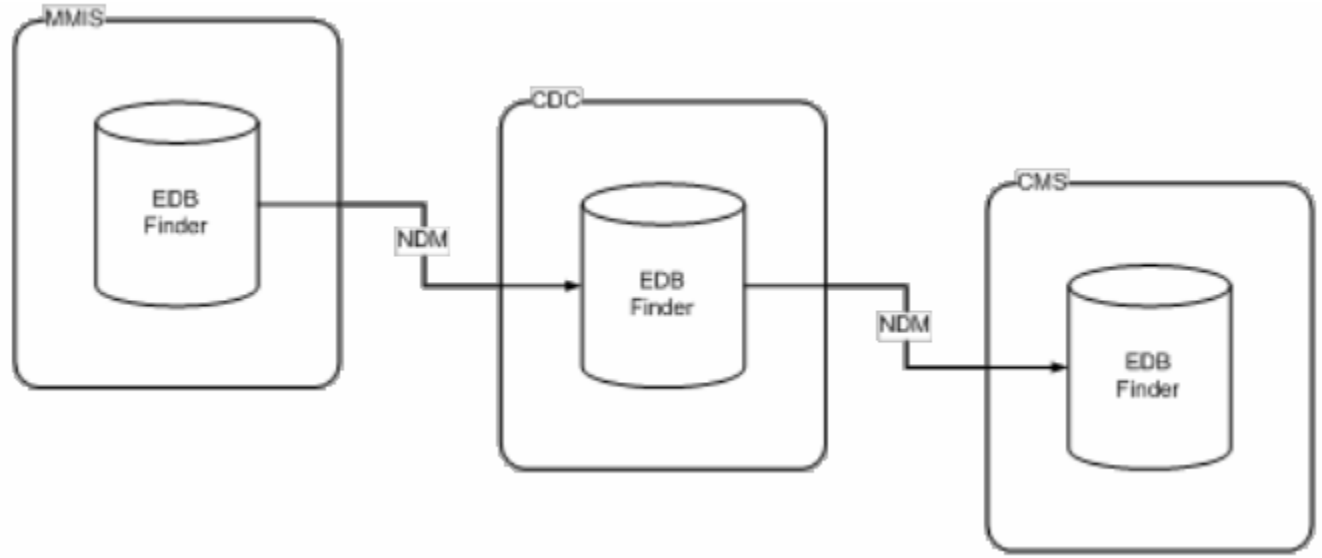
The Buy-in Input Files are created by PCG. They are routed to interChange for table updates and then routed to CMS through the Commonwealth Data Center. The transition system receives the Input file directly from the Commonwealth Data Center. For interChange, the files will get to interChange by traveling from the Commonwealth Data Center to the Commonwealth Data Center EDI environment to the Orlando Data Center.

File transfer that is currently NDM will be converted to secure FTP (SSL).

2.1.2.2.2 EDB Finder

2.1.2.2.2.1 Transition Technical Design

The EDB Finder file is created from the MMIS Eligibility Master and then sent to the Commonwealth Data Center where Commonwealth Data Center send it to CMS.



2.1.2.2.2.2 New KYMMIS Technical Design

InterChange sends the EDB (Eligibility Data Base) Finder file to CMS through the Commonwealth Data Center using the interChange (ODC) EDI environment and Commonwealth Data Center EDI environment.

EDB file structure

FIELD NAME	TYPE	START	END	LENGTH
Social Security Number	Alphanumeric	1	9	9
State Identifier	Alphanumeric	10	17	8
CMS Identifier	Alphanumeric	18	42	25
Date of Birth	Date (CCYYMMDD)	43	50	8
Sex Code	Numeric	51	51	1
Given Name	Alphanumeric	52	57	6
Surname	Alphanumeric	58	63	6
Create Date	Date (YYMM)	64	69	4
Request Source	Alphanumeric	70	73	6
Serial Number	Alphanumeric	74	80	7

2.1.2.2.2.3 Transition/New KYMMIS Gap Analysis

InterChange sends the EDB (Eligibility Data Base) Finder file to CMS through the Commonwealth Data Center using the interChange (ODC) EDI environment and Commonwealth Data Center EDI environment. The change from transition to interChange is the introduction of the EDI environment to facilitate file transfer.

File transfer that is currently NDM will be converted to secure FTP (SSL).

2.1.2.3 First Health KMAA Output

Name	Interface Type	Description	Subsystems Impacted	System Entry Point	Data Owner
Buy-in Updates	File	Buy-in Updates are sent to First Health KMAA to reflect any Buy-in Data changes in interChange.	Buy-in	FIQM	InterChange

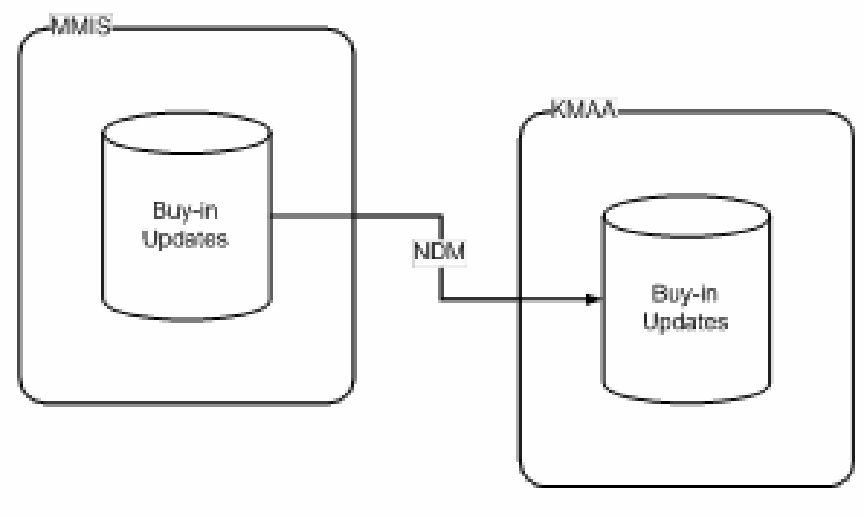
Name	Destination System	Destination Contact Name	Destination Contact Phone Number	Destination Contact Email Address	EDS Contact Name	EDS Contact Phone Number	EDS Contact Email Address	Escalation Procedure
Buy-in Updates	FIQM	Bob Gaston	(804) 527-5745	BGaston@fhsc.com	Bill Ponder	(502) 209-3145	Bill.Ponder@eds.com	Contact Bob Gaston, if unreachable, call 800-453-8780, option 3, category – applications, type – FIQM, item – Data Loads/Extracts

Name	Destination System	Transaction Type	Transmission Type	Frequency	Record Format	Record length	Batch or Real-time	Peak Volume	Archive Requirements	Allowable Latency	Tested	Verified
Buy-in Updates	FIQM	Flat file	FTP	Daily	Fixed width	120	Batch		1 month			

2.1.2.3.1 Buy-in Updates

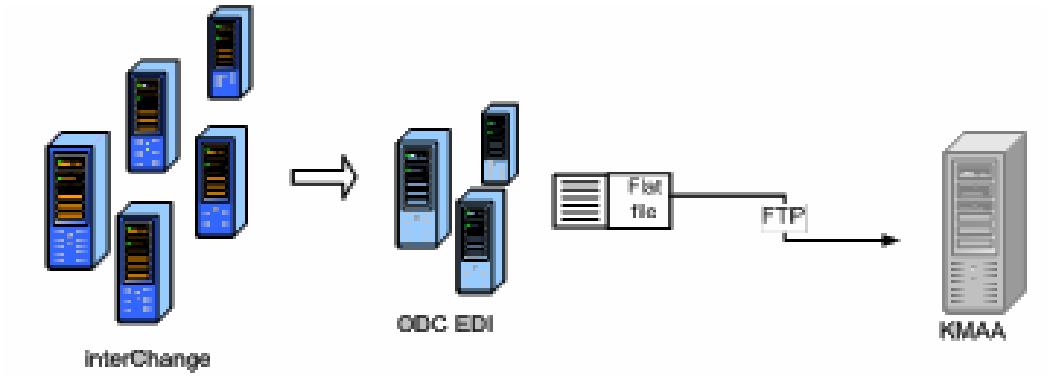
2.1.2.3.1.1 Transition Technical Design

Buy-in Master file adds and changes are sent to KMAA.



2.1.2.3.1.2 New KYMMIS Technical Design

Buy-in Data adds and changes are sent to KMAA.



Buy-in Update Header Record

FIELD NAME	TYPE	START	END	LENGTH
Record Type (“00”)	Numeric	1	2	2

2.1.2.3.1.3 Transition/New KYMMIS Gap Analysis

InterChange sends Buy-in Updates to First Health KMAA. The change from transition to interChange is the introduction of the EDI environment to facilitate file transfer.

.

2.1.2.4 PCG Input

Name	Interface Type	Description	Subsystems Impacted	System Entry Point	Data Owner
Medicare Entitlement	File	Medicare Entitlement Data is sent to interChange from PCG through Commonwealth Data Center at Commonwealth Data Center. It is used to update interChange Buy-in Data. Two update reports are created and sent directly to PCG.	Buy-in	interChange	PCG

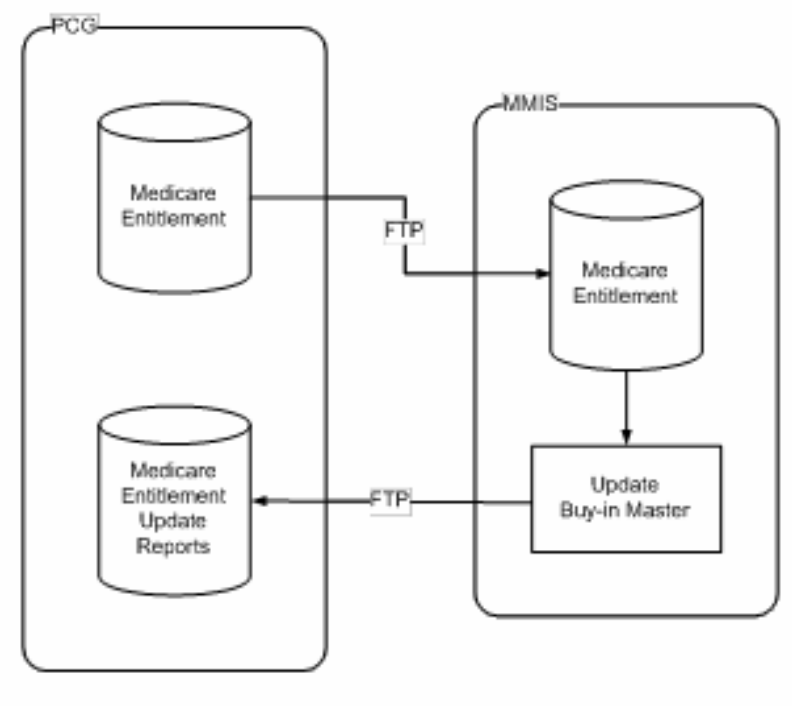
Name	Source System	Source Contact Name	Source Contact Phone Number	Source Contact Email Address	EDS Contact Name	EDS Contact Phone Number	EDS Contact Email Address	Escalation Procedure
Medicare Entitlement	PCG	Chris Sallee	(704) 372-9384 ext 8117	CSallee@pcgus.com	Bill Ponder	(502) 209-3145	Bill.Ponder@eds.com	Contact Chris Sallee. After hours, dial the PCG Help Desk, (866) 857-0089

Name	Source System	Transaction Type	Transmission Type	Frequency	Record Format	Record length	Batch or Real-time	Peak Volume	Archive Requirements	Allowable Latency	Tested	Verified
Medicare Entitlement	PCG	Flat file	FTP	Request	Fixed width	351	Batch		Last 6 files			

2.1.2.4.1 Medicare Entitlement

2.1.2.4.1.1 Transition Technical Design

The Medicare Entitlement file is sent by PCG to the MMIS for processing. The Entitlement Update process creates 2 reports that are sent to PCG using FTP.



2.1.2.4.1.2 New KYMMIS Technical Design

The Medicare Entitlement file is sent by PCG to interChange for processing. The Entitlement Update process creates 2 reports that are sent to PCG using FTP.

2.1.2.4.1.3 Transition/New KYMMIS Gap Analysis

The Medicare Entitlement file is sent by PCG to the Commonwealth Data Center where Commonwealth Data Center forward it to interChange for processing. The Entitlement Update process creates 2 reports that are sent to PCG using FTP. The only change from transition to interChange is the EDI environments utilized to facilitate file transfer.

File transfer that is currently NDM will be converted to secure FTP (SSL).

Security (40.1.1.17 to 40.1.1.18)

The protection of healthcare data, applications, and the associated standard controls of a design and development effort are critical for an implementation of an MMIS. The subject of security directly relates to the risk of a project and the team's experience in successful deliveries. The EDS team's application and control processes are repeatable and proven based on multiple successful implementations. Each aspect of the project and program are thought through, and appropriate controls are instituted to meet security demands.

At the heart of the application security is interChange Single Sign-On, a full-featured user provisioning and single sign-on solution that includes identity management, delegated administration, delegated access, identity federation, application access control, password management, profile management, and compliance management. This system is based on Microsoft Active Directory and Active Directory Federated Services (ADFS), Security Assertion Markup Language (SAML), and Service Provisioning Markup Language (SPML) technologies to provide industry-standard mechanisms for interfacing between disparate systems.

interChange Single Sign-On will interface with the North Carolina Identity Enterprise Service (NCID) through the industry-standard SPML, which exists for the integration of separate provisioning systems. SPML was adopted in April 2006 by the Organization for the Advancement of Structured Information Standards (OASIS), which represents more than 600 organizations and individual members in 100 countries, including Oracle and Novell, the underlying software providers of NCID.

Additional information about interChange Single Sign-On and security can be found in proposal section 50.2.8 Section H—Security Approach.

The following subsections describe the interChange Single Sign-On functions.

Identity Self-Service

interChange Single Sign-On provides a high degree of self-service identity management for users. The self-service capabilities are crucial for a security system that must serve four divisions and the 57,000 providers accessing the secure Web portal. The self-service features are different for the various user types, as described in the following list:

Providers

When a provider is added to the Replacement MMIS through the provider enrollment and credentialing process, interChange Single Sign-On will submit an SPML-formatted lookup request for the provider number to NCID. If a response is received from NCID with the information for that provider, the information will be added to interChange Single Sign-On, and an SPML-formatted modification request will be sent to NCID with any new information about the

provider. If no response or a negative response is received from NCID, interChange Single Sign-On will generate a PIN for the provider. The system will generate a letter to the provider with the provider PIN so the provider can go to interChange Single Sign-On and create a user ID and password. The provider will receive a default set of roles based on his or her provider type, and interChange Single Sign-On will then send an SPML-formatted add request to NCID.

Billing Agents

A billing agent is the default user type for anyone who registers over the Internet for an ID. An ID of billing agent has restricted permissions. When a billing agent ID is created, interChange Single Sign-On will ask whether the user already has a North Carolina user ID. If so, interChange Single Sign-On will collect the appropriate data from the user and submit a lookup request to NCID for the appropriate information. If NCID responds with a match, the system will use that information to create an ID in interChange Single Sign-On and send an SPML-formatted modification request to NCID. If the lookup fails for any reason, interChange Single Sign-On will create the billing agent's ID and send an SPML-formatted add transaction to NCID. A billing agent's permissions are limited to updating their profile information, adding agents, or submitting a provider application.

Recipients

The addition of a recipient is similar to the addition of a provider. The main difference is that a recipient enrollment transaction starts the process. interChange Single Sign-On will interface with NCID for recipient identities in the same way it interfaces for providers.

Internal Users

When a State user, EDS user, or other internal user requests a new ID in interChange Single Sign-On, an ID will be created and interChange Single Sign-On will send an SPML-formatted lookup request to NCID. If a response is received from NCID with the information for that user, the information will be added to interChange Single Sign-On and an SPML-formatted modification request will be sent to NCID with any new information about the user. If no response or a negative response is received from NCID, interChange Single Sign-On will add the user and send an SPML-formatted add request to NCID.

Internal users also can submit their own authorization requests through interChange Single Sign-On for access to specific applications and permissions within that application. These requests will go through approval workflows based on the user's department, organization, payer, and the application access being requested. After a request has been approved, the user will be automatically granted access and interChange Single Sign-On will send an SPML-formatted modification request to NCID.

Identity Administration

The Medicaid Identity Management System provides for administration of user accounts by a trained call center. Call center individuals can use the identity management functions to do the following:

- Determine the permission sets of an individual for troubleshooting access to a particular system
- Send password-reset e-mails to users
- Lock a user ID
- Change an individual's profile information
- Assist with delegation of authority questions

Identity administration also includes the authentication and authorization of an individual.

Identity Migration

User IDs can be migrated from existing systems into interChange Single Sign-On. This migration can occur through bulk-loads of IDs from the existing system or through a variety of communication processes. The originating system must be able to provide the critical security items for loading into interChange Single Sign-On, including user ID, permissions, password, and associated demographic information such as name, address, and telephone number.

Delegated Administration

Many facets of administration can be delegated to the responsible organizations or individuals. Organization administrators can be delegated the authority to set up departments within their organizations and give or deny access to applications or roles within the application to the department manager and employees. Organization administrators can further delegate access to any or all of the organization administration functions to other individuals.

Administration includes the administration of users. An individual can be granted the authority to administer the users within a particular organization or across the entire system. Administration of a user includes the ability to add or remove access to applications or application roles. A user's administrator can also administer the delegation of that user's rights.

Administrative changes from interChange Single Sign-On will be communicated to NCID through SPML-formatted transactions.

Delegated Access

interChange Single Sign-On will allow external users (providers, billing agents, and recipients) to delegate their access to another user. A provider can allow one billing agent to submit or enter his or her claims and another billing agent to

submit or enter his or her prior approvals (PAs). Billing agents and providers can also create agents who are under the complete control of the organization that created them. An agent under the control of a billing agent can have his or her ID locked or roles changed by the billing agent at any time.

When delegated access occurs from one user to another, interChange Single Sign-On will send an SPML-formatted modification transaction to NCID.

Identity Federation

The SAML token generated by interChange Single Sign-On ADFS servers can be used by any organization that can verify the digital signature on the token. In previous implementations, interChange Single Sign-On has provided the authentication and authorization services for applications owned, managed, and hosted by a variety of state business partners with a varied set of technologies.

Application Access Control

interChange Single Sign-On provides a single point of entry for all users. After a user authenticates against the ADFS servers, the user will be presented with a list of applications to access. The applications that could be present on a user's Access Control page include document management, iTRACE, interChange, DSS, Provider Portal, Recipient Portal, or other system identified in this proposal as under the control of interChange Single Sign-On. When a user selects an application from this menu, the event is recorded in an audit log for future reporting. Using this information, we can report when a user has accessed or attempted to access a specific application.

Password Management

interChange Single Sign-On will manage the length and structure of the user-assigned password to conform to State standards. Passwords will be exchanged between interChange Single Sign-On and NCID whenever users update their password in either system. The exchange will occur in an SPML-formatted modification request.

Profile Management

interChange Single Sign-On maintains a base profile for each user with the user's name, address, and telephone number. interChange Single Sign-On also will maintain the NCID-generated user ID (hash value) to link the two systems. Other data will be specific to a particular user type. For providers, we will keep their Medicaid provider IDs, National Provider Identifiers, and taxonomy. For recipients, we will keep the recipient ID. For billing agents and providers, we also will maintain a trading partner ID.

Compliance Management

interChange Single Sign-On will provide multiple types of compliance management. From a user perspective, interChange Single Sign-On will manage

agreements and whether a user has read and said "yes" to a particular agreement. Agreements will be specific to each organization, with specific agreements for recipients, providers, billing agents, and agents. EDS does not provide the legal language for the agreements because that will be determined by the State's legal department.

interChange Single Sign-On also will provide robust audit trails and reporting for HIPAA and Sarbanes-Oxley compliance. These reports will provide information on who authorized access to what system and for whom, when a system was accessed and by whom, and what access is allowed by a user currently and the access modification history of the user.

Approach to Customization and Modifications

Key to the Replacement MMIS interChange Single Sign-On system is the fact that it is a configurable framework that will support the unique needs of the State. As such, it will take close collaboration and effort to translate the specific rules of the State into the Replacement MMIS interChange Single Sign-On system. For example, questions to be answered and configured or customized include the following:

- What are the departmental, organizational, and application workflows?
- What are the details of the NCID-to–interChange Single Sign-On SPML interfaces?
- What are the password requirements?

These and several other questions will be answered in the detailed requirements validation (RV) meetings and fed into the analysis and customizations of the single sign-on solution for North Carolina.

Enhancements to Functional Requirements

Based on the RFP requirements, we will not need to make enhancements to the interChange Single Sign-On solution. interChange Single Sign-On will have three environments: development, model office, and production. The development and model office environments will be limited to security function testers and application developers. The production security environment will control access to the other systems, including training, parallel, and acceptance testing environments.

Response to Security Requirements

The following table, EDS Response to Security Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Security Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.17	Provides capability to adopt current industry and State standards and address the State's Security Program Planning and Management, Access Controls, Application Software Development and Change Controls, System Software Controls, and Service Continuity Controls	Met by interChange. interChange Single Sign-On meets or exceeds these requirements for application access controls and the change controls associated with the workflow of identity management and planning.
40.1.1.18	Provides capability for initial batch loading of security records and profiles prior to implementation	Met by interChange. interChange Single Sign-On identity migration features provide for the initial batch loading of security records prior to implementation.

User Access Authentication and Authorization (40.1.1.19 to 40.1.1.20)

Our user access authentication and authorization security structure is an integral part of our interChange solution. EDS will work with the State to meet information and communication processing security requirements as spelled out in the State's policies and standards and will be a willing and active participant in a joint security management team. Through this collaboration, the State-specific security profiles will be developed and deployed. We understand that the North Carolina Office of Information Technology Services is responsible for setting policies, standards, and guidelines for technology in North Carolina state government.

At regular intervals, user passwords will expire and users will be prompted to create new passwords. The default expiration period is 30 days but can be adapted to meet the State's needs.

EDS uses Microsoft Active Directory Federated Services (ADFS) as the enabling technology. ADFS uses Active Directory for its user store; therefore, password protection will be configured to support strong password protection and password management capabilities. The creation or denial of a generic or shared password is an administrative task. EDS' policy is to not allow generic or shared passwords; therefore, we will solicit State approval for exceptions to this policy.

interChange Single Sign-On will prompt users to accept the State's security policy before they can proceed into the portal. EDS will use the logon and security policy language defined by the State, which will be used in a pop-up security acceptance panel. User acceptance or declining of the policy will be logged and kept for audit purposes. The single sign-on solution stores passwords in encrypted form and does not display the password at any time. It is EDS policy not to share user IDs or passwords. Incidents of ID or password sharing that come to the attention of systems administrators will be reported to the appropriate management.

The single sign-on solution also will disconnect or automatically log off any user of a specific application if that application has not been accessed through the security landing page within a configurable time period that is unique for each system environment. EDS will work with the State's security staff to determine the rules for unsuccessful logon attempts, password timeouts, session timeouts, activity timeouts, and other security items, as appropriate, and implement the agreed-to parameters.

Approach to Customization and Modifications

The approach to customization and modification of the single sign-on solution involves working with the State to define the user groups and associated security profiles. Each group and associated profile will be documented and verified with the agencies before being implemented within the Replacement MMIS. This identification and documentation of the various users from DMA, DMH, DPH, and ORHCC, EDS team members, and the provider and recipient communities and their user access and authentication rules comprises the bulk of the customization work.

Additionally, the Microsoft Federated Services are installed and configured to work with the various MMIS components, such as the interChange user interface, the document management component, MMIS ad hoc reporting, and the workflow engine—providing a unified security approach.

Enhancements to Functional Requirements

While the single sign-on solution is a proven solution in production, it will require the following specific enhancement to meet the North Carolina requirements:

- Establishment of an interface between the Replacement MMIS single sign-on solution and the North Carolina Identity Enterprise Service

This is the only anticipated enhancement to interChange Single Sign-On because the base solution meets the requirements as-is.

Response to User Access Authentication and Authorization Requirements

The following table, EDS Response to User Access Authentication and Authorization Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to User Access Authentication and Authorization Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.19	Provides capability for a user interface design to incorporate the North Carolina Identity Enterprise Service (NCID), version 7 (or later), Model 2	Met through customization of interChange. The Replacement MMIS will contain the interChange Single Sign-On solution, providing a unified security approach to the MMIS and the

RFP No.	RFP Requirement	EDS Response
	Refer to *DHHS Application Integration with NCID* in the Procurement Library.	provider and recipient secure Web portals. The interChange Single Sign-On solution will be customized to provide an interface to the NCID.
40.1.1.20	Provides capability to adhere to the role-based access control model in compliance with NC DHHS Security policies Refer to *Replacement MMIS Security Business Rules* in the Procurement Library.	Met by interChange. interChange includes role-based security that is applied to the application, panel, fields, and reports, enabling the security as needed per role in compliance with NC DHHS Security policies.

Architecture (40.1.1.21 to 40.1.1.25)

The EDS-developed browser-based interChange MMIS is a highly sophisticated, feature-rich system centered on a strong, Medicaid-specific relational data model. It divides the application into components so that they process on different networked computers, leveraging the true power of client/server architecture. This design and supporting architecture deliver enhanced flexibility, scalability, and reliability, as recognized by the National Association of State Information Resource Executives (NASIRE) Award for innovative use of technology.

The interChange architecture applies technology that supports better business practices. Clients can easily access data using online inquiry through the browser, and desktop access to reports and document images through the electronic document management system (EDMS) technology rather than traditional paper reviews. The architecture incorporates the improved functions of distributed processing, giving users quicker access to more information.

The interChange architecture uses the following design strategies:

- **Component assembly and reuse—**interChange uses common software components that provide flexibility, increased reliability, and reduced cycle time for building and maintaining software applications.
- **Specialized, distributed devices—**The interChange architecture allows it to interface with specialized hardware, such as laptops and palmtops, to meet unique business requirements and fit these devices into the overall architecture.
- **Integration—**The interChange thin-client architecture provides for technical options that meet unique business requirements and satisfy distinct political boundaries and governmental jurisdictions. The options also enable the parts to work together effectively and reliably to benefit the overall enterprise.

- **Portfolio management strategy—**The interChange design provides rapid adaptation for interfaces with the existing legacy systems and future systems developed under the new architecture, making sure the old and new system elements are accommodated and can coexist in a mutually supportive technical environment.
- **Modular construction—**interChange uses clearly partitioned system elements to logically separate data access, business logic, and user interfaces. As a result, systems may be modified in a timely and efficient manner to meet evolving business demands and new political initiatives.
- **Enterprise information management—**The interChange design integrates and manages dissimilar information from text and images. This information is typically found in departmental workgroup applications, and the numeric and field data in large application databases. Accordingly, relevant and timely information can be provided for both decision-making and workflow processing.
- **Scalable services—**The interChange architecture provides a scalable platform to process the high volume of transactions today with the capability to expand to meet future processing needs.

These design strategies fully align with the North Carolina Statewide Technical Architecture (NCSTA) principles, practices, and guidelines, meeting the stated goal in RFP section 40.1.1.22.

The interChange application architecture consists of separated logical layers that integrate smoothly to deliver the multi-tier benefits mentioned above. These layers are distinctly identified with one of the three n-tier layers: presentation, business logic, and data, as shown in the following exhibit, interChange Logical Layers.

interChange Logical Layers

Architecture Layer	Components
Presentation Layer	interChange user interface and provider and recipient Web portals
Integration Services Layer	Data integration processing and extract, transformation, and load (ETL) for the MMIS reporting module; workflow engine; and interChangeRules engine
Application Data Layer	Web services, application services, and batch processes

A detailed description of the interChange technical architecture, together with a detailed mapping to the NCSTA principles, can be found in the Proposed Technical Architecture subsection of proposal section 50.2.4.1.1.

Approach to Customization and Modifications

The architecture of the base interChange meets these requirements, and no customizations or modifications are necessary.

Enhancements to Functional Requirements

The architecture of the base interChange meets the RFP requirements. The customization to the architecture is in relation to the scale of the North Carolina solution. The number of interChange server central processing units (CPUs), the number of application services, and the amount of storage area network (SAN) space have been customized for North Carolina. Please refer to the Proposed Technical Architecture subsection of proposal section 50.2.4.1.1 for details on the proposed sizing.

Response to Architecture Requirements

The following table, EDS Response to Architecture Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Architecture Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.21	**Goal:** Provides capability for the architecture to be: • Adaptable • Available • Extensible • Interoperable • Manageable • Redundant • Resilient • Scalable • Securable	interChange meets this goal. Please refer to the Proposed Technical Architecture subsection of proposal section 50.2.4.1.1 for a detailed description of the interChange technical architecture.
40.1.1.22	**Goal:** Provides capability for the architecture to align with the principles and practices in the North Carolina Statewide Technical Architecture (STA)	interChange meets this goal. Refer to the Proposed Technical Architecture subsection of proposal section 50.2.4.1.1 for a detailed mapping of interChange to the NCSTA.
40.1.1.23	Provides capability for all applicable components of the proposed solution to perform efficiently on State desktop office tools consistent with the current State standards and versions (i.e., no more than [1] major release behind the current supported levels). See Appendix 40, Attachment J for State Standards.	Met by interChange. interChange is designed as a thin-client browser-based solution using Microsoft Internet Explorer Version 6 or greater.
40.1.1.24	**Goal:** Provides capability for the client user interface to be decoupled (a clear physical separation) from the	interChange meets this goal. The interChange design incorporates n-tier architecture principles separating

RFP No.	RFP Requirement	EDS Response
	business rules layer and limited to presentation of data, capturing of input, and control of application flow	presentation and business rules layers.
40.1.1.25	**Goal:** Provides capability for the architecture to use Web services-based solutions that are designed using either a 3/N-tier or Service-Oriented Architecture (SOA) approach	interChange meets this goal. The interChange design incorporates n-tier architecture principles, providing the capability to use Web services.

System Software Controls (Record Merge and Decouple) (40.1.1.26)

interChange allows the State to manage the required data relationships, including the ability to merge (link) or decouple (unlink) recipient and provider records. Parts of the process are automated; however, for quality control, other steps require human review and decisions. This combined approach to software controls is critical for controlled and accurate record updating within an MMIS. The base solution has existing browser panels that will support the manual processes.

The Recipient Link process allows authorized users to combine key data from two active recipients under one recipient ID and deactivate the other recipient ID. This process should only be executed when authorized personnel are certain that the two active recipients are the same individual and should not have been given two distinct, active IDs. The recipient link process is a one-way merge that can partially be performed systematically and may also need manual intervention to complete.

Linking Recipient IDs

Within the Recipient Information Merge process, key data from numerous recipient-related tables associated with the deactivated recipient will be compared to similar data for the active recipient. In general, for each table compared, the following approach will be used to merge the data; in this example, Recipient A will be deactivated and Recipient B will be given Recipient A's data:

- If Recipient A does not have any rows on the affected table, no update will be made for Recipient B.
- If Recipient A has rows but Recipient B does not, Recipient A's rows will be copied and Recipient B's ID will be placed on them.
- If both Recipient A and Recipient B have rows, the following will be done on a row-by-row basis for each row Recipient A has:

- If Recipient A's row does not have overlapping dates with any of Recipient B's rows, Recipient A's row will be copied and Recipient B's ID will be placed on it.
- If Recipient A's row is identical to one of Recipient B's rows, no update will be made because Recipient B already has the appropriate information.
- If Recipient A's row overlaps with the dates on Recipient B's row, but everything else is identical, the following will be done:
  - If Recipient A's row only overlaps with one of Recipient B's rows, the dates on Recipient B's row will be expanded to include the dates on Recipient A's row.
  - If Recipient A's row overlaps with more than one of Recipient B's rows, a row will be written to a linkage-reporting table to indicate which data did not get merged.

The following table, interChange Recipient Linking Decision Table, details how recipient data is merged.

interChange Recipient Linking Decision Table

Recipient A Information	Recipient B Information	Action of Link Process
No rows	Has rows	No update performed
Has rows	No rows	Copy A's rows to B
If Recipient A and Recipient B have rows for the same table:		
Dates do not overlap		Copy A's rows to B
Identical data on both recipient's data		No update
Key data matches, dates overlap a single row		Expand B's dates to incorporated A's dates
Key data matches, dates go across multiple rows on B, or vice versa		No update automatically performed as message is written to report
Dates overlap but key data disagrees		No update automatically performed as message is written to report

If Recipient A's row overlaps with the dates on Recipient B's row and other columns on the row are also different, no update will be made to this table for this row, and a row will be written to the linkage-reporting table to indicate which data did not get merged. Wherever there is a linkage action that is unsuccessful, such as eligibility that cannot be merged because of date conflicts, a row detailing that information will be written to the linkage-reporting table. At the end of the Recipient Link process, this information will be used to format the

Link Requests Processed report for manual review and potential correction by the authorized staff.

This report will have information written for every process area for which the system could not automatically perform a merge, and a staff member will review the data and resolve the inconsistency as appropriate. The authorized staff will review the data to make sure the correct data is present in every system.

After an authorized staff member enters a link request, the following processes will take place:

- Recipient deactivated and recipient link cross-reference will be established.
- Eligibility information will be merged.
- Common recipient-specific tables will be merged.
- TPL information will be merged.
- Managed care information will be merged.
- Service authorization information will be merged.
- A Recipient Link Process report will be produced.
- Paid claims will be adjusted.

For auditing and utilization reporting to be accurate, the paid claims from the inactive recipient must be voided from the inactive recipient and allocated to the active recipient. This will be done through an automated, administrative adjustment process that creates exact copies of the paid claims for the inactive recipient and creates adjustments with them.

Only two things will change between an original claim and the adjustment: the recipient key will be changed to the active recipient key, and a new internal control number (ICN) will be assigned, indicating a link/unlink adjustment. Appropriate entries will be made in the adjustment cross-reference tables and the medical policy table used for claims auditing. These claims will not be re-adjudicated but will be written to the week-to-date history tables in preparation for the weekly financial cycle.

To avoid provider confusion, there is logic within the remittance advice (RA) and accounts receivable (AR) area of the financial system to bypass these particular administrative adjustments. Otherwise, they would be treated exactly like normal adjustments. The new linked adjustment claims will become the active claims and can be adjusted by future activity by either the provider or the system, including system-initiated mass adjustments.

Unlinking Recipient IDs

The Recipient Unlink process will be used when two previously active recipients have been merged together through the Recipient Link process and that linkage was later determined to be in error. Only recipients who were previously linked can be unlinked.

Systematically, interChange can sever the link between recipient IDs that were established during the link process, reactivate the inactivated recipient key, and present the previously deactivated recipient's eligibility and recipient-related data as it was prior to the link being established. Both recipients will be active after the Recipient Unlink process has completed. Most of the updates systematically performed when the merge or link occurred cannot be automatically undone because the information in the affected tables may have changed since the link was performed.

When an unlink request is processed, it will set the active indicator on the unlinked (previously inactive) recipient back to active. It will remove the record of linkage visible through the Recipient Link History panel between these two IDs. It will update the recipient link cross-reference table with the unlink indicator and date, and the system automatically will generate a new ID card for the newly unlinked recipient. These are the only activities that are systematically performed as a result of an unlink request. interChange's unlink process will then generate a report of the areas to be manually reviewed for potential updates, but will not actually make the updates.

As the process reads through the various tables such as lock-in, TPL, and Medicare and finds a row for the active recipient, a row will be written to the linkage reporting table for reporting on the Unlink Request Process Report showing the areas that need manual review. An authorized user with the proper security access will review currently held information related to the active recipient to make sure it is correct and current. In some cases, the authorized user may need to use interChange recipient panels to remove information that was merged as a result of the link. Audit tables will be available through the various online panels to help determine what has been added or updated as a result of the link and if that should be manually undone through the online panels.

The identification of the claims to unlink will be facilitated by the Claims Delink Web panel, but the selection of the specific claims is a manual process. The Claims Delink process can search for claims for the active recipient (the recipient who was active before the unlink), including from and through dates of service and also benefit program. Paid claims that meet this criteria will be displayed for the user to review. The user will be able to select any or all of the paid claims presented to be adjusted and thereby moved to the unlinked ID.

Because adjustments can only be performed on paid claims, only paid claims will be available for selection. Denied claims will not be affected by the linking or unlinking process. If there are suspended claims for the recipient, they must be reviewed and an individual determination of which recipient these services should be paid for must be made on each one.

After the user has selected the claims to be unlinked, the claims will flow through the same Claim Link Adjustment process that happens when a link is established. Specialized administrative adjustments will be automatically created

for this selected list of claims. The only thing that will change between the original claim and the adjustment is that the recipient key will be changed to the newly activated recipient key, and the internal control number (ICN) will indicate a link/unlink adjustment.

Linking Provider IDs

interChange can identify a provider by a number of identifiers, including National Provider Identifier (NPI), legacy provider, Medicare provider, license number, or employer identification number (EIN). Each of these numbers can be traversed back to the specific provider. interChange also can use start and stop dates to begin or terminate participation in provider groups or networks, as well as when they can serve specific benefit programs. Therefore, the system will not collapse multiple, distinct provider numbers into a single provider number, but it will offer a complete series of alternatives to manage their information. There will be no need to link or unlink providers because users can access their information through any of the various IDs and apply start and end dates for their eligibility or associations.

Approach to Customization and Modifications

interChange can meet the requirements to merge or decouple recipient and provider records. No customizations nor modifications are required for the Replacement MMIS DDI project.

Enhancements to Functional Requirements

No enhancements are required to the base system.

Response to the System Software Controls Requirement

The following table, EDS Response to the System Software Controls Requirement, records how we will meet the requirement set forth in the RFP.

EDS Response to the System Software Controls Requirement

RFP No.	RFP Requirement	EDS Response
40.1.1.26	Provides capability to update records to reflect changes such as merging or decoupling of recipient and provider IDs	Met by interChange. The Recipient Link process will allow authorized users to merge key data from two active recipients under one recipient ID and deactivate the other recipient ID. interChange also initiated a decoupling of recipient data for improperly linked recipients and will generate new ID cards. The provider cross-reference capability within interChange supports the North Carolina policy for merging and decoupling providers.

User Interface and Navigation (40.1.1.27 to 40.1.1.34)

EDS designed the user interface from the ground up as a browser-based application, allowing for a smooth navigational experience for every user. Our experience in the Medicaid industry has enabled EDS to develop a user-friendly and intuitive system that displays the data elements necessary for users to successfully perform their job functions.

EDS provides the State with a complete suite of tools required to efficiently and effectively adjudicate claims and encounters, authorizations, eligibility enrollment, payments, and related inquiries. We deliver technologically advanced functions for operational effectiveness and real-time interoperability capabilities with a user interface that is intuitive and user-friendly.

Our solution enables users to navigate quickly and easily through browser pages and menus to view critical information. The interface implements functions consistent with Microsoft Windows display standards. For example, users can open multiple browser sessions on the desktop to share information easily between applications and move quickly from one to another.

Because interChange information displays within a browser page, no specific interChange software needs to be installed on the user's workstation. The flexible and configurable interChange user interface is made possible by the powerful toolset that manages the data and business applications. This open architecture is based on industry standards and leads to a modularized system that can be updated easily to meet future needs.

The browser-based technology of interChange is easily understood by nontechnical users and provides access to functional areas of the system. This approach to Web-based access allows the system to interact with various desktop hardware platforms.

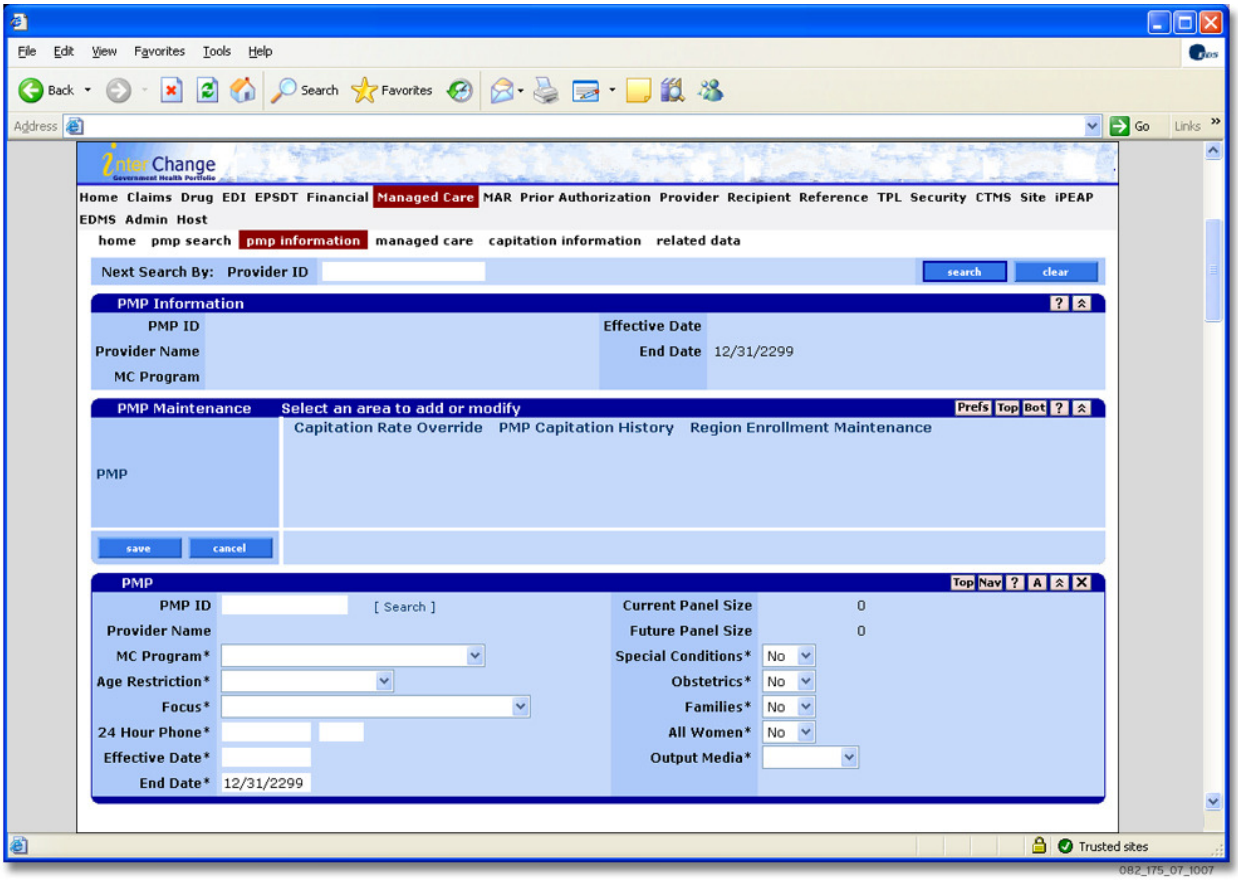
Thin client architecture allows for changes to the interface in one location so users have immediate access to the most current version of interChange. The EDS Replacement MMIS solution is a fully browser-based, thin client solution, allowing access from anywhere in the State enterprise without the need for software distribution. There are no desktop software requirements beyond the standard Internet Explorer version 6.0 or higher for access to interChange.

EDS uses a clear and consistent labeling standard for data elements that mitigates the struggle users may experience while transitioning to a new system.

The presentation layer of interChange, which comprises browser pages displayed to users, takes advantage of the latest technology by using standardized browser pages, incorporating elements such as pull-down navigation menus, drop-down lists, list boxes, and combination boxes. Advanced user interface controls and techniques maximize user productivity.

Browser pages for interChange demonstrate the familiar "Windows look and feel" for navigation features. The key to the interface is a standardized behavior model and a consistent presentation format across each business function that is robust and feature-rich. Every interChange browser page displays one or more panels, and each panel groups related data. The following exhibit, Sample interChange Browser Page, displays examples of the PMP Information and PMP Maintenance panels.

Sample interChange Browser Page



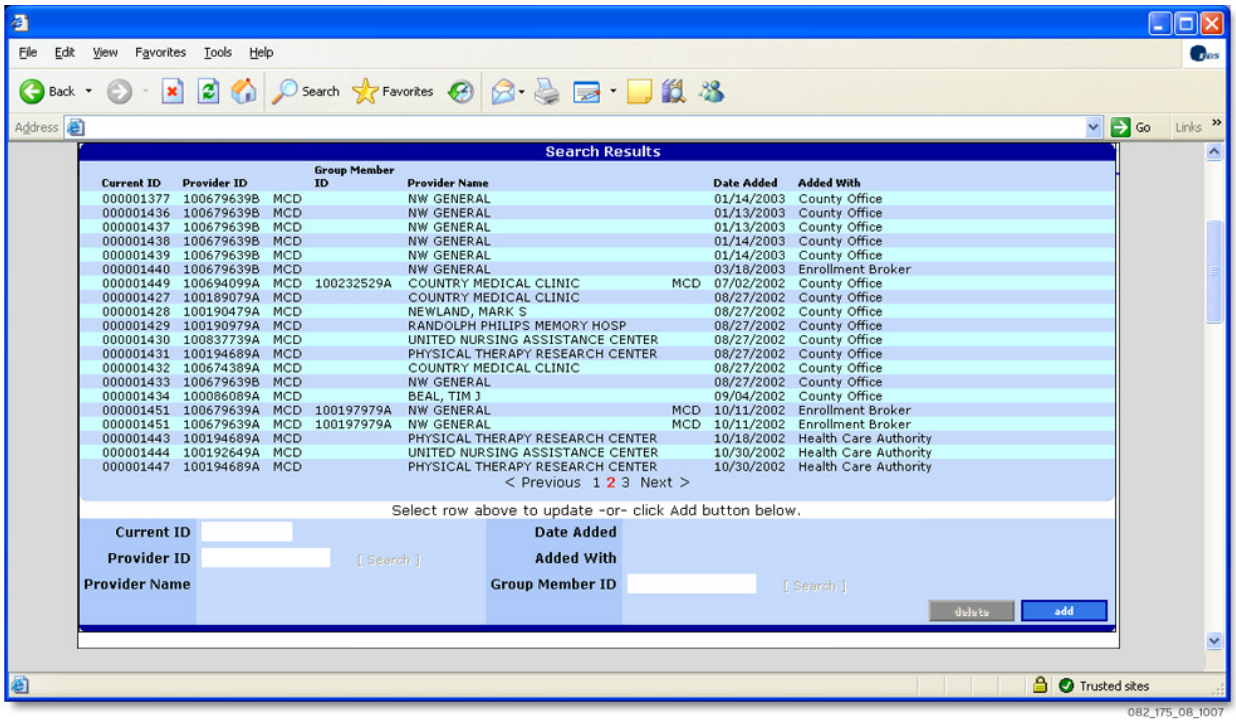
Maintaining the standard Windows appearance, the interChange browser interface uses the latest technologies and interface capabilities.

The interChange user interface displays business functional areas through links across the top of the page. The panels within the page logically group data fields together for fast research.

Hyperlinks are point-and-click text that will transfer the user to a new page or URL. When a user moves the cursor above the hyperlink, the cursor changes to a hand. Hyperlinks to a URL are underlined. The Next and Previous hyperlinks are found on the inquiry Web pages that allow the user to page forward and backward through search results that have more than 20 matches. The following

exhibit, Next and Previous Hyperlinks, displays an example of interChange Next and Previous hyperlinks.

Next and Previous Hyperlinks

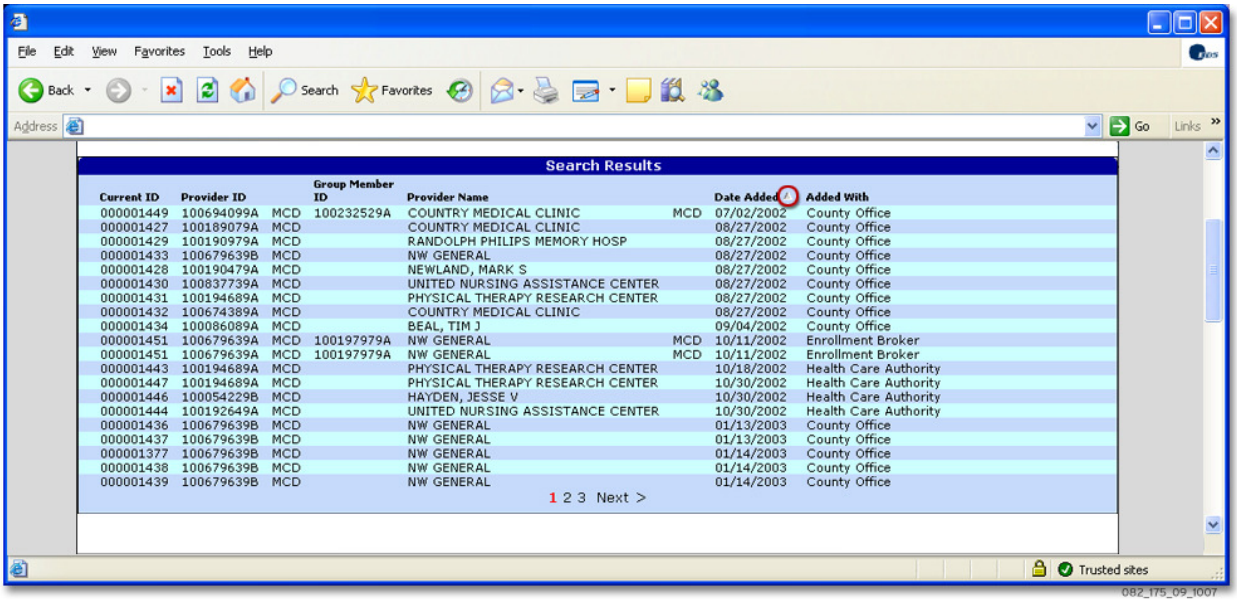


The Search Results panel displays rows of summary data, and every row is a hyperlink. When a user clicks a specific row, interChange displays a page that contains additional details.

The minimum configuration is a PC that can install and run the latest version of the browser software (Internet Explorer), supports ActiveX controls, and has a 1024x768 display. Through configuration settings, the user can resize the monitor resolution without truncation of the Web pages. If the user chooses to resize the monitor resolution below the minimum configuration, the user can scroll to areas that are greater than the monitor resolution. Pages only require vertical scrolling, although pages in the application can be implemented for horizontal scrolling because of special business requirements.

Each page of the user interface displays a navigation bar that provides a standard means of navigating within a Web page, and a scroll bar to indicate when more data is available. This scrolling ability allows the user to view complete current and historical information regarding a provider's claim. Data is organized into panels, which are laid out vertically, down the page. Data elements are presented in columns within a panel. The user can select a column to sort on by clicking on its column header. The following exhibit, Sorting by Date Added, displays the results when a user clicks on the Date Added column heading. An arrow displays next to the heading, indicating what column is sorted and if the sort is in ascending or descending order.

Sorting by Date Added



Users can search results by sorting according to the date the material was added.

interChange works with the Electronic Document Management System (EDMS) to link attachments to a claim or encounter. The following is a brief summary of the key interface standards.

- The Web application can be accessed by multiple browser instances on the same PC.
- Menus, links, buttons, and title bar icons are used to navigate through the system.
- A link is used when the user wants to navigate to a different page or panel.
- A button is used when the user wants to indicate that an action should occur. Because of that action, navigation to a different page or panel also may occur.
- Title bar icons indicate either a link or button.
- Each subsystem has at least one search page, which allows the user to search for the primary entities in that subsystem. A single click on a row in a search results page navigates the user to a more detailed information page.

Most panels contain the following:

- A title bar

- Icons to maximize () and minimize () the panel, which are not present on panels that must remain open or when only a single panel comprises the page content
- A question mark icon () to invoke the panel-level help text
- Drop-down list to make a single choice from a list of available choices when there are more than three but less than 50 available choices
- Data list to display data or records returned by a query
- Multiple select list to pick multiple values from a list of available choices
- Radio button to make a single choice from a list of available choices when there are three available choices or less
- Check box used to select a parameter or option
- Pop-up search hyperlink to make a single choice from a list of available choices when there are more than 50 available choices, or when there are many elements of data associated with a choice that the user needs to see
- Text box to enter alphanumeric strings

Approach to Customization and Modifications

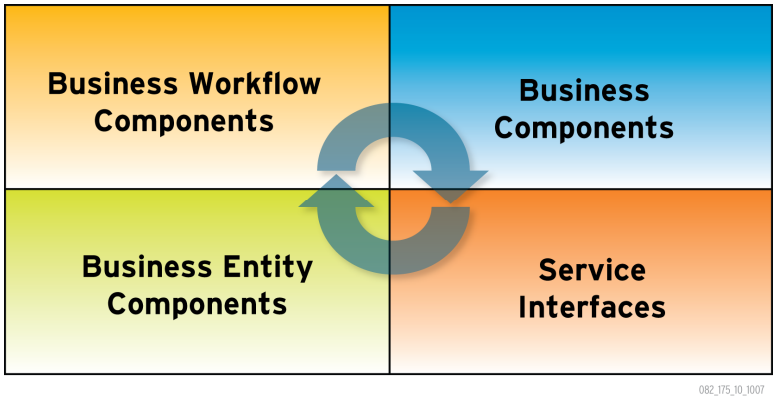
EDS has reviewed the State's accessibility standards that were identified in the RFP, and interChange is in full compliance with State mandates. Our Web applications allow maximum user access, including access to people with disabilities who may be accessing the Web site with the aid of assistive technologies.

The EDS interChange Web-based system is fully compliant with applicable Section 508 requirements to verify that external users can easily access the application. The user interface accommodates individuals who are limited by physical or cognitive disabilities.

Enhancements to Functional Requirements

We meet the user-interface requirements through the base interChange solution. However, specific business features, such as prior approval, DPH eligibility, and provider enrollment, will require enhancements that integrate automated workflow tools with user processes. Statewide business processes will be managed using the EDS interChange business workflow components. These components enable tasks that range from routine inquiries to complex information processing. As shown in the following exhibit, EDS interChange Business Workflow Components, interChange accommodates varying tasks using four primary components.

EDS interChange Business Workflow Components



EDS interChange business workflow components enable tasks that range from routine inquiries to complex information processing.

These primary components are described as follows:

- **Business workflow components—**Enables business processes to occur with the given data from the user interface. This is similar to a shopping cart application, where after the items are added to the cart, the user and the application handle the payment process.
- **Business components—**Validation and business rules are applied to system data. Because business rules vary, the business components can be customized.
- **Business entity components—**Data containers for the application. Business entities are usually mapped to one or more data repositories such as a database table or XML document. This will facilitate an efficient and reliable State healthcare program.
- **Service interfaces—**A critical aspect for highly responsive means of sharing data among applications.

Users can access the information needed for any authorized process without having to leave the application. State users can access documentation, log an issue, view imaged documents and reports, and perform traditional system functions such as claims resolution or inquiry. These capabilities are available by a single logon ID.

Security for the interChange user interface application is based on the network security used by the State, typically role-based security. Network security identifies a particular user by his user ID and the domain server where the user ID permissions are defined. Users can be assigned to security groups. Some common security groups are named Administrators, Users, and Guests. Individual states will set up their security groups based on the access they wish to grant to a particular user. For example, a state might define security groups

such as ClaimsFullAccess or ClaimsReadOnly. Every page, panel, and field in the application can have permissions assigned.

Response to User Interface and Navigation Requirements

The following table, EDS Response to User Interface and Navigation Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, or processes that meet the stated requirements.

EDS Response to User Interface and Navigation Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.27	Provides capability for standard user interface characteristics, data accessibility, and navigation across all Replacement MMIS business areas	Met by interChange. The interChange user interface has standard characteristics of navigation and data accessibility for every business area. The user interface is built on the .NET framework and uses industry standards such as World Wide Web Consortium (W3C) and government accessibility requirements.
40.1.1.28	Provides capability for compliance with language and accessibility requirements as defined in the Regulatory Compliance Section	Met by interChange. This requirement is met by the standard system user interface.
40.1.1.29	**Goal:** Provides capability for a secure, interactive Web Portal for users twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year	interChange meets this goal. EDS will deploy a Web portal application framework that provides powerful features, including content security, complemented by the ability to customize features. The Web portal is available 24 hours a day, 7 days a week, 365 days a year, except during regularly scheduled maintenance.
40.1.1.30	Provides capability for a secure, interactive Web Portal to have an informational/introductory Web page twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year	Met by interChange. The Web portal has an Information Web page that is available 24 hours a day, 7 days a week, 365 days a year, except during regularly scheduled maintenance. This page can be used for broadcast announcements and general introductory information.
40.1.1.31	Provides capability for real-time interaction with all business areas, enabling routine inquiries	Met by interChange. This requirement is met using the real-time access to the application that is built on role-based security. Each of the MMIS business functional areas have real-time access to their respective data through the interChange user interface. Thus, a routine query from the user interface, AVRS, or Web portal provide the same consistent answer, since each query is serviced from the same database.
40.1.1.32	Provides capability for multiple business area views to be displayed concurrently and to facilitate interaction between business area views	Met by interChange. interChange allows for multiple Web pages to be opened at the same time; thereby, fulfilling this requirement.
40.1.1.33	Provides capability for consistency in displaying view/file/report titles, dates, times, and other business	Met by interChange. This requirement is met by the system user interface and online report standards. The user

RFP No.	RFP Requirement	EDS Response
	area-specific requirements	interface standards are inherited by each subsystem within the MMIS, providing the consistency in viewing the data. Online reporting services in TPL and MAR make use of a standard query and results presentation of the data.
40.1.1.34	Provides capability to display error messages, interactive help views and tables, accessible reference files, and hypertext links to appropriate additional files/reports	Met by interChange. This requirement is met by the standard system user interface. On the title bar of the panel is a question mark icon that the user can click to access online help.

Document Management and Correspondence Tracking (40.1.1.35 to 40.1.1.53)

Through the integration of leading COTS products, EDS will provide the State with a paperless, more efficient solution. Our approach parallels our best practice experiences as well as the vision established by MITA for MMISs. interChange integrates the right tool for the right job, enabling more efficient operational work patterns that are innovative and can move the State toward a cost-effective paperless work environment.

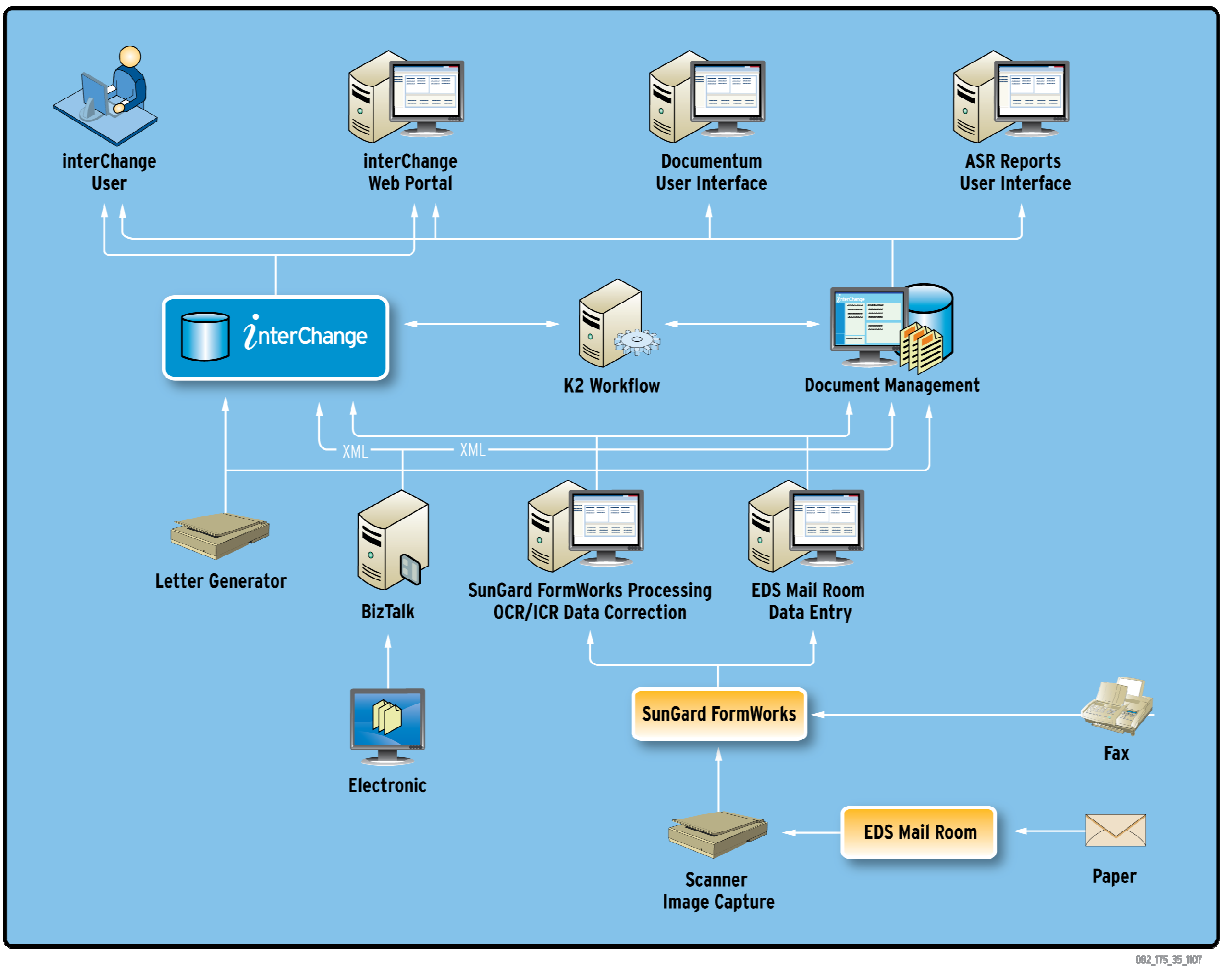
Our approach consists of the following:

- Configuration of EMC | Documentum to support early implementation of document management
- Configuration of SunGard FormWorks to support early implementation of document scanning
- Enhanced interoperability between FormWorks and Documentum to support integrated audit trail (from scan to archive) and rescan capabilities
- Modification of existing MMIS API call to retrieve images from Documentum vs. IAI/DocViewer application
- Migration of the large store of existing images and data from the IAI/DocViewer application to Documentum for the Replacement MMIS
- Analysis and design of additional functional areas that are not included in the early implementation scope, such as data capture and processing, to coincide with the DDI Phase of the Replacement MMIS
- Implementation of additional functional areas as designed within the existing Documentum and SunGard applications
- Implementation and configuration of the Pitney Bowes DOC1 COTS tool for correspondence generation

- Implementation and configuration of Documentum Archive Services for Reports
- Implementation of Web services and/or APIs for interaction with the Replacement MMIS and the Web portal
- Integration of the solution with the Replacement MMIS so certain images, such as claims, can be retrieved directly through the Replacement MMIS pages

The following exhibit, Replacement MMIS Document Management and Correspondence Tracking Integration and Workflow, illustrates the components of the solution through which each document will pass.

Replacement MMIS Document Management and Correspondence Tracking Integration and Workflow



Standard documents, such as claims and prior approvals, and nonstandard documents, such as correspondence and checks, pass through the document management system.

EDS will use SunGard's FormWorks solution set for capturing images of documents. We use the SunGard/FormWorks product for many of our existing

Medicaid clients, such as the states of Tennessee, Alabama and California. For documents on a standard form, such as claims, this solution offers data capture through intelligent character recognition and optical character recognition (ICR/OCR). SunGard/FormWorks' ICR/OCR solution provides a high level of accuracy, repeated data reference files, and processing speed required by a state health program the size of North Carolina. The output of the ICR/OCR process is a formatted claim input file to the claim adjudication process, an image file, and the associated data indices for storage and retrieval of the claim image through the Electronic Document Management System (EDMS). Documents—other than claim forms, prior approval, provider enrollment, and adjustments—are considered to be nonstandard paper documents. The nonstandard documents are scanned, image verified, and manually indexed within the data capture process.

For the document management functions, EDS proposes the commercial off-the-shelf (COTS) product EMC | Documentum for our data image, storage, and retrieval solution. Documentum coupled with the SunGard data capture component will meet the requirements established by the state of North Carolina. Far from dictating a one-size-fits-all approach, Documentum solutions provide multiple, customized interfaces that align smoothly with the way specific organizations work. Due to the strength of this solution, we also are proposing document management as an early implementation component so that users will have direct access to the Documentum interface to review claim images with improved accessibility and security.

Documentum will be integrated with the existing legacy MMIS during early implementation so users of the current MMIS will retrieve images from Documentum through the same mechanisms they do today. Users will quickly discover that Documentum acts as a simple, flexible tool for navigation and interaction, delivering content to the desktop without the need for extensive training. The open architecture and robust integration points of Documentum—the leader in the Gartner Enterprise Content Management Magic Quadrant—was a key factor in our decision to use this tool for North Carolina.

For correspondence generation and tracking, EDS will integrate Pitney Bowes DOC1 software. We use this solution component for our Florida Medicaid client and our MediVance commercial healthcare clients. The DOC1 software works with interChange to automatically generate letters that meet certain criteria. For example, when a provider has completed the stages of enrollment, an approval letter can be automatically generated and sent to the provider. Additionally, users may generate a single letter that may be printed, faxed, or sent by e-mail immediately. Users can send letters to multiple destinations or one person, as well as generate mass mailings. Generated correspondence will have a key index value(s) that will allow association or linkage with other interChange components to support a 360-degree view of claim data.

The following table, Document Management Features and Benefits, lists the key highlights of our document management and correspondence tracking approach.

Document Management Features and Benefits

Feature	Benefit
Single unified repository, where all functions are delivered from a single application implementation and all content, such as images, correspondence, and reports, are housed in the Documentum repository	• Ability to search all content through one software engine • Ability for all workflow content involving documents to be integrated and originate through one repository • Ability to search, link, look up, and annotate by recipient or provider ID, claim number, or other chosen index • Rapid development, as developers only need to understand one set of Web services or APIs • Simplified administration and support • Leveraged infrastructure • Ability to place all content under a standard single security model • Ability to subject all content to a standard set of records management and disposition policies
Service-oriented architecture (SOA)	Full functionality available as discrete Web services for robust integration with the Replacement MMIS, Web portal, and other applications
MITA alignment	Strong alignment with the industry-standard, emerging MITA architecture related to SOA, security, and business process management, laying the platform for current and future compliance
Inclusion of Oracle and EMC in EDS' Agility Alliance	• Extensive corporate relationships to enable implementation success • Imbedded professional staff for rapid issue resolution • Imbedded technical staff for smooth integration within our solution offerings

Documentum will use the existing integration toolsets within interChange to expose its functional capabilities and smoothly interact with other external applications, such as DOC1 for correspondence generation. The Documentum and DOC1 integration with interChange allows the user to easily retrieve aggregated claims information—data, images, and correspondence—from the proposed Replacement MMIS.

After retrieving documents, users can print, fax, or e-mail them. They also can attach electronic sticky notes to documents or highlight areas of documents. These annotations to the images are stored separately from the image file, so the integrity of the original file is intact. Beyond managing the documents themselves, Documentum manages subprocesses within an overall orchestration in which those documents may exist by virtue of user collaboration.

Approach to Customization and Modifications

The base interChange EDMS solution is designed to meet the standard or common functions that EDS typically delivers within our MMIS implementations. Documentum is a robust package and quickly adaptable to unique requirements. For North Carolina, the EDMS is part of early implementation; therefore, some minor customizations or changes to our standard are required to facilitate a continued level of service for North Carolina during the overall implementation.

Customizations

Customization or configuration is required to meet the State requirements. Customization scope is limited to the configuration of application program interfaces (APIs) and Web services to facilitate the smooth integration of Documentum within the interChange user interface environment that will be deployed in the State. Documentum provides, out of the box, a standard set of APIs or Web services for core functional areas that need to be addressed.

Modifications

We will make the following modifications to interChange:

- EDS will integrate Documentum with the existing Legacy MMIS+, which will allow users to continue to function as they do today until the Replacement MMIS is brought online.
- EDS will change the existing Kofax capture release scripts to provide an additional release of index data and images to Documentum, in parallel with the releases that occur today to the legacy MMIS and the DocViewer document repository. This will allow us to place a hard stop on the date of images that need to be converted from DocViewer to Documentum. This will verify that DocViewer data will be available immediately on the switch to the new EDMS. The conversions will be completed as part of the early implementation.
- Overlapping the final testing of the early deployment of the EDMS will be the DDI Phase for other document types that need to be processed. These new document types and processes will be fully tested and promoted into production with no impact to existing business functions.
- We will provide a fully functional document management interface for use inside and outside the interChange environment to provide direct access to authorized personnel to claim images, reports, and other MMIS-related content that will be stored with the repository by a user-friendly Web interface.
- We will construct a search service that will smoothly return to interChange images that have been captured with the new index schema,

images captured using the legacy indexing standard, and values required by interChange converted from the DocViewer application.

These minor modifications performed by EDS provide great benefit for the State. The Legacy MMIS + integration to images and parallel testing will provide a smooth transition between systems. The EDS team has taken a strategic look at early implementation as a way to bring value to the State by providing mechanisms and functions that will ease the change management and transition risks that are typically associated with the implementation of a new MMIS.

Enhancements to Functional Requirements

The interChange EDMS is a feature-rich solution that will deliver the mandated requirements. Specifically, we will make the following changes to the solution.

- The EDMS subsystem will be configured to store and maintain more indexes, including the current indexing configuration used by the existing MMIS, and the expanded index format that will be used by the Replacement MMIS.
- EDMS will provide for annotations—such as sticky notes or highlights—on image files that have been captured. These annotations are stored separately from the image files so that the original image is not impacted.

Response to Document Management and Correspondence Tracking Requirements

The following table, EDS Response to Document Management and Correspondence Tracking Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Document Management and Correspondence Tracking Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.35	Provides capability to electronically store and view online in an easily readable format all inbound and outbound transactions and correspondence within the Replacement MMIS	Met through COTS integration. The proposed Replacement MMIS can store content or object type and provide viewing access. The transactions and content generated or received will be stored in interChange or Documentum. The interChange panels will provide an online aggregated view.
40.1.1.36	Provides capability for integrated document management and correspondence tracking across all Replacement MMIS business areas	Met through COTS integration. Content and correspondence will be saved within Documentum or DOC1. APIs or Web services will be used to provide smooth interaction, such as search or view, be supported within the native Documentum Webtop client, portal, interChange panels, or the EDS CTMS.

RFP No.	RFP Requirement	EDS Response
40.1.1.37	Provides capability for online access to Replacement MMIS and document management and correspondence tracking with a single log-on	Met through COTS integration. Documentum will support the document management feature, while DOC1 will provide for outbound correspondence generation and tracking. Each of the products provides support of single sign-on methodologies out of the box. This will be used by the proposed interChange Single Sign-On configuration.
40.1.1.38	Provides capability to capture and electronically store all documents, both incoming and outgoing, including claims, claim attachments, data entry forms, images, medical records, X-rays, correspondence, incoming and outgoing fax documents and system-generated reports, tracking date, and time of receipt	Met through COTS integration. The implementation of FormWorks and Documentum COTS tools will meet this requirement. FormWorks will provide for a robust capture capability and subsequently release data and images to interChange and Documentum. Documentum is the single, unified repository for information or content other than system-generated correspondence that will be handled with Group 1. An aggregated query will support a single view to the information through multiple channels such as portal, CTMS, interChange panels, and direct image repository interaction through the Webtop interface.
40.1.1.39	Provides capability to receive, electronically store, and retrieve intraoral/extraoral photographs, digital radiographs, and digital versions of orthodontic models (casts)	Met through COTS integration. Documentum provides a single unified repository for content storage and retrieval. Documentum can store and provide access to any object or content type.
40.1.1.40	Provides capability to link incoming documents, correspondence, and supporting documentation to related documents and correspondence already on file	Met through COTS integration. Documentum provides a single unified repository for content. A unique identifier will be applied to content for association and linkage to existing content within interChange.
40.1.1.41	Provides capability to assign a unique document identifier to each document	Met through COTS integration. FormWorks, during the capture process, will assign a unique document identifier to each document.
40.1.1.42	Provides capability to retrieve all linked documents with one (1) request	Met through COTS integration. Documentum provides a single repository for content, so documents will be virtually linked by unique identifier(s) and available by a single query.
40.1.1.43	Provides capability for documents to be electronically stored by unique document identifier and accessible by online search via hypertext link from all views that reference the image	Met through COTS integration. Documentum provides a single repository for content so documents will be virtually linked by unique identifier(s) and available by a single query. For content such as system-generated correspondence, an aggregated query will be executed to include the letter storage. The request may be executed by portal, CTMS, interChange, or direct interaction with the repository.
40.1.1.44	Provides capability to retain electronic documents for ten (10) years online; once the electronic document has been verified, it becomes the official copy of the document	Met through COTS integration. The system storage has been sized appropriately to maintain 10 years of content online. Documentum has been proposed with Retention Policy Services and Records Manager to provide a platform for

RFP No.	RFP Requirement	EDS Response
		management and disposition of official documents in accordance with State records and regulatory mandates.
40.1.1.45	Provides capability to archive electronic documents offline after ten (10) years and retrieve them for online viewing within two (2) business days of a request	Met through COTS integration. The system storage has been sized appropriately, and EDS proposes to maintain the Replacement MMIS content online for viewing through Documentum. Therefore, the images will be available for immediate viewing. The system can archive items, either manually or automatically; however, EDS intends to keep the images available in the online repository for optimal retrieval.
40.1.1.46	Provides capability for data retrieved from offline storage to be retained online for ten (10) business days, unless otherwise requested	Met through COTS integration. The system storage has been sized for the storage of all historic and future images (life of contract) online. EDS proposes to maintain the Replacement MMIS content in online storage through Documentum. Based on this architectural approach, there is no offline storage configured; however, the system does have the capability for configuration of retention periods for items retrieved from offline storage if any were configured.
40.1.1.47	Provides capability to print hard copies of electronically stored documents	Met through COTS integration. Documentum provides the capability to print hard copies of electronically stored documents through the Webtop interface. APIs or Web service calls will be made to enable this capability from other user interfaces such as interChange, portal, or CTMS. Correspondence printing is handled by DOC1 and its interfaces.
40.1.1.48	Provides capability to print and fax documents	Met through COTS integration. Documentum provides the capability to print and fax documents. APIs or Web service calls can be modified to enable this capability from other user interfaces such as interChange, portal, or CTMS.
40.1.1.49	Provides capability for State and Fiscal Agent staff to retrieve and display any electronically stored documents within eight (8) seconds for the first page, within five (5) seconds for the second page, and within three (3), two (2), and one (1) second(s) or less for subsequent pages	Met through COTS integration. Documentum is configured and sized appropriately to meet the service-level agreement (SLA) for retrieval on standard images. During DDI, the EDS electronic documentation team will work with the State to establish document retrieval metrics for special large documents such as medical images and radiographs. It is possible State network constraints may adversely impact the transit time.
40.1.1.50	Provides capability to make all documents available to the State within two (2) business days of creation	Met through COTS integration. The implementation of FormWorks and Documentum will meet this requirement. Captured content or documents will be processed through FormWorks within two business days and made available immediately on release into the repository.
40.1.1.51	Provides capability to accept input in frequencies as defined in business areas and from multiple sources,	Met through COTS integration. The implementation of FormWorks and Documentum will meet this requirement.

RFP No.	RFP Requirement	EDS Response
	types, and formats, including: • Required electronic transaction formats, (e.g., X12) • Scanners (e.g., paper claims/written correspondence) • Electronic text (e.g., e-mail, e-fax, voice media files) • Paper documents (e.g., correspondence, claims forms, faxes) • Portable media (e.g., magnetic tapes, 3.5" floppy drives, CD/DVD drives)	The proposed Replacement MMIS provides the capability to accept the required sources, types, and formats. • Required electronic transaction formats—such as X12—will be ingested and stored as XML within interChange. • Scanners—such as paper claims or written correspondence—will be ingested within the FormWorks component and stored within Documentum • Electronic text—such as e-mail, e-fax, or voice media files—will be printed and ingested by the FormWorks component or in the case of fax directly ingested from a queue within the fax server environment. Voice media files will also be stored within the EDMS as .wav or .lpt files. • Paper documents—such as correspondence, claims forms, or faxes—will be ingested and processed within the FormWorks component or, in with a fax, directly ingested from a queue within the fax server environment, processed, and subsequently stored in the Documentum repository. • With portable media—such as magnetic tapes, 3.5" floppy drives, or CD/DVD drives—Documentum provides for the ingestion of any content type. Import Manager has been provisioned within the proposed software solution. Import Manager does need to be configured for the various media input devices.
40.1.1.52	Provides capability for all data input (e.g., images of scanned paper documents, voice media files, electronic and EDI transactions) to be transformed as needed for further processing	Met through COTS integration. Documentum has been proposed with transformation services and advanced transformation services. These components will need to be configured for the various transformations that may be required but support industry-standard formats. Other electronic transactions that are received as XML will be stored as XML and rendered through panels within the interChange system. Voice media files will be stored as either .wav or .lpt files.
40.1.1.53	Provides capability to protect all stored images and electronic copies from direct access while allowing authorized copies to be used for further processing	Met through COTS integration. Documentum's trusted content service has been proposed within our solution. This service provides for the encryption of content within the repository and any transmission of content between components. Only users who are authorized through interChange Single Sign-On or a native Documentum interface will be provided access to images or electronic copies of transactions.

Audit Trail (40.1.1.54 to 40.1.1.56)

interChange maintains an audit trail for each transaction update. Our system tracks every insert, update, or delete that is performed on an auditable panel. We identify who made the change, what change was made, the date and time stamp of the change, and a record of the data before the time the change was made. Users can display and review this information using the online audit panels or run an audit history report.

This process verifies consistency of information captured and also applies the standard for audits by tracking not only the specific transaction but also the individual responsible for the change and the date and time the transaction occurred.

MMIS information is captured at a transaction level using triggers directly applied to the database. This approach allows EDS to capture inserts, updates, and deletes to the MMIS critical data automatically without having to create specialized modules for the various programming environments for the batch, user interface, Web, or any other method of modifying data on the MMIS.

The data update panels within interChange contain an audit trail search feature that provides generic transaction-level information. Audit information can be filtered by fields (columns), date ranges, and can display results for the selected record or for each record in the parent panel. The audit results are based on search criteria entered on the panel.

A check box on the search panel allows users to select which fields to display. If not checked, the audit results will display changes to only the single data row selected in the main panel. If checked, the audit results will report changes to each data row contained in the list of the main panel.

Approach to Customization and Modifications

interChange meets the audit trail standards and requirements of the Replacement MMIS, and interChange's audit trail capabilities apply to the major business areas of the application where updates occur and are tracked.

Enhancements to Functional Requirements

The EDS interChange solution provides a fully integrated audit feature that meets the criteria required to effectively provide complete audit trail information.

Response to Audit Trail Requirements

The following table, EDS Response to Audit Trail Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements.

EDS Response to Audit Trail Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.54	Provides capability to track through audit trail data with date/time stamps: • All access, activity, and system identifier of users or persons making adds, changes, deletes, or queries • All activity that causes any additions, changes, deletions, or queries • All transactions that result in a claim being entered into the system, including EDI transactions, a prior approval being entered into the system, Third Party Liability (TPL) transactions, a financial result (incoming and outgoing financial transactions and system-generated financial transactions), adding, changing, or deleting recipient or provider data, adding, changing, or deleting reference or code data, drug rebate activity, financial activity, and reference file changes	Met by interChange. The audit trail process meets this functional requirement. The audit trail process verifies consistency of information captured and also applies the standard for audits by tracking the specific transaction and the individual or entity responsible for the change and the date and time the transaction occurred. interChange logs the changes to data, tracking by the date and time the change was made, and capturing the following: • When the change occurred • The entity ID that made the change • The type of operation—such as add, change, or delete • The "before" image of the change MMIS information is captured at a transaction level using triggers directly applied to the database. Data fields that are updated through the interChange user interface application have audit trail capabilities enabling authorized users to see the trail of modifications to specific elements, when the updates were made, what the updates were, and who entered them.
40.1.1.55	Provides capability to maintain an automated audit trail of all update transactions, both batch and online, including date and time of change, before and after data field contents, and operator identifier or source of the update	Met by interChange. The interChange user interface application automatically tracks the update transactions, capturing the specific date and time stamp of the changes, and which user or batch ID performed the updates. Each time an entry in a master file table is changed, added, or deleted, an entry is automatically made in an audit history file table recording the image before and after the change, and the date, time, and logon ID of the entity making the change.
40.1.1.56	Provides capability to create audit trail data that can be accessed online in a user-friendly, indexed, searchable format that has the capability to reflect the complete history of the transaction	Met by interChange. The interChange Audit panel provides online access to detailed audit trail data showing a complete history of changes made to the system. These audit trails are available online and are a built-in feature of the interChange MMIS database structure. Audit reports of transactions are stored from the first day of operations forward. Users can print a specific audit report of transactions using the Print Screen function of the Web browser or the Print Screen button on the keyboard. interChange will maintain the audit trail history online for a client-defined period and subsequently archive the material.

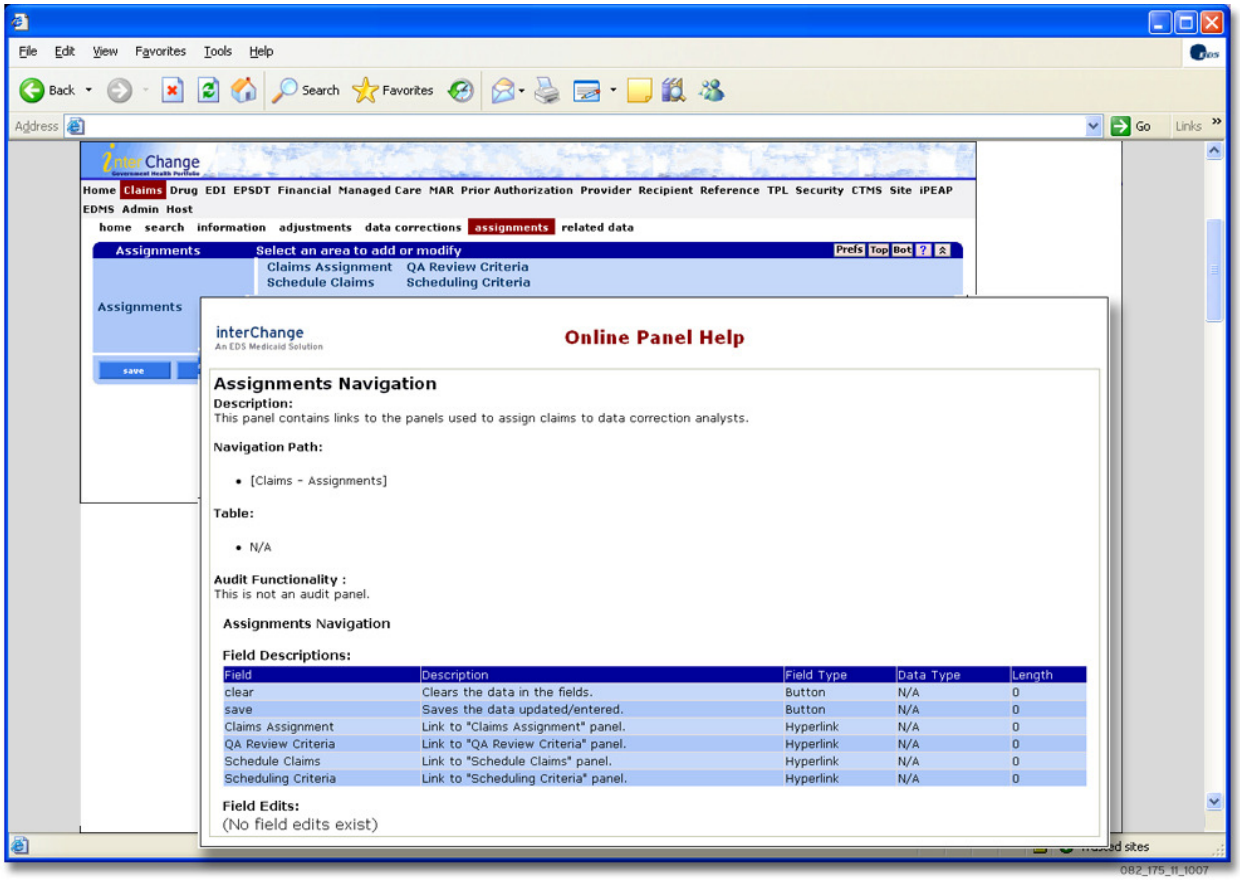
Online Help (40.1.1.57 to 40.1.1.59)

To assist the user community, EDS provides a comprehensive help architecture to guide interChange users. Application-level context-sensitive help is available as a standard feature of interChange. Online help and search capabilities support

every interChange panel. The online help system delivers just-in-time information for the user quickly and efficiently. The help system includes help topics, table of contents, index, glossary, context-sensitive help, and more. Help topics explain interChange features, integrating graphics—such as screenshots of particular panels or Web page objects—into the specific help topic. Additionally, hyperlinks to other related topics, rollover messages, customized pop-up Web pages, and URLs are incorporated. Online help contains comprehensive navigation features so a user can quickly find needed information. The powerful interChange natural language search or full-text document search includes a glossary of terms that a user can access without leaving the topic in use.

When online help is available for a panel, a Help button (?) displays on the right side of the panel header. The following exhibit, interChange Online Help Page, shows an example of the Online Help page.

interChange Online Help Page



EDS provides a comprehensive help architecture to guide interChange users. The EDS interChange online help system provides information such as panel descriptions, navigation path, field descriptions, extra panel features, and a thorough explanation on why error messages occur and how to correct them.

Help within the system is context-sensitive, which means that when the help link is clicked, the starting point for help is the information directly associated with

the page being displayed. Indexes and tables of contents also are available for more in-depth information.

Context-sensitive help links are added to objects—such as text fields—that connect directly to specific help topics. Instructions display for fields that allow users to enter information.

Online help provides an online version of the interChange user documentation. User documentation is available on every Web page, and topics can be printed, as needed. interChange online help has the following features:

- **Using help—**The user-friendly guide shows how to use the help function.
- **Processes and instructions—**This breaks down system business functions into processes. Instructions for completion of each process include an overview of the function, such as claims entry, along with field-by-field instructions for completion.
- **Index and search capability—**This powerful function enables users to conduct a search based on a question, phrase, or word the user enters in a search box. The help system displays an index or list of associated topics for selection.
- **Hyperlinks—**Online help provides hyperlinks to information, starting at a high-level description and building to a detailed explanation. A user can click links to access details, as needed.
- **Print capability—**Online help documentation may be printed directly from the help Web page or exported to Microsoft Word files as needed.

EDS will provide online documentation and instructions for system use. This documentation is at the application level—embedded within browser pages and specific data elements—and at the system level—stored in iTRACE.

iTRACE stores interChange documentation, delivering an innovative online help system that grants State and EDS staff members access to the most current version of the system. iTRACE provides a single source of information that is used to generate content for the online help features. Our single-source online help design enables the retrieval of information that is created and edited once and displayed consistently across each form of interChange.

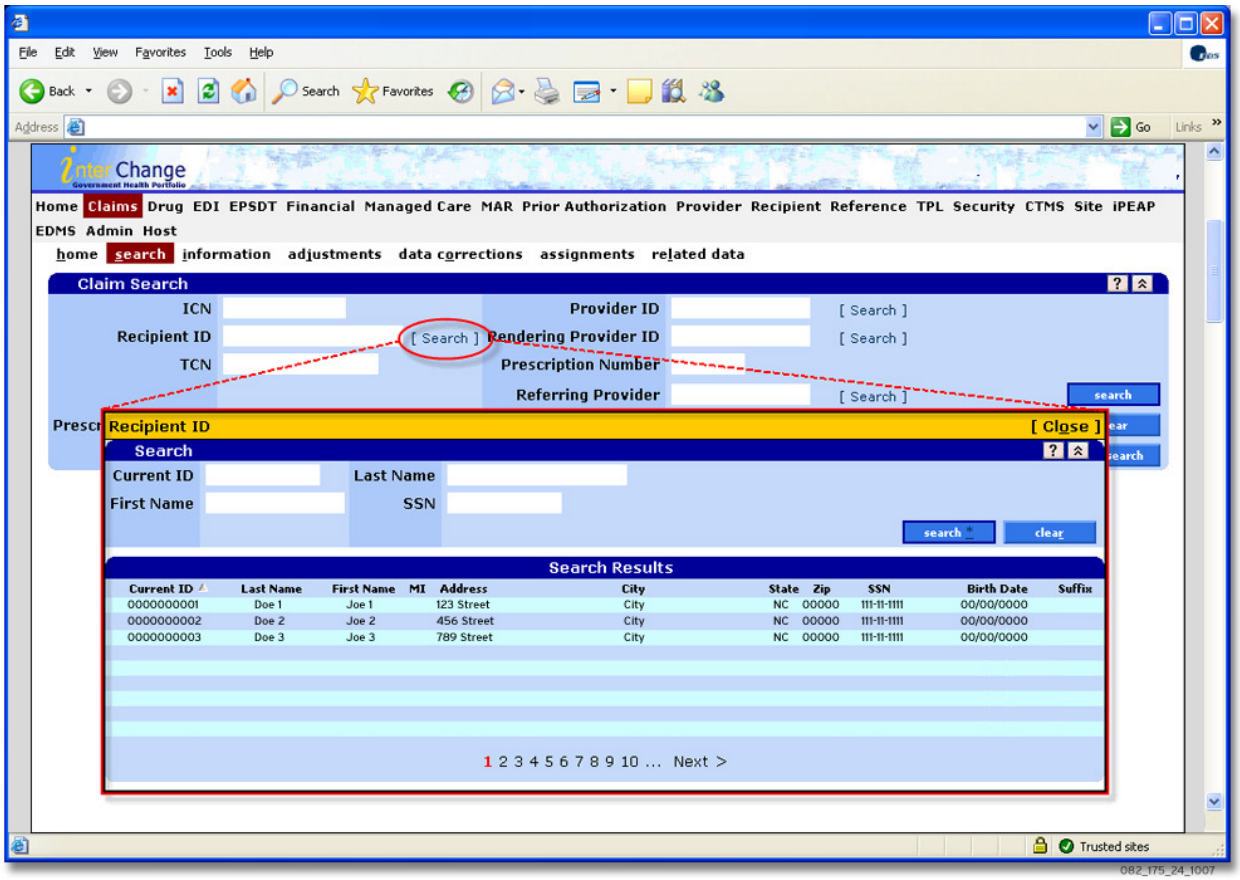
Links to system information such as the interChange user manual, interChange and subsystem documentation, the data element dictionary, provider handbooks, and other State-defined resources will be stored on iTRACE. The data element dictionary comprises data tables and respective data elements for the subsystem or functional areas of interChange.

In addition to the extensive online help features, interChange provides for the standard browser-based functions, including hovering, drop-down list boxes and menus, and point-and-click and cut-and-paste functions. For example, a user can

hover on a field name to get an extended description of the field. General information, panel descriptions, and field descriptions are accessed through panel-level help. These help features provide immediate details, allowing the users to resolve numerous system and business questions easily and quickly.

The EDS online help system implements many other online features that facilitate a positive user experience and make the EDS interChange system intuitive to use. We make extensive use of hyperlinks to make inter- and intra-subsystem navigation easy for the user. For example, the following exhibit, Recipient ID Pop-Up Panel, illustrates how a user, while viewing the claims subsystem, can click on a hyperlink that will launch recipient information in a new panel. The user can then search for specific recipient information while in the claims subsystem.

Recipient ID Pop-Up Panel



Using hyperlinks, users can toggle between subsystems to find information.

For users who prefer to use shortcut keys, interChange supports shortcut keys for common operations such as save, cancel, and add. To transfer information easily from one Web page to another, users can copy and paste any field-level information. Additionally, users can drag and drop data fields as they build ad

hoc queries. Users also can add bookmarks using the Favorite feature of the Web browser.

Approach to Customization or Modifications

No customization is required to meet this requirement. The base interChange MMIS solution contains the help features to meet the requirements.

Enhancements to Functional Requirements

No enhancement is required to meet this requirement.

Response to Online Help Requirements

The following table, EDS Response to Online Help Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Online Help Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.57	Provides capability for selectable online help views for user functionality that duplicate or link to system documentation	Met by interChange. The online help feature is available at the field, panel, and page level, and links to iTRACE, thereby providing access to system documentation.
40.1.1.58	Provides capability for online help for all features, functions, and data element fields as well as descriptions and resolutions for error messages, using help features, including indexing, searching, tool tips, mouse-over, field value options, hypertext links to files, reports, and context-sensitive help topics	Met by interChange. The online help feature is available at the field, panel, and page level, and links to iTRACE, thereby meeting this requirement.
40.1.1.59	Provides capability for context-sensitive help to view, window, or dialog	Met by interChange. The online help feature is available at the field, panel, and page level, and links to iTRACE, thereby enabling this requirement.

Search and Query (40.1.1.60 to 40.1.1.66)

Through our extensive experience in the Medicaid industry, EDS has gained valuable knowledge in the areas of common user and provider search needs. We have used this knowledge to tailor the search capabilities within interChange to most accurately match the typical data elements used in searches. This approach makes interChange more intuitive and efficient.

Authorized users can search the major business areas of the application using common data such as Provider ID, and then narrow the search using the interChange integrated advanced search option that provides additional search fields. Providers also can use the interChange Web portal to search for and access their claims, and search for provider billing information. The Web portal includes the ability to search for claim status information, payment history,

recipient eligibility and benefit information, and existing prior approval (PA) information.

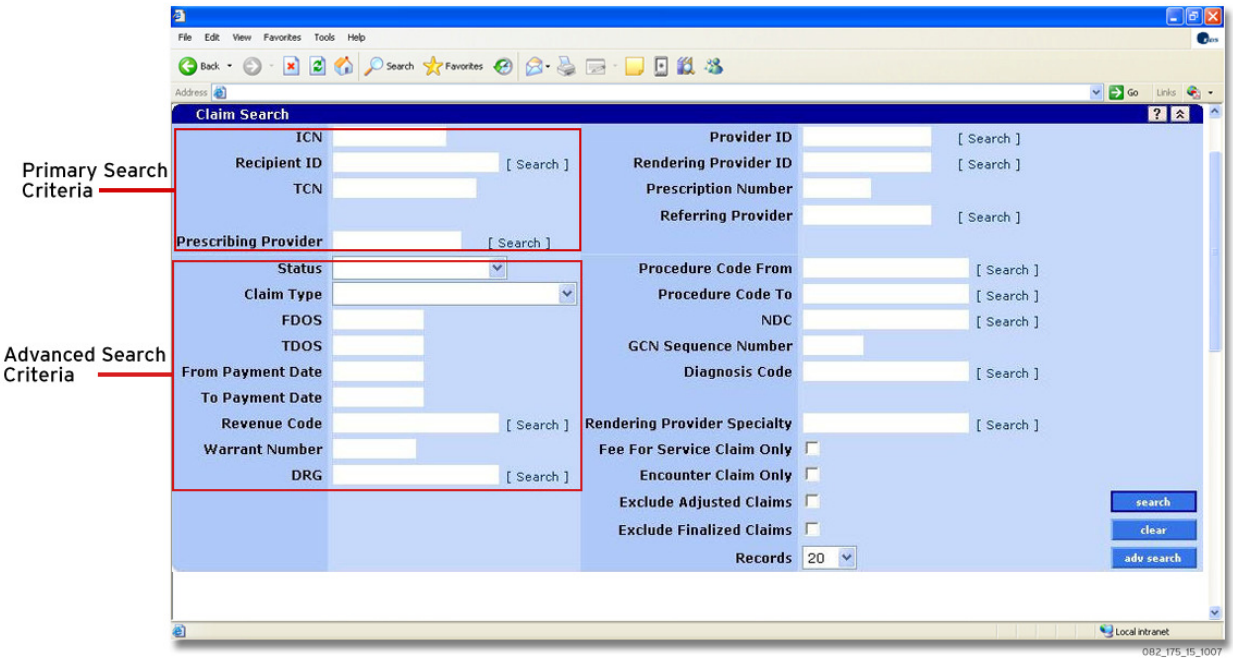
With interChange and iTRACE, the EDS browser-based documentation repository, users and providers benefit from Web-based features such as online access to user-friendly search capabilities. Records are selectable and searchable by fields specific to each business area, and interChange also offers the capability for users to query by running parameterized standard reports and viewing online production data.

Common Data Search

Users can search using common data, such as an internal control number (ICN), provider ID, or recipient ID number, to perform an initial search or expand the search panel to use the advanced search option. The advanced search feature more narrowly defines the search criteria and, thereby, the search results. Using this feature will offer many more claims-related search fields and, because the number of returned records will be fewer, the user can more quickly access the desired record.

The search fields available will vary depending on the subsystem, and users can perform a search using a combination of the available fields on a search panel. For example, the Claims Search panel, as depicted in the following exhibit, Sample Claims Search Panel, has search options that will allow users to view only the claims requested. The primary selection fields are ICN, Prescribing and Rendering Provider, or Current ID. Users may select claims by using one or more of the primary selection choices. Additional search criteria include claim type, claim status, from date of service, to date of service, and payment date. Users enter the specific selection criteria, and then click on the search button to initiate the search.

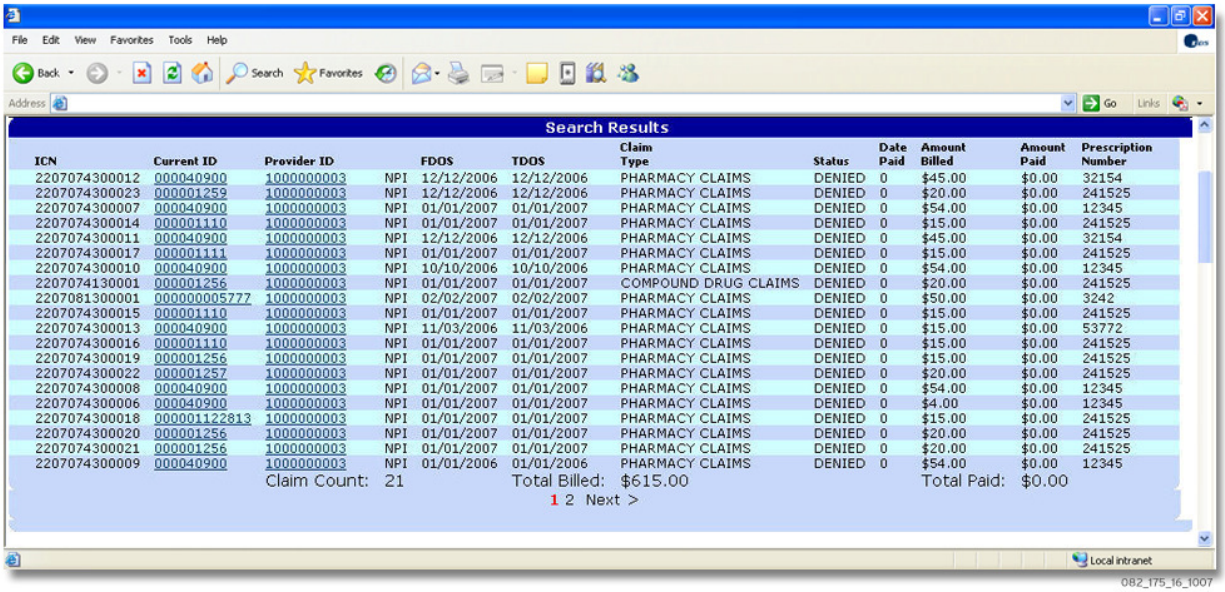
Sample Claims Search Panel



Detailed claim status results that are HIPAA content-compliant are populated on the user's panel from the strong search feature.

The system will search the database for the claims that meet the criteria and will display them on the Claims Search Results display panel, as shown in the following exhibit, Sample Claims Search Results Panel. If users want to access more details about any of the records in a search results panel, clicking on the record will drill down to record-specific information.

Sample Claims Search Results Panel



The claims histories that users want to see are clearly displayed.

The search function will retrieve lists of claims that match the entered search criteria, including any of the following—recipient ID, claim status, claim type, from and through dates, or paid dates. Even claims in suspense can be retrieved and reviewed. From the list of claims returned, providers can select an individual claim to see the detail related to that claim.

Our interChange solution is flexible and allows users to select the number of records that will be displayed in the search results panel—such as 20, 50, or 100. When the requested number of records display in the search results panel, a pager bar can be used to navigate through the matching records.

Text Search

The second category of search capability is to search within the MMIS site for pages that contain certain words. interChange provides sitewide search capabilities for documents within the Web portal.

EDS will configure the software to set up a system folder to include the search paths for the folders to be included in the search. The interChange MMIS will provide search capability based on wild cards or on combinations of selected fields.

When the setup process is complete, users can search Web pages, including PDFs, for words or phrases in a similar fashion to Yahoo or Google searches. Ifilter 6.0 displays a list of hits and a count of hits against the page on which the word or phrase was found. The following table, Search and Query Key Features and Benefits, lists the highlights of our solution.

Search and Query Key Features and Benefits

Feature	Benefit
Easy-to-navigate pages	Fast access to required information
Online access for authorized users to submit queries and get results	Better, faster, and more direct information retrieval
High-level, detailed, or text searches	Easily defined criteria by which authorized users can search
Flexible provider access to current information such as claim status or service authorization status, claim submission, and correction	Increased provider satisfaction

Approach to Customization and Modifications

interChange meets the RFP search and query standards and requirements. interChange's search and query capabilities apply to each major business area of the application. Users can create and change searches using common data such as Internal Control Number or Provider ID, and further customize the results by selecting additional record elements allowed by the advanced search capability.

The interChange Management and Administrative Reporting (MAR) Web pages allow users to generate parameter-driven standardized financial and operational statistical reports that are stored in a summary datamart that provides a data history, and allows interactive queries into the historical data for customized views for analysis. interChange also offers the capability to generate query-based, on-demand, online reports that allow for real-time reporting and analysis of user activity.

Enhancements to Functional Requirements

The EDS interChange solution provides a fully integrated search and query capability that supports access to MMIS data based on user-defined criteria and standardized-parameter reporting. Therefore, no enhancements are required to meet the requirements of the RFP.

Response to Search and Query Requirements

The following table, EDS Response to Search and Query Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements.

EDS Response to Search and Query Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.60	Provides capability to allow all records to be selectable and searchable by record elements, as specified within business areas	Met by interChange. The interChange search and query capabilities apply to the major business areas of the application. Search panels allow users to search using common data such as Provider ID, then narrow the search using interChange's integrated advanced search option to access additional record elements to further define the search results. To access details about a record in the search results panel, the user clicks on the desired record. Users also can search the Web portal for pages within the MMIS site that contain text or keyword criteria.
40.1.1.61	Provides capability to query and search information based on user-defined criteria or by data elements as specified within the business areas	Met by interChange. The interChange Business Intelligence Analytical Reporting (BIAR) system meets this functional requirement. Besides the system search capabilities, the interChange BIAR data repository supports user-defined criteria searches, as well as an advanced search option that provides additional search fields to more narrowly define the search result records.
40.1.1.62	Provides capability for search by phonetic/mnemonic, full-text, partial-text, keyword, Boolean operators, specific date, date ranges, partial Postal/zip code, and wildcard	Met by interChange. Besides the system search capabilities, the interChange BIAR system supports advanced data mining searches. The interChange text search provides sitewide search capabilities using full or partial text entries. Query capabilities will include Boolean operator, keyword, and searches. Data search fields will vary depending on the business area. However, the available fields on a search panel will include dates, date ranges, and partial field data with wild cards.
40.1.1.63	Provides capability for users to query via parameterized standard reports and view online production data	Met by interChange. The interChange MAR online parameter-driven reports meet this functional requirement, allowing users to generate parameter-driven standardized financial and operational statistical reports. These user-driven parameter reports are snapshots of financial, eligibility, participation, and filing statistics. The reports list results by various data elements. They are stored in a summary datamart so that a user can refer to prior periods to compare results. The State also can perform interactive queries and drill into historical data for customized views for analysis. interChange also offers the capability to generate query-based, on-demand, online reports that allow for real-time reporting and analysis of user activity.
40.1.1.64	Provides capability to generate descriptive alerts that specify any invalid query parameter(s) and to generate alerts when the anticipated return time on a query or search exceeds a defined time limit	Met by interChange. The interChange query capabilities meet this functional requirement. EDS will configure query capabilities to alert a user who enters an invalid parameter into any search field. The application enables thresholds on inquiries using a governor process to set limits on the time

RFP No.	RFP Requirement	EDS Response
		it takes to perform an inquiry. When the return time on a query or search is greater than a threshold, a system message will alert the user.
40.1.1.65	Provides capability to permit users to easily locate specific information in the online documentation, e.g., user manual, operating procedures, and online system help	Met by interChange and iTRACE, our online documentation repository. Documentum provides a simple, flexible tool for data image storage and retrieval. interChange provides site-wide search capabilities for documents within the Web portal. iTRACE provides online access to interChange documentation, including narrative overviews of functional areas with links to documentation for programs, reports, panels and pages, and system and business processes maintained by each functional area, including user manuals, operating procedures, and online help.
40.1.1.66	Provides capability to govern queries so that run time does not exceed defined limits	Met by interChange. The interChange BIAR query component meets this functional requirement. interChange features allow thresholds on inquiries using a governor process to set limits on the time it takes to perform a search.

Correspondence and Letters (40.1.1.67 to 40.1.1.88)

The Automated Letter Generator component of interChange is part of our Replacement MMIS solution, which will maximize the efficiency of the State's health programs. This component of the solution is an application that will support timely and cost-effective communication to DMA, DMH, DPH, ORHCC, and the State's providers and recipients.

We will provide a method of automatically generating letters to providers, recipients, and other necessary stakeholders in North Carolina. The Automated Letter Generator is an integrated COTS tool, Pitney Bowes DOC1, which is an easy-to-use tool that allows users to generate letters for mailing, e-mailing, faxing online, or delivery to the secure Provider Web Portal.

The Automated Letter Generator will work with the Replacement MMIS to automatically generate letters that meet certain criteria. For example, after a provider has completed enrollment, the system can automatically generate an approval letter and send it to the provider. Additionally, users can generate a single letter that may be printed, faxed, or e-mailed immediately on completion of a letter request. Authorized users can send letters to one person or multiple destinations, or send mass mailings to many people in many destinations.

Approach to Customization and Modifications

EDS will work with the State to customize letter templates for use in correspondence. The solution will allow for free-form text and also for more complicated correspondence types. This will be accomplished by using the letter

generator tool for data acquisition from the data repository and the use of DOC1, a component of Pitney Bowes Group 1 software, for letter generation and distribution. DOC1 will store the generated letters in the Documentum document management repository. The customization work, besides the letter templates, will be the text in the specified languages supported by the solution.

Enhancements to Functional Requirements

The correspondence and letters work during the DDI Phase is a customization and configuration task. The COTS DOC1 product meets the stated RFP requirements.

Response to Correspondence and Letters Requirements

The following table, EDS Response to Correspondence and Letters Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Correspondence and Letters Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.67	Provides capability to produce system-generated standardized letters as specified in business area requirements and to electronically store saved images of each letter produced	Met through COTS integration. Using the Automated Letter Generator tool and the Pitney Bowes DOC1 application, we will provide a method of automatically generating letters to providers, recipients, and other necessary stakeholders. We will track and retain an image of outgoing correspondence. As outgoing correspondence is created, each image will be prepared for posting on the Web portal, e-mailing, faxing, or printing for mailing, and the electronic non-updatable image will be stored in the Documentum document management system.
40.1.1.68	Provides capability to produce updatable, form-based, version-controlled, customized templates for letter generation with capability for free-form text as specified in business area requirements and to electronically store saved images of each letter produced from the templates in an easily accessible, searchable format	Met through COTS integration. We will provide a method of automatically generating letters to providers, recipients, and other necessary stakeholders in North Carolina. Letters designated as “updatable” will allow the user to enter free-form text as specified in business area requirements. There are no size limitations to the text fields. Version control for letter templates is provided within the Automated Letter Generator tool. Only the current version of a template is available for the generation of new letters. Previous template versions are archived within the system and are available on request. Images of the generated letters are stored within the Documentum document management system for archival purposes.
40.1.1.69	Provides capability for letter and template generation to comply with US DHHS Title VI Language Access Policy	Met through configuration of interChange parameters and features and through COTS integration. The flexibility of

RFP No.	RFP Requirement	EDS Response
	based on flag that defines recipient language preference	interChange allows the user to configure parameters such as the language preference on a recipient's base information file, which provides needed information for communication with the recipient. Using the language preference and the DOC1 language encoding scheme allows for the generation of standard and routine recipient correspondence in preferred language and complies with US DHHS Title VI Language Access Policy.
40.1.1.70	Provides capability to create and manage stakeholder correspondence, clinical policy documentation, bulletins/publication, business rules, and business forms	Met through COTS integration. Using the Automated Letter Generator tool and DOC1 Designer, we will create base templates. DOC1 Designer meets the stakeholder correspondence component of this requirement. For the clinical policy documentation, bulletins and publications are done by the Provider Relations team. That information is distributed to the provider portal for historical reference by the providers and easy downloading.
40.1.1.71	Provides capability to perform desktop publishing of documents for all stakeholders	Met by operational processes and procedures. Using standard applications such as Microsoft Word and Adobe Professional, EDS will implement procedures for the production of provider handbooks, policies, system documentation, training materials, notices, and other documents. We will provide a robust, standardized tool for efficient and consistent publication of quality, multilingual documents. This tool will meet the requirements detailed in this section.
40.1.1.72	Provides capability for on-demand and batch-driven correspondence creation and mailing	Met through COTS integration. At any step in the workflow process, the user may generate on-demand letters that may be printed, faxed, or sent by e-mail immediately on completion of the letter request. Also, the Automated Letter Generator and DOC1 will support batch-driven mailings. The letter can be defined within the Automated Letter Generator tool. EDS will work with the State agencies to determine the selection criteria, provide online reports to verify and finalize the selection, and generate the letters.
40.1.1.73	Provides capability for letter-generation solution that has the flexibility to use form letters and/or on-demand text generation	Met through COTS integration. With the Automated Letter Generator tool and the DOC1 tool, letters designated "interactive" will allow the user to enter any free-form text. There are no size limitations to the text fields. At any step in the workflow process, the user may generate on-demand letters that may be printed, faxed, or sent by e-mail immediately on completion of the letter request.
40.1.1.74	Provides capability for all stakeholders to create and electronically store correspondence templates for private and community use	Met through COTS integration. With the Automated Letter Generator tool and the DOC1 tool, the letter templates are updated easily by those users granted edit rights to the stored letter templates. Access to these templates will be

RFP No.	RFP Requirement	EDS Response
		based on role-based security profiles in the interChange EDMS. These predefined templates can support text, data fields, graphics, and multiple page orientations, including State letterhead and signature blocks.
40.1.1.75	Provides capability to use spellchecker functionality	Met through customization of interChange. EDS will use industry-standard tools to validate proper spelling, punctuation, grammar, capitalization, and check for technical compliance with printing industry standards before publication.
40.1.1.76	Provides capability to use business rules intelligence to determine the best choice for correspondence communication and allow for the identification of the best selection for combination of address(es), USPS, fax, e-mail	Met by interChange. interChange allows addresses to be scrubbed to facilitate the preferred correspondence method. The letter generation process allows the user to determine the optimum correspondence communication method when selecting the generation of the letter.
40.1.1.77	Provides capability to bulk distribute to target populations messages and communications via e-mail, fax, or Really Simple Syndication (RSS)	Met through COTS integration. The bulk e-mail generation ListServ tool allows for bulk e-mail distributions of messages and communications.
40.1.1.78	Provides capability to integrate the letter-generation solution with the Replacement MMIS and import required data elements identified in the business rules that must be included in the letter text	Met through COTS integration. The letter templates are updated easily by users granted edit rights to the stored letter templates. Access to these templates will be based on role-based security profiles in interChange. These templates can support text, data fields, graphics, and multiple page orientations, including DHHS letterhead and signature blocks. The tool is integrated with the EDS correspondence query generator, which pulls the detailed data from the database and passes it to DOC1 for processing.
40.1.1.79	Provides capability to send correspondence through workflow management for approval, where business rules require secondary approval	Met through configuration of interChange parameters and features and through COTS integration. The Automated Letter Generator and the DOC1 tool will provide a chain of review process within the workflow that will allow a user to create a letter and have it reviewed by an approver, such as a quality assurance analyst, supervisor, or business specialist before the letter is finalized and produced.
40.1.1.80	Provides capability to integrate and link all correspondence to the document management solution in real-time from point of origin (State, county, Fiscal Agent, or other State-contracted entity's location)	Met through COTS integration. DOC1 saves the postscript stream to the Documentum document management system. The EDMS provides the capability to link correspondence in real time from point of origin.
40.1.1.81	Provides capability to track the correspondence creator, date, recipient, and time stamp and maintain this information historically	Met through COTS integration. Version control for letter templates is provided within the Automated Letter Generator. Only the current version of a template is available for new letters. Previous template versions are archived within the system. Images of the mailed letters are stored in the Documentum document management system for archival purposes.

RFP No.	RFP Requirement	EDS Response
40.1.1.82	Provides capability to enclose attachments to meet recipient's language requirements	Met through configuration of interChange parameters and features and through COTS integration. The flexibility of interChange allows the user to configure parameters such as the language indicator on a recipient's file, which provides needed information for communication with the recipient. This feature further demonstrates how interChange is designed to accept fields that are required to establish a recipient's record and provide sufficient information for processing. Using the language preference in interChange along with the DOC1 language encoding scheme, standard and routine recipient correspondence will be generated in the required languages, which are Spanish, Russian, and Hmong.
40.1.1.83	Provides capability to create and distribute documents to multiple addresses	Met through configuration of interChange parameters and features and through COTS integration. The Automated Letter Generator will support sending letters to one person or multiple destinations, or mass mailing to many people in many destinations. EDS will work with the State to determine the selection criteria, provide online reports to verify and finalize selection, and generate the letters.
40.1.1.84	Provides capability to redistribute static letters	Met through COTS integration. The image of each letter that is generated will be stored in the Documentum document management system. To view outgoing correspondence, users will access the recipient or provider and select the hyperlink to the letter image.
40.1.1.85	Provides capability to create performance reporting associated with correspondence	Met by interChange and the Automated Letter Generator. The ability to generate performance reports with items such as volumes and dates is available within interChange.
40.1.1.86	Provides capability to allow user to designate address to be used	Met through customization of interChange. The flexibility of interChange will allow the user to configure parameters such as the address indicator on a recipient's file, which provides needed information for communication with the recipient. This feature further demonstrates how interChange is designed to accept fields that are required to establish a recipient's record and provide sufficient information for generating required correspondence.
40.1.1.87	Provides capability to enforce security rules to control who issues each type of letter and to designate and enforce a chain of review for certain letters	Met by interChange. Security controls will be imposed to restrict users to appropriate letter types for their job functions. For example, a provider enrollment clerk can enroll a provider in interChange and also generate an enrollment letter. A chain of review also can be implemented, allowing a user to create a letter and have it reviewed by a quality assurance analyst or business specialist before the letter is produced.

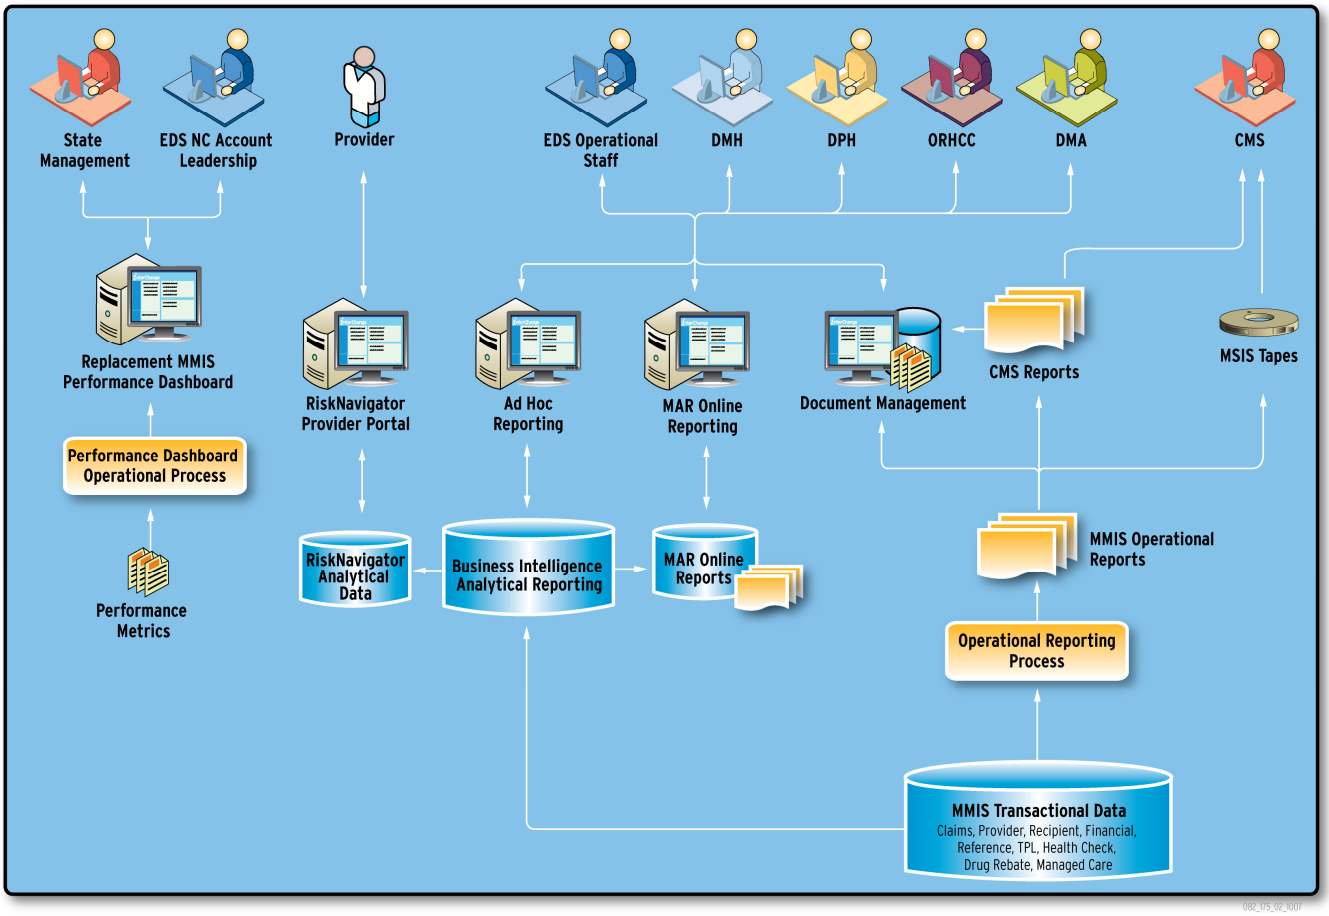
RFP No.	RFP Requirement	EDS Response
40.1.1.88	Provides capability for a user-friendly, English-text index that allows easy access to templates and easy retrieval of initial letters generated per requested parameters: business area, date of generation, topic, recipient name, etc.	Met by interChange. The interChange document management system creates an index that is passed along with the PDF letter template files, which includes requested parameters such as recipient, provider code, and letter image number as a part of the Letter Generator history.

Reports (40.1.1.89 to 40.1.1.91)

The management of State healthcare programs is a complex and demanding task. The ability to make timely and informed decisions regarding policies and the affected stakeholders is a must. EDS understands that one of the State's objectives is increased reporting capabilities for the State's programs. This is a common need for our clients, and we can take advantage of the success that we have delivered to our other clients for North Carolina's benefit. The interChange solution has many MMIS-generated business functional area reports that assist the claims and encounters, financial, provider, recipient, managed care, third-party liability (TPL), and other operational functions.

In addition to the operational reports, we will deliver our interChange Business Intelligence and Analytical Reporting (BIAR) data repository. This is a critical feature of our solution designed to empower the State staff and program stakeholders to have the greatest access to MMIS data at their desktops. The following exhibit, Replacement MMIS Reporting Solution, provides an overview of our reporting solution regarding the stakeholders accessing the data.

Replacement MMIS Reporting Solution



Our reporting solution is a critical feature designed to empower the State staff and program stakeholders.

EDS' approach to reporting brings the greatest flexibility and fast access to data available within an MMIS solution. Through various reporting options, data is gathered faster, helping to answer those "what-if" questions that arise and need to be answered quickly. EDS has continually invested in our reporting capabilities, as detailed in the subsections that follow.

Federal and State Reporting

With the interChange solution, federal reports are provided in compliance with current regulations, including the State Medicaid Manual Parts 7 (Quality Control) and 11 (MMIS), while maintaining the ability to accommodate future requirements.

Federal data reporting including Medicaid Statistical Information System (MSIS) files and 372 Waiver reporting is generated within the interChange solution. interChange has been federally certified to meet the requirements of Part 7 and 11 of the State Medicaid Manual. The summary process for the base MAR solution has been implemented in many states including Oklahoma, Indiana, Pennsylvania, Tennessee, Kansas, and Kentucky. For additional details

regarding the federal and state reporting, refer to proposal section 40.13.1 MARS Requirements.

Report Creation Capability

Besides the standard federal and state management reporting, the interChange MMIS BIAR module comprises market-leading, COTS ad hoc query tools and scalable hardware. When combined with our state healthcare-based dimensional data model, these tools will enable the State analysts to access and summarize large volumes of data from multiple inputs and produce customized reports such as the report titles described in Appendix G of the RFP.

The Replacement MMIS reporting data repository's desktop user interface and query tool, BusinessObjects, will allow direct access to critical program data and the ability to drill down into the details.

BusinessObjects is used as the MMIS ad hoc reporting tool, enabling users to develop and execute their own reports, queries, extracts, and results sets. Within BusinessObjects, data elements from the database are defined as objects in the business functional BusinessObjects Universes. A BusinessObjects Universe provides an easy-to-use and understandable interface for nontechnical BusinessObjects users to run queries against the database to create reports, queries, extracts, and result sets for data analysis.

Performance Management

Another slice of the reporting solution comes from executive reporting capabilities of the interChange solution. The interChange reporting solution includes the integration of BusinessObjects Dashboard Manager COTS tool. This tool brings the performance metric measurements and reporting to the manager's desktop, enabling the monitoring of business activities to meet the State's goals. By using dashboards to track and monitor business performance, the State will be more agile and adaptable to new internal or external conditions.

The performance measures are targeted at the State and EDS leadership for overall tracking of the operational performance. EDS has assumed that there will be 30 users of the BusinessObjects Performance Dashboard for the State. The State can track key performance indicators across time to identify trends. Measuring and tracking business metrics across time provides an important dimension to understanding the State's key business questions.

The powerful Dashboard Manager metrics engine stores metrics across any calendar period using prebuilt or custom calendars. EDS and the State will define and store requested metric history so that users can quickly compare today's business activities with any previous period, thereby gaining insight into trends and exceptions. For additional details and examples, please refer to the Performance Dashboard subsection of the Proposed Early Implementations section of this proposal.

Standard Parameter-Driven Reports

The Replacement MMIS MAR solution includes online, parameter-driven reports designed to quickly allow users to drill into the program data needed for research and evaluation of the program. The online reports generate financial and operational statistical reports that provide information regarding current and previous payment periods. Users can trend cash flows from period to period across time. The State also can perform interactive queries and drill into historical data for customized views of cash flow analysis.

These user-driven parameter reports are snapshots of financial, eligibility, participation, and filing statistics by logically grouped data elements. The following exhibit, Sample Payment Comparison by Provider Type Report, is a monthly and yearly comparison report by provider type. There are also lists by place of service, State category of services, specialty, county, provider ID, recipient ID, and revenue code. These snapshots are stored in a summary datamart so that a user can refer to prior periods to compare results.

Sample Payment Comparison by Provider Type Report

082_175_13_1007

The example report results show tracking and reporting on home health services, and the ability to compare home health services to mental health services and rural health services based on selection of provider types.

When selecting this report, the user enters the qualifying conditions, which are listed at the top of the report. For this example, the only parameter with a restriction is the Reporting Period, which is limited to 2006. After the user selects the report criteria, the report is generated dynamically and presented to the user in the format shown.

Additionally, other reports in the Replacement MMIS MAR solution will allow the State to perform provider type analysis on items such as filing statistics, denied claims and encounters, and provider participation statistics. Payment comparison by category of service (COS) reports also are available that list the same data elements as the provider type report, but lists by COS. The State will realize direct analysis benefits from the 26 Replacement MMIS MAR online reports that allow research to be performed quickly and accurately when needed.

Approach to Customization and Modifications

Multiple aspects to the customization and modifications are required of interChange for the reporting solution. The overall approach is built on tight data integrity between the operational MMIS transaction data and the reporting data store. The interChange reporting solution shapes the report creation and presentation methods to meet the needs of the deliverables from federal reporting, report generation capabilities to performance reporting, and parameter-driven online reporting.

The CMS-defined output reports are performed by interChange batch processes that efficiently handle the large volume processing and the detailed North Carolina mapping of healthcare groupings to the federal categorization. The mapping of the State-specific data to the federal reports is the customization work that we will perform with the State during DDI.

Enabling user report generation is accomplished through the integration with BusinessObjects, which puts the power of report generation in the hands of the users. The data attributes available for North Carolina are customized in this approach for business areas such as Health Check (EPSDT), which is a business function that requires additional MMIS modification to process the required business functions.

The initial delivery of the performance measurement dashboard will use the existing MMIS performance criteria as the definition of what to measure and report. The values from the performance spreadsheet will be directly input into the dashboard presentation tool, providing continuity with the existing management review activities between EDS and State leadership.

The final approach to reporting customization and change is through the configuration definitions of the North Carolina healthcare codes available to drive the MAR online parameter reports. These code definitions provide the details.

The following table, Software Modules and Features, is a listing of the software modules configured as part of the Replacement MMIS reporting solution.

Software Modules and Features

Software Package Module	Feature	Number of Licenses
BusinessObjects Query and Reporting	MMIS ad hoc report creation and analysis of the detailed data processed by the multi-payer system	100
BusinessObjects Dashboard	Contract performance reporting to agency and EDS managers	30
interChange MAR online reports	Management metrics used for healthcare program analysis and provider education	Unlimited
interChange MMIS operational reports	Reports from the various MMIS business functional areas available through the document management system	500

Each software access will be in part defined by the role-based security, as defined during the implementation. Across the reporting interfaces to the Replacement MMIS, the user profile security requirements will be defined. For predefined reports, security is applied at the report level, while the ad hoc and parameter-driven report security is applied at the data attribute level, meeting the requirements for multi-payer security presentation of the data.

Enhancements to Functional Requirements

The interChange reporting solution is a feature-rich offering that spans the mandated federal reporting and local State reporting needs. It provides online, parameter-driven reports for fast and accurate analysis of the State healthcare programs. The Replacement MMIS solution also will take MMIS reporting to the next level through direct user MMIS ad hoc request capabilities for report generation and analysis.

The following are specific changes required to meet the requirements of the RFP:

- Customize the BIAR reporting data store based on the State-specific data field updates to claims, provider, recipient, major reference files, financial, TPL, drug rebate, prior approval, health check, and managed care and provide the State with 100 user licenses for this reporting capability
- Customize the performance management dashboard using the existing account spreadsheet measures as the scope of the initial dashboard reporting and provide the State management team with 30 user dashboard licenses
- Perform the internal State code mappings for the MSIS files and 372 Waiver reporting federal requirements

- Define the detailed multi-payer report security approach and application for the report and data access layers within the reporting database

Response to Reports Requirements

The following table, EDS Response to Reports Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, or processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Reports Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.89	Provides capability for system-generated reporting to include, without limitation: • Federal- and State-required report and distribution • Reports identified in Appendix 40, Attachment G of this RFP • Fiscal Agent operations and system performance • Contract compliance • Cost allocation • Contract invoicing • Standard pre-formatted reports with parameters selection criteria	Met by interChange. The solution provides for the capability of system-generated reports, from operational reports to management and performance reporting, in addition to the CMS-required reports and analytical reporting. The MAR subsystem provides the output for the federal and State-required reporting including the MSIS tapes and waiver reporting. The solution includes the interChange BIAR module, which provides the State analysts the capability of generating the reports listed in Appendix 40. The fiscal agent operations, system performance, and contract compliance are met through the interChange performance management dashboard. The cost allocation and contract invoicing are met through operational processes. The interChange MAR reporting solution extends to include standard preformatted reports that are parameter-driven criteria directly to the user's browser.
40.1.1.90	Provides capability for online access for users (based on role-based security) to reports, enabling downloads for export/import into multiple software formats and availability for use in multiple media	Met by interChange. Reports are protected by role-based security, which will be defined in conjunction with the agencies during the DDI design and analysis phases. The operational reports are stored in the document management system and available to the users through their desktop browser. Security is provided at the report level by the defined user role configured within the MMIS security module. Additionally, the interChange system provides 26 online, parameter-driven reports in MAR, which enable the user to render the output as Excel, PDF, or HTML for export—including the Comparison by Category of Service, Error Code, Expenditures by COS, Payment by Provider Type, Provider Filing, Provider Ranking, Recipient Ranking, Throughput Date of Receipt to Date of Payment reports, and others.
40.1.1.91	Provides capability to maintain all reports that cannot be regenerated to reflect the report contents as originally represented	Met by interChange and through COTS integration. The operational reports from the system are stored in the Documentum document management system as a

RFP No.	RFP Requirement	EDS Response
		permanent storage media snapshot of the reports as they were originally created. Users can view the reports directly from their browsers for easy access to these snapshots of reports.

Workflow Management (40.1.1.92 to 40.1.1.106)

With communication critical to successful business operations and process improvement, interChange is adding a new focus to the typical MMIS—managed workflow. Because communication technology must facilitate the necessary interaction between providers, recipients, the State, EDS, and the interChange system, our team has made improved communication and coordination a continual focus.

Our automated workflow management solution includes the integration of the K2 workflow engine into interChange within the areas of provider enrollment, prior approval (PA), and DPH eligibility processing. The K2 workflow engine is an XML and standards-based workflow solution used for enabling task-sharing across multiple enterprises using Web services. It provides a framework for designing, deploying, monitoring, and administering workflow processes and provides support for the following features:

- Unique workflow paths per requirements of provider types and specialties
- Standards processing for timely high-quality DPH enrollment processing
- Workload monitoring and balancing for optimal PA review processing
- Dehydration, which enables the states of long-running processes to be automatically maintained in a database and correlation of asynchronous messages
- Service-oriented architecture (SOA) framework, laying a foundation for long-term value to the State as workflow usage expands
- Fault-handling and exception management
- Audit trails for tracing business flow history

Approach to Customization and Modifications

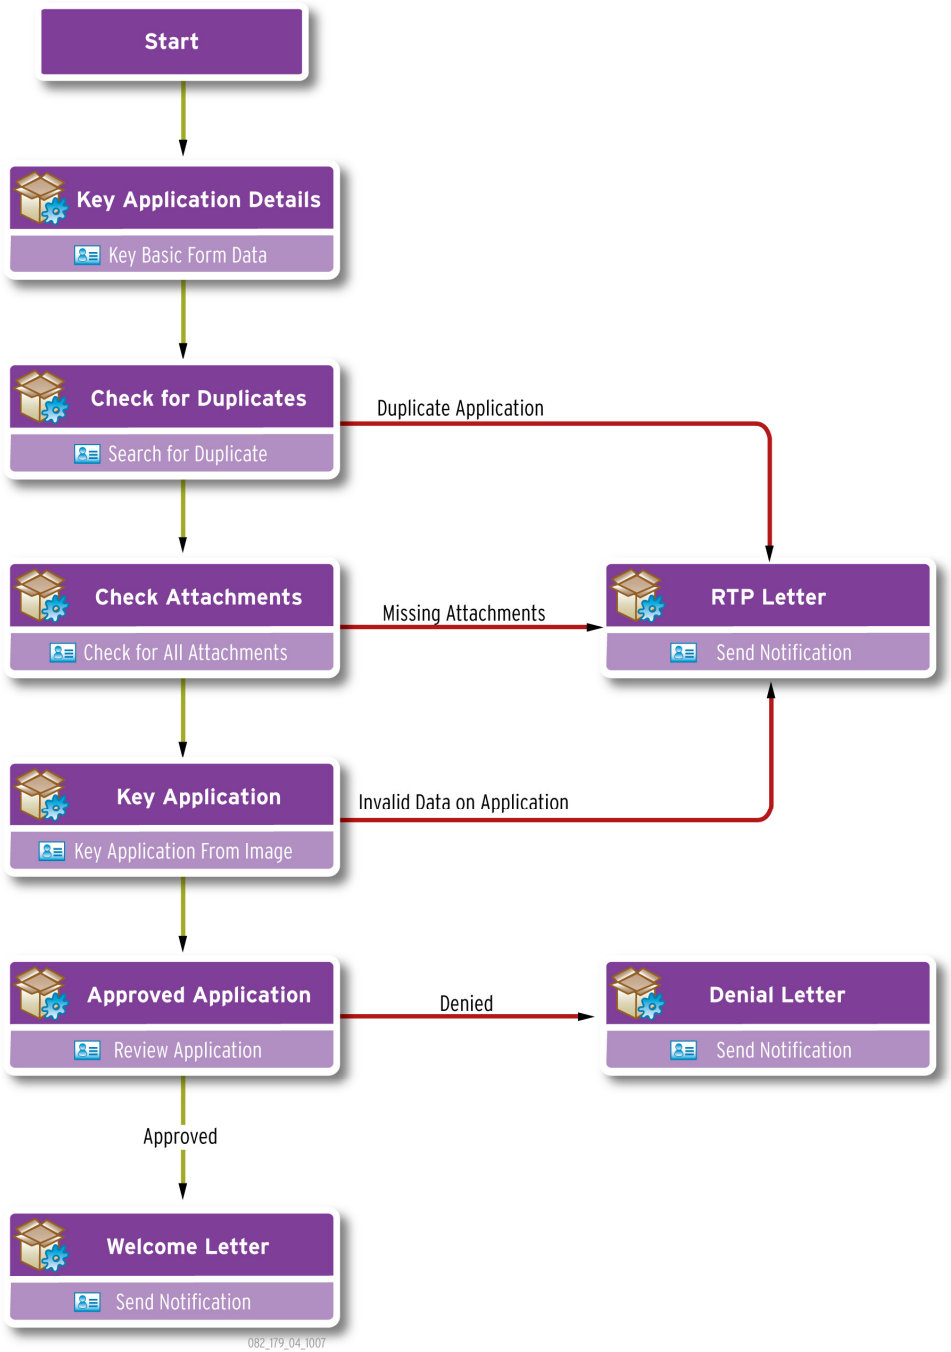
The customization and modification approach to the Replacement MMIS will focus on the provider enrollment processes. The unique State rules surrounding provider types and specialties will be customized within the interChange workflow processes to best meet the business workflows.

The K2 workflow engine enables workflow definitions to be viewed and managed by several audiences, including business users, business analysts, and developers. interChange provides smooth integration to these capabilities through the interChange portal Web application. Each workflow in the EDS interChange solution is created to be configurable. This enables authorized users to configure, manage, override, change, or suppress flexible processing rules to support workflow activities in real time. For example, a workflow may include some decision logic related to a provider specialty that requires additional review or certifications. The workflow is customized to process this specific provider specialty as needed in the workflow implementation. The configurability of the EDS interChange workflows maximizes the State's ability to easily manage or configure workflows so they meet the State's needs and minimize the effort required to implement the changes.

Business workflows often are coupled with interChange user interface pages to enable the workflow items or tasks to be worked on. For certain types of workflow changes and modification, these pages will require modification. In these scenarios, EDS will work with the State to arrive at an optimal solution for the required changes.

For developers, the logic of an automated business process can be implemented directly in a language such as C# or Visual Basic. Yet creating, maintaining, and managing complex business processes in conventional programming languages can be challenging. As shown in the following exhibit, Workflow Provider Enrollment Decision Point Diagram, the K2 workflow solution allows for the creation of business processes and workflows graphically.

Workflow Provider Enrollment Decision Point Diagram



The provider enrollment workflow process clearly identifies each step in the process for consistent application of the provider enrollment rules.

Doing this can be faster than building the process directly in a programming language, and it also can make the process easier to understand, explain, and change. Business processes built in this fashion can be monitored more easily, too, a fact that is exploited by the monitoring technology built into interChange.

Interacting with the interChange workflows occurs at various times and by various groups within the interChange solution. A user will be interacting with the interChange workflow in the context of a participant. This is someone who is actively involved in a workflow. The user may be working on a provider enrollment by keying data or reviewing and approving a provider enrollment application that has already been entered into the system.

In this context, the work done by the user enables the workflow process to progress to the next step or activity based on how the workflow is defined. For example, after enrollment data is keyed and verified, the workflow engine will move the process to the next activity, which may be an activity that verifies that the attachments have been received and are valid. This activity may in turn be worked by the same user who keyed the data or a different group of users.

During the process of working in a workflow instance, authorized users can view a picture or diagram that shows them where they are in the workflow process and what the next steps are. This helps the users understand the process and how what they are doing or working on fits into the bigger picture. Team leaders or business unit managers also can interact with the system. The system provides several workflow management panels that enable the configuration and management of workflow instances in the system by these types of users. These panels allow authorized users to reassign work from one user or group to another, as well as change certain properties about a given workflow instance, such as priority. There also are panels that allow an authorized user to configure a workflow and modify how a new workflow instance will be processed.

interChange workflows are configurable and allow the user to make various changes that impact the processing of a given workflow. However, the ability to configure a workflow is restricted when the changes required are significant. When this happens, developers, partnering with the State, will use various development tools to modify and extend the interChange workflows. The developers will make sure the parts of a workflow are handled when changes or extensions are requested. Because of the robust tools from K2, modifying or extending these workflows is much easier and more efficient than ever before.

When changes are required to a given workflow, they can be released into production before the existing versions of the workflow are completed because the K2 workflow engine supports versioning of workflows. Therefore, multiple versions of the same workflow may be operating in the workflow engine at the same time. This enables the State's workflows to always be current.

Enhancements to Functional Requirements

The interChange workflow environment comes with extensive internal monitoring on active processes, users, and exceptions. Additionally, scalable and configurable logging tools make it possible to log a fine granularity of system interaction for management, reporting, and compliance needs. Significant events

can lead to alerts that indicate events such as changes in policy, system features, status, and other pertinent activity. This means that the solution can be applied in the most demanding audit, management, monitoring, and compliance-based scenarios. The following specific interChange areas will be enhanced with the workflow engine COTS tool:

- We will build PA workflows for PAs that require more review than adjudication.
- We will build our DPH eligibility workflow for the eligibility applications entered for that agency.

Statistical and audit information captured by the interChange workflow solution will be stored within a Microsoft SQL Server repository. While this solution provides many reports out of the box, any custom reporting requirements can be acted on by using these statistics stored within the back-end database. EDS will work with the State to meet and fulfill its reporting requirements.

Response to Workflow Management Requirements

The following table, EDS Response to Workflow Management Requirements, describes how we will meet the requirements set forth in the RFP. We also have described how the K2 COTS software product is integrated within the solution.

EDS Response to Workflow Management Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.92	Provides capability to maximize work queue technologies that enable a business rule empowered workflow, end-to-end enterprise-wide strategic solution that generates prioritized, sequential first-in/first-out delivery of work items that are generated as either media event or application event work items Provides capability to support: • Documentation retrieval (link to imaged documentation) • Alert agent on events such as work item creation, assignment, work item updates, and status changes • Assignment tracking and retrieval • Aging report(s) • Work item monitoring • Work item reassignment	Met through COTS integration. The K2 workflow engine and the interChange user interface for PA and provider enrollment meet this requirement. While the K2 workflow engine provides the capability to maximize work queues, prioritize work items, retrieve documents, provide alerts on various events, track and retrieve assignments, age reports, monitor work items and reassign work items, these capabilities will need to be integrated into the appropriate areas of the overall interChange solution as the State determines the necessity for this capability to be implemented.
40.1.1.93	Provides capability to input requests/inquiries into the workflow/imaging application to enable processing to be automated and forwarded to designated work and print queues	Met through COTS integration. While this capability is native to the K2 workflow engine, EDS will work with the State to determine areas where this capability can be exploited.

RFP No.	RFP Requirement	EDS Response
40.1.1.94	Provides capability to move requests to the next work queue based on expertise required for completion	Met through COTS integration. This capability is native to the K2 workflow engine.
40.1.1.95	Provides capability to allow the assignment or routing of tasks by the user	Met through COTS integration. This capability is native to the K2 workflow engine.
40.1.1.96	Provides capability for tickler and/or to-do list capability	Met through COTS integration. This capability is native to the K2 workflow engine.
40.1.1.97	Provides capability to support the tracking and resolution of contacts, including calls, on-site visits, override requests, prior approvals, and written inquiries	Met through customization of the COTS K2 workflow engine. State-specific requirements for tracking and resolution can be built into the K2 workflows.
40.1.1.98	Provides capability for the unlimited entry of notes with date/time stamp, user identity, and categorization as to type of note	Met through customization of the COTS K2 workflow engine. State-specific requirements for the entry of notes can be built as necessary into K2 workflow functionality.
40.1.1.99	Provides capability to designate certain notes as confidential and restrict access to notes to authorized users	Met through customization of the COTS K2 workflow engine. State-specific requirements for restricting access to notes can be built as necessary into K2 workflow functionality.
40.1.1.100	Provides capability for automated work load balancing	Met through COTS integration. This capability is native to the K2 workflow engine.
40.1.1.101	Provides capability for convenient, instant access to current and historical information without requiring a separate sign-on beyond the initial Replacement MM IS sign-on	Met through customization of the COTS K2 workflow engine. State-specific requirements around single sign-on can be built into the K2 workflow engine.
40.1.1.102	Provides capability to produce work management reports to include, without limitation, performance measures online by individual business unit and business process and compare them to actual performance	Met through customization of the COTS K2 workflow engine. State-specific requirements around work management reports can be built into the K2 workflow engine as necessary.
40.1.1.103	Provides capability to use user-defined templates that support various workflow processes	Met through COTS integration. The use of user-defined workflow templates is native to the K2 workflow engine.
40.1.1.104	Provides capability for a graphical interface to support the development and maintenance of the business processes; provides capability to allow users to create a visual capability or flowchart that controls the sequencing of manual and automated tasks performed throughout the business cycle	Met through COTS integration. This capability is native to the K2 workflow engine.
40.1.1.105	Provides capability of integrating with a rules engine	Met through customization of the COTS K2 workflow engine. The K2 workflow engine can be integrated into the interChangeRules engine using Web services.
40.1.1.106	Provides capability to allow State access to work queue to assist in evaluation and disposition of work queue items	Met through COTS integration. This capability is native to the K2 workflow engine.

Rules Engine (40.1.1.107 to 40.1.1.120)

EDS' interChangeRules provides a comprehensive solution to encapsulate North Carolina's business policies. EDS applies the appropriate solution to the proper situation in rules integration. Our approach balances the high-volume transactions and tight data integrity needs of claims processing with the flexible and highly configurable third-party COTS approach in the areas where throughput requirements are not as aggressive.

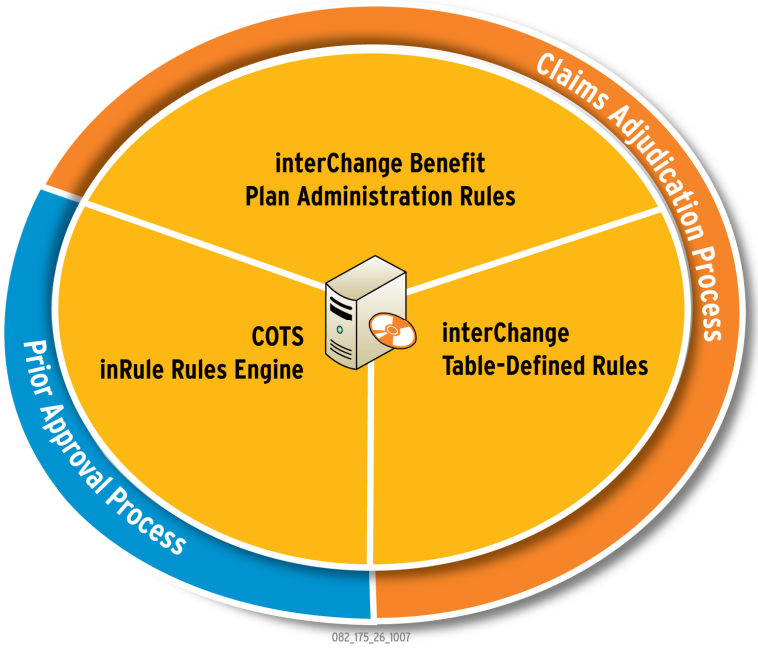
As shown in the following table, interChangeRules Components and Functions, there are three distinct components that are integral to the accuracy of the State's healthcare processing. These components play important and distinct roles in the system processing for optimal configuration and maintenance of the system.

interChangeRules Components and Functions

Rule Component	Feature and Function
interChange Benefit Plan Administration (BPA) rules engine	These rules define the claims adjudication rules. This rules engine is an integrated module of the interChange application and designed specifically for state healthcare rule definition needs. This rules engine is exposed to authorized benefit user analysts for configuration and maintenance of the business rules used to process claims.
InRule COTS rules engine	This rules COTS product is integrated within the overall solution to define business rules, such as prior approval (PA) rules, by the business analysts who will define and enter the policy for processing the PA requests.
interChange table-defined rules	These table rules build the relationship of the data within the system, such as the relationship between claim type and the submission form type and the provider type to specialty cross-reference. These table-driven rules are maintained through the interChange user interface by authorized business analysts during system configuration and maintenance activities.

This triad of rules components provides a strong foundation for the overall application, while opening up the process of entering rules to the business analyst community rather than hard-coding the rules within the application. The following exhibit, interChangeRules Components, is a representation of how the EDS solution applies rules in a logical and proven manner.

interChangeRules Components



interChangeRules opens up the process of entering rules to the business analyst community rather than hard-coding the rules within the application.

This COTS rules engine is incorporated into the PA functional area to meet the State's needs. For higher transaction volume areas such as claims adjudication, the interChange BPA and table-defined rules are used.

The EDS-developed rules-authoring tool is designed to allow analysts to configure rules used during the processing of claims within the claims engine. These rules define the following specific criteria needed to develop four distinct types of rules:

- Benefit plan rules establish which services are covered—or excluded—for a given benefit plan and the conditions that allow that coverage.
- Provider contract rules define who can perform, bill, and be reimbursed for given services.
- Reimbursement agreements define exactly which pricing methodology should be applied to a service and which pricing adjustment factors to consider.
- Other insurance rules allow the analyst to configure the coverage of different third-party liability (TPL) programs, which are used in setting TPL edits.

Each type of rule controls an aspect of the claims processing. The interChange system enforces rule compatibility by preventing rule collisions or overlaps and

by recommending rule simplification strategies when the newly authored rule is compared to the existing rules in the system.

The interChangeRules online reporting capability supports searching for rules by numerous parameters and allowing rules to be compared across recipient populations or rule types for a complete picture of what coverage rules, provider contracts, or reimbursement agreements play a part in defining the business policy of a benefit plan. For research purposes, any rule used to authorize payment of a claim is stored with that claim's history. This facilitates answering provider's questions and providing input to future policy direction.

Please refer to the Configuring the System section of 40.8.1 Claims Processing System Requirements for exhibits and details about how this rule-authoring capability is used within the claims processing system.

EDS' interChangeRules provides table-driven, online, near-real-time customizable business rules that can be configured and adapted to accommodate changing business needs. The EDS solution enables the authoring, management, and verification of business application rules by nontechnical and technical personnel.

By presenting application decision logic and user interface components in a familiar business context, users can encode, verify, and evolve their business rules much more effectively. For example, if the policy relating to the authorization of a PA for a given service were to change, a technical coding change would not be necessary. An authorized user can directly change or edit these rules and apply them immediately.

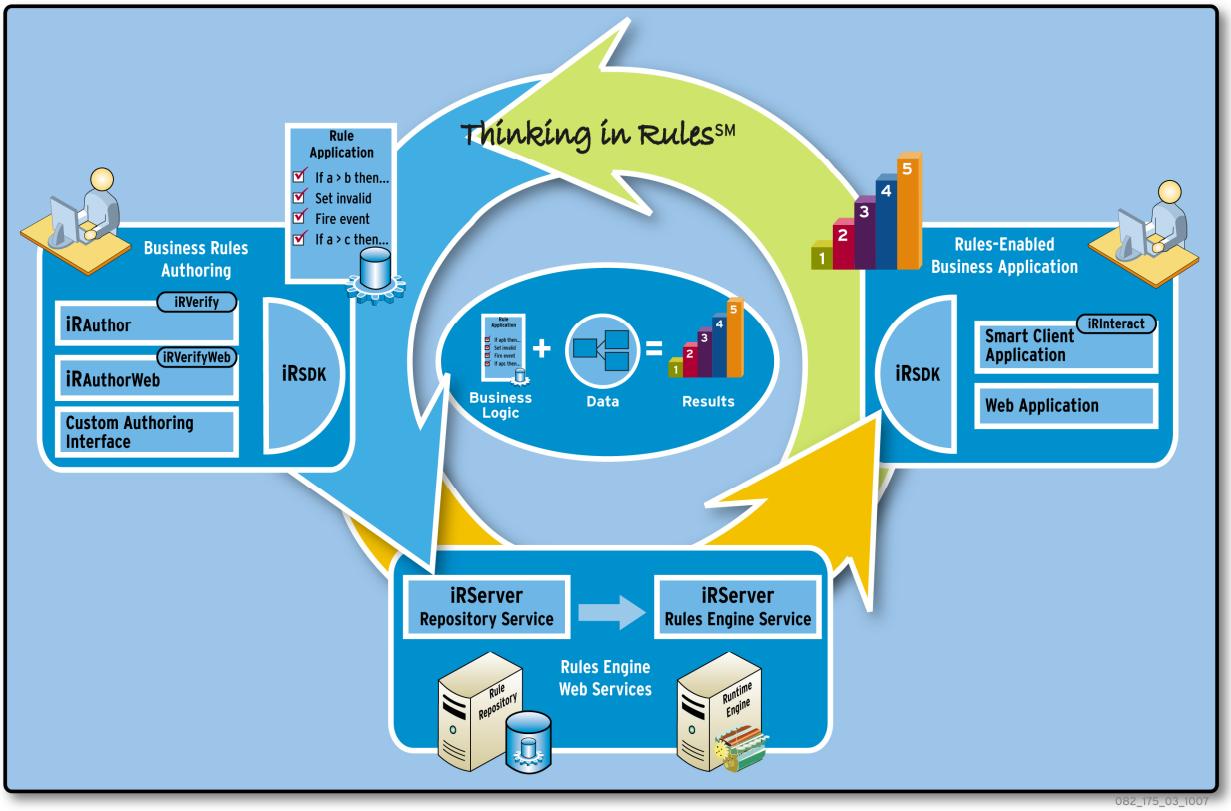
EDS' interChangeRules provides configurable business rules that encompass edits and audits, medical policy, cost avoidance, funding source code, budgets, benefit plans, PA, and other system drivers required to complete the core business processes. Within interChangeRules, authorized users will have the tools necessary to implement policy changes without the need for technical assistance, saving valuable time and eliminating costly programming expenses. These changes can be applied in near real time rather than in days or weeks. This will allow the Replacement MMIS to quickly respond to policy change or legislative mandate. Policy changes are tied to cost savings in many instances, so rapid policy implementation can translate to earlier cost reductions for State programs.

One of the core components of the interChangeRules is the InRule business rules engine. InRule provides technology for the authoring, management, and verification of application decision logic that involves rules, calculations, and user interfaces required for recipient management. The second is the COTS InRule rules engine, rated as "visionary" in Gartner's 2005 Business Rules report. InRule's declarative development approach captures business intent by allowing users to encode rules without the overhead of custom programming, which results in adaptive business processes. InRule's industry-leading rules console

approach uses a rules catalog that provides visibility into core logic and facilitates the sharing of that logic across applications.

The following exhibit, InRule Business Rules Engine Capabilities, shows the different capabilities of InRule.

InRule Business Rules Engine Capabilities



InRule's industry-leading rules console approach uses a rules catalog that provides visibility into core logic and facilitates the sharing of that logic across applications.

InRule is built entirely on the .NET platform, using a component architecture that delivers rule-processing performance and flexibility. From the feature-rich rule-authoring environment to the optimized execution of the business rules engine, InRule unifies the domains of managed business logic and traditional systems processes. Using open industry standards, the InRule engine can be used from anywhere in the infrastructure using Web services or a native .NET application program interface (API).

For areas of the solution where high throughput and quick response times are essential, EDS uses our highly customized rules engine, interChangeRules, which incorporates database table-driven rules and custom rules components. For example, the benefit plan administration (BPA) system allows states to quickly and easily manage benefits through the interChange user interface.

This system manages the benefits and rules that are applied during claims adjudication as a part of the operations management business functions. Rules may be applied to payment processing to determine how and when copayment is applied, and they may be used to define provider contract and billing restrictions. The interChangeRules is designed around the State's needs to define how services are covered, delivered, adjudicated, and managed.

The interChangeRules operates with business process automation services through Web Service calls, allowing workflow automation to work with and be driven by State business rules.

With interChangeRules, business rules are represented using numerous representations, such as decision tables and pseudo-linguistics. Rules can be sequenced to provide easy changes in execution. Rule testing will allow rule consistency checks and logic collision checks.

The following are key features that enable ease of administration and use:

- **Intelligent authoring—**Even novice rule authors can create complex context-driven rules and expressions.
- **Context-aware rule authoring—**The rules are maintained in the context of their use so the author may have a full understanding of how and where the rule will be applied.
- **Integrated near-real-time testing—**Users can inspect how rules work and what the results are and get a full understanding of why a rule returns the results it does.
- **Web services enhancements 2.0 support—**InRule is the only rules engine that complies with Web services enhancements 2.0, which implements the latest Web services standards for security and policy for the best interoperability between Web services and applications.
- **Superior calculation engine—**A calculation engine supports analytics and mathematical operations with visual decomposition. Examples include running totals, time series data, and aggregate functions.
- **Extensible representation of rules—**Using industry-standard technologies, rules can be represented in various formats.
- **Rule availability—**Rules may be made available for review using a Web browser and are maintained using either a Web browser or Windows form application.
- **Rule configurability—**Rules can be configured in various ways, including enabling them to be date-time-sensitive so they only apply when appropriate.

Approach to Customization and Modifications

Using rules-authoring functions, interChange is highly configurable. One of the larger efforts of the transition to the Replacement MMIS will be the analysis, definition, and configuration of State business, pricing, and payment policy. This will require a collaborative effort involving meetings, discussion, bidirectional education, and thought to achieve successfully. The Replacement MMIS has many additional capabilities that allow many of the old policies and processes that were based on existing system constraints to be rethought and redefined. EDS has the experience to guide this discovery and transform the Legacy MMIS+ of today into the Replacement MMIS of tomorrow.

The EDS team will work closely with the policy subject-matter experts of the four agencies to analyze, extract, review, and confirm the current claims processing business rules to be configured in the EDS table-driven and BPA rules components. The EDS analysts will enter the confirmed rules into the application.

For the PA rules configuration, the interChange team will leverage the design and definitions work from the current Unified Screening Project (NC-USP) as a jump start to the integration of business rules for PA adjudication through InRule.

The EDS interChangeRules solution will fully support the State's policy and business requirements. The interChangeRules solution provides maximum flexibility in administration and scalability. The interChangeRules management is facilitated by an easy-to-use Web interface and can be maintained through a Web browser or Windows form application. A drag-and-drop Web page designer of InRule lets authors create rules that can be tested directly from the authoring tool or one of the other integrated testing tools available in our solution. Using the integrated testing tools, changes to rules may be analyzed before implementing the change into the production environment.

Enhancements to Functional Requirements

EDS recognizes that it is important to follow a promotion schedule when it comes to adding or changing business rules because the effect of a rule change can be significant to the delivery of healthcare for the consumer and financial resources of a state. A policy change may affect how claims are paid or not paid. A strict promotion policy must be in place and followed. The EDS team will perform enhancements to the base functional requirements for the following areas of the Replacement MMIS:

- We will build out the DPH rules and how they are to be applied.
- We will build the PA rules by leveraging the current unified screening project analysis and definition and review in relation to interChange and the integration with the COTS rules product, InRule.

The rule-authoring environments are secure, preventing unauthorized users from viewing or changing the business rules without first being granted access. Because changes in rules may be implemented immediately, we recommend that only skilled business administrators be authorized to make changes.

Response to Rules Engine Requirements

The following table, EDS Response to Rules Engine Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Rules Engine Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.107	Provides capability to register, classify, inquire, manage, and automate date-specific business rules in a graphical, user-friendly rules engine	Met by interChange. interChangeRules provides a rule-authoring and inquiry environment to manage, define, and report on date-specific business rules in a graphical, user-friendly rules engine.
40.1.1.108	Provides capability to modify rules, allowing the application to be adaptable with the dynamic rules	Met by interChange. interChangeRules meets this functional requirement. Authorized users can change rules, allowing the application to be adaptable with the dynamic rules.
40.1.1.109	Provides capability for generating media events or application events as a result of the execution of a business rule	Met through customization of interChange. interChangeRules will be customized to generate media or application events because of a business rule.
40.1.1.110	Provides capability to structure in a modular concept so the same rules engine can be used by different services or be called as a service itself	Met by interChange. Within interChangeRules, the InRule engine is a modular, COTS rules engine that can be used by different services or be called as a service itself.
40.1.1.111	Provides capability for a debugging process that automatically analyzes and identifies logical errors (i.e., conflict, redundancy, and incompleteness) across business rules	Met by interChange. InRule and BPA rules include a debugging process that automatically analyzes and identifies logical errors—such as conflict, redundancy, and incompleteness—across business rules. Please see the Claims Processing response for specific exhibits of this capability.
40.1.1.112	Provides capability to allow for rules to be tested against production data prior to installation	Met by interChange and operational processes and procedures. The rules will be configured and tested from the UAT environment before being transferred to the production environment.
40.1.1.113	Provides capability for a built-in rule review and approval process that will identify any conflicts in business rules as they are being developed	Met by interChange. interChangeRules meets this functional requirement. Both rule-authoring formats insist that each conflict in business rules be resolved before saving new rules. Every rule must have only one outcome when compared with the other rules in the system. No conflicts or overlaps are allowed.

RFP No.	RFP Requirement	EDS Response
40.1.1.114	Provides capability to track and report rules usage	Met by interChange. interChangeRules meets this functional requirement. The specific rules used during the adjudication of a claim are stored with the claims history and available for subsequent reporting.
40.1.1.115	Provides capability to produce and maintain documentation regarding all business rules	Met by interChange. interChangeRules meets this functional requirement. The BPA rules capability provides two distinct methods of producing printer friendly documentation about the business rules. The more robust rules catalog search capability can produce a printer-friendly document or a delimited data file that can be imported into a spreadsheet for further analysis. A standard text file also can be generated. InRule provides a similar printer-friendly printing capability.
40.1.1.116	Provides capability for integration with a workflow management process	Met by interChange. interChangeRules meets this functional requirement. The interChangeRules can be integrated with the K2 workflow engine.
40.1.1.117	Provides capability to identify impact of business rule changes to claims adjudication	Met by interChange and operational processes and procedures. The rules will be configured and tested from the UAT environment before being transferred to the production environment. This environment can be used to identify impact of business rule changes to claims adjudication.
40.1.1.118	Provides capability to reuse business rules across processes	Met by interChange. interChangeRules provides the ability to copy rules to allow them to be used by another benefit plan or provider contract.
40.1.1.119	Provides capability to change business rules independent of process	Met through configuration of interChange parameters and features. interChangeRules meets this functional requirement.
40.1.1.120	Provides capability to apply Procedure Code Pricing (PR) File Cleanup business rules against current Procedure Code Pricing (PR) File	Met by interChange. Through the existing procedure code pricing panels, policy analysts can apply updates, including cleanup business rules as compared to the current Procedure Code Pricing file.

Integrated Test Facility (40.1.1.121 to 40.1.1.128)

The integrated test facility (ITF) will be a combination of several testing environments and a physical area where the State can test on-site. From an environment point of view, the ITF will include model office, UAT, and parallel environments, where testing can be executed concurrently. The UAT environment will enable the State to have a hands-on approach to testing. A central feature of the base interChange system is its user configurability, which will make it possible for the State to set up, test, and review policy changes without technical intervention. The ITF environment will have the most current version of code available for the users to test, whether that is production or

testing of a new feature before production. The EDS facility will be set up with a training/testing room that can accommodate as many as 25 State personnel to use while verifying that the business requirements and system features are working as expected. The UAT environment also will be made available to State users in off-site locations with access to the MMIS wide area network using accepted security protocols.

The environments will be populated with converted production data from North Carolina payers to give an accurate representation of various claim types. System testers will coordinate testing between the applications within the Replacement MMIS. Outside interface entities also will be tested during Inter-System Testing. The interface coordinator will make sure the data passed to and from the Replacement MMIS is accurate and compatible. The ITF also provides the capacity for volume and stress testing. Ongoing State communication and monitoring of the facets of the project plan are critical to our testing approach. Through ongoing reviews of status reports, status meetings, and metrics, the project requirements will be tested to make sure the level of risk is low. Because it can concurrently execute various testing phases, the ITF will enable the State to monitor the project's status as it progresses.

Approach to Customization and Modifications

EDS will use proven development processes and tools refined from past successful interChange system implementations. A suite of predefined test cases will make sure the base interChange features are working as expected. UAT will use North Carolina converted data that will be a superset of the data used in the parallel environment for policy verification. The Replacement MMIS provides various provider-specific parameters, enabling the unique business policies of North Carolina to easily be set up and tested. The customization and modification work to be performed for the multi-payer implementation is to define and execute the test cases for the North Carolina–specific requirements that require changes to the Replacement MMIS. The other customization work is done in conjunction with the data conversion team so that the ITF has good data from which to execute test cases.

Enhancements to Functional Requirements

The Replacement MMIS base solution includes successfully used development and operational processes to execute testing concurrently in multiple independent testing environments. Data scripts will be developed to synchronize the testing environments as enhancements are promoted to production.

Response to Integrated Test Facility Requirements

The following table, EDS Response to Integrated Test Facility Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, or processes that meet the stated requirements.

EDS Response to Integrated Test Facility Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.121	Provides capability for an Integrated Test Facility (ITF) with multiple test environments to allow for different phases of testing to be conducted concurrently during the DDI Phase and throughout the life of the Contract	Met by operational processes and procedures. There will be multiple testing environments—model office test, UAT, and parallel test. Combined, these environments will meet the ITF requirements.
40.1.1.122	Provides capability for the ITF environment to operate independently from production, either physically or logically separated, so that performance within the production and ITF environments are not adversely affected by the other, regardless of activity level	Met by operational processes and procedures. The model office, UAT, and parallel ITF environments will be logically independent of the production environments.
40.1.1.123	Provides capability to maintain the ITF environment as a mirror image of the production system environment to be used for testing all Replacement MMIS changes throughout the life of the Contract	Met through customization of interChange. The ITF environment will include data scripts for refreshing data from production into the ITF environments. The ITF environments will have the most current version of code available to the users to test, whether that is production, or testing of a new feature before production.
40.1.1.124	Provides capability for the automated migration of new business areas and application fixes between the ITF environments and production environment	Met by interChange. The configuration management process meets this functional requirement.
40.1.1.125	Provides capability to perform assessments without affecting production and/or data	Met by interChange. The UAT or parallel test environment meets this functional requirement. The UAT environment will enable the State to test changes in business policies. The parallel environment enables the State to monitor impact to claim adjudication resulting from changes in edits and audits, which may vary by payer.
40.1.1.126	Provides capability for State access to all test system files	Met by interChange. The State will identify individuals who need required access to UAT files.
40.1.1.127	Provides capability for version control in the ITF	Met by interChange. The configuration management process meets this functional requirement through our defined release schedules and associated code and data model versioning.
40.1.1.128	Provides capability to synchronize the ITF with the production environment when updating the Replacement MMIS production system	Met by interChange. The ITF environment will include data scripts for refreshing data from production.

Training (40.1.1.129 to 40.1.1.136)

We understand the importance of identifying the audience for the specific training courses offered and tailoring the courses to meet users' needs. Whether the audience is the State, the provider community, or EDS, our classroom and computer-based training (CBT) program will address each facet of the Replacement MMIS subsystem, functional components, interfaces, and procedures. For further details on the training approach, please refer to proposal section 50.2.4.4 Training Approach, which outlines our entire training approach, software, operations, and team members performing the work, including our sample curriculum.

We will provide professional trainers who understand interChange functions and Medicaid business processes and procedures. The interChange training teams will comprise instructional design specialists (IDSs), training specialists, and provider field representatives.

Approach to Customization and Modifications

The customization and modification of interChange will allow advanced technology and training to meet the needs of North Carolina providers. CBT will allow topics to be taught and produced for the State's healthcare communities.

EDS will use various software for training development, including Microsoft Word and PowerPoint. Additional software will be used for development and maintenance of CBT and WBT courses. We will use a learning management system (LMS) product for the creation and presentation of online training courses. The LMS also functions to track enrollment of individuals in WBT classes, offer standard reporting on user or provider proficiency results, give course progress, and offer course completion information. The LMS will offer a flexible platform that streamlines administration of training, regardless of the delivery method.

Enhancements to Functional Requirements

Enhancements to the functional requirements led us to a training group that can meet the daily requirements that will serve the State's training goals. Features include CBT and Web portal support for training, documentation, and information. For an example of this training, please refer to the Sample Provider and Recipient Training Curriculum table in proposal section 50.2.4.4 Training Approach.

Response to Training Requirements

The following table, EDS Response to Training Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange processes that meet the stated requirements.

EDS Response to Training Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.129	Provides capability for computer-based-training (CBT) courses for all users (State staff, Fiscal Agent staff, county staff, local agency staff, and providers)	Met through customization of interChange. Our CBT and WBT solutions function as a training application, tutorial, or reinforcement training. Because of our experience in Medicaid implementations, we already have developed several CBT and WBT courses for users.
40.1.1.130	Provides capability for online CBT courses for all Replacement MMIS application systems	Met through customization of interChange. Our CBT and WBT solutions function as a training application, tutorial, or reinforcement training. Because of our experience in Medicaid implementations, we already have developed several CBT and WBT courses for users.
40.1.1.131	Provides capability for proficiency testing, quality reviews, and retraining, as needed, for Fiscal Agent staff	Met through customization of interChange. A continuous training environment will be established and maintained to support the training requirements. We develop our CBT and WBT solutions with an integrated electronic proficiency test that requires each user to answer the questions correctly before recording a "course complete" status.
40.1.1.132	Provides capability to deliver provider training through Web-based services and electronic media	Met through customization of interChange. Provider training through Web-based services and electronic media will be supported, created, and met through customization.
40.1.1.133	Provides capability for a Web Portal to access training news, schedules, training registration and evaluation forms, CBT and Web-based training content, provider bulletins, and frequently asked questions (FAQs) by provider type and subject	Met through customization of interChange. The Provider Web Portal will provide access to this content, as required, and the content will be maintained by the provider relations team and the training team. The portal will be the technology mechanism to keep the stakeholders informed, but the operations teams will be the key to this effort by keeping the information updated and accurate.
40.1.1.134	Provides capability for the Web Portal to include document management, version control, and contextual queries related to Replacement MMIS rules and operations	Met through customization of interChange. A search engine capability for the Web portal will be included in the design, interfacing with informal document management processes, which include features such as version control.
40.1.1.135	Provides capability for Web-accessible downloads of training documentation that will be synchronized with provider policy and billing updates	Met through configuration of interChange parameters and features. EDS will maintain this information within the provider team and the training team described previously. The Provider Web Portal provides an easy mechanism to post, maintain versions, and update the documentation needed for each provider type.
40.1.1.136	Provides capability for a training evaluation tool to analyze and report to the State on training effectiveness	Met through customization of interChange. Each training session will include a participant evaluation that gathers data regarding the training materials. The trainer will share those results with the IDS, verifying that the materials reflect the latest version of interChange.

Call Center Services (40.1.1.137 to 40.1.1.149)

As a part of our call center responsibilities, we will include activities required to support the functions within the fiscal agent and MMIS business model. Through our efforts supporting the State and with our experience in Medicaid support across the country, we bring a unique understanding of opportunities to improve and streamline call center functions. Our knowledge base of the business processes and current challenges will enable us to improve current operations and operate the call center to meet State requirements.

As the North Carolina payer groups have grown in the past 25 years, so has the need for proactive and responsive communication. EDS answered more than 203,000 North Carolina provider telephone inquiries in 2006.

interChange provides the following:

- Options to "opt out" of any self-service transaction
- Screen-pop features that will allow information that callers enter for self-service transactions to be displayed for the customer service representative, allowing the callers to be served more quickly and making the toll-free call shorter
- Automated call tracking to log the length of each call
- Online notes to record call resolution
- Call forwarding that allows a customer service representative to forward a call to another customer service representative along with the call history to keep providers from having to restate their information
- Document images that customer service representatives can access during the call to aid in inquiry resolution
- Complete tracking of provider interactions
- Capability for call monitoring by authorized EDS personnel and State personnel
- Support requirements of Civil Rights Act for Persons of Limited English Proficiency (LEP) and Hearing Impaired

EDS will use COTS products for our telephone system. The telephone system is built on proven and innovative automatic call distribution (ACD) technology by Avaya that offers a suite of call routing and resource selection capabilities. The ACD allows the system to intelligently route incoming telephone calls that are handled by the most suitable customer service representative, rather than simply choosing the next available customer service representative. The functions within the Avaya telephone system are designed to help customer service representatives handle calls more effectively and enhance the overall level of the call center's productivity.

Calls will be assigned to a specialized skilled group of customer service representatives based on different levels of expertise. The skill groups will be based on provider types and specialties—special programs such as Health Check, provider enrollment, and a dedicated ACD group to support requirements of Civil Rights Act for Persons of LEP and Hearing Impaired. Managing calls by specialized customer service representatives will verify that callers are receiving reliable information and managing the call center workload.

To best provide effective customer service, EDS recommends that all callers access self-service interactions. Callers who need to gain quick access to the customer service representative can do so by self-transferring.

EDS understands that operating a successful call center includes managing by the numbers, and real-time metrics will be an integral part of the call center solution. We will have dedicated call centers, including the Provider Services Unit, Recipient Services Unit, Prior Approval Unit, Electronic Commerce Services (ECS) Unit, Integrated Payment and Reporting System, and Pre-Admission Screening and Annual Resident Review (PASARR). It is important that the quantity of staff matches the call center workload. We have staffed our call center team to effectively meet the needs of the State, providers, recipients, and other State business partners.

Approach to Customization and Modifications

The base interChange and COTS Avaya solutions are designed to meet many standards and common functions of the call center process.

A majority of the work regarding the call center will be completed with the COTS Avaya tools. EDS has developed customizable integration applications within InterChange where the COTS Avaya solution did not fully meet the specific needs called for by the RFP. Please refer to proposal section 40.4.1 AVRS System Requirements for additional details about the customization work performed for the solution.

Enhancements to Functional Requirements

No enhancements are required to meet these requirements. The functions within the call center will use interChange, COTS Avaya tools, or the configurable EDS' Medicaid Interaction Center integration applications.

Response to Call Center Services Requirements

The following table, EDS Response to Call Center Services Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Call Center Services Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.137	Provides capability for Customer Service Call Center/Help Desk to include, without limitation, hardware, software, and toll-free telephone access to operate the Customer Service Call Center/Help Desk System	Met by interChange, through operational processes and procedures, and through COTS integration. The Avaya tool will be used to meet this requirement.
40.1.1.138	Provides capability for an automatic phone attendant that provides a hierarchical, menu-driven capability for directing calls to appropriate Replacement MMIS Program Fiscal Agent or State staff	Met through COTS integration. The Avaya voicemail system is a comprehensive software package that meets the State's delivery expectations.
40.1.1.139	Provides capability to receive, appropriately route, and manage all telephone inquiries from Federal, State, local, and county workforce members, recipients, and in-state and out-of-state providers regarding prior approval, technical support, provider services, etc.	Met through customization of interChange, through operational processes and procedures, and through COTS integration. The Avaya tool and the voice response systems will be used to meet this requirement.
40.1.1.140	Provides capability to integrate voice and electronic transactions into a single workflow with integrated queues that allow work blending and load balancing	Met through COTS integration. Using the Avaya tool, the customer service representative will receive voice calls or electronic transactions from callers requesting help in areas with which the customer service representative is qualified to assist. The customer service representative's skills are assigned based on his or her knowledge and capabilities. This allows the caller to reach the right person the first time.
40.1.1.141	Provides capability to support requirements of Civil Rights Act for Persons of Limited English Proficiency (LEP) and Hearing Impaired	Met by interChange and operational processes and procedures. We will provide multiple language options and services for the hearing impaired. The ability to have the caller select a language option and route to a language-specific representative is part of the Avaya ACD and Expert Agent Selection (EAS) software. Operators will be staffed in the primary threshold languages of English and Spanish. We will use Language Line for additional interpretation services. We will offer a Telecommunications Device for the Deaf Teletype (TTY) and the hearing disabled.
40.1.1.142	Provides capability for call monitoring by supervisors and State monitors	Met through COTS integration. We will use a feature of the Avaya system called Service Observing to meet this requirement. This will allow the EDS-authorized personnel and State monitors to monitor a call without the operator's knowledge and participate in the conversation if necessary and assist the representative. This minimizes misinformation to the caller and ultimately increases customer satisfaction.
40.1.1.143	Provides capability for automated call-tracking of all calls received to include, without limitation, online display, inquiry, and updating of call records that will	Met by interChange. The Based Edit, Information, Search, and Call Questions panels meet this functional requirement. With the Contact Tracking Management System (CTMS), users

RFP No.	RFP Requirement	EDS Response
	also be available to State staff	have a single interface for researching and maintaining contact information for providers or recipients within the enterprise repository. After the State staff members are given proper access to browser-based online CTMS, the staff members also can retrieve and update the contact records.
40.1.1.144	Provides capability to maintain free-form notes for each call record, coordinate these notes in the document management and correspondence tracking business area, and make the notes available for State and Fiscal Agent access	Met by interChange. Using the CTMS Information panel, call center specialists create, maintain, and update contact records that include contact type, demographic information, questions, resolutions, or contact reasons whether received through telephone call, written mail, e-mail, Web-based interaction, fax, meetings, or on-site visits to the call centers. Each contact encounter is associated with a unique contact tracking number (CTN). CTMS Search Web page allows call center specialists access to contacts based on various criteria. With proper access to an online CTMS, State staff members also can retrieve and track the contact records.
40.1.1.145	Provides capability for the automated population of call views with relevant recipient and provider information; provides capability for the system to track information such as time and date of call, identifying information on caller (provider, recipient, and others), call type, call category, inquiry description, customer service clerk ID for each call, and response description	Met by interChange. The CTMS Information panel meets this functional requirement. The panel displays the summary of the contact record, which includes the time and date of the call, identifying information about the caller (provider or recipient), and the customer service clerk ID for the contact.
40.1.1.146	Provides capability to automatically fax back (or e-mail back, when there is no protected health information involved) to callers with attachments containing requested information, such as claims histories, copies of pertinent policy or rules, and provider letters	Met by interChange. The Letter Generator can fax, e-mail, or print physical correspondence.
40.1.1.147	Provides capability to transfer calls, along with all related documentation that was collected	Met through customization of interChange. interChange will be enhanced to include the capability to transfer calls and the related documentation that was collected.
40.1.1.148	Provides capability for callers to interact with an automated attendant or speak to a customer service representative	Met by interChange. The AVRS has a shortcut capability, enabling callers to interrupt any AVRS prompt or message, enter information, or request to speak with a contact center representative. The menu-driven design supports easy navigation through the prompts to obtain information.
40.1.1.149	Provides capability for technical help desk to support inquiries on system processes and system troubleshooting from providers, value-added networks (VANs), State, and Fiscal Agent users	Met through COTS integration. The use of the Avaya tool will meet this requirement.

System Availability (40.1.1.150 to 40.1.1.152)

EDS has designed the interChange implementation to meet the RFP's system availability requirements. Our design for the State directly uses our proven environment configurations used by five interChange states already in production. This best practice policy of using established solutions for the benefit of our new implementations reduces delivery risks and enables the long-term performance needed to support the providers, recipients, and State users of the Replacement MMIS. Specific features provided to support system availability include the following:

- **UNIX servers—**Multiple system boards that can be dynamically configured into processing "zones" to provide continued resources if a failure occurs
- **Application servers—**VMWare virtual machine images on the storage area network (SAN) that can be allocated dynamically to physical Windows servers in the event of a failure
- **Load balancing—**High availability achieved through load balancing between multiple virtual machines running the same virtual server image, a method used to maintain transaction response time for users of the interChange Web portal
- **Local area network (LAN) interface—**Physical servers with dual network interface cards
- **SAN interface—**Physical servers with dual fiber channel interfaces with the SAN and EMC Powerpath software, running on the servers, performing load balancing and failover between the interfaces
- **Network—**A wide area network (WAN) that features redundant circuits, routers, and firewalls
- **Monitoring—**Servers continuously monitored using the HP SiteScope tool, with indicators such as CPU utilization, memory utilization, and I/O throughput measured and alerts automatically raised for support staff response if thresholds are reached

The SiteScope tool also will be used to gather the system availability statistics to meet RFP requirement 40.1.1.150. User transaction response time from the Web portal also will be measured using the SiteScope tool.

Approach to Customization and Modifications

The customization of the North Carolina environment in support of system availability has occurred during the procurement analysis and design. The North Carolina volumes, history of detailed data, and claim and report images were taken into account when designing the supporting architecture and network. Having existing knowledge of DMA's and DMH's current solutions has aided in

our ability to customize a solution that minimizes the State's risk for system availability.

EDS will implement business practices for technical operations management. The technical operations management team will make sure the Replacement MMIS meets the system availability requirements through proactive monitoring and support of the system's infrastructure, including servers, storage, and network.

Enhancements to Functional Requirements

No enhancements to the base interChange are necessary to meet these requirements.

Response to System Availability Requirements

The following table, EDS Response to System Availability Requirements, describes how we will meet the requirements set forth in the RFP. We also have described how an integrated COTS piece of software is used to meet the requirements.

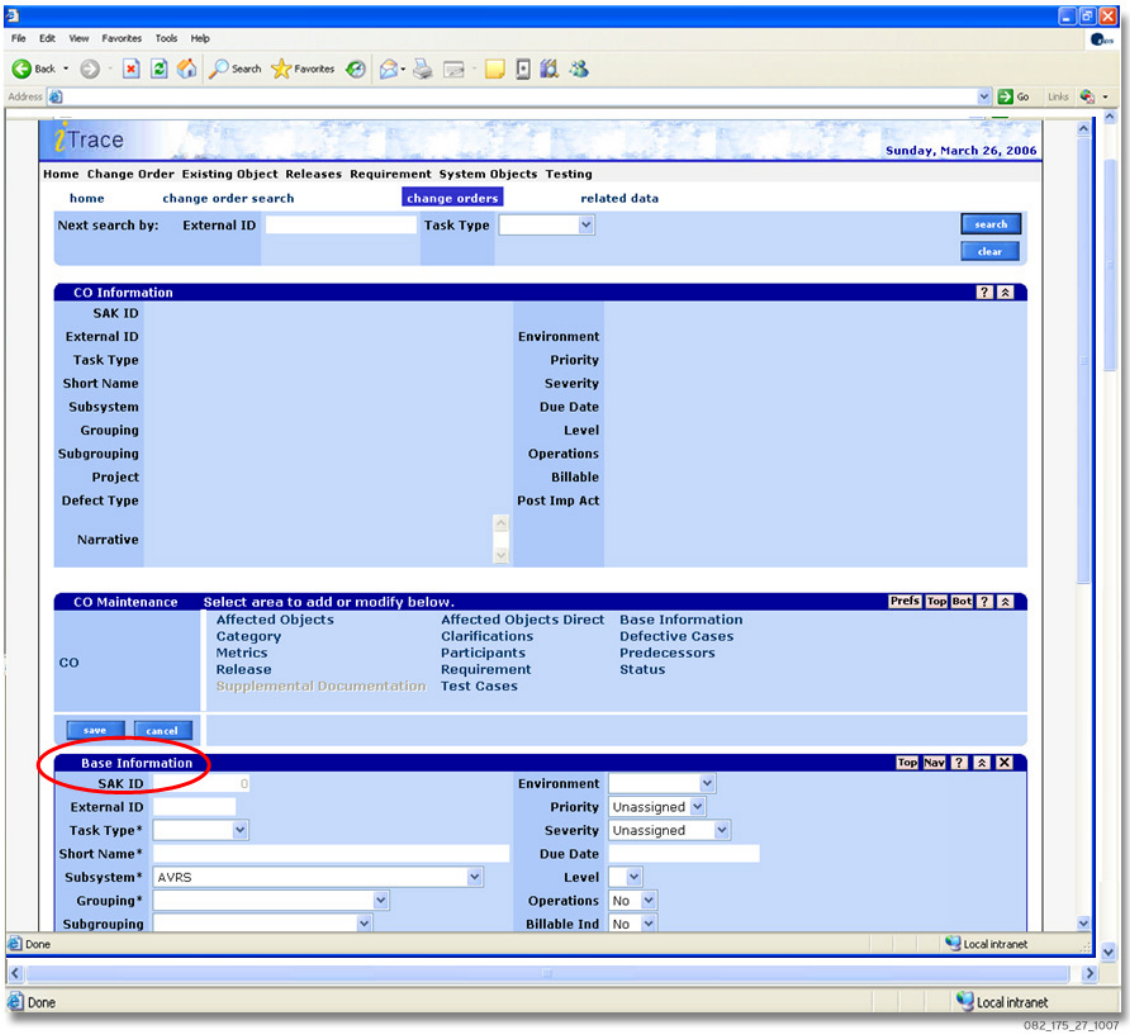
EDS Response to System Availability Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.150	Provides capability for the system to be consistently and persistently accessible to authorized users in compliance with the System Availability Policy in Appendix 40, Attachment I of this RFP	Met by interChange. We will monitor system availability using the COTS HP SiteScope tool to verify compliance with this requirement.
40.1.1.151	Provides capability for the system to be available and substantially compliant with its complete specification for ninety-nine and six tenths (99.6) percent of the time on a monthly basis during production hours of operation, excluding planned system down-time	Met by interChange. We will monitor system availability using the COTS HP SiteScope tool to verify compliance with this requirement.
40.1.1.152	Provides capability for transaction response time to be consistent for all users directly interacting with the production environment, based on a common Web Portal access for network access point, processed and returned to the network access point; provides capability for: • Ninety (90) percent of transactions to occur in four (4) seconds or less • Ninety-five (95) percent of transactions to occur in five (5) seconds or less • Ninety-seven (97) percent of transactions to occur in six (6) seconds or less • Ninety-nine (99) percent of transactions to occur in seven (7) seconds or less	Met by interChange. We will monitor Web portal transaction response time using the COTS HP SiteScope tool to verify compliance with this requirement.

Customer Service Request Tracking System (40.1.1.153 to 40.1.1.158)

As with any DDI project, organized change control is critical for success. Changes to meet new requirements or add functions will be identified by system users. These change requests are received as customer service requests (CSRs). When a CSR is received, the iTRACE mechanism that begins the process is the creation of a change order. The change order terminology is used in iTRACE whether a change is deemed in scope or out of scope during DDI and for new requests during the Operations Phase. The following exhibit, iTRACE Change Order Entry, shows the initial change order creation entry panel in iTRACE.

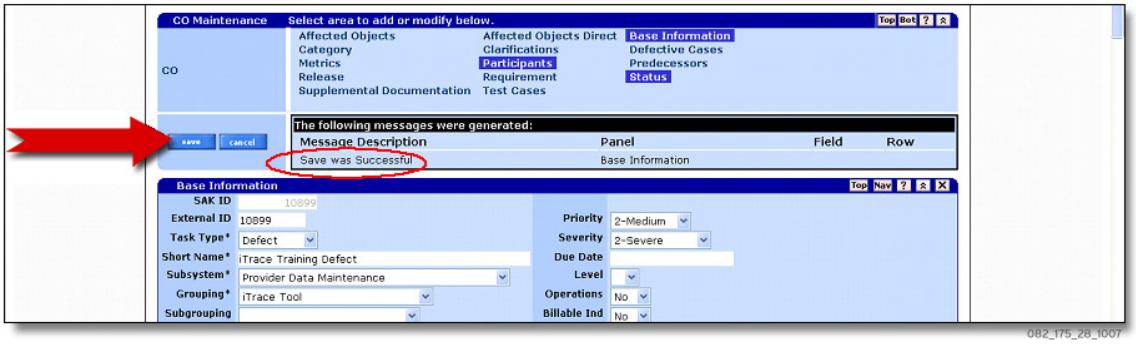
iTRACE Change Order Entry



Users access the initial entry panel for new change order creation.

After initial data entry save, as shown in the following exhibit, Saving a Change Order, a unique number is assigned for tracking, status, and reporting purposes.

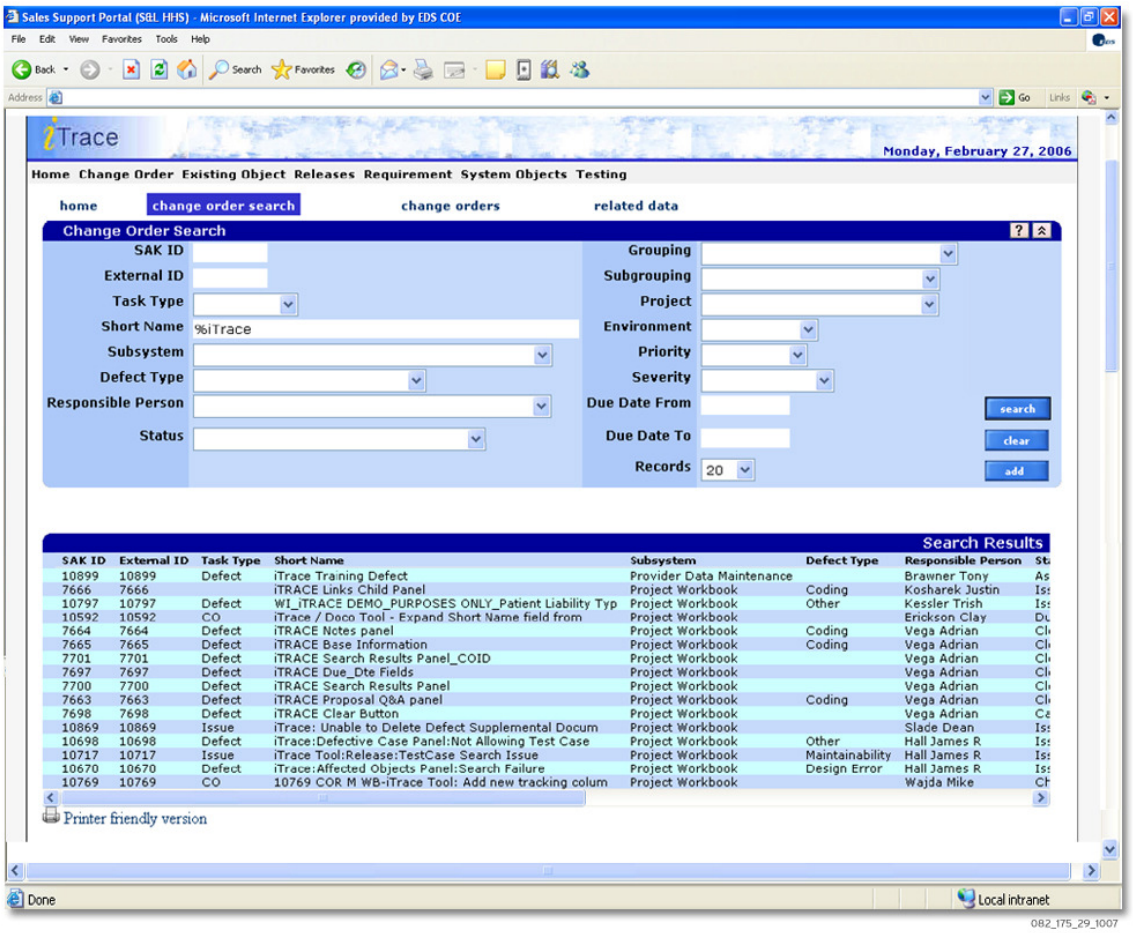
Saving a Change Order



Unique numbers are generated for new change orders so users can track them.

The iTRACE tool allows easy search capability of all change orders in the system, regardless of status, as shown in the following exhibit, Change Order Search.

Change Order Search



iTRACE makes it easy for users to search for change orders.

Change order data is visible and accessible in various parts of iTRACE and through iTRACE reports, as described in proposal section 50.2.5 Section E—Project Management Plan.

CSRs will be cross-referenced to iTRACE change order numbers, allowing management to check status throughout the change order/CSR life cycle. With easy browser access into the iTRACE tool, the State will have full visibility of the information used by EDS during implementation operations. iTRACE is a major part of EDS' change management solution, providing an automated, online system of capturing, tracking, and reporting system maintenance and modification projects with full accessibility to users. iTRACE will provide further benefits by acting as a conduit for knowledge transfer, access to information, and enhancement of the systems life cycle by opening access to system and business documentation.

With our proven, structured change management procedures, and ongoing reporting and communications, iTRACE will assist the State in establishing reasonable completion dates and setting priorities for modifications. The State and EDS management staff also will review current priorities and time lines, change priorities by adding new tasks and target dates, and immediately see the effect of the new priorities on preexisting priorities and their target dates. Additionally, our project management reporting capabilities will enable review of system programmer or analyst slack time, status of phase completion, and rapid readjustment of target dates based on system staff members being reassigned to new projects and priorities.

Approach to Customization and Modifications

EDS has already begun the process of customization for the CSR tracking process. The team has created the initial North Carolina iTRACE application and loaded the RFP's detailed requirements. As part of our analysis of the RFP, the team performed a gap analysis comparing the detailed requirements to interChange. It was during this process that the requirement status was determined, such as "Met by interChange" or "Met through COTS integration." Besides classifying each requirement, the interChange system objects that meet specific requirements are associated with the requirements in iTRACE. This provides long-term documentation of specifically how the system meets the requirements. EDS' approach to a successful implementation for the four divisions has already been put in motion through this work. This base set of product-to-requirements mapping is used as the starting point for requirements validation sessions and subsequent design and development activities.

Enhancements to Functional Requirements

No enhancements are required to the iTRACE application to meet these requirements.

Response to Customer Service Request Tracking System Requirements

The following table, EDS Response to Customer Service Request Tracking System Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Customer Service Request Tracking System Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.153	Provides capability for online tracking and workflow management of requests for service	Met by interChange and iTRACE. Requests for service can be tracked and managed using the easy and open access to project status information available through the iTRACE repository.
40.1.1.154	Provides capability to track the system Change Management Life Cycle Phases, schedule, and work breakdown structure (WBS) for systems maintenance and modification requests	Met by interChange and iTRACE. iTRACE provides an automated, online system of capturing, tracking, and reporting system maintenance and modification projects. We use our proven software development methodology as the underlying process for verifying that maintenance and modification activities are controlled and managed effectively and efficiently in each phase of the contract.
40.1.1.155	Provides capability to track resources for all CSR work breakdown structure, including maintenance and modification requests during the DDI and Operations Phases	Met by interChange and iTRACE. A key benefit of iTRACE is that it can track resources associated with requests for service, and can transition the relevant information—including resources—from the Design and Development Phase into the Operations Phase.
40.1.1.156	Provides capability for tracking CSR status by multiple data elements consistent with the Change Management Process	Met by interChange and iTRACE. iTRACE can trace CSRs by multiple data elements for the Change Management Process. The State can use several predefined reports to perform queries against this information to meet specific needs.
40.1.1.157	Provides capability to generate reports for request management tracking, with flexibility for variable content, format, sort, and selection criteria to meet State and Fiscal Agent reporting needs	Met by interChange and iTRACE. The iTRACE repository provides online reporting and status inquiry for any CSR and contains extensive reporting capabilities. The State can create reports using the information retained in iTRACE to meet State and fiscal agent reporting needs.
40.1.1.158	Provides capability to maintain accessibility to all completed project requests for analytical purposes throughout the life of the Contract	Met by interChange and iTRACE. iTRACE offers easy access to project information, including completed project requests. State staff members can see the status of virtually any aspect of the project by linking to the appropriate Web page in iTRACE. This information will be maintained for the life of the contract.

Web Portal (40.1.1.159 to 40.1.1.172)

With interChange we propose a solution that will continue to expand on the embedded Web portal capability, providing a foundation for required and future functionality. Combining our solutions through a single "launch" page will give smooth integration of services to the stakeholder and recipient communities. Throughout this section, we present some of our sample public portal pages. The State can customize and brand the portal.

The Internet facilitates access and exchange of information through our Web-based DHHS portal. Our portal solution provides direct data entry, file uploads and downloads, easily customizable user preferences, and access by providers, as well as other stakeholders and agencies that need Medicaid healthcare administration data. The portal transforms the daily healthcare business of groups such as the Kentucky provider community, which averaged 1 million Web portal–based eligibility verifications a month the first three months of operation. In Oklahoma, 17 percent of the claims processed are direct data entered through the Web portal. These portal capabilities enable the provider communities to access information and business functions quickly and easily, changing the way they perform their business.

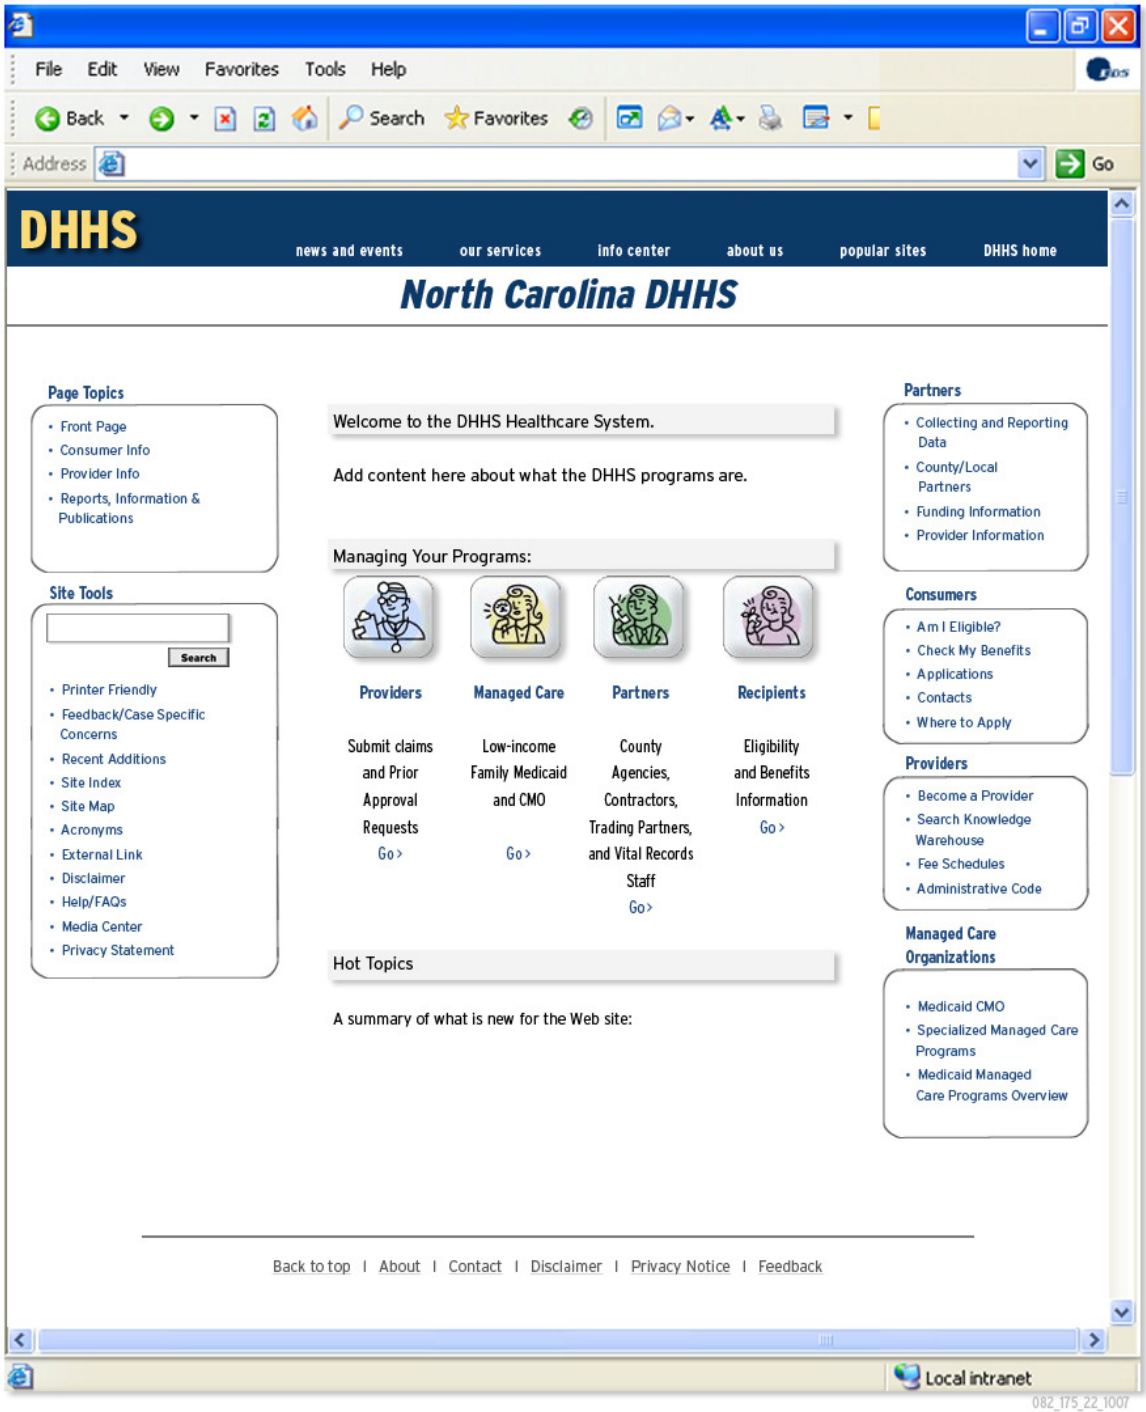
Where there are requirements throughout the RFP that address specific functional area requirements of the portal, we have addressed those in the applicable section. Within this section EDS provides a high-level overview of the Web portal and the features available directly to public consumers and program stakeholders. Each component of the portal will be accessed through a single launch page enabling public and "secure" users to interact with the appropriate and necessary information. This launch page provides the starting point to access the different areas of the Medicaid program.

Internet transport and usage of MMIS information must be secured, protecting its sensitive and confidential nature. Facilitating open access of information to the public and protecting confidentiality of MMIS information requires two sites—one public and one secured. The two areas provide the benefits of the Internet while making sure sensitive information remains confidential.

The portal, shown in the ensuing exhibit, Sample interChange Web Portal Page, displays the following:

- The public portal contains information applicable to every entity and links to other State sites and applications and allows stakeholders to access their respective secure sites.
- The providers' secure Web site provides features to the providers and authorized State agencies supporting healthcare.
- Recipient's secure Web site provides features to Medicaid recipients related to their specific claims and coverage.

Sample interChange Web Portal Page



The interChange Web portal provides secure and nonsecure access to program information for program stakeholders including providers, recipients, agencies, and other stakeholders.

As such, the portal will have secure and nonsecure areas. Access to secure areas with protected health information (PHI) meets State and federal security and

privacy requirements. The portal provides access to information and services for the following stakeholders:

- General public
- North Carolina providers, office administrators, and office staff members
- Medicaid recipients
- State, office administrators, and office staff
- Billing agencies, office administrators, and office staff

The Web portal will provide Medicaid consumers and stakeholders with general and program-specific information and interactive functions—such as a provider locator, ability to explore eligibility for various Medicaid programs, verify existing eligibility, enroll or administer enrollment, and link to other agencies and resources.

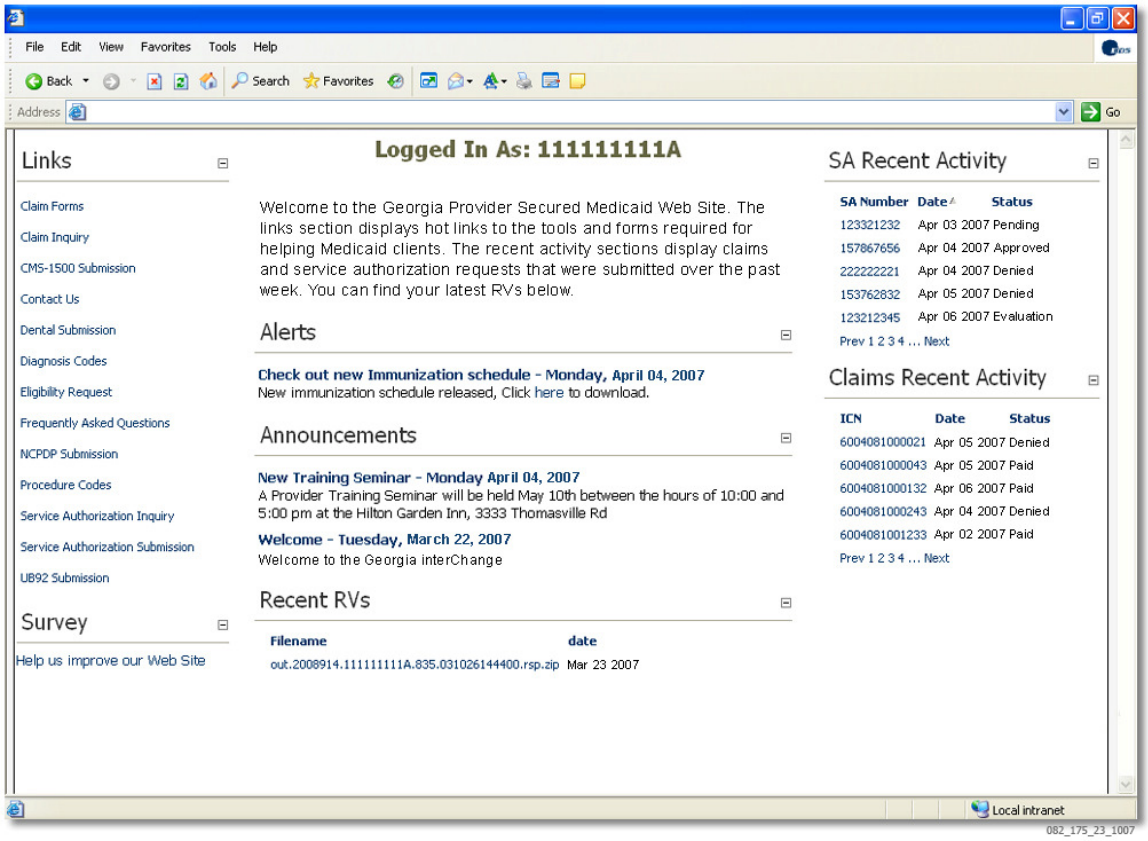
Within the secure area, the information presented will change based on the ID and role that logs in. Providers can only see their own claims, remittance advice, prior approvals (PAs), or other related information. The service-oriented architecture (SOA) of the interChange solution and the modular design provides data integrity and promotes efficiency and flexibility. For example, Web-based direct data entry (DDE), the automated voice response system (AVRS), ANSI X12N batch inquiries, and ANSI X12N inquiries call the same modular functions for eligibility, claim status, third-party insurance, and other similar routines. Because the same modules are called regardless of the source of the request, providers receive consistent, accurate answers regardless of which method they use to access the system.

Because the system uses XML to create a common denominator, changes in the originating input format can be isolated from the modules. This modular design makes it easier to add or change functions and share that capability instantly across the system.

The portal online pages are easy to navigate and use. Our expertise implementing Web portals will facilitate faster, efficient dissemination of health information, and provide a means for the collection of Medicaid program metrics for managing daily operations and initiating lasting reform.

The following exhibit, sample interChange Provider Web Portal, shows the easy-to-navigate nature of the portal.

Sample interChange Provider Web Portal



interChange's Provider Web Portal will be easy to navigate and use, minimizing disruption to providers and increasing their satisfaction.

Web Site Content

EDS understands that Web site content needs to constantly evolve to keep the information current. We are prepared for this constant change and will work with the State to keep this information current and easy for the providers and recipients to find and understand. We understand and will maintain the content and transactions required in the detailed requirements of the RFP in each section. The following table, Web Site Content Examples, provides a high-level understanding and overview.

Web Site Content Examples

Program Data	Description
Manuals	• Provider manuals • Program-related manuals
Publications	• Provider bulletins • Documentation • Fee schedules
Forms and Applications	Commonly used forms
News and Information	• Important announcements • Provider relations workshop schedules and workshop registration • Notices to providers and recipients • Managed care information • Links to other sites • Answers to frequently asked questions (FAQs)

Interactive Web Transactions

The following table, Interactive Web Transactions Examples, illustrates some of the features to which providers will have access.

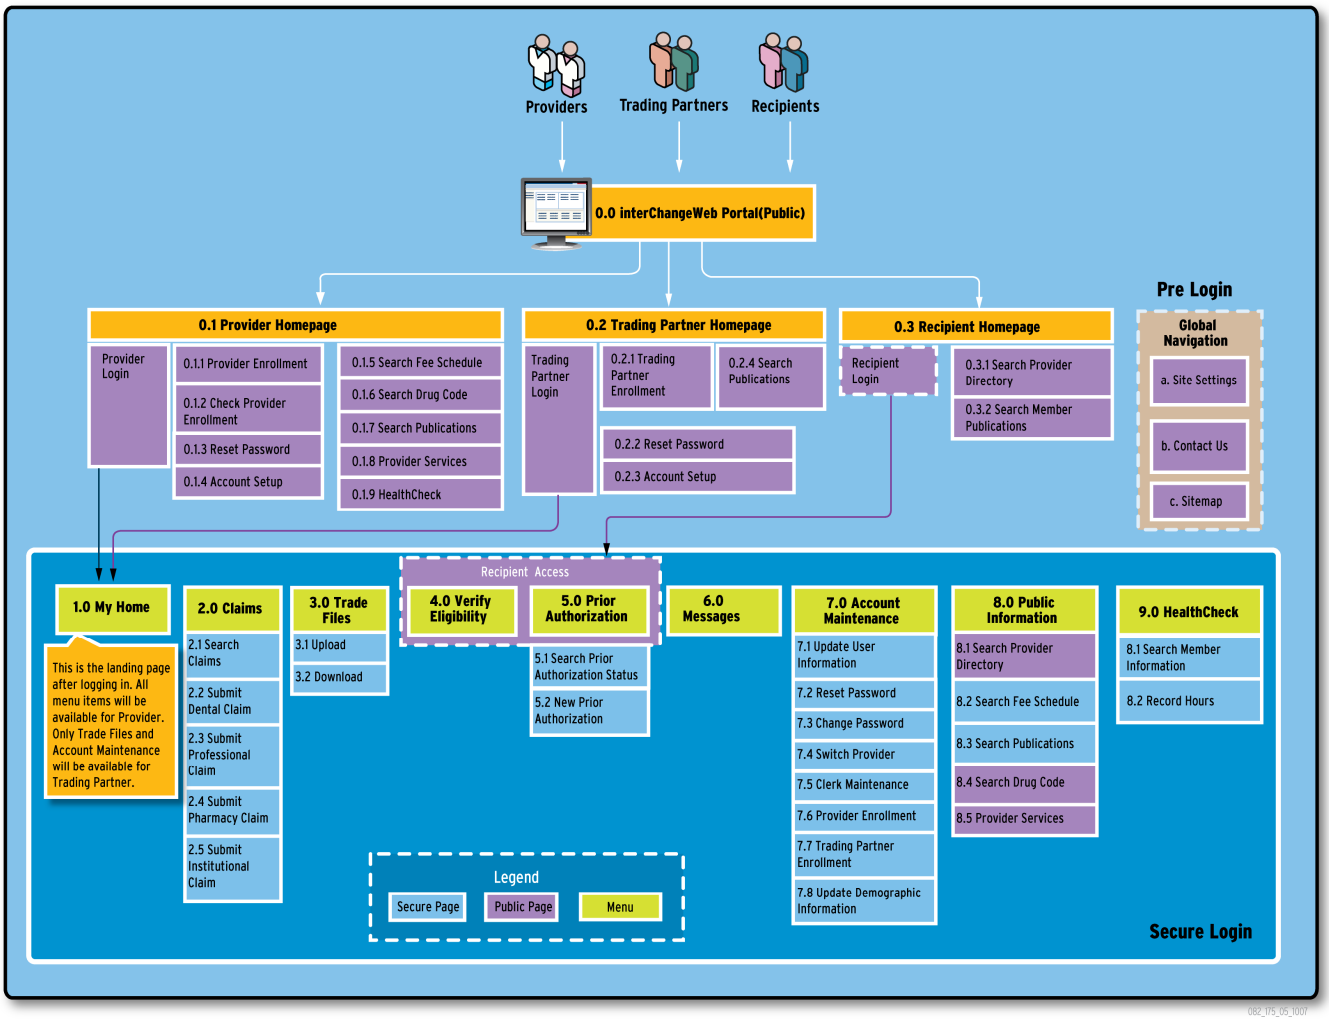
Interactive Web Transactions Examples

Transaction	Description
Provider Enrollment and Update	Allows new providers to complete enrollment applications and existing providers to update limited profile information using the Web
Eligibility Verification	Allows providers to submit eligibility verification requests and view the response information
Prior Approval Inquiry	Allows providers to inquire on the status of a prior approval request
Claim Filing/Submission	Allows providers to enter a claim and submit it for processing, with processing results available within seconds
Upload Files	Upload files, such as the ASC X.12 837 standard format for claims, for processing
Claims Inquiry	Allows providers to inquire on the details of a previously submitted claim
Download Files	Download files, such as the ASC X.12 835 standard for electronic remittance advices (RAs), using the ASC X.12 format, with RA files available for the 10 most current payment cycles

To detail the power of these interactive transactions, the following exhibit, Web Portal Interaction Flow Chart, provides a site map of the interChange Web

portal. The dark blue section identifies the secure portion of the portal requiring an ID and password for identification and authentication of the user.

Web Portal Interaction Flow Chart



The interChange Web portal provides access to key stakeholder information in a controlled and easy-to-use structure.

The interChange system interface allows users to navigate without having to enter identifying data multiple times and have multiple browser sessions open at a time. The browser-based system automatically passes key information between the linked pages as the user navigates. The default presentation style will be a single document interface (SDI) in which only one Web page is opened at a time. The advantage of using SDI is that subsequent Web pages are independent and aware of previous transactions. This is unlike a multiple document interface, where the Web pages have a parent-child relationship that is confined to the parent, and the subsequent Web pages do not interact with each other.

Additionally, the interChange browser-based interface uses the latest technologies and interface capabilities. The key to this interface is a standardized behavior model and a consistent presentation format across business functions.

Approach to Customization and Modifications

The approach to customization and modification for the North Carolina delivery of the interChange Web Portal begins with the installation of the base product, which includes both secure and public pages as well as the inherent query features such as eligibility and claim status lookup.

The development team will build on this working portal through the following customization work:

- Branding the Web portal for the North Carolina DHHS look and feel
- Inclusion of the downloadable and static content that is unique to DMA, DMH, DPH, and ORHCC
- Integrate the EFM Feedback product from Vovici for enabling survey processing through the portal
- Integration with the North Carolina instance of single sign-on

EDS will take the low-risk approach to customization work during the DDI project. Specifically, we start with a working application that works in conjunction with the MMIS to provide the data entry and query support within the processing times needed for the State. From this solid base, we will weave into the portal solution the customization and modification work, such as the tasks listed above, being careful not to impact the performance of the application.

For instance, "themes and skins" development will be used to customize the visual design of the portal. Themes will be used to define fonts, colors, spacing, and other visual elements. They comprise cascading style sheets and images. Skins are decorations and controls placed around portlets, such as title bars, borders, and shadows. Because the look and feel of each top-level Web page can be completely different, themes, skins, and access control can be used to create multiple virtual portals running on the same portal instance. In this manner we will comply with the State's usability and content standards, as specified in the style guide.

From the standard base interChange portal product, through the use of proven DDI processes, the Replacement MMIS Web portal will be created with the personalization for the State's needs.

Enhancements to Functional Requirements

The EDS interChange Replacement MMIS will be customized to meet the functional requirements listed in the following table through the software development life cycle and the customizations listed in our response. Customization will include the following:

- The Health Check portal capabilities for the county workers will be constructed for the Replacement MMIS project.
- The logging of inquiry transactions for eligibility and claim status checks will be enabled.
- The links to the stakeholder Web sites will be customized to the State's specific needs.

Our approach to the Web portal architecture has secured our ability to meet the needs of the State through creating additional configurable Web panels and integrating a few COTS software upgrades.

Response to Web Portal Requirements

The following table, EDS Response to Web Portal Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Web Portal Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.159	Provides capability for Web Portal access to the Replacement MMIS by the State staff, providers, government employees, and the general public	Met by interChange. The single launch page and our single sign-on solution meet this functional requirement.
40.1.1.160	Provides capability for a Web Portal that adheres to the State's User Interface and Navigation requirements and simplified sign-on	Met through customization of interChange. EDS will implement the interChange portal for the recipients, providers, and stakeholders of the programs. EDS will work with the State when finalizing content standards and explain how the interChange portal meets the usability guidelines. To this point extensive development and design research has been performed to provide a high level of usability for the interChange portal. The results of this effort are encapsulated in the graphical user interface (GUI), which will adhere to the State's user interface and navigation requirements. Design standards are used to control the complexity of application development by applying commonality and proven technologies, processes, and frameworks. The design standards are as follows: • The portal will be built using open architecture and industry standards. • Developed libraries will be reentrant for interaction by multiple users simultaneously. • Standard libraries that are nonreentrant will be protected

RFP No.	RFP Requirement	EDS Response
		against threads making damaging calls. EDS will use interChange Single Sign-On for security and user access for the Provider and Recipient Web Portals. The provider and recipient home pages are affected in this integration. These are the first Web pages a user sees after entering the secure site. This Web page displays some user-specific information, claims, messages, PAs, and RAs. It also has a Quick Links panel that has links to claim status inquiry, client eligibility verification, PA inquiry, and RA download.
40.1.1.161	Provides capability for browser independence and to ensure the browser has broad usage (approximately 500,000 users nationally) and the version is consistent with State usage	Met by interChange. Our testing strategy meets this functional requirement. As part of our testing strategy, we perform Web panel validation testing for the specified browsers. In Web panel validation testing, we have a Web panel checklist for each Web panel within the interChange system. Each Web panel is accessed and checked to verify that it is displaying properly, that it functions properly (such as correctly links to other panels, provides correct help, or displays error messages), and processes data correctly.
40.1.1.162	Provides capability to post announcements or alerts that are displayed at user sign-on	Met by interChange. The portal meets this functional requirement. interChange supports the ability to post announcements and alerts on the launch page after entering the site. When the message is no longer applicable or relevant, it is removed. An example of a banner announcement was previously shown through the sample portal welcome page.
40.1.1.163	Provides capability to maintain archives of posted announcements and non-provider specific alerts, including the date and message	Met by interChange. The interChange application meets this functional requirement. The interChange application stores the information that is presented on the launch page message area. EDS will archive announcements and nonprovider-specific alerts by date and message. The announcements and alerts will be archived by date received, date sent, or expiration date, and will be stored on a table for a predetermined length of time, in a mutually agreeable format and order.
40.1.1.164	Provides capability to access, complete, and submit online surveys	Met through COTS integration. EDS will use the EFM Feedback from Vovici to meet the online surveys requirements. The State and EDS will use Windows-based surveys with common point-and-click functions familiar to users. This online feature will enable the State to effectively communicate important program information, collect valuable metrics, and be more responsive to current or outstanding business needs. EFM Feedback from Vovici for the Internet is an easy and powerful survey software tool to help users gather questionnaire and feedback responses online. EDS' unique blend of MMIS experience, professionalism, objectivity, and

RFP No.	RFP Requirement	EDS Response
		innovation enables us to offer a sophisticated solution that offers the following: • Minimal resources expended to collect data • Enhanced speed and accuracy of survey results • Quality services, statistics, metrics, and reporting • Outstanding product support From a technical standpoint, survey design and deployment will be quick and simple using auto-wizards.
40.1.1.165	Provides capability to link to CBT course presentations	Met through customization of interChange. EDS will create a page that contains a link to the CBT courses. The courses will be provided by the training team, and the Web portal will provide a link to the courses. EDS will provide for the rapid implementation of a CBT course presentation and recordkeeping through the Web portal. A COTS system will offer CBT and recordkeeping that includes instruction for course navigation and content and proficiency testing. EDS will use a core curriculum that has been used successfully in other State interChange implementations.
40.1.1.166	Provides capability to create, organize by topic, and post FAQs and responses online	Met through customization of interChange. This capability is not met by base interChange, but it is something we do today and requires no major change in the system. EDS will integrate our CTMS solution with the Web portal. Communicating and sharing business experiences is an essential learning tool. We will monitor proactively statistics contained with the CTMS, management reporting, quality assurance, and survey results to determine the FAQs. When we determine the FAQs, EDS staff members will draft clear and concise answers and provide online links to additional documentation where appropriate. FAQs, links, and responses will be reviewed and approved before posting to the Web site. The FAQs function includes the following: • FAQ content will be static and maintained in the content management system. • The FAQ function will contain a list of questions that will be hyperlinked to the corresponding answers. FAQ items that are categorized similarly—such as Navigation Questions—will be grouped together.
40.1.1.167	Provides capability to maintain version history of previous forms, user manuals, etc.	Met through customization of interChange. EDS will add versions to the publication posting Web page. This page will provide a tool for searching for publications such as forms, fee schedules, and other publications.
40.1.1.168	Provides capability to create configurable Web pages of	Met by interChange. The interChange architecture allows for

RFP No.	RFP Requirement	EDS Response
	Replacement MMIS functions	configuration. Some fields, field edits, and Web panels are configurable. See our response to requirement 40.1.1.159 for more information.
40.1.1.169	Provides capability to view and download standard Replacement MMIS reports in a readable format	Met by interChange. The interChange browser meets this functional requirement. Users can access reports through their browser out of the EDMS solution.
40.1.1.170	Provides capability to request and view parameter-driven standard formatted reports	Met by interChange. This requirement is met by the MAR Reporting Services and implemented Business Intelligence Analytical Reporting (BIAR) solution. The BIAR solution can render reports in PDF format, which can then be published to the Web portal as required.
40.1.1.171	Provides capability to link to stakeholder Web sites	Met through customization of interChange. EDS will create a Web page and install the links to external Web sites such as the DHSR Health Care Personnel Registry (HCPR) and the DHSR Nurse Aide Training & Registry (NATRA) for inquiry on DHSR registry information, which are identified as requirements in the AVRS section of the RFP.
40.1.1.172	Provides capability to populate user/security profile-related data for Web Portal access prior to implementation	Met by interChange. Mail PIN letters meet this functional requirement. EDS will mail PIN letters in advance for early provider's self-registration.

Data Integrity (40.1.1.173)

Maintaining the integrity of data is critical for any data processing environment. For a system as complex and dynamic as a state healthcare system that includes DMA, DMH, DPH, and ORHCC programs, the ability to maintain data integrity over time is vital, particularly in light of changing program and system requirements. The confirmation of data integrity enhances the accuracy of historical data studies, fraud and abuse investigations, and program and waiver reporting.

interChange accomplishes data integrity through the following means. Historical claims records are permanently stored, with adjusted claims being processed as a separate record so as to not overlay the original transaction. Other portions of the system, such as recipient and reference, build date-effective segments for each record on the tables. Each segment record is retained for accurate data integrity over time.

Additionally, audit and control procedures are integrated into the overall architecture of the interChange application and operating procedures. The interChange audit trail feature will support RFP requirement 40.1.1.172 for each transaction by identifying who made the change and what change was made and providing a date and time stamp of the change. The audit trail feature also will

provide a record of the data before the time the change was made, which will allow for a historical review of individually dated versions. The audit trail function comes with interChange, which is CMS-certified. Audit trails are available online and are a built-in feature of interChange's database structure.

Approach to Customization and Modifications

No customization is required to meet this requirement.

Enhancements to Functional Requirements

No enhancement is required to meet this requirement.

Response to the Data Integrity Requirement

The following table, EDS Response to the Data Integrity Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to the Data Integrity Requirement

RFP No.	RFP Requirement	EDS Response
40.1.1.173	Provides capability for each record or file to be saved as created, not overwritten by updates or changes, to allow a historical review of individually dated versions	Met by interChange. The audit trail function within the base interChange application meets this functional requirement. The previous value (the historical value) is stored on the audit trail. The "after" image is the current value displayed in interChange for a given field.

40.2.1 Recipient System Requirements

Our recipient solution best fits your needs for a flexible system with a solid foundation that will be able to easily adjust to the ever-changing face of health-care. Our support does not stop at the technology; we also have the right people to help you track developing standards and respond appropriately.

State of North Carolina

To support your efforts to enable additional consumer-centric publicly funded healthcare programs, you need accurate, valid information regarding recipients and the ability to communicate this information to appropriate stakeholders when needed. interChange's design meets the need for real-time, accurate information that incorporates the consumer experience and quality performance information. interChange provides a solid foundation for any publicly funded program for electronic healthcare management.

We know the healthcare industry is changing, and many of the changes still are undefined. EDS offers the State user-configurable technology to support the need to maintain diverse recipient data. Our solution best fits the State's needs for a flexible system with a solid foundation that can adjust easily to the ever-changing face of healthcare. Our support does not stop at technical competency. We also have the right people to help the State track changing healthcare industry standards and respond appropriately.

EDS has the experience, knowledge, and technology to work with the State to meet the RFP requirements and accomplish the following objectives:

- Interface with other systems to receive and store recipient data and allow direct entry of recipient and entitlement data from authorized staff or departments
- Apply appropriate business rules to accurately merge the data from the distinct systems in accordance with State policy
- Set rules for benefit plans for enrolling recipients
- Enroll recipients in the appropriate benefit plans
- Support accurate buy-in processing of dual eligibles
- Support Medicare data exchanges, including beneficiary data exchange (BENDEX), the Medicare Modernization Act (MMA), and eligibility database (EDB) files
- Support lock-in and lock-out control of recipient service utilization
- Support recipient linking and unlinking activities and reporting

- Enable recipient premium payment, refund processing and invoicing activities, and reporting
- Support cost-sharing activities
- Generate Certificate of Credible Coverage (COCC) letters as appropriate
- Inform, initiate, and track follow-up of early and periodic screening, diagnosis, and treatment (EPSDT)–eligible recipients, known in North Carolina as Health Check services
- Provide access to the same HIPAA-compliant recipient information over multiple channels, including the Web, automated voice response system (AVRS), and electronic data interchange (EDI)
- Provide a contact center for identification (ID) card requests, notices, and recipient communication

In the subsections listed in the following table, Recipient Management Solution Features, we describe our approach to the recipient management business processes.

Recipient Management Solution Features

Subsection	Proposed Solution	Features
Eligibility Determination and Integration	• interChange • Microsoft BizTalk Accelerator 2006	• Ability to accept and integrate eligibility files and transactions • Ability to allow online access to authorized users for nonbatch transactions • Flexibility to support real-time or daily batch updates from external interfaces • Management of data interfaces
Benefit Administration	interChange	• Ability to handle recipient data for multiple health programs • Automatic or manual assignment of primary care providers (PCPs) • Rule-driven assignment to appropriate benefit plans • User-configured benefit plan coverage
Recipient Enrollment	interChange	• Professional, experienced contact center staff • Comprehensive tracking of recipient interactions • Lock-in administration control access to services • Recipient linking and unlinking • Correct entitlement issues

Subsection	Proposed Solution	Features
Buy-In and Medicare Data Exchanges	interChange	• Centers for Medicare & Medicaid Services (CMS)–certified buy-in capability • Online repository of buy-in transactions • Full integration with financial reporting • Full support for MMA, EDB, and BENDEX data exchanges
EPSDT (Health Check)	interChange	• Easy access to real-time EPSDT/Health Check data for authorized users • Automated workflow and tracking of EPSDT/Health Check outreach efforts • User-configured parameters for periodicity schedules and abnormality tracking

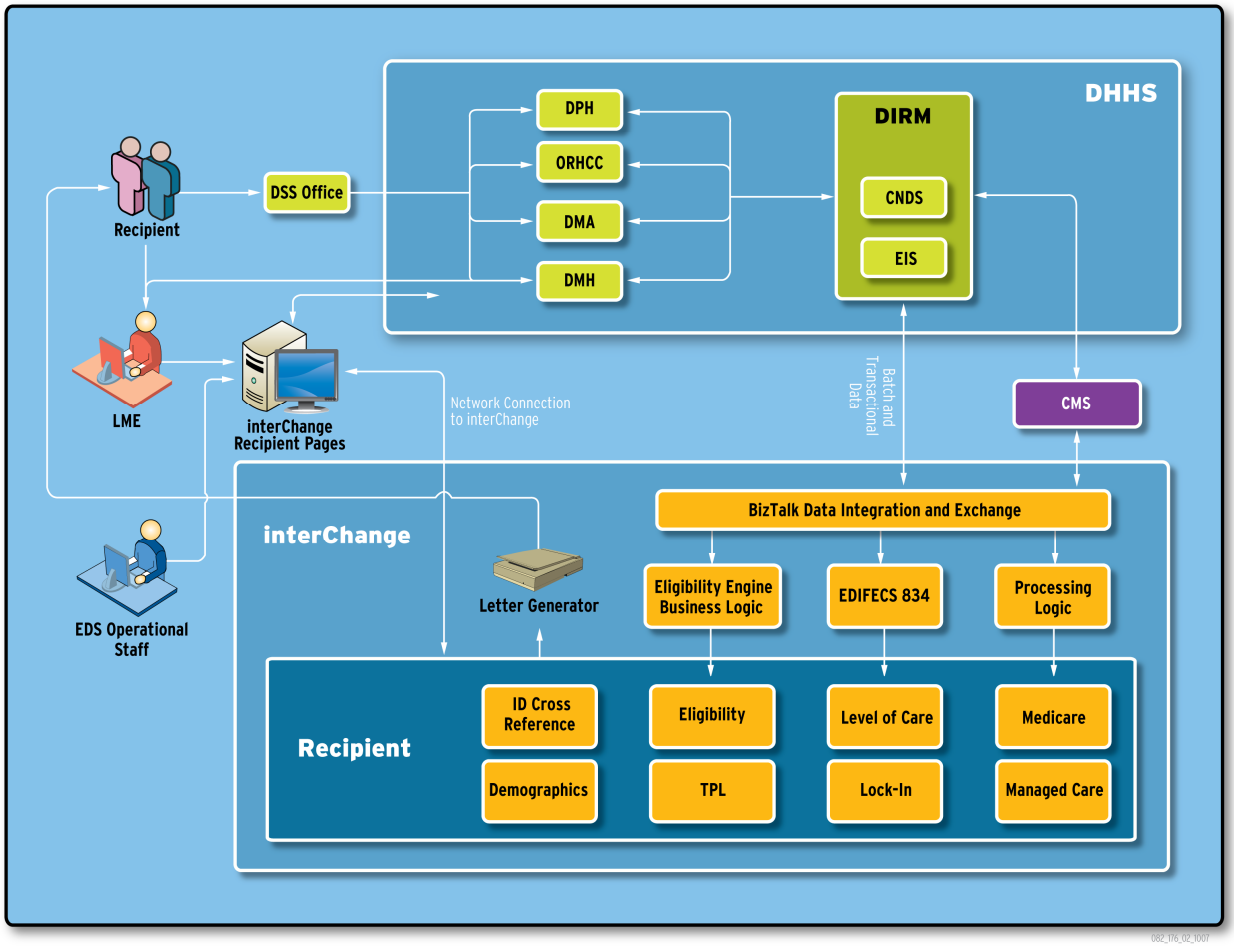
Eligibility Determination and Integration

The North Carolina Medicaid Program exists for the benefit of recipients. Therefore, information that the recipient business function provides to the other functional areas must be correct and current. EDS will update and maintain the recipient business processes and keep its capabilities relevant to the program's evolving needs.

The eligibility and enrollment process requires extensive coordination among State healthcare agencies. The Replacement MMIS will support this unique multi-payer environment by properly identifying which recipients are eligible for which programs. The Replacement MMIS will enable the State to assign recipients to every program for which they qualify, specify the unique policies and coverage associated with each plan, provide complete audit trails of activity, and support the extensive fiscal and statistical reporting needs of each program.

The following exhibit, Recipient Eligibility and Entitlement Data Flow Process, shows the logical flow of recipient eligibility data from multiple sources into interChange. Through real-time and batch processes, the Replacement MMIS will contain a consolidated repository of the pertinent State eligibility data.

Recipient Eligibility and Entitlement Data Flow Process



interChange merges recipient data from numerous sources, including batch and real-time eligibility update transactions, direct data entry, and CMS, to weave a cohesive, complete recipient entitlement repository.

EDS has a proven ability to support and integrate the many complex interfaces required to fully support the North Carolina Medicaid Program. We have experience managing input from multiple enrollment brokers. For example, in the TennCare program in Tennessee, the interChange enrollment system integrates the data from three distinct enrollment systems into a single, cohesive recipient repository, using a waterfall of state-defined rules to determine if the individual records from each data feed match existing recipients, or are distinct recipients themselves. This function also will allow North Carolina to integrate the eligibility and entitlement information from four different divisions into a single publicly funded healthcare recipient repository. We will perform this same blending of disparate entitlement information from the various State divisions.

We will provide the State with a complete solution to support the eligibility and enrollment business model. Our integrated approach offers you an industry-leading solution to improve the eligibility and enrollment processes, as depicted in the following table, Eligibility Determination Key Features and Benefits.

Eligibility Determination Key Features and Benefits

Feature	Benefit
Multi-payer functionality	Ability to handle recipient data for multiple health programs in a single system and uniquely identify each recipient
Access to real-time information through multiple access channels	Accurate and timely eligibility and enrollment business processing and inquiries that can be performed through online panels, voice response, and the Web portal, each providing consistent, accurate responses
Automatic validity, format, and consistency edits before allowing a transaction to update interChange	Integrity of recipient data, maintained at a high level for validation, reporting, and correspondence activities
Tracking, reporting, and status of interfaces	Complete, improved, integrated interface functionality

We designed interChange to accept and send recipient and eligibility transactions from and to external interfaces. The flexibility of our system means it is capable of accepting other interfaces to support the State as DHHS expands functionality to other agencies. These files can be HIPAA-compliant files such as the ASC X12 834 from LME or proprietary file formats. The BizTalk data integration system tracks and monitors the file exchanges to enable appropriate receipt and processing.

Online browser pages will facilitate manual entry or inquiry of recipient-related data that is not provided through an external interface. This would include the direct entry of recipients who are eligible for programs such as DPH, the maintenance of lock-in/lock-out criteria, and recipient service limit data. Our secure system will allow only authorized users to update or change data.

Regardless of the source of the recipient and eligibility data, the Replacement MMIS will apply standard validation and data integrity edits. For example, the validation process will include verifying that the date of death is not prior to the date of birth and that eligibility start and end dates are consistent. The Replacement MMIS will disallow overlaps where State policy dictates. Our stringent front-end editing will prevent erroneous information from entering the recipient record and keep recipient information accurate and current.

After the data transaction is validated, it will follow strict matching rules to determine whether the transaction matches a recipient on file or is a unique individual. Defined-source hierarchy rules will control the data presented through the user interface. For example, the system will hold all the addresses for a recipient received from each agency, but it will show them in the Base Information panel according to the priority the State sets for recipient address data. Key elements in the recipient data include the source of that information so the reviewer will know the origin of the data displayed.

Although the Replacement MMIS will allow multiple, concurrent benefit plans from the same or different agencies, it will require those benefits to follow State-defined rules. For example, if the rules specify that a recipient cannot be in the State Children's Health Insurance Program (SCHIP) and a specific DHP plan at the same time, logic in the update process will prevent the overlap and will require the source agencies to correct the overlapping coverage. Data identified as inconsistent when compared to State policy would need to be corrected in the source system and retransmitted.

The Replacement MMIS supports online data entry, so agencies such as DMH or DPH can access the user interface directly to add recipients or update eligibility for qualifying recipients. However, changing or entering recipient-related data should be strictly controlled. We recommend that only a few people be granted a security profile to enter or update recipient and eligibility data directly through the online panels. These online updates are subject to exactly the same business rules as a transaction-initiated eligibility request.

The Replacement MMIS will track each update to recipient and eligibility data for audit and reporting purposes. The audit trail will record the date of the change, the source of the change, and what information changed as a result of the update.

The Replacement MMIS will contain a complete repository of information that can be used across the enterprise. Each recipient will be assigned a unique ID number that prevents overuse of services due to the same recipient receiving benefits under multiple agency ID numbers. After the recipient information is established in the system, users will have access to a comprehensive record of recipient eligibility and other vital data elements. The recipient may be known by several numbers or identifiers in each of the systems, but those numbers or identifiers will link together into a unified record that can be accessed by any of them. Authorized users can search for recipient information using multiple identifiers, including combinations of recipient ID, last name, first name, Medicare ID, case ID, Social Security number (SSN), gender, birth date, and county. Soundex search capability is available for searching by recipient last name.

Benefit Administration

The Replacement MMIS will provide the ability to pay Medicaid and non-Medicaid claims within one system, eliminating redundant data and systems.

This feature will enable the State to consolidate and simplify program management and reduce administrative expenses. Our benefit administration solution will help the State manage benefits more creatively and with greater specificity across the diverse spectrum of programs. This precise targeting of benefits and services translates into more efficient management of benefit dollars.

The inherent functionality of the Replacement MMIS will provide a single system with the capability to process and pay claims for multiple agencies and programs, such as the following:

- DMA
- DPH
- DMH
- ORHCC

This functionality will allow the State to create specialized benefit plans such as the following:

- Service and coverage limitations
- Level of care required
- Assistance category
- Waiver program enrollment
- Provider restriction

Customized benefit plans can support primary care capitation, physician case management, full-risk capitation, managed care organization (MCO) and vendor contracting agreements, and utilization-controlled fee-for-service agreements. They also can support a combination of those service delivery models based on the recipients' eligibility and business rules.

Benefit Package Assignment

The Replacement MMIS will provide the State with a CMS-certified capability to assign recipients to benefit plans based on a configurable hierarchy structure. This will allow recipients to reside in multiple benefit plans with overlapping enrollment dates, while coordinating the benefits available through those programs. During the Design and Development Phase, EDS will work with the State and agency representatives to clearly define the rules to be applied during the eligibility update process for benefit plan assignment. This may include such parameters as age, aid category, or county of residence, as well as the development of a hierarchy of update in the case of disparate information in the various source files.

We will document these rules within the Replacement MMIS and configure existing, proven capabilities to efficiently and accurately enroll recipients. This will give the State the desired capabilities while significantly reducing the risk associated with a new system implementation.

Benefit Package Processing

The Replacement MMIS will provide the ability to establish, maintain, and administer multiple benefit packages by defining benefit package–covered services, recipient populations, pricing models, and capitation criteria.

The benefit package functions will be integrated into the Replacement MMIS' advanced claims processing engine. They will offer flexible parameters used to validate and edit claims for service limitations. The system will process claims within the guidelines established in the benefit package and scope-of-service criteria maintained in the reference business rules.

Through table-driven processing, Replacement MMIS users can customize the business processing invoked for each payer and benefit package. Specialized code will not be required to share business rules among payers and plans or to establish unique rules for a particular payer and package. This will reduce costly technical support and provide the State with the technical infrastructure required to move forward with Medicaid modernization initiatives.

The Replacement MMIS benefit package capability also will include the flexibility to manage benefits in combination with each other. The following are defined as benefit plan types:

- **Major benefit plan—**This benefit plan can stand alone and cannot be combined with any other major benefit plan. SCHIP and Medicaid are major benefit plans.
- **Dependent benefit plan—**This benefit plan cannot stand alone and can exist only with a major benefit plan. An example might be a waiver benefit plan, which must be combined with a Medicaid benefit plan.
- **Dual benefit plan—**This benefit plan can stand alone or be combined with other benefit plans. DMH may be an example of a dual benefit plan.
- **Stand-alone benefit plan—**This benefit plan can only stand by itself. No other benefit plan can exist. An example of this might be qualified Medicare beneficiary (QMB), which cannot have another Medicaid plan at the same time.
- **Assignment plan—**An assignment plan restricts a covered service to be provided by a specified provider or provider organization. This includes lock-in, long-term care facilities or MCOs. In this way, the specific services the recipient must receive from a specific provider without a referral or prior approval can be precisely controlled.

Exclusivity can be applied across benefit plans where coverage should not overlap other benefit plans. These benefit plan interrelationships cross agency boundaries and so must be defined in the context of the Statewide publicly funded healthcare management system.

The following table, Benefit Plan Administration Key Features and Benefits, highlights our interChange benefit plan administration solution.

Benefit Plan Administration Key Features and Benefits

Feature	Benefit
Unlimited pricing and eligibility segments	• Improved claims processing efficiency and accelerated payment to providers • Increased provider satisfaction
Online access to historical data	• Eliminated need to access reports or other systems for information so provider inquiries can be answered more quickly • Increased provider satisfaction
Integrated rules allowing users to modify benefit eligibility criteria	• Accelerated implementation of new policy • Reduced administrative time and money
Flexibility of the system to allow users to customize benefit package reference data, such as audit limitations, service authorizations, and rates	• Reduced program costs • Accelerated implementation of new or changed policy • Increased user control and reduced programmer intervention • Reduced administrative time and money
Consolidation of redundant systems	• Reduced cost of maintaining duplicate systems • Holistic coordination of care for a recipient of services within and across State departments
Direct methods of claims processing for different payers and benefit plans	• Easy migration of new recipient groups and new payers to the Replacement MMIS • Increased adaptability
True multi-payer functions capable of supporting State plans outside Medicaid	• Migration of multi-payer functions from manual processes to an automated system while maintaining individual benefit packages and funding structures • Increased adaptability

Recipients may be enrolled in more than one benefit plan at the same time. For example, a recipient may be assigned a benefit plan for the Primary Care Case Management (PCCM) program, a second benefit plan for the standard Medicaid services, and a third benefit plan for participation in a behavioral health waiver program. In such cases, the benefit plan hierarchy will drive claims processing and payment. The Replacement MMIS' Recipient Eligibility page will specify the packages in which a recipient is enrolled and the enrollment effective dates.

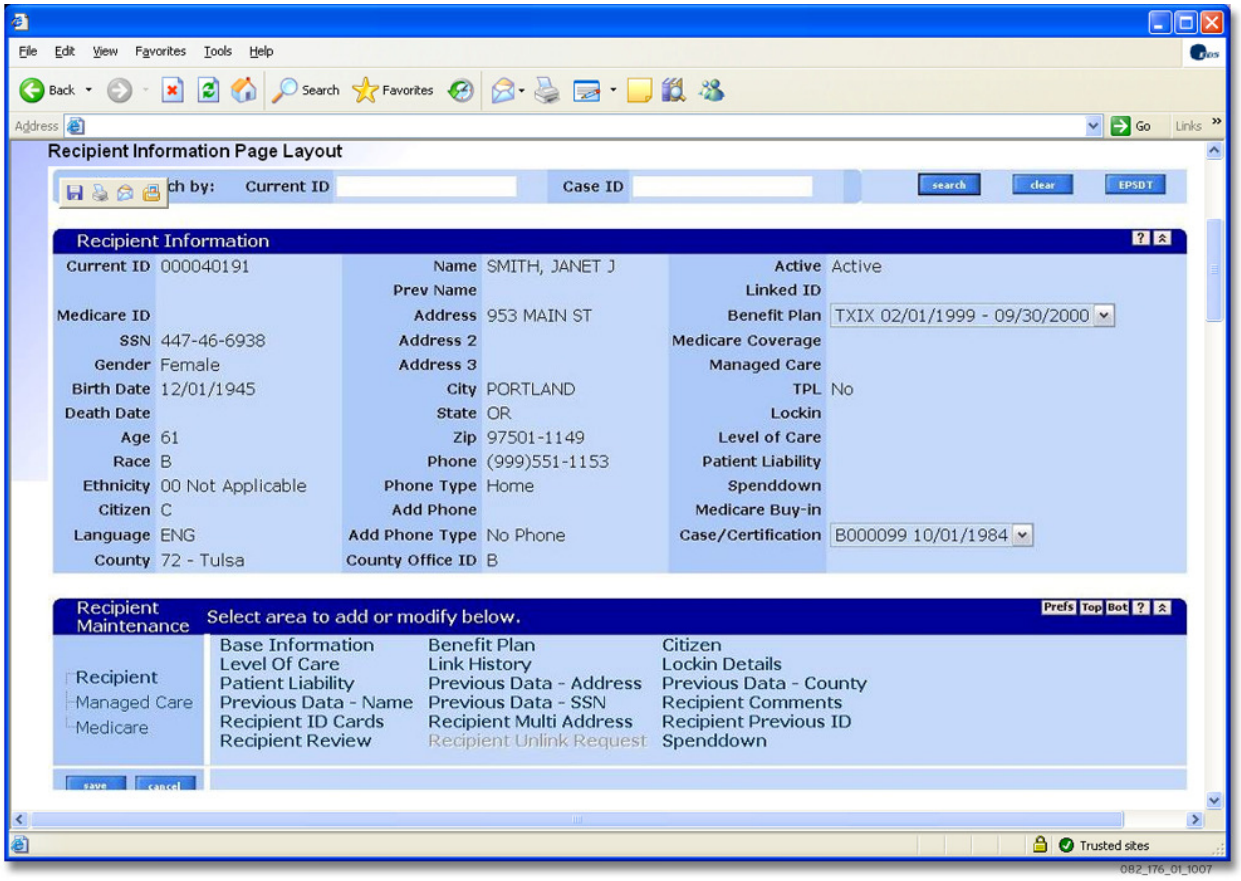
When the recipient requirements for a benefit package are defined by adding appropriate aid categories, any recipient meeting the eligibility requirements will be subject to the benefit package and payer requirements, without user intervention. It is highly probable that the assignment methodology for benefit packages will be based on variables that are present on the eligibility data

received from the participating agency. In this instance, the benefit package will be assigned to the recipient following the automated eligibility load from the North Carolina Eligibility Information System (EIS) to the Replacement MMIS eligibility record.

Recipient Enrollment

Access to recipient data conveniently originates from one panel, and from there all other data related to the recipient is just a click away. The following exhibit, Sample Recipient Information Page Layout, represents the base information for a recipient record and the links to other information available about this recipient.

Sample Recipient Information Page Layout



The recipient information panel provides key recipient information at a glance and the ability to directly access related information such as benefit plans, lock-in, managed care, Medicare, patient liability, linking/unlinking, and historical data.

Lock-in/lock-out segments will be controlled through online panels and allow the setup of effective and end dates, including reasons and free-form comments. The lock-in segment will be associated with an assignment plan and provider or provider group. The assignment plan controls which services must be provided by that specific provider. The Replacement MMIS will support an unlimited

number of concurrent lock-in plans for a recipient. These lock-in assignment plans are viewable from the recipient base record and, like the other recipient data, have online audit trails available to indicate when that data was updated and the ID of the user who made the change.

When a recipient loses eligibility from qualifying healthcare coverage, the Replacement MMIS will automatically generate a COCC letter for that recipient to take to a potential future health insurance provider. The system will track when the letter is generated and can reprint the letter on demand. Additionally, a COCC letter can be generated on demand for recipients who have lost coverage. Reports will indicate the number of COCC letters produced during the month.

Recipient Premium Processing

Client-funded healthcare has gained considerable attention since the Deficit Reduction Act gave states the ability to extend entitlement to citizens who are often just outside the federal means justification calculation or who meet other qualifying criteria. interChange supports this expansion through a full recipient premium invoicing system. The system will produce invoices, set up the necessary accounts receivables and payables, accept payments, generate refunds, produce correspondence, and enable recipient entitlement for State-defined programs.

The system will accept, validate, and process applications and produce the appropriate correspondence in terms of welcome packets or denial letters. The system will compare the recipient against State-defined entitlement criteria, including third-party liability (TPL) coverage, other benefit plans, household financial limits, or Medicare entitlement. After a recipient is enrolled, the system will perform invoicing, check, and electronic funds transfer (EFT) processing and set up accounts receivables and reporting. Adjustments, bounced checks, refunds, and fee forgiveness processing will be supported.

Recipient Linking and Unlinking

Occasionally, the same recipient will be actively enrolled into the eligibility system twice under different identifiers. The Replacement MMIS will provide the ability to link the data from both recipients together. The authorized user will identify one ID to be deactivated and the information merged into the remaining active ID. Automated batch processes will compare the data from both recipients across several tables, including eligibility, demographics, prior approval, managed care, TPL, and Medicare. To the degree possible, the system will merge the data related to these two recipients between these tables. Reports will indicate what data was merged and what needs to be manually reviewed for possible manual quality control completion.

There will be administrative adjustments made for the deactivated recipient's claims to move them to the active recipient's data so the entire healthcare history is complete. Online panels will indicate that a recipient's ID has been deactivated

and point the user to the new ID, or allow the user to review the deactivated recipient's information.

On extremely rare occasions, the result of a link will have to be undone. The quality control aspect of assigning linked records to separate IDs requires analyst intervention. This is a more manual activity because it is difficult to systematically know which records belong to which recipient. However, interChange helps by indicating which records were merged and which records are new. It also presents a list of all claims for the current recipient and allows an authorized user to select individual claims for an administrative adjustment to move them back to the newly reactivated recipient ID. Online panels show the entire recipient link history for a given recipient.

Buy-In and Medicare Data Exchanges

interChange automatically determines who is eligible for buy-in, when their Medicare coverage starts, and if the coverage start date is immediate or delayed based on the CMS information received.

North Carolina's population demographics demonstrate the importance of effective Medicare buy-in processing. Because many of the State's Medicaid recipients also are eligible for Medicare benefits, the process to pay Medicare premiums and process claims for recipients with dual eligibility is an important business function in making the best use of the State's Medicaid funds.

Using our rules-based, table-driven approach, the Replacement MMIS will provide the premium payment, claims processing, plan assignment, and federal reporting functions the State needs. The system also will make information readily accessible online through browser pages dedicated to the buy-in business function.

Besides the automation of much of the eligibility determination, the buy-in business function automatically can trigger notices into users' eligibility determination systems to notify them of mismatches returned by CMS for correction. Mismatches that can be corrected within the Replacement MMIS will be displayed in easy-to-read and understandable online browser pages. Batch processes will perform the processing of the buy-in process and response files. The browser pages will allow users to determine what caused the mismatch by displaying reason codes. The reason codes displayed can be linked through browser pages to data tables so users can click on the reason code and be given the definition in English of the error reason code. This reduces the need for supplemental data and documentation, increasing productivity and efficiency.

The following table, Buy-In Key Features and Benefits, highlights our solution.

Buy-In Key Features and Benefits

Feature	Benefit
Automatic identification of recipients who should be transmitted to CMS for buy-in processing	Increased number of recipients identified for buy-in
Table-driven methodology	Unlimited retention of and easy access to historical data through online browser pages
Automated processes within the buy-in business function	Automated processing of data returned from CMS, without manual intervention
Operations that generate few mismatched leads	High percentage of potential buy-in recipient matches (EDS' current buy-in operations in Kansas generate less than .003 percent mismatched leads.)

The Replacement MMIS also will feature automated interfaces for State eligibility agencies or CMS in accordance with the CMS redesign practices, reducing the need for manual intervention. The system will perform the necessary buy-in and BENDEX data exchanges with CMS with the existing connection through the Division of Information Resource Management (DIRM). The Replacement MMIS will support Medicare A, B, C, and D coverage determination, processing, and reporting.

The Replacement MMIS will fully support the Medicare EDB finder file and response data exchange. Monthly, a finder file of dual-eligible and potentially dual-eligible recipients will be sent to CMS to determine what information CMS has on its files related to these recipients. CMS will respond with an EDB results file that provides detailed Medicare-related information about the matched recipients. The Replacement MMIS will provide online panels to view the data available through the CMS EDB data exchange, including every element in the EDB record.

The Replacement MMIS also will support the MMA data exchange to assist State recipients who are dually eligible to participate in the Medicare D pharmacy benefit. A program automatically will identify recipients who meet the criteria and send the formatted MMA file to CMS for processing. CMS will process the MMA file and return a response file for each individual, indicating if the individual qualifies for Medicare D or additional low-income subsidy (LIS) support, as well as the pharmacy plan in which the individual is enrolled. The Replacement MMIS will update the recipient record with the appropriate information. The MMA file history for a given recipient will be available through the online panels in the recipient maintenance area.

EPSDT (Health Check)

All children deserve quality healthcare and immunizations. Frequently, though, immunization requirements and timetables are confusing for caregivers, resulting in missed immunizations and services. To a Medicaid provider rendering care to children, it is frustrating not to have the tools necessary to identify and track immunizations a child has received or still needs. These were some of the underlying factors we kept in mind when we designed the interChange EPSDT functionality to efficiently track the delivery of these services.

Health Check, the State's EPSDT business function, serves as the State's mechanism for identifying and tracking EPSDT, managed care, and fee-for-service recipients, services, referrals, and costs and generating Health Check information letters, including letter attachments for eligible recipients. Medicaid-eligible children under age 21 are eligible for Health Check services, including preventive care, medical consultation referrals, and necessary treatment for identified medical conditions not always available to the general medical assistance population. We appreciate and support the program's goal of preventing illness, complications, and the need for long-term treatment by screening and detecting health problems in the early stages.

To support the objectives of the State's Health Check program, our Replacement MMIS will perform the following activities:

- Maintain identification of individuals eligible for Health Check services
- Automate the notification process to promote Health Check services and immunization tracking with maximum efficiency
- Support fast identification of instances requiring treatment through flexible, real-time access to Health Check data and summary reports that identify and track services
- Meet State and federal reporting requirements

EDS will produce the mandated federal EPSDT report, CMS-416, and other program management reports containing recipient-level and summary data relating to Health Check services, referrals, and follow-up treatment, using fee-for-service and encounter claims information.

The Replacement MMIS Health Check solution will offer the following benefits:

- Point-and-click browser pages that provide authorized users easy access to real-time EPSDT data
- Flexible, on-demand, desktop inquiry and reporting that yield fast, accurate answers for users

- Ability to encourage routine periodic health screenings and monitor claims activity for EPSDT recipients to quickly identify recipients requiring treatment
- Online letter templates that allow users to modify Health Check letter text and the position of fields, such as recipient name

Approach to Customization and Modifications

Key to the Replacement MMIS recipient system is the fact that it is a configurable framework that will support the unique needs of the State. As such, it will take significant collaboration and effort to translate the specific business rules of the State into the Replacement MMIS recipient data maintenance system. For example, questions to be answered and configured or customized include the following:

- What are the benefit plans to be defined, and what data elements combine to define them?
- What is the hierarchy of benefit plans?
- What rules define if an eligibility transaction matches an existing record or defines a new recipient?
- What recipient-related data elements are unique to the State?

These and many other questions will be explored and answered in the detailed requirements validation (RV) meetings. In most states, about 20 percent of the recipient-related data model represents state-specific data. This is especially true in states that are extending their publicly funded health plans to populations outside of traditional Medicaid.

EDS has more experience than any other company in consolidating entitlement data from multiple agencies. As such, we have built our recipient processes to have a firmly defined structure supported by flexible criteria. This is not an area where a state wants a cookie-cutter approach, but rather a recipe for a successful fusion of ingredients. Therefore, many of the inputs and outputs in the recipient area will require some State-specific modification even if the functional capability exists, including the areas discussed in the following subsection.

Enhancements to Functional Requirements

The following enhancements will be made to the base interChange to meet the RFP requirements for the Replacement MMIS' recipient subsystem:

- We will create cost-sharing thresholds for recipients in a family. The base interChange does apply cost-sharing at the case level, so State-specific modifications will be needed.
- We will make State-specific modifications to the existing interChange recipient premium invoicing and payment process.

- We will develop new processes to handle the Transfer of Assets requirements of this RFP.
- We will design new functionality to accept DPH eligibility applications online. This includes maintenance, storage, and audit history for application requests received. The Contact Tracking Management System (CTMS) will accept hard-copy and facsimile applications, which will be scanned by the document-capture business function for online availability. We also will produce a user guide for recipients and produce reports for online retrieval.
- We will enhance the Alternate Address panel in the recipient subsystem to store an alternate address by line of business (LOB).
- We will enhance the recipient subsystem to allow for confidential enrollment.
- We will modify the recipient subsystem panel, Buy-In EDB Information, to allow updates to be made to the table it represents.
- We will modify the recipient subsystem report, Non-Provider Accounts Receivable, to add cost-sharing transactions.
- We will modify the recipient subsystem panel, Alternate Address, to store pharmacy mailing information and maintain a history of pharmacy mailing addresses. This panel also will store and maintain the name, mailing address, and relationship of an individual other than the recipient.
- We will update the interChange Business Intelligence and Analytical Reporting (BIAR) ad hoc module with data elements to produce a report with date span parameters based on the application or recipient characteristics.
- We will make State-specific modifications to meet the precise data, logic, and presentation requirements. This functional capability exists within interChange, but it will be refined to meet the specific needs of the State.

For more information on letter generation, see the Correspondence and Letters subsection of proposal section 40.1.1 General System Requirements.

Response to Recipient System Requirements

The following tables map our solution to the general requirements and the DPH online enrollment requirements of the recipient functional area. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

General Recipient System Requirements

The following table, EDS Response to General Recipient System Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Recipient System Requirements

RFP No.	RFP Requirement	EDS Response
40.2.1.1	Provides capability for access to recipient data using any combination of name or partial name, date of birth (DOB), gender, Medicare Health Insurance Claim Number (HICN), and/or county	Met by interChange. The Recipient Search panel in the recipient subsystem will allow the user to search recipient records based on Medicaid ID, Medicare ID, case ID, or SSN using any combination of name or partial name, gender, birth date, and county information.
40.2.1.2	Provides capability for access to recipient data using any recipient ID number or SSN without other qualifiers	Met by interChange. The Recipient Search panel is the initial panel viewed on entry into the recipient application. This Web page allows the user to access recipient information by selecting a "search by" criteria. After completing a recipient search, the Recipient Mini Search panel will allow the user to search additional recipient records without having to go back to the main search menu.
40.2.1.3	Provides capability for name and partial-name search through use of a proven phonetic/mnemonic algorithm, such as Soundex or a State-approved alternative	Met by interChange. The Recipient Search panel will allow the user to search recipient records based on phonetic last name and/or first name.
40.2.1.4	Provides capability to maintain an online audit trail of all updates to recipient data and provides online access to audit trail for all State-authorized individuals	Met by interChange. Every insert, update, or delete performed (on an auditable panel) in interChange causes a "before" image of the data to be saved to the audit table. This also includes the user ID and date time stamp of the update. Users can use the audit panel to display this information.
40.2.1.5	Provides capability to support classification of recipients into multiple concurrent eligibility groups by health benefit program and benefit plan based on State entities' concurrency rules	Met by interChange. The Reference Benefit Administration Assignment Plan and Benefit Plan Hierarchy panels maintain assignment plan and benefit plan threads that are used to control relationships and the order of claim processing at the assignment plan and benefit plan level. These hierarchy threads are ordered sets of plans that may cover recipients concurrently.
40.2.1.6	Provides capability to accept and process online and batch update transactions of recipient data for all recipients from the State eligibility systems, EIS, CNDS, local managing entities (LMEs), and other State-authorized users	Met through customization of interChange. The maintenance of recipient data is available to support claims processing in batch and online mode. The batch mode is a daily file extract from the eligibility engine, which maintains eligibility data for the medical assistance programs. Recipient-related data residing on the eligibility engine also must reside in the MMIS. The online mode is the Add Recipients panel in the recipient subsystem, which allows authorized users to add recipients to interChange. State-specific customization will accommodate State data elements, logic, and presentation

RFP No.	RFP Requirement	EDS Response
		through the interface.
40.2.1.7	Provides capability to perform editing of eligibility transactions and report on transactions that updated successfully, transactions that updated successfully but received soft edits, and transactions that did not update due to receiving hard edits	Met by interChange, with a portion of the requirement requiring customization code. The interChange recipient data integration program eligibility engine will be customized for the State-specific data elements and logic. The Recipient Maintenance panel is the access point for seeing the results of the eligibility transactions. The existing recipient report, Example Error, needs a few State-specific changes in what it reports. This report lists the errors that occurred during the daily batch update process for interChange recipient transactions. The fields in error, the invalid data, and a brief message explaining each error are displayed.
40.2.1.8	Provides capability to identify and report on exact duplicate and potential duplicate recipient records within and across lines of business	Met by interChange, with a portion of the requirement requiring customization code. The existing recipient report, Potential Duplicate Error Report, will require State-specific modifications.
40.2.1.9	Provides capability for maintenance of current and historical recipient identification numbers	Met by interChange. interChange stores multiple IDs for a specific recipient and can access the data through any of these numbers using the Recipient Other ID Search panel.
40.2.1.10	Provides capability to de-link recipient data when it is discovered that a recipient's eligibility has been collapsed erroneously into another recipient or re-link recipient's eligibility that has been erroneously split out from the recipient; this includes eligibility data, TPL, buy-in data, prior approvals, service limits, consents, and any other data identified by the State	Met by interChange, with a portion of the requirement requiring customization code. Users access the Recipient Unlink Request panel to request an unlink for a recipient. Users access the Recipient Link Request panel to request a link for a recipient. Actual unlink and link occurs during nightly batch processing. The existing report, Link Requests Processed, lists the recipient link requests that were processed successfully. The types of information that the system could not determine how to handle are included in the report. There will be certain State-specific customization to this process.
40.2.1.11	Provides capability to use Enrollment Database (EDB) information to detect Medicare and Medicare HMO entitlement for use in claims processing	Met by interChange. Three panels in the recipient business function address this requirement. The Buy-In EDP Part A panel allows the user to view the Part A information from the EDB file for a buy-in recipient. The Buy-In EDP Part B panel allows the user to view the Part B information from the EDB file for a buy-in recipient. The Buy-In EDB End Stage Renal Disease panel allows the user to view the End Stage Renal Disease information from the EDB file for a specific buy-in recipient with information that includes the start and termination dates for coverage, dialysis, and transplant.
40.2.1.12	Provides capability to maintain five (5) years of historical recipient information online and five (5) years near-line, including history of changes to name, DOB, SSN, and recipient address	Met by interChange. We will exceed this requirement by keeping 10 years of data online for immediate access. interChange does not purge records and can maintain ongoing history.

RFP No.	RFP Requirement	EDS Response
40.2.1.13	Provides capability for notes tracking by recipient to accommodate tracking of calls regarding claims, complaints, customer service, and TPL, and provides easy access to the call information by authorized users	Met by interChange. CTMS provides a means of access and storage for information associated with a customer service contact. The contact information is associated with an assigned contact tracking number (CTN). This information includes contact type, demographic information, questions, resolutions, and contact reasons. EDS and State staff enter information for each contact through online pages. Search panels allow users to sort and access contacts based on various criteria. Reports are available based on open dates, status, clerk IDs, and department.
40.2.1.14	Provides capability for updating recipient letter templates with free-form text to support cases specific to a recipient data issue or specific applicant/recipient	Met through COTS integration. The Letter Generator is an automated correspondence system that allows account and State staff to send written communication to recipients, providers, and other business partners. The Letter Generator draws and updates data from interChange and is designed to run on Web-based interaction and batch generation modes.
40.2.1.15	Provides capability to reconcile CNDS data with Replacement MMIS data each State business day in order to verify that all records and segments received through the CNDS interface are processed or are listed on error reports	Met by interChange. The existing report, Example Error, lists the errors that occurred during the daily update process for interChange recipient transactions. The fields in error, the invalid data, and a brief message explaining each error are displayed on the report.
40.2.1.16	Provides capability to reconcile State-entity DMA eligibility data with the Replacement MMIS each State business day in order to verify that all records and segments received through the EIS interface are processed or are listed on error reports	Met by interChange. The existing report, Eligibility Maintenance Error, lists the errors that occurred during the daily update process for interChange recipient transactions. The fields in error, the invalid data, and a brief message explaining each error are displayed on the report.
40.2.1.17**	Provides capability to reconcile DMH Accredited Standard Committee (ASC) X12N 834 transactions eligibility data with the Replacement MMIS each State business day in order to verify that all records and segments received via the 834 transaction are processed or are listed on error reports	Met by interChange. The existing report, Eligibility Maintenance Error, lists the errors that occurred during the daily update process for interChange recipient transactions. The fields in error, the invalid data, and a brief message explaining each error are displayed on the report.
40.2.1.18	Provides capability for State staff to enter online recipient-specific overrides to the timely billing edit for claims processing	Met through customization of interChange. A change will be made to the application to allow for online recipient-specific overrides to the timely billing edit for claims processing.
40.2.1.19	Provides capability to receive and process State entities' Eligibility History data from DIRM or ITS prior to operational startup	Met by interChange. This task is done during the conversion process of the implementation.
40.2.1.20	Provides capability for Recipient/Client Eligibility Cross-Reference data for State entities, including all CNDS updates by participating organizations as appropriate to the State entity	Met by interChange, with a portion of the requirement requiring customization code. interChange accepts and accesses recipient data through numerous State-supplied identifiers. State-specific customization will be necessary to understand these cross-references, but the system readily

RFP No.	RFP Requirement	EDS Response
		uses them.
40.2.1.21	Provides capability to allow access to the entire recipient record via a common CNDS ID for recipients with multiple cross-referenced IDs, regardless of the number of cross-references, including claims data, eligibility data, TPL data, buy-in data, prior approvals, service limits, and consents	Met by interChange. The Recipient Search panel is the initial panel viewed on entry into the recipient application. This panel allows the user to access recipient information by selecting a "search by" criteria. Additionally, the Other ID Search Panel grants access to the same information using additional State identifiers. After the search criteria is selected, the Recipient panel is displayed.
40.2.1.22	Provides capability to retain the CNDS ID used for Federal reporting when recipient IDs are combined	Met by interChange. The Recipient Link History panel allows the user to review the recipients who have had multiple ID numbers. The actual ID submitted on a claim is retained, even if two IDs have been linked, allowing direct access to claims with a specific ID.
40.2.1.23	Provides capability for online updates to the CNDS for maintenance of cross-reference and demographic information	Met by interChange. The Add Recipients panel is used to allow authorized users to add recipients to the Replacement MMIS. The Recipient Other IDs panel can be used to establish a new ID relationship for a recipient.
40.2.1.24	Provides capability for online updates for performing client "combine" functions when multiple CNDS IDs are identified for a single client, according to CNDS rules	Met by interChange. The Recipient Link Request panel initiates the batch programs to merge two distinct recipients' information together. The Link History panel allows the user to review the recipients who have multiple ID numbers.
40.2.1.25	Provides capability to produce a report of CNDS cross-reference ID updates within and across lines of business	Met by interChange, with a portion of the requirement requiring customization code. The Link Requests Processed report lists the recipient link requests that were processed successfully. The Unlink Requests Processed report lists the recipient unlink requests that were processed successfully. A new report that lists when a new cross-reference ID is associated to an existing recipient can be developed if required.
40.2.1.26	Provides capability for online updates of fields not updated through the State's eligibility update	Met by interChange. Numerous panels support adding or updating elements not updated through an eligibility transaction. These include level of care, managed care, TPL, previous IDs, and many others.
40.2.1.27	Provides capability to receive and process deductible information from the recipient eligibility record and make it available for claims processing	Met by interChange. The Recipient Spenddown panel is used to view spenddown ICNs and the amount of spenddown withheld. The spenddown ICN portion of the panel is accessed by selecting a row on the spenddown list. For nursing facility claims, the recipient liability represents the same basic functionality, but this recipient obligation is used only to satisfy nursing facility claims.
40.2.1.28	Provides capability to process updates to recipients of North Carolina Health Choice for Children (NCHC) as any other recipient eligibility update (NCHC is equivalent to	Met by interChange. The NCHC eligibility will simply be considered another benefit plan, which is subject to the policy of the State and is readily configured within

RFP No.	RFP Requirement	EDS Response
	State Children's Health Insurance Program.)	interChange.
40.2.1.29	Provides capability to accept recipient eligibility segments from EIS and CNDS with no limitations on the number of eligibility segments maintained within the Replacement MMIS	Met by interChange. The relational database architecture of interChange allows unlimited recipient eligibility segments.
40.2.1.30	Provides capability to process and reconcile the full file of EIS and the Replacement MMIS recipient eligibility records	Met by interChange, with a portion of the requirement requiring customization code. The current source of eligibility data for the MMIS is a daily file extract from the eligibility engine. The eligibility engine maintains eligibility data for the medical assistance programs. Recipient-related data residing on the eligibility engine also must reside in the MMIS. Many states perform full file reconciliation runs of their data, which interChange fully supports. There may be a need to make certain State-specific modifications in the reporting and the balancing because DPH recipients would not be part of that data exchange.
40.2.1.31	Provides capability for transmission and receipt of buy-in data to and from CMS via DIRM interface in accordance with CMS Redesign practices	Met by interChange. interChange has an entire subsystem devoted to the proper management, processing, updating, and reporting of buy-in—related data.
40.2.1.32	Provides capability to produce buy-in update transactions for Warrant Calculation and Previously Unknown County Warrant Calculation for Medicare Parts A and B	Met by interChange. The buy-in financial transactions are integrated into the financial processing. These financial transactions are detailed in the Buy-In Part A Expenditure Report and Buy-In Part B Expenditure Report.
40.2.1.33	Provides capability to edit all buy-in transactions for completeness of required fields, reasonability of dates, accuracy of converted Railroad Retirement numbers, presence on the Replacement MMIS eligibility file, and unwanted duplication	Met by interChange. The Buy-In A and B Transaction, Exception, Coverage, and Mismatch panels allow authorized users to manage the buy-in transactions and perform necessary corrections and updates.
40.2.1.34	Provides capability for online inquiry into buy-in current status and full buy-in history for all affected individuals on the Replacement MMIS eligibility file(s)	Met by interChange. The Medicare Buy-In A Combined panel and the Medicare Buy-In B Combined panel show the history of all buy-in transactions for recipients, which are searchable on numerous fields.
40.2.1.35	Provides capability to automatically create a buy-in deletion transaction in the month in which death of the recipient or termination of the Medicaid case is recorded on the Replacement MMIS file Date of death and termination of the Medicaid case are included in the eligibility record received from EIS.	Met by interChange. The buy-in data exchange with any State agencies provides recipient information for the buy-in program. The monthly data exchange with CMS is triggered by a date of death record being received by interChange. The receipt of a date of death record triggers the termination of buy-in for that recipient.
40.2.1.36	Provides capability to process buy-in updates from CMS via DIRM interface in accordance with CMS Redesign practices	Met by interChange. The buy-in daily exchange with CMS is in accordance with CMS requirements.
40.2.1.37	Provides capability to produce reports after each buy-in update to identify all transactions received, all	Met by interChange. The following reports meet this requirement: Buy-In Part A Exception Error By Transaction

RFP No.	RFP Requirement	EDS Response
	transactions that processed successfully, and all transactions that had errors, invalid data, and/or could not be matched to a recipient in accordance with CMS Redesign practices	Code, Buy-In Part B Exception Error By Transaction Code, and Example Error.
40.2.1.38	Provides capability to void eligibility segments	Met by interChange. Based on rules determined during eligibility design, interChange can void eligibility segments.
40.2.1.39**	Provides capability for State staff to enter an online request for a recipient ID card	Met by interChange. The Recipient ID Cards panel is used to view and verify ID card issuance for a recipient and allows the user to request a new ID card for the recipient. It also includes the reason for reissue.
40.2.1.40	Provides capability for system notification from MMIS Recipient business area to MMIS Managed Care business area whenever retroactive managed care enrollment/disenrollment occurs	Met by interChange, with a portion of the requirement requiring customization code. The automated transfer of information between the recipient and managed care subsystems identifies retroactive eligibility and enrolls or disenrolls according to State specifications. State-specific business rules and restrictions may need to be incorporated.
40.2.1.41	Provides capability to notify TPL electronically whenever retroactive Medicare enrollment occurs	Met by interChange. The relational database architecture of interChange allows the recipient subsystem to notify the TPL subsystem. TPL uses that data as part of the cost avoidance to check if the recipient has Medicare coverage and identify any retroactive recoveries when billing.
40.2.1.42	Provides capability to notify claims electronically whenever retroactive Medicaid eligibility occurs for a recipient eligible in another health benefit program	Met by interChange. The Benefit Administration Code table in the reference subsystem identifies those service programs for which a recipient may be eligible and processes a change in benefit plan based on the State rules. This change is read in real time by the claims engine when it processes a claim for the recipient in question.
40.2.1.43	Provides capability to create claim financial transactions for each CMS buy-in update record	Met by interChange, with a portion of the requirement requiring customization code. The buy-in system creates financial transactions but not actual claims transactions for processing. The buy-in financial transactions are included in the financial summary reports. These financial transactions are detailed in the Buy-In Part A Expenditure Report and Buy-In Part B Expenditure Report.
40.2.1.44	Provides capability to allow adjustments to buy-in claim financial transactions	Met by interChange. The buy-in data maintenance function makes adjustments each time buy-in records are received for transactions that have been processed already. These transactions will either positively or negatively impact the financial transactions, as appropriate.
40.2.1.45	Provides capability to run the final buy-in cycle for receipt by CMS no later than the 25th of each month Date of final monthly cycle runs shall be directed by the State.	Met by interChange. Automated data exchanges between EDS and CMS are conducted monthly to identify, update, resolve differences, and monitor new and ongoing Medicare buy-in cases. Scheduling of the buy-in process jobs is according to State requirements.

RFP No.	RFP Requirement	EDS Response
40.2.1.46	Provides capability upon completion of the final cycle run to immediately produce buy-in final cycle reports on paper, if requested, and deliver to the State within two (2) business days	Met by interChange. The Buy-In Part A and B Billing (Receiving) reports inform the State of the status of buy-in Part A and B Medicaid recipients. They use transaction codes to communicate an update or an acknowledgment of State accretion, deletion, or change. Scheduling of the reports is according to State requirements.
40.2.1.47	Provides capability to accept and process updates to the EDB from CMS via DIRM interface	Met by interChange. The buy-in function receives and processes the EDB file from CMS. The EDB process populates the EDB Medicare tables.
40.2.1.48	Provides capability to accept and process updates to the Beneficiary Data Exchange (BENDEX) from the Social Security Administration via a DIRM interface	Met by interChange. The recipient subsystem receives and processes the BENDEX file monthly, updating the Part A, Part B, and Medicare identification information for recipients that are matched to the BENDEX file.
40.2.1.49	Provides capability to edit online recipient update transactions for completeness, consistency, and valid values	Met by interChange. The primary users responsible for the management of recipient eligibility and enrollment information for the State use pages and panels in the recipient subsystem to directly enter, review, and modify recipient demographic and eligibility information. In-screen edits prevent the saving of incomplete, inconsistent, or invalid fields.
40.2.1.50	Provides capability to identify the correct eligibility group and associated premium using information on the recipient's eligibility record	Met by interChange, with a portion of the requirement requiring customization code. State-specific logic will be required in processing the recipient eligibility transaction, but the framework for recognizing those transactions and classifying the recipient appropriately is a core aspect of the interChange recipient data management system.
40.2.1.51	Provides capability to produce and send correspondence related to recipient premiums— including invoices, notices of non-payment, cancellation notices, receipts, and refunds—in the recipient's preferred language	Met through COTS integration. DOC1 is an automated correspondence system that allows EDS and State staff to send written communication to recipients, providers, and other business partners. The Letter Generator draws and updates data from interChange and is designed to run on Web-based interaction and batch generation modes. The Letter Generator can accept a language other than English.
40.2.1.52	Provides capability to collect recipient premium payments	Met by interChange, with a portion of the requirement requiring customization code. interChange has a complete recipient premium payment invoicing and processing system that generates invoices, tracks receivables and payables, accepts payments, generates refunds, and integrates into the eligibility determination system. Each state has minor state-specific changes required to identify who qualifies for specific benefits and premiums.
40.2.1.53	Provides capability to produce refunds of recipient premiums	Met by interChange. The interChange recipient premium payment system can produce refunds and adjustments to premium transactions. They are reported on the Weekly

RFP No.	RFP Requirement	EDS Response
		Refund Report Listing report.
40.2.1.54	Provides capability to process financial accounting records for premium payments and refunds	Met by interChange. The premium payment system is designed to produce, process, and report premium payments and refunds. Numerous processes, pages, and reports are involved in the complete solution.
40.2.1.55	Provides capability to produce reports for recipient premium payment and cost-sharing processes	Met by interChange. There are 28 standard daily, weekly, monthly, and annual reports produced through the recipient premium processing system.
40.2.1.56	Provides capability to apply cost-sharing	Met by interChange. interChange supports cost sharing in four ways: spenddown, patient liability, premium payments, and copay. Spenddown and patient liability are set for a periodic (usually monthly) time frame, where the recipients meet that set amount every month. Patient liability is used only for nursing facility claims.
40.2.1.57	Provides capability to ensure cost-sharing does not exceed threshold for the family group	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to create time-based thresholds for a family unit to meet. This case spenddown process will apply across all members of a case.
40.2.1.58	Provides capability to associate multiple cases in a family together to ensure cost-sharing does not exceed threshold	Met by customization code. interChange will be modified to create time-based thresholds for a family unit to meet. This case spenddown process will apply across all members of a case.
40.2.1.59	Provides capability to send recipient notices and Explanations of Benefits (EOB) in recipient's preferred language	Met through COTS integration. DOC1 is an automated correspondence system that allows EDS and State staff to send written communication to recipients, providers, and other business partners. The Letter Generator draws and updates data from interChange and is designed to run on Web-based interaction and batch generation modes. The Letter Generator can accept a language other than English.
40.2.1.60	Provides capability to produce a Certificate of Creditable Coverage (COCC) for each recipient deleted/terminated from specified Medicaid coverage	Met by interChange, with a portion of the requirement requiring customization code. The COCC process is incorporated into interChange as part of HIPAA compliance. The specific benefit plans or criteria of who qualifies to receive a COCC under specific conditions will be customized for the State.
40.2.1.61	Provides capability to produce a COCC for a specific period if requested by the recipient/client or by the State	Met by interChange. The COCC process is incorporated into interChange as part of HIPAA compliance.
40.2.1.62	Provides capability for an online request function to allow the State to request a COCC for a specific recipient for a specific period	Met by interChange. The COCC process is incorporated into interChange as part of HIPAA compliance.
40.2.1.63	Provides capability to produce a Monthly Summary Report indicating all COCCs mailed to recipients per	Met by interChange, with a portion of the requirement requiring customization code. The COCC process generates a

RFP No.	RFP Requirement	EDS Response
	month that includes: • Total number of COCCs mailed • Total number of COCCs mailed within five (5) days of date of termination/request • Total number of COCCs mailed later than five (5) days from the date of termination/request	monthly report of notices produced. Additional reporting elements will be added to meet the requirements for counting those produced within five days of the request and those produced more than five days after the request.
40.2.1.64	Provides capability to use transfer of assets data on the Medicaid recipient record in claims processing	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to use transfer of assets data on the Medicaid recipient record in claims processing.
40.2.1.65	Provides capability to create a report of recipients with paid claims for targeted services for whom a transfer of assets indicator is not on file	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to create a report of recipients with paid claims for targeted services for whom a transfer of assets indicator is not on file.
40.2.1.66	Provides capability to provide DIRM an electronic copy of the report of recipients with paid claims for targeted services for whom a transfer of assets indicator is not on file for publication for county Department of Social Services (DSS) agencies	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to provide DIRM an electronic copy of the report of recipients with paid claims for targeted services for whom a transfer of assets indicator is not on file for publication for county DSS agencies.
40.2.1.67	Provides capability to create a report of individuals with a transfer of assets sanction	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to create a report of individuals with a transfer of assets sanction.
40.2.1.68	Provides capability to provide DIRM an electronic copy of the report of individuals with a transfer of assets sanction for publication for county DSS agencies	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to provide DIRM an electronic copy of the report of individuals with a transfer of assets sanction for publication for county DSS agencies.
40.2.1.69	Provides capability to create the Medicare Modernization Act (MMA) Enrollment File based on selection criteria provided by the State in the format specified by CMS	Met by interChange, with a portion of the requirement requiring customization code. interChange automatically identifies recipients who meet the criteria and sends the formatted MMA file to CMS for processing. CMS processes the MMA file and returns a response file for each individual, indicating if the individual qualifies for Medicare D or additional Low-Income Subsidy (LIS) support and in what pharmacy plan he or she is enrolled. interChange updates the recipient record with the appropriate information. The MMA file history for a given recipient is available through the online panels in the recipient maintenance area. This may need to be modified slightly for any State-specific criteria or processing instructions.

RFP No.	RFP Requirement	EDS Response
40.2.1.70	Provides capability to include data in the MMA Enrollment File necessary to count the number of enrollees for the phased-down State contribution payment	Met by interChange. The buy-in subsystem report, Part D MMA Outbound, lists and counts the total number of records for enrollees for the phased-down State contribution payment. This report is the transaction detail for transactions in the monthly transmission to CMS.
40.2.1.71	Provides capability to include records in the MMA Enrollment File for those individuals for whom the State has made an enrollment determination for the Part D low income subsidy	Met by interChange. The Part D MMA Outbound report in the buy-in subsystem provides transaction details for recipients enrolled in Part D. Part D logic incorporates these recipients into the MMA file.
40.2.1.72	Provides capability to transmit the MMA Enrollment File to DIRM for transmission to CMS	Met by interChange. The Part D MMA Enrollment File can be sent to DIRM for transmission to CMS.
40.2.1.73	Provides capability to process the MMA Enrollment Response File from CMS transmitted via DIRM interface	Met by interChange. The Part D MMA Enrollment Response File from CMS can be received through the DIRM interface.
40.2.1.74	Provides capability to produce a report of all records transmitted on the MMA Enrollment File	Met by interChange. The Part D MMA Outbound report in the buy-in subsystem provides transaction details for recipients enrolled in Part D.
40.2.1.75	Provides capability to produce a report of all records received on the MMA Response File, identifying any errors, records unable to be matched to a recipient on the Replacement MMIS, and records unable to be processed	Met by interChange. The buy-in system provides the Part D MMA Inbound report and lists the transactions rejected by CMS. The Part D MMA File Error report lists the records from CMS that experience errors during processing.
40.2.1.76	Provides capability for online access to MMA Response File records that were in error or unable to be matched with a recipient on the Replacement MMIS	Met by interChange. The Part D CMS MMA History panel in the recipient system allows a user to view the MMA enrollment and responses for a particular recipient.
40.2.1.77	Provides capability for online access to a summary of the recipient's MMA Enrollment and Response File records	Met by interChange. The Part D CMS MMA History panel in the recipient system allows a user to view the MMA enrollment and responses for a particular recipient.
40.2.1.78	Provides capability for online access to the MMA record selected from the summary	Met by interChange. The Medicare D CMS MMA History panel in the recipient system allows a user to view the MMA enrollment and responses for a particular recipient.
40.2.1.79	Provides capability for online access to Medicare coverage data from EIS for Parts A, B, C, and D for Medicaid recipients	Met by interChange, with a portion of the requirement requiring customization code. The Medicare A Coverage, Medicare B Coverage, and Medicare D Entitlements panels in the recipient system allow a user to view the Medicare coverage for the selected recipient. The system would need to be modified to identify Medicare Part C (HMO) distinctly.
40.2.1.80	Provides capability to accept and process Medicaid/Medicare coverage data from EIS and make it available for claims processing	Met by interChange. The current source of eligibility data for the MMIS is a daily file extract from the eligibility engine. The eligibility engine receives data from EIS and maintains eligibility data for the medical assistance programs. Recipient-related data residing on the eligibility engine also must reside in the MMIS.

RFP No.	RFP Requirement	EDS Response
40.2.1.81**	Provides capability for online access to add, update, and inquire into Medicare data for DMH and DPH recipients	Met by interChange. The Medicare A Buy-In Coverage and Medicare B Buy-In Coverage panels in the recipient system allow adding, updating, and inquiring into Medicare data for DMH and DPH recipients. This also can be added automatically through the Medicare EDB process by simply adding these recipients to the finder file.
40.2.1.82	Provides capability to produce eligibility extracts for contractors with whom DMA does business	Met by interChange, with a portion of the requirement requiring customization code. The ability to provide extracts is part of interChange. Each data extract would be customized to meet the needs of the receiving entity.
40.2.1.83	Provides capability to use CNDS governance rules to determine which demographic data has priority when a recipient is enrolled concurrently in multiple lines of business and benefit plans	Met by interChange, with a portion of the requirement requiring customization code. The current source of eligibility data for the MMIS is a daily file extract from the eligibility engine. The eligibility engine receives data from EIS and maintains eligibility data for the medical assistance programs. The State-specific rules for defining hierarchy would need to be customized, but interChange supports holding multiple sets of certain demographic data by source.
40.2.1.84	Provides capability for multiple types of recipient addresses per line of business (LOB)	Met by interChange, with a portion of the requirement requiring customization code. The Alternate Address panel is used to insert and maintain alternate addresses and contact information for a recipient. This panel will be enhanced to store alternate addresses as identified per LOB.
40.2.1.85	Provides capability for a Client Services Data Warehouse (CSDW) extract of recipient data	Met by interChange, with a portion of the requirement requiring customization code. The ability to provide extracts is part of interChange. Each data extract would be customized to meet the needs of the receiving entity.
40.2.1.86	Provides capability to produce letters/notices to applicants/recipients	Met through COTS integration. DOC1 is an automated correspondence system that allows EDS and State staff to send written communication to recipients, providers, and other business partners. The Letter Generator draws data from interChange and is designed to run in Web-based interaction and batch generation modes.
40.2.1.87	Provides capability to send, receive, and update Provider data between DHSR and the Replacement MMIS for placement of eligible recipient	Met by interChange, with a portion of the requirement requiring customization code. The ability to send, receive, and process extracts is part of interChange. Each process would be customized to meet the needs of the data exchange.

DPH Online Enrollment Requirements

The following table, EDS Response to DPH Online Enrollment Requirements, describes how we will meet the requirements set forth in the RFP. Where

appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to DPH Online Enrollment Requirements

RFP No.	RFP Requirement	EDS Response
40.2.1.88**	Provides capability to accept Web-submitted and hard copy financial eligibility applications (DHHS 3014) for program participation	Met by interChange, with a portion of the requirement requiring customization code. The system would need to include a new panel to accept Web-submitted applications, and the CTMS subsystem would be used for tracking hard-copy financial eligibility applications (DHHS 3014) for recipient eligibility.
40.2.1.89**	Provides capability for enrollment instructions and guidelines for supporting functions by selected enrollment options	Met by interChange, with a portion of the requirement requiring customization code. The public Web portal would need to include enrollment instructions and guidelines for supporting functions by selected enrollment options. It supports user manuals and instructions as a standard feature.
40.2.1.90**	Provides capability to accept Web-submitted and hard copy supporting documentation for financial eligibility applications	Met by interChange, with a portion of the requirement requiring customization code. The CTMS subsystem would need to include the capability to accept both paper and facsimile documentation to track the financial eligibility application.
40.2.1.91**	Provides capability to upload attachments electronically and associate attachments with submitted financial eligibility applications	Met by interChange, with a portion of the requirement requiring customization code. The Web subsystem would need to include the capability to accept uploaded attachments with the financial eligibility application.
40.2.1.92**	Provides capability to receive paper and facsimile documentation, scan it so it can be viewed online, and associate documentation with the submitted financial eligibility application	Met through COTS integration. The COTS image repository, EMC | Documentum, stores and retrieves applications and related attachments.
40.2.1.93**	Provides capability to identify and assign the applicant's CNDS ID and associate/link it to the financial eligibility application in accordance with CNDS Governance Rules	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to identify and assign the applicant's CNDS ID and associate/link it to the financial eligibility application in accordance with CNDS governance rules.
40.2.1.94**	Provides capability for State DPH staff to enter the status of the application as either complete or incomplete	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to allow State DPH staff to enter the status of the application as either complete or incomplete.
40.2.1.95**	Provides capability to place all applications in an online work queue for State DPH eligibility staff to review	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to place each application in an online work queue for State DPH eligibility staff to review.

RFP No.	RFP Requirement	EDS Response
40.2.1.96**	Provides capability for State DPH staff to accept, reject, and/or modify income and deductions provided on the application and provides capability to indicate the reason income and/or deductions are rejected or modified	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to allow State DPH staff to accept, reject, or modify income and deductions provided on the application and provide the capability to indicate the reason income or deductions are rejected or modified.
40.2.1.97**	Provides capability for State DPH staff to indicate if an application is complete and ready for disposition	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to allow State DPH staff to indicate if an application is complete and ready for disposition.
40.2.1.98**	Provides capability to calculate recipient income based on information provided on an application and compare it to program thresholds to determine financial eligibility	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to calculate recipient income based on information provided on an application and compare it to program thresholds to determine financial eligibility.
40.2.1.99**	Provides capability to electronically store and maintain DPH eligibility data in the Recipient business area	Met by interChange, with a portion of the requirement requiring customization code. The recipient subsystem is the repository for MMIS data. Certain data model extensions may be needed to support any DPH-exclusive attributes.
40.2.1.100**	Provides capability to electronically store and maintain multiple addresses for one recipient, including correspondence mailing, pharmacy mailing, residence, and alternate and to maintain history of addresses	Met by interChange, with a portion of the requirement requiring customization code. The recipient subsystem can store multiple addresses by source. It will be extended to add address type.
40.2.1.101**	Provides capability to electronically store and maintain the name, mailing address, and agency of the application interviewer	Met by interChange, with a portion of the requirement requiring customization code. The recipient subsystem can store the name and mailing address. It will be extended to include the agency of the application interviewer.
40.2.1.102**	Provides capability to electronically store and maintain the name, mailing address, and relationship of an individual other than the applicant/recipient to receive copies of notices and letters if requested	Met by interChange, with a portion of the requirement requiring customization code. The Alternate Address panel in the recipient subsystem is used to insert and maintain alternate addresses and contact information for a recipient. This panel will be enhanced to store and maintain the name, mailing address, and relationship of an individual other than the applicant or recipient.
40.2.1.103**	Provides capability to produce system-generated letters/notices of approvals or denials	Met through COTS integration. DOC1 is an automated correspondence system that allows EDS and State staff to send written communication to recipients, providers, and other business partners. The Letter Generator draws and updates data from interChange and is designed to run in Web-based interaction and batch generation modes.
40.2.1.104**	Provides capability to maintain the necessary data elements to produce reports on demand with date span parameters based on application and/or recipient	Met by interChange, with a portion of the requirement requiring customization code. interChange and the BIAR MMIS ad hoc support subsystem may need to be updated to

RFP No.	RFP Requirement	EDS Response
	characteristics	add the needed data elements to produce reports with State-specific data.
40.2.1.105**	Provides capability for inquiry selection for one (1) or more applications/records that meet specified criteria, by any of the following: • Application/case number • Applicant name (partial or complete) • Applicant name phonetic (partial or complete) • CNDS ID, • SSN • Date of birth	Met by interChange, with a portion of the requirement requiring customization code. The Search panel in the recipient subsystem allows for record search by current ID, applicant name (partial or complete), applicant name phonetic (partial or complete), case ID, SSN, birth date, gender, or county. It will need to be extended to include the application number.
40.2.1.106**	Provides capability to store abandoned or incomplete applications indefinitely	Met by interChange, with a portion of the requirement requiring customization code. interChange will be enhanced to store abandoned or incomplete applications indefinitely.
40.2.1.107**	Provides capability to store and maintain all applications for program participation	Met through customization of interChange. interChange will be updated to accommodate the detailed data online associated with applications.
40.2.1.108**	Provides capability to maintain an audit trail to document time stamp and user ID information for all applications added to the application file	Met by interChange. interChange maintains an audit trail that tracks and captures time stamp and user ID information for each application added to the application file.
40.2.1.109**	Provides capability to maintain an audit trail to document before and after image of changed data, time stamp of the change, and the user ID information for all changes made to the application data	Met by interChange. The audit trail capability within interChange automatically captures data changes, the specific date and time stamp of the changes, and the user or batch ID that performed the updates.
40.2.1.110**	Provides capability to document date and time of receipt of supporting documentation for applications	Met through COTS integration. The COTS document management system, Documentum, date and time stamps the inputs or updates.
40.2.1.111**	Provides capability to produce a weekly aging report that lists work queue status	Met by interChange, with a portion of the requirement requiring customization code. The recipient subsystem will be enhanced to produce a new Aging report, run weekly. This report will list work queue status.
40.2.1.112**	Provides capability to produce identification cards for approved recipients; the card must identify the recipient, provide the recipient's identification number, and not contain eligibility information	Met by interChange. The system produces ID cards containing recipient information, including name and ID number. The ID card meets ANSI standards and does not contain eligibility information.
40.2.1.113	Provides capability for recipient lock-in/lock-out to a specific pharmacy and/or primary care provider and/or prescriber	Met by interChange. The Lock-In Details panel in the recipient subsystem displays the name of the lock-in plan for the recipient, the provider ID and type, and the status of the lock-in.

RFP No.	RFP Requirement	EDS Response
40.2.1.114	Provides capability for recipient lock-in/lock-out from a specific pharmacy and/or primary care provider and/or prescriber	Met by interChange. The Lock-In Details panel in the recipient subsystem displays the name of the lock-in plan for the recipient, the provider ID and type, and the status of the lock-in.
40.2.1.115	Provides capability for claims exceptions to process automatically when prior authorized by the lock-in/lock-out primary care provider or prescriber in accordance with State policy	Met by interChange. Appropriate prior approval or referral records will bypass the lock-in editing.
40.2.1.116	Provides capability for historical begin and end dates for each lock-in and lock-out segment, as well as the reason for lock-in/lock-out	Met by interChange. The Lock-In Details panel in the recipient subsystem displays lock-in period information, including effective date and end date. The lock-in reason comments area on this panel allows users to set the lock-in reason and add comments.
40.2.1.117	Provides capability for an unlimited number of lock-in/lock-out segments per recipient	Met by interChange. The Lock-In Details panel, in combination with interChange architecture, provides unlimited segments.
40.2.1.118	Provides capability for multiple concurrent active lock-in/lock-out segments of any type	Met by interChange. The Lock-In Details panel provides multiple concurrent active lock-in/lock-out segments of any type.
40.2.1.119	Provides capability for online inquiry and update into lock-in/lock-out segments	Met by interChange. The Lock-In Details panel allows inquiry into lock-in/lock-out segments by status and lock-in plan name.
40.2.1.120	Provides capability to maintain an audit trail of all changes to lock-in/lock-out segments	Met by interChange. The Lock-In Details panel captures each lock-in entry and stores it in the recipient's history.
40.2.1.121	Provides capability for online inquiry into audit trail	Met by interChange. The Lock-In Details panel allows searching into the recipient's lock-in history.
40.2.1.122**	Provides capability for confidential enrollment (when a potential client is unable or unwilling to identify himself or herself) for DMH These recipients will require separate tracking to avoid potential duplicate enrollment of applicants when they become clients.	Met by interChange, with a portion of the requirement requiring customization code. The recipient data maintenance system will be enhanced to allow for confidential enrollment of an applicant. A unique tracking ID will be assigned to prevent duplicate enrollment of applicants.
40.2.1.123	Provides capability to associate an individual with a specific provider, including long-term care and group living arrangements, with a begin and end date for each segment, including sponsoring agency, authorizer, level of care, date certified, date of next certification, and patient share of cost, including deductibles and patient liability	Met by interChange. The eligibility system can associate an individual with a specific provider, by effective dates, associated certification, sponsor, and recipient financial information. interChange meets these requirements.

40.3.1 EVS System Requirements

Our solution includes Web-based eligibility verification capabilities through the Replacement MMIS Web portal for the provider and recipient communities. We will continue to provide multiple access methods, while using the same EVS engine and data to produce a consistent response.

State of North Carolina

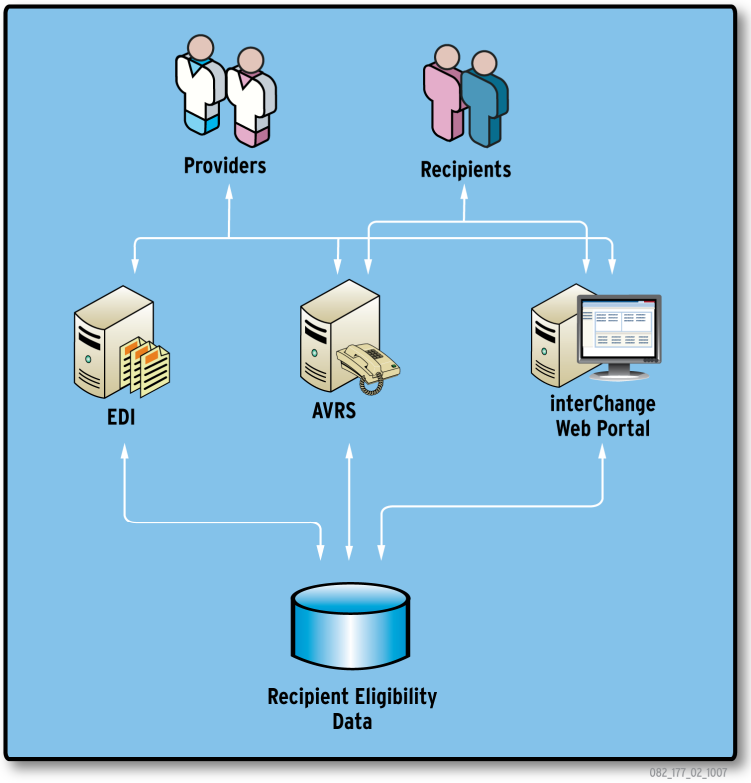
Eligibility verification is a key component of communicating with the healthcare provider community. Constant availability of accurate data is critical to provider satisfaction and ease of program use.

Currently, providers have the following three methods for access to eligibility data: Automated Voice Response System (AVRS), electronic Eligibility Verification System (EVS) through participating value-added networks (VANs) using the HIPAA-compliant 270/271 eligibility transactions, and caller assistance through the Provider Services call center if AVRS and eligibility system outages occur.

Today, the eligibility verification methods are independent systems and can sometimes produce inconsistent responses, causing frustration and confusion among the provider community. To alleviate these problems and improve the availability of consistent eligibility data, we will implement the Replacement MMIS EVS solution. EVS will continue to provide multiple access methods, while using a unified EVS engine and data to produce a consistent response. Each of the methods of accessing eligibility data inquire into the same recipient information; therefore, regardless of access method, the same results are provided, increasing the data integrity of the overall application.

Eligibility verification access will include Web-based eligibility verification capabilities through the interChange Web portal for the provider and recipient communities, as shown in the following exhibit, EVS Solution Process Flow.

EVS Solution Process Flow



Eligibility verification will include Web-based capabilities through the Web portal for providers and recipients.

Providers using our interChange EVS have found the Web-based eligibility verification capabilities we have implemented to be efficient and helpful in improving provider office staff productivity.

Web access to eligibility information is by far the most popular access method. In the first four months of operation, the Kentucky interChange Web portal has processed 1 million eligibility verifications each month. By providing reliable eligibility systems and multiple options for accessing recipient eligibility information, we empower providers to choose the eligibility verification method that best suits their business needs. This robust solution will bring improved access to more comprehensive program data by allowing providers to view current and historical EVS information.

Providers may call the AVRS to access EVS information by recipient ID as well as Social Security number (SSN) combined with date of birth (DOB). The response will be spoken using the AVRS. The Fax on Demand option also will be available, allowing the provider to enter the eligibility request information through AVRS and receive a hard-copy response by fax. This option will save the provider time because responses can be received by fax instead of having to listen to each spoken response.

We have designed our EVS to aid the provider community and meet the State's needs. To support the State's objectives, our Replacement MMIS will provide an EVS with the key benefits listed in the following table, EVS Features and Benefits.

EVS Features and Benefits

Feature	Benefit
Fast response time	Improved provider satisfaction and client access
Multiple inquiry field combinations	Ease in finding recipient information
Most current recipient information for every access method	Control of benefit utilization, where the same response information is provided regardless of inquiry method
Multiple access methods	Improved provider satisfaction through a greater choice of access methods
Secure interface	Industry-standard security measures for eligibility transactions to protect confidential information
Web-enabled capability	Ease of access and increased provider efficiency

Approach to Customization and Modifications

No customization or modification is required to the interChange application to meet the State's EVS requirements. Within the existing application, we will configure the EVS solution to meet the State-specific lexicon and messages.

Enhancements to Functional Requirements

No enhancements to interChange are required to meet the State's EVS requirements.

Response to EVS System Requirements

The following table, EDS Response to EVS System Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange reports and processes that meet the stated requirements. For more information regarding our voice response capabilities, please see proposal section 40.4.1 AVRS System Requirements.

EDS Response to EVS System Requirements

RFP No.	RFP Requirement	EDS Response
40.3.1.1	Provides capability to receive and process ASC X12N 270/271 eligibility inquiry and response transactions in real-time and batch transactions	Met by interChange. The interChange application processes these transaction files in batch and in real time.

RFP No.	RFP Requirement	EDS Response
40.3.1.2	Provides capability for inquiry via ASC X12N 270 transactions by recipient identification number, recipient full name and DOB, recipient partial name and DOB, and recipient SSN and DOB	Met by interChange. The interChange application allows for multiple inquiry keys such as name, DOB, and SSN.
40.3.1.3	Provides capability for ensuring safeguards in responses via ASC X12N 271 transactions, including: • Limiting access to eligibility information to authorized medical providers, VANs, and authorized State personnel only; and • Protecting the confidentiality of all recipient information	Met by interChange and operational processes and procedures. Each method for accessing EVS information is secured by the use of authenticated access. Authentication is accomplished in the following ways: • Providers accessing the Web use an ID and password. • AVRS users enter a four-digit provider ID number (PIN). • EDI submitters use a trading partner ID to authenticate the transaction. Web access also uses Secure Socket Layer (SSL) technology and 128-bit encryption.
40.3.1.4	Provides capability for access to eligibility verification inquiry to inquire for dates of service within the preceding twelve (12) months	Met by interChange. The interChange capabilities in the Web portal and AVRS subsystems meet this requirement. Historical eligibility data for the previous 12 months will be accessible.
40.3.1.5	Provides capability for an online audit trail of all inquiries and verification responses made, the information conveyed, and to whom the information was conveyed	Met by interChange. The inquiry table and the EVS eligibility tracking table meet this functional requirement. Inquiries through the Web portal and AVRS are tracked. The following data elements are tracked: provider, recipient, dates, accept/reject, and inquiry entry point. The EVS eligibility tracking table tracks the eligibility dates passed back and forth between the eligibility system and interChange.
40.3.1.6	Provides capability to report all EVS transactions online, segregating transaction data by provider and source of inquiry (Automated Voice Response System [AVRS], Web, EVS, etc.) at a minimum	Met by interChange. The EVS Transaction Counts by Provider and Provider Type report meets this requirement.
40.3.1.7	Provides capability to uniquely identify and track each EVS recipient eligibility verification inquiry and response	Met by interChange. The EVS Transaction Counts by Provider and Provider Type Report meets this requirement.
40.3.1.8	Provides capability to issue a reference number to a provider for any Medicaid eligibility inquiry and response issued from the EVS	Met by interChange. interChange can store the reference number.

40.4.1 AVRS System Requirements

Our key responsibilities for automated voice response include operating and maintaining a secure AVRS that provides current eligibility, claim status, service limit, and prior approval information to the provider community. Timely, accurate information from our flexible, user-friendly AVRS will increase provider productivity and satisfaction, which will lead to increased participation.

State of North Carolina

Making information easily available to providers and recipients is a critical facet of any healthcare service system, and much of it can be automated. An Automated Voice Response System (AVRS) allows callers to gain immediate access to information without requiring human operator contact. Our AVRS gives providers multiple inquiry choices to verify eligibility, check the status of a claim, and much more—24 hours a day, 7 days a week, except for agreed downtime for maintenance.

AVRS data is stored in interChange. Using simple touch-tone prompts, a provider submits an inquiry through the AVRS, and an interactive transaction is sent to interChange. When the response is returned, the caller is provided the inquiry results through speech text. The AVRS provides up-to-the-second information to providers and gives them prompt and accurate information.

We selected Intervoice, one of the nation's leaders in voice technology, for its robust and highly scalable system and because of its proven history. Through our long-term relationship with Intervoice, we have gained valuable experience, training, and a superior support network to provide our clients with an AVRS application that the provider community can rely on to obtain accurate information in an efficient, user-friendly manner. Intervoice is the deployed AVRS platform that we use in support of 17 state Medicaid programs to provide improved provider satisfaction and program participation.

The following table, AVRS Key Features and Benefits, highlights some of our solution's most critical benefits.

AVRS Key Features and Benefits

Feature	Benefit
Self-service features that allow providers to verify recipient eligibility and prior approval before rendering service	Reduced claim denials
Ability for providers to check the status of claims and encounters	Quicker resolution of claim billing and administrative issues and faster payment to the provider
Accurate information that supports the management of providers' administrative workflow	Increased productivity for providers

Feature	Benefit
Reduced call volume for Provider Services call center staff	Increased ability for call center staff members to focus on requests requiring additional support
Real-time, transaction-based request and response processing delivered using XML transaction services and processed using common eligibility and claim status routines	Fast, consistent, and accurate answers and reduced maintenance costs
Availability 24 hours a day, 7 days a week	Ability for providers to perform inquiries at their convenience, leading to greater satisfaction and increased participation
Text-to-speech (TTS) capability that facilitates provider inquiries by speaking text strings during the response, such as provider names, recipient names, and insurance company names	Accelerated provider inquiries

Our key responsibilities for automated voice response include operating and maintaining a secure AVRS that provides current eligibility, claim status, service limit, and prior approval information to the provider community. Current information enables providers to effectively administer services to eligible recipients and reduces the providers' risk in serving recipients who are not eligible for coverage. Timely, accurate information from a flexible, user-friendly AVRS increases provider productivity and satisfaction.

The AVRS also has a shortcut capability, which enables the caller to interrupt any AVRS prompt or message, enter information, or request to speak with a call center representative or a provider enrollment specialist during business hours. The menu-driven design supports easy navigation through the prompts to obtain information. Shortcut key sequences enable the caller to repeat prompts or messages, reuse information previously entered, and enter the current date.

Providers are given the option within the AVRS to receive the information verbally or receive fax notification. When providers choose the faxback option, they enter their fax numbers and the interChange system automatically sends fax responses. This capability eliminates the need for providers to repeat the AVRS response to write down the information.

Approach to Customization and Modifications

Most of the AVRS requests for data will depend on information retrieved in real time from the Replacement MMIS. Almost every AVRS request handler will require at least some customization of interChange. Modifications will be performed using the latest version of InVision software to update the base call flow. State-specific changes will be tested on a separate test line. After testing is complete, changes will be released into the production environment on the voice server and in the Replacement MMIS. When future modifications become necessary, the call flow will be built and tested using the test line and in an

appropriate testing area of the Replacement MMIS. New voice messages will be recorded, cataloged, and deployed onto the AVRS as necessary.

Enhancements to Functional Requirements

The new AVRS will support voice recognition and text-to-speech in English. Digital T1s will connect to the 120-port server. Additional lines will be provided so that calls can be transferred to and from Provider Services and fax services can be supported. During times of peak load, busy signals will be eliminated or reduced. A secure Web site will be available so that the AVRS can place data there for pickup and notify the caller by e-mail that the data is available.

Response to AVRS System Requirements

The RFP's AVRS system requirements will be supported and implemented unless otherwise noted. Most of the requirements will require additional coding to implement requested solutions because EDS is bidding a new platform for the Replacement MMIS.

The following tables map our solution to the different requirements of the AVRS functional area, including general requirements and Web inquiry requirements. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements.

General AVRS System Requirements

The following table, EDS Response to General AVRS System Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General AVRS System Requirements

RFP No.	RFP Requirement	EDS Response
40.4.1.1	Provides AVRS capability and toll-free telephone access for providers and Medicaid recipients to access information from the Replacement MMIS AVRS, twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year except for agreed-upon scheduled down-time for maintenance	Met by interChange. The AVRS will be available 24 hours a day, 7 days a week, 365 days a year. The EDS team will work with the State stakeholders during DDI to define the scheduled maintenance windows. The EDS team will present the proposed maintenance windows based on our existing experiences across many MMIS applications.
40.4.1.2	Provides capability for an online audit trail of all inquiries and verification responses made, the information conveyed, and to whom the information was conveyed	Met by interChange. The interChange AVRS tracks 100 percent of the calls into the call center through CTMS contact records.
40.4.1.3	Provides capability for eligibility verification inquiry by recipient identification number, or SSN and DOB, and date of service	Met through customization of interChange. A submenu will be provided for the caller to specify the MID or SSN and DOB to obtain information.
40.4.1.4	Provides capability for access to eligibility verification for dates of service within the preceding 365 days	Met through customization of interChange. Eligibility inquiries older than 365 days will be rejected.
40.4.1.5	Provides capability for access to eligibility verification for	Met by interChange. Eligibility inquiries for dates of service

RFP No.	RFP Requirement	EDS Response
	dates of service not greater than the current date for Medicaid recipients	greater than the current date for Medicaid recipients will be rejected by AVRS.
40.4.1.6**	Provides capability for access to eligibility verification for dates of service not greater than the current date plus 365 days for DPH recipients	Met through customization of interChange. Providers calling about DPH recipients will be allowed to check for eligibility up to 365 days into the future, testing against the end date of the program in which the recipient is enrolled.
40.4.1.7	Provides capability for system-generated monthly reporting of AVRS daily system availability checks	Met by operational processes and procedures. This process will back up the daily log generated by the voice server and parse it for relevant daily data. Daily, weekly, and monthly reports will be produced directly by the voice server.
40.4.1.8	Provides capability for an AVRS menu Help option, accessible at any time during the call, which allows callers a choice of being transferred to the Fiscal Agent call center or being directed to a specific Web site where detailed, written instructions are available	Met through customization of interChange. A special key sequence will allow callers to be transferred automatically to the call center or hear instructions about accessing the Web site.
40.4.1.9	Provides capability for menu options to distinguish between NC DHHS provider and Medicaid recipient callers; designs cascading options appropriate to these two (2) caller types	Met through customization of interChange. The definition and configuration of the call flow scripts is part of the standard AVRS implementation. During this time, the delineation between the provider and recipient callers and the corresponding cascading options will be defined and programmed.
40.4.1.10	Provides capability for AVRS to repeat to caller the recipient's full name and spelling of full name exactly as defined in the Recipient business area	Met through customization of interChange. When an eligibility inquiry is being made, a text-to-speech function will say and spell out letter by letter the recipient's full name.
40.4.1.11	Provides capability to process inquiries made by enrolled providers entering either a National Provider Identifier (NPI) or a legacy provider ID number (for atypical providers)	Met through customization of interChange. The capability for the provider community to access inquiries by NPI or legacy provider number will be allowed. Under certain circumstances, the caller may have to specify a legacy provider number when using an NPI does not yield a single legacy provider.
40.4.1.12	Provides capability to process inquiries made by Medicaid recipients entering the recipient's Medicaid ID number, DOB, and SSN	Met through customization of interChange. A submenu will be provided for the caller to specify the MID or SSN and DOB to make an eligibility inquiry.
40.4.1.13	Provides capability to report all AVRS transactions online, segregating transaction data by caller type (provider or recipient), inquiry type (eligibility, claim status, etc.), and inquiry source (AVRS, Web, EVS, etc.)	Met through configuration of interChange parameters and features. The internal telephone switch of the call center will offer this function to direct callers to the right department or automated service. Recipients generally do not call North Carolina Medicaid at 1 800 688 6696, only providers. Calls to the AVRS at 1 800 723 4337 do not route through the telephone switch of the call center.
40.4.1.14**	Provides capability to allow access by providers, aides, potential employers, etc. via AVRS to the Division of	Met through customization of interChange. The call flow for North Carolina will be updated to include the telephone

RFP No.	RFP Requirement	EDS Response
	Health Service Regulation (DHSR) Health Care Personnel Registry (HCPR) and the DHSR Nurse Aide Training & Registry (NATRA) for inquiry on DHSR registry information	numbers for each of the unique registry information centers identified by this requirement.
40.4.1.15	Provides capability to allow callers to interact with the AVRS by interactive voice response (IVR) or by touch-tone telephone keypad	Met through customization of interChange. Part of the definition work of the call flow scripts will be the documentation of the voice and touch-tone responses. Each time input is required, the AVRS will be enabled so that the caller can key or say the required input.
40.4.1.16	Provides capability to retain and transfer all information entered and received when the caller chooses to be transferred to the Fiscal Agent call center	Met through customization of interChange and additional lines reserved for internal transfer to and from the EDS call center's telephone switch. The AVRS unit will be equipped to electronically transfer the provider number and other pertinent information to the representative's desktop, and to the extent possible transfer the call into the most logical Provider Services area.
40.4.1.17	Provides capability to switch from English to other languages for all Medicaid recipient inquiry options	Met through customization of interChange. The initial solution will be in English because only providers call the AVRS. Recipients do not call the AVRS at 1 800 723 4337.
40.4.1.18	Provides capability to refer or transfer recipient calls for information about additional translator services	Met by operational processes and procedures. The EDS Provider and Recipient Services team will have personnel available to handle the translation services needed for the major languages supported for the recipient community.
40.4.1.19	Provides capability for providers to enter real-time requests for prior approval adjudication via AVRS	Met through customization of interChange. Callers will be given an opportunity to request prior approval (PA). This solution is for programs that can logically be accommodated through AVRS processing.
40.4.1.20	Provides capability to interface with the communication solution that will execute a fax verification (and/or email verification, if no protected health information is involved) of entry, approval, or denial of a prior approval request	Met through customization of interChange. Additional telephone lines will be provided for outbound faxing. A caller can request a fax to the number of his or her choice or provide an e-mail address, whereby the caller receives an e-mail confirmation of the request. The caller can then enter the secure Web site provided by EDS using the link embedded in the e-mail and obtain the full information available.
40.4.1.21	Provides capability for providers to request printed copies of their Remittance Advice (RA) statements	Met through customization of interChange. The call flow script will be customized to direct providers who want to request their Remittance Advice statements on paper to a Provider Services team member. The team member, when speaking with the provider, can then work through the interChange provider panels to set the printed RA indicator.
40.4.1.22	Provides capability for call flows for the following provider inquiry types:	Met through configuration of interChange parameters and features. Items new to AVRS are PA for DPH benefits, referrals, and Carolina ACCESS Emergency Authorization

RFP No.	RFP Requirement	EDS Response
	• Claim status • Checkwrite • Drug coverage • Procedure code pricing • Modifier verification • Procedure code and modifier combination • Procedure code pricing for Medicaid Community Alternatives Program services • Prior approval for procedure code • Medicaid dental benefit limitations • Medicaid refraction and eyeglass benefits • Medicaid prior approval for durable medical equipment (DME), orthotics, and prosthetics • Prior Approval for DPH benefits • Recipient eligibility, enrollment, and Medicaid service limits • Sterilization consent and hysterectomy statement inquiry • Referrals • Medicaid Carolina ACCESS Emergency Authorization Overrides	Overrides. These will be addressed and included in the solution.
40.4.1.23	Provides capability to allow the Carolina ACCESS referring provider and the Carolina ACCESS referred-to provider to inquire on the primary care provider referral status	Met through customization of interChange. New referral call flow will allow the referring or the referred-to provider to specify a recipient and confirm the primary care provider (PCP) referral status.
40.4.1.24	Provides capability for call flows for responses for the following Medicaid recipient inquiry types: • Medicaid eligibility • Managed care enrollment information, including the primary care provider name, address, and daytime and after-hours phone numbers • Third party liability • Medicare coverage • Well child checkup dates • Hospice eligibility	Met through customization of interChange. Providers will call in to obtain eligibility and enrollment information or hospice eligibility. During the eligibility call flow, besides a basic Medicaid eligibility indication, additional TPL, transfer of assets, Medicare coverage, and well child checkup dates will be given. On the enrollment call flow, the PCP name, address, and daytime and evening telephone numbers will be repeated back to the caller. Hospice eligibility will have its own call flow and submenu for requests.
40.4.1.25	Provides capability to uniquely identify and track each AVRS recipient eligibility verification inquiry and	Met through configuration of interChange parameters and features. TR logs will be kept in the MMIS for each eligibility

RFP No.	RFP Requirement	EDS Response
	response	verification response.
40.4.1.26	Provides capability to return a reference number to a provider for any DMA/Medicaid eligibility verification inquiry and response issued from the AVRS	Met through customization of interChange. Each eligibility request placed into an MMIS TR log will be issued a reference number. That reference number will be placed into the TR log and given to the caller.
40.4.1.27	Provides capability for Web-accessible downloads of AVRS training documentation that will be synchronized with application system updates	Met through configuration of interChange parameters and features. Copies of downloadable AVRS training documentation will be available on the Web site. When application system updates occur, training documentation will be synchronized.

Web Inquiry Requirements

The following table, EDS Response to Web Inquiry Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Web Inquiry Requirements

RFP No.	RFP Requirement	EDS Response
40.4.1.28	Provides capability for an online, HIPAA-compliant inquiry of all information available via the AVRS	Met by interChange. The solution provides unique IDs for the secure Web portal pages where inquires to the detailed data are performed. The queries verify that the results presented to the user are limited to the appropriate data that the identified user is allowed to view.
40.4.1.29	Provides capability to return a reference number to a provider for any DMA/Medicaid eligibility verification inquiry and response issued from the Web	Met through customization of interChange. Part of the results returned to the inquiry will be a reference number that is stored with the inquiry transaction log.
40.4.1.30	Provides capability for Medicaid recipient access to recipient eligibility and enrollment information, including: • Medicaid eligibility • Carolina ACCESS enrollment information to include the primary care provider name, address, and daytime and after-hours phone numbers • Third party liability • Medicare coverage • Well child checkup dates • Hospice eligibility	Met through configuration of interChange parameters and features. When an eligibility request is made by the provider, an eligibility confirmation number will be issued. It will then be orated, or an e-mail can be ordered by the caller that will contain a link to the secure Web site containing the eligibility information for that recipient.
40.4.1.31	Provides capability for the option to switch from English to non-English (Spanish, Russian, Hmong, etc.) static content on each non-secure page that is targeted for	Met through customization of interChange. The ability to switch from English to Spanish and another predominate language will be customization work performed on the base

RFP No.	RFP Requirement	EDS Response
	consumers/recipients for all Medicaid recipient inquiry options	Web portal product.
40.4.1.32	Provides capability for the option to switch from English to non-English (Spanish, Russian, Hmong, etc.) static content on each secure page targeted for recipients for all Medicaid recipient inquiries and responses	Met through customization of interChange. The ability to switch from English to Spanish and another predominate language will be customization work performed on the base Web portal product.
40.4.1.33	Provides capability for English and non-English (Spanish, Russian, Hmong, etc.) versions of all downloadable written materials targeted for recipients/consumers	Met by interChange. The Web portal inherently has the capability to present downloadable written material for recipients/consumers.
40.4.1.34	Provides capability to report all Web inquiry transactions online, segregating transaction data by provider and recipient inquiry, by inquiry type (eligibility, claim status, etc.), and inquiry source (AVRS, Web, EVS, etc.)	Met through customization of interChange. Specifically, the ability to log the eligibility and claim status inquiries will be added to the interChange Web portal component of the solution. The logging will include the unique ID of who is performing the inquiry, as well as the type of query and when the search is performed. The data will be stored and available for the MMIS support team to perform reporting on the details.
40.4.1.35	Provides capability to uniquely identify and track each online recipient eligibility verification and nurse aide verification inquiry and response	Met through customization of interChange. Specifically, the ability to log the eligibility and nurses aide verification inquiries will be added to the interChange Web portal component of the solution. The logging will include the unique ID of who is performing the inquiry, the type of query, and when the search is performed. The data will be stored and available for the MMIS support team to perform reporting on the details.
40.4.1.36**	Provides capability to provide access to providers, nurse aides, potential employers of nurse aides, etc., via the Web query functionality to the DHSR Health Care Personnel Registry (HCPR) and the DHSR Nurse Aide Training & Registry (NATRA) for inquiry on DHSR registry information	Met through customization of interChange. The interChange Web portal will be customized to include hyperlinks to the DHSR Health Care Personnel Registry (HCPR) and the DHSR Nurse Aide Training & Registry (NATRA) for inquiry on DHSR registry information.
40.4.1.37	Provides capability to report all Web Inquiry transactions online, segregating transaction data by caller type (provider or recipient), inquiry type (eligibility, claim status, etc.) and inquiry source (AVRS, Web, EVS, etc.)	Met through customization of interChange. Specifically, the ability to log the eligibility and claim status inquiries will be added to the interChange Web Portal component of the solution. The logging will include the unique ID of who is performing the inquiry and when the search is performed. The data will be stored and available for the MMIS support team to perform reporting on the details.

40.5.1 Provider System Requirements

Our proposed Replacement MMIS features a comprehensive provider component that will improve provider productivity with faster and easier access to accurate data. This will reduce provider cost and lead to greater provider satisfaction, thereby encouraging provider participation in the State's programs and improving the quality of life for North Carolina recipients.

State of North Carolina

The North Carolina provider community is the front line for healthcare delivery to the North Carolina healthcare recipient population. The healthcare programs rely on the quality, commitment, understanding, and participation of providers to accomplish their mission and improve the quality of life for North Carolina's citizens. We understand the critical impact that accurate, current information makes for overall provider satisfaction. Keeping the provider community informed as healthcare program decisions are made is vital.

As proven in more than 20 states, EDS' provider communication solution will improve communication and operational capabilities that reduce provider cost and encourage and support provider participation in the State's programs. For example, since implementing interChange in Oklahoma, EDS has maintained call drop rates of less than 5 percent without increased staffing. The enhanced workflow of our solution has increased provider services' productivity threefold in Oklahoma, increasing quality, timely responses to the Oklahoma provider and recipient communities.

The Replacement MMIS will provide the requested system functions and support efficient processes. The provider interface function will provide the following:

- **Improved provider service—**The field representatives and contact center representatives can review related claims history pertaining to a provider, eliminating the need for providers to repeat their original inquiry if they need additional information.
- **Improved performance—**The Replacement MMIS will provide a more streamlined approach to responding to questions in the contact center by eliminating the need to rekey information provided at the beginning of the AVRS call. Call telephony integration (CTI) will allow the provider to enter identifying demographics. The call agent will not have to ask the provider to repeat this information, improving the call response and speak time.
- **Improved operations and reduced manual processes—**Data to research a provider or recipient issue will be housed in one place: our Contact Tracking Management System (CTMS). The history surrounding an issue

will be available in one place, significantly reducing the level of effort to resolve the issue. Providers also will be empowered to conduct their own service authorization, enrollment, and claim status research on the Provider Web Portal, further reducing calls to the contact center.

- **Flexibility to address future changes—**The CTMS enables the user, without technical intervention, to quickly document call conversations and track emerging issues. This technology will allow users to immediately track and report call statistics on important issues. In most cases, the provider contracts function in the reference subsystem will allow users to set up the criteria for individual medical assistance programs without technical intervention. This feature will enable faster time-to-market for new assistance programs, including enabling providers to participate sooner.
- **Tighter quality control through credentialing—**Through provider credentialing, a consistent, high-quality method of reviewing provider qualifications is established and maintained. This gives the State a higher level of confidence that the providers delivering care to recipients can meet their needs appropriately.

Provider Overview

The provider function plays a critical role in not only attracting and retaining providers, but also providing the critical information required to allow funds to be released to eligible providers for authorized services. The Replacement MMIS offers a comprehensive provider enrollment component that will improve current productivity, make the process more efficient and effective, and provide faster access to accurate data for the State and the provider community.

The Replacement MMIS will offer provider enrollment, maintenance, and reporting capabilities and contain the core requirements to meet the State's expectations and CMS certification requirements. Our solution parallels the MITA goals by supporting flexible, adaptable, and rapid response solutions to changes in programs and technology.

Robust provider business processes serve as the nucleus for critical information, such as provider enrollment, demographics, and important licensure and credentialing information. Critical information is date-driven to allow tracking of historical segments and correct adjudication of claims. A wide spectrum of information is available to track and manage provider information, such as multiple service locations, Drug Enforcement Agency (DEA) status, freestanding or distinct psychiatric facility indicators, level of care rate, and cost of medical education for teaching facilities.

interChange is designed specifically for state healthcare administration, including a provider data model containing data elements not likely to be found in a COTS or commercial healthcare system, such as data elements to track

disproportionate share or participation in State-only funded programs administered by other State agencies.

The Provider Web Portal will allow the State's provider community to enroll faster and begin rendering services to recipients earlier. Internal and external entities will use the portal to verify a provider's status.

Provider data will be maintained in one database. Inputs into the database will be through automated interfaces with outside entities such as the provider community, the State, licensing agencies, and other government agencies. The provider database will be fully integrated with reference, claims, TPL, financial, and other data in a single integrated data model. This integration will allow automatic updates to be fed to and from the provider business area to other business areas within the Replacement MMIS.

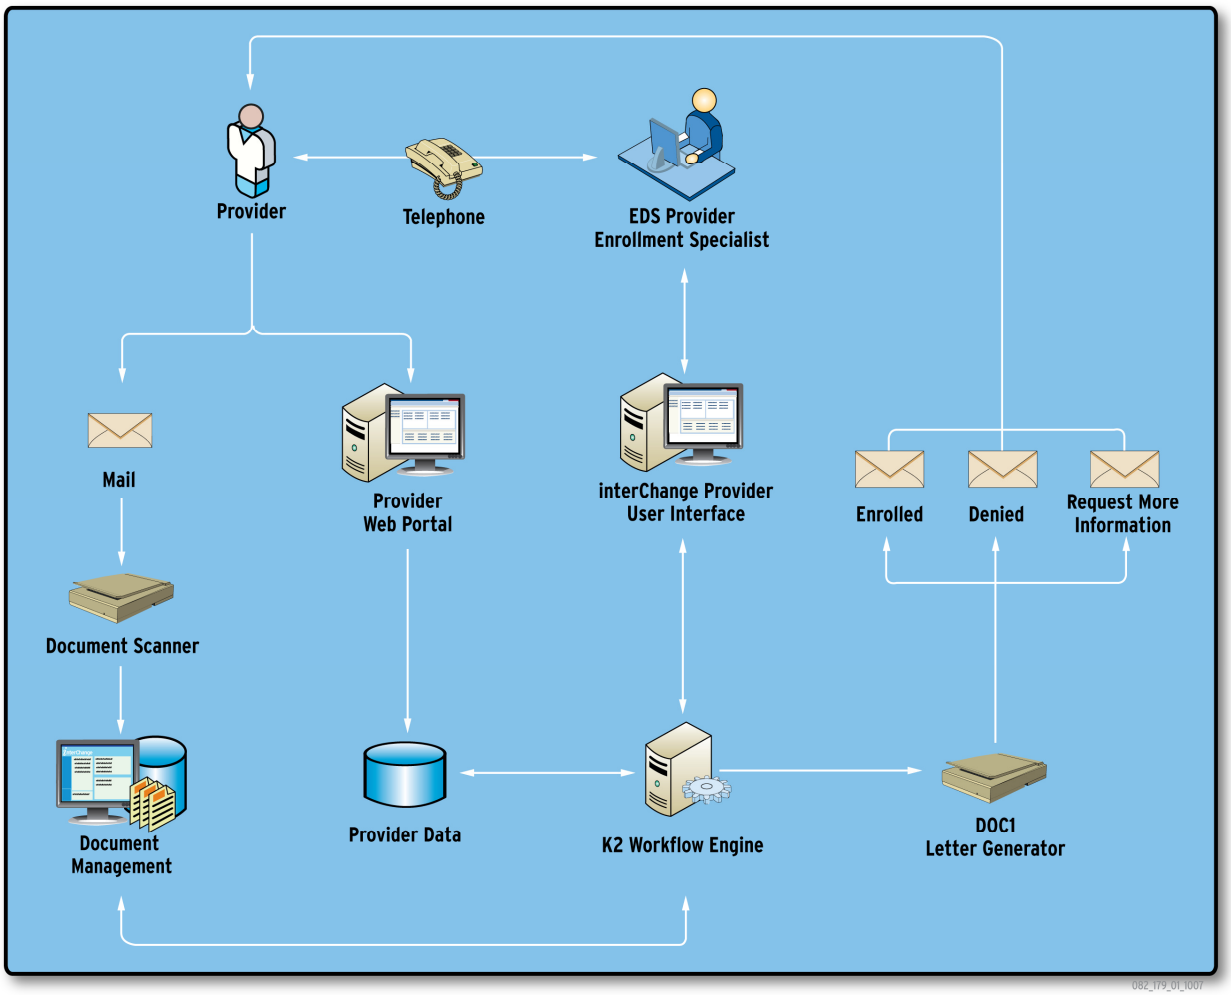
Automatic batch updates, as well as manual entry of pertinent data by authorized users, will allow the provider subsystem to process reliable information in near real time. Manual inputs will include data supplied on the provider enrollment applications, address changes, Clinical Laboratory Improvement Amendments (CLIA) information, and other valid data changes by authorized users.

The table-driven architecture of the provider business area will allow the State to implement new provider programs and specialties more quickly. Authorized business users can implement most new policies through the online application, reducing reliance on technical staff and accelerating the implementation time line.

Flexibility means options. When it comes to superb customer service, providers must have options that are sufficiently flexible to respond to the way they operate. Our enrollment and re-enrollment processes focus on giving providers several avenues for submission of requests. Providers always have the option to submit requests through the mail. They also can submit enrollment requests and monitor status through our secure Provider Web Portal. Providers who submit enrollment applications through the portal can log on, perform online correction of submitted enrollment applications, and view applications in a finalized status.

As shown in the following exhibit, Replacement MMIS Provider Enrollment Process, each avenue of submission leads to a managed workflow that routes requests, allowing the processing activity to occur efficiently.

Replacement MMIS Provider Enrollment Process



Our enrollment and re-enrollment processes focus on giving providers several avenues for submission of requests.

The system's integrated enrollment process means enrollment documents are imaged, indexed, and associated with a provider. These images will support the entire electronic workflow process, making retrieval, viewing, and auditing of enrollment documents by the State easy and convenient. The image will be viewable through the electronic document management system (EDMS), EMC | Documentum.

Provider Enrollment Workflow

The Replacement MMIS will process enrollment applications using the defined guidelines set by the State for each provider type. Different provider types will have differing criteria, all of which will be configured in the K2 workflow engine, our workflow management tool, to accurately enroll providers based on the established criteria for their provider type. Enrollment applications will be processed through the same workflow pattern, no matter how they are received,

allowing for accurate processing of enrollment applications without deviation from the standards established by the business requirements. interChange uses content-sensitive enrollment criteria to manage different provider types and specialties with different enrollment requirements. These requirements dictate the enrollment flow for the provider. Using the workflow engine, the system will present only the applicable panels needed for enrollment, streamlining the process.

The workflow processes will control the enrollment process from beginning to end, with status designations such as unassigned, assigned to, working, suspended, and closed. We will establish specific work queues and workflows that facilitate the fast, efficient processing of enrollment functions. The system will maintain the appropriate level of security, as well as an audit trail of changes.

The K2 workflow engine will allow monitoring of applications and the ability to prioritize tasks for each worker in the queue. The ability to monitor, track, and report enrollment applications, recertification, and provider change requests means providers can be more effectively served, resulting in increased satisfaction.

As described in the Workflow Management subsection of proposal section 40.1.1 General System Requirements, each workflow in interChange is configurable. The Workflow Provider Enrollment Decision Point Diagram shown in that subsection is easy for a user to follow, with distinct steps and flow arrows to identify processing alternatives.

Within the Replacement MMIS, each provider will be assigned a unique number that designates the provider. The system will not assign multiple IDs per provider, which allows for an easier transition to the HIPAA NPI. Only those data elements applicable to the provider, regardless of service location, are assigned, or linked, to the provider ID. The system will maintain comprehensive current and historical information about providers eligible to participate in the North Carolina payer groups. The advanced design will reduce maintenance by offering a single provider data repository with current, accurate information.

Each provider will be assigned one or more service locations to denote each office or facility where the provider accepts State healthcare recipients. Service locations are noted on the Provider Information page, allowing users to simply select the specific location from the service location drop-down menu. The system can maintain multiple addresses for one provider location. Each service location will maintain the following addresses: service location, home, office, mail to, and pay to.

Our provider services subsystem will support provider database maintenance, update and edit functions, and reporting to allow the State to deliver superior services to the North Carolina provider community. It will contain files and data elements necessary to meet the requirements defined by the State.

Through the provider type and specialty, the Replacement MMIS will allow the State to identify providers who perform services—such as immunizations, X-ray services in the office, and lab tests—and durable medical equipment (DME) providers who deliver equipment. The detailed design of edits associated with each browser-based page will verify that the updated record is complete and accurate before it is committed to the database. This maintains the integrity of the database and the uniformity of data for accurate reporting and claims processing.

When adding a new provider, the system will perform an edit and alert the user of potential system duplicates. The system will identify duplicates based on Social Security number (SSN), federal employer identification number (FEIN), and license number.

Provider Data Security

Data will be stored in a secure, protected environment that maintains confidentiality by providing accessibility only to authorized personnel. We also can establish field-level security. For example, not all staff will have access to view or update provider banking information for EFT. These system controls allow automatic enforcement of segregation-of-duties principles whenever possible. We have implemented a full range of audit trails, reconciliations, exception reports, transaction logs, supervisory reviews, and independent reviews to further strengthen our internal controls.

The Replacement MMIS will contain the necessary data to provide the appropriate audit trail for provider-specific reports. Updates made to provider data will be recorded in an online audit trail table showing data elements inserted, updated, or deleted; the user ID of the person making the change; the change date and time stamp; and how the data was modified. The Replacement MMIS will feature online audit trails of changes made to information and additions to the provider table. The State can use the audit trail to cross-check changes and additions made to the provider data by referencing the online image of a corresponding change request, enrollment form, or update form.

Provider Credentialing

EDS has selected VisionPro COTS software from GetProof for the provider credentialing component of the solution. This software provides for fast and accurate research, tracking, and credentialing activities that meet Joint Commission on Accreditation of Hospitals (JCAHO) and National Committee for Quality Assurance (NCQA) standards.

VisionPro offers automated interfaces to the Office of Inspector General's (OIG's) List of Excluded Individuals/Entities (LEIE) and the National Practitioner Data Bank (NPDB). By checking these data sources, the State can have confidence in the providers administering care to recipients. The OIG tool will assist users in downloading the OIG list and other opt-out provider lists. This solution enables the comparison of the exclusion lists to the North Carolina provider list.

Providers who match will be identified, and those findings will be passed to the Replacement MMIS for consolidated provider enrollment data storage. The results will then be incorporated in the appropriate provider enrollment workflow steps for quality processing of the enrollment activities. The application will be used by Provider Enrollment team members as an additional workflow mechanism to track the data used in the verification and credentialing process to completion and to document the results.

The software can interface with multiple state or national Web sites to pull data in for the credentialing process. This application can be used as a supplemental application to interChange to consolidate, validate, and certify the data used in the application process. Not only can this application handle the information requested in the RFP's provider system and operations requirements, it also is expandable to meet future required trends in provider credentialing and recredentialing.

The NPDB interface allows users to send a physician query directly to the NPDB. A report is then electronically received from the NPDB into the VisionPro software. The workload of credentialing also is assisted by this software. Automatic alert notifications allow users to monitor critical expiration dates and take appropriate action. Based on configurable notification parameters, the system will automatically notify users on logon or by e-mail of upcoming critical dates, such as license and certification expirations. This feature allows for effective monitoring of the processes of enrollment and re-enrollment.

For more information on the GetProof VisionPro software, please see the Proposed Early Implementations subsection of this proposal section.

The following table, Key Features and Benefits of the EDS Provider Solution, provides some highlights of our provider enrollment and maintenance functions.

Key Features and Benefits of the EDS Provider Solution

Feature	Benefit
Provider Web Portal that allows providers to access and complete enrollment applications and make changes to their own data	Streamlined enrollment process that increases provider satisfaction
Provider Web Portal application tracking for users	Instant determination of an application's status and fast application processing
Data organized in tables using a relational database structure so that an update automatically populates the appropriate fields when a user accesses a new page for the same provider	Better sharing of data across many pages, resulting in reduced entry and processing time
K2 workflow engine that allows authorized users to configure, manage, override, change, or suppress flexible processing rules to support workflow activities in real time	Increased accuracy and consistency of the enrollment process, including supervisor approvals where needed

Feature	Benefit
Quality provider credentialing through VisionPro, enabling timely and accurate research	More quality information available when determining if a provider should be eligible to provide care for recipients

Approach to Customization and Modifications

Through interChange's user-configurable items, such as contact tracking codes, provider types, and State agency codes; the highly flexible, configurable provider contracts feature; and the configuration of the K2 workflow engine, most of the State's provider system requirements will be met without modification. However, some requirements will necessitate customization or modification to interChange. We will analyze the State's requirements to ascertain the modifications and customizations to interChange. We will evaluate the service mappings for the provider functions and identify the provider services functional areas that need to be modified to meet the requirements.

The K2 workflow engine enables workflow definitions to be viewed and managed by several audiences, including business users, business analysts, and developers. interChange provides smooth integration to these capabilities through the interChange Web portal application. Each workflow in interChange is configurable, enabling authorized users to configure, manage, override, change, or suppress flexible processing rules to support workflow activities in real time. For example, a workflow may include some decision logic related to a recipient who is 18 years old or younger. The workflow is created so that the age value is configurable and is not "hard-coded" into the workflow implementation. The configurability of the EDS interChange workflows will therefore maximize the State's ability to easily change and manage or configure workflows.

Business workflows often are coupled with user interface pages to enable the workflow items or tasks. For certain types of workflow changes, these pages will require some modifications. In these scenarios, EDS will work with the State to arrive at an optimal solution for the required changes.

Our team will conduct requirements verification (RV) sessions to facilitate developing and delivering the Replacement MMIS with the features and functions required by the State. These RV sessions will verify or clarify our understanding of the functional requirements and validate the proper solution for each requirement. For example, in the RV sessions we will identify and document the events requiring State intervention. The point during the enrollment process flow at which this decision must be made will be noted. This information will be used to configure the K2 workflow engine to not only identify the trigger (predefined event), but also the step in the process when it is appropriate to take the next step, such as requiring State intervention. In many business process flows, actions such as State intervention occur after basic

validity and completeness checks are satisfied, which verifies that only applications that met all other criteria are sent to the State for action.

Part of the customization work for the provider subsystem will involve the configuration of the DOC1 COTS letter generation tool for correspondence caused by the workflow processes.

Another example is a review of the functional requirement to allow provider access to online enrollment. The criteria for accepting online enrollment will be defined in the RV session, including the types of data to be captured and any required forms to be presented for download and completion. This information will be used to develop the new Web page, edit logic, and configuration of the K2 workflow engine. Validation edits will be defined, and actions such as being able to save an incomplete enrollment and return to it later will be verified and the process documented.

Through the RV sessions, we will work with the State to verify each requirement in terms of process, criteria, exceptions, data, and so on. Each requirement will result in a cascade of configuration data for interChange and K2 tables, change orders for code extensions and new Web pages, and documentation of how each requirement is met.

Enhancements to Functional Requirements

interChange is designed to support multiple provider types through enrollment, certification, and maintenance across several different medical assistance programs. The provider function smoothly integrates with other functional areas of interChange. We will make the following changes to the provider function:

- The enrollment processing function will allow enrollment of providers through an update process, as might be encountered when interfacing with local managing entities (LME) that handle their own enrollment processing.
- The provider and provider contracts functions will be modified to capture LME demographic information and processing requirements for providers endorsed by or seeking endorsement from mental health LMEs.
- Batch and online data interfaces will be configured or customized using the COTS BizTalk integration tool or a point-to-point interface.
- Automated workflow processes will be configured using the COTS K2 workflow engine.
- A defined data interface will be created with the provider credentialing COTS software VisionPro so the MMIS provider area stores key data elements related to credentialing activities.

Other changes to interChange include the addition of missing data elements, creating new reports, and enhancing the search criteria interfaces.

Response to Provider System Requirements

The following tables map our solution to the different requirements of the provider functional area. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

Provider Enrollment Requirements

The following table, EDS Response to Provider Enrollment Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Provider Enrollment Requirements

RFP No.	RFP Requirement	EDS Response
40.5.1.1	Provides capability to interactively enroll eligible providers in a multi-payer environment using a single enrollment strategy to eliminate process redundancy	Met by interChange. The Provider Enrollment panels and Web pages meet this functional requirement.
40.5.1.2	Provides capability to generate and accept electronic and hard copy supporting documentation for enrollment and re-enrollment or verification functions	Met by interChange. The integration of the EDMS and interChange Letter Generator COTS tools meet this functional requirement.
40.5.1.3	Provides capability for provider access to online and batch enrollment functionality	Met through customization of interChange and the provider enrollment panels. New Web pages will be created to meet this requirement. A custom interface will accept batch enrollment files from authorized external agencies.
40.5.1.4	Provides capability for secure log-on that allows providers to retrieve and update incomplete application or check status of a submitted application	Met by interChange. The Account Logon panel meets this functional requirement. Applications must meet minimum data requirements in order to be saved and retrieved later.
40.5.1.5	Provides capability for a provider to download application for paper submission	Met through configuration of interChange parameters and features. The Publications Search panel features the ability to search for publications for download.
40.5.1.6	Provides capability to edit against duplicate provider record during enrollment, addition, or change processes	Met through customization of interChange. The Provider Enrollment Identify Information panel logic will be extended to include a field edit that will identify duplicates.
40.5.1.7	Provides capability to image, link, and reference all provider correspondence, enrollment applications, contracts, and supporting documentation to be retrieved by the Fiscal Agent or State-authorized staff	Met through COTS integration. An application program interface (API) call to link to the owning system of the documentation will be part of the Documentum EDMS solution.
40.5.1.8	Provides capability for a provider to select services that will be provided at a practice location or by the provider entity	Met by interChange. The Provider Contract panel meets this functional requirement.
40.5.1.9	Provides capability to capture and maintain demographic information of the LME from which the provider is seeking and/or has received endorsement	Met through customization of interChange. Demographic information for LMEs will be added to interChange provider and provider contract functions.

RFP No.	RFP Requirement	EDS Response
40.5.1.10	Provides capability to capture and maintain Medicare numbers and crossover information	Met by interChange. The Provider Maintenance Service Location panel meets this functional requirement.
40.5.1.11	Provides capability for a provider to access enrollment functions, download enrollment package, recall a saved application, submit, and check the status of an application online	Met by interChange. The Account Logon panel and provider enrollment function meet this functional requirement. Applications must meet minimum data requirements in order to be saved and retrieved later.
40.5.1.12	Provides capability to receive, image, and link hard copy attachments, executed contracts, and signatory documentation to the provider application	Met through COTS integration. The Documentum EDMS tool uses an API call to access documentation.
40.5.1.13	Provides capability to capture and maintain all provider data elements necessary to support the enrollment, credentialing, inquiry, and participation by program	Met by interChange. The Provider Enrollment panel and enrollment processes meet this functional requirement.
40.5.1.14	Provides capability to electronically store multiple historic provider identifiers	Met by interChange. The Provider Maintenance Service Location panel meets this functional requirement.
40.5.1.15	Provides capability to accept and electronically store multiple occurrences of provider demographic information, including e-mail	Met by interChange. The Provider Maintenance Service Location panel meets this functional requirement.
40.5.1.16	Provides capability to capture information on provider billing agents	Met by interChange. The Trading Partner Information panel meets this functional requirement.
40.5.1.17	Provides capability to present customized enrollment application options	Met through customization of interChange, through configuration of interChange parameters and features, and through COTS integration of the K2 workflow engine. interChange allows configuration of provider types, certifications, address types, categories of service (contracts), and others. Specific customization requirements must be determined through RV sessions.
40.5.1.18	Provides capability to edit data during the enrollment process to ensure that all required information is captured based on provider's participation and contractual requirements	Met by interChange. The Provider Enrollment panel and process meets this functional requirement.
40.5.1.19	Provides capability to present enrollment instructions and guidelines for supporting functions by selected enrollment options	Met by interChange. The Provider Enrollment panel and process, iTRACE documentation, and the Provider Portal meet this functional requirement.
40.5.1.20	Provides capability to system-generate application attachments based on required criteria and affirmative responses	Met through customization of interChange and through COTS integration of the K2 workflow engine. The Provider Enrollment panel and the interChange Letter Generator functions meet this functional requirement.
40.5.1.21	Provides capability to identify and enroll providers classified as special, atypical, State-funded, or funded by other assistance programs	Met by interChange. The Provider Enrollment panel and processes and the provider contract functions meet this functional requirement.
40.5.1.22	Provides capability to identify and assign unique	Met by interChange. The provider function accepts NPI and

RFP No.	RFP Requirement	EDS Response
	identifiers to providers	assigned provider numbers. The Provider Enrollment panel and process meet this functional requirement.
40.5.1.23	Provides capability to support a time-limited, abbreviated, or expedited enrollment process that collects a limited amount of information to enroll a provider for a limited period	Met by interChange. The Provider Enrollment panel and processes meet this functional requirement.
40.5.1.24	Provides capability to capture the requestor, sender, and status for all hard copy provider enrollment form requests	Met by interChange. The Provider Enrollment Application Information panel meets this functional requirement.
40.5.1.25	Provides capability to capture all enrollment events	Met by interChange. The Provider Enrollment Application Information panel and application tracking process meet this functional requirement.
40.5.1.26	Provides capability to accept and electronically store electronic funds transfer (EFT) information	Met by interChange. The Provider EFT Account panel and function meet this functional requirement.
40.5.1.27	Provides capability to flag provider records to support operational activities	Met by interChange. The Provider Maintenance Service Location panel and provider review function meet this functional requirement.
40.5.1.28	Provides capability to capture and validate nine-digit (9-digit) zip code to geographic location	Met by interChange. The Provider Location Name Address panel meets this functional requirement.
40.5.1.29	Provides capability to store abandoned or incomplete applications for ninety (90) days	Met by interChange. The Provider Enrollment Application Information panel meets this functional requirement.
40.5.1.30	Provides capability to capture provider eligibility, program eligibility, and participation status codes with associated affiliations, effective dates, and end dates	Met by interChange. The Provider Group panel and provider contract function meet this functional requirement.
40.5.1.31	Provides capability to capture the providers' preference to use electronic submittal of claims, remittance, and/or EFT	Met by interChange. The Provider Maintenance Service Location, Trading Partner Information, and Provider EFT Account panels meet this functional requirement.
40.5.1.32	Provides capability to capture, link, and reference multiple provider affiliations, specialties, and taxonomies, by program, with associated effective and end dates	Met by interChange. The Provider Maintenance Service Location panel and provider contract function meet this functional requirement.
40.5.1.33	Provides capability to capture providers' legal business filing status, including Non-profit, Corporate, State-owned, Federally owned, For Profit, and Tribal-owned	Met by interChange. The Provider Maintenance Service Location panel meets this functional requirement.
40.5.1.34	Provides capability to capture, verify, and cross-reference provider ownership information	Met by interChange. The Provider Maintenance Service Location panel meets this functional requirement.
40.5.1.35	Provides capability to recognize predefined events requiring State determination or intervention	Met through COTS integration. Predefined events are coded as triggers to the K2 workflow engine, directing the process to the next step. We will work with the State to identify the triggers requiring State determination or intervention.

RFP No.	RFP Requirement	EDS Response
40.5.1.36	Provides capability to accommodate NPI and multiple associated taxonomies	Met by interChange. The Provider Identifier panel meets this functional requirement.
40.5.1.37	Provides capability to validate all NPIs	Met by interChange. The Provider Identifier panel meets this functional requirement.
40.5.1.38	Provides capability for option selection for a provider to indicate preference to receive a paper RA	Met by interChange. The Provider Maintenance Service Location panel meets this functional requirement.
40.5.1.39	Provides capability for the system to capture electronic signatures	Met through customization of interChange. We will work with the State to define the legal and technical requirements for meeting this requirement.
40.5.1.40	Provides capability to use workflow functionality to forward a completed application for credentialing/re-credentialing or verification	Met through COTS integration of the K2 workflow engine.
40.5.1.41	Provides capability for batch and/or online real-time access between EIS, Mental Health Eligibility Inquiry, CSDW, Medicaid Quality Control, Online Verification, Automated Collection and Tracking System (ACTS), and Health Information System (HIS) and the Replacement MM IS using API and SOA concepts	Met through customization of interChange. interChange allows access to the system by any authorized user. Custom API and SOA calls must be developed to facilitate online real-time access and batch access as noted in the requirement.
40.5.1.42	Provides capability to send, receive, and update data between DHSR and the Replacement MMIS in support of provider participation for enrollment functionality	Met through COTS integration. The BizTalk integration tool will accept and send enrollment data.

Provider Credentialing Requirements

The following table, EDS Response to Provider Credentialing Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Provider Credentialing Requirements

RFP No.	RFP Requirement	EDS Response
40.5.1.43	Provides capability to conduct provider credentialing and source verification of provider participation criteria and requirements	Met through COTS integration. The GetProof VisionPro software will be used to perform the provider credentialing and source verification of provider participation criteria. An interface between VisionPro and interChange will be created to store long-term results of the provider credentialing.
40.5.1.44	Provides capability for credentialing to include Office of Inspector General (OIG) participation “exclusion” data or capability to receive and employ OIG file interface	Met through COTS integration. VisionPro will be used to perform the provider credentialing. The EDS provider enrollment credentialing process will validate using OIG data to meet the requirement. VisionPro is currently configured for interfacing directly with OIG data.
40.5.1.45	Provides capability for credentialing process to include criminal background checks and query of the North	Met through COTS integration. The GetProof VisionPro software will be used to perform the provider credentialing,

RFP No.	RFP Requirement	EDS Response
	Carolina State Provider Penalty Tracking "exclusions" data	including provider background checks.
40.5.1.46	Provides capability to restrict or eliminate provider billable services if the service requirements are no longer supported (by endorsement, certification, or licensure) with associated begin and end date by service	Met by interChange. The Provider Maintenance Service Location and Provider Contracts panels and function meet this requirement. The associated begin and end dates of a provider's enrollment can be set to enforce the restriction or eliminate provider billable services as required.
40.5.1.47	Provides capability to send and receive electronic communications to support credentialing data verifications	Met through COTS integration. VisionPro will be used to perform the provider credentialing, including provider background checks. VisionPro can send and receive electronic communication to support the credentialing data verification process. Confirmation and results reports can be created to store in the EDMS and link to provider ID.
40.5.1.48	Provides capability to exclude a provider from licensure requirements based on provider type or category	Met through COTS integration. Using the K2 workflow engine, the provider enrollment and credentialing process can be customized based on the provider type and category to exclude a provider from licensure requirements.
40.5.1.49	Provides capability to generate notification to providers of status, changes, enrollment, termination, credentialing, re-verification, penalties, and termination	Met by interChange and through COTS integration of DOC1. The Provider Change Notification Letter meets this functional requirement.
40.5.1.50	Provides capability to capture and electronically store critical credentialing data missing from current Legacy MMIS+ to support licensure, credentialing, and verification processes	Met by interChange, with a portion of the requirement requiring customization code. The provider subsystem contains data elements to support licensure, credentialing, and verification. Custom data elements will be added where interChange does not contain the equivalent data element.
40.5.1.51	Provides capability to share licensure, endorsement, and accreditation information with issuing agencies, authorized State entities, and users	Met by interChange. The Provider Maintenance Service Location panel meets this functional requirement.
40.5.1.52	Provides capability to send notification to a provider of impending renewal	Met by configuration of interChange parameters and features. The Letter Generator feature meets this requirement.
40.5.1.53	Provides capability to send notification to providers who failed to respond to renewal information requests	Met by configuration of interChange parameters and features. The Letter Generator meets this requirement.
40.5.1.54	Provides capability to send, receive, and update data between DHSR and the Replacement MM IS in support of provider credentialing functionality	Met through COTS integration. The BizTalk integration tool will send and receive data between interChange and external sources.

Provider Maintenance Requirements

The following table, EDS Response to Provider Maintenance Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Provider Maintenance Requirements

RFP No.	RFP Requirement	EDS Response
40.5.1.55	Provides capability to present to the provider selected data for verification and update	Met by interChange. The Provider Enrollment panel and process meet this functional requirement.
40.5.1.56	Provides capability to support different business rule definitions by program and services to be provided	Met by interChange. The Provider Program Eligibility and Provider Contracts panels and process meet this functional requirement.
40.5.1.57	Provides capability to make State-approved forms available online	Met through configuration of interChange parameters and features. The Publications Search panel features the ability to search for publications for download.
40.5.1.58	Provides capability to process online requests for generation and distribution of provider contracts	Met through customization of interChange. We will work with the State to define these requirements and the technical solution.
40.5.1.59	Provides capability to accept and process online requests for additions and changes to the provider data	Met by interChange. The Demographic Maintenance panel and process meet this functional requirement.
40.5.1.60	Provides capability to capture, identify, and report suspected duplicate provider identification numbers and applicable expiration dates	Met by interChange and operational processes and procedures. The system will not allow duplicate primary IDs. Using a combination of the K2 workflow engine criteria and interChange rules, duplicate secondary numbers such as a license number or employer ID can be identified.
40.5.1.61	Provides capability to capture, update, and maintain Clinical Laboratory Improvement Amendments (CLIA) information for providers	Met by interChange. The CLIA panel and process meet this functional requirement.
40.5.1.62	Provides capability to track, identify, and provide notification the status of licenses, certifications, endorsements, and State-defined participation requirements or criteria	Met by interChange. The Provider Reports and Letters — Letters panel and process meet this functional requirement.
40.5.1.63	Provides capability to systematically suspend and notify providers who do not meet enrollment or participation criteria	Met through customization of interChange. The K2 workflow engine triggers will prompt action, such as provider letters requesting information for continued enrollment.
40.5.1.64	Provides capability to cross-reference all provider identifiers that correspond to the providers' tax identification/reporting number	Met by interChange. The Provider Maintenance Service Location panel and process meet this functional requirement.
40.5.1.65	Provides capability for online access of providers to training materials, training registrations, and tracking, including audit history of all provider trainings	Met by operational processes and procedures.
40.5.1.66	Provides capability to generate on-demand reports with date span parameters for provider data	Met by interChange. The Provider Reports and Letters — Reports panel and process meet this functional requirement.
40.5.1.67	Provides capability to enter and maintain tax and financial information, including budget codes for accessing State funds	Met by interChange. The FIN Budget Information panel and process meet this functional requirement.

RFP No.	RFP Requirement	EDS Response
40.5.1.68	Provides capability to capture data regarding agency-specific provider incentives, sanctions, withholds, and review processes by issuing agency with beginning and end dates	Met by interChange. The provider subsystem data tables contain the data elements necessary to capture this data.
40.5.1.69	Provides capability to capture the providers who participate in the Competitive Acquisition Program with begin and end dates by program	Met by interChange. The Provider Program Eligibility panel and process meet this functional requirement.
40.5.1.70	Provides capability to suspend, sanction, or terminate providers	Met by interChange. The Provider Program Eligibility panel and process meet this functional requirement.
40.5.1.71	Provides capability to identify and report on out-of-state provider claims denied for non-enrollment	Met by interChange. The daily Exception Summary By Claim Type report meets this functional requirement.
40.5.1.72	Provides capability to maintain 1099 and associated payment summary data	Met by interChange. The Financial 1099 Detail Information panel and process meet this functional requirement.
40.5.1.73	Provides capability to identify and reference ownership across multiple occurrences and entities	Met by interChange. The Provider Owner panel and process meet this functional requirement.
40.5.1.74	Provides capability to generate provider notifications of licensure, certification, accreditation, and endorsement renewals or expirations and monitor all response activity	Met by interChange. The Provider Reports and Letters panel and process meet this functional requirement.
40.5.1.75	Provides capability for providers to enter requested updates to data and identify instances that require operational review	Met by interChange. The Provider Enrollment panel and process meet this functional requirement.
40.5.1.76	Provides capability to identify to the State those providers with issues under review, giving the State equal access to work queue and documents to support the business decision process	Met by interChange. The Provider Review panel and process meet this functional requirement.
40.5.1.77	Provides capability to identify providers for whom mail has been returned and suppress all printing and claims activity	Met by operational processes and procedures.
40.5.1.78	Provides capability to place the provider on pre-payment, post-payment, payment review, compliance payment withholds, and denial as directed by the State	Met by interChange. The Provider Review panel and process meet this functional requirement.
40.5.1.79	Provides capability to leverage electronic listserv technology to allow providers to register for notifications and facilitate communications	Met through COTS integration of the ListServ tool.
40.5.1.80	Provides capability for online access by State-authorized users to view and update information on sanctioned providers by LOB	Met by interChange. The Provider Maintenance Service Location panel and process meet this functional requirement.
40.5.1.81	Provides capability to perform manual and automated updates to provider data	Met by interChange. The Provider Maintenance Service Location and other provider function panels and processes meet this functional requirement.

RFP No.	RFP Requirement	EDS Response
40.5.1.82	Provides capability for online real-time access to Provider data using API and SOA concepts between EIS and the Replacement MMIS	Met through customization of interChange. interChange allows access to the system by any authorized user. Custom API and SOA calls must be developed to facilitate online real-time access and batch access.
40.5.1.83	Provides capability for a daily provider table extract	Met through customization of interChange. A batch job will be created to produce a provider extract file.
40.5.1.84	Provides capability for online, real-time responses to EIS and DIRM applications for all provider data processing transactions	Met by interChange. The Provider Application Base Edit panel and process meet this functional requirement.
40.5.1.85	Provides capability to send, receive, and update data between DHSR and the Replacement MMIS in support of provider maintenance functionality	Met through COTS integration. The BizTalk integration tool will send and receive data between interChange and external sources.

Provider Training Requirements

The following table, EDS Response to Provider Training Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Provider Training Requirements

RFP No.	RFP Requirement	EDS Response
40.5.1.86	Provides capability for online automated provider training and related documentation access	Met through COTS integration. Documentum is a repository for content, accessed through API or Web services in the portal, CTMS, interChange, or native interface.
40.5.1.87	Provides capability to capture and maintain provider-written, verbal, or electronic correspondence requesting an on-site visit or training	Met through configuration of interChange parameters and features. The CTMS Base Edit panel meets this requirement using configured source, contact method, and reason codes.
40.5.1.88	Provides capability for automated workflow functionalities to process call center and provider training requests and educational monitoring activities	Met through COTS integration of the K2 workflow engine.
40.5.1.89	Provides capability for an online provider training tutorial that can be tailored by selection to facilitate training in a variety of subject matters	Met through configuration of interChange parameters and features. The Provider Web Portal training materials will be configured to provide training on the designated subjects.
40.5.1.90	Provides capability to image, maintain, and make accessible all (current and historic) course instructional materials	Met by interChange. These objects can be accessed in iTRACE using a browser page.
40.5.1.91	Provides capability to image instructional materials, training evaluations, and other correspondence linked to a site visit to the provider record	Met through COTS integration. Documentum is a repository for content, accessed through API or Web services in the portal, CTMS, interChange, or native interface.
40.5.1.92	Provides capability to track and report on provider requested visits	Met through configuration of interChange parameters and features. The CTMS Base Edit panel and process meet this

RFP No.	RFP Requirement	EDS Response
		requirement using configuration of source and reason codes.
40.5.1.93	Provides capability for online and on-site training evaluation questionnaires for providers to complete	Met through COTS integration of the EZSurvey tool.
40.5.1.94	Provides capability to develop a State-approved training evaluation process	Met by operational processes and procedures.
40.5.1.95	Provides capability to maintain and submit to the State provider training sessions participants	Met by operational processes and procedures.
40.5.1.96	Provides capability to identify providers with a claims denial rates of twenty (20) percent or higher	Met by interChange. The MAR Provider Error panel meets this functional requirement.
40.5.1.97	Provides capability to maintain State-approved instructional materials for viewing and retrieval	Met by operational processes and procedures.
40.5.1.98	Provides capability for initial and updated State-approved Provider Basic Training Tutorials to be available through Web access	Met through configuration of interChange parameters and features. The Publications Search page features the ability to search for publications for download.

Secure, Browser-Based, Web-Enabled Capability Requirements

The following table, EDS Response to Secure, Browser-Based, Web-Enabled Capability Requirements, describes how we will meet the RFP requirements.

EDS Response to Secure, Browser-Based, Web-Enabled Capability Requirements

RFP No.	RFP Requirement	EDS Response
40.5.1.99	Provides capability to record, track, and report on provider and recipient communication	Met through customization of interChange. A new report, either online or batch, is required to provide reporting on provider and recipient communication.
40.5.1.100	Provides capability to make provider contact data accessible and retrievable	Met by interChange. The Provider Maintenance Service Location panel and process meet this requirement.
40.5.1.101	Provides capability to report on queries for call-related data	Met through customization of interChange. A new report is required to provide reporting of call-related data.
40.5.1.102	Provides capability for communication tracking business area to interface with other MMIS functional areas	Met by interChange. The CTMS Contact Tracking Sub Menu panel meets this functional requirement.
40.5.1.103	Provides capability for individual access to query tools	Met by interChange. The Provider Search panel meets this functional requirement.
40.5.1.104	Provides capability to auto-populate Replacement MMIS provider data into the Web-based provider enrollment and maintenance functions	Met by interChange. The provider subsystem function prepopulates data as available.

40.6.1 Reference System Requirements

The reference subsystem of the Replacement MMIS will serve as the repository for reference codes, pricing conditions, benefit packages, and edit and audit parameters. Our solution allows for a high degree of flexibility with minimum effort and expense, allowing the State to efficiently and cost-effectively accommodate future changes and new benefit packages.

State of North Carolina

Claims adjudication is like a well-conducted orchestra with each function playing a distinct but critical role—for example, recipient eligibility from the recipient function and provider type and specialty from the provider function. The reference system can be thought of as the conductor in this orchestra, coordinating the edits, audits, pricing agreements, and overall benefit plan rules that apply for any given claim. Making this critical business function easy to navigate and highly configurable, yet capable of producing the data required for accurate, real-time claims processing, is the enormous business challenge interChange meets.

The interChange reference system maintains critical information in the following logical groupings:

- Benefit Administration
- Diagnosis/Procedure Codes, including the following:
  - Diagnosis codes
  - National Drug Codes (NDCs)
  - ICD-9 clinical modification (CM) procedure codes
  - Modifiers
  - Procedure codes
  - Revenue codes
  - Edit and audit criteria/disposition

Since 1995, EDS has been evolving and enhancing the interChange reference system to allow authorized business users to configure the reference file, reducing the need for technical resource support. Powered by interChange, authorized reference business users can create and maintain edit/audit disposition, audit criteria, pricing, code set relationships such as procedure code to place of service, and virtually all other reference file updates, without technical assistance.

Inquiry and update access to this information is provided through the interChange browser interface. Easy access to the tables accommodates pricing or policy changes, providing rapid response to the dynamics of state and federal medical policy.

From establishing benefit plans to developing new benefit limitation audits, users of the Replacement MMIS will be given the following:

- **Configurable, table-driven design—**interChange provides the ability for authorized staff members to easily establish benefit plans or new programs by defining what procedure codes will be covered, what edits and audits will be applied, and what price will be in effect for a specific plan—without programming changes.
- **Multi-payer/program processing—**interChange supports multiple payer groups and service delivery models. Each program can have its own eligibility criteria, provider network, reimbursement methodology and rules, medical policy, and benefit structure, yet receive the same benefits of a shared system and operational environment.

In the following sections, we discuss three critical features of the interChange reference business function that meet the Replacement MMIS requirements:

- Benefit Administration
- Code Set Maintenance
- Edit/Audit Maintenance

Benefit Administration

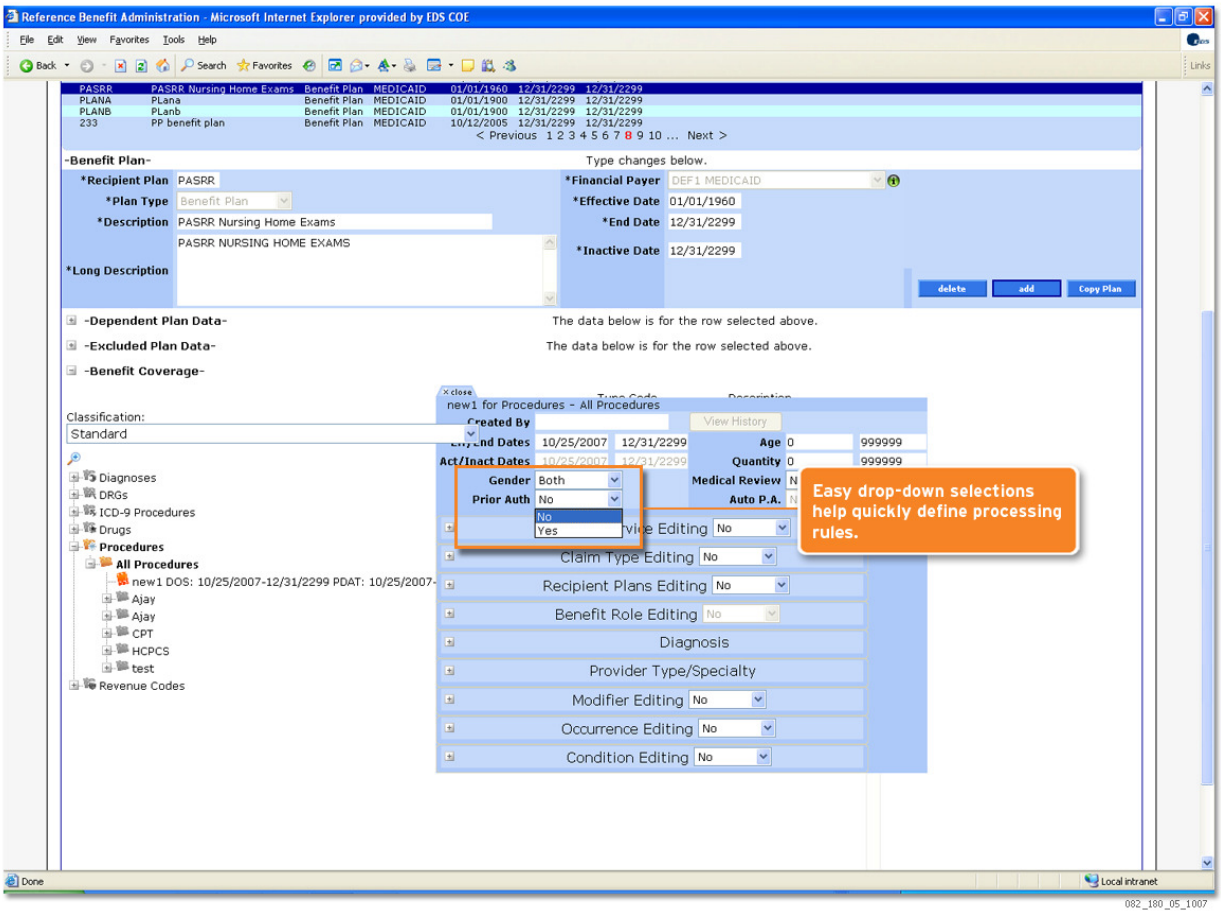
Claims adjudication begins with validating the claim against established benefit plan rules stored in the benefit administration (BA) component of the reference system. Through BA, authorized users can maintain and view the following:

- **Benefit Classification**—Defines the various classifications of benefits, with like codes grouped under classifications to ease plan development
- **Benefit Plan—**Defines the payer and covered services for specific benefit plans
- **Financial Payer**—Defines the organization responsible for funding the plan
- **Provider Contract**—Determines which types of providers can bill for and get reimbursed under a specific plan
- **Other Insurance**—Defines the types of other insurance a recipient can have and still be covered under a specific benefit plan
- **Reimbursement Agreement**—Determines how a service billed under the plan will be reimbursed
- **Rule Catalog—**Provides a quick reference to the rules maintained through benefit plan administration (BPA)
- **Plan Hierarchy—**Defines the order of plans for adjudication when a recipient is covered by multiple plans for a single date or service

Benefit Plans

As demonstrated in the following exhibit, Benefit Plan Configuration, users can configure numerous coverage rules for a benefit plan, such as whether a procedure code requires prior approval for a certain benefit plan or if a code is covered under a particular place of service for a benefit plan.

Benefit Plan Configuration



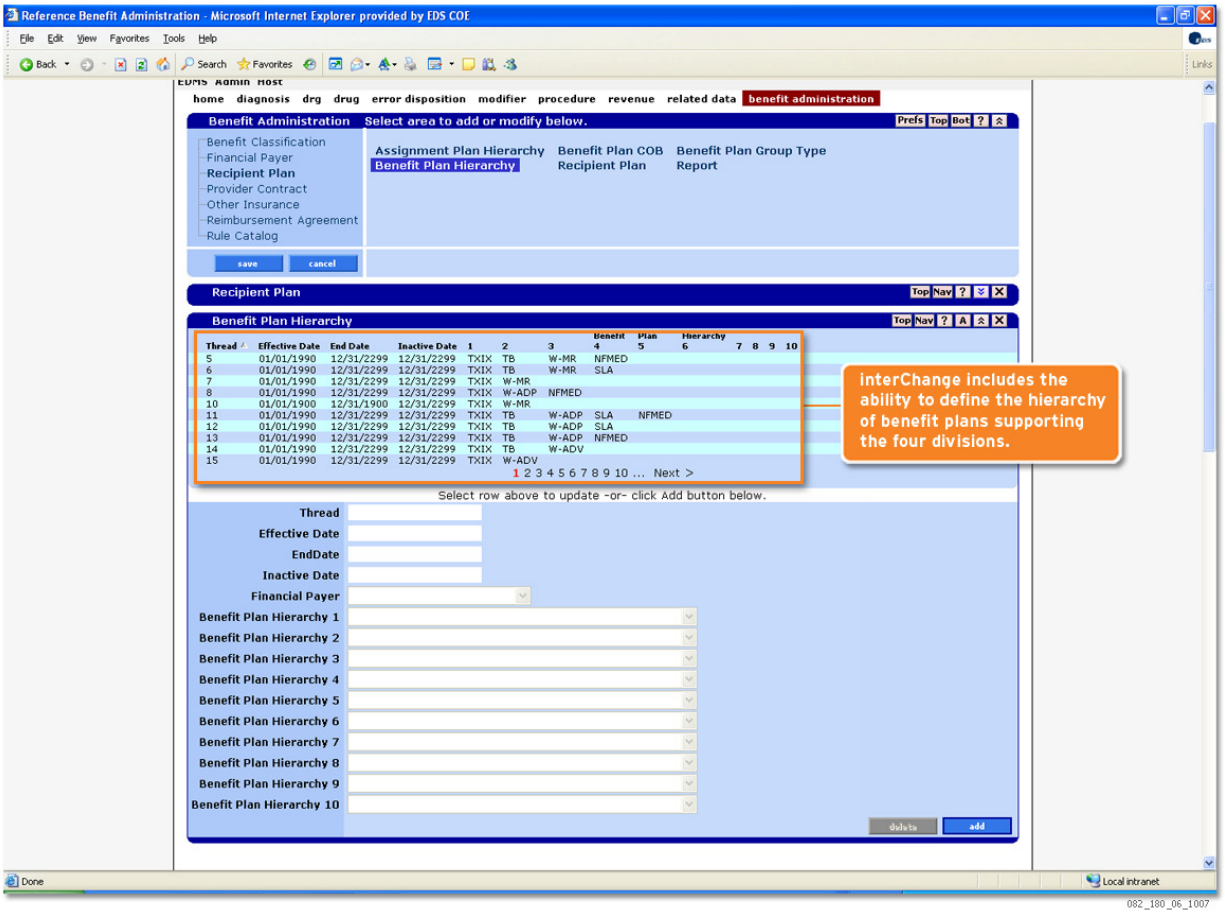
User-configured benefit plan rules are the first driver within the reference function to determine if a service is covered for a recipient.

User-configured benefit plan rules are accessed during claims adjudication to determine if the billed service is covered under the recipients assigned benefit plan.

Another key component of benefit plan administration is determining the hierarchy for multiple, overlapping plans. This is especially critical in the multi-payer environment the State requires. Recipients can be enrolled in multiple benefit plans at the same time. When this occurs, the system must be able to identify which plan takes precedence during processing. When the system can automatically determine that Medicaid—not a State-funded program—is the

appropriate first payer, the State accurately shares cost responsibility with the federal government. This is demonstrated in the following exhibit, Benefit Plan Hierarchy Panel.

Benefit Plan Hierarchy Panel

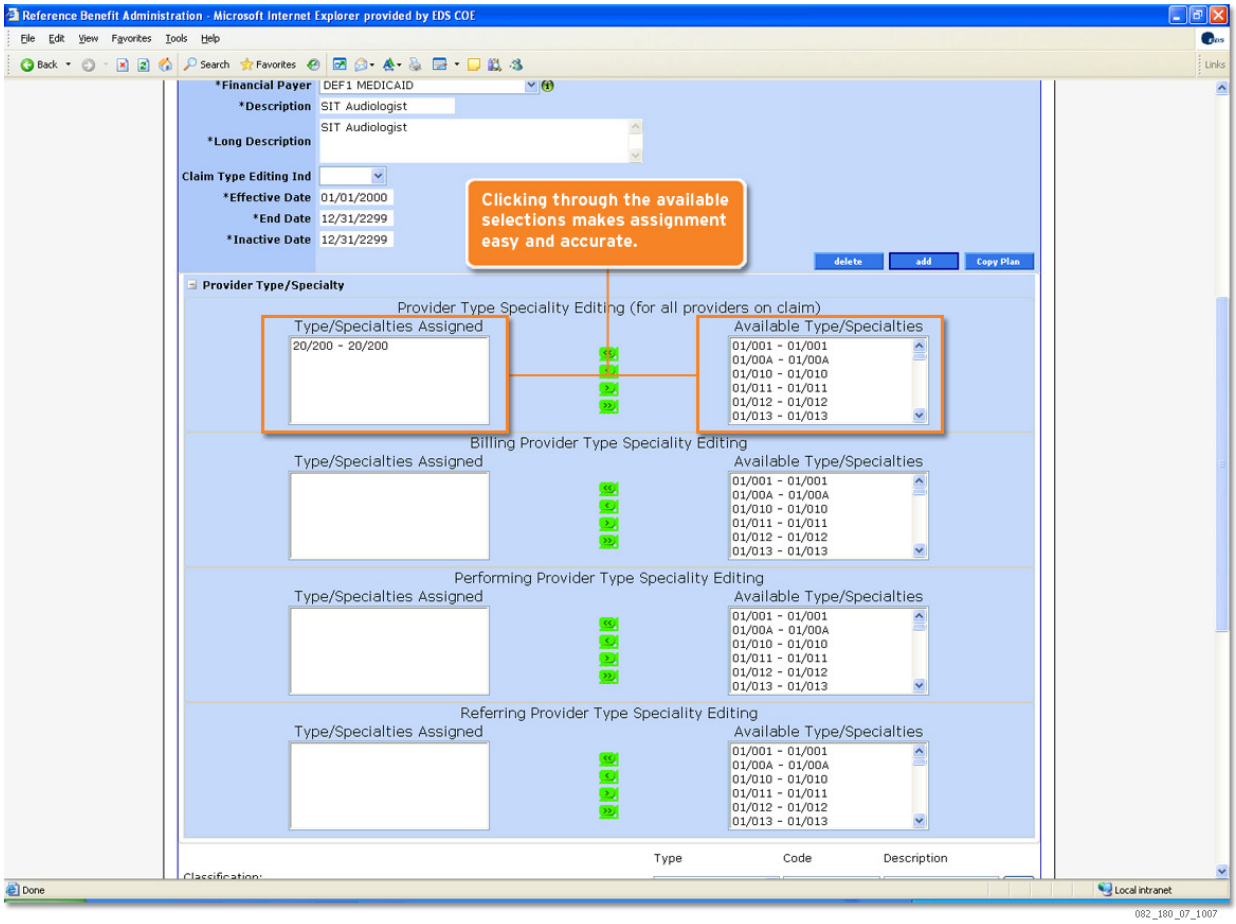


Through the Benefit Plan Hierarchy panel, users configure the order in which benefit plan coverage will be applied if the recipient has multiple overlapping eligibility segments.

Provider Contracts

The interChange reference function also allows users to configure the various provider contracts in effect within the Replacement MMIS. Even if a billed service is covered under a recipient's benefit plan, the provider must still be eligible to bill that service. Provider contracts allow users to configure the exact procedures, diagnosis, revenue codes, and other values for which providers assigned to that contract are eligible to receive reimbursement. As shown in the following exhibit, Provider Contracts, users configure a contract for provider type/specialty 20/200 that is configured as audiologist. This means that this contract can only be assigned to that particular type and specialty.

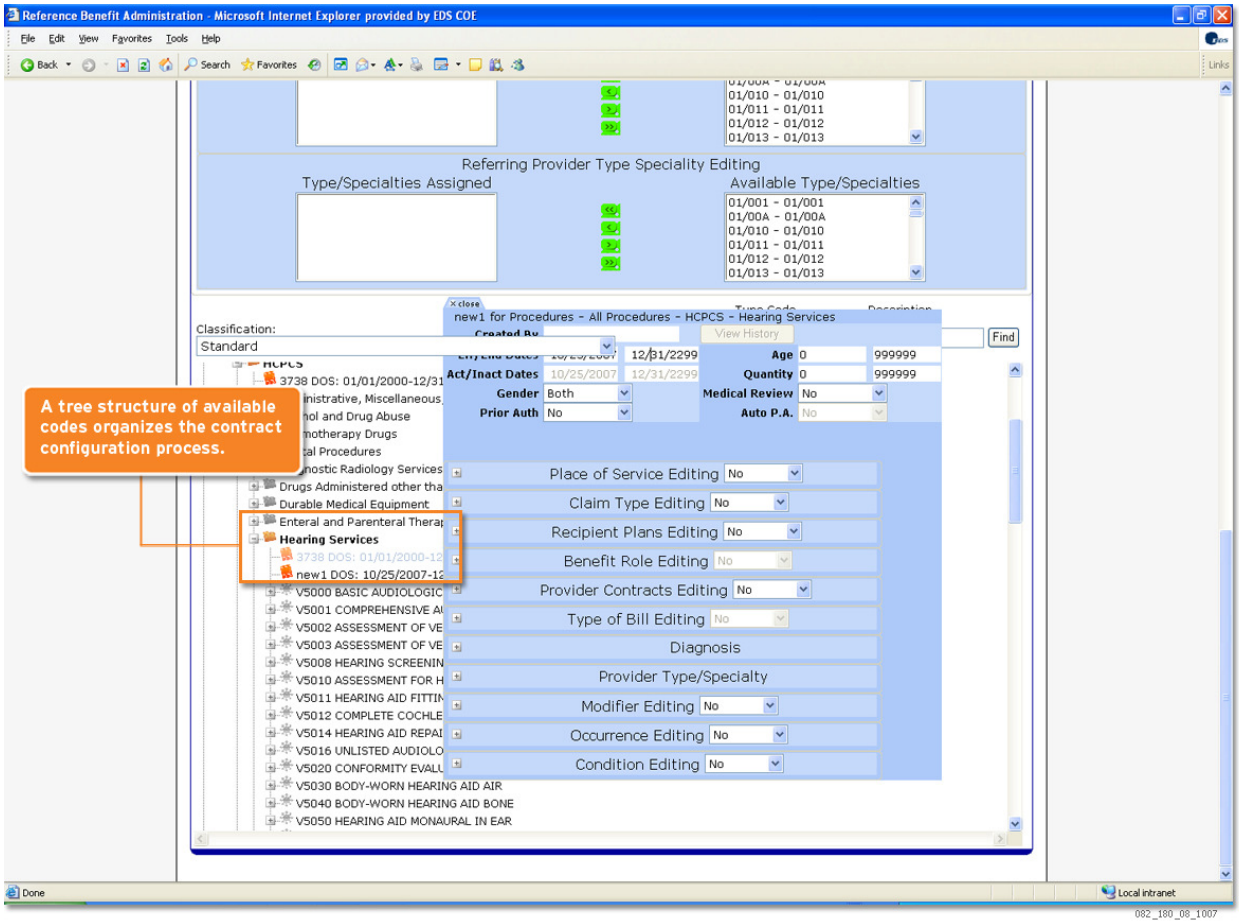
Provider Contracts



Provider contracts allow users to define the provider types/specialties and services for which a provider is eligible to receive reimbursement.

After users configure the types and specialties eligible for a contract, they can further define the services covered by this contract, as shown in the following exhibit, Provider Contract Configuration.

Provider Contract Configuration



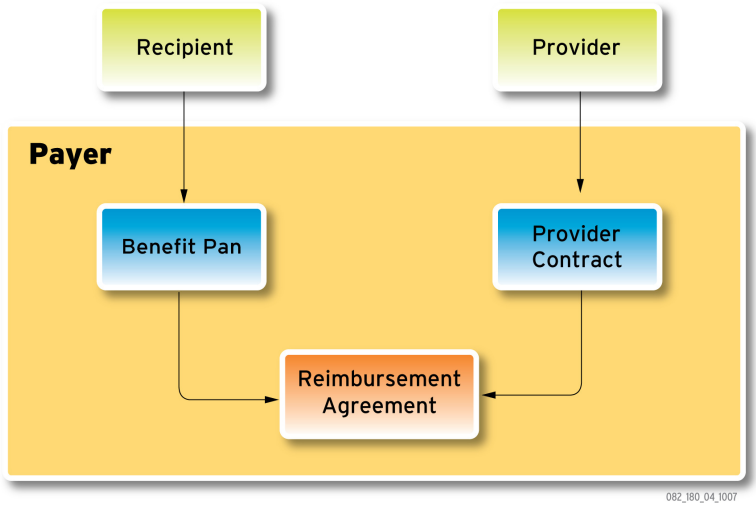
Provider Contract Rules configuration allows users to denote which services are eligible for reimbursement under a specific provider contract.

After establishing a contract for audiologists, users denote that hearing services are covered under this provider contract. When a claim is received for an audiologist under this contract, the service billed must be covered under the contract in order to be eligible for reimbursement.

Reimbursement Agreements

After users have configured benefit plans, denoting services for which a recipient is eligible, and provider contracts, denoting for which services a provider may bill, the next step is to create reimbursement agreements. As demonstrated in the following exhibit, Reimbursement Agreements, these indicate how a claim is to be priced based on the recipient's benefit plan and the provider's contract.

Reimbursement Agreements

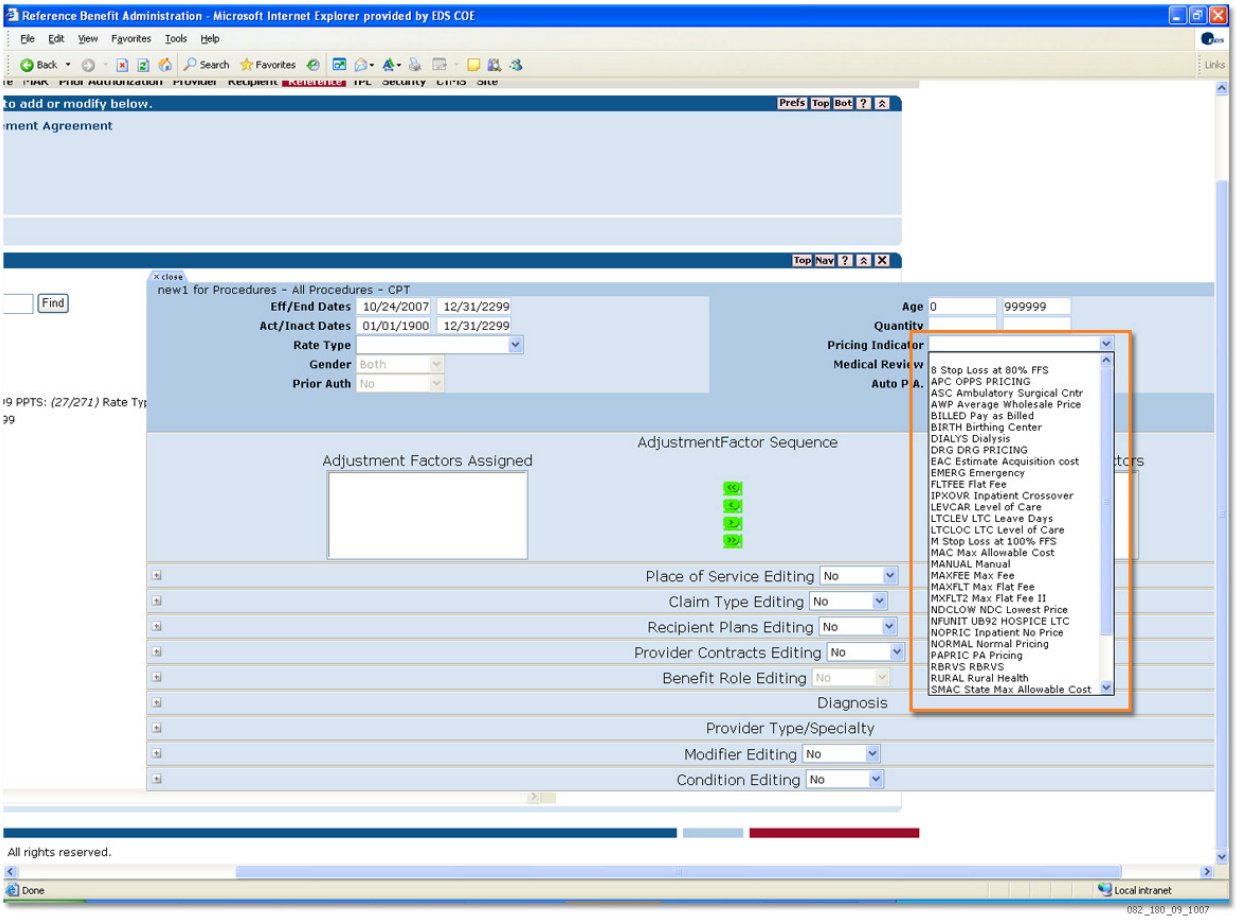


Reimbursement agreements tie together the benefit plan and provider contract billed on a claim and other configurable criteria to determine how the claim should be priced.

Using high degrees of specificity, the interChange reference functions allow users to configure the pricing methodology to be used for a claim based on various criteria including the benefit plan and contract. With interChange, various combinations of claim criteria can result in different pricing methods, even for the same procedure code. For example, users can configure an office visit under Mental Health to pay using Max Fee, but the same codes could be reimbursed using a resource-based relative value scale (RBRVS) when the service is billed under Medicaid.

The following exhibit, Reimbursement Agreement Rule Configuration, shows the various criteria users can configure to determine the appropriate pricing methodology on a claim.

Reimbursement Agreement Rule Configuration



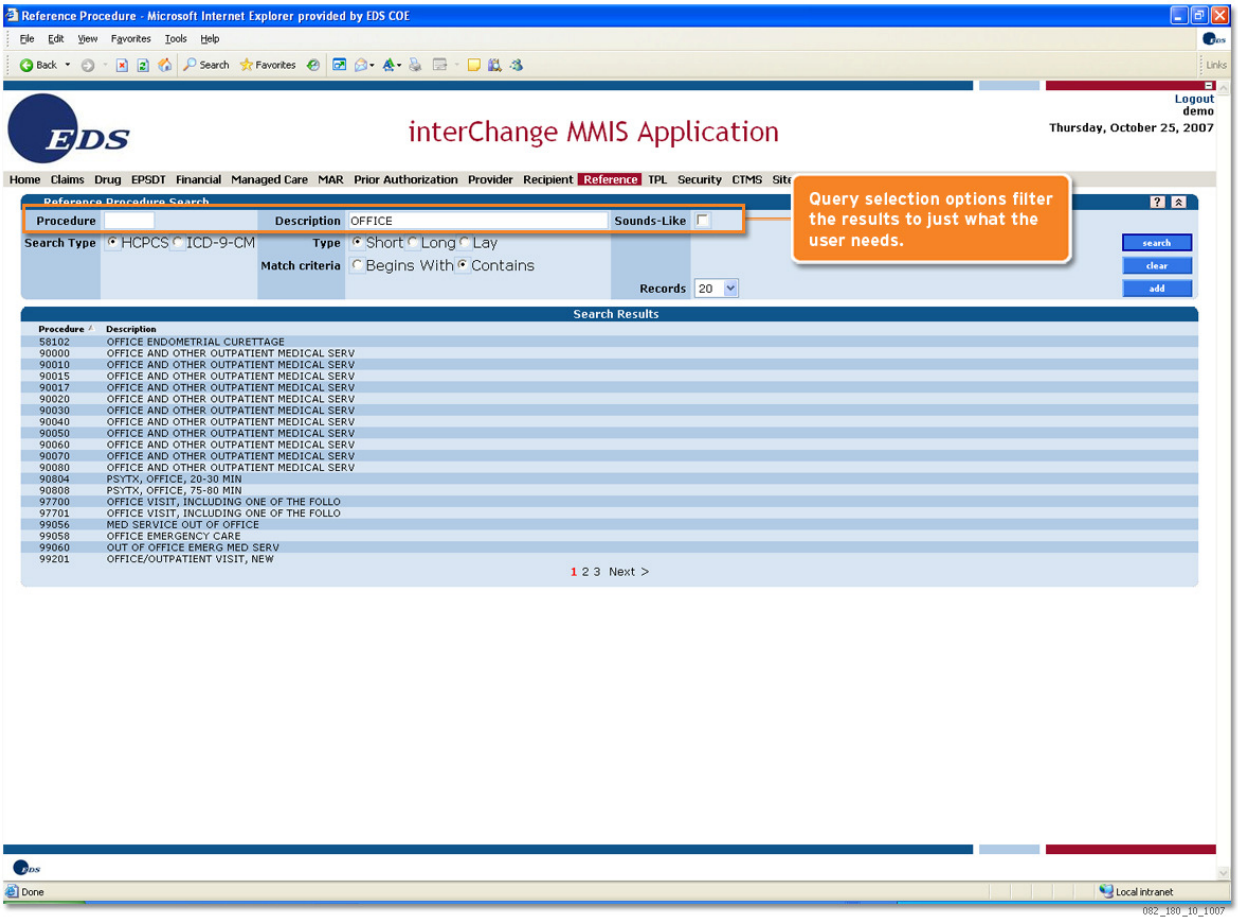
Authorized users are able to configure the exact pricing methodology for a claim based on numerous criteria, including benefit plan, provider contract, place of service, and diagnosis.

Users also can configure adjustment factors under a reimbursement agreement, which indicate the pricing methodology and additional incentive or cutback to the amount allowed based on the claim data. This is useful in situations where the State wishes to increase access in rural areas. Provider contracts can be established for those areas such that providers are paid RBRVS plus an additional 10 percent.

Code Set Maintenance

The BA plan allows for configuration of those services for which a recipient is eligible and a provider may bill, and how the claim should be priced. It pulls together information maintained in the various code sets reference tables—procedure, diagnosis, revenue, and drug—that allow users to build these plans. Additional information required to accurately process claims is viewed and maintained through links to the particular code set. The following exhibit, Code Set Search Capability, provides an example of a search criteria panel for the procedure code set, with similar search panels existing for the other sets.

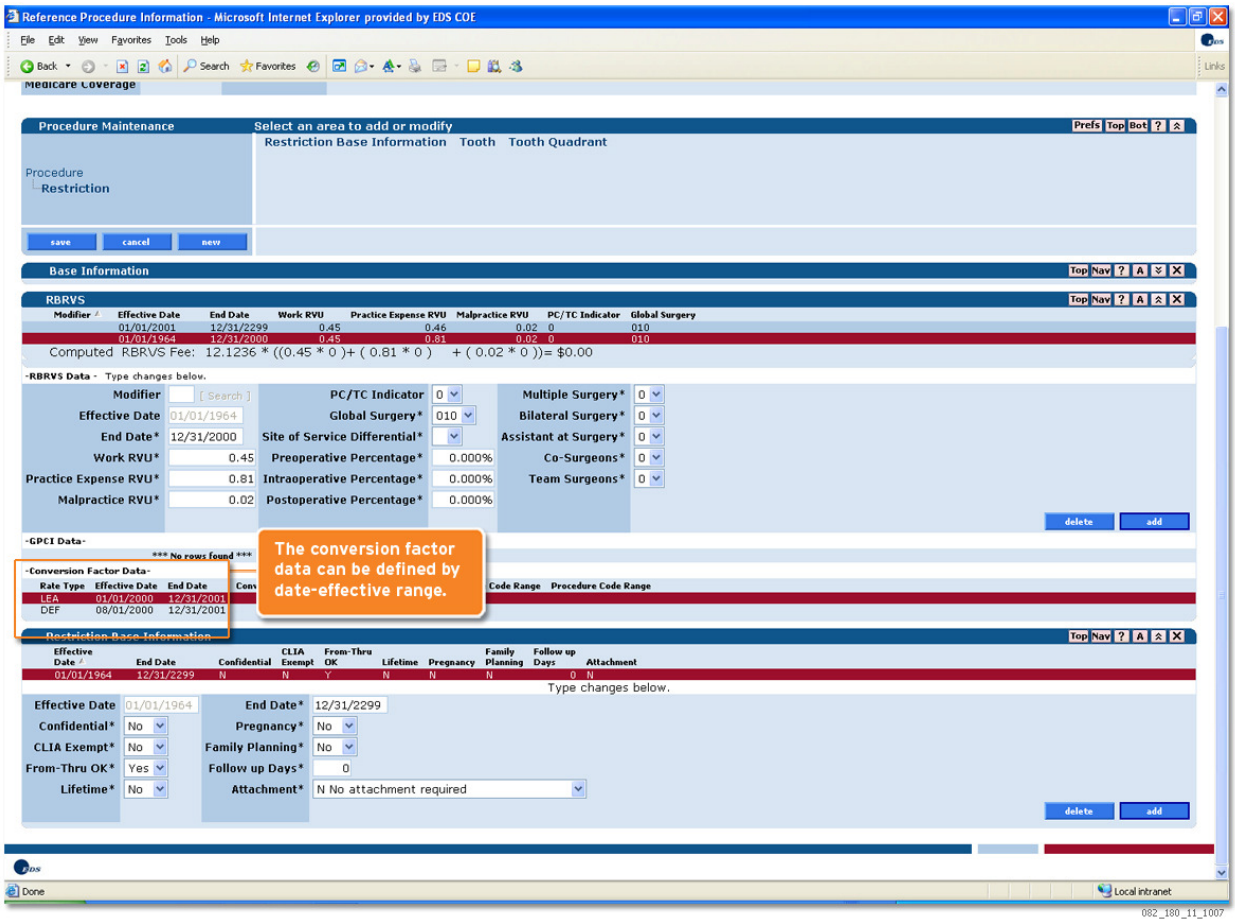
Code Set Search Capability



Users can search by code or description, including SOUNDEX search capability, to locate the appropriate code.

By simply clicking on the desired code, users are navigated to the code information, as shown in the following exhibit, Procedure Code Information.

Procedure Code Information



Code set information is easily maintained and viewed within interChange, allowing users to quickly access the desired code and information.

The code set information maintains additional information about the code required during claims processing. For example, the panel displays the pricing rates for this particular code when it is priced using the RBRVS methodology. Additionally, restrictions for this code, such as identifying it as a once-in-a-lifetime procedure, also are maintained in the code set information. Restriction information is accessed during claims editing and auditing.

Information is date-segmented for accurate claims processing. For example, pricing on procedure codes is maintained with effective and end dates. Each time a claim is processed, the date of service is compared to the date-segmented information on the appropriate procedure code pricing table based on the appropriate configured pricing methodology, and the correct segment is used for claim pricing.

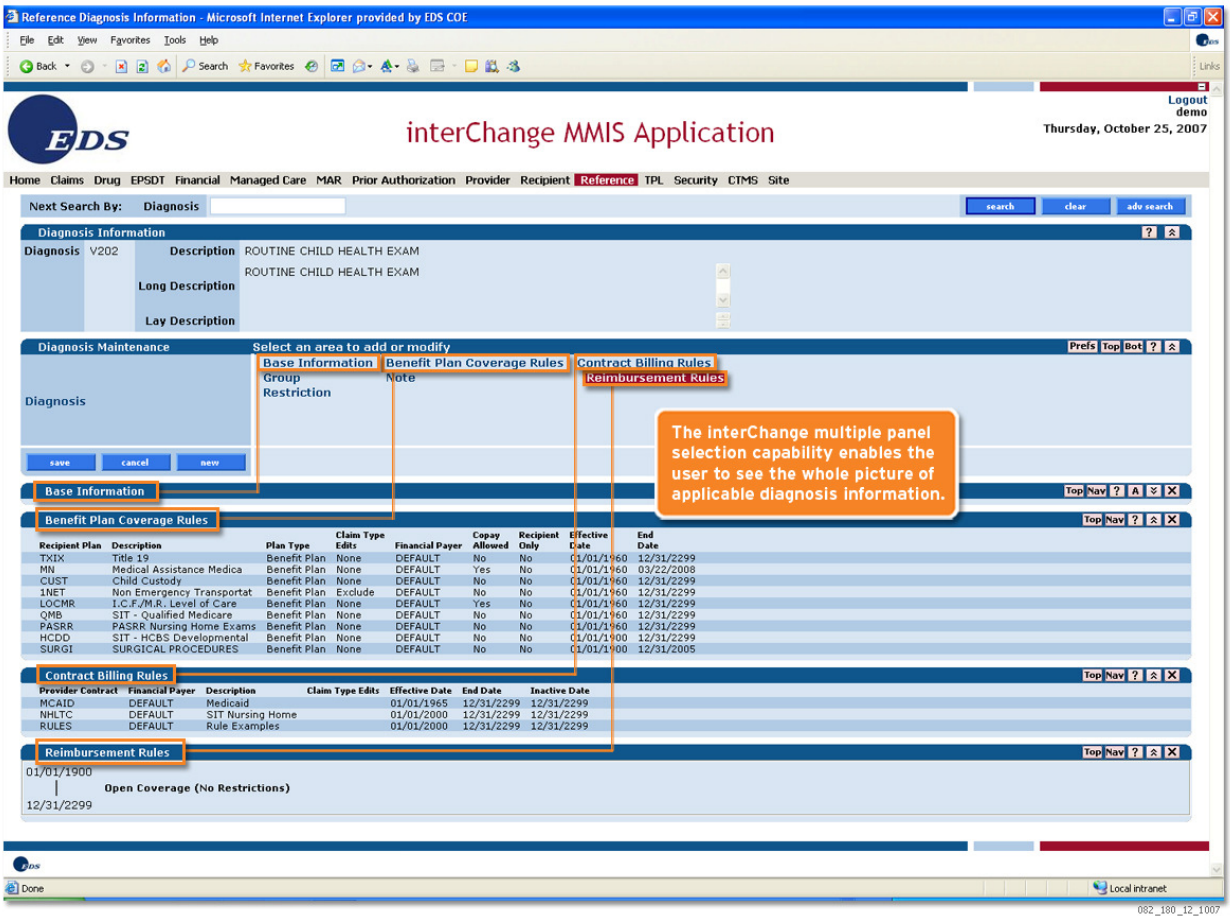
The reference database can handle an unlimited number of date-specific historical segments of coverage and pricing for each procedure code, procedure code or modifier combination, revenue code, drug code, and other areas. Reference history

is built by adding informational segments to the reference codes. To preserve data integrity, online deletions are not allowed on the reference files. Codes, pricing, and other date-sensitive items are end-dated, rather than deleted, allowing the history of the data to remain in the reference database indefinitely for claims processing and online research. Date-specific information is maintained in the database and viewable online indefinitely.

Integrity within the reference functions is critical to program integrity. Audit trail information is available by looking up a procedure, revenue, diagnosis, or other reference component code. Audit trails maintain the date/time of the update, an image of the data before the update, and the user that made the change.

Users also can view the applicable provider contract, benefit plan coverage, and reimbursement agreements for a given code through the code set panels. For example, the following exhibit, Cross-Reference to Benefit Plan, Provider Contract, and Reimbursement Agreements, shows the benefit plans and provider contracts that cover diagnosis code V20.2.

Cross-Reference to Benefit Plan, Provider Contract, and Reimbursement Agreements



Code set information is cross-referenced to BA to provide a complete view of coverage.

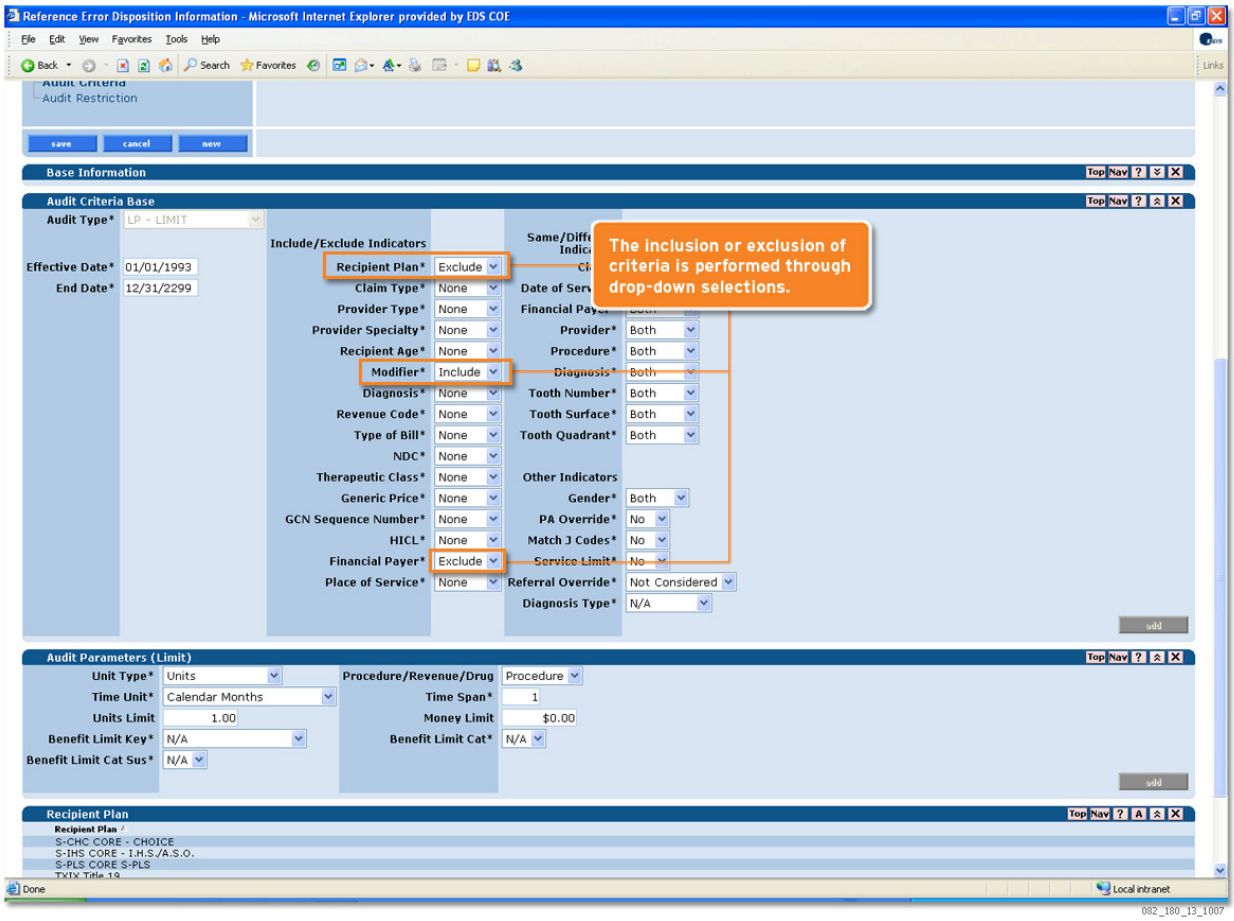
Using interChange, the Replacement MMIS reference function will maintain the required information for a particular code set from effective dates to pricing rates. This information will be cross-referenced to the information maintained in the BA function and accessed during claims processing for accurate adjudication.

Edit/Audit Maintenance

The information maintained in the BA function or the individual code sets is accessed during the editing and auditing process. For example, the once-in-a-lifetime audit accesses the procedure code information to determine if a procedure is listed as once-in-a-lifetime and audits the claim appropriately. Edits that deny services based on covered services access the information in the benefit plan or provider contracts to determine if the recipient or provider is eligible.

Authorized users establish new audits, update audit criteria, and maintain edit/audit disposition criteria through the online browsers. The following exhibit, Audit Criteria, shows the criteria available for inclusion or exclusion on an audit.

Audit Criteria



Authorized users can configure the criteria to be included or excluded in a particular audit.

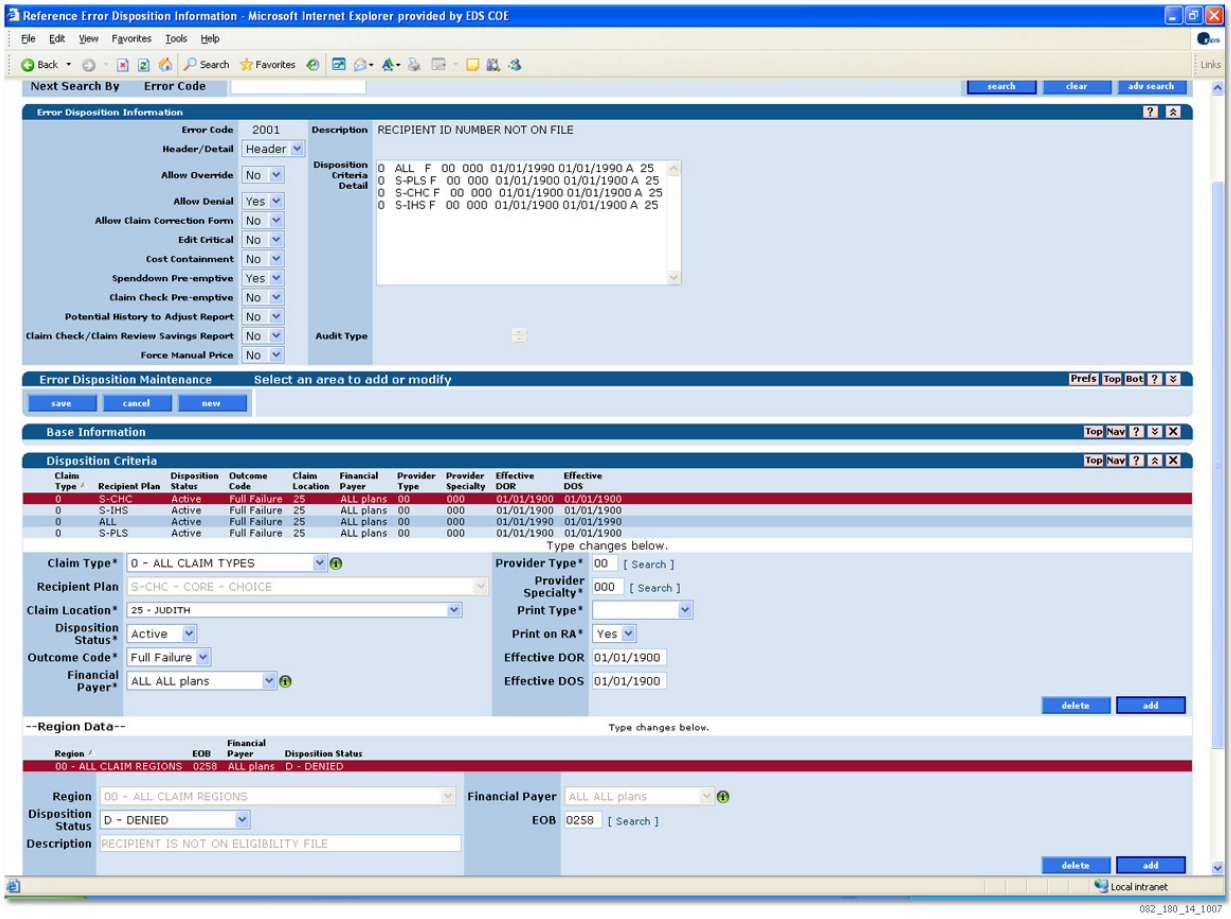
As seen in the previous panel, audits can be configured based on several criteria, including the recipient plan. In this example, the recipient plan is set to "exclude." When a recipient plan is excluded, claims processed for excluded plans are not counted toward the audit limitation. After criteria are set for include or exclude, users configure the appropriate information. In this example, the recipient plans to be excluded from the audit are shown in the Recipient Plan subpanel.

This panel also shows the audit parameters. A user can configure the specific parameters of this audit using this feature. An example of a parameter is the number of units.

Updates to the audit parameters and criteria are done using a point-and-click feature, eliminating technical intervention and making the Replacement MMIS highly responsive to a changing healthcare environment.

Equally configurable is the disposition criteria applied when an edit or audit is triggered. As shown in the following exhibit, Disposition Criteria, users can specify if an edit or audit (in this example, a recipient ID not on file), should deny or suspend based on a number of criteria, including the benefit plan of the claim, the provider type and specialty, and how the claim was submitted—electronic, paper, paper with attachments, as an adjustment, through the Internet, or through POS.

Disposition Criteria



Users configure the action the system will take when an edit or audit is triggered.

The reference function will orchestrate the information required for accurate claims processing, whether that information is maintained under BA, code sets, or edits and audits. Updates are applied in real time, without the need for technical resources. This means that the State can focus its resources and time on the right policy development, knowing the Replacement MMIS powered by interChange can quickly handle the resulting changes.

Approach to Customization and Modifications

The Replacement MMIS is a user-definable, rules-based, table-driven system that allows authorized users to add or change processing in real time as business needs require without programmer or system analyst assistance.

interChange was designed to put power into the hands of the trained users and reduce the need for hard-coding, thereby minimizing technical intervention. The approach to customization and modifications is for analysts to use the panels to configure the application with the specific State reference values during the DDI process. At the heart of interChange processing engines is a series of user-

configured tables. These tables provide the rules that the system needs to accurately process transactions as they are received.

For any MMIS implementation, the task of translating the legacy reference data into the interChange reference data should not be underestimated. Policy and reference experts from EDS and the State will need to work together to translate and develop the conversion and translation rules needed to populate the reference data in the Replacement MMIS. The EDS team will use our policy transition business practices to guide the process of collecting the policy from the existing disparate systems and configuring interChange with the required policy. The ability to use these proven DDI process is one of the most important aspects of the implementation. The critical success of the multi-payer project is directly dependent on the policy configuration. EDS has successfully transitioned policy into interChange over the past five years.

Enhancements to Functional Requirements

While the interChange reference function meets the majority of the Replacement MMIS requirements for the reference system, EDS has identified the following enhancements for implementation in North Carolina:

- Reconciliation to the diagnosis update tape
- Reformatting of automated files
- End date reporting
- Additional search criteria
- Edit manual cross-referencing
- Additional audit trail data elements
- Ability to accept non-FDB drug file updates
- Additional edit disposition criteria
- State-specific interfaces, reporting, and extracts

Response to Reference System Requirements

The following table, EDS Response to Reference System Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Reference System Requirements

RFP No.	RFP Requirement	EDS Response
40.6.1.1	Provides capability for necessary data to accommodate multiple population groups, their benefit packages, and payment methodologies	Met by interChange. The Recipient Plan Web panel allows users to administer population groups, benefit plans, and reimbursement agreement deals with the payment methodologies. The Web panels can accommodate most scenarios with limited configuration effort.

RFP No.	RFP Requirement	EDS Response
40.6.1.2	Provides capability for online access to all Reference and pricing data	Met by interChange. The reference diagnosis, diagnosis-related group (DRG), drug, drug labeler, error disposition, modifier, procedure, revenue, benefit administration, and related data Web panels and pages meet this functional requirement. Pricing data is accessible through the benefit administration subpanels.
40.6.1.3	Provides capability to accept online and batch updates, additions, and deletions to all Reference data with the capability to make changes to individual records or mass changes to groups or classes/records	Met by interChange and operational processes and procedures. The user interface provides online access to Reference data with the capability to make changes to individual records. Several standard batch file update processes exist including scheduled updates of HCPCS, FDB and ICD-9 files. Additional mass updates will be handled on an ad hoc basis if needed.
40.6.1.4	Provides capability to identify all covered and non-covered ICD-9/ICD-10 Diagnosis codes and any field value differences based upon a match of the Replacement MMIS Diagnosis Codes to the Diagnosis Update Tape/data	Met through customization of interChange. EDS is currently implementing processes in the HCPCS, ICD-9 diagnosis, ICD-9 procedure and drug load functions that report the impact of the file update and which rules would be inherited or needed to maintain current policy. Through user-controlled parameters, the system will simply report the effect and not update the classification or it will update the classification with the result of the file load.
40.6.1.5	Provides capability to produce a report that demonstrates the differences of all covered and non-covered ICD-9/ICD-10 Diagnosis codes and any field value differences based upon a match of the Legacy MMIS+ Diagnosis Codes to the Diagnosis Update Tape/Data for State use in determining appropriateness to update ICD-9/ICD-10 data	Met by interChange. The HCPCS procedure, ICD-9 Procedure and ICD-9 Diagnosis Code batch update processes update the appropriate tables in interChange and produce numerous reports, including a Procedure Maintenance and Error report by type, Deleted Procedures, Reactivated Procedures, Changed Procedures, Changed Modifiers and Discontinued Modifier reports.
40.6.1.6	Provides capability for diagnosis codes to be accessible from the National Council of Prescription Drug Programs (NCPDP) claims and physician drug program	Met by interChange. A table of a recipient's diseases and allergies—including the diagnosis code—is maintained to support drug and disease Pro-DUR auditing. It is developed based on adjudicated claims and professional and pharmacy claims. FDB inferred disease module is used to define diagnosis based on drug treatments.
40.6.1.7	Provides capability to configure maximum rates and algorithms that permit rates to be assigned based on one of the following for all providers: • Financial payer • Billing provider (i.e., single county or multi-county) • Population group • Procedure code • Begin and end date of service	Met through configuration of interChange parameters and features. The Reimbursement Agreement Edit panel meets this functional requirement. This panel provides the flexibility to make rate assignments based on multiple variables defined in the BA configuration.

RFP No.	RFP Requirement	EDS Response
	• Attending provider (i.e., single county or multi-county) • Recipient	
40.6.1.8	Provides capability to allow reformatting of automated files to develop or update fee schedules and/or rate files	Met through customization of interChange and operational processes and procedures. We will create a new interface to update rate files based on spreadsheets or other external data. An operational process will be in place to accept the rate files and changed to match input format for the new interfaces. interChange supports loading pharmacy pricing rates based on the feeds from FDB.
40.6.1.9	Provides capability for system logging of receipt date of each Reference File Maintenance Request, file maintenance initiation completion date, operator completing request, and supervisor validation date	Met by interChange and operational processes and procedures. The Web-based iTRACE tool will be used to create and track memos with operational processes.
40.6.1.10	Provides capability for parameter-driven, ad hoc activity logging reports	Met by interChange. interChange provides audit trail features for specific fields in Web panels.
40.6.1.11	Provides capability to ensure appropriate tracking, controls, and audit logs are associated with all file updates	Met by interChange and operational processes and procedures. The system automatically tracks file changes by audit tables and provides Web panels to view changes. Batch file updates are logged through batch control reports. Manual updates are controlled through enhanced panel security requirements and business processes that require documentation and approval.
40.6.1.12	Provides capability to link Reference File updates to applicable edits/audits	Met through configuration of interChange parameters and features. All audits and many edits are based on the configuration of reference data. When new batch updates of HCPCS or NDCs are performed, the pharmacy and medical classification engines described in requirement 40.6.1.4 show all rules to be inherited or added based on the update. When a new value is added to a code group (such as procedure, diagnosis, or revenue code), it is inherited automatically in the edits, audits, and reporting that use that code group. A report can be run to indicate which edits and audits are affected by which code group.
40.6.1.13	Provides capability to maintain the diagnosis data set using State-approved number of characters of the ICD-9/ICD-10 coding system that supports relationship between diagnosis code and claim information, including: • Valid age • Valid gender • Family planning indicator • Health Check indicator • Prior approval requirements	Met by interChange. There are numerous panels that control the relationship between the diagnosis code and claim information. Because interChange is a multi-payer system, these configurations generally are defined in the rules and may differ from payer to payer or benefit plan to benefit plan. Age, gender, and PA requirements are examples of relationships controlled at the benefit plan level. This rules-based configuration gives DHHS much greater flexibility in defining the operational processes.

RFP No.	RFP Requirement	EDS Response
	• Reference indicator • TPL, emergency, accident trauma diagnosis, and cause code/indicator • Inpatient length of stay criteria • Description of the diagnosis • Attachment required • Primary and secondary diagnosis code usage • Cross-reference to procedure codes • Drug by designated parameters	
40.6.1.14	Provides capability for online, updateable edit disposition tables and files that contain unlimited edit numbers with: • Description of edit • Description of edit for RA per RA media • RA print indicator, exception print detail, or list indicator • Disposition, force indicator, deny indicator, location code, prior approval override indicator, location override per claim type, per claim media, per program, per provider • Cross-referencing edits/audits • Information line	Met by interChange. The Error Disposition Information panel meets this functional requirement. The system can support 9,999 available edit numbers.
40.6.1.15	Provides capability to audit HCPCS codes and associated National Drug Codes (NDCs) against pharmacy NDCs to prevent duplicative services	Met by interChange. interChange supports cross-claim auditing and features a cross-reference table, which relates HCPCS codes to NDC codes for overlapping dates. This list of HCPCS to NDC relationships is updated through a batch update of CMS-supplied data or manually through online panels.
40.6.1.16	Provides capability to maintain an online, updateable claims Edit Resolution Manual that reflects correct processes for adjudicating edits and audits	Met by interChange. The resolution manual is entered into interChange as the edits are being set up and is available in iTRACE. It can be printed to hard copy. The resolution pages contain the criteria for posting the edit or audit written in nontechnical language, the associated service groups, the associated policies, and the detailed step-by-step-instructions for manual review.
40.6.1.17	Provides capability to cross-reference new CPT codes and ICD-9/ICD-10 codes to Replacement MMIS edits and audits that support the code's data set within the same or specified range	Met by interChange and operational processes and procedures. interChange can link procedure codes to edits or audits. It also can link revenue codes, HICL, NDC, GCN, and diagnosis codes to edits or audits within the same or specified range.

RFP No.	RFP Requirement	EDS Response
40.6.1.18	Provides capability to generate a report of edits/audits associated with codes that will be end-dated	Met through customization of interChange. A new report will be required for this feature.
40.6.1.19	Provides capability to categorize edits/audits	Met by interChange. interChange allows the user to define groups and associate edits and audits to these groups. It also groups edits and audits by suspense location, indicating the specific skill set required to process an edit or audit.
40.6.1.20	Provides capability to link each procedure code, diagnosis code, revenue code, dental code, etc. to the associated current and reverse (historical) edit	Met by interChange and operational processes and procedures. interChange can define groups based on each of the major code sets and can associate those groups to edits and audits for processing. They also can be documented in the resolution manual browser pages related to edits and audits.
40.6.1.21	Provides capability to create online Edit Manuals that enables access by edit or specific procedure code, revenue code, diagnosis code, dental code, etc. that displays: • Edit relationships • Other procedure, revenue, diagnosis, dental codes • Modifiers related • Sex, age indicators (by day, month, year) • State Memo effective date with a link to a separate promulgated policy file to obtain policy or related detail information • Any other parameters that drive the edit	Met through customization of interChange. The resolution manual is available through iTRACE. The ability to access the edit manual by a specific procedure code, revenue code, diagnosis code, or dental code will require custom development.
40.6.1.22	Provides capability to upload State-approved HCPCS updates from CMS, including Resource-Based Relative Value Scale (RBRVS)	Met by interChange. interChange provides jobs or programs to load CMS updates.
40.6.1.23	Provides capability for a procedure code data set that contains the current five-character (5-character) HCPCS/CPT code and can accommodate the future six-character (6-character) HCPCS codes, second-level HCPCS codes, State-specific local Level III codes, and ICD-9 procedure codes and can accommodate the future ICD-10 procedure codes, acceptance of a one-character (1-character) or a two-character (2-character) field for HCPCS pricing modifier(s); and at a minimum, the following elements: • Valid tooth surface codes and tooth number/quadrant designation • Date-specific pricing segments by program code, provider taxonomy, and/or provider type and or specialty	Met through configuration of interChange parameters and features. interChange meets the functional requirements of storing and accessing the data including a seven-character diagnosis for ICD-10 and a six-character procedure code. The reference diagnosis, DRG, drug, drug labeler, error disposition, modifier, procedure, revenue, benefit administration, and related data Web panels and pages provide access to the basic configuration of these code sets. Pricing data is accessible through the benefit administration subpanels. Nearly all of the pricing tables are configurable by a rate type that is associated to one or more reimbursement agreements. This allows for multiple prices to be configured for each pricing methodology. Nearly all of the stated features are enabled through interChange, but the relational database storage

RFP No.	RFP Requirement	EDS Response
	• Five (5) date-specific pricing segments, including two (2) occurrences of pricing action • Five (5) status code segments with effective beginning and end dates for each segment • Indicator of covered/not-covered and effective and end dates by program code • Allowed amount for each pricing segment • Multiple modifiers and the percentage of the allowed price applicable to each modifier or procedure code/modifier combination • State-specified restrictions on conditions to be met for a claim to be paid, including, but not limited to: – Recipient eligibility – Pricing Action Code – Category of service – Specialty – Lab certification – Recipient age/sex restrictions – Allowed diagnosis codes – Prior approval required – Medical review required – Place of service – Pre- and post-operative days – Appropriate diagnosis – Acceptable place of service – Units of service – Once-in-a-lifetime indicator – Attachments required – Valid provider type/specialty – NDC codes and units – Claim type – Purge criteria – Provider subspecialty – Drug Coverage (effective/term dates)	methodology is significantly different than the current MMIS. Because interChange is designed to support multiple programs and multiple payers, the majority of the reference configurability is related to rules associated through those programs.

RFP No.	RFP Requirement	EDS Response
	– Health Check reporting indicator – Family Planning indicator – Family Planning Waiver Indicator • Narrative language of procedure codes in both short and long description • Indication of when or whether claims for the procedure can be archived from online history (such as once-in-a-lifetime procedures) • Indication of TPL actions, such as cost avoidance, benefit recovery, or pay and chase by procedure code • Indication of third party payers, non-coverage by managed care organizations by managed care organization type • Other information, such as accident/trauma indicators for possible TPL, Federal cost-sharing indicators, and Medicare coverage indicator	
40.6.1.24	Provides capability to maintain Pharmacy Point-of-Sale (POS) reference files that include: • NDC number • Generic Code Number (GCN) or formulation ID • Generic Code Number-Sequence (GCN-Sequence) or clinical formulation ID • Therapeutic class-specific (TxCL) or Therapeutic class code (General Classification Code 3 [GC3]) • Ingredient list ID (HICL-S, relational and non-relational) • HICL sequence number • Med ID • Routed DF Med ID • Routed MED ID • Med Name ID • HIC Sequence • Generic name (GNN) • Ingredient List ID (HICL) • Brand name • Label name • Manufacturer	Met through customization of interChange. A change is required to include ETC, MEDID, and UPC in the drug file. Enhancement to the existing search criteria is required to meet these requirements.

RFP No.	RFP Requirement	EDS Response
	• Enhanced Therapeutic Classification (ETC) system • American Hospital Formulary (AHF) classification • Universal Product Code (UPC) Search criteria should also include edit description, claim exceptions, explanation of benefits (EOBs), and NCPDP rejects.	
40.6.1.25	Provides capability for the procedure code data set to contain a minimum of five (5) years of data to support claims online history	Met by interChange. The reference diagnosis, DRG, drug, modifier, procedure, and revenue Web panels and pages meet this functional requirement and can hold an unlimited amount of historical information.
40.6.1.26	Provides capability to upload annual Diagnosis Related Group (DRG) and Medicare Code Editors (MCE) software based on a Federal fiscal year no later than October 1st each year and report all errors that occur in processing of the annual DRG code update	Met by interChange, with a portion of the requirement requiring customization code. interChange supports the annual DRG update process. interChange can support either the CMS DRG or the All Payer (AP) DRG modules. A new process will be created to upload the data.
40.6.1.27	Provides capability to receive all weekly, biweekly, or daily drug updates from the drug update service vendor and upload within one (1) business day, including all new modules developed by the Vendor	Met by interChange. interChange contains weekly FDB drug update capability; however, the jobs can be run on demand.
40.6.1.28	Provides capability to process updates from the contracted or State-owned drug update service upon receipt without overwriting exact updates previously made by the State or at the request of the State	Met through customization of interChange. interChange will be customized to receive and process a non-FDB drug update file and define the update requirements.
40.6.1.29	Provides capability to produce a report that identifies contracted drug updates bypassed identifying the data on the database and the update received from the State-owned or contracted drug update service	Met through customization of interChange. interChange will be customized to identify and report on bypassed updates from a State-defined drug file.
40.6.1.30	Provides capability for State-specified customized updates to the drug file from a contracted or State-owned drug update service	Met through customization of interChange. interChange will be customized to receive and process a non-FDB drug update file and define the update requirements.
40.6.1.31	Provides capability for specific “facility rate times DRG weight” as well as appropriate facility disproportionate share information for inpatient reimbursement annually	Met by interChange. The DRG Rates panel meets this functional requirement. The reference subsystem provides the DRG Rate Web panel to maintain DRG weighting. This requirement is shared with the interChange provider function.
40.6.1.32	Provides capability to maintain rate files for all services and institutional rates to support pricing that conforms to program requirements	Met by interChange. The Provider Disproportionate Share Rate, Provider Drug Rate, Provider Level of Care Rate, Usual Customary Charge, DRG Rate, Drug AWP, Entity Maintenance Search, Flat Fee, and Max Fee panels meet this functional requirement. This requirement is satisfied by the Max Fee, DRG Rate, Drug AWP, Drug EAC, and Revenue Flat Fee panels in reference. Within the provider subsystem, the Customary Charge, NH/IP Rates, Inpatient Level of Care Rate, Provider

RFP No.	RFP Requirement	EDS Response
		DRG Rate, and Provider Disproportionate Share Rate panels administer provider-related rate information.
40.6.1.33	Provides capability to create NC Title XIX Tables Manual and Edit Resolution Manuals	Met by interChange and operational processes and procedures. The resolution manual is entered into interChange as the edits are set up, and it is available in iTRACE or can be printed to hard copy. The iTRACE tool includes a live connection to the Oracle database and the ability to define the list of code tables needed for the tables manual. The definition of the table and each field is presented through iTRACE. The actual data in each table can be accessed from the model office or production database in real time without the need to log into Oracle.
40.6.1.34	Provides capability to apply edit criteria across claim types, provider type, and specialty types of service, provider taxonomy, provider type and/or specialty by procedure code and therapeutic class, generic product indicator, generic code, and all other drug codes	Met by interChange, with a portion of the requirement requiring customization code. The base system provides the ability to edit or audit based on the criteria listed apart from taxonomy. For drug codes, interChange can audit on NDC, therapeutic class, generic price, GCN sequence number, HICL, and HIC3. interChange has the ability to add additional elements—such as taxonomy or generic code—as additional rule attributes with a relatively minor amount of customization.
40.6.1.35	Provides capability to electronically store State-assigned EOB and ESC message descriptions	Met by interChange. The Entity Maintenance Search and Error Disposition Base Edit panels meet this functional requirement. The base system provides the EOB and Error Disposition panels to maintain EOB and ESC codes. These also are available through iTRACE in real time.
40.6.1.36	Provides capability to store unlimited policy changes received via State/Fiscal Agent Memo regarding file changes for procedure codes, diagnosis codes, revenue codes, dental codes, etc.	Met by interChange. The iTRACE repository can store the State/Fiscal Agent Memos regarding reference changes. These will be associated to the appropriate tables and code set updates defined in the memos.
40.6.1.37	Provides capability to electronically store accommodation rate data	Met by interChange. Accommodation rates include a rate type for each revenue code so the same revenue code can be priced many ways, depending on the reimbursement agreements.
40.6.1.38	Provides capability to maintain indefinitely procedure codes that have timeframe limitations	Met by interChange. The Reference Procedure Information and Maintenance panels meet this functional requirement. Reference data is not purged.
40.6.1.39	Provides capability to electronically store modifier information with appropriate multiple modifier and payment calculations	Met by interChange. The Procedure Modifier panel meets this functional requirement. interChange provides the Modifier Information, Max Fee, Provider Customary Charge, and Modifier Rate panels to store modifier and payment calculations.
40.6.1.40	Provides capability to produce electronic copies of Reference Files	Met by operational processes and procedures. iTRACE allows users to export the first 2,000 rows of a table into an Excel

RFP No.	RFP Requirement	EDS Response
		spreadsheet for download without any technical assistance. The BIAR system provides a similar capability to export and download files without technical assistance. Additionally, electronic copies of reference files would be handled ad hoc through an operational process.
40.6.1.41	Provides capability to electronically store an unlimited number of pricing files and methodologies by date range that support NC DHHS program requirements	Met by interChange and through configuration of interChange parameters and features. This requirement is satisfied by the Max Fee, DRG Rate, Drug AWP, Drug EAC, and Revenue Flat Fee panels in the reference subsystem. Within the provider subsystem, the Customary Charge, NH/IP Rates, Inpatient Level of Care Rate, Provider DRG Rate, and Provider Disproportionate Share Rate panels administer provider-related rate information.
40.6.1.42	Provides capability to create crosswalk of all claim type/provider type/taxonomy combinations to State, Family Planning, and Federal Categories of Service for all Types of Service	Met by interChange and through configuration of interChange parameters and features. interChange supports the configuration of state, federal, CMS 64, CMS 21, and MSIS category of service values for all types of service using claim type, provider type, provider specialty and age. EDS will work with DHHS analysts to define the appropriate combinations to define each category of service.
40.6.1.43	Provides capability to apply State-approved policy to: • HCPCS, including CPT, American Dental Association (ADA) codes, HCPCS Level II codes, NDCs, State local codes, International Classification of Diseases diagnosis and procedure codes (ICD-9) and future ICD codes • Drug codes • Edits • Rate methodology and calculations • Professional services fees	Met by interChange and through configuration of interChange parameters and features. The base system provides the information panels within reference as a single point to maintain the entities listed for this functional requirement. Policy is configured through the rule authoring pages and the editing and auditing pages. Pricing methodologies can be configured to meet state policy using the available data and panels in interChange.
40.6.1.44	Provides capability for the Replacement MMIS Reference diagnosis file to interface with pharmacy claims processing to ensure that the diagnosis data is the same in both systems	Met by interChange. The pharmacy processing uses the FDB-inferred disease module that infers diagnosis from specific pharmacy product usage. It supplements this data with diagnosis information from the professional claims.
40.6.1.45	Provides capability to maintain a Reference Modifier File that contains procedure code and modifier information, including sub-database/matrix that supports State/Fiscal Agent staff-authorized access by procedure code and modifier that displays: • Narrative of procedure code • Narrative of modifier, including effective end dates by either date of service, date of	Met by interChange. This requirement is met by the Procedure Information, Procedure Restriction, Procedure Modifier, and RBRVS — Procedure panels. The recipient plan coverage rules, provider contract rules, and reimbursement agreement rules can be configured using the standard rule definition attributes, which include, among many others, provider type and specialty, modifiers (1 to 4 — include or exclude logic), diagnosis (header or detail — include or exclude logic), place of service, and benefit plan.

RFP No.	RFP Requirement	EDS Response
	• processing, or date of receipt • Modifier and narrative applicable to the use of the procedure code/modifier combination • Modifier pricing information, including effective end dates by either date of service, date of processing, or date of receipt • Applicable modifier combinations • Applicable procedure/modifier combinations • Applicable providers for each modifier, including effective and end dates	
40.6.1.46	Provides capability to maintain Reference data with all procedure codes and pricing action codes (PAC) that indicate where pricing occurs based on: • Procedure code, type of service, and/or modifier • Provider type, provider specialty, taxonomy, and procedure code • Type of service • Place of service • Provider and per diem rate • Provider, DRG rate, and financial payer • Provider accommodation code • Provider number, percentage of charges, and financial payer • Pharmacy dispensing fee • Enhanced pharmacist professional services fee for performing cognitive services and State-approved interventions • Revenue code • Accommodation code on the Accommodation Rate File • Capitation payments and management fees	Met by interChange. The Reimbursement Agreement Edit panel meets this functional requirement. The Reimbursement Agreement panel provides the capability to maintain pricing actions. Under each of the main reference entities—procedure, diagnosis, drug, DRG, or revenue code—a read-only panel is available that shows the applicable reimbursement rules and pricing actions. Most pricing actions can be configured. The same service can be priced using multiple methodologies, depending on the applicable rules.
40.6.1.47	Provides capability to indicate whether pricing is performed on the revenue code or the CPT code when a combination of the two is billed	Met by interChange and through configuration of interChange parameters and features. The Reimbursement Agreement Edit panel meets this requirement. The panel is used to configure the pricing methodology based on several variables, including CPT and revenue code.
40.6.1.48	Provides capability to determine if auditing/editing occurs on procedure code or revenue code when a combination of revenue code and procedure code is used	Met by interChange and through configuration of interChange parameters and features. The Error Disposition and Audit Criteria panels provide the capability to control auditing on a procedure versus a revenue code.

RFP No.	RFP Requirement	EDS Response
40.6.1.49	Provides capability to search for drugs using the following search criteria: • NDC number • Generic code number or formulation ID • Generic sequence number or clinical formulation ID • Therapeutic class specific or Therapeutic class code • Ingredient list ID (HICL-S, relational and non-relational) • HICL sequence number • Med ID • Routed DF Med ID • Routed Med ID • Med Name ID • HIC Sequence • Generic name (GNN) • Ingredient List ID (HICL) • Brand name • Label name • Manufacturer • Enhanced Therapeutic Classification (ETC) • AHF classification • UPC	Met by interChange, with a portion of the requirement requiring customization code. A change is required to add the criteria listed to the Drug Search panel, which currently allows searching by NDC/GCN, label name, brand name, and generic name. In addition to the changes to the search panel, the interChange ad hoc BIAR system allows a user to search on any FDB elements as needed.
40.6.1.50	Provides capability to search for Drug Utilization Review (DUR) parameter data, drug name, NDC, TxCL, GCN, GCN-Sequence, or State-defined data elements	Met through customization of interChange. Modifications are necessary to add these search criteria.
40.6.1.51	Provides capability for an online, updateable GCN data set to maintain references and associations of drugs with similar indications/therapeutic benefits	Met by interChange. interChange uses the GCN information supplied by FDB. interChange uses the GCN in several areas, including the setting of edits and audits and in the DUR+ prior approval process.
40.6.1.52	Provides capability for an online, updateable GCN data set to identify acute level and duration of a drug before prior approval is required	Met by interChange. interChange can set audits, including step therapy audits based on GCN using configurable dates. The DUR+ prior approval process also is configurable by GCN and dates.
40.6.1.53	Provides capability to electronically store and maintain all State-approved pharmacy pricing methodologies	Met by interChange and through configuration of interChange parameters and features. The state or federal MAC, AWP, EAC, and other rates provide the ability to maintain pharmacy pricing methodologies.

RFP No.	RFP Requirement	EDS Response
40.6.1.54	Provides capability to create a crosswalk of HCPCS Level I and Level II codes in the Physician Drug Program (PDP) to NDC/GC3 codes	Met by interChange. The Drug Procedure Xref panel meets this functional requirement. The NDC/HCPCS Procedure panel provides the capability to cross-walk drugs to procedures.
40.6.1.55	Provides capability to create a crosswalk of HCPCS Level I and Level II codes to rebateable NDCs	Met by interChange. The Drug Procedure Xref panel meets this functional requirement. The NDC/HCPCS Procedure panel provides the capability to cross-walk drugs to procedures. These cross-references can be modified to include only the rebateable NDCs, but the default is to use the HCPCS to NDC cross-reference available from CMS.
40.6.1.56	Provides capability to identify Drug Efficacy Study Implementation (DESI) drugs	Met by interChange. The Drug State DESI panel meets this functional requirement.
40.6.1.57	Provides capability for State-approved provider maximum reimbursement rates for claims processing to ensure the ability to modify, add, or delete any rates on an individual provider basis or mass provider basis	Met by interChange. The Customary Charge panel meets this functional requirement. Individual providers are managed through the Universal Commercial Code (UCC) rates, which can be set for a procedure by a provider. Mass provider is handled through creation of a defined benefit plan.
40.6.1.58	Provides capability to electronically store maximum reimbursement rates for DME by procedure code priced for rental or purchase (new or used)	Met by interChange. The Max Fee panel meets this functional requirement.
40.6.1.59	Provides capability to electronically store laboratory maximum reimbursement rates for individual and "panel" laboratory procedures	Met by interChange. The Max Fee panel meets this functional requirement.
40.6.1.60	Provides capability to maintain an online audit trail of all updates to Reference data, including PRO-DUR data, identifying source of the change, CSR number, memo number, before and after images, and change dates to assure State and Federal auditing requirements are met	Met through customization of interChange. CMS-certified audit trails in interChange include the date and time stamp of the change, as well as the user ID and the before image of the updated or deleted data. Modifications can be developed to include the CSR number and memo number.
40.6.1.61	Provides capability to receive memos from the State online and send memos to the State online for approval	Met by interChange and operational processes and procedures. iTRACE will be used to create and track memos with operational processes.
40.6.1.62	Provides capability to electronically store and track State Memos with online status updates	Met through interChange and operational processes and procedures. iTRACE will be used to create and track memos with operational processes.
40.6.1.63	Provides capability to generate an online status report of State Memos	Met by interChange and operational processes and procedures. The iTRACE tool provides search panels to generate memo status reports.
40.6.1.64	Provides capability for note entry	Met by interChange. interChange provides the ability to make an unlimited number of free-form notes for HCPCS/ICD-9 procedures, diagnoses, modifiers, DRGs, drugs, and revenue codes only.
40.6.1.65	Provides capability for electronic storage of unlimited policy changes received via State/Fiscal Agent Memos	Met by operational processes and procedures. State memos can be stored in the document management system and

RFP No.	RFP Requirement	EDS Response
	and link to all the memo contents for all record changes	cross-referenced to the iTRACE tool. There is no limit to the amount of policy changes that can be stored. iTRACE includes linkage to system objects, requirements, directives, and test data that can be linked to the memos.
40.6.1.66	Provides capability to link a State/Fiscal Agent Memo with associated procedure codes	Met through customization of interChange. A change will be required to create a Web panel to query audit tables by memo number and return procedure codes affected by a given memo number.
40.6.1.67**	Provides capability to maintain budget criteria information	Met by interChange. Benefit plans are tied to payers and budget codes. The interChange financial system compares the available budget dollars to a claim and can perform several configurable options, including choosing the next budget in the hierarchy, suspending the claim detail, denying the claim detail, or overspending the budget.
40.6.1.68	Provides capability to replicate rates from one (1) type of provider and service to another like type of provider when the service and rate are equal	Met by interChange. The Reimbursement Agreement Edit panel meets this functional requirement. interChange does not directly map provider types to rate amounts, but provides the ability to map a provider type to a rate type that is used to calculate the pricing amount. In this way, multiple provider types can be mapped to the same rate type without having to recreate the rate for each provider type.
40.6.1.69	Provides capability to supply claims pricing information to the Division of Vocational Rehabilitation and the Division of Services for the Blind	Met through customization of interChange. An interface change will be required to create an extract of pricing information.
40.6.1.70	Provides capability to retain MMIS Reference data change requests received from the State in the format received for control, balance, and audit purposes for the life of the Fiscal Agent Contract	Met by operational processes and procedures. File maintenance requests are stored in the COTS electronic document management system, EMC | Documentum, for search and retrieval.
40.6.1.71	Provides capability for a user-controlled method to maintain edit criteria online	Met through configuration of interChange parameters and features. The Error Disposition Information panel meets this functional requirement. Security authorization rules restrict update capability to a limited number of users.
40.6.1.72	Provides capability to access or link with State online policies to facilitate search of policies for changes in CPT and ICD-9/ICD-10 codes	Met through customization of interChange. interChange will be modified to provide the capability to access or link with State online policies to facilitate search of policies for changes in CPT and ICD-9/ICD-10 codes.
40.6.1.73	Provides capability for inquiry, entry, and updates to group-level pricing parameters for the determination of pharmacy reimbursement calculations	Met by interChange. The state and federal maximum allowable cost (MAC), average wholesale price (AWP), estimated acquisitions cost (EAC), and other rates provide the ability to maintain pharmacy pricing methodologies. The Reimbursement Agreement panel allows the creation of reimbursement rules at any group level within the classification.

RFP No.	RFP Requirement	EDS Response
40.6.1.74	Provides capability to maintain and electronically store pharmacy pricing methodologies to appropriately price claims according to the appropriate financial payer or population according to State policy and business rules	Met through configuration of interChange parameters and features. The state and federal MAC, AWP, EAC, and other rates provide the ability to maintain pharmacy pricing methodologies. The Reimbursement Agreement panel allows the creation of reimbursement rules at any group level within the classification. Each claim—pharmacy or otherwise—stores the pricing methodology used to calculate reimbursement.
40.6.1.75	Provides capability to maintain and electronically store new pricing methodologies, criteria, and/or parameters	Met through configuration of interChange parameters and features. The Reimbursement Agreement Edit panel meets this functional requirement. The Reimbursement Agreement Web panel allows the creation of reimbursement rules. The rate type and pricing indicator provide the ability to add new rates and pricing. Every new pricing methodology requires a limited amount of coding to inform the system of which tables or rates to read to identify the proper pricing methodology, but the majority of effort in using that new pricing methodology is performed through configuration.
40.6.1.76	Provides capability to search for drug data using as primary search criteria: • NDC • Generic code number • Generic sequence number • Therapeutic class • Drug name • Any State-identified First DataBank (FDB) data element	Met through customization of interChange. A change is required to add the criteria listed to the Drug Search panel, which currently allows searching by NDC/GCN, label name, brand name, and generic name. The BIAR system allows a user to search on any FDB element without customization.
40.6.1.77	Provides capability for inquiry, entry, and updates of existing and new drug data for a specific drug	Met by interChange. interChange meets this functional requirement. interChange provides the Drug Information panel that links to panels with the ability to add or update drug data.
40.6.1.78	Provides capability to search for claim exception parameter data using primary and/or secondary search criteria	Met by interChange, with a portion of the requirement requiring customization code. interChange provides robust search parameters for most of the key data using several search criteria. If additional search criteria are needed, they will be defined during the requirements verification sessions.
40.6.1.79	Provides capability to search by phonetic and partial description or user-defined selection criteria	Met by interChange. interChange allows phonetic and partial searches for descriptions for the main entities within the reference HCPCS/ICD-9 procedures, diagnoses, modifiers, DRGs, drugs, and revenue codes.
40.6.1.80	Provides capability to electronically store and update drug rates on a schedule determined by the State that	Met through configuration of interChange parameters and features. The state and federal MAC, AWP, EAC, and other

RFP No.	RFP Requirement	EDS Response
	allows drug price indicator to be turned on or off for coverage	rates provide the ability to maintain pharmacy pricing methodologies. The Provider Contract and Recipient Plan panels allow rules to be created and updated to turn coverage on and off for a particular benefit package or provider contract.
40.6.1.81	Provides capability to restrict pharmacy services according to State policy and business rules	Met by interChange. Existing pharmacy rule capability and pharmacy edit capability give vast features to restrict pharmacy use.
40.6.1.82	Provides capability to handle recipient opt-in to specified lock-in pharmacies according to State policy and business rules	Met by interChange and operational processes and procedures. The lock-in assignment plans can be constrained to include only those providers who wish to participate. interChange can be configured to terminate a provider or recipient, if desired.
40.6.1.83	Provides capability to electronically store and maintain the Prescription Advantage List (PAL) tiers	Met by interChange. interChange will receive and publish the PAL list tiers to the publicly accessible Web.
40.6.1.84	Provides capability to maintain and use list of Medicare Part D drugs for dual-eligible recipients according to State policy and business rules	Met through configuration of interChange parameters and features. Provider Contract and Recipient Plan panels allow rules to be created and updated for a particular benefit package or provider contract. Rules can be created within a benefit classification that could be configured to contain Medicare Part D drugs.
40.6.1.85	Provides capability to search inquiry, entry, and updates for step care data	Met by interChange. The Audit ST Group panel meets this functional requirement. Several types of step therapy audits are configurable and updatable through interChange.
40.6.1.86	Provides capability for inquiry, entry, and updates to a list of preferred agents for a specific step care plan	Met by interChange. The Audit ST Group panel meets this functional requirement.
40.6.1.87	Provides capability to ensure that all prior approval requirements and associated edits and audits are linked	Met through configuration of interChange parameters and features. The Provider Contract and Reimbursement Agreement panels provide a way to set PA requirements. The link between PA requirements and edits is made in the benefit administration configuration using meta data.
40.6.1.88	Provides an online separate file in the Prior Approval business area that includes all services that require prior approval with a minimum of code, definition, initial date the prior approval was required, and end date when prior approval is no longer required	Met through customization of interChange. A new report will be created to extract PA requirements from the benefit administration rules tables by service.
40.6.1.89	Provides capability to create Fee Schedule reports detailed in the bullets below: • Adult Care Home Personal Care • Ambulance • Ambulatory Surgical Centers/Birthing Centers	Met through customization of interChange. The base system provides features within the Provider Web Portal to query fee schedule data from reimbursement rules. Searches can be performed by financial payer, provider contract, benefit group, or procedure for a given date of service (DOS).

RFP No.	RFP Requirement	EDS Response
	• Behavioral Health (separate schedules) • Certified Clinical Supervisor and Addictions Specialist • Children's Developmental Service Agencies • Licensed Clinical Social Worker and Licensed Professional Counselor and Licensed Marriage and Family Therapist • Licensed Psychological Associate • Mental Health Enhanced Services • Mental Health (LME) • Mental Health Non-Licensed Clinical Fee Schedule • Nurse Practitioner • Nurse Specialist • Prospective Rates • Psychologist • Residential Treatment Level III and IV • Community Alternatives Program (CAP) Rates (separate rates) • CAP/AIDS • CAP/Children • CAP/DA • CAP/Mentally Retarded-Development Disability (MR-DD) • DRG Weight Table • Dental Services • Durable Medical Equipment • Federally Qualified Health Center • Home Health Agency Services • Home Infusion Therapy • Hospice • Local Education Agency Practitioners • Local Health Department • Multi-specialty Independent Practitioner • Nursing Facility Rates • Occupational Therapy • Orthotics and Prosthetics	

RFP No.	RFP Requirement	EDS Response
	• Physical Therapy • Physician Drug Program • Respiratory Therapy • Rural Health Center • Speech and Audiology Services	
40.6.1.90	Provides capability to create fee schedules and related rate reports for State users and division Web site, including: • Dialysis Centers • Nurse Midwife • Portable X-ray • Optical and Visual Aids • Private Duty Nursing • Targeted Case Management	Met by interChange. The base system provides features within the Provider Web Portal to query fee schedule data from reimbursement rules. Searches can be performed by financial payer, provider contract, benefit group, or procedure for a given DOS.
40.6.1.91	Provides capability to create rate reports for internal State use only, including: • Lower Level NF Rates • Outpatient Hospital Pricing, Ratio-Cost-to-Charge • Nursing Facility Rates	Met through customization of interChange. A change will be required to create extracts of rate files.
40.6.1.92	Provides capability to electronically store a daily file of county DSS mailing addresses	Met through customization of interChange. The County Web panel provides the ability to maintain DSS mailing addresses. A new interface will be required to accept a daily file and make the appropriate updates.
40.6.1.93	Provides capability to calculate selected physician fee schedule records based on periodic Resource-Based Relative Value Scale (RBRVS) updates	Met by interChange. The interChange inherent pricing methodologies include the ability to perform RBRVS pricing. The pricing methodologies are configured during the DDI effort.

40.7.1 Prior Approval System Requirements

Adaptability and flexibility are integral to our prior approval solution. For groups with special needs, the flexibility of our user configuration at the benefit plan level will empower the State to effectively manage services across a broader spectrum of the community.

State of North Carolina

The State directs programs that reimburse for medically necessary, appropriate, and cost-effective services. Flexibility, accuracy, and responsiveness are critical characteristics for any MMIS in the current environment of healthcare change and reform and fiscal constraints.

A highly capable and efficient prior approval (PA) system will be a key component in enabling the State to manage services and financial pressures more economically. Our Replacement MMIS will provide the framework to support the State's objectives with the optimized K2 workflow engine for workflow management and the InRule rules engine to define and document the State's PA business rules. The local EDS team working on the current Pre-Admission Screening and Annual Resident Review (PASARR) project gives our DDI team a head start on the definition and analysis of PA rules for configuration in the rules engine. This enables EDS to deliver a more thoughtful and complete solution to the expanding challenge of PA.

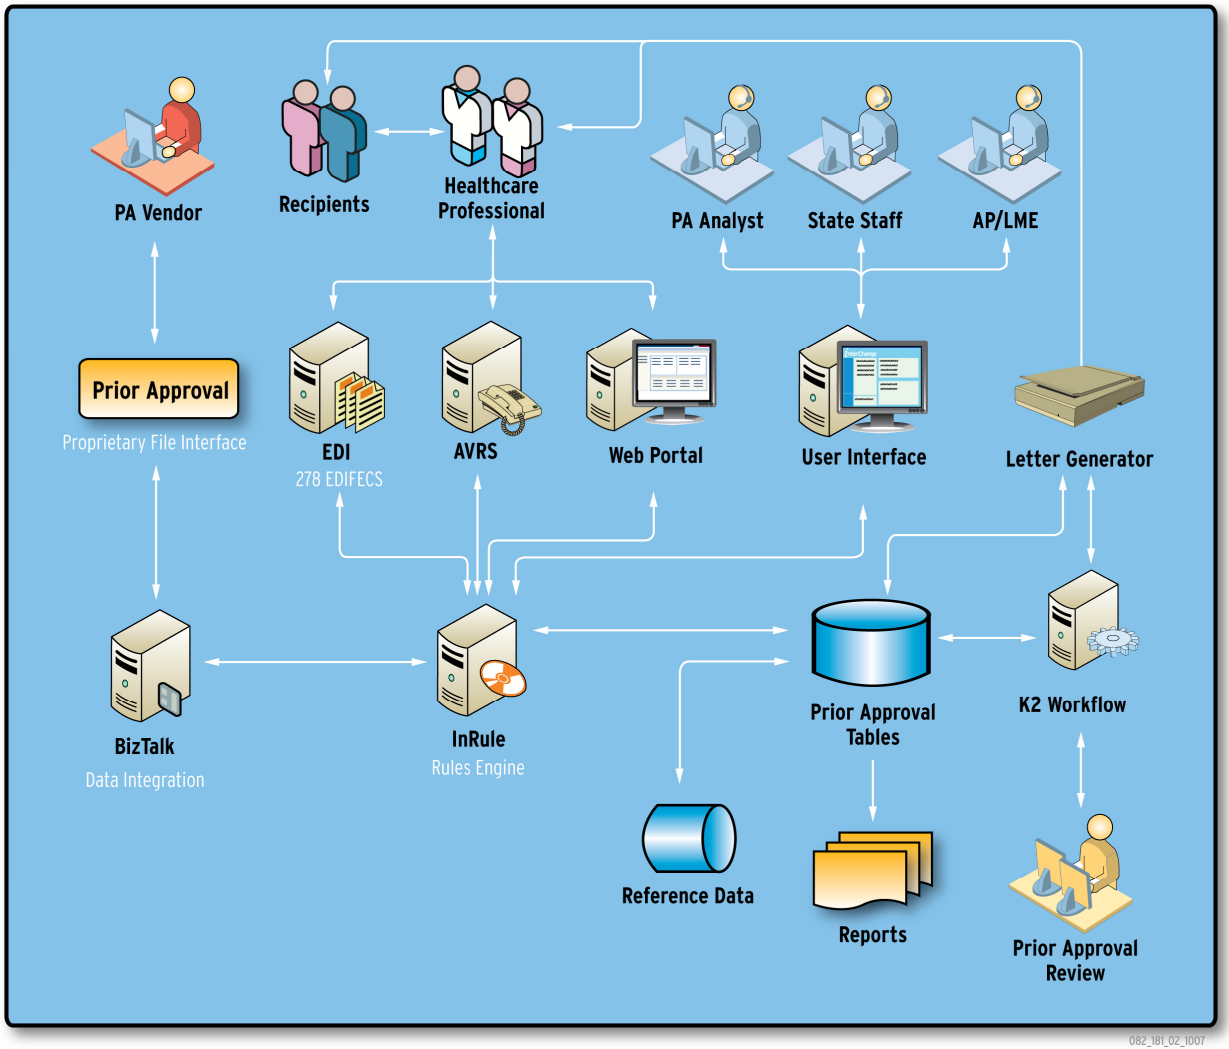
Adaptability and flexibility are integral to our PA solution. For groups with special needs, such as waiver, Community Alternatives Programs (CAP), or self-directed care and recipients assigned to DMH or ORHCC programs, the flexibility of our user configuration at the benefit plan level will empower the State to effectively manage services across a broader spectrum of the community.

The interChange solution addresses the need for PA support through two methods: rules-based, workflow-enabled manual entry of PAs and system generation of pharmacy claim PAs through our unique DUR+ capability.

The Replacement MMIS also will enable PAs to be initiated and queried from numerous authorized sources, including EDI, the Web portal, local PA analysts, external PA vendors, telephone, fax, or mail.

The following exhibit, Prior Approval Flow, shows the ways a PA request can be received and how the Replacement MMIS will apply the same business logic to each.

Prior Approval Flow



PA requests are subject to the same business rules, no matter how they are received. This provides consistency and quality throughout PA processing.

The Replacement MMIS will provide the following capabilities in support of the PA business area:

- Process the PA request by validating recipient eligibility, provider eligibility, and service coverage based on predefined rules
- Automatically generate PA records for pharmacy-related claims that meet customized rules related to the recipient; claim history, including pharmacy, medical, and institutional data; and provider taxonomy information
- Receive and process PA transactions from multiple input sources, including paper, telephone, fax, Web portal, National Council for

Prescription Drug Programs (NCPDP), and standard Health Insurance Portability and Accountability Act (HIPAA)–compliant transactions

- Apply customized rule criteria to each PA request to automate the PA classification and the approval or denial of the PA request to the degree possible, freeing up PA experts to focus on the non-standard PA requests
- Allow providers to initiate PA requests through the Internet and query PA requests to learn the decision status and the authorized units or dollar amounts
- Generate provider and recipient notification letters using combinations of fixed, variable, and free-text formats that are automatically triggered, or allow users to initiate using point-and-click technology on the PA page
- Treat letters containing protected health information (PHI) as secure documents
- Use browser-based pages to give authorized users various levels of access depending on their security levels, ranging from basic inquiry to complete PA entry, update, and approval capabilities
- Enable changes due to administrative review or appeals and appropriately track the dates and changes and generate the necessary letters

Processing PAs

EDS will review, process, and determine the appropriate outcome of PAs according to State policy. The EDS solution for the PA function will help control the use of services and equipment based on the medical necessity of the service. We will implement the latest technologies in workflow management and systematic application of processing rules to effectively apply State policy. Enabling North Carolina recipients to receive timely approval for services while allowing the State to control expenditures are the hallmarks of a successful PA process.

Timely, accurate adjudication of PAs requires the following:

- Clinical expertise
- A strong understanding of State policy
- The technical infrastructure to support the adjudication process

Through our experience with North Carolina and other state healthcare programs throughout the country, EDS has the insight and understanding to successfully implement and operate the PA business function. We will provide the clinical expertise required to apply sound healthcare principles and make crucial medical necessity decisions. With the clinical expertise in place, we also have a technical infrastructure solution that allows our team to focus on the decision, not the paperwork. We are excited to provide significant enhancements

to the current MMIS technical infrastructure to reduce paper, eliminate unnecessary manual intervention, and decrease adjudication times compared to the current MMIS PA processing capability.

Within the Replacement MMIS solution, each payer group will maintain its unique approach to PA. In some programs, PA is relied on heavily as a means to control costs. Other programs rely on back-end auditing to validate program compliance and subject few services to PA. The Replacement MMIS will allow users to denote by specific payer group which services require PA for a given plan. Specifically, the system will allow users to denote PA by program, using the following services:

- Procedure code, including Current Procedural Terminology (CPT), Health Care Common Procedure Coding System (HCPCS), and the American Dental Association (ADA)
- As many as four modifiers
- Revenue code
- Diagnosis code
- NDC/generic sequence number/HIC3
- Tooth number/tooth quadrant

After a payer group has established its specific PA requirements, the Replacement MMIS will recognize this limitation during processing and will not pay claims without the presence of an approved PA for the service.

PA determinations are made case by case, using one of the following outcomes:

- **Approved—**Used when the service is approved exactly as requested
- **Modified—**Used when the number of units, dollars, or time frame requested is authorized at a decreased level
- **Denied—**Used when all of a requested service is denied
- **Pended—**Used when information is insufficient to make a determination or when another request appears in the system for the same service

Appropriate decision correspondence can be automatically generated to the provider and recipient based on the PA determination.

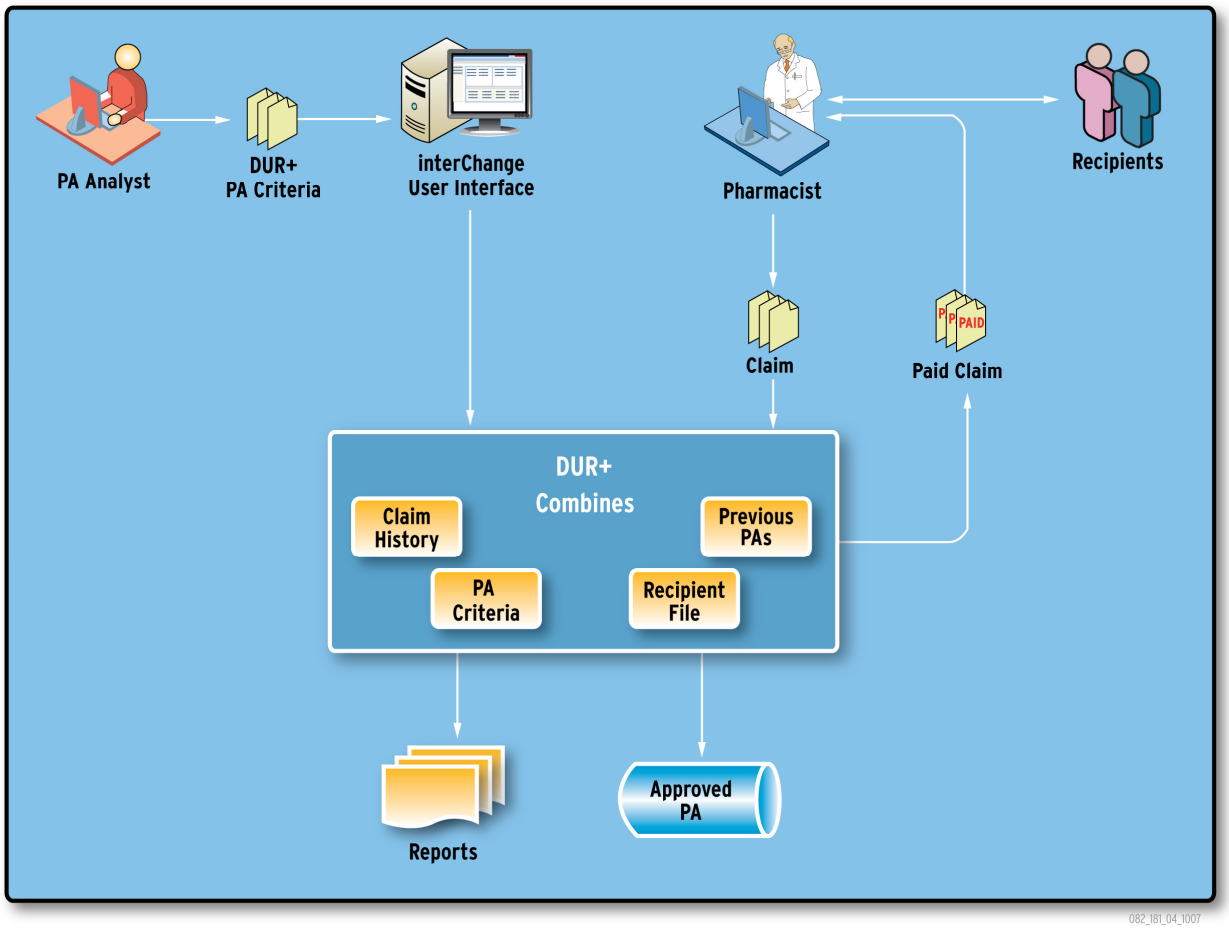
DUR+

The Replacement MMIS PA system will provide robust support to automatically generate pharmacy-related PAs in situations that meet State-defined criteria. The need for physician- or pharmacist-initiated pharmacy-related PA requests is vastly reduced through the use of the EDS DUR+ PA capability. DUR+ can automatically review the recipient data, existing PA history, medical- and pharmaceutical-related history, and State-configurable business rules to

determine if a PA can be automatically generated from a pharmacy claim in process. If the proper conditions are not met, the PA is not generated and the pharmacist or physician must submit a PA request, which will be reviewed by the appropriately trained PA staff for proper dispositioning.

The following exhibit, interChange DUR+ System Process, shows how the DUR+ system compares the new pharmacy claim entering the configured PA criteria, claims history, recipient information, and previously approved, related PA data to system-generate a new PA. This PA is then auto-approved for the PA requirements of the processed claim. This interChange feature makes pharmacy PA and claim processing more efficient for the provider community.

interChange DUR+ System Process



The number of manually entered pharmacy PA requests is reduced when the DUR+ system can auto-adjudicate defined PA policy for the State.

The following is a high-level review of the decision criteria that the DUR+ module evaluates to determine if a pharmacy PA request can be systematically defined and approved:

- **Base information—**This identifies the criteria used to establish the authorization. Criteria code can be established for an individual National Drug Code (NDC), generic code number (GCN), or therapeutic class (HIC3). It also can be established for groups of NDCs, generic products, or therapeutic classes.
- **Grandfathering—**This creates a new PA if a previous approval has expired or is close to expiration. It approves a new PA if there was already a related, previous PA on file for this condition. The system allows for each criterion to specify how soon before or after an authorization existed to trigger the creation of a new authorization. The system-generated PA is based on the number of units per day (dose ratio) and duration days.
- **Age—**This allows for coverage based on clinical exemptions for young or elderly recipients. It allows for parameters to be set to establish authorizations based on the recipient being in a specific age range. The PA is established based on the number of units per day (dose ratio) and duration days associated with the age of the recipient.
- **Primary diagnosis—**This allows for an authorization based on a specific condition being confirmed. Primary diagnosis can be included or excluded. An included diagnosis allows for a drug to be authorized for an appropriate use, while an excluded diagnosis prevents a PA from being created if it would be considered contraindicated. This allows for a specific daily dose based on diagnoses. A higher dose can be established for one disease state as compared to another. For example, rheumatoid arthritis and osteoarthritis are dosed differently, and the authorization is automatically created with the correct quantity being approved.
- **Secondary diagnosis—**This allows for an authorization based on a specific condition being confirmed. A secondary diagnosis can be included or excluded; an included diagnosis allows for a drug to be authorized for an appropriate use, while an excluded diagnosis prevents a PA from being created if it would be considered contraindicated. This allows for a specific daily dose based on diagnoses.
- **Full taxonomy/specialty—**This establishes the PA solely based on the practitioner specialty generating the prescription. This allows for special consideration to be given to a particular taxonomy. For example, for a 5HT3, if the recipient does not have a cancer diagnosis but the script is written by a provider with a taxonomy of hematologist or oncologist, the claim can be given special consideration, and a PA is established on the assumption that the recipient has a cancer diagnosis.
- **First/second line drug therapy—**This creates an authorization based on previous drug history. It can be included or excluded. Inclusion may be used for a step-therapy type of PA. For example, criteria for authorization

of COXIIs require previous use of two different NSAIDS. DUR+ allows for inclusion of a GC3 and can count two different GCNs out of the GC3 within a specified time period. Exclusion may be used for a situation where concurrent use of a particular type of drug may be contraindicated with the DUR+ drug. For example, the DUR+ may be for CNS stimulants. It is not necessarily appropriate for a recipient to also receive a CNS depressant. With exclusion, the CNS depressant GC3 can be excluded as first or second line drug therapy. Step therapy can be set to look at a policy-specific number of days in history. The system-generated PA is based on number of units per day (dose ratio) and duration days.

- **Co-morbid diagnosis—**This allows for specificity to the dose and consideration of a co-morbid condition. It can be included or excluded. For example, with the COXIIs, it may be included if the recipient has a diagnosis of gastric hemorrhage and the required first line drug therapy of NSAIDS would be contraindicated. Or, it may be excluded if the request is for a CNS stimulant and the recipient has a history of drug abuse.
- **Linking—**This allows for multiple criteria to be considered before granting an authorization. This flexibility allows for parameters such as age and step therapy to be combined before establishing an authorization. There is no limit of combinations that can be used.

The breadth of these criteria gives the State precise control over which PA approvals can be automated and which should be reviewed manually by a pharmacy professional.

The following table, DUR+ Criteria Evaluation Logic, lists the specific steps that the DUR+ system follows, the criteria evaluated at that step, and the outcomes of that evaluation for each step. These outcomes determine if the claim being processed qualifies for a DUR+ system-generated PA. Each of these PA criteria steps produces a different PA reason so the reviewers can tell instantly which criteria was matched to generate the PA.

This table indicates the following conditions and outcomes for each step:

- Condition tested (Step)
- Action taken if there is no criteria for this specific step (No Criteria)
- Action or outcome if the claim and related data matched the Include criteria (Matched Include Criteria)
- Action or outcome if the claim and related data did not match the Include criteria (Did Not Match Include Criteria)
- Action or outcome if the claim and related data matched the Exclude criteria (Matched Exclude Criteria)

DUR+ Criteria Evaluation Logic

Step	No Criteria	Matched Include Criteria	Did Not Match Include Criteria	Matched Exclude Criteria
Grandfather PA	Go to Min/Max Age Check	Create Grandfather PA if Link Indicator is set to No. If Link Indicator is set to Yes, the process checks the next criteria.	Go to Min/Max Age Check unless the Link Indicator is set to Yes. If Link Indicator is set to Yes, and this criteria did not match, the process stops and no PA is issued.	Not applicable
Min/Max Age Check	Go to Primary Diagnosis Check	Create Min/Max Age PA if Link Indicator is set to No. If Link Indicator is set to Yes, the process checks the next criteria.	Go to Primary Diagnosis Check unless Link Indicator is set to Yes. If Link Indicator is set to Yes, and this criteria did not match, the process stops and no PA is issued.	Not applicable
Primary Diagnosis	Go to Secondary Diagnosis Check	Create Primary Diagnosis PA if Link Indicator is set to No. If Link Indicator is set to Yes, the process checks the next criteria.	Go to Secondary Diagnosis Check unless Link Indicator is set to Yes. If Link Indicator is set to Yes, and this criteria did not match, the process stops and no PA is issued.	Not applicable
Secondary Diagnosis	Go to 1st Line Drug	Create Secondary Diagnosis PA if Link Indicator is set to No. If Link Indicator is set to Yes, the process checks the next criteria.	Go to 1st Line Drug unless Link Indicator is set to Yes. If Link Indicator is set to Yes, and this criteria did not match, the process stops and no PA is issued.	Not applicable
1st Line	Go to 2nd Line Check	Create 1st Line Drug PA if Link Indicator is set to No. If Link Indicator is set to Yes, the process checks the next criteria.	Go to 2nd Line Check unless the Link Indicator is set to Yes. If Link Indicator is set to Yes, and this criteria did not match, the process stops and no PA is issued.	No PA; quit
2nd Line	Go to Co-Morbid Check	Create 2nd Line Drug PA if Link Indicator is set to No. If Link Indicator is set to Yes, the process checks the next criteria.	Go to Co-Morbid Check unless Link Indicator is set to Yes. If Link Indicator is set to Yes, and this criteria did not match, the process stops and no PA is issued.	No PA; quit
Co-Morbid	Go to Taxonomy Check	Create Co-Morbid PA if Link Indicator is set to No. If Link Indicator is set to Yes, the process checks the next criteria.	Go to Taxonomy Check unless Link Indicator is set to Yes. If Link Indicator is set to Yes, and this criteria did not match, the process stops and no PA is issued.	No PA; quit
Taxonomy	Go to next DUR+ record	Create Taxonomy PA.	Go to next DUR+ record.	Not applicable

By using this configurable business logic, pharmacy PA clerks will not spend time "rubber-stamping" PA requests that the system can determine meet the appropriate criterion. They can use their time more productively working with physicians and pharmacists where the conditions fall outside of the defined parameters.

Effect on Claims Processing

The Replacement MMIS will allow authorized staff to determine the conditions where a service must have PA before it will pay. These services can be defined either through the use of benefit program administration (BPA) rules for individual services or through the use of audits for program limits, step therapy, or service contraindication. By using PA, providers can bypass the specific edits or audits that would otherwise prevent payment for services provided.

The provider does not need to supply the PA number on the claim during submission. The Replacement MMIS will use appropriate matching logic based on provider, recipient, service date, and services authorized to determine if there is a valid PA on file. PA approvals also can be payer-specific, allowing, for example, a PA to cover a DMH service but not a DMA service. Assuming there is a match, the system will bypass that edit or audit. If the claim remains in a payable condition, the PA will be associated with that specific claim, and the number of allowed units or dollars will be compared to the billed units or dollars. If the available PA units or dollars are less than billed, the system will either cut back the units or dollars with an appropriate explanation of benefits (EOB) or deny the service. The choice to cut back or deny is configured by selecting a check box at the individual edit or audit level.

Managing the PAs

The Replacement MMIS PA system gives authorized users the ability to change the services that require PA. It also gives users the following capabilities to research, document, and manage the existing PAs when they are supporting the PA business process:

- The State can revise the types of services (typically at the service code or benefit plan levels) for which PA is required. This is done through the interChangeRules rule-authoring process, where PA requirements can be set at nearly any level, from "All DME Service" to a specific procedure code for a motorized wheelchair.
- A specific PA will control the amount and length of time the State pays for a specific service for a specific recipient. interChange displays the list of claims that have used a portion of a PA and will present a running total of the remaining units or dollars related to that PA line item.
- The Replacement MMIS will provide the capability to change, at any time, the scope of services authorized and to extend or limit the effective dates

of authorizations. Multiple agencies can establish program-specific service authorizations.

- Online audit trails will capture changes made to PA data records by user ID and date and time stamp for future research and reference.
- The Replacement MMIS will enable reviewer notes entered online to be sent to a provider or recipient with the PA notice.
- The Replacement MMIS will support the identification of the status of PAs, including pending, approved, denied, and utilized, and allow searches of PAs based on their status.
- The Replacement MMIS will integrate the K2 workflow engine to enable management of the PA review processes to enforce consistency of reviews and balance the workload of reviewers.

Approach to Customization and Modifications

To meet the State's requirements for streamlined PA processing, we will integrate the following COTS products into the Replacement MMIS PA process:

- BizTalk 2006 for file integration and data transformation of batch files
- InRule for business rule authoring and execution
- K2 workflow engine for workflow and business process management

These products are described in detail in proposal section 50.2.4.1.1 Overview of System Solution and Solution for DDI.

BizTalk 2006 will provide the data integration and translation services for the PA files coming from the State-contracted PA vendors or PASARR vendors. The file integration, validation, and transformation capabilities will bridge disparate layouts from external vendors to quickly translate proprietary file formats into a consistent, usable record for continued processing. BizTalk 2006 will log the presence and processing of the files and perform configured data validation, including required fields, valid values, or valid format editing.

On completion of the transformation and translation of the data, it can provide an electronic notification, including e-mail, if desired, that the file has been received and processed. This notification can include the date and time the file was received, date and time processed, number of transactions received, number of transactions processed, number of transactions updated, and number of transaction errors, listing each error transaction and error reason.

InRule will provide a method for the authoring, management, and verification of application decision logic that involves rules, calculations, and user interfaces. InRule's declarative development approach captures business intent by allowing users to encode rules without the overhead of custom programming, which results in adaptive business processes. This process will use the effort EDS is already performing for DMA related to the uniform screening project in defining the appropriate PA program to assign based on a rules-determined level of care. The existing project can help jump-start the analysis and definition of the PA business rules to be configured in the Replacement MMIS.

We will combine the existing CMS-certified features of interChange with the rule-processing capability of the InRule rules engine and the K2 workflow engine. The combination of these products will result in North Carolina having one of the most robust PA functions of any state healthcare agency in the country.

The K2 workflow engine will enable the definition, routing, and monitoring of workflow processes and work queues based on defined business criteria and limits.

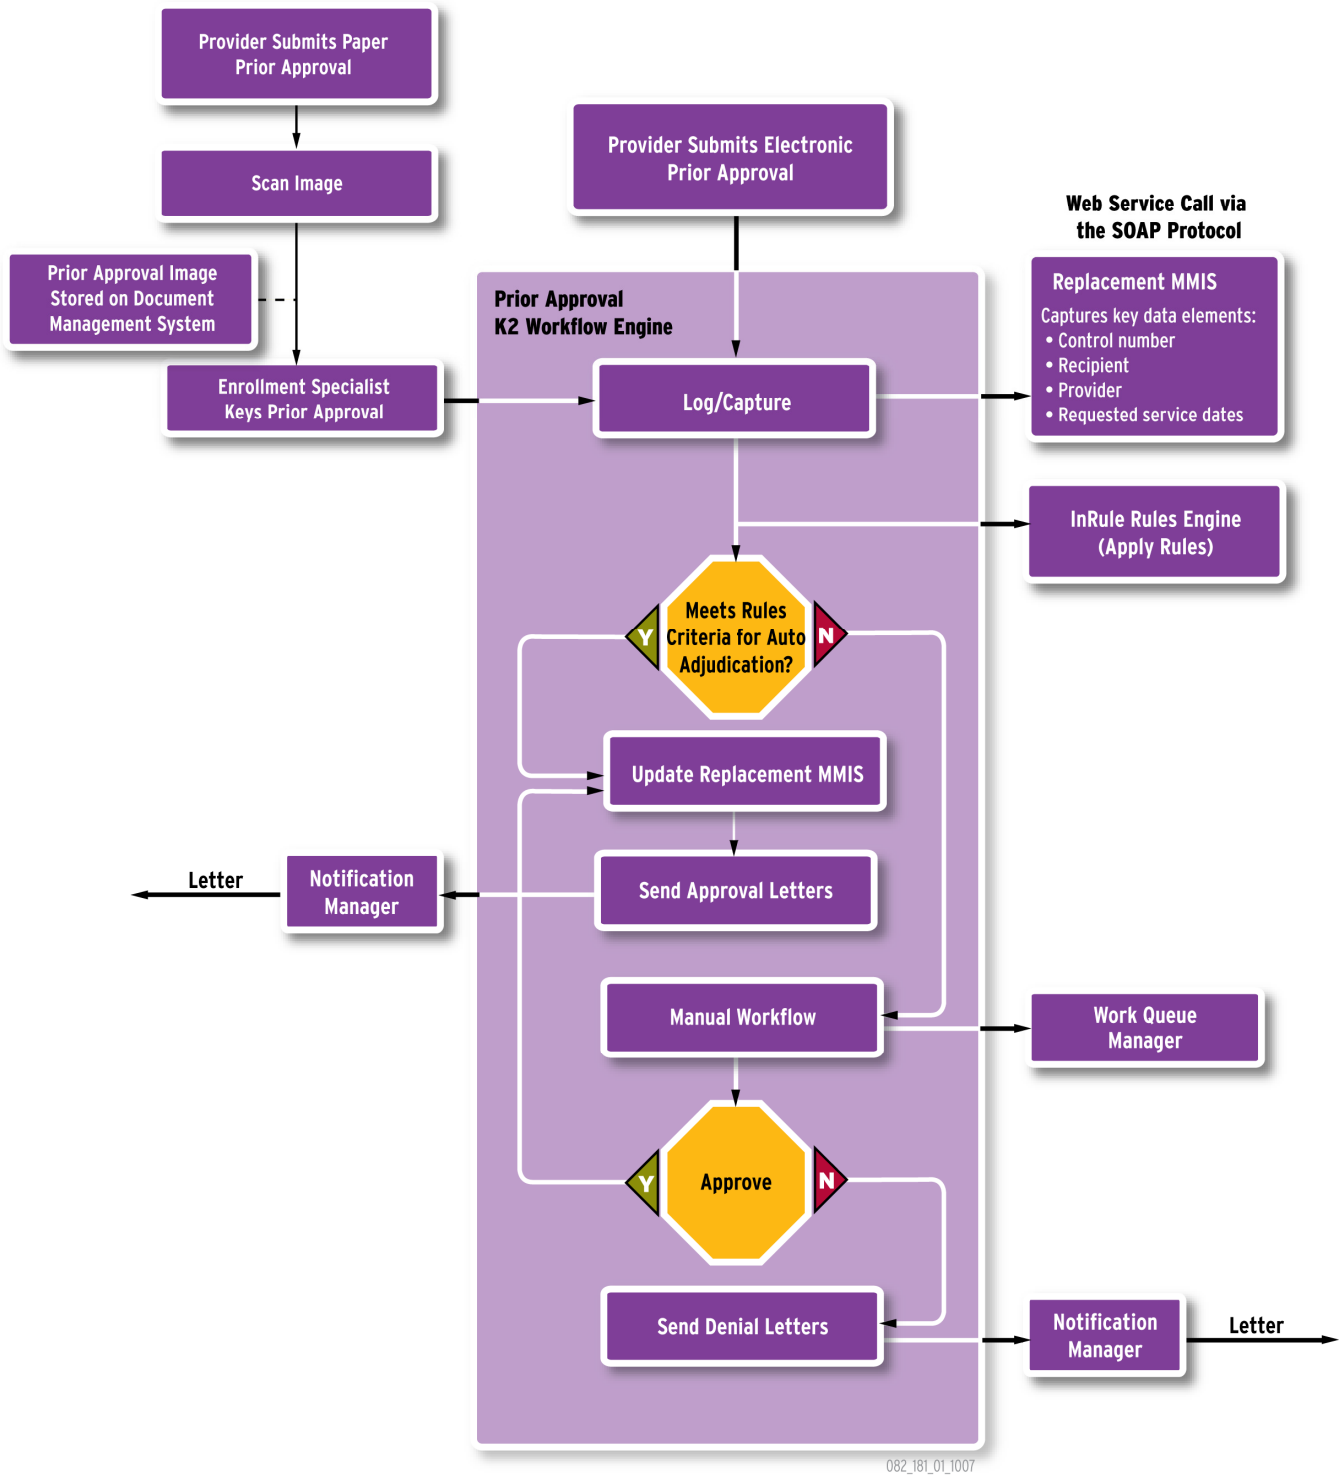
For the Replacement MMIS, we will combine the existing CMS-certified features of interChange with the rule-processing capability of the InRule rules engine and the K2 workflow engine. The combination of these products will result in the State having one of the most robust PA functions of any Medicaid agency in the country.

We will use automated workflow systems to route, review, adjudicate, track, and update PA and override requests and amendments. The K2 workflow engine will route electronic PA requests to the appropriate person immediately on receipt.

Each PA request also will be subjected to the rules defined by the InRule rules engine to further automate the decision-making process. Our solution will provide an automated tracking system for receiving, collecting, transmitting, and assigning PA and override requests to analysts for review. Service requests can be received as paper or electronic documents. Paper PAs will be scanned into the system and made available to analysts at their desktops through hypertext links.

The following exhibit, Workflow and Rules Engine Integration, shows how the K2 workflow engine and the InRule rules engine will be integrated into the Replacement MMIS.

Workflow and Rules Engine Integration



Using an automated workflow system, the Replacement MMIS will provide a system for routing, reviewing, adjudicating, tracking, and updating service authorization requests and amendments.

The request will be routed according to the workflow established for each of these transactions. For example, for electronic receipts, the workflow will immediately register the request and log it within the Replacement MMIS. PAs will be processed through the InRule engine, which will contain a repository of rules associated with PA processing. Before the transaction is assigned to a specialist, it will be processed against a defined rule set. For example, most of the referral requests will be auto-approved by the InRule process. If the PA can be systematically adjudicated according to predefined rules, the K2 workflow engine will update the Replacement MMIS with the approval or denial and call the notification service so the appropriate approval or denial letters can be generated. These letters will contain PHI, so they will be treated as secure documents.

PA requests that are not auto-adjudicated will be assigned to the appropriate staff or authorizing agency based on the rules and criteria of the automated workflow process. A work list will direct the specialist's actions by listing PAs that require attention or review. For example, a dental PA request would be immediately routed to an available dental specialist.

Using the proposed EDS solution, PA, override, and referral request forms will be imaged and made available for viewing in the Replacement MMIS. These imaged files, including notes or even scans of medical photographs, will be accessible by hypertext link from the PA pages. To maintain proactive control over PA receipt, each page of the request will be imaged on receipt in the mail room, and the electronic image will be routed through the electronic workflow process to the appropriate staff.

Enhancements to Functional Requirements

Besides integration of the COTS products previously described to extend the functionality of the PA system, we will enhance the current capabilities of interChange to meet the specific requirements set forth in this RFP. We will add the following functionality to interChange:

- Accept, inquire on, update, utilize, and report on referral requests from providers, including allowing submittal and inquiry along each of the other PA pathways such as the Web portal, EDI, and AVRS
- Accept PA, override, and referral requests through the AVRS
- Provide the capability to manage and adjudicate PA requests for individuals who are not currently on the recipient file
- Provide the capability to encumber funds associated with approved PAs
- Provide the capability to establish variable recipient copayment percentages on a PA
- Enhance the reporting capability to meet the specified needs of the State

- Enhance the pharmacy PA capabilities to use the additional fields of GCN, American Hospital Formulary Service (AHFS), therapeutic class, or other specified FDB-selected data element
- Enhance the PA system to use and search by category of service or override number
- Provide the capability to tie the date of delivery to the PA logic for Medicaid for Pregnant Women (MPW)
- Make available to a provider the last 25 unique referred provider IDs and provider names used during the submission of referrals by Web entry
- Provide the capability for online searchable tracking of therapeutic leave in child care facilities, nursing facilities, and intermediate care facilities for the mentally retarded
- Provide additional search capabilities for covered drugs

Response to Prior Approval System Requirements

EDS has performed a detailed review of the requirements of the RFP and compared them to the capabilities of interChange. By combining the current PA capabilities of interChange with the COTS BizTalk 2006, InRule, the K2 workflow engine and custom code, EDS will implement a PA system that meets the State's requirements.

The following tables map the general, customer service center, therapeutic leave, and pharmacy benefits management PA requirements to our solution. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

General PA System Requirements

The following table, EDS Response to General PA System Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General PA System Requirements

RFP No.	RFP Requirement	EDS Response
40.7.1.1	Provides capability to receive and adjudicate prior approval requests and adjustments	Met by interChange. The PA panels (whole subsystem), EDI 278, Web portal, and batch file transfers allow PA information to be received and processed. Corrections, medical reviews, and appeals are supported to modify the PAs. Claims processing and adjustment capabilities either add or subtract from any limits on units or dollars as appropriate.
40.7.1.2	Provides capability to integrate prior approval	Met by interChange. Claims processing accesses PA tables

RFP No.	RFP Requirement	EDS Response
	functionality for all applicable claims and benefit plans (services and drugs)	to determine if PA is available as needed. If a claim uses PA to process, the claim is linked to that PA number and can be viewed from the PA panels. For pharmacy-related processing, the DUR+ system can actually generate a PA according to predefined rules as appropriate.
40.7.1.3	Provides capability for secure electronic submissions of adjudicated Prior Approval data from State-contracted Prior Approval vendors	Met by interChange, with a portion of the requirement requiring customization code. interChange can receive batch files of PA information and process and store the data on the PA tables. EDS will configure the BizTalk 2006 data integration server to meet the specific proprietary formats of the State and incorporate the specific required business rules.
40.7.1.4	Provides capability for receipt and response of prior approval and referral requests and adjustments via a secure electronic transmission medium, such as AVRS/IVR, Web, ASC X12 278 transactions, and/or NCPDP	Met by interChange, with a portion of the requirement requiring customization code. interChange currently accepts and processes PAs from the Web, ASC X12 278 transactions, and NCPDP transactions. It will be expanded to accept PAs from a 278 content—compliant AVRS/IVR system.
40.7.1.5	Provides capability to receive and manage prior approval, override, and referral requests via telephone, mail, and fax	Met by interChange, with a portion of the requirement requiring customization code. interChange can receive and manage PA and override requests by telephone, mail, and fax. It will be enhanced to receive and manage referral requests in the same manner.
40.7.1.6	Provides capability to create and maintain electronic copies of all prior approval, override, and referral requests and all supporting documentation, including medical photographs	Met through COTS integration. The EMC | Documentum electronic document management system (EDMS) allows for the storage, retrieval, and presentation of a large number of media formats, including medical photographs.
40.7.1.7	Provides capability to electronically link supporting documentation to prior approval, override, and referral request for on-demand online retrieval by staff	Met through COTS integration. Documentum allows for the storage, retrieval, and presentation of a large number of media formats. The PA subsystem will be customized to associate the specific documents, such as attachments and supporting documentation, with the PAs and present them through the online panels.
40.7.1.8	Provides capability for real-time, online prior approval and referral adjudication and notification of response via secure electronic transmission medium, such as AVRS/IVR, Web, ASC X12 278 transactions, and/or NCPDP	Met by interChange, with a portion of the requirement requiring customization code. interChange supports real-time PA adjudication and notification for Web and NCPDP content and near—real-time adjudication for ASCX12 278 transactions. The system will be enhanced to process PA requests through AVRS/IVR in real time and process referral requests through these media formats.
40.7.1.9	Provides capability to review online claims and stored electronic health information	Met by interChange. The Claims Inquiry panel within PA links the specific claims associated with a PA and shows the units and dollars used by each claim against the PA. Clicking on the ICN opens the entire claim detail.
40.7.1.10	Provides capability for automated screening of drug	Met by interChange, with a portion of the requirement

RFP No.	RFP Requirement	EDS Response
	claims to ensure that evidenced-based, drug-specific criteria are met for pharmacy claims, medical claims data (ICD-9/ICD-10, revenue, and CPT codes), laboratory data, and eligibility data	requiring customization code. The DUR+ system currently uses evidence-based, drug-specific criteria using pharmacy claims, medical and UB claims, ICD-9 diagnosis codes, and eligibility data. It will be modified to include laboratory data and revenue codes for the State and to use ICD-10 data if it becomes available.
40.7.1.11	Provides capability for entry, inquiry, updates, and reporting for prior approvals, overrides, and referrals	Met by interChange, with a portion of the requirement requiring customization code. The PA system supports entry, inquiry, updates, and reporting for PAs and overrides. The system will be enhanced to handle referrals.
40.7.1.12**	Provides capability to manage and adjudicate prior approval requests for individuals who are not currently on the Recipient File	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to suspend a PA request if the recipient ID requested is not on file. That PA request could be reprocessed after a State-determined time frame. The status of the PA request could be set to Approved if the recipient became enrolled, or Denied if the recipient was not eligible within a specified time frame.
40.7.1.13	Provides capability for entry and adjudication of prior approval request by LOB	Met by interChange. The PA Type panel allows for account-defined groupings of PA categories such as lines of business. Additionally, there are funding codes available to differentiate the different programs that would be funding the PA request.
40.7.1.14	Provides capability for online, real-time update and adjudication of prior approval requests by State and State Prior Approval contractors	Met by interChange. The PA system fully supports online, real-time update and adjudication of PA requests by the State and the State's PA contractors with appropriate security credentials.
40.7.1.15	Provides capability for interface with State-contracted Prior Approval vendors to accept adjudicated prior approvals	Met through COTS integration. The BizTalk 2006 integration layer allows for the simple configuration of file sharing and transformation. Preapproved PA requests can simply be stored within the PA tables. Those needing to be adjudicated against State-defined business rules can have the transactions processed through the InRule business logic prior to writing to the PA tables.
40.7.1.16	Provides capability for interface with the contracted Pre-Admission, Screening, and Annual Resident Review (PASARR) Vendor and retain PASARR number and associated start/end dates	Met through COTS integration. The BizTalk 2006 integration layer allows for the simple configuration of file sharing and transformation. Preapproved PASARR requests can simply be stored within the PA tables. Those needing to be adjudicated against State-defined business rules can have the transactions processed through the InRule business logic prior to writing to the PA tables.
40.7.1.17	Provides capability to retain the relationship of recipient-based hospice information (recipient, diagnosis, provider, and coverage dates)	Met by interChange, with a portion of the requirement requiring customization code. The Recipient Level of Care panel contains this information with the exception of the

RFP No.	RFP Requirement	EDS Response
		diagnosis, although it does include a reason for the level of care. This will be enhanced to include the diagnosis code.
40.7.1.18	Provides capability for a secure online entry of overrides and referrals	Met by interChange. The PA function's application security has panel-level and even field-level security that restricts access to enter or update information into interChange.
40.7.1.19	Provides capability to enter comments (free-form text) within a prior approval, referral, or override	Met by interChange. The Internal Text panel allows entry of notes at the PA or line item level, tracking who and when the notes were written. Additionally, interChange supports external text, which allows notes or instructions unique to this PA to be presented to the provider through the PA notification letter or the Web site.
40.7.1.20	Provides capability for online inquiry, data entry, and update access for prior approval, referral, and override requests 6:00 A.M. until 11:00 P.M. Eastern Time Monday through Friday and 7:00 A.M. to 7:00 P.M. on Saturday and Sunday	Met by interChange and operational processes and procedures.
40.7.1.21	Provides capability for tracking prior approval date of receipt, date of decision, denial/reduction in service reason, and decision notification date	Met by interChange. The PA Information panel includes the date of receipt, the date keyed, the review date, the date mailed, the date an update was received, the date the update was reviewed, and any decisions, reasons, and status.
40.7.1.22	Provides capability for tracking override date and time of receipt and date decision was rendered	Met by interChange. The PA Administrative Review panel displays the date received and date mailed for administrative reviews. The Appeal panel displays the date received, appeal date, mail date, and dismiss date.
40.7.1.23	Provides capability to generate Prior Approval statistical processing report detailing contracted Prior Approval vendors' submissions that indicates the date and time file received, date and time processed, number of transactions received, number of transactions processed, number of transactions updated, and number of transaction errors, listing each error transaction and error reason	Met by interChange, with a portion of the requirement requiring customization code. interChange will accept the batch PA files from the State's vendors through the data integration capabilities of BizTalk 2006. The data transformation capabilities and customizable business logic inherent in BizTalk will be used to generate the necessary operational processing reports.
40.7.1.24	Provides capability to ensure each keyed prior approval, referral, and override by Fiscal Agent, State agency, or vendor has complete audit trail	Met by interChange. Every update to the database table triggers an audit record to be generated, which is viewable online through the PA Audit Table panels.
40.7.1.25	Provides capability to enter prior approval, referral, and override services and limitations	Met by interChange, with a portion of the requirement requiring customization code. The interChange PA and claims processing system allows analysts to enter services and limitation constraints that would require PA and override requests. It will be enhanced to process referral requests similarly.
40.7.1.26	Provides capability to retain prior approvals for each	Met by interChange. The system will be sized appropriately

RFP No.	RFP Requirement	EDS Response
	State program's recipients for five (5) years from last occurrence online and an additional five (5) years near-line; provides capability to maintain all usage by recipient for those benefits that are considered to be periodical or lifetime	to store the PA data online for the expected life of this contract.
40.7.1.27	Provides capability to retain overrides and referrals for each recipient for five (5) years from last occurrence online and an additional five (5) years near-line	Met by interChange. The system will be sized appropriately to store the override and referral data online for the expected life of this contract.
40.7.1.28	Provides capability to assign system-generated unique prior approval, referral, and override numbers to approved, pended, and denied requests	Met by interChange. Each PA, referral, and override request written to the database will be given a unique number, which will never change. This is available through the PA Informational panel.
40.7.1.29**	Provides capability to encumber funds associated with approved prior approval/authorizations	Met by interChange, with a portion of the requirement requiring customization code. EDS will modify the system to provide the capability to encumber funds associated with approved prior approval/authorizations.
40.7.1.30**	Provides capability to establish variable recipient co-pay percentages on a prior approval	Met by interChange, with a portion of the requirement requiring customization code. interChange provides the capability to define and apply variable copayment rules based on benefit plan. We will modify this capability slightly if needed to meet the requirements of the RFP.
40.7.1.31	Provides capability for incrementing approved units, Prior Approval pricing amounts, and frequencies of authorizations resulting from adjusted claims and voided claims or fully refunded claims back to the Prior Approval data	Met by interChange. The PA and claims adjudication process work together to automatically credit back any PA units or dollars for any claim that is adjusted, voided, or fully refunded. This is done through the claims list, which relates the claims associated to a given PA. When that claim is adjusted, it is backed out of the PA, and the replacement claim, if there is one, will again use those units and dollars.
40.7.1.32	Provides capability for decrementing approved units, Prior Approval pricing amounts, and frequencies of authorizations of services reimbursed from paid claims, adjusted claims, and fully refunded claims to Prior Approval data until all services are used up or zero units remaining within approved timeframe in which time closure of prior approval should occur	Met by interChange. This is exactly how interChange works. Each new claim that uses some or all of a PA to adjudicate is associated with that PA and will decrement the number of available dollars and units. If the claim is backed out, as through an adjustment, the value is returned. After the available units or dollars reach zero or the claim is outside the approved time frame, that PA will not be used to authorize additional payment.
40.7.1.33	Provides capability to generate letters of notification for approved, denied, reduced, or pended prior approval requests	Met by interChange. The Letter Generator triggers PA notices to be produced based on a number of conditions, including approved, denied, reduced, or pended PA requests. These letters include both standard and free-form text and incorporate variables such as provider, recipient, or referring provider information directly from the PA request.
40.7.1.34	Provides capability for automated denial of prior	Met through COTS integration. The criteria used to automate

RFP No.	RFP Requirement	EDS Response
	approval and referral requests for providers who are determined to be on suspension or under review	many approval or denial decisions will be incorporated into the InRule rules engine. PA requests that meet defined criteria will be adjudicated immediately. Those that do not meet specific criteria or where the rule decision is defined to suspend will be included in the workflow of the PA analysts for human review and action.
40.7.1.35	Provides capability to request prior approval recipient profiles by name, recipient ID number, specific or range of time from five-year (5-year) Prior Approval history online; near-line five (5) years and lifetime procedures in State-approved format	Met by interChange, with a portion of the requirement requiring customization code. EDS will build a customized report with the Business Intelligence and Analytical Reporting (BIAR) capabilities to meet this requirement.
40.7.1.36	Provides capability to apply Prior Approval logic by LOB, benefit, and recipient eligibility category	Met by interChange. interChange has various methods to indicate if a PA is required for a service, including the benefit program administration rules process and the audit process. Each of these can be used to apply PA logic by line of business, benefit, or recipient eligibility category.
40.7.1.37	Provides capability for online, updateable letter templates to all prior approval letters with the ability to add free-form text specific to a provider or recipient	Met by interChange. The integrated COTS Letter Generator provides configurable online, updatable letter templates with the ability to incorporate fixed, variable, and free-form text. The business rules that trigger which of these letter templates to use also are configurable.

Prior Approval Customer Service Center Requirements

The following table, EDS Response to Prior Approval Customer Service Center Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Prior Approval Customer Service Center Requirements

RFP No.	RFP Requirement	EDS Response
40.7.1.38	Provides capability to support inquiries regarding prior approval, referrals and overrides from physicians, pharmacists, recipients, and other health care professionals	Met by interChange. interChange supports PA inquiries using HIPAA-compliant standards from the secure Provider Web Portal through an ASC X12 278 transaction or by telephone.
40.7.1.39	Provides capability to generate a prior approval to limit drug claims for a specific NDC, GCN, GCN-Sequence, GC3 therapeutic class, American Hospital Formulary Service (AHFS) therapeutic class, or any other State-determined FDB-selected data element	Met by interChange, with a portion of the requirement requiring customization code. The interChange DUR+ system can automatically generate PAs based on business rules and claims data. Currently, the logic supports age, primary diagnosis, secondary diagnosis (for disease states), taxonomy of the prescriber, NDC, GCN-Sequence or GC3. It will be expanded to include the GCN and AHFS therapeutic class or the specific FDB data elements determined during requirements validation.

RFP No.	RFP Requirement	EDS Response
40.7.1.40	Provides capability to change services authorized and to extend or limit the effective dates of the authorization while maintaining the original and the change data on the prior approval, referral, or override	Met by interChange. The PA Line Item panels allow updates to services or dates, which is sometimes triggered by a medical review or an appeal. The audit trail holds a history of the prior values. New letters can be triggered for changed services to either the provider or recipient, or both.
40.7.1.41	Provides capability to search prior approval and overrides by service type, name of provider (issuing and authorized), provider number, name of recipient, recipient number, prior approval and override number, category of service, clerk identification, effective dates, prior approval type, diagnosis, HCPCS, or revenue code and any combinations thereof	Met by interChange, with a portion of the requirement requiring customization code. interChange allows for PA searches based on the following fields in combination: PA number, recipient ID, recipient name, provider ID or name, service provider ID or name, analyst, reviewer, diagnosis, revenue code, HCPCS code, NDC, authorization effective date, authorization end date, or PA status. The PA system will be modified to store category of service and override number, which will be added to the search capability.
40.7.1.42	Provides capability to search referrals by recipient ID, referring provider ID, referred provider ID, and referral number	Met by interChange, with a portion of the requirement requiring customization code. interChange will be modified to search for referrals based on recipient ID, referring provider ID, referred provider ID, and referral number.
40.7.1.43	Provides capability to validate the need for prior approvals based upon NDC, GCN, GCN-Sequence, GC3 therapeutic class, AHFS therapeutic class, or any other State-determined FDB-selected data element	Met by interChange, with a portion of the requirement requiring customization code. The interChange BPA rules can be written using various FDB fields as the criteria. Any of these could be used to determine that a PA is required to authorize a service for a given benefit plan.
40.7.1.44	Provides capability to dispense a seventy-two-hour (72-hour) supply of drugs without prior approval in emergency situations	Met by interChange. interChange uses logic including the emergency indicator on the claim and a day's supply of three or less to bypass PA requirements.
40.7.1.45	Provides capability to tie in the date of delivery to the Prior Approval logic for Medicaid for Pregnant Women (MPW) (actually requiring prior approval for anything but postpartum care after the date of delivery)	Met by interChange, with a portion of the requirement requiring customization code. EDS will customize the PA process to include logic using the date of delivery for pregnant women for services prior to the delivery date.
40.7.1.46	Provides capability for inquiry and update of prior approval, overrides, and referrals reason/exception codes and descriptions	Met by interChange. The PA Reason panel provides the ability to inquire, update, or add reason and exception codes and descriptions.
40.7.1.47	Provides capability to edit DME prior approvals online to include: Valid provider identification and eligibility, including other payers and place of residence Valid recipient age for service Duplicate approval check for previously authorized or previously adjudicated services, including the same service over the same timeframe by different providers	Met through COTS integration. EDS will use InRule to define the business rules and compliance checks needed for the authorization of new PA requests. Those rules can use additional data and perform the necessary evaluations. If a business rule to approve or deny is found, that PA status will be assigned; otherwise, the PA request will be sent to an appropriate work queue for human review.
40.7.1.48	Provides capability to maintain multiple referral types	Met by interChange, with a portion of the requirement requiring customization code. EDS will work with the State to

RFP No.	RFP Requirement	EDS Response
		fully define this requirement and build an appropriate solution for multiple referral types in the PA process.
40.7.1.49	Provides capability for data validation and duplicate prior approval, referral, and override editing	Met by interChange, with a portion of the requirement requiring customization code. interChange performs a significant number of data validations and integrity checks before a PA is allowed to be saved to the system. Those validity checks occur at the entry points (batch file transfer, EDI compliance, Web portal, online panel) to prevent invalid or incomplete data from being applied. EDS will develop appropriate InRule logic to prevent duplicate PAs from being allowed.
40.71.50	Provides capability for authorized users to search for a provider number for purposes of authorizing a referral	Met by interChange. The PA Base panel has search capability for the provider or recipient numbers to assist the analyst in getting the right codes for the PA. This capability will be extended to referrals that will use the same online pages.
40.7.1.51	Provides capability to make available to a provider, his/her last twenty-five (25) unique referred-to provider IDs and provider names used during the submission of referrals via Web entry	Met by interChange, with a portion of the requirement requiring customization code. EDS will build an additional panel, available through the Provider Web Portal, which will meet this need.
40.7.1.52	Provides capability to return to the provider, upon successful submission of a referral, a confirmation page in a readable PDF format	Met by interChange, with a portion of the requirement requiring customization code. The confirmation page of a PA submission through the Web will be made available in a printer-friendly PDF format.
40.7.1.53	Provides capability to allow the referring provider and the referred-to provider to inquire on referrals	Met by interChange, with a portion of the requirement requiring customization code. Currently the referring provider can inquire on PAs—and, by extension, referrals—through the Provider Web Portal. EDS will modify the security protocols for the Web to allow referred-to providers to inquire on PA referrals that they are a part of using a HIPAA-compliant inquiry.
40.7.1.54	Provides capability to produce a report that lists all open referrals not used within a specified period of time	Met by interChange, with a portion of the requirement requiring customization code. EDS will develop a standing report that can be run on a schedule to identify the open referrals not used within a specified period of time.
40.7.1.55	Provides capability for a monthly report that lists the total number of referrals processed within a given month, broken out by referral media type and referral type	Met by interChange, with a portion of the requirement requiring customization code. A new report will be generated to meet this requirement.
40.7.1.56	Provides capability for workflow imaging application, to enable automated processing and work queue functionality for prior approvals and overrides	Met through COTS integration. The K2 workflow engine will be integrated into the PA workflow to manage the work queues for PAs and overrides.

Searching and Tracking of Therapeutic Leave Requirement

The following table, EDS Response to Searching and Tracking of Therapeutic Leave Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Searching and Tracking of Therapeutic Leave Requirement

RFP No.	RFP Requirement	EDS Response
40.7.1.57	Provides capability for online searchable tracking of therapeutic leave in child care facilities, nursing facilities, and intermediate care facilities for the mentally retarded (ICF-MR) by patient identification number and number of days used per calendar year to State staff	Met by interChange, with a portion of the requirement requiring customization code. EDS will work with the State to more fully define this requirement and build an appropriate solution based on the associated claims data for the therapeutic leave occurrences.

Pharmacy Benefits Management Requirements

The following table, EDS Response to Pharmacy Benefits Management Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Pharmacy Benefits Management Requirements

RFP No.	RFP Requirement	EDS Response
40.7.1.58	Provides capability for workflow imaging and work queue functionality to ensure that prior approval requests are listed in each work queue based on first in, first out	Met through COTS integration. The K2 workflow engine will be integrated into the PA workflow to manage the work queues for PAs based on first-in, first-out or other defined prioritization schemes. The K2 workflow engine provides supervisors significant control in changing work queues throughout the day as needs change.
40.7.1.59	Provides capability to generate adjudicated prior approval appeal letters to recipients and providers when prior approval was denied or reduced	Met by interChange. The integrated COTS Letter Generator tool, DOC1, supports producing letters to recipients and providers in a number of predefined or on-demand circumstances, including when PAs are denied or reduced.
40.7.1.60	Provides capability to identify and capture recipient drug information where aberrant drug patterns have been identified	Met by interChange, with a portion of the requirement requiring customization code. We will develop a customized report in the interChange BIAR area to identify and report on recipients showing these patterns of activity.
40.7.1.61	Provides capability for providers to link to the DHHS Web site to obtain the current Prescription Advantage List (PAL) and other pharmacy-related information	Met by interChange, with a portion of the requirement requiring customization code. We will include a link to these sites, as required.
40.7.1.62	Provides capability to ensure verification of recipient eligibility, provider program participation, and third party coverage during adjudication of prior approvals	Met through COTS integration. We will use InRule to define the business rules and compliance checks needed for the authorization of new PA requests. Those rules can use recipient eligibility, provider program participation, or

RFP No.	RFP Requirement	EDS Response
		available TPL coverage to perform the necessary evaluations. If a business rule to approve or deny is found, that PA status will be assigned; otherwise, the PA request will be sent to an appropriate work queue for human review.
40.7.1.63	Provides a prior approval Web site (prior approval-enhanced pharmacy program Web site to include: Home page/Welcome page, What's New section, prior approval list/criteria, prior approval forms, authorization via e-mail, provider information, FAQs, Contact Us page, link to NC Medicaid Home page), and PAL, including upgrades to drug list, updates to criteria, EBM prescriber updates to clinical pearls, and updates to information for providers and recipients	Met by interChange, with a portion of the requirement requiring customization code. EDS will build custom Web pages to house this PA-specific information. This type of Web portal is similar to those we already host and will primarily include the gathering, publishing, and maintenance of current information related to the PA program. The framework for these types of pages is part of interChange. We will simply publish the requested information and links in a user-friendly fashion.
40.7.1.64	Provides for search capability of covered drugs by: • Effective, termination, or a range of dates • NDC. Generic name, brand name • HICL, HICL-Sequence, HICL code, GCN, GCN-Sequence, GNN, label name manufacturer, UPC, GC3, TxCL, AHF	Met by interChange, with a portion of the requirement requiring customization code. interChange allows search of the drug reference data by NDC, generic name, brand name, label name (all names include Soundex), or GCN-Sequence. Advanced sort criteria will be added to include HICL, HICL-Sequence, HICL code, GCN, GNN, UPC, GC3, TxCL, and AHF therapeutic class as well as effective and termination dates.

40.8.1 Claims Processing System Requirements

The rules-based, table-driven design and real-time processing for all claim types in the Replacement MMIS will provide unparalleled efficiency and flexibility for the support of the State's programs. State users will be able to quickly and easily change business rules and update tables that will immediately affect the way claims process.

State of North Carolina

Accurate and expedient claims processing is the heart of the interChange system. It provides the life blood to support the healthcare administration needs of North Carolina.

Our Replacement MMIS claims business process solution will provide strict enforcement of the capture, control, editing, and auditing of claims and encounter data from receipt to final disposition in accordance with State policies. The interChange application controls and processes encounter claims in the same manner as fee-for-service claims, except encounters do not generate payments. The rules-based, table-driven design and real-time processing for every claim type in interChange provides unparalleled efficiency and flexibility for the support of the State's programs. State users can quickly and easily change business rules and update tables that will immediately affect the way claims process. interChange is already processing more than 225 million claims and more than 100 million encounters annually across our existing five production installations.

The interChange claims engine provides real-time adjudication of every claim type, whether submitted electronically or on paper. Providers can access a secure Web site to submit any claim type for processing and receive an immediate, fully adjudicated response, including pricing. If they receive a denial due to an improperly billed claim, such as an invalid diagnosis code, they can copy the denied claim, correct it, and resubmit it through the Web in seconds. This capability will increase provider satisfaction as adjudication time decreases and they are able to check the status of a newly submitted claim in real time.

The objectives of the Replacement MMIS claims business process function include the following:

- Capture claims and encounters in a timely and accurate manner
- Monitor and track location and status of claim and encounter transactions, from receipt to data capture to final disposition
- Edit, audit, and price claims in real time according to established State policies, procedures, and benefit limitations
- Determine the appropriate payer of a service based on an established hierarchy of benefit plans

- Calculate the appropriate claim and detail reimbursement amount according to State payment methodologies
- Provide exact balancing of claims transactions

How the Claims Engine Works

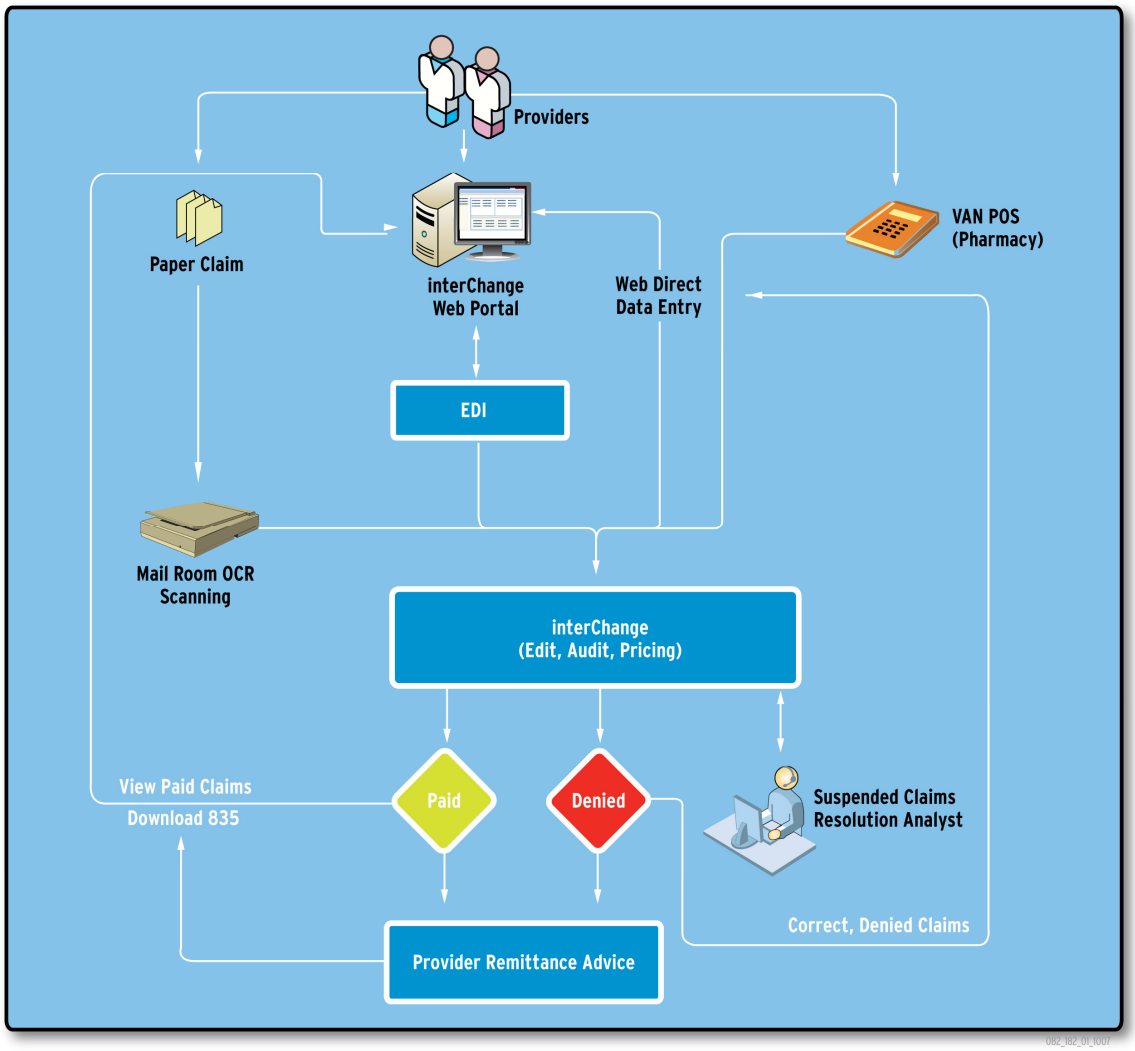
interChange processes claims through an interrelated and interactive series of events. In this section, we discuss these claims processing events as follows:

- Accepting claims
- Editing claims
- Pricing claims
- Auditing claims
- Assigning disposition
- Resolving suspended claims
- Determining payment
- Maintaining claim transaction history

Unlike other systems that only alert providers of the claim's intent, interChange fully adjudicates the claims to finalization in real time. It is not necessary to wait for a batch cycle to run. The transaction-based capabilities of the interChange claims system transform the way providers can interact with the MMIS, giving them direct access to claim submission and adjudication.

The following exhibit, Claims Flow Through interChange, illustrates how the claims process works.

Claims Flow Through interChange



Providers can submit claims by paper, POS, EDI, or Web. Similar claims are translated into a common format and processed by a single claim engine. Responses are returned based on the channel submitted, with the claims, including suspended claims, presented on the RA and available through the Web.

Accepting Claims

As shown in the previous exhibit, interChange accepts claims through a variety of media, including direct data entry submission through the Web portal, HIPAA-compliant electronic transactions, and entry of paper claims and pharmacy claims through VANs. Similar claim forms, such as medical claims or outpatient claims, are translated into consistent internal formats for processing, regardless of how they are received.

Editing Claims

Claims and encounters are subjected to system edits to validate compliance with State policies and medical criteria. Every claim is adjudicated to the fullest extent

possible, and the system design allows an unlimited number of edits posted. The system dispositions claims based on the error disposition rules.

During editing, interChange accesses data from the following MMIS functional areas to validate the claims data:

- Recipient
- Provider
- Coverage and pricing rules
- Reference for diagnosis and edit and audit disposition
- Prior approval (PA)
- Cost avoidance, including third-party liability (TPL)

If a claim or encounter passes through the editing function without an error, it is forwarded to the pricing function for initial pricing. The Replacement MMIS will post all possible errors for a claim during the initial processing. It will provide table-driven, online, real-time, customizable business rules that can be easily configured and adapted to accommodate changing business needs.

Pricing Claims

interChange is a versatile, dynamic system that can price claims according to multiple, distinct methodologies for different recipient populations. Multiple pricing and reimbursement methodologies are maintained to appropriately price claims according to the required specifications. The specific list of pricing methodologies available for a given recipient, provider, and service combination is configured through the reimbursement agreement rules using online panels. Claims will price using multiple, proven pricing methodologies to validate that each service is reimbursed accurately in full accordance with the payment policies established by the State.

Reimbursement rates, whether fee-for-service (FFS) or managed care, are maintained in online tables with date-specific price segments. This approach supports fast changes to pricing criteria and provider relationships because State-authorized staff can make immediate changes to table-driven pricing data, rather than waiting for technical personnel to implement the change. Depending on the pricing methodology used, the system matches the claim service date to the appropriate segment from the provider rate, fee schedule, or managed care payment tables. This method allows services to be reimbursed at the price in effect on the day the service was rendered.

interChange is driven by user-updateable tables, such as fee schedules and provider-specific rate tables, as well as recipient cost-sharing tables such as patient liability and spend-down and TPL tables. These tables provide the claims adjudication system with the data necessary for calculating the appropriate claim and detail payment for each service according to the rules and limitations applicable to each claim type, category of service, and type of provider.

To accurately price claims and encounters, the pricing function of interChange accommodates deductions to the calculated allowed amount, including payments from other insurance carriers (TPL amounts), recipient cost share such as spend-down and copayments, and Medicare paid amounts.

Auditing Claims

After claims editing and initial pricing is determined, the system performs duplicate, relationship, contraindicated, step, and limitation audits to validate compliance to State policies and medical criteria.

The Replacement MMIS will audit claims against defined service, policy, and payment parameters in accordance with the North Carolina Medicaid plan and established state and federal guidelines. interChange supports audit processing with a user-driven, rules-based table structure that contains the criteria for audits. Trained and authorized users define customized audits online through a series of audit criteria pages. Then, interChange performs automated audit processing on claim records using paid history claim records and week-to-date claim records across provider and claim types. We will extend the code to also consider suspended claims.

Assigning Disposition

Based on the results of claims editing, auditing, and claim dispositioning, a claim is paid, denied, or suspended for further review and processing. Paid and denied claims are forwarded to the financial function for processing in the financial cycle. As shown in the previous exhibit, Claims Flow Through interChange, claims suspended for further review and processing go to claims resolution specialists or medical review. These claims are available for immediate viewing by authorized users through interChange and by the billing providers through the Web portal.

Resolving Suspended Claims

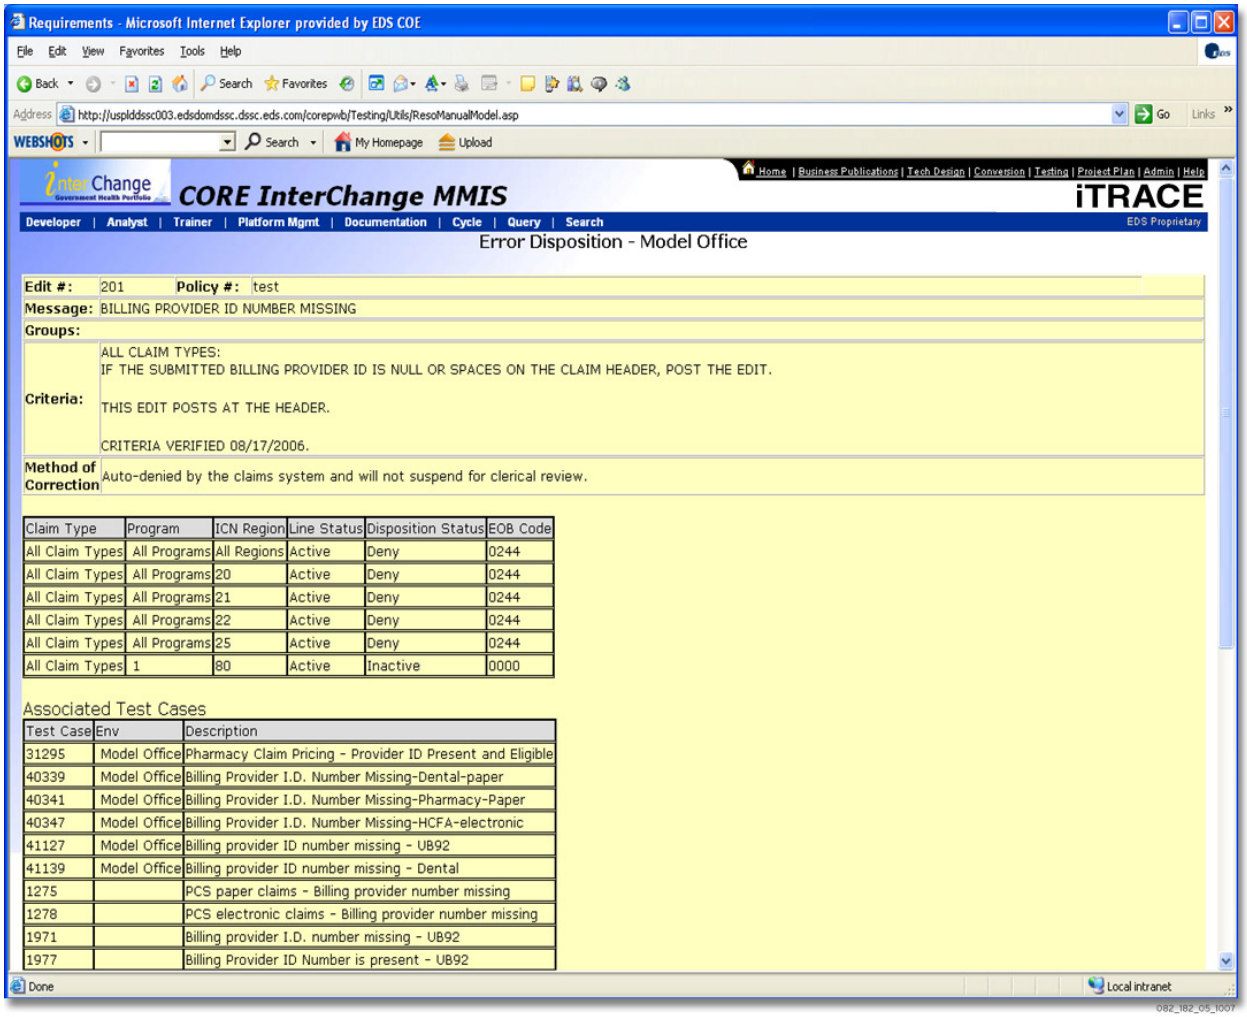
Claims failing edits and audits that are not set to systematically deny will suspend and route to the appropriate system claim suspension locations for review and resolution. interChange tracks this action, indicating the date the claim entered the location and the edits or audits that suspended it. The system also records the identification of the staff member who processed the claim at each suspension location and the date it exited that suspension location.

The suspense scheduling function allows users to define how claims are routed for resolution. Supervisors can monitor the suspense queues in real time and redirect suspended claims if needed. Claims automatically show up in the appropriate work queue based on the suspense location. Clerks work the error types they specialize in, such as recipient-related, and can direct the claim to the next appropriate resolution clerk if needed, such as a medical necessity reviewer, or release the claim back into the system for reprocessing.

Claims resolution in interChange is a paperless process, performed online in real time. The claims resolution staff members have online access to the claims data that was entered into the claims processing system and an image of the claim that was submitted for processing. The resolution "manual" is entered into interChange as the edits are being set up and is available online, as well as in iTRACE, or it can be printed to hard copy. The resolution pages contain the criteria for posting the edit or audit written in nontechnical language, the associated service groups, the associated policies, and the detailed step-by-step-instructions for manual review.

The following exhibit, Sample Error Disposition Page, shows a typical disposition page in iTRACE.

Sample Error Disposition Page



Edit resolution details are presented online through iTRACE, including edit number, criteria, and method of correction.

The resolution clerks also will have access with point-and-click navigation to various tables, such as the recipient and provider tables, that may be needed to

verify data on the claim. Claims hold a history of every edit they hit with every reprocessing for future reporting.

Determining Payment

After calculating the State-allowed amount, the Replacement MMIS will deduct costs borne by other payers. These costs may be TPL amounts from outside insurers or recipient cost sharing requirements, such as copayment, patient liability, or spend-down. Additionally, Medicare payments are deducted when calculating the reimbursable amount for Part A and Part B crossover claims. This approach conserves scarce Medicaid funds by spending Medicaid dollars only after other parties have fulfilled their obligations.

Maintaining Claim Transaction History

One of the strengths of interChange is that we maintain a full history of each claim from the time the claim is first received in the system, up to the final disposition and payment. The system monitors, tracks and maintains a complete audit trail of each transaction, and maintains this information for the life of the contract. interChange preserves each transaction record intact, to make sure the claim history remains available for future review and auditing purposes. While the RFP calls for five years of historical data online and an additional five years in near-line storage, interChange provides all 10 years of historical claims data online, streamlining the data access issues for the users of the system.

How interChange Supports Users

The preceding subsections discussed how interChange supports transactional claims processing best practices. While interChange very quickly processes the claims and encounters as described above, the system also specializes in making the claims support tasks intuitive and straightforward. For an MMIS to effectively manage multiple payers through constantly evolving regulations and policy adaptations, it is critical to have these proven and flexible system features. This section describes how interChange allows the business users to perform the following claims support business functions:

- Accessing claims
- Configuring the system
- Establishing coverage hierarchies
- Modifying rules
- Processing audits
- Dispositioning edits
- Requesting adjustments
- Giving providers access to claims information
- Performing financial balancing

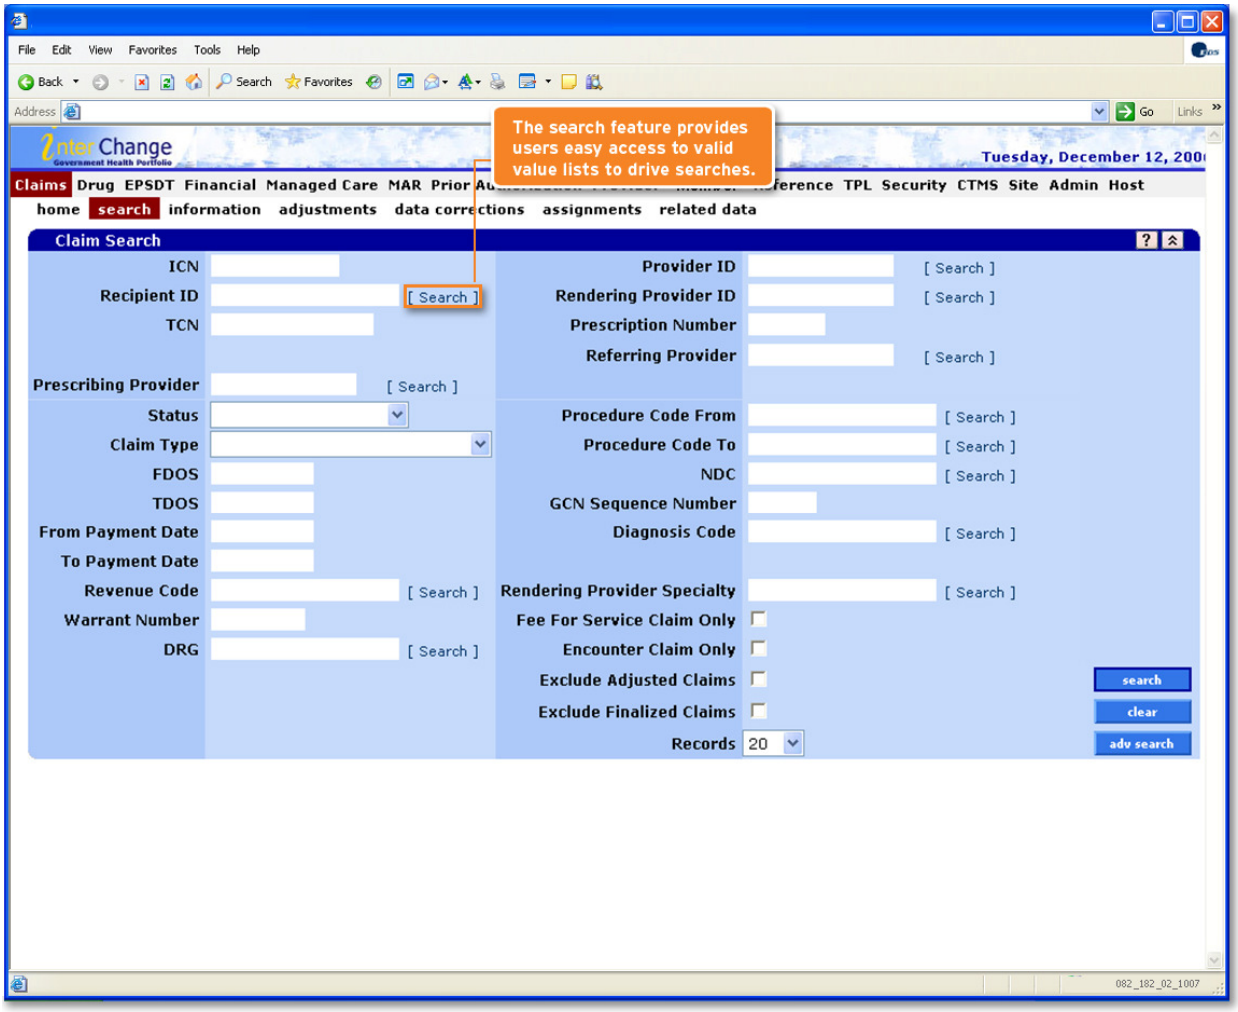
Accessing Claims

interChange provides unique internal control number (ICN) tracking for each claim, encounter, adjustment, and financial transaction, including the date, claim format, batch control, special batch identification, and other data as applicable through assignment of a unique ICN. Regardless of the submission method the provider chooses, every claim received is automatically assigned a unique ICN. An ICN is generated and encoded to indicate the method of submission, claim type, and receive date so that it may easily be identified by visual inspection.

For paper attachments and paper claims, the claims and attachments are scanned together and associated through the claims ICN. They are retrieved in combination when viewing a claim image or when working a suspended paper claim. If separate attachments are received for an electronic claim, they will be linked and cross-referenced back to the original claim using the attachment control number received on the original claim, provider ID, and recipient ID. They are viewable with that claim after they have completed the imaging process. The system links electronic attachments to the related claim and maintains the linkage through the attachment control number.

Hundreds of millions of claims will be stored in the Replacement MMIS. Users will retrieve and view claims and encounters in the Replacement MMIS using a wide variety of search parameters. Authorized users can access claims using the ICN, provider ID, recipient ID, and many other search criteria to research the status of a claim or group of claims. As shown in the following exhibit, Claims Search, many of the fields have a search feature beside the field, providing user access to the valid value list for each of these fields listed on the page.

Claims Search

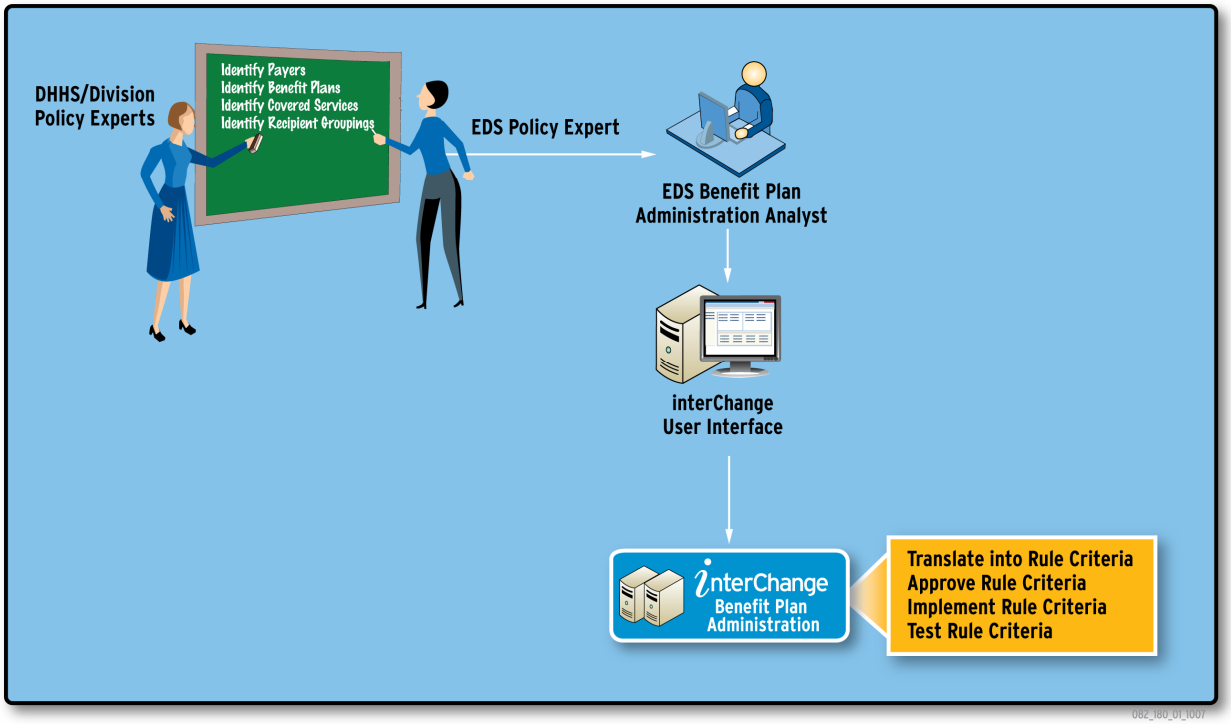


Authorized users can access claims using the ICN, provider ID, recipient ID, and claim status and limit the returned information by service information such as procedure codes, diagnosis codes, or revenue codes. The returned list of claims can be sorted on any of the returned fields. These features help provider assistance clerks research and quickly find the right claims.

Configuring the System

The Replacement MMIS claims system will bring together the right rules, prices, edits, and audits from the reference system to adjudicate the claim or encounter according to State policy. As such, it is directly dependent on how those rules are set up and defined. interChange allows trained analysts to configure most of the business policy through online panels, and the claims system interprets those rules during the adjudication process, as shown in the following exhibit, User-Configurable Business Policy.

User-Configurable Business Policy



interChange allows trained users to configure most of the business policy.

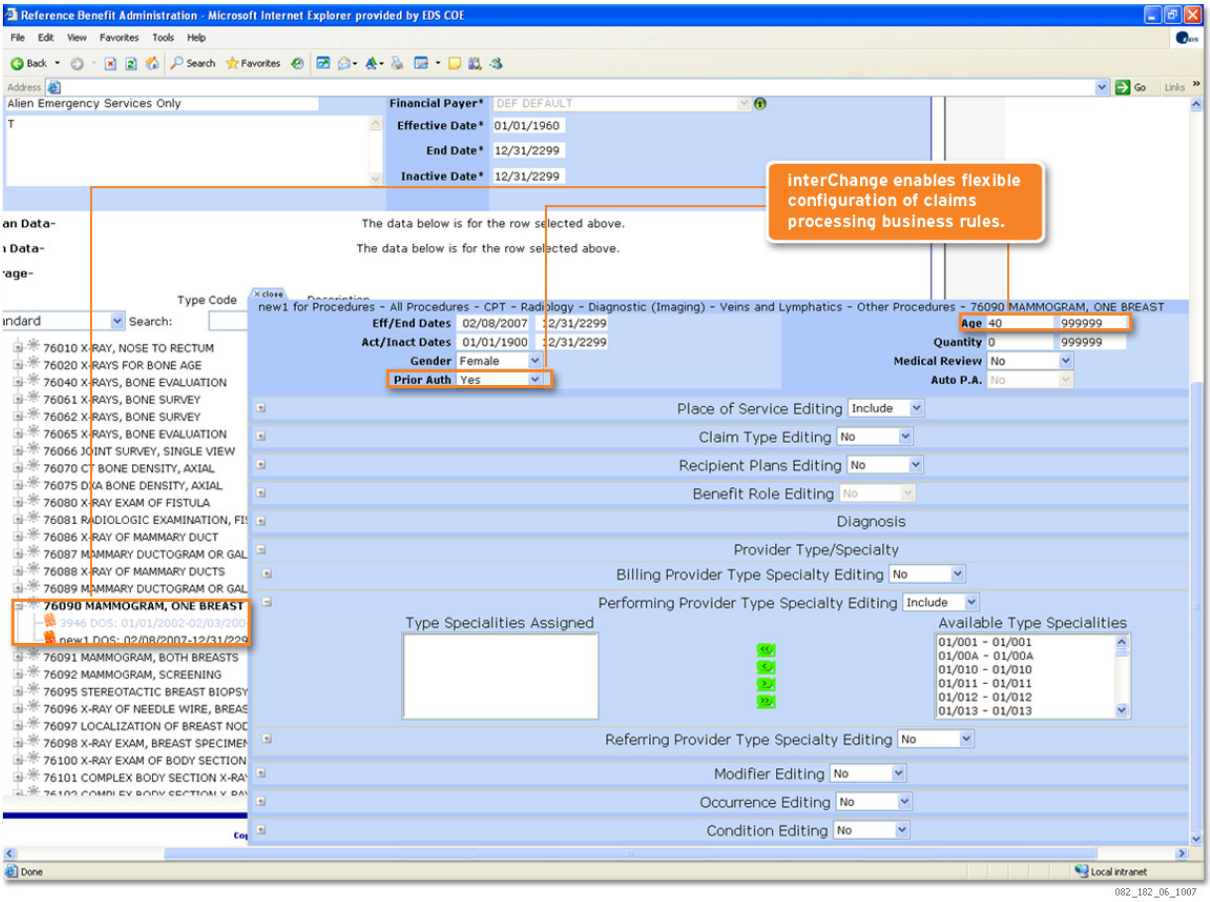
Clear, concise development of rules is critical to accurate claims processing. The development of these rules begins after the State outlines a new policy or a change in existing policy. No system technical expertise can substitute for the analytical business process required to define a new policy and detail its complete impact on the organization.

The EDS Claims Operations Services team proposed for North Carolina, led by Tammy Wheeler, provides knowledgeable, experienced staff members who can help the State through this process and develop the right processing rules for the Replacement MMIS. This policy definition work is represented by the analysts working at the chalkboard depicted in the preceding exhibit. We also provide a full suite of testing tools and methodologies to verify that rules are working as expected before they are promoted to production.

Before a given service can be paid on a specific claim in the Replacement MMIS, there must be three rules established. The first is recipient plan coverage: Is the recipient entitled to the service billed? The second is the provider contract: Is the provider authorized to bill or perform the service? The third is a reimbursement agreement: What pricing methodology should be used in this case? These rule types are established as hierarchies, and the highest available rule is applied. Authorized users can configure these rules through the interChange Benefit Program Administration (BPA) panels.

These panels provide flexibility in how the parameters are configured, including the ability to combine parameters. For example, while a benefit plan may be configured to cover and reimburse mammograms, specific rules can be established that restrict that coverage only to female recipients 40 years of age or older in an outpatient setting with PA, as shown in the following exhibit, Establishing Specific Benefit Plan Coverage.

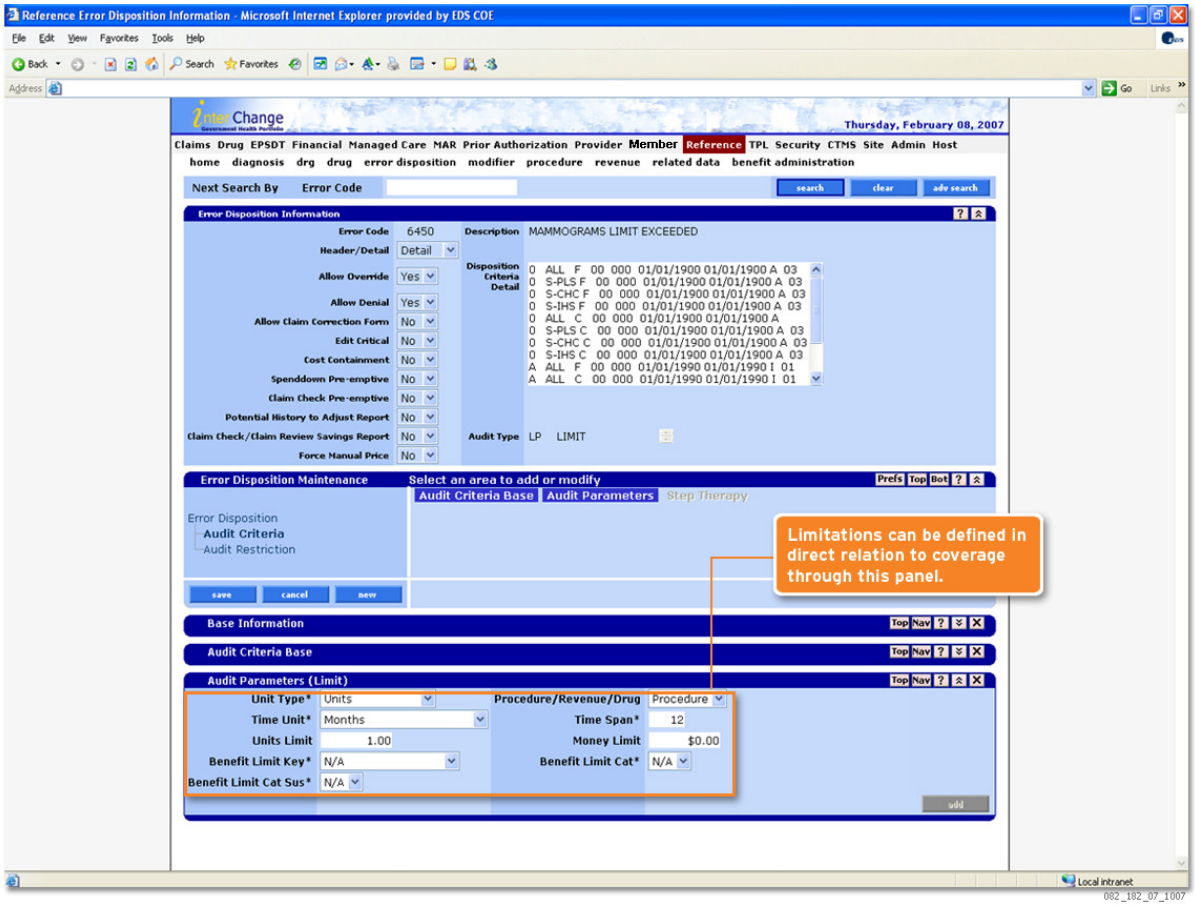
Establishing Specific Benefit Plan Coverage



The interChange BPA function allows users to configure coverage rules through the use of several criteria, including age, place of service, and provider editing.

After the benefit plan and its coverage have been established, users can then establish specific audits that limit the number of services available in a specific time period. In the following exhibit, Combined Coverage and Limitations for Accurate Processing, an audit is being created to limit the number of mammograms to one per year.

Combined Coverage and Limitations for Accurate Processing



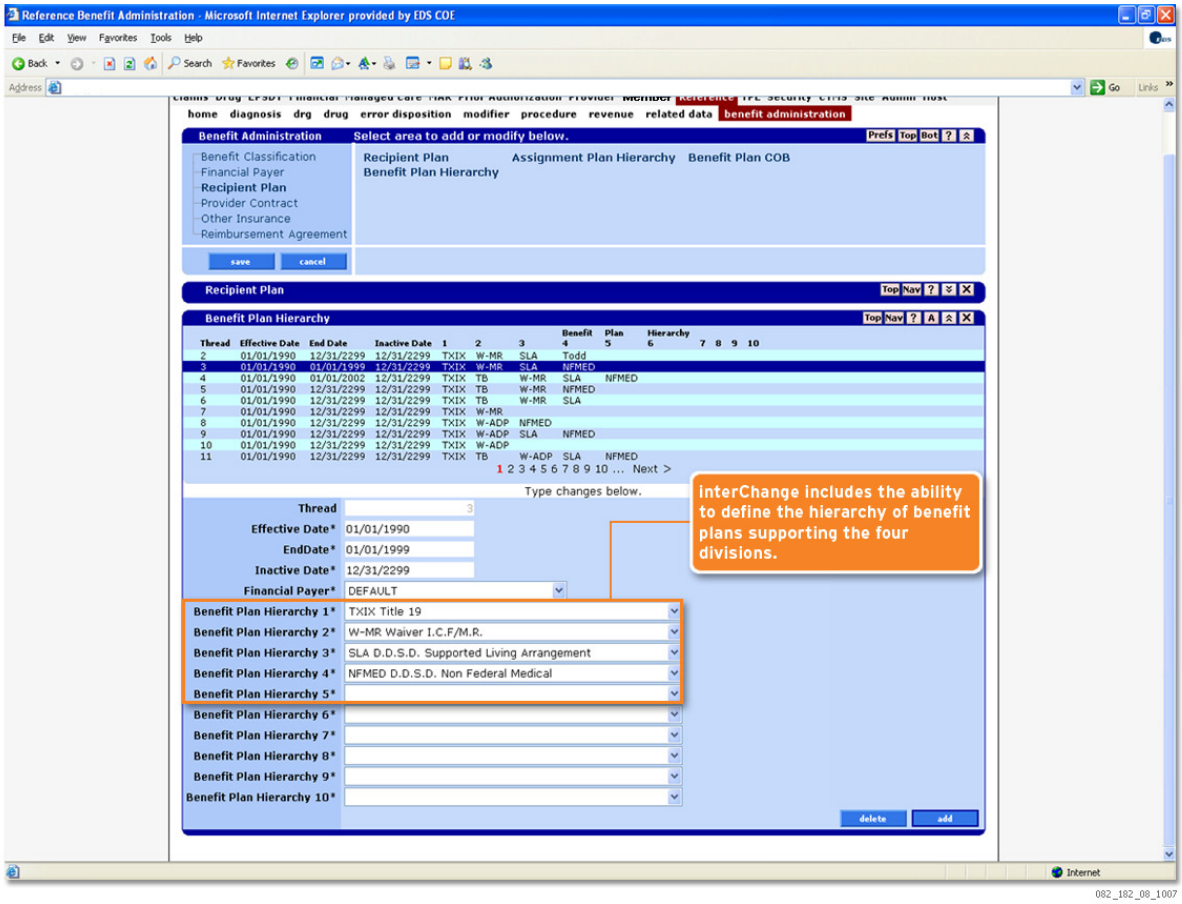
Authorized users can establish and maintain service limits for a procedure within a benefit plan by updating the processing parameters through an online browser.

Audits cause the system to query a recipient's claim history to determine if benefit limitations have been reached. Besides coverage, users also maintain rules for PA, medical policy review, edit or audit disposition, pricing, and authorized provider type or specialty through the online browsers.

Establishing Coverage Hierarchies

When a recipient has concurrent coverage in multiple benefit plans, the system uses the user-configured benefit plan hierarchy structure to correctly adjudicate the claim. The benefit plan hierarchy tells the system in which order it should prioritize a recipient's benefit plans. The following exhibit, Establishing the Hierarchy of Plans, shows a hierarchy in the following order: Title XIX, ICF/MR Waiver, Supported Living Arrangement for the Developmentally Disabled, and Non-Federal Medical Program for the Developmentally Disabled.

Establishing the Hierarchy of Plans



Users define the hierarchy of plans through the panels. This defines the order in which the plans will be processed to determine if a service can be covered.

The claims processing system goes to the first benefit plan listed to see if the billed service was eligible under that plan. If not, it goes against the second plan, and then to each subsequent plan until it finds a plan under which the service is covered for that recipient. The claim detail stores both the specific benefit plan that authorized coverage, and therefore will fund, as well as the "thread," or the list of benefit plans the recipient was entitled to on the date of service. Because benefit plans are associated with payers, the system knows how to fund and report this service.

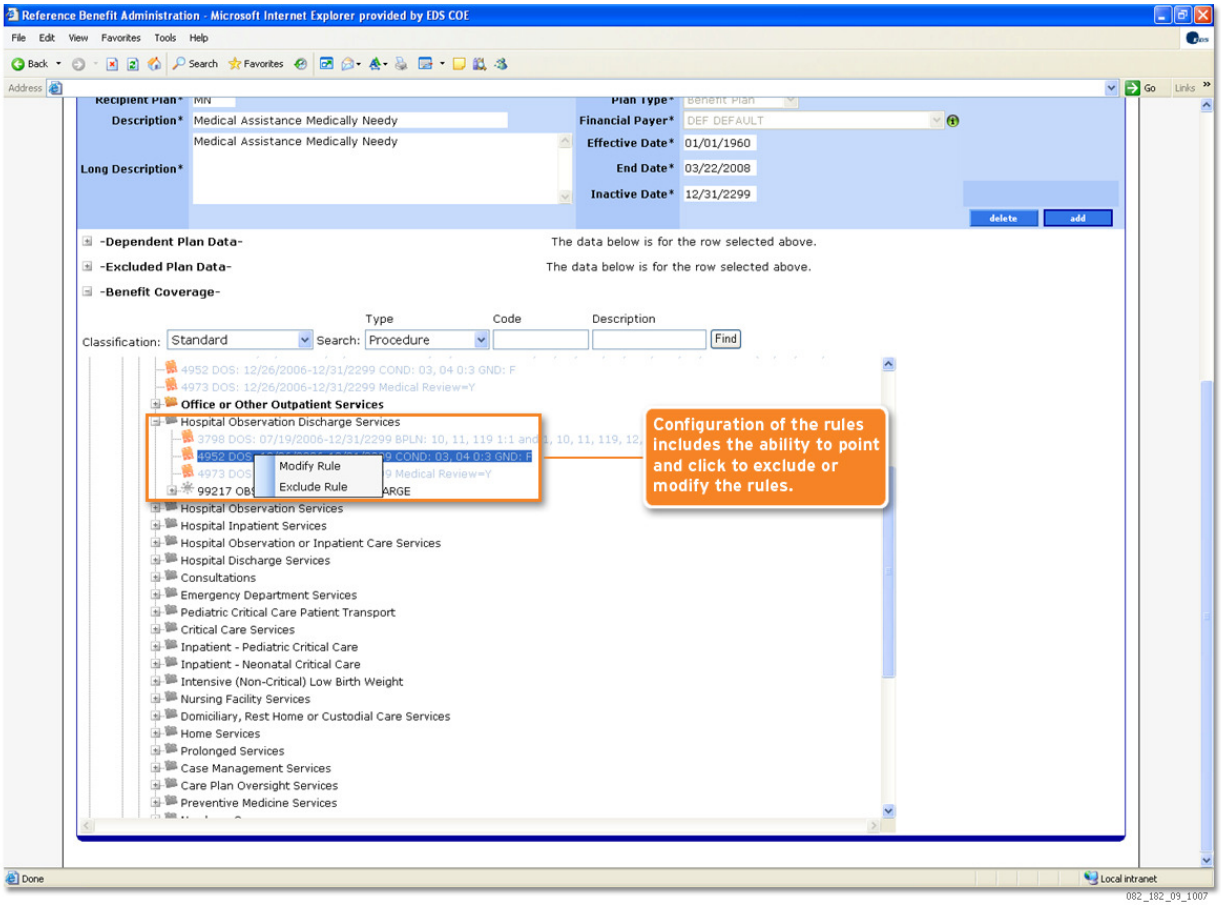
Modifying Rules

Because policies often change, the State needs a system that can react quickly yet does not allow for illogical or inconsistent results. The interChange rules authoring panels are designed to allow change, while automatically reviewing those changes to simplify the rule or prevent overlap.

When an authorized user determines that a change is needed, the user simply navigates to the specific code to be changed, right-clicks, and selects to exclude

or modify the rule, as shown in the following exhibit, User-Configured Rule Exclusions. As illustrated in the following exhibit, User-Configured Rule Exclusions, the user has clicked on the rule and can now modify or exclude it.

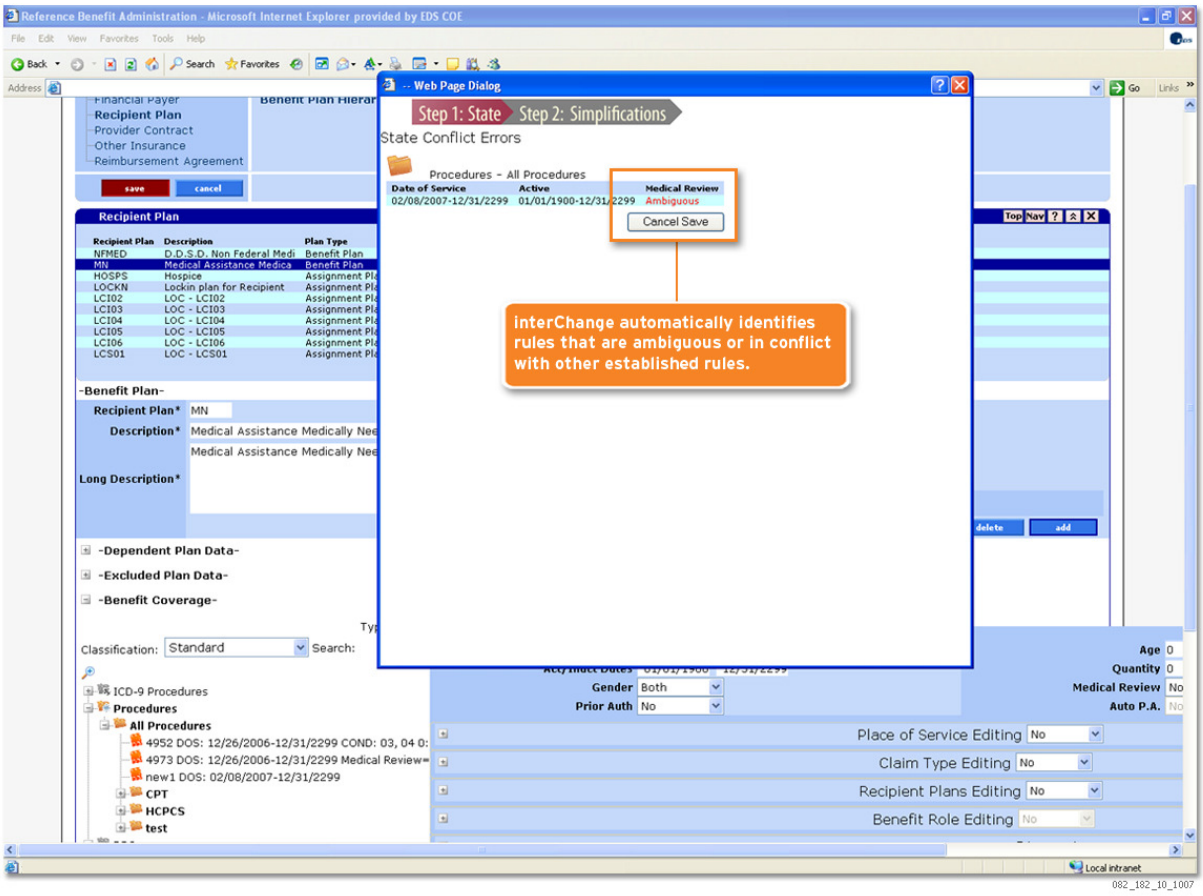
User-Configured Rule Exclusions



interChange users can exclude a specific code or group of codes from a benefit plan by simply overriding the rule.

The interChange methodology keeps simple tasks simple. Users can make and apply complex updates intuitively and in a straightforward manner, without unnecessary steps or complications. Additionally, interChange also reviews the modified rule to determine if it is inconsistent with another existing rule. For example, in the following exhibit, Identification of Conflicting Rules, the user attempted to load a coverage rule for a group of procedures and indicated medical review was not required. A rule for the same coverage group already existed, and it indicated that medical review was required. Therefore, the rules were in conflict and the system automatically generated a notification to the user.

Identification of Conflicting Rules

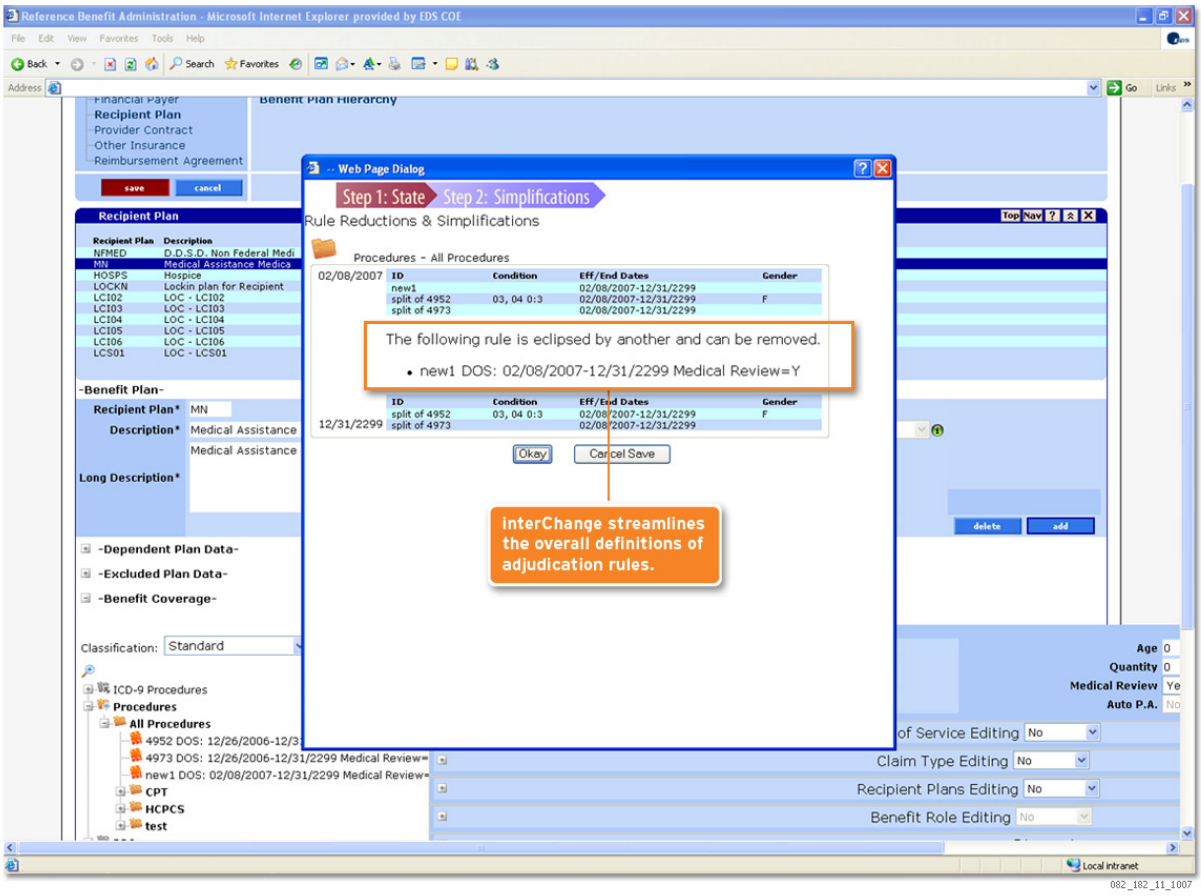


interChange automatically notifies users of conflicting rules.

The user must then correct one or the other of the rules to remove the conflict. This integrated quality checking process prevents conflicting rules from being saved.

In the following exhibit, Identification of Overlapping Rules, the user attempted to save a rule that required medical review for a group of procedure codes in a benefit plan. However, a rule requiring medical review already existed. In this scenario, the rule passed step one—State Errors—but was flagged for simplification. The user is prompted to simplify the parameters by removing the duplicate rule.

Identification of Overlapping Rules

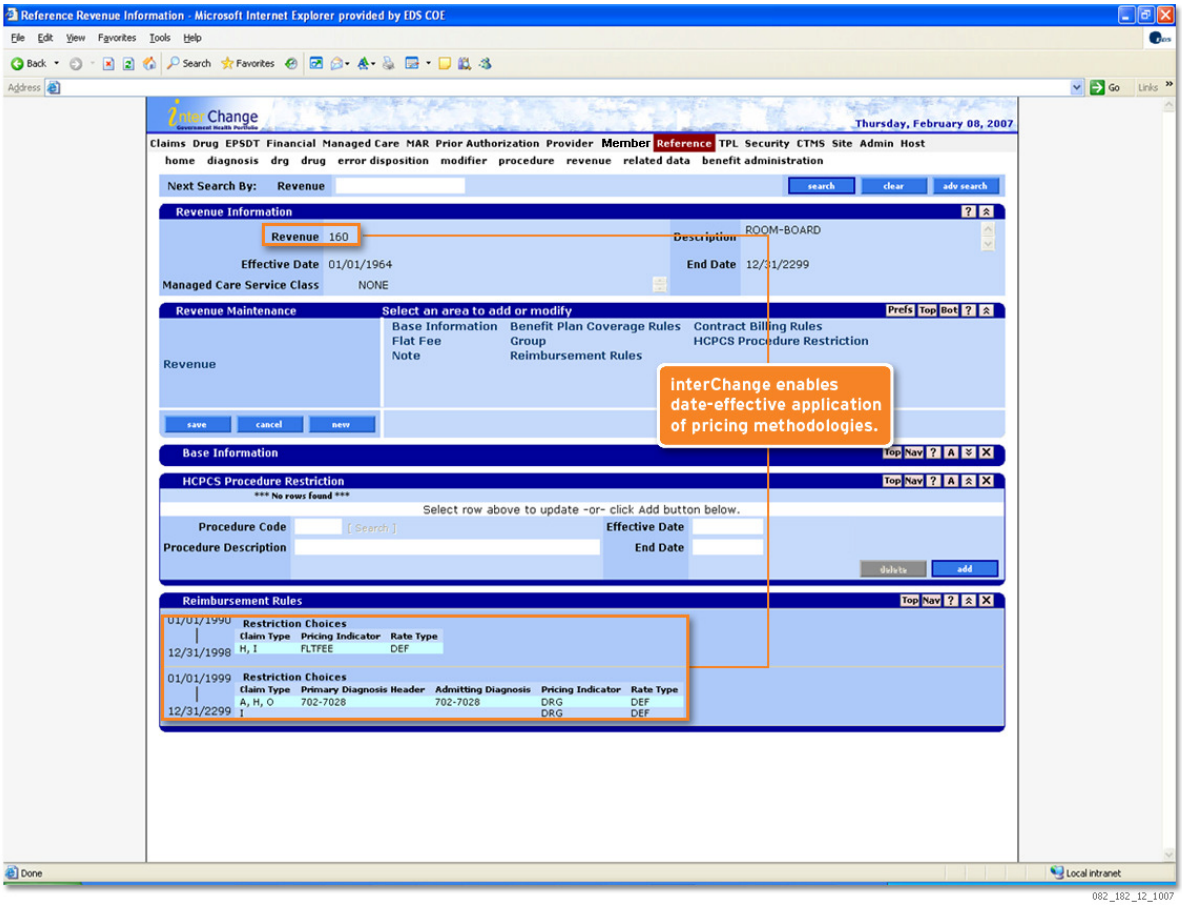


interChange automatically notifies the user of overlapping, unnecessary rules.

The step-by-step process prevents erroneous rules, keeping the long-term defined policy clean and accurate. Clearer policy definition makes communication with the provider community easier and supportive of the multiple divisions served through the Replacement MMIS.

When a claim is received by interChange, the system interrogates the claim against the rule parameters maintained in reference, including benefit plan coverage, audits, edits, and PA. If the system determines the claim is eligible for payment, the claims system accesses the pricing rules to determine the appropriate pricing method and rate for the procedure, provider, and benefit plan combination. In the following exhibit, Reimbursement Rules, we show the capability of the system to maintain reimbursement rules, which allow the user to define how a code will be reimbursed. In this example, the Revenue Code 160 is reimbursed differently—flat fee versus DRG—depending on when it was billed.

Reimbursement Rules



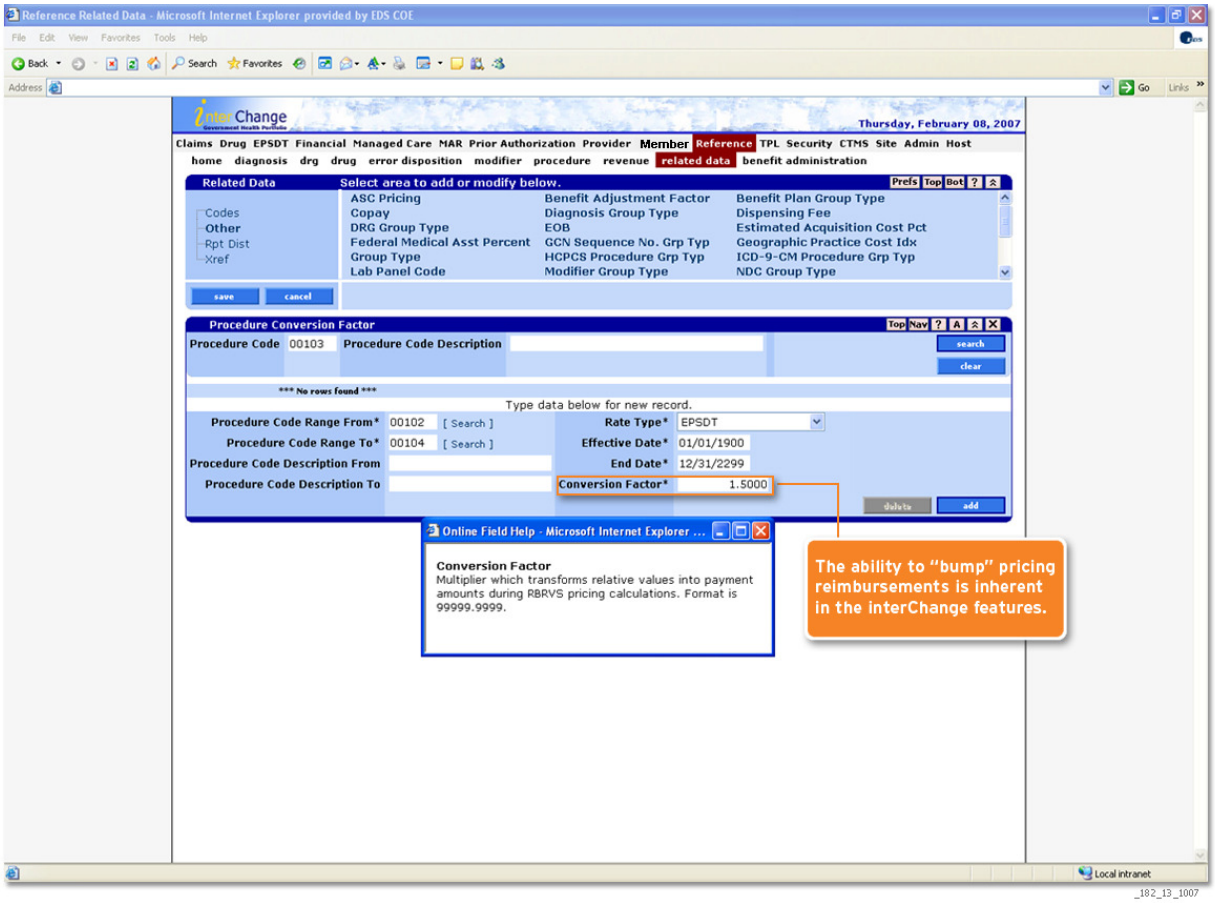
Users can configure specific reimbursement rules for a whole classification or for a specific code.

The reference function allows for flexible rate tables, including anesthesia base rates; administration fees; early and periodic screening, diagnosis, and treatment (EPSDT) schedules; and conversion factors.

A common business scenario would include the policy change to use DRG to price inpatient claims as compared to flat file pricing to have greater delineation in the allocation of benefit dollars. interChange allows for the implementation of pricing rules by the date of service, allowing for accurate payment by the appropriate pricing methodology defined on the date the service to the recipient was performed.

At times, State policy must be adjusted to incent the care of recipients for certain services. This is the business scenario presented in the following exhibit, Ability to Handle State-Defined Factors, where Health Check (EPSDT) services are incented through a multiplier applied to these specific services. These pricing methodologies can be used to positively impact the availability of care throughout the State.

Ability to Handle State-Defined Factors



interChange enables users to establish procedure code conversion factors that impact pricing.

In the above example, claims qualifying for the EPSDT pricing methodology would receive 1.5 times the reimbursement of the normal pricing method for these specific procedure codes.

Processing Audits

The Replacement MMIS will audit claims against State-defined service limitations, including once-in-a-lifetime procedures and other frequency, periodicity, and dollar limitations. interChange can define the criteria for the following types of audits using online panels without additional coding needed, and the claims engine then will make sure those audits are performed in accordance with State policy:

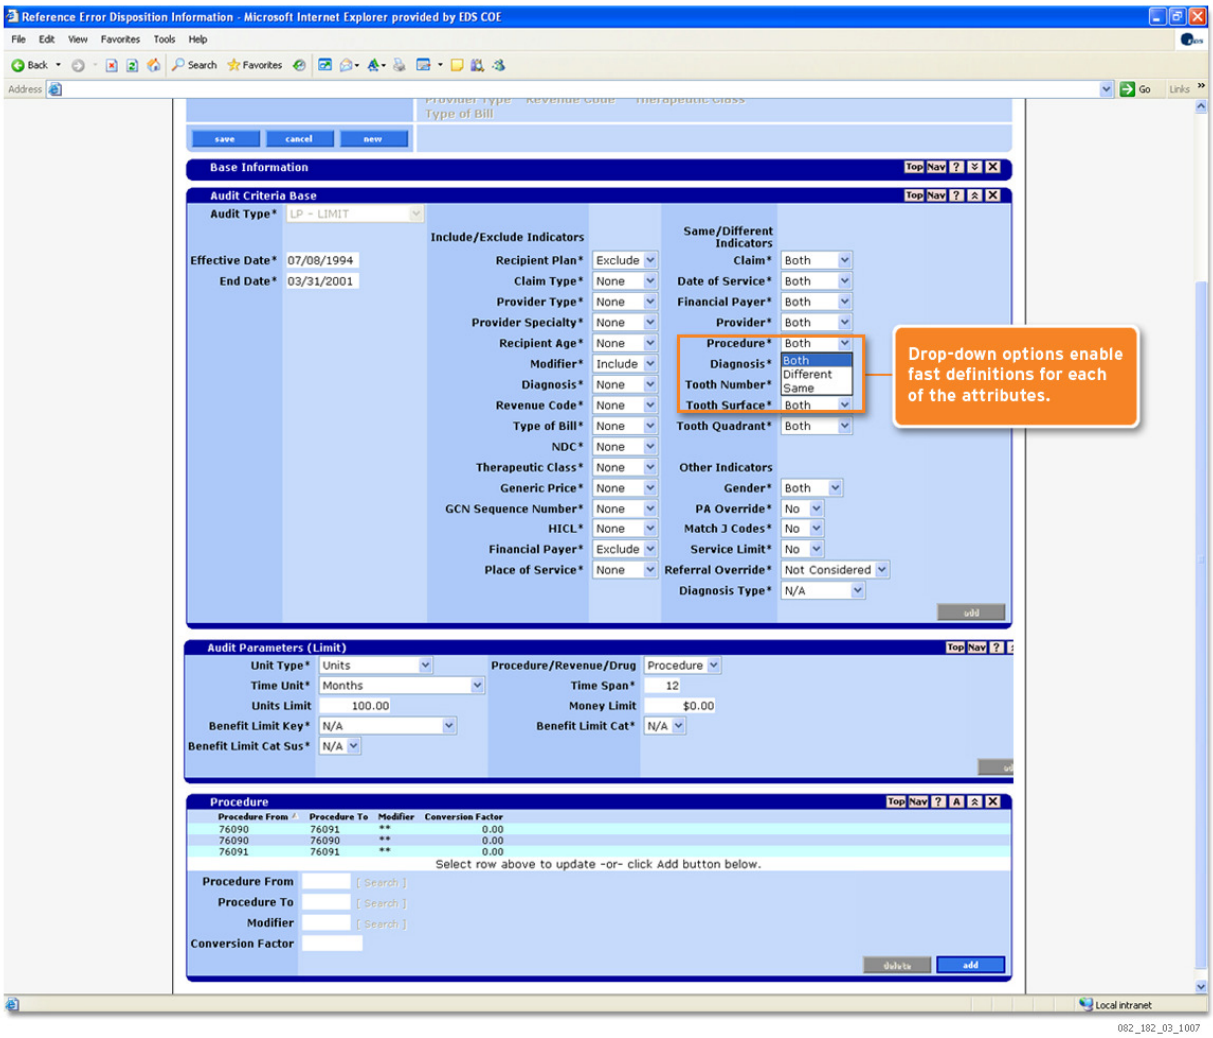
- **Duplicate checking—**This type of audit will compare current claim detail or header information, depending on the claim type, with claims information on history. A duplicate audit will post against the claim if the current claim information matches the history.

- **Limitation—**This type of audit is used to set dollar or unit limitations on services such as procedure code, revenue code, or National Drug Code (NDC) based on defined policy criteria.
- **Contra-indicated—**This type of audit is used to limit services based on relationships between the new claim and associated procedures already recorded on historical claims for the recipient
- **Negative contra-indicated—**This type of audit is used to limit services based on relationships between procedure codes on history and the one on the current detail of the claim. If a history procedure is indicated on the audit as a history type of procedure, and the procedure on the current detail is not indicated on the audit as a current procedure, then the relationship is not met and the audit will post against the claim.
- **Umbrella—**This type of audit is used to limit preoperative and postoperative care for surgical procedures. The surgical procedures that apply to a specific umbrella audit are identified by the number of days in the global surgery field on the Medicare fee schedule.
- **Bundling—**This type of audit is used to identify current claims being billed with procedure codes that are considered to be components of a global procedure when the global procedure has already been paid on history.
- **Unbundling—**This type of audit is used to identify current claims being billed with procedure codes that are global procedures when a component procedure of that global procedure has already been paid on history.
- **Cross-claim type—**These audits compare dates between services on different claims types to verify that there are no conflicting services for overlapping dates.
- **Step therapy—**This audit determines that the criteria are met for a drug listed as part of the step therapy program. Each drug in the program is assigned to one of five step therapy levels. Each level has criteria for the number of prescriptions, number of days, and continuous coverage. To step up to a higher-level drug, the recipient's drug history must have fulfilled the step therapy level's criteria requirements.

These interChange audit features provide the State the proper control of claims processing so that the benefit dollars are allocated only as defined by the State's associated policy.

The following exhibit, User-Configured Audit Criteria, indicates the various attributes that can be used to define audit criteria.

User-Configured Audit Criteria



interChange configures the criteria of numerous attributes to be included or excluded for audits.

Each limitation audit in interChange has two possible outcomes: full failure or cutback. Claims are subjected to full failure when the entire detail exceeds the limitation, and the cutback feature is invoked when only a portion of the detail exceeds the limitation. The dynamic disposition table of interChange allows the State to specify the outcome of the audit as suspend, deny, or paid. If the audit is dispositioned to paid, the system will automatically cut back to the units remaining on the limitation audit.

Dispositioning Edits

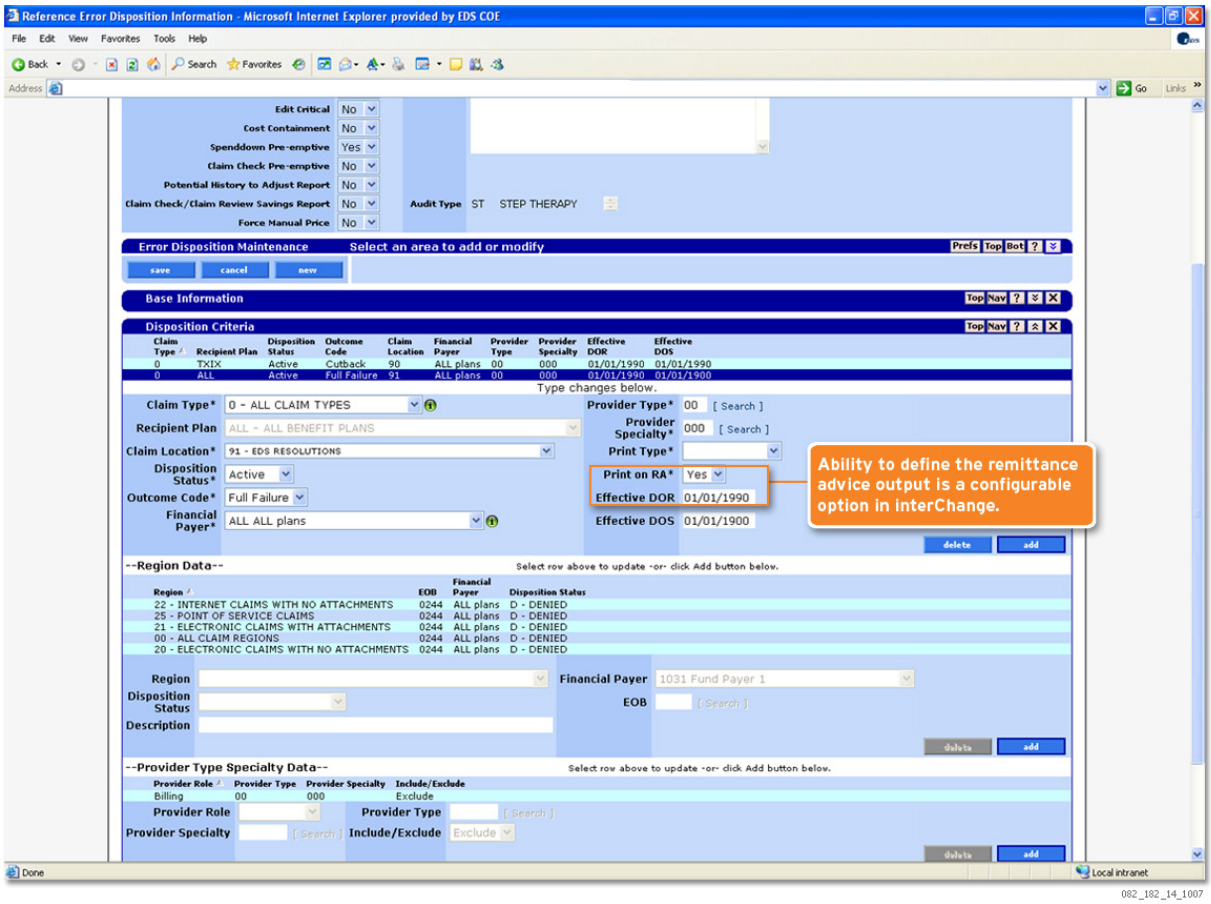
While the dispositioning of audits applies the State policy, the dispositioning of edits is used within interChange to identity claims with specific data field errors that will affect claims processing. During the initial setup, a user can specify whether he or she wants a claim error to process at both the header and detail lines. Header items that cause failure, such as an invalid provider ID, will cause

the entire claim to fail. Detail errors, such as a missing or invalid place of service, will cause that particular detail to suspend or deny while allowing other details to continue to process, allowing partial claims payment if appropriate. Denied details can be resubmitted on a subsequent claim.

To return the most complete information to the provider, detail editing continues even after the header edit failure occurs. The flexibility of interChange allows the State to disposition the same edit in completely different ways based on payer, benefit plan, or even claim submission media. This vastly reduces the number of claims that need to suspend for human review. For example, if a hysterectomy must have supporting documentation and there was no attachment with the claim (identified in the ICN region), that claim should automatically deny. A claim with an attachment may route for review for the same edit.

The following exhibit, User-Configured Disposition Criteria, shows the fields that can be updated by the user.

User-Configured Disposition Criteria



Users configure which edits will report on the provider's remittance advice.

In interChange, the error status code function generates daily and weekly reports that show which edits and audits are occurring the most among claim types,

providers, and provider types and region codes. This will indicate the origin of the claim (electronic or paper), and fee-for-service versus encounters.

Requesting Adjustments

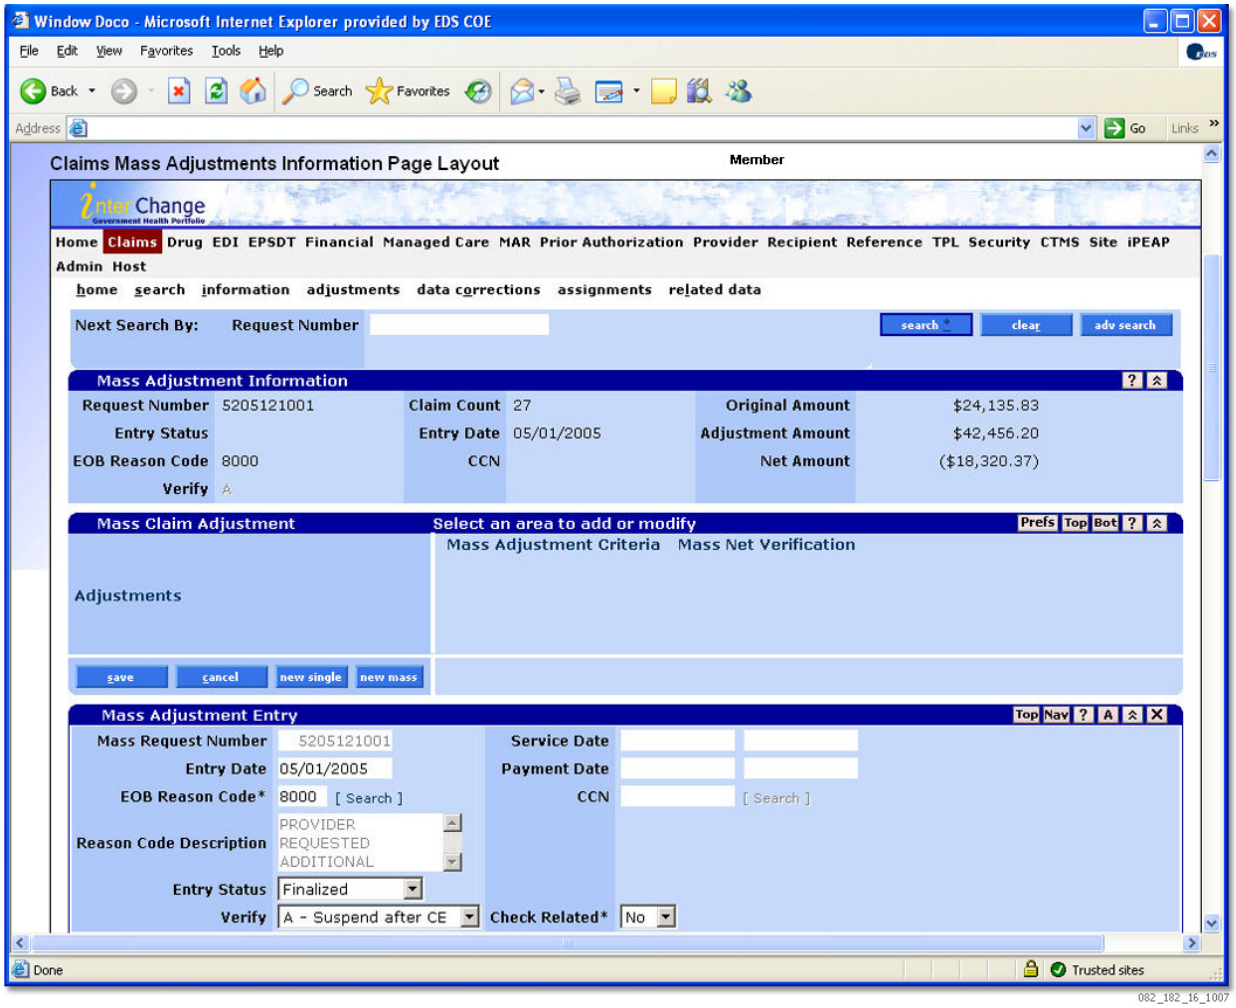
The adjustment business function can accept adjustment requests through a variety of media, such as Web submission, HIPAA-compliant electronic transactions, and manually entered requests. The original claim and the subsequent adjustment claim are linked using the ICN. Each adjustment claim is repriced and re-edited. From a business point of view, the original claim is deactivated and replaced with the adjustment claim. This claim activity is recorded on the provider's remittance advice (RA). The RA demonstrates what happened to the provider's claims, financial transactions, and adjustment activities.

We have found that providers greatly appreciate the ability to use the interChange Web portal to void a claim and then copy the original claim, make changes to it, and resubmit it. It gives them the ability to initiate adjustments on their own without waiting for the extended process of sending a paper adjustment request. This also reduces the workload on the claims adjustment unit. In Oklahoma and Kansas, nearly 85 percent of the claims adjustments are now submitted through the Web portal. This interChange feature has transformed how adjustments are initiated from just a few years ago.

One of the key capabilities that interChange offers is the ability to reprocess or adjust a targeted group of claims, either due to retroactive price changes, warrant voids, or changes in policy. The mass adjustment process lets authorized users define an adjustment request online. They can denote the reason for the adjustment, if the adjustment is due to a check from the provider, and if this is to be tied to a cash control number. A key feature of this method of entry is that this adjustment request is always available online, including a summary of the results and the related claims.

The following exhibit, Mass Adjustment Information and Entry Panel, shows the panel used to begin the mass adjustment process.

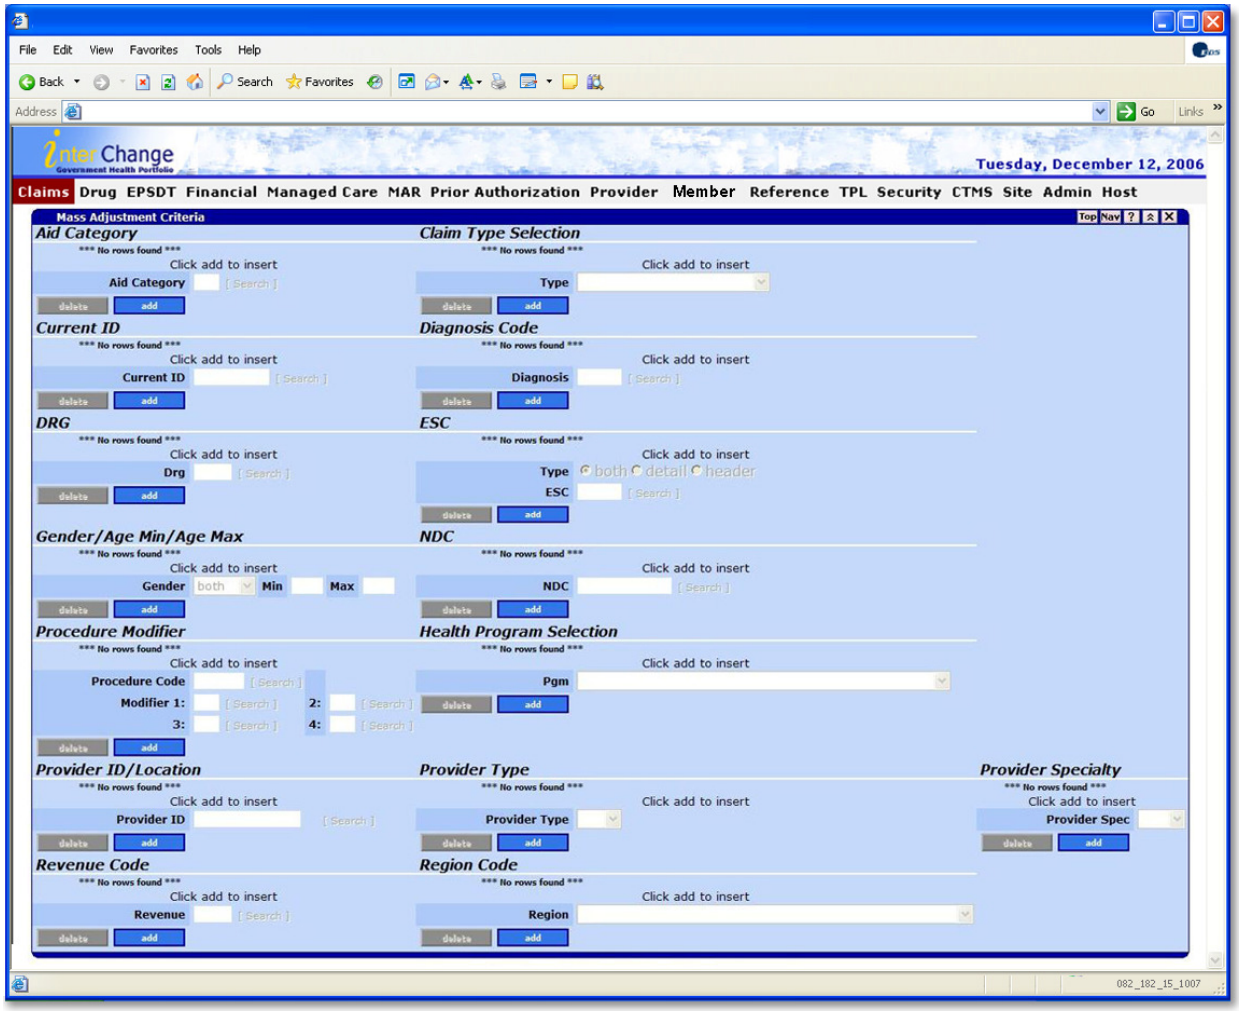
Mass Adjustment Information and Entry Panel



The Mass Adjustment Entry panel is used to initiate the setup of a mass adjustment request. When it is complete, a summary of the results is always available online.

After the adjustment clerk has initiated the adjustment header, they are presented with the Mass Adjustment Criteria page, which provides the online capability for authorized users to select criteria across a wide variety of parameters for mass adjustment processing. The available parameters are defined in the following exhibit, Sample Mass Adjustment Criteria Page.

Sample Mass Adjustment Criteria Page



The mass adjustment criteria function allows users to configure a mass adjustment request as needed.

Each adjustment request contains a tracking number tied to each adjusted claim. The tracking number serves as a means of identification and audit trail for adjustments. The mass adjustment selection criteria supported by interChange include the following:

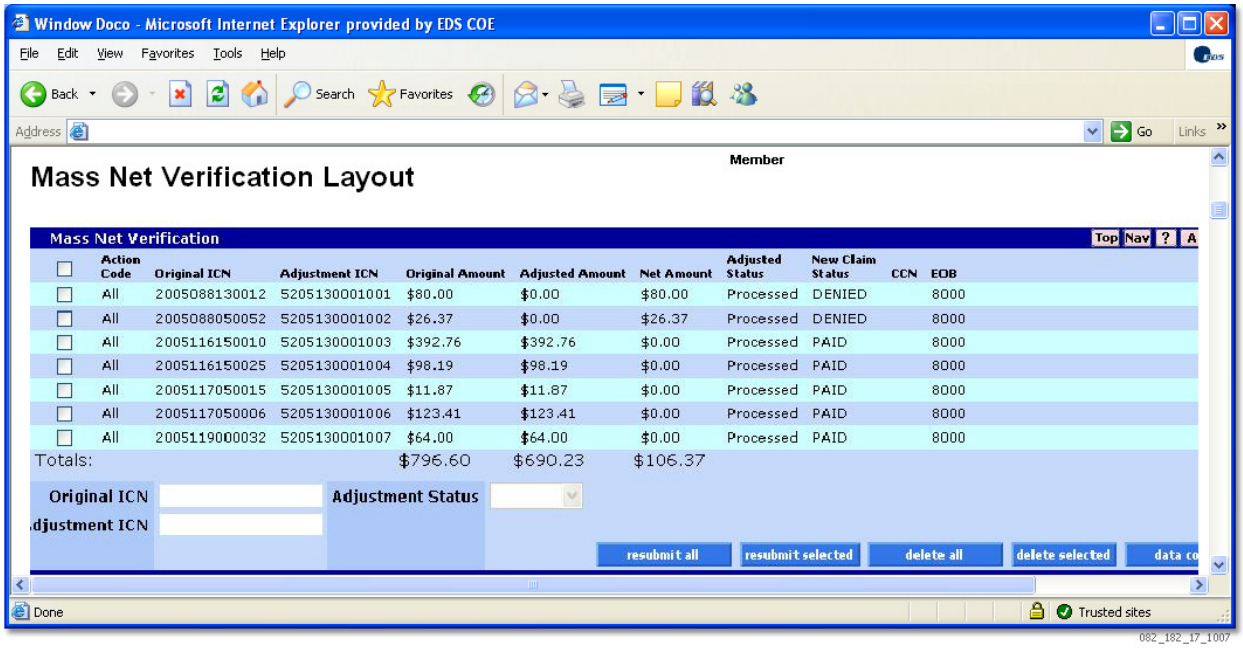
- Date of payment
- Date of service
- Provider type
- Provider specialty
- Recipient ID
- Recipient's age (calculated by the "from date of service" on the claim)
- Recipient aid category
- Recipient's gender
- Error codes (edits and audits)

- NDC code (pharmacy claims only)
- Program code (benefit plan)
- Procedure codes and modifiers
- Revenue codes
- Diagnosis code
- Claim type
- Service location

After the mass adjustment request criteria is defined, the claims meeting the criteria are presented to the clerk. They can then go through the list on a claim-by-claim basis and remove individual claims from the mass adjustment request before processing. When the right claims are identified, a supervisor can release the mass adjustment for processing. When the process is complete, the Mass Adjustment Net Verification panel shows the results. Even then, authorized users can delete or reprocess some or all of the adjustments until the result is right. Any adjustment request that is deleted keeps the original claim intact. Any adjustment that is finalized replaces the original claim with the finalized result.

The entire mass adjustment activity, including all affected claims, is accessible through the Mass Adjustment Inquiry panel indefinitely because this data is not purged. The following exhibit, Mass Net Verification Layout Panel, provides an example of this panel.

Mass Net Verification Layout Panel



The Mass Net Verification Layout Panel identifies the results for each claim in a mass adjustment. Authorized staff can choose to delete or reprocess individual claims from this list. After they are completely satisfied, they can finalize the mass adjustment, and no further changes can be made.

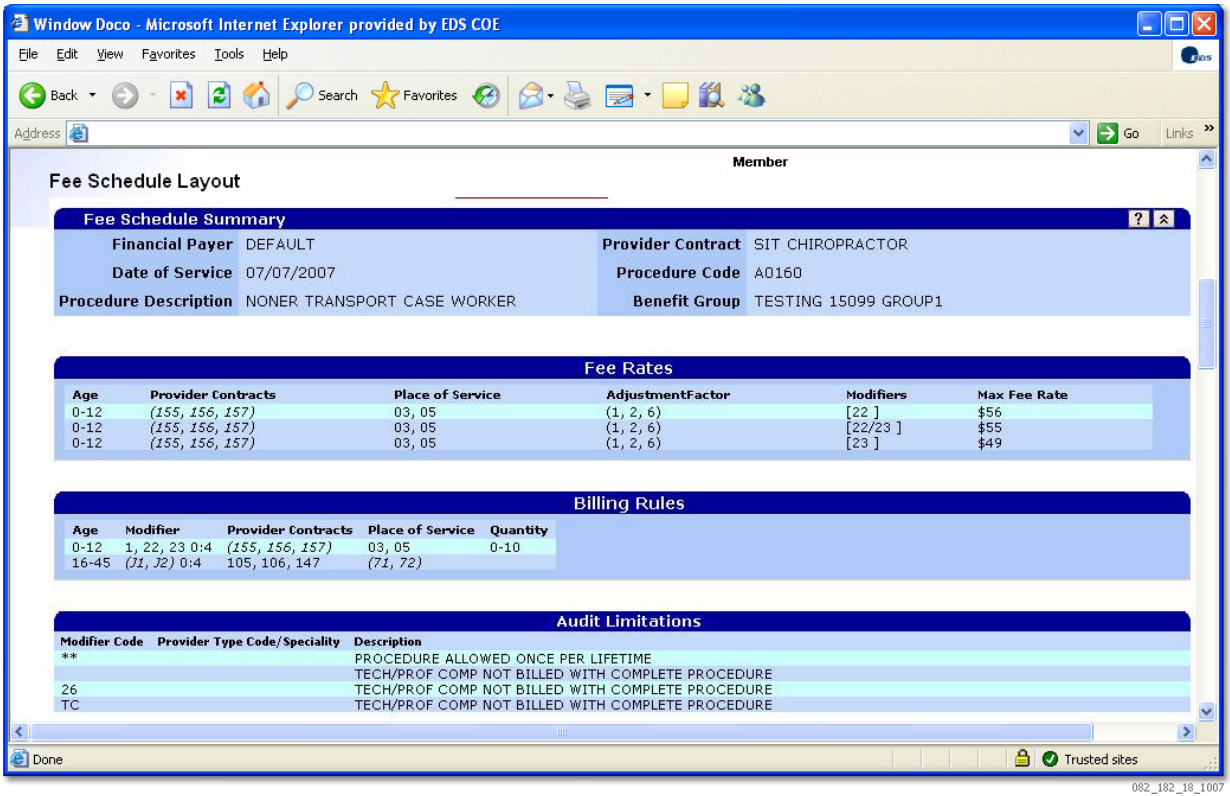
This type of functionality is available to meet several business needs, including recouping claims with dates of service after a retroactively posted date of death or reprocessing claims after a retroactive change in deductible or spend-down.

Giving Providers Access to Claims Information

Making it easy for providers to retrieve and use information regarding claim payments will encourage provider participation in the State's programs. Providers want to receive accurate and timely communication in ways that are meaningful to them. Our solution provides many methods to support this need.

Providers can use the interChange secure Web portal as their electronic window into the Replacement MMIS. The interChange Web portal allows billing providers to search for any of their claims that have been adjudicated in the system, regardless of how they were submitted. The portal allows them to download their past 10 RAs in a PDF format or their last 10 ASC X12 835 files. It also presents a searchable fee schedule for the provider's convenience, which presents the reimbursement rules including adjustment factors and differences for ages or modifiers. The following exhibit, Fee Schedule Panel, shows an example of the panel that will be available to providers through the Web portal.

Fee Schedule Panel



The searchable fee schedule shows providers the maximum reimbursement and the coverage restrictions for procedures, including the effect of recipient age, modifiers, provider contracts, and place of service.

Performing Financial Balancing

The claims payment business process of interChange maintains an accurate accounting of State division finances and timely payment to those who provide services for each of the State's payers. This is done through strict internal accounting controls, system audit trails, automatic cycle balancing, and precise accounting and reporting functions that support program management. The claims business process provides accurate and efficient updating of payment information, the generation of the RA and recipient explanation of medical benefits (EOMB) letters, and the generation of claims payment–related reports. The system tracks, monitors, and posts related transactions for a claim or encounter based on the ICN.

During every payment cycle, interChange checks the funding source assigned to each approved claim to see if funding is available. If the primary funding source does not have a remaining balance that is sufficient to pay the claim, the designated alternative funding sources are checked in the order specified by the State until possible sources of funding have been tried. Payments for services for which no funding remains can be pended or denied according to the business rules established by the State.

Additionally, the weekly updates from the MMIS transaction history database to the MMIS ad hoc supporting database are balanced during each and every update process. The update procedures include balancing the paid and allowed amounts by claim type for each financial update. Through this work, the users have confidence that the reporting results are accurate and representative of the care received by the recipient community.

Approach to Customization and Modifications

As indicated in the examples above, interChange is highly configurable. One of the larger efforts of the transition to the Replacement MMIS will be the definition and configuration of State pricing and payment policy. This is true regardless of the MMIS chosen; however, interChange is the most proven in its ability to take legacy-based policy and transform it into the configured MMIS for tomorrow. Our team will conduct requirements verification (RV) sessions to facilitate developing and delivering the Replacement MMIS with the features and functions required by the State. This will be a highly collaborative effort involving meetings, discussions, and bidirectional education. interChange has additional capabilities that allow reconsideration or refinement of many of the old policies and processes that were based on existing system constraints. Claims processing is the heart of the interChange system, and collaboration on transforming the MMIS functional requirements from their current "if-then-else" logic into the configured rules of adjudication is the heart of a successful implementation. We are ready to leverage our many decades of North Carolina healthcare policy experience to work with you in making this transition successful.

There will be some customization needed. For example, if State coverage policy depends on an attribute that is not part of the current rule configuration list, interChange is designed to enable additional elements. There may be some State-specific data elements that need to be added, processed, and displayed in the Replacement MMIS. Additional search criteria may be needed for certain data panels. These are common enhancements made with each implementation of interChange, and, by design, the interChange framework is flexible and adaptable to these needs.

During the implementation, the EDS team will perform detailed policy parallel testing on claims. The goal of the parallel testing is to minimize the impact of transitioning from the current systems to the new multi-payer Replacement MMIS. Through this testing effort, we can refine the configured business policy to match the policy translated from the base systems. This testing component is a key approach to our configuration of the policy.

Enhancements to Functional Requirements

interChange is designed to support claims processing for multiple claim types that are submitted through a variety of media across several different medical assistance programs. It spans the functional areas of claims processing and smoothly integrates with other functional areas of interChange.

Some enhancements to interChange are required to meet some of the requirements noted in the RFP. Specifically, we will make the following changes to the claims processing function:

- The edit/audit processing function validates claim records in accordance with the claim processing policy. EDS will enhance the edit/audit process to meet the current needs of the State. We will set new edits and audits or modify the existing ones to support the State's requirements.
- The rules engine will be configured to include every rule needed for claims processing for the State. The claims rules engine currently supports numerous rules for the functional areas of claims entry, receipt, control, adjudication, disposition, and more. We will add any new rules and/or modify the existing rules to meet the State's requirements. Coordination of recipient plans, provider contracts, and reimbursement rules determine how claims are processed and priced. EDS will enhance the rules engine in accordance with the State policy.
- The pricing methods additions and changes are configured in the rules engine. Because each State has its custom pricing rules, we will create new methods or modify existing pricing methods to facilitate the pricing of claims according to the State's requirements.

- Interfaces will be designed or modified as needed to support the appropriate data sharing with the North Carolina Accounting System, the Retro-DUR vendor, and the Division of Information Resource Management (DIRM).
- There are other changes to interChange that include creating new reports, and enhancing the search criteria interfaces.

Response to Claims Processing System Requirements

The following tables map the detailed solutions to the different requirements of the claims functional area, including mailroom, claim acquisition, pharmacy point of sale, financial payer and population group, suspended claims, general claims resolution, retrospective drug utilization review, adjustment processing, general payment processing, financial and related processing, and financial management and accounting business area requirements. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

Mailroom Requirements

The following table, EDS Response to Mailroom Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Mailroom Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.1	Provides capability for mechanized date stamping of all mail	Met by operational processes and procedures. EDS will scan correspondence mailed from the recipient. Each of these items will be provided with an ICN that includes a Julian date.
40.8.1.2	Provides capability to access system for logging receipt of packages and envelopes received from couriers	Met by operational processes and procedures. This activity is typically handled by mailroom clerical staff.
40.8.1.3	Provides capability to access system log for entering checks received	Met by interChange. The financial subsystem allows the entry of checks received.
40.8.1.4	Provides capability for system-generated logging of regular mail costs	Met through integration of the COTS Pitney Bowes Mailing Equipment Accounting tool and operational procedures. Additional accounts can be added to include additional units, programs, and other data.
40.8.1.5	Provides capability for automated Return to Provider (RTP) letter	Met by operational processes and procedures and the integration of the COTS letter generation tool, DOC1.
40.8.1.6	Provides capability for automated system log/accounting for mailroom	Met through COTS integration and through operational processes and procedures. The Pitney Bowes Mailing Equipment Accounting tool meet this requirement.

Claim Acquisition Requirements

The following table, EDS Response to Claim Acquisition Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Claim Acquisition Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.7	Provides capability to assign a unique number for each claim, adjustment, and financial transaction that contains date of receipt, batch number, and sequence of document within the batch, upon receipt of each claim and adjustment	Met by interChange. interChange assigns unique claim identifiers in the form of ICNs for both claims and adjustments. This assignment is based on a region that defines the media and type of transaction, as well as the Julian date followed by a sequence number.
40.8.1.8	Provides capability for tracking of all claims, adjustments, and financial transactions from receipt to final disposition	Met by interChange. The claim location code tracks the phases of claims processing, starting with entry or initial input to the claims engine through financial payment. The second date and time stamps record each change in location and status.
40.8.1.9	Provides capability for mechanized images of all claims, attachments, adjustment requests, and other claims-related documents and ability to link these documents to the unique claim number they are associated with	Met by interChange. Claims-related documents are imaged and provided with document control numbers. These numbers are linked to the claim through a database table.
40.8.1.10	Provides capability to maintain batch and online entry controls for all claims, batch audit trails, and all other transactions entered into the system	Met by interChange. Maintenance of batch and online entry control for claims, as well as batch audit trail and other transactions entering the system, are done through SunGard reports.
40.8.1.11	Provides capability to identify any activated claim batches that fail to balance to control counts	Met by interChange. SunGard writes claims to a server location. The claims engine batch process then retrieves those files for processing. At both ends, balance is achieved through SunGard reports and the claim engine balancing reports, which display the status of the claims processed. The report includes a summary of claim counts sent to the claims engine by submission type.
40.8.1.12	Provides capability for editing to prevent duplicate entry of electronic media claims	Met by interChange. EDI processing meets this requirement. The claims engine has a check to prevent duplication of claims entry. It stores batches with duplicate file numbers in a nonprocessing directory so that they may be used for research purposes.
40.8.1.13	Provides capability to perform CLIA editing based on the provider CLIA number and the CLIA number for the service	Met by interChange. The generic edit/audit configuration meets this requirement. interChange maintains a monthly download process from the OSCAR system to retrieve Clinical Laboratory Improvement Amendment (CLIA)—related information. The CLIA editing is performed on the basis of the CLIA number of the provider and the CLIA number for the service. The editing consists of checks for required presence, format, consistency, reasonableness, and

RFP No.	RFP Requirement	EDS Response
		allowable values.
40.8.1.14	Provides capability to perform diagnosis editing by line item	Met by interChange. The interChange rules engine facilitates this requirement. The diagnosis editing is linked to the detail by the treatment indicator. The rules engine compares the rules with claim-related data, including necessary header or detail diagnosis code and type (emergency, admitting), makes decisions accordingly, and then posts edits as specified.
40.8.1.15	Provides capability to adjudicate a claim to the fullest extent possible in order to report all errors	Met by interChange. Edits that can be logically performed are completed before suspension or denial. The error table with the claims engine reports the errors for claims, current and historical, if the claim processed multiple times due to suspension.
40.8.1.16	Provides capability to adjudicate claims for Medicare Part D dual-eligible recipients according to State business rules and policies	Met through configuration of interChange parameters and features. The edit/audit processing function in interChange validates claim records in accordance with the State's business rules and claims processing policy.
40.8.1.17	Provides capability for key re-verification of critical fields, data entry software editing, and supervisor audit verification of keyed claims	Met by interChange. This requirement is met by using the SunGard data entry and the data corrections panels and recycle reprocess. The Claim Suspense panel lists the claims with a suspended or resubmit status. A user logged on to the application can verify critical fields and make data corrections to a claim by selecting it from this list.
40.8.1.18	Provides capability to maintain extract tables that contain key elements to verify the validity of entered claim information	Met through configuration of interChange parameters and features. Through the reference function of interChange, different stub files (dental, diagnosis, drug, hospital, procedure, and revenue code) are generated for use in the electronic claims pre-edit process. The process checks the validity of the claim information entered against the reference data.
40.8.1.19	Provides capability to perform presence and format editing on all entered claims	Met by interChange. When a claim is entered through the Web, paper, or electronic data interchange (EDI), the required fields are edited for presence and format.
40.8.1.20	Provides capability to perform validity editing on all entered claims using current information on Provider, Recipient, Claims History, Prior Approval, and Reference Files or business area/interfaces	Met by interChange. The claims engine uses the available reference data to accurately adjudicate the claims. The load recipient history function loads audit history information to memory with separate routines for each claim type.
40.8.1.21	Provides capability to support the Medicare Correct Coding Initiative (CCI)	Met through configuration of interChange parameters and features. These are standard general edit/audit configurations required for each State.
40.8.1.22	Provides capability for front-end claim, adjustment, or crossover denials when required attachments are not present	Met by interChange. The claims engine can suspend claims for a specified time period and wait for attachments. If the attachments are not processed by that time, the claims

RFP No.	RFP Requirement	EDS Response
		engine reprocesses the claims. Claims may be denied, if appropriate.
40.8.1.23	Provides capability to generate RTP letters with entry available to denote front-end claim error conditions	Met by operational processes and procedures. SunGard and the mail room staff can perform this function when it is determined that a paper claim cannot be entered into the system.
40.8.1.24	Provides capability for individual paper and electronic claim overrides on edits such as presumptive eligibility, Medicare A, B, and C, HMO coverage, TPL, and timely filing limit	Met by interChange. The claims engine can override edits for claims that are in suspended status.
40.8.1.25	Provides capability to override service limitations for Early Periodic Screening, Diagnosis, and Treatment (EPSDT) -eligible recipients	Met by interChange. The claims engine allows limited audit overrides for the claims with a suspended status.
40.8.1.26	Provides capability to identify and allow online correction to claims suspended as a result of data entry errors	Met by interChange. The interChange Claims Data Correction page allows online correction to claims suspended due to data entry errors. This page contains panels that allow access to suspended claim header and detail information. These panels are used to update and resubmit claims information.
40.8.1.27	Provides capability to return to submitters an acknowledgement of all electronic submissions and claim status within twenty-four (24) hours of original receipt	Met by interChange. The transmissions generated from the EDI subsystem, which runs throughout the day, meet this requirement. The EDI 997 Functional Acknowledgement Generation script returns a functional acknowledgement by dynamically updating a special 997 map and invoking the EDIFECS translator.
40.8.1.28	Provides capability to pre-screen batch electronic media claims to identify global error conditions and prevent entry of such claims into the system	Met through configuration of interChange parameters and features. EDIFECS is designed to enforce compliance to the EDI standard.
40.8.1.29	Provides capability to reject electronic claims at the claim level	Met through configuration of interChange parameters and features. An electronic claim that is not in compliance will cause the batch to reject it. The EDI translator reviews the electronic batch and rejects it at the claim level.
40.8.1.30	Provides capability to process claims and financial transaction adjustments	Met by interChange. The interChange Claims Adjustments Information page contains panels that allow the user to display and create adjustment requests. These panels allow both single and mass adjustments.
40.8.1.31	Provides capability to perform duplicate editing of drugs billed by physicians and pharmacy	Met through configuration of interChange parameters and features. Audits in the claims subsystem check for duplicate services and compare current claim detail or header information (depending on the claim type) with claims information on history. This includes comparing J-codes with their matching list of National Drug Codes (NDCs).

RFP No.	RFP Requirement	EDS Response
40.8.1.32	Provides capability to use transfer of assets data on the Medicaid recipient record in claims processing	Met through customization of interChange. The transfer of assets data is incorporated into the recipient files, and this is further used to correct the claims processing.
40.8.1.33	Provides capability to populate each claim detail with appropriate header level EOB	Met by interChange. The pricing and information explanations of benefits (EOBs) can be applied to populate each claim with the appropriate header or detail level. This also applies to EOBs associated with edits and audits.
40.8.1.34	Provides capability to use Medicaid/Medicare coverage data from EIS to adjudicate claims	Met through configuration of interChange parameters and features. Eligibility Information System (EIS) data will be incorporated to adjudicate claims.
40.8.1.35	Provides capability to update the Claims History tables with paid and denied claims from the previous audit run	Met by interChange. The claim is processed from initial input to adjudication in one step. Claims are written to a week-to-date history table before the financial cycle and to a master history table after the financial cycle.
40.8.1.36	Provides capability for inquiry on suspended claims, accessible for online inquiry	Met by interChange. The interChange Claims Search panel has various selection options that allow the user to view only the claims required. The primary selection items are ICN, billing and rendering provider, and current ID. The user may select claims by using one or all of the primary selection items. Additional search criteria include claim type, claim status (including suspended claims), from and to dates of service, and payment date. After the user enters the specific selection criteria and clicks the Search button, the system searches the database. Claims that meet the search criteria display on the Claims Search Results panel. Providers can also view suspended claims through the Web portal, although they cannot modify them.
40.8.1.37	Provides capability to accept the indicator denoting whether a third party was billed for TPL claims	Met by interChange. The interChange claims TPL processing module takes into account claims for which TPL amounts have been applied.
40.8.1.38	Provides capability to use EDB and BENDEX information to detect Medicare and Medicare HMO entitlement for use in claims processing	Met by interChange. Enrollment Database (EDB) and beneficiary data exchange (BENDEX) data exchanges with CMS are standard capabilities in interChange.
40.8.1.39**	Provides capability to define parameters and create a file for the negative and positive eligibility quality control sampling for DMH	Met through customization of interChange. A new mass adjustment function will be created to define negative and positive eligibility quality control DMH parameters.
40.8.1.40**	Provides capability to produce reports regarding the results of the DMH negative and positive sampling	Met through customization of interChange. EDS will work with the State to understand, define, and develop the processes needed to satisfy the MEQC-related requirements.
40.8.1.41	Provides capability to accept an MEQC positive sample file from DMA via DIRM	Met through customization of interChange. A new interface will be added.
40.8.1.42	Provides capability to produce claim history reports	Met through customization of interChange. We will build the

RFP No.	RFP Requirement	EDS Response
	using the MEQC positive sample file from DMA via DIRM	capability for producing claim history reports using the MEQC positive sample file.
40.8.1.43	Provides capability to reflect all premium payments and adjustments on the online paid Claims History files	Met by interChange. interChange captures premium payments and adjustments. They are not stored as claims, but rather as financial transactions.
40.8.1.44	Provides capability to maintain a complete history of all claims: paid, adjusted, and denied	Met by interChange. A complete history of claims (paid, adjusted, and denied) and multiple search options are available in interChange.
40.8.1.45	Provides capability to accrue all appropriate EOBs messages for relevant claim adjudication for each detail line and report on RA	Met by interChange. All EOBs are available for inquiry online as well as for reporting on the RA, the 835, and the Web portal. Through interChange claims disposition, a disposition is assigned to a line item or claim based on the errors found.
40.8.1.46	Provides capability to maintain a minimum five-year (5-year) history of previously paid or denied claims to support duplicate checking and utilization review	Met by interChange. The interChange claims audit process will use as much history as is configured in the audit, including the history stored or converted in the Replacement MMIS. At least 10 years will be available for processing.
40.8.1.47	Provides capability to assign the status of claims in the system to determine course of each action to be taken in the claims adjudication process and completion of appropriate financial processing tasks	Met by interChange. interChange uses the claim status and the code location to identify the status and processing history for each claim. Date and time stamps define to the second when each status was changed.
40.8.1.48	Provides capability to adjust paid claims history for State-specified TPL recoveries at the detail level to include duplicate check	Met through configuration of interChange parameters and features. interChange can bill other insurance companies electronically or on paper for pay-and-chase or retroactively discovered TPL. The recoveries are applied to the appropriate claim identified either at the header or detail level.
40.8.1.49	Provides capability to allow DME claims to span across calendar months in order to be consistent with Medicare and thus allow appropriate claims payment for Medicaid-covered items	Met through configuration of interChange parameters and features. interChange edits can be configured to meet this requirement.
40.8.1.50	Provides capability for providers to bill ambulance services using multiple claim types	Met through configuration of interChange parameters and features. This is handled as a billing contract rule.
40.8.1.51**	Provides capability for an extract of DMH claims denied due to insufficient budget	Met through customization of interChange. interChange can deny claims due to insufficient budget. The customized data exchange will need to be developed.

Pharmacy Point-of-Sale Requirements

The following table, EDS Response to Pharmacy Point-of-Sale Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Pharmacy Point-of-Sale Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.52	Provides capability for an interactive session that accepts submitted pharmacy claims and processes to identify and alert the provider of problems associated with inappropriate drug use prior to dispensing	Met through configuration of interChange parameters and features. The edit/audit processing function validates claim records in accordance with the State's claim processing policy. The electronic claims management (ECM) function provides for the interactive real-time submission and processing of pharmacy claims. interChange performs prospective drug utilization review (Pro-DUR) against drug claims, alerting the pharmacist of potentially inappropriate prescriptions.
40.8.1.53	Provides capability to allow for the submitting provider to respond to alerts by overriding alerts or reversing the claim submitted based on State-determined hierarchy	Met through configuration of interChange parameters and features. The DUR processing function provides the capability to establish rules to indicate if the Pro-DUR alert can be overridden. The system will allow overrides according to the State-determined hierarchy.
40.8.1.54	Provides capability to identify informational alerts for warning on claim denials	Met through customization of interChange. The system will need to be modified to call the Pro-DUR module for a denied claim.
40.8.1.55	Provides capability for an audit trail of all inquiries (event logging), including who made the inquiry, information input, and response provided	Met by interChange. The automated voice response system (AVRS) logs inquiries.
40.8.1.56	Provides capability for alerts for drugs requiring prior approval; provides capability to allow providers to immediately apply for prior approval; provides capability to receive approval if appropriate and complete claim adjudication online	Met through configuration of interChange parameters and features. The DUR+ feature allows automated PAs to be generated for pharmacy claims meeting approved conditions. Please refer to the proposal section 40.7.1 Prior Approval System Requirements for more detail. For PAs that must be manually entered, the interChange claims engine makes use of a PA the instant it is saved into the system. This way, a PA analyst can enter a PA while the pharmacist is on the telephone, and the pharmacist can submit the claim point-of-sale (POS) and have it adjudicate immediately.
40.8.1.57	Provides capability to price all pharmacy claims using lesser of logic incorporating all State-approved pricing methodologies	Met through configuration of interChange parameters and features. The pricing method additions or changes function of interChange determines the pricing methodology. Both compound and noncompound pharmacy claims are priced using the appropriate per-unit rate for the NDC and date of service billed. The rate is multiplied by the number of units billed to determine the allowed charge. A dispensing fee is added to the allowed price calculated for the claim. This allowed charge is then typically compared to the billed amount, and the lower of the two amounts is determined as the claim's allowed charge.
40.8.1.58	Provides capability for online prospective drug utilization review POS/PRO-DUR) for all pharmacy claims	Met through configuration of interChange parameters and features. The interChange pharmacy functional area accepts

RFP No.	RFP Requirement	EDS Response
	using 5.1 formats or newer, more recent NCPDP format updates	HIPAA-compliant pharmacy claim submissions and returns HIPAA-compliant responses in National Council for Prescription Drug Programs (NCPDP) 5.1 format (interactive) and NCPDP 1.1 format (batch). POS claims are subject to Pro-DUR auditing, whereas batch or paper claims bypass Pro-DUR.
40.8.1.59	Provides capability for submittal of decimal units on claims up to the maximum allowed by NCPDP standards and calculate payment based on the actual decimal versus rounding to a whole unit	Met by interChange. The claims pharmacy pricing module prices routines specific to pharmacy claims. The system allows for the submittal of three significant decimal places according to the NCPDP 5.1 format and calculates the payment based on the actual decimal received versus rounding to a whole unit.
40.8.1.60	Provides capability to interface with Comprehensive Neuroscience (CNS) Program-Behavioral Pharmacy Management System (BPMS); provides capability to interface with BPMS quality indicator algorithms developed by an outside vendor (CNS)	Met through customization of interChange. EDS will provide an interface from claims to meet this requirement.
40.8.1.61	Provides capability for PRO-DUR and Retroactive DUR	Met through configuration of interChange parameters and features. The edit/audit processing function validates claim records in accordance with the State's claim processing policy. The Drug Utilization Pro-DUR page meets this requirement. We will configure the Pro-DUR function of interChange in accordance with State-specific requirements. The retroactive DUR (Retro-DUR) process in interChange is a monthly, automatically scheduled batch process. We will provide and deliver the extracted data to the valid Retro-DUR contractor.
40.8.1.62	Provides capability to process all pharmacy claims in POS/PRO-DUR inclusive with edits/audits/overrides consistent with current State policy	Met through customization of interChange. The edit/audit processing function validates claim records in accordance with the State's claim processing policy. The system's Pro-DUR function processes pharmacy claims in POS inclusive with edits/audits and overrides. We will configure the Pro-DUR functions of interChange in accordance with State-specific requirements. We will design and develop specific customization required to meet this requirement.
40.8.1.63	Provides capability to allow for online pharmacy claim reversal/adjustment within one (1) year of date of service	Met by interChange. The adjustment module controls initialization and adjustment requests for the majority of the adjustment functions. interChange supports pharmacy adjustments to meet this requirement.
40.8.1.64	Provides capability to allow for duplicate editing across lines of business, claim types, including pharmacy against HCPCS (e.g., J codes) or NDC codes to ensure both are not billing for nursing home and inpatient stays or pharmacy claims against DME, physician, or Competitive Acquisition Program (CAP) B claims	Met through configuration of interChange parameters and features. The audit processing function validates claims records in accordance with the State's claim processing policy. The audit function performs the verification for duplicate services, service limitations, and service conflicts, including the comparison of Health Care Financing

RFP No.	RFP Requirement	EDS Response
		Administration (HCFA) Current Procedural Coding System (HCPCS) codes to related NDC codes. We will configure conflict audits to meet the State's needs for auditing across all claim types.
40.8.1.65	Provides capability for an online audit trail of all POS/PRO-DUR transactions	Met through configuration of interChange parameters and features. The interChange system logs the inbound and outbound POS transactions for future review.
40.8.1.66	Provides capability for submissions and responses for all Replacement MMIS POS/PRO DUR via the Web Portal	Met by interChange. The claim panels from the Web portal for dental (Claim Dental), pharmacy (Claim Pharmacy), professional (Claim Professional), and institutional (Claim Institutional) claims allows a provider to enter the required information to submit the claim, including multiple detail lines. In addition to submission of claims, the Web portal provides the capability for submitting adjustments and copying current claims for resubmission.
40.8.1.67	Provides capability to accept multiple NDCs and associated prices to calculate total allowed for compound drugs to price and pay compound drugs that include multiple NDCs, rebateable legend drugs, and selected covered over-the-counter products	Met through configuration of interChange parameters and features. The pricing method additions or changes function of interChange determines the pricing methodology. Both compound and noncompound pharmacy claims are priced using the appropriate per-unit rate for the NDC and date of service billed. The system processes each detail of compound drug claims. We will modify, if necessary, the pricing methods associated with compound drugs to meet the State's requirement.
40.8.1.68	Provides capability for flexible State-determined dispensing fees	Met through configuration of interChange parameters and features. The pricing method additions or changes function of interChange determines the pricing methodology. We will modify or add new pricing methods to meet this requirement.
40.8.1.69	Provides capability to set edits that cannot be overridden when the potential drug conflict reaches certain State-approved severity or significance levels	Met through configuration of interChange parameters and features. Pro-DUR alerts can be easily configured to not allow override and allow informational and overridable alerts. We will configure the alerts for drug conflicts so that they cannot be overridden when the conflict reaches a certain State-approved severity or significance level by alert type.
40.8.1.70	Provides capability to exempt a drug or a recipient from the State-specific prescription limit according to policy	Met through configuration of interChange parameters and features. There are several methods of meeting this requirement, including coverage rules and PA.
40.8.1.71	Provides capability to maintain an online audit trail of all updates to Reference and POS/PRO-DUR data, identifying the source of the change, before and after, and change dates	Met by interChange. The reference subsystem keeps audit trails of the changes made to reference and POS/Pro-DUR data for online viewing.
40.8.1.72	Provides capability to allow for the submitting provider	Met through configuration of interChange parameters and

RFP No.	RFP Requirement	EDS Response
	to respond to alerts by overriding alerts or reversing the claim submitted	features. The system allows overrides to alerts and the capability of reversing the submitted claim or the claim in history that is causing the alert. We will configure the system to meet the State's requirement.
40.8.1.73	Provides capability to edit for and deny FDA DESI -identified drugs	Met through configuration of interChange parameters and features. The edit/audit processing function validates claims records in accordance with the State's claim processing policy. The system can identify and deny claims based on criteria within the drug files, including either the Food and Drug Administration (FDA) or CMS Drug Efficacy Study Implementation (DESI) indicators.
40.8.1.74	Provides capability to pay or deny (but not suspend) all pharmacy claims entered through POS devices	Met by interChange. The system can disposition claims based on several criteria, including claim type and ICN region code. The rules of dispositioning determine that claims entered through POS devices can be paid or denied but not suspended.
40.8.1.75	Provides capability to edit against lock-in/lock-out recipient data for pharmacy, primary care provider, and/or prescriber	Met through configuration of interChange parameters and features. The system provides lock-in and lock-out editing for pharmacy, PCP, or prescriber. This can apply to just a specific class of drugs, if desired. We will configure the edits in accordance with the State's requirements.
40.8.1.76	Provides capability to process claims for pharmacist's professional services and to price according to the cognitive service provided	Met through configuration of interChange parameters and features. The pricing method additions or changes function of interChange determines the pricing methodology. We will build a new pricing method to meet the criteria for cognitive service.
40.8.1.77	Provides capability for State-specified customized updates from a contracted drug update service and provides the State all clinical and editorial highlights, newsletter, product information, and modules	Met by interChange. interChange will integrate the FDB drug file as part of the overall solution. EDS pharmacy professionals will stay current with clinical and editorial highlights, newsletters, product information, and modules.
40.8.1.78	Provides capability to edit all claims entered into the system to ensure claims for drugs mandated by Federal regulations, the Federal upper limit (FUL) drugs, and the SMAC drugs are processed correctly; provides capability to edit claims entered into the system to ensure claims are not paid for the drugs listed on the Federal DESI list	Met through configuration of interChange parameters and features. We will configure drug edits to meet the requirements for DESI and State Maximum Allowable Cost (SMAC) drugs.
40.8.1.79	Provides capability to edit against all State-determined DUR alerts	Met through configuration of interChange parameters and features. The system will process pharmacy claims against the State-required DUR alerts. interChange is designed to perform any or all of the following Pro-DUR alerts: Drug High/Low Dose, Drug/Disease, Drug/Pregnancy, Drug/Age-Pediatric & Geriatric, Drug/Drug, Drug/Allergy, Therapeutic Duplication, Ingredient Duplication, Duration of Therapy , Underutilization (late refill) , Overutilization (early refill),

RFP No.	RFP Requirement	EDS Response
		and Additive Toxicity.
40.8.1.80	Provides capability for e-prescribing services, e.g., Rx HUB , and access to formulary and benefit information to enrolled providers using NCPDP Version 1.0 (or more recent) Formulary and benefit standard	Met through customization of interChange. interChange will be customized to support the MMIS side of the e-prescribing services; specifically, the ability to interface through the NCPDPE1 eligibility inquiry files to the e-prescribing transaction vendor. interChange also will be customized to provide brand-to-generic drug cross-reference inquiry services. We can connect to an external e-prescribing vendor and interface with the State's e-prescribing vendor when that vendor is selected.
40.8.1.81	Provides capability to apply edits for coverage of non-legend drugs within compound drugs	Met through configuration of interChange parameters and features. The edit/audit processing function validates claims records in accordance with the State's claim processing policy. We will configure the interChange compound drug function to include edits for non-legend drugs.
40.8.1.82	Provides capability to ensure use of the appropriate package size in calculating the maximum allowable unit cost for reimbursement	Met by interChange. The general claims auditing module in interChange provides the capability to audit where claims in history use differing units or package sizes.
40.8.1.83	Provides capability to edit for Part D eligibility or suspect and deny appropriately	Met through configuration of interChange parameters and features. The edit/audit processing function validates claims records in accordance with the State's claim processing policy. interChange will configure Part D edits to meet the State's requirement.
40.8.1.84	Provides capability to ensure drugs have not been previously issued within the Physician Drug Program and Pharmacy POS	Met by interChange. interChange provides duplicate audit functionality for pharmacy claims.

Determination of Financial Payer and Population Group Requirements

The following table, EDS Response to Determination of Financial Payer and Population Group Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Determination of Financial Payer and Population Group Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.85	Provides capability to ensure that financial payer and population group determination is based on the recipient's program, enrollment, and related benefit packages, the enrollment of the provider, the inclusion of services in eligible benefit packages, and the dates	Met through configuration of interChange parameters and features. The claims rules engine stores the rules engine calls. The rules engine will determine the correct relationship between the recipient, payer, and reimbursement decisions. The Financial Payer Coordination

RFP No.	RFP Requirement	EDS Response
	services were rendered	of Benefit panel maintains relationships and the order of payers as related to coordination at the payer level. The Financial Payer panel is used to maintain the organizations responsible for the underwriting of the claims transactions to be paid. The Financial Payer Hierarchy panel maintains HIPAA payer hierarchy threads used to control payer relationships and the order of claim adjudication at the payer level. Payer hierarchy threads are ordered sets of payers that may cover recipients concurrently.
40.8.1.86	Provides capability to determine the most appropriate LOB and benefit plan for each claim (by line detail)	Met through configuration of interChange parameters and features. The claims rules engine stores the rules engine calls. The rules engine will determine the correct relationship between the recipient, payer, and reimbursement decisions. Benefit plan hierarchy is configurable within the reference subsystem. The Assignment Plan Hierarchy panel maintains assignment plan threads that are used to control assignment plan relationships and the order of claim adjudication at the assignment plan level. Fund code assignment is determined within the claims engine by examining the required criteria. The Fund Code Selection panel is used for selecting the fund codes that are to be included or excluded in the claim payment hold. The claims program module is responsible for editing, pricing, and auditing claims based on the hierarchy of the recipient's eligible benefit plan.
40.8.1.87	Provides capability to perform Payer Determination process daily after input conversion process to accurately route the claim according to financial payer	Met through configuration of interChange parameters and features. The claims rules engine stores the rules engine calls. The rules engine will determine the correct relationship between the recipient, payer, and reimbursement decisions. The Financial Payer Coordination of Benefit panel maintains relationships and the order of payers as related to coordination at the payer level. The Financial Payer Hierarchy panel maintains HIPAA payer hierarchy threads used to control payer relationships and the order of claim adjudication at the payer level. Fund code assignment is determined within the claims engine by examining the required criteria. The Fund Code Selection panel is used for selecting the fund codes to be included or excluded in the claim payment hold.
40.8.1.88	Provides capability to re-perform Payer Determination process before the claims processing cycle to incorporate any data corrections made subsequent to the initial Payer Determination process	Met by interChange. During claims processing, whether recycle or new-day, all edits and audits are performed.
40.8.1.89	Provides capability to determine financial payer hierarchy	Met through configuration of interChange parameters and features. The multi-payer module contains the functions to do the final pricing, spend-down, TPL, and coordination of

RFP No.	RFP Requirement	EDS Response
		benefits (COB) among payers and benefit plans. The Financial Payer Hierarchy panel maintains HIPAA payer hierarchy threads used to control payer relationships and the order of claim adjudication at the payer level.
40.8.1.90	Provides capability to determine population group hierarchy within a specified financial payer	Met through configuration of interChange parameters and features. The claims rules engine stores the rules engine calls. The rules engine will determine the population group (benefit plan) hierarchy within a specified financial payer.
40.8.1.91	Provides capability to maintain, report, and view the original claim and associated actions that changed the original makeup of claim details	Met through customization of interChange and through COTS integration. interChange will capture the original claim image for paper claims for review and reporting from the document management COTS software, EMC | Documentum, of the original data submitted. Additionally, electronically submitted claims data will be stored and presented to the users through the interChange user interface. For both paper and electronically submitted claims, the original data is stored and available to the users for research.
40.8.1.92	Provides capability to identify any claim details and track back to the original claim	Met by interChange. interChange does not split claims into multiple claims depending on certain criteria. The claims engine will handle the details submitted on a claim as an indivisible entity.
40.8.1.93	Provides capability to identify a claim detail line that has been processed independent of the original claim and tie it to the original claim	Met by interChange. interChange does not split claims into multiple claims depending on certain criteria. The claims engine will handle the details submitted on a claim as an indivisible entity.
40.8.1.94	Provides capability to apply appropriate Replacement MMIS edits to any claim detail that is processed independent of the original claim	Met by interChange. interChange does not split claims into multiple claims depending on certain criteria. The claims engine will handle the details submitted on a claim as an indivisible entity.
40.8.1.95	Provides capability to require prior approval for recipients covered in the Medicaid for Pregnant Women (MPW) program for services (other than postpartum care) that are provided after date of delivery	Met through configuration of interChange parameters and features. Through the rules engine, we can configure the rules to set up prior approval for varying criteria, including pregnancy services.
40.8.1.96	Provides capability to format key-entered POS, batch, and electronic claims submission/electronic data interChange (ECS/EDI) claims into common processing formats for each claim type	Met by interChange. interChange processes translate claims of the same form into a similar format and process them through the claims engine. No matter how they are received, they are formatted and processed the same.
40.8.1.97	Provides capability to perform claims processing based on recipient's enrollment and eligibility information	Met by interChange. interChange performs claims processing based on unique characteristics of each individual claim, including recipient enrollment and eligibility information.
40.8.1.98	Provides the capability to edit claim detail identifying all error codes for claims that fail daily edit processing at	Met by interChange. The interChange edit/audit function posts all possible errors for a claim during the initial

RFP No.	RFP Requirement	EDS Response
	initial processing of the claim to minimize the need for multiple re-submissions of claims	processing of the claim to minimize the need for multiple resubmission of claims.
40.8.1.99	Provides capability to identify the processing outcome of claims (suspend, deny, or pay and report) that fail edits, based on the edit disposition	Met by interChange. interChange provides a variety of criteria for edit disposition to determine the correct outcome for a claim. The claims disposition module is responsible for the disposition of a claim. It assigns a disposition to a line item or claim based on the errors found. The Disposition Criteria — Error Disposition panel contains detailed dispositioning information concerning a specific edit/audit. The correct disposition detail to use for a claim will be determined based on the claim type, level of care, outcome (full failure or cutback), provider specialty, date of receipt, and date of service of the claim.
40.8.1.100	Provides capability for online claims correction and resolution of suspended claims	Met by interChange. The Claim Data Correction panel meets this functional requirement.
40.8.1.101	Provides capability to receive paper/electronic claims for Medicare and Medicare HMO cost sharing	Met by interChange. The claims entry functional area provides the capability to receive both paper and electronic claim submissions through multiple media. Claims processing of crossover and encounter claims meets this functional requirement.
40.8.1.102	Provides capability for the identification of potential TPL (including Medicare) and suspend, deny, or pay and report the claim	Met by interChange. interChange considers TPL amounts for final pricing and allows for history-only TPL adjustments. The adjustment functions module supports history-only adjustments. An example of such an adjustment is the application of TPL collection results applied at the claim level. The receipts of payments from private insurance companies for medical assistance claims are applied to the claims for which payment is applicable. An RA is not produced as a result of an insurance collection, but the claims record is updated to reflect the private insurance payment.
40.8.1.103	Provides capability to distinguish between a Medicare denial versus private insurance denials	Met by interChange. interChange recognizes Medicare and private insurance denials (EOBs). For Medicare denials, Medicaid claim rules are applied. For appropriate private insurance denials, the TPL edit is bypassed.
40.8.1.104	Provides capability for editing to assure that TPL has been satisfied or that a TPL denial attachment is present if required	Met through configuration of interChange parameters and features. The interChange edit/audit processing function produces edits and audits of claims records in accordance with the State's claim processing policy. The disposition status is based on user-defined and table-driven instructions that can cause a claim to pay and list, suspend, or deny.
40.8.1.105	Provides capability for editing and suspending of claims for pre-payment review based on provider, recipient,	Met through configuration of interChange parameters and features. The interChange edit function verifies the

RFP No.	RFP Requirement	EDS Response
	procedure code, diagnosis code, third party insurance, and authorized services	accuracy, validity, and integrity of data submitted on claims by comparing claim data against reference data, provider data, valid value lists, and recipient data received. The audit function compares the in-process claim data with data in paid claims history to determine the appropriateness of the service reflected on the claim in relation to other services received by the recipient. The disposition status is based on user-defined and table-driven instructions that can cause a claim to pay and list, suspend, or deny.
40.8.1.106	Provides capability for editing to assure that the services for which payment is requested are covered by the appropriate State Medical Assistance program	Met by interChange. The benefit plan coverage rules will process each benefit plan in the hierarchy to determine coverage. Each available benefit plan (State Medical Assistance Program) is attempted in turn. The first plan that covers the service is used for that detail for further processing and funding. If none of the available benefit plans will cover a service, the detail is denied.
40.8.1.107	Provides capability for editing to ensure that all required attachments are present	Met by interChange. interChange performs edits to determine if the appropriate attachments are present.
40.8.1.108	Provides capability to edit for cost-sharing requirements on applicable claims	Met through configuration of interChange parameters and features. The claims pricing function determines the pricing methodology used to calculate the amount paid for services rendered to eligible recipients. This function includes the calculation of the allowed amount and application of payment deductions and cost-sharing requirements, based on recipient and claim criteria. interChange will configure a pricing method to correctly adjudicate a claim when cost-sharing applies, if necessary.
40.8.1.109	Provides capability to edit any suspended claims requiring provider or recipient prepayment review	Met through configuration of interChange parameters and features. The interChange edit function verifies the accuracy, validity, and integrity of data submitted on claims by comparing claim data against reference data, provider data, valid value lists, and recipient data received. interChange will configure edits to suspend appropriate claims for prepayment review. The claims resolution functions support the capture of data corrections to suspended claims so that they may be completely reprocessed through the system.
40.8.1.110	Provides capability to process all claims against the edit criteria	Met by interChange. The interChange edit function verifies the accuracy, validity, and integrity of data submitted on claims by comparing claim data against reference data, provider data, valid value lists, and recipient data received. interChange will configure edits to meet the State's needs. The claims resolution functions support the capture of data corrections to all claims so that they may be completely reprocessed through the system.

RFP No.	RFP Requirement	EDS Response
40.8.1.111	Provides capability for editing to assure that reported diagnosis, procedures, revenue codes, and denial codes are present on Medicare primary claims and all other appropriate claim types	Met through configuration of interChange parameters and features. The interChange edit function verifies the accuracy, validity, and integrity of data submitted on claims by comparing claim data against reference data, provider data, valid value lists, and recipient data received to validate that reported diagnosis, procedures, revenue codes, and denial codes are present on Medicare primary claims and all other appropriate claim types.
40.8.1.112	Provides capability to edit for recipient eligibility on date(s) of service	Met by interChange. Recipient eligibility edits capture the correct segment for the dates of service on the claim to meet this functional requirement.
40.8.1.113	Provides capability to edit for valid recipient identification, using DOB and a minimum of the first two (2) characters of last name and the first character of first name	Met by interChange. Name and date of birth (DOB) edits meet this functional requirement.
40.8.1.114	Provides capability to edit for special eligibility records, indicating recipient participation in special programs where program service limitations or restrictions may vary	Met through configuration of interChange parameters and features. The interChange edit function verifies the accuracy, validity, and integrity of data submitted on claims by comparing claim data against reference data, provider data, valid value lists, and recipient data received. interChange can configure limitation audits based on benefit plans, which include waiver programs.
40.8.1.115	Provides capability to edit for recipient living arrangement within the dates of service	Met through configuration of interChange parameters and features. The interChange edit function verifies the accuracy, validity, and integrity of data submitted on claims by comparing claim data against reference data, provider data, valid value lists, and recipient data received. interChange can configure edits based on benefit plans, including hospice or long-term care (LTC).
40.8.1.116	Provides capability to edit for Provider program eligibility to perform procedure rendered on date of service	Met by interChange. interChange will process rules and edits to determine provider eligibility for the service rendered.
40.8.1.117	Provides capability to edit for provider participation as a member of the billing group	Met by interChange. The provider subsystem provides the necessary information to determine if a provider is a recipient of a billing group; if not, an appropriate edit is set.
40.8.1.118	Provides capability to edit claims for recipients in nursing facilities against recipient approval data, level of care, patient liability, patient deductible, Medicare denial, reserve bed and leave days, and admit/discharge information	Met through customization of interChange. The claims rules engine compares the rules with claim data and makes decisions accordingly, posting edits as specified. The interChange edit function verifies the accuracy, validity, and integrity of data submitted on claims by comparing claim data against reference data, provider data, valid value lists, and recipient data received. interChange will configure edits and provide new functions to cross-reference these criteria if necessary to adjudicate the claim correctly.

RFP No.	RFP Requirement	EDS Response
40.8.1.119	Provides capability to edit for prior approval and ensure an active prior approval number is on file	Met by interChange. PA editing meets this functional requirement. interChange will edit against available PA combinations for a correct match with the claims criteria.
40.8.1.120	Provides capability to edit for prior approval claims and cut back billed units or dollars	Met through configuration of interChange parameters and features. PA editing meets this functional requirement. Limitation audits can be processed for cutback or full denial. PA can override these audits depending on how the claim elements match the PA criteria. When the claim and PA data does match, claims processing updates the PA record with the units or dollars from the claim. The claim ICN is inserted into the PA-to-ICN cross-reference table to facilitate tracking and online viewing of claims that have used the services authorized. The units and dollars remaining on the PA record are decremented to reflect what the claim has used.
40.8.1.121	Provides capability to edit for step therapy criteria and protocol for selected drugs	Met through configuration of interChange parameters and features. interChange has step therapy audits and will configure them to match the State's specific drug groups.
40.8.1.122	Provides capability to override the thirty-four-day (34-day) supply limit edit for drugs	Met through configuration of interChange parameters and features. Based on the State's criteria, interChange will allow for an override to the 34-day supply limit.
40.8.1.123	Provides capability to maintain edit disposition to deny claims for services that require prior approval if no prior approval is identified or active	Met by interChange. PA editing meets this functional requirement. According to policy, an indicator of services that require PA is established for each procedure code, revenue code, and NDC within the service program for which a valid PA must be obtained.
40.8.1.124	Provides capability to update the Prior Approval record(s) to reflect the services paid on the claim, including units, amount paid, and the number of services still remaining to be used	Met by interChange. PA editing meets this functional requirement. interChange processes a PA against the PA record and a detail tracking table that determine the remaining services allowed for that PA item. The PA Claim List panel displays claim-to-PA cross-reference information for claims that used a PA to pay. The PA Line Item panel allows authorized users to view, enter, and modify service detail information on a PA request.
40.8.1.125	Provides capability for automated cross-checks and relationship edits on all claims	Met by interChange. Cross-check and relationship edits meet this functional requirement.
40.8.1.126	Provides capability for automated audit processing against history, suspended, and same cycle claims	Met through customization of interChange. The edit/audit processing function in interChange processes against history and week-to-date claims. There is not a batch cycle, so each claim runs independently against the available paid history. However, interChange does not audit against suspended claims because their outcome is unclear. After a claim has adjudicated, it becomes visible to audit processing. interChange can be extended to include reviewing suspended claims during auditing.

RFP No.	RFP Requirement	EDS Response
40.8.1.127	Provides capability to apply Medical Procedure Audit Policy (MPAP) to determine audits on a specific claim detail	Met through configuration of interChange parameters and features. The edit/audit processing function in interChange meets this requirement. interChange can configure audits to apply MPAP criteria.
40.8.1.128	Provides capability to ensure that auditing supports claim denials, automatic recoupments or cutbacks, suspended for review, or specific pricing	Met by interChange. The audit disposition meets this functional requirement.
40.8.1.129	Provides capability for automatic system recoupment and denial of hospital claim when prior approval for surgery was not granted	Met by interChange. PA editing meets this functional requirement. interChange will deny a claim if appropriate if a required PA is not found according to the claim's criteria. Claims that have been previously paid can be identified and recouped through the highly configurable mass-adjustment process.
40.8.1.130	Provides capability to apply clinical and pricing business rules in claims processing	Met through configuration of interChange parameters and features. The rules engine within claims can be set up to provide a flexible set of parameters for clinical and pricing rules.
40.8.1.131	Provides capability to identify paid and denied claims in Claims History	Met by interChange. The Claims Search and Information panels meet this functional requirement because they allow users to view paid and denied claims with multiple sorting options.
40.8.1.132	Provides capability for editing an unlimited number of claim lines	Met by interChange. interChange adheres to the HIPAA standard of 999 lines and therefore meets this functional requirement.
40.8.1.133	Provides capability to process multiple units of service for a span of dates of service	Met through configuration of interChange parameters and features. The pricing method additions or changes function determines the pricing methodology for claims. interChange can configure pricing methods to process units across spanned dates.
40.8.1.134	Provides capability to edit for potential duplicate claims based on a cross-reference of group and rendering provider, multiple provider locations, and across provider and claim types	Met through customization of interChange. The claims edit/audit process will be customized to meet this requirement. Currently, interChange checks for duplicates on provider groups. interChange includes a number of duplicate and suspect duplicate audits that can be enhanced to cover the State's requirements.
40.8.1.135	Provides capability to identify potential and/or exact duplicate claims in the MMIS and POS within and across financial payers	Met by interChange. The duplicate and suspect duplicate audit processing meets this functional requirement.
40.8.1.136	Provides capability to edit using duplicate audit and suspect-duplicate criteria to validate against history, suspended claims, and same-cycle claims	Met by interChange. The duplicate and suspect duplicate audit processing meets this functional requirement. However, interChange does not audit against suspended claims because their outcome is unclear. After a claim has adjudicated, it becomes visible to audit processing.

RFP No.	RFP Requirement	EDS Response
		interChange can be extended to include reviewing suspended claims during auditing.
40.8.1.137	Provides capability for audit trail of all claims that identify timing and suspense status, error codes, and occurrences per claim header and claim detail as processed to final adjudication status	Met by interChange. The Claims Location panel meets this functional requirement. The claims engine tracks the processing of the claim through its various locations from initiation, through suspense, if necessary, and finally to adjudication and final disposition.
40.8.1.138	Provides capability for an unlimited number of edits per claim	Met by interChange. The system provides the capability for 100 edits at the header level and 100 edits for each detail. interChange adheres to the HIPAA standard of 999 lines and therefore meets this functional requirement.
40.8.1.139	Provides capability to identify and track all edits and audits posted to the claim from suspense through adjudication	Met by interChange. The database within the claims engine keeps the edits posted to the claim in a historical status so the processing history of the claim is available to the user.
40.8.1.140	Provides capability for each error code to have a resolution code, an override, force or deny indicator, and the date that the error was resolved, forced, or denied	Met by interChange. The database within the claims engine keeps the edits posted to the claim in a historical status so the processing history of the claim is available to the user. Each edit stores the user, action, and time stamp that was applied to it.
40.8.1.141	Provides capability for the acceptance of overrides of claim edits and audits	Met by interChange. The Data Corrections Listing and Claim Edit Recycle panels meet this functional requirement. The claims engine allows edit and audit overrides through the online panels and through batch processing.
40.8.1.142	Provides capability to turn off and on edits/audits for program types as specified by State Memo	Met by interChange. The edits within interChange can be turned to inactive for claims meeting specific criteria.
40.8.1.143	Provides capability to identify the claim deposition, based on the edit status or force code with the highest severity specific to each LOB	Met by interChange. The specific benefit plan tied to a line of business (LOB) that authorizes coverage for a service is used to define the additional actions taken, including pricing methodology available and the disposition of edits and audits. Each edit disposition can have different severities based on line of business.
40.8.1.144	Provides capability to maintain a record of service codes required for audit processing where the audit criteria covers a period longer than five (5) years (such as once-in-a-lifetime procedures)	Met by interChange. interChange does not currently purge claims, so lifetime audits are handled in the normal process.
40.8.1.145	Provides capability to modify the disposition of edits by LOB to: • Suspend for special handling • Deny and print an explanatory message on the provider RA • Suspend to a specific location unit	Met through configuration of interChange parameters and features. interChange will configure the rules engine and edit dispositioning to meet this requirement.

RFP No.	RFP Requirement	EDS Response
	• Pay and report to a specific location/unit • Pay	
40.8.1.146	Provides capability to set claim edits to allow dispositions and exceptions to edits based on claim type submission media, provider type and specialty and subspecialty or taxonomy, recipient Medical Assistance program, or individual provider number	Met through configuration of interChange parameters and features. Configuration of the claims edit/audit function will meet this requirement.
40.8.1.147	Provides capability to perform edits against claims for limits on dollars, units, and percentages	Met through customization of interChange. interChange does not currently audit based on percentages but can be enhanced to do so by customizing the edit/audit function to meet this requirement.
40.8.1.148	Provides capability to override the Prior Approval edit to allow for emergency seventy-two-hour (72-hour) supply of a drug and does not count toward service limitations for prescriptions	Met through configuration of interChange parameters and features. interChange currently processes emergency PA requests. The claims edit/audit function will be configured to meet the State's requirements for overrides.
40.8.1.149	Provides capability for variable limitations of pharmacy prescription benefits, such as number of prescriptions, quantity of drugs, specific drugs, and upper limits	Met through customization of interChange. Most of the pharmacy requirements will be configurable. Some will require State-specific customization.
40.8.1.150	Provides capability to allow for exceptions to pharmacy lock-ins	Met by interChange. Pharmacy lock-in for an individual can be set for only classes of drugs, giving very precise control to when the lock-in is applied. The manual override process meets this functional requirement. interChange can suspend a claim for a particular reason and then manually override the suspension.
40.8.1.151	Provides capability to edit claims with billed amounts that vary by a specified degree above or below allowable amounts	Met through configuration of interChange parameters and features. Using the claims edit/audit function in interChange, we will work with the State to determine the criteria for price variance edits between the billed and allowed amounts.
40.8.1.152	Provides capability to validate provider IDs for billing, attending, referring, and prescribing providers	Met by interChange. The claims edit/audit function provides the capability to validate the provider data entered.
40.8.1.153	Provides capability to edit for valid CLIA certification for laboratory procedures	Met by interChange. The claims edit/audit function provides the capability to validate and edit the claims data entered. interChange supports an interface to the OSCAR system for monthly updates of CLIA information.
40.8.1.154	Provides capability to edit claim for tooth numbers for procedures requiring tooth number, surface, or quadrant	Met by interChange. The claims edit/audit function provides the capability to validate the claims data entered. Tooth number, surface, and quadrant support edits. Tooth number and quadrant support auditing.
40.8.1.155	Provides capability to edit for procedure to procedure on same date of service	Met by interChange. The contra and negative contra edits meet this functional requirement. The Audit Procedure Restriction - Contra panel is used to maintain procedure

RFP No.	RFP Requirement	EDS Response
		codes and their modifiers or revenue codes that should be included when performing contra-indicated audits.
40.8.1.156	Provides capability to edit for service limitations	Met by interChange. The claims edit/audit function in interChange has many parameters available for designing limitation audits, including procedure, diagnosis, and revenue codes as well as include/exclude and same/different indicators.
40.8.1.157	Provides capability to edit for the identification of the quadrant based on tooth number for editing	Met through configuration of interChange parameters and features. Detail edits will be configured for a cross-reference between tooth number and quadrant.
40.8.1.158	Provides capability to track service limitations online	Met by interChange. The Recipient Service Usage panel meets this functional requirement. interChange has benefit limit audits, which will store service usage by month, available for viewing online.
40.8.1.159	Provides capability to edit and suspend with procedure codes set to manually price unless there is a prior approval for the procedure code for the recipient with the servicing provider	Met by interChange. interChange can manually price claims when a PA is not present for a procedure code that requires it.
40.8.1.160	Provides capability to edit for program and allow for services to ICF-MR adults for procedures limited to those individuals under twenty-one (21) years of age	Met through configuration of interChange parameters and features. Rules for benefit programs and age limits limiting services can be applied in the rules engine.
40.8.1.161	Provides capability to edit for timely filing	Met by interChange. The configuration of the timely filing edits meets this functional requirement.
40.8.1.162	Provides capability to cut back units on claims, retaining the original units billed and units paid	Met by interChange. Billed units is a preserved field in the claim detail. A separate field reveals the allowed units. They can be different if a claim has been cut back due to auditing or PA requirements.
40.8.1.163	Provides capability to process Medicare cost-sharing charges using the full claim input information and system edit capability	Met by interChange. The pricing function determines the applicability of cost-sharing charges. The edit/audit function applies cost-sharing using the full claim input information. Crossover claims processing meets this functional requirement.
40.8.1.164	Provides capability to edit across claim types, including the ability to process with a minimum of four (4) modifiers and edit for modifier appropriateness	Met by interChange. interChange can audit across claim types and can edit using the four modifiers.
40.8.1.165	Provides capability to edit for disproportionate share hospitals	Met through configuration of interChange parameters and features. Provider contract rules can be set up to handle pricing methods for disproportionate share hospitals. The disproportionate share allocation is stored as a separate field in the UB04 detail tables.
40.8.1.166	Provides capability for all edits as listed by the State	Met by interChange. interChange executes all possible edits in each run. Recycled claims also re-execute all edits.

RFP No.	RFP Requirement	EDS Response
40.8.1.167	Provides capability for encounter-specific editing and auditing	Met through configuration of interChange parameters and features. The editing and auditing dispositions can be different for encounters.
40.8.1.168	Provides capability to edit billed charges for high and low variances	Met through configuration of interChange parameters and features. interChange can configure the percentages for variance edits to meet the State's needs.

Suspended Claims Requirements

The following table, EDS Response to Suspended Claims Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Suspended Claims Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.169	Provides capability to suspend claims for review, as required by the State	Met by interChange. The claims operations management functions provide the overall rules to support the interChange claims system parameters that govern tracking, processing, finalization processes, and reporting of claims. The edit/audit processing function validates claims records in accordance with the State's claim processing policy. interChange can disposition edits to suspend claims for review.
40.8.1.170	Provides capability for manual review of claims for specific services, such as hysterectomies, abortions, sterilizations, DME claims for external insulin pumps, equipment repairs, miscellaneous pediatric items, miscellaneous drugs, off-labeled drugs, and all PAC "1" codes	Met through configuration of interChange parameters and features. The claims rules engine compares the rules with claim data and makes decisions accordingly, posting edits as specified. The data corrections panels and recycle reprocess functions meet this requirement.
40.8.1.171	Provides capability to process Medicare cost-sharing charges	Met through configuration of interChange parameters and features. The pricing method additions or changes function of interChange determines the pricing methodology. The pricing function determines the applicability of payment reductions, such as copayment, other insurance amounts, Medicare payment amounts, and recipient payment and liability amounts, and applies these reductions to the calculated claim allowed amount to determine the claim payment amount, in accordance with policy.
40.8.1.172	Provides capability to electronically store and report comparable codes used to price unlisted procedure codes	Met through customization of interChange. interChange must have the procedure codes on file to perform pricing. We will work with the various agencies to determine how to proceed with the business scenarios and associated codes that fall under this function.

RFP No.	RFP Requirement	EDS Response
40.8.1.173	Provides capability to subject all pharmacy claims to the automated POS PRO-DUR consistently	Met by interChange. The pharmacy Pro-DUR program contains routines to store and retrieve drug utilization review information like drug therapeutic class and dispense date. The pharmacy drug program contains the details related to pharmacy drugs. Thus, interChange executes all relevant pharmacy edits and Pro-DUR functionality for each pharmacy claim. Pro-DUR is only performed on POS-processed claims.
40.8.1.174	Provides capability to provide adjudication of the pharmacy POS claim as paid or denied when it passed all edits and audits, sending a response back to the provider via a VAN	Met by interChange. The response configuration file contains the supported transaction responses, segments, and elements. The NCPDP server program serves as the interactive server for NCPDP 5.1 requests, thereby providing interChange with the capability to send a response back to a value-added network (VAN) containing the status of the pharmacy claim.

General Claims Resolution Requirements

The following table, EDS Response to General Claims Resolution Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Claims Resolution Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.175	Provides capability for online claims resolution, edit override capabilities for all claim types, and online adjudication	Met by interChange. The Claim Suspense panel lists the claims that are in a suspended or resubmit status. A user can make data corrections to a claim by selecting it from this listing. The data correction panels allow for reprocessing of claims, overriding edit or audits, and forcing the payment or denial of edits and audits for claims adjudication.
40.8.1.176	Provides capability to ensure that all corrected claims are completely re-edited	Met by interChange. The Claim Suspense panel lists the claims that are in a suspended or resubmit status. A user can make data corrections to a claim by selecting it from this listing. The data correction panels allow for reprocessing of claims, overriding edit or audits, and forcing the payment or denial of edits and audits for claims adjudication.
40.8.1.177	Provides capability for claims correction process that allows inquiry and update by transaction control number, provider ID, recipient ID, location code, adjustment initiator ID, clerk ID, claim type, date of service, ranges of dates, and prior approval number	Met through customization of interChange. The Replacement MMIS we propose to develop will have an interface to meet this requirement. Not all criteria are currently part of the search criteria, but they can be added if necessary.
40.8.1.178	Provides capability to sort suspended claims into applicable work queues	Met by interChange. The Claims Assignments page contains panels used to assign claims to data correction analysts. Supervisors can modify the queues in real time to

RFP No.	RFP Requirement	EDS Response
		redistribute work as appropriate.
40.8.1.179	Provides capability to forward suspended claims to multiple locations	Met by interChange. The Claims Assignments page contains panels used to assign claims to data correction analysts. Through claim assignment and claim notes, interChange can send a claim to a different location for assignment with notes to the next clerk. After one clerk has completed his or her tasks, the clerk can forward the suspended claim to another clerk, such as a medical necessity clerk, or resubmit the claim for processing.
40.8.1.180	Provides capability to accept mass adjustments to suspended claims	Met by interChange. The claims adjustment process calls the adjustment process to select claims for mass adjustments. Because the outcome of suspended claims is unknown and interChange will adjust paid claims, suspended claims are not considered for mass adjustments. The reference changes that made the mass adjustments necessary will be used when the suspended claims are reprocessed through the claims engine. interChange does not adjust suspended claims. However, the suspended claims can be forced to reprocess to an adjudicated status, where they can be available for a mass adjustment.
40.8.1.181	Provides capability to link free-form notes from all review outcomes and directions to the imaged claim	Met by interChange. Clerks can store notes in the Claim Notes panel. These notes can be seen by clerks working the claim at any time throughout the processing cycle.
40.8.1.182	Provides capability to maintain error codes and messages that clearly identify the reason(s) for the suspension	Met by interChange. The Claims Error and Detail Error panels display error header and detail information including error codes and messages that clearly define the reason for suspension of claims. The error messages and descriptions are stored on database tables and can be easily modified.
40.8.1.183	Provides capability for the methodology to process the adjustment offset in the same payment cycle as the adjusting claim	Met by interChange. The financial function of interChange supports this requirement. The mother and daughter claim can be processed in the same cycle, creating the correct financial transactions.
40.8.1.184	Provides capability to adjust Claims History only	Met by interChange. The adjustment functions module supports history-only adjustments. An example of such an adjustment is the application of TPL collection results applied at the claim level. The receipt of payments from private insurance companies for medical assistance claims are applied to the claims for which payment is applicable. An RA is not produced as a result of an insurance collection, but the claim record is updated to reflect the private insurance payment.
40.8.1.185	Provides capability to re-edit, re-price, and re-audit each adjustment, including checking for duplication against other regular and adjustment claims, in history, and in	Met by interChange. interChange processes the edits and audits and reprices the claim in each run of the claim through the claim engine. Every claim is processed in its

RFP No.	RFP Requirement	EDS Response
	process	entirety at one time, not in a multiple-step batch process, as some legacy systems do.
40.8.1.186	Provides capability to allow online changes to the adjustment claim record to reflect corrections or changes to information during the claim correction (suspense resolution) process	Met by interChange. The Claim Suspense panel lists the claims that are in a suspended or resubmit status. A user can make data corrections to a claim by selecting it from this listing. The data correction panels allow for reprocessing of claims, overriding edit or audits, and forcing the payment or denial of edits and audits for claims adjudication. interChange processes adjustments through the suspense process. When a regular adjustment is created, the daughter claim is written to suspense. If there is a need for data correction, the clerk makes the changes and changes the status of the claim to resubmit. It is then extracted and run through the claims engine. The claims resolution function allows online resolution of suspended claims.
40.8.1.187	Provides capability to maintain primary and secondary adjustment reason codes that indicate who initiated the adjustment, the reason for the adjustment, and the disposition of the claim for use in reporting the adjustment	Met by interChange. The Case Inquiry panel supplies adjustment reason codes and amounts as needed for an entire claim or for a particular service with the claim being paid. It also identifies the general category of payment adjustment. interChange can store multiple reason codes through the claim case element. The EOB related to the adjustment itself and its originator also are stored in an adjustment cross-reference record. Through the miscellaneous general claims program, adjustments use the check/cash receipt function to create financial disposition records.
40.8.1.188	Provides capability for the methodology to allow online changes to the adjustment claim record to reflect corrections or changes to information during the claim correction (suspense resolution) process	Met by interChange. The Claim Suspense panel lists the claims that are in a suspended or resubmit status. A user can make data corrections to a claim by selecting it from this listing. The data correction panels allow for reprocessing of claims, overriding edit or audits, and forcing the payment or denial of edits and audits for claims adjudication. interChange processes adjustments through the suspense process. When a regular adjustment is created, the daughter claim is written to suspense. If there is a need for data correction, the clerk makes the changes and changes the status of the claim to resubmit. It is then extracted and run through the claims engine. Because the adjustment goes through the suspense process, it can be data-corrected and recycled.
40.8.1.189	~~Provides capability to generate exception sheets online~~	Cancelled. This requirement was deleted by RFP 30-DHHS-1228-08-R.
40.8.1.190	Provides capability to capture and maintain the medical reviewer ID and claims resolution worker ID by date and by error/edit for each suspended claim	Met by interChange. The Location panel stores the location information for the claims. Each location through which the claim passes can be stored with a clerk ID. The claim is

RFP No.	RFP Requirement	EDS Response
		stamped with a date and time stamp, indicating the second it entered each location.
40.8.1.191	Provides capability to identify and access the status of any related limitations for which the recipient has had services	Met by interChange. The Recipient Service Usage Search, Recipient Service Usage Search Results, and Recipient Service Usage ICN Search Results panels allow users to search for and display the service usage and show claim information for a chosen service limit. Benefit limit audits store usage information for claims that meet the criteria of the audits.
40.8.1.192	Provides capability to enter multiple error codes for a claim to appear on the RA	Met by interChange. The claims engine stores the relevant errors for the claim. Each edit can be configured to appear on the RA or not. The print limit is five at the header and five at each detail. They are printed in order of priority by a ranking assigned by the State so the most important edits are shown.
40.8.1.193	Provides capability to assign a unique status to corrected claims	Met by interChange. The claims resolution function allows complete reprocessing of suspended claims, therefore correcting the claims and assigning a new status. When data corrections for a claim have been applied, the resolutions user can change the status to resubmit to mark the claim for reprocessing within the system. Other statuses include suspend, pay and list, and deny. interChange can display derived statuses based on other criteria.
40.8.1.194	Provides capability of entering multiple error codes for a claim to appear on the RA	Met by interChange. If a forced edit is configured to display on the RA, it will print. The same applies to forced denials.
40.8.1.195	Provides capability to maintain all claims on the suspense file until corrected, automatically recycled, or automatically denied	Met by interChange. Suspended claims remain on the suspense tables until adjudicated. If a claim is suspended multiple times, each error from each reprocessing is available. The errors indicate if they are current (most recent pass) or historical (a prior pass) so the trail of everything that has happened to a claim is available.
40.8.1.196	Provides capability to adjudicate special batches of claims	Met by interChange. Sometimes claims need special processing. These claims are assigned a special batch range (99) and can process differently than other claims. Timely filing is an example of an edit that can be bypassed by a special batch claim.
40.8.1.197	Provides capability to force release of claims	Met by interChange. interChange supports auto-release of certain edits after a specific number of days; for example, waiting for an attachment. Clerks can auto-recycle edits through an online panel. There also is the ability to manually force release a claim.
40.8.1.198	Provides capability to adjudicate and track non-covered service claims for EPSDT recipients	Met through configuration of interChange parameters and features. The claims rules engine stores the rules engine calls. Rules can be set up for benefit plans to adjudicate

RFP No.	RFP Requirement	EDS Response
		claims for non-covered services. Tracking can be accomplished through the interChange Business Intelligence and Analytical Reporting (BIAR) component.
40.8.1.199	Provides capability to capture rebateable NDCs for all administered drugs in the Physician Drug Program, including drugs administered with HCPCS codes	Met by interChange. interChange is currently being enhanced to handle the processing of physician claims to capture NDCs and determine whether the drugs are rebateable.

Retrospective Drug Utilization Review Requirements

The following table, EDS Response to Retrospective Drug Utilization Review Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Retrospective Drug Utilization Review Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.200	Provides capability to generate a file of paid drug claims to the Retrospective DUR Vendor	Met through customization of interChange. interChange has a standard extract process to support Retro-DUR processing. It will be customized to meet the needs of the Retro-DUR vendor.
40.8.1.201	Provides capability to generate a file of physician, clinic, hospital, and pharmacy Provider data to the Retrospective DUR Vendor	Met through customization of interChange. interChange has a standard extract process to support Retro-DUR processing. It will be customized to meet the needs of the Retro-DUR vendor. Every month, there is an automatic batch extract for the required claims history and related provider and recipient data. We will provide the extracted data and deliver it to the valid Retro-DUR vendor.
40.8.1.202	Provides capability to generate a file of the recipient data to the Retrospective DUR Vendor	Met through customization of interChange. interChange will create a recipient report to extract data for the Retro-DUR vendor.
40.8.1.203	Provides capability to produce the CMS Annual Drug Utilization Review Report	Met through customization of interChange. interChange will create and produce the CMS Annual Drug Utilization Review Report.

Adjustment Processing Requirements

The following table, EDS Response to Adjustment Processing Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Adjustment Processing Requirements

RFP No.	RFP Requirement	EDS Response
40.1.1.204	Provides capability for online search inquiry for pharmacy claims via any available FDB data element/module, including, but not limited to: • Recipient identifier • Provider identifier • Pharmacy number • Internal control number (ICN) • Prescription number • Therapeutic class • Drug codes • GCN • GCN-Sequence • NDC	Met through customization of interChange. The Claim Search panel and data warehouse panels will be enhanced to meet this functional requirement.
40.8.1.205	Provides capability to update provider payment history and recipient claims history with all appropriate financial records and reflect adjustments in subsequent reporting, including claim-specific and non-claim-specific recoveries	Met by interChange. The Financial Payment Information panels meet this functional requirement. interChange updates provider payment history in the financial cycle and the recipient history during claims processing.
40.8.1.206	Provides capability to link an original claim with all adjustment transactions	Met by interChange. interChange provides cross-reference records that link the mother claim to the daughter claim. There is one for each claim form and an additional one for daughter in suspense. The Adjustment Information — Mother/Daughter panel displays the mother and daughter claims.
40.8.1.207	Provides capability for an online mass-adjustment function to re-price claims, within the same adjudication cycle, for retroactive pricing changes	Met by interChange. The Claims Mass Adjustment Criteria panel meets this functional requirement.
40.8.1.208	Provides capability to correct the tooth surface on dental claims and process as an adjustment	Met by interChange. The claims adjustment process meets this functional requirement.
40.8.1.209	Provides capability to process unit dose credits	Met through customization of interChange. EDS will work to fully understand and implement this requirement.
40.8.1.210	Provides capability to input transactions to Drug Rebate and TPL of all collected dollars	Met by interChange. interChange can input transaction to drug rebate and TPL of all collected dollars.
40.8.1.211	Provides capability to capture pharmacy/drug rebates on professional and institutional claims	Met by interChange. interChange can capture drug rebates on professional and institutional claims by passing the NDC received on physician or institutional claims through to the drug rebate. HCPCS codes that convert to exactly one NDC also are translated and used in the drug rebate process.

RFP No.	RFP Requirement	EDS Response
40.8.1.212	Provides capability to capture and electronically store the clerk ID of the individual who initially entered the adjustment and the clerk ID who worked the suspended adjustment	Met by interChange. The Claim Adjustment Base Information panel meets this functional requirement.

General Payment Processing Requirements

The following table, EDS Response to General Payment Processing Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Payment Processing Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.213	Provides capability to process all claims and adjustments in accordance with Replacement MM IS policy and procedure	Met through configuration of interChange parameters and features. The benefit administration edit and audit capabilities of the interChange claims engine meet this functional requirement.
40.8.1.214	Provides capability to assign the status of claims in the system to determine the course of each action to be taken in the claims adjudication process and completion of appropriate financial processing tasks	Met by interChange. The claims edit/audit function validates the claims data and determines the course of action to be taken in the claims adjudication process and completion of appropriate financial processing tasks.
40.8.1.215	Provides capability to apply payments to open accounts receivables when the provider has a positive balance, apply third party collections, create Adjudication Claims File for checkwrite period, and update Provider Earnings file	Met by interChange and operational processes and procedures. The financial system, in conjunction with the claims system, allows the capability to apply payments to open accounts receivables when the provider has a positive balance, apply third-party collections, create the adjudication claims file for the checkwrite period, and update the provider earnings file.
40.8.1.216	Provides capability to generate Health Insurance Premium Payments (HIPP)	Met by interChange. interChange has a full-featured HIPP processing capability. Existing reports include HIPP Automated Billing Statements, HIPP Billing Statement Exceptions, HIPP Premium Payment RA Register, and HIPP Monthly Clerk Cost Effective Activity.
40.8.1.217	Provides capability for claims exceptions to process automatically when prior authorized by the lock-in primary care provider or prescriber in accordance with State policy	Met through customization of interChange. EDS will customize the PA function to meet the State's requirement.

Financial and Related Processing Requirements

The following table, EDS Response to Financial and Related Processing Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Financial and Related Processing Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.218	Provides capability to maintain complete audit trails of adjustment processing activities	Met by interChange. The error status code function generates reports daily and weekly to make sure the audit trails are maintained by the system.
40.8.1.219	Provides capability to assign the status of claims in the system to determine course of each action to be taken in the claims adjudication process and completion of appropriate financial processing tasks	Met by interChange. The edit/audit function validates the input claims data and determines the course of each action to be taken in the claims adjudication process and completion of appropriate financial processing tasks.
40.8.1.220	Provides capability to calculate claims payments by payer source, balancing payments due from adjudicated claims with any increase/decrease for adjustments or other financial transactions	Met by interChange. Benefit plans are assigned to each payable detail or header depending on claim type. These are tied to payers through budgets and funding codes. The financial system maintains these relationships and is able to calculate the payments by payer source and provide accurate balancing reports.
40.8.1.221	Provides capability to apply payments to open accounts receivables when the provider has a positive balance, apply third party collections, create Adjudication Claims File for checkwrite period, and update Provider Earnings file	Met by interChange. The interChange financial business function accumulates paid claims and outstanding receivables and nonclaim expenditures to determine final payments. The initiation of accounts payables or receivables is automated. For more details, please refer to proposal section 40.14.1 Financial Management and Accounting System Requirements.
40.8.1.222	Provides capability to produce system-generated check registers, provider checks, and RAs and update control totals by LOB	Met through customization of interChange. Multi-payer processing enhancements will meet this requirement.
40.8.1.223	Provides capability to print provider voucher Statements and checks by LOB	Met by interChange. The interChange financial business function writes the checks and RAs for providers.
40.8.1.224	Provides capability to validate a provider's status prior to issuing payments or processing refund checks and voided checks	Met by interChange and operational processes and procedures. The standard claims processing edits validate a provider's status for claims. Financial analysts verify the provider status when processing refund checks or voided checks.
40.8.1.225	Provides capability to produce a monthly file of all adjudicated claims and other financial transactions by LOB	Met through customization of interChange. The addition of a new extract file will meet this functional requirement.
40.8.1.226	Provides capability to track the status of all financial transactions by payer source	Met by interChange. The interChange financial business function maintains all financial transactions, which assumes fund codes and reflects the appropriate payer.
40.8.1.227	Provides capability to run separate payment cycles by each LOB	Met by interChange. The FSM Financial Schedule Hold and FSM Financial Schedule Maintenance panels meet this requirement.
40.8.1.228	Provides capability to override the system date used for	Met by interChange. The FSM Financial Schedule Hold, FSM Financial Schedule Maintenance, and FSM Financial

RFP No.	RFP Requirement	EDS Response
	the payment cycle through a system parameter	Schedule Override panels meet this requirement.
40.8.1.229	Provide the capability to use the same system date for all outputs of a claims payment cycle	Met by interChange. The interChange financial business function maintains all financial transactions. All reports from a cycle use that date as part of standard processing.
40.8.1.230	Provides capability to create a single check or EFT per payment cycle for each provider by LOB	Met by interChange. The multi-payer functional enhancement to the system will meet this requirement.
40.8.1.231	Provides capability to generate beneficiary Recipient Explanation of Medicaid Benefits (REOMBs)	Met by interChange. The REOMBs report meets this functional requirement.
40.8.1.232**	Provides capability to generate beneficiary Recipient Explanation of Benefits (REOBs) by LOB	Met through customization of interChange. The addition of several batch jobs to separate the data by LOB will meet this functional requirement.
40.8.1.233	Provides capability to produce and distribute paper RAs formatted separately for individual provider types	Met by interChange. The RA is produced by claim type for each provider.
40.8.1.234	Provides capability to produce ANSI 835 and 820 transactions	Met by interChange. interChange produces standard HIPAA transactions.
40.8.1.235	Provides capability for EFT by LOB	Met by interChange. The multi-payer functional enhancement to the system will meet this requirement.
40.8.1.236	Provides capability to update historical files with information from RAs/835s and checks	Met through customization of interChange. EDS will work with the State to understand this requirement and implement the required functionality.
40.8.1.237	Provides capability to ensure RAs contain State-approved EOB messages by LOB	Met by interChange. The error disposition and region data meet this functional requirement.
40.8.1.238	Provides capability for producing statistically valid sampling reports for use in provider audits by LOB	Met by interChange. The Business Intelligence and Analytical Reporting (BIAR) component of interChange meets this requirement.
40.8.1.239	Provides capability to rerun a payment cycle by LOB before the next regularly scheduled cycle and within eight (8) clock hours of State notification, when the original cycle is considered unacceptable	Met by interChange and operational processes and procedures.
40.8.1.240	Provides capability to produce EFT register and ANSI 835	Met by interChange. The interChange financial business function meets this requirement. The system can produce an electronic funds transfer (EFT) register, and the EDI function supports HIPAA 835 generation.
40.8.1.241	Provides capability for balancing process associated with financial month-end reporting	Met by interChange. The interChange financial business function meets this requirement. Monthly reports are tied to four weekly reports and are validated during testing.
40.8.1.242	Provides capability to modify payment cycle schedule	Met by interChange. The payment cycle is determined by a table-driven process to meet this functional requirement.
40.8.1.243	Provides capabilities to provide independent and separate banking	Met by interChange. The bank account panels meet this functional requirement. The system can have separate

RFP No.	RFP Requirement	EDS Response
		bank accounts based on funding of a transaction. Funded transactions will be associated to the same payment, and as a result the same bank account information will be used when generating a payment. Our system provides bookkeeping capabilities for cash. Because we are not a depository, the information provided on a cash receipt is at the discretion of the user or clerk who enters the information. interChange can do receipt money through external interfaces for purposes such as lockbox, but this is not part of the base system. The system can record whatever information is provided by manual or automatic inputs, and that information can be related to a bank account with some minor modifications.
40.8.1.244	Provides capability to combine claims from MMIS and POS for payment processing	Met by interChange. All transactions processed by the MMIS combine before the financial cycle.
40.8.1.245	Provides capability to withhold adjudicated claims from the payment cycle by payer source	Met by interChange. The payment hold information process meets this functional requirement.
40.8.1.246	Provides capability to retrieve budget and available balance data from North Carolina Accounting System (NCAS)	Met through customization of interChange. The development of a new interface and process for retrieving the data will meet this functional requirement.
40.8.1.247**	Provides capability to accept and process budget data from a DMH file	Met through customization of interChange. The development of a new interface and process for retrieving the data will meet this functional requirement.
40.8.1.248	Provides capability to use approved budget data for expenditure allotment and control	Met by interChange. The Financial Budget Information panel meets this functional requirement.
40.8.1.249**	Provides capability to process and pay claims, based on the applicable budget hierarchy, from the first eligible benefit plan where money is available and the service is covered, within the same payment cycle	Met by interChange. interChange allows authorized users to indicate if there are one or more alternative budgets for a given budget if the primary budget is depleted. For more details on the capability and user control of this feature, please see the proposal section 40.14.1 Financial Management and Accounting System Requirements.
40.8.1.250**	Provides capability to deny claims for services for lack of available funds	Met by interChange. interChange allows users to control the actions of a budget when depleted. Choices include rolling to a secondary budget, suspending the claim from payment, or denying the claim.
40.8.1.251	Provides capability to hold payment of a claim for a specified period of time	Met by interChange. The payment hold process meets this functional requirement.
40.8.1.252	Provides capability to exclude “to be paid” claims for payment processing when the provider is in hold status	Met by interChange. The payment hold process meets this functional requirement.
40.8.1.253	Provides capability to accumulate by LOB the reimbursement amounts of all original claims, voids, adjustments, and financial transactions in a “to-be-paid” status to determine an initial net payment amount	Met by interChange. The payment estimation reporting feature of interChange meets this requirement.

RFP No.	RFP Requirement	EDS Response
	for a provider	
40.8.1.254	Provides capability to create a receipt for individual claims that were overpaid or paid in error and produce a void or adjustment claim showing the transaction	Met by interChange. The claims adjustment process meets this functional requirement.
40.8.1.255	Provides capability to create a financial transaction to correct overpayments, link to original transaction, and apply to offset future payments	Met by interChange. The claims adjustment process meets this functional requirement.
40.8.1.256	Provides capability to apply all or a portion of the provider's initial payment amount, if it is positive, to recoup monies against any outstanding accounts receivable balances present for the provider	Met by interChange. The accounts receivable process meets this functional requirement.
40.8.1.257	Provides capability to use the Thursday following the processing date as the last payment cycle of the month	Met through configuration of interChange parameters and features. interChange will establish the month end dates based on State policy and adjust financial reports accordingly.
40.8.1.258	Provides capability to process adjustment claims and credit the appropriate budgets before processing any new day claims	Met by interChange and operational processes and procedures. The interChange claims engine is a transaction system that runs throughout the day. As adjustments and new day claims are received, they edit, audit, and price right then. The system can be configured to deny or suspend due to lack of funds and send those claims to specific regions with associated reason codes. Using these specific codes, the claims can be recycled as required to maximize the claim payment coverage to the provider community.
40.8.1.259	Provides capability to apply Patient Monthly Liability (PML) to specific types of claims and post liability amounts used	Met by interChange. Patient liability is only assigned to LTC claims. Each claim that is used to meet a patient liability obligation can be directly accessed from the recipient's Patient Liability panel.
40.8.1.260	Provides capability to apply recipient deductible balance to specified types of claims	Met through customization of interChange. The Recipient Deductible or Spend-Down process may require enhancements to meet this functional requirement.
40.8.1.261	Provides the capability for positive pay processing	Met by operational processes and procedures.
40.8.1.262	Provides the capability for provider payment data	Met by interChange. The Provider Financial Summary and Provider 1099 panels meet this functional requirement.
40.8.1.263	Provides capability to apply withholds to capitation payments	Met through customization of interChange. A change to the claims processing component is necessary to meet this functional requirement.
40.8.1.264	Provides capability to release withholds to capitation payments	Met through customization of interChange. A change to the claims processing component is necessary to meet this functional requirement.

RFP No.	RFP Requirement	EDS Response
40.8.1.265	Provides capability to apply provider sanctions by rate or percentage	Met through configuration of interChange parameters and features. interChange will establish a specific provider contract and apply the rate or percentage of the sanction by configuring the appropriate reimbursement rules.
40.8.1.266	Provides capability to apply provider incentives to management fee claims	Met by interChange. The Benefit Factor Adjustment Rate panel and the Capitation Override panel meet this functional requirement.
40.8.1.267	Provides all payments, adjustments, and other financial transactions to enrolled providers for approved services	Met by interChange. The entry of claims and financial data, the ability to process claims according to business rules (such as provider contracts and pricing), and the ability of the financial subsystem to issues checks, accounts receivables, and other financial transactions meet this requirement.
40.8.1.268	Provides the capability to associate all drug rebates to the claim detail	Met by interChange. The drug rebate process meets this functional requirement. The claim can be viewed on the Invoice Detail Related Claim panel.

Financial Management and Accounting Business Area Requirements

The following table, EDS Response to Financial Management and Accounting Business Area Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Financial Management and Accounting Business Area Requirements

RFP No.	RFP Requirement	EDS Response
40.8.1.269	Provides capability to establish accounts receivable in the format of withholds, liens, levy data, and advance payment/recovery of advance payment	Met by interChange and operational processes and procedures. interChange creates appropriate financial transactions for each of these reasons automatically or by financial analysts through online panels. EOBs associated with the accounts receivables indicate why they were set up.
40.8.1.270	Provides capability for claims that have passed all edit and pricing processing or that have been denied to be documented on the RA by LOB	Met by interChange. The RA process meets this functional requirement. We will indicate the payer at the detail level.
40.8.1.271	Provides capability to create financial transactions	Met by interChange. interChange creates appropriate financial transactions based on the claims cycle and other appropriate tables.
40.8.1.272	Provides capability to create receivables generated from other MMIS functions	Met by interChange. Receivables are created by the appropriate business function within interChange. TPL and

RFP No.	RFP Requirement	EDS Response
		surveillance utilization review (SUR) produce most receivables.
40.8.1.273	Provides capability to create provider, recipient, reference, and account receivable/payout data	Met by interChange. Within interChange, based on security rules, payouts and receivables can be created for recipients and providers.
40.8.1.274	Provides capability to make retroactive changes to deductibles	Met by interChange. The mass adjustment process meets this functional requirement. Recipient information can be retroactively updated and then mass adjustments created.
40.8.1.275	Provides capability to create transactions for corrections to receivables entered into the Replacement MMIS	Met by interChange. The accounts receivables maintenance panels meet this functional requirement.
40.8.1.276	Provides capability to create transactions for manual checks	Met by interChange. The Financial Expenditure Base Information panel meets this functional requirement.
40.8.1.277	Provides capability to create transactions for paper checks	Met by interChange. The financial cycle meets this functional requirement.
40.8.1.278	Provides capability to validate new and updated EFT provider information	Met by operational processes and procedures. The EFT validation process meets this functional requirement.
40.8.1.279	Provides capability to requests an override EFT and create paper checks for a date range and check pulls for void and replacement	Met through customization of interChange. EDS will work with the State to fully understand this requirement and develop a solution.
40.8.1.280	Provides capability to create transactions of check voucher status from the State Controller's Office	Met through customization of interChange. The addition of a new process and a new interface will meet this functional requirement.
40.8.1.281	Provides capability for notes tracking to accommodate tracking of calls	Met by interChange. The Contact Tracking Management System (CTMS) meets this requirement.
40.8.1.282	Provides capability for online access to all recipient, provider, encounter (shadow claims), and reference data related to Financial Management and Accounting by LOB	Met by interChange. The online recipient, provider, claims, reference, and financial panels meet this functional requirement.
40.8.1.283	Provides capability for Financial Management and Accounting functions with system update capability	Met by interChange. The online financial panels meet this functional requirement.
40.8.1.284	Provides capability to maintain a consolidated accounting function, by program, type, and provider	Met by interChange. The online financial panels and the BIAR component of interChange meet this requirement.
40.8.1.285	Provides capability to process capitation payments	Met by interChange. interChange processes capitation or gatekeeper fees based on the capitation rates and recipient demographics on file.
40.8.1.286	Provides capability to withhold a percentage of capitation payments	Met through customization of interChange. A change to the claims processing component is necessary to meet this functional requirement.
40.8.1.287	Provides capability to process Managed Care management fees	Met by interChange. The capitation claims process meets this functional requirement.

RFP No.	RFP Requirement	EDS Response
40.8.1.288	Provides capability to process management fees for Health Check	Met through customization of interChange. Changes made to accommodate the Health Check requirements 40.10.1.11, 40.10.1.13, and 40.10.1.15 will meet this requirement.
40.8.1.289	Provides capability to process capitation and/or management fee adjustments	Met by interChange. The mass adjustment process meets this functional requirement.
40.8.1.290	Provides capability to process management fees for APs/LMEs	Met through configuration of interChange parameters and features. The interChange application will meet this requirement by configuration as either a capitation rate or standard code used in claims and subject to benefit plan rules.
40.8.1.291	Provides capability to process encounter claims through the payment cycle, updating the final status of the claims to "paid" or "denied" but not producing an associated payment	Met by interChange. The claims adjudication process meets this functional requirement. The allowed amount for encounter claims is determined by interChange to allow cost comparisons, but no paid amounts are defined.
40.8.1.292	Provides capability to produce an output extract of encounters (an Encounter RA)	Met through configuration of interChange parameters and features. To meet this requirement, a standard, ad hoc report will be created to produce this extract using the BIAR subsystem because encounter claims are stored in BIAR. This will be done during the Operations Phase of the project.
40.8.1.293	Provides capability to produce an output extract of enhanced Pharmacist Professional fee (on a Pharmacy RA)	Met through customization of interChange. An additional process and associated reports will be developed to meet this requirement.
40.8.1.294	Provides capability for system-generated log and tracking of receipt date of request for changes	Met through customization of interChange. Additional processes and components will be developed to meet this requirement.
40.8.1.295	Provides capability to ensure that provider payments are generated by the processing of claims for eligible recipients and provides capability for adjustments	Met by interChange. The claims and financial processes meet this functional requirement.
40.8.1.296	Provides capability to carry the provider's selection of receiving checks or EFT form of payment	Met by interChange. The Provider Information and EFT panels meet this functional requirement.
40.8.1.297	Provides capability to carry the provider's selection of receiving hard copy, electronic RAs, or both	Met by interChange. The Provider Information panel meets this functional requirement.
40.8.1.298	Provides capability to accept pended and adjudicated claims against Provider Earnings file	Met by interChange. The financial process meets this functional requirement.
40.8.1.299	Provides capability to generate or reproduce provider RAs, to include: • An itemization of submitted claims that were paid, denied, or adjusted, and any financial transactions that were processed for that provider, including subtotals and totals by LOB • An itemization of suspended claims, including dates of	Met by interChange. interChange can generate and reproduce provider RAs with the items listed in this requirement.

RFP No.	RFP Requirement	EDS Response
	receipt and suspense and dollar amount billed by LOB • Adjusted claim information showing the original claim information and the adjusted information, with an explanation of the adjustment reason code and credits pending by LOB • Reason for recoupment or adjustment by LOB • Indication that a claim has been rejected due to TPL coverage on file for the recipient; include available relevant TPL data on the RA by LOB • Tooth number and surface • Explanatory messages relating to the claim payment cutback, denial, or suspension • Summary section containing earnings information, by program, regarding the number of claims paid, denied, suspended, adjusted, in process, and financial transactions for the current payment period, month-to-date, and year-to-date • Listing of all relevant error messages per claim header and claim detail that would cause a claim to be denied by LOB	
40.8.1.300	Provides capability to print global informational messages on RAs by LOB; provides capability to make multiple messages available on an online, updateable, user-maintainable message text table; provides capability for unlimited free-form text messages; provides capability for parameters such as provider category of service, provider type, provider specialty, program enrollment, claim type, individual provider number, or pay cycle to control the printing of RA messages	Met by interChange. The Check Banner Information panel meets this functional requirement.
40.8.1.301	Provides capability to suppress the generation of (both zero-pay and pay) check requests for any provider or provider type but generates associated RAs	Met through customization of interChange. Customization in the warrant interface and check printing functions will meet this requirement. The warrant number will still be generated and all claims and transactions will be tied to it through interChange, but the processing of the check or EFT will be suppressed.
40.8.1.302	Provides capability to update provider payment data	Met by interChange. The financial process meets this requirement.
40.8.1.303	Provides capability to maintain a process of fiscal pends	Met by interChange. The financial budget process and the payment hold process meet this functional requirement.
40.8.1.304	Provides capability to not accumulate claims in a “to be paid” status that have been excluded from payment	Met by interChange. The payment hold process meets this functional requirement.

RFP No.	RFP Requirement	EDS Response
40.8.1.305	Provides capability to suppress the print of a RA when the only thing that is being printed is related to a credit balance	Met through customization of interChange. An alteration to the RA process to suppress the printing of credit balance RAs will meet this functional requirement.
40.8.1.306	Provides capability to maintain all data items received on all incoming claims, including the tooth number and tooth surface(s)	Met by interChange. The standard claim processing function meets this requirement.
40.8.1.307	Provides capability to update Claims History and online financial files with the date of payment and amount paid	Met by interChange. The financial process meets this functional requirement.
40.8.1.308	Provides capability for summary-level provider accounts receivable and payable data and pending recoupment amounts that are automatically updated after each claims processing payment cycle	Met by interChange. The financial process meets this functional requirement.
40.8.1.309	Provides capability to adjust claim money fields to net out	Met by interChange. The adjustment process meets this functional requirement.
40.8.1.310	Provides capability to automatically establish new accounts receivables	Met by interChange. The accounts receivable information panels meet this functional requirement. Establishing accounts receivables automatically if recoupments exceed payment is a function of the financial process.
40.8.1.311	Provides identification of providers with credit balances and no claim activity, by program, during a State-specified number of months	Met by interChange. The BIAR component of interChange meets this functional requirement. State users will have direct access to the data to research this scenario.
40.8.1.312	Provides capability for the issuance of provider checks and/or EFTs for all claims in the current checkwrite cycle	Met by interChange. The checkwrite process meets this functional requirement.
40.8.1.313	Provides capability to ensure accurate balances for each checkwrite in accordance with State-approved policy and procedures	Met by interChange and operational processes and procedures. The financial panels and numerous balancing reports will be used to meet this functional requirement.
40.8.1.314	Provides capability to process transactions for manually written checks generating a Claims History record	Met by interChange. The financial process meets this functional requirement. However, it is a financial transaction, not a claims history record, that is generated.
40.8.1.315	Provides capability to process EFT provider information, updating provider records to reflect their status with EFT	Met by interChange. The provider EFT panels and the EFT process meet this functional requirement.
40.8.1.316	Provides capability to accept requests to override EFT payment to a provider	Met by interChange. The provider EFT status panel can be set prior to the financial cycle to meet this requirement.
40.8.1.317	Provides capability to process check voucher information from the State Controller's Office	Met through customization of interChange. The addition of a new interface to receive data from the State Controller's Office will meet this functional requirement.
40.8.1.318	Provides capability to update Claims History with RA number and RA issued date from the State Controller's Register file	Met through customization of interChange. The addition of a new interface to receive data from the State Controller's Office will meet this functional requirement.
40.8.1.319	Provides capability to ensure that the weekly budget	Met by interChange and operational processes and

RFP No.	RFP Requirement	EDS Response
	reporting is consistent with the costs allocated during the checkwrite by LOB	procedures. The financial panels and balancing reports will be used to meet this functional requirement.
40.8.1.320	Provides capability to produce reports and RAs within the financial processing function of the checkwrite cycle by LOB	Met through customization of interChange. interChange reports will be customized to meet this requirement.
40.8.1.321	Provides capability to process and/or set up a recoupment against a provider without specifying a credit balance by LOB	Met through customization of interChange. The interChange financial function will be customized to meet this requirement.
40.8.1.322	Provides capability to use a hierarchy table when a provider has multiple recoupment accounts	Met through customization of interChange. The interChange financial function will be customized to meet this requirement.
40.8.1.323	Provides capability to identify and recoup payments from the provider made for services after a recipient's date of death	Met by interChange. The mass adjustment panels and mass adjustment process meet this functional requirement.
40.8.1.324	Provides capability to apply claims payments recoupments to more than one (1) account receivable at a time	Met by interChange. The accounts receivable and financial processes meet this functional requirement.
40.8.1.325	Provides capability to support a methodology that allows the portion of payments made against each account receivable to be controlled by State staff	Met by interChange. The Accounts Receivable Base Information panel meets this functional requirement.
40.8.1.326	Provides capability to validate provider tax identification numbers and associated tax names	Met by interChange. The IRS W9 Tax ID panel meets this functional requirement.
40.8.1.327	Provides capability to process any change transactions received for corrections to checks by LOB	Met by interChange. The FPI Stop – Reissue – Void Request panel and the expenditure panels meet this functional requirement.
40.8.1.328	Provides capability to ensure that all financial reports can be tied into the basic financial activity recorded in Provider histories by LOB	Met through configuration of interChange parameters and features. The provider profile reporting will be a standard report in BIAR.
40.8.1.329	Provides capability to generate weekly, monthly, quarterly, and annual financial reports after checkwrites	Met through configuration of interChange parameters and features. interChange will configure dates for weekly, monthly, and quarterly in individual job scripts.
40.8.1.330	Provides capability for Advance Provider payments by LOB	Met by interChange. The FEI expenditure information is maintained by payer, providing the capability for advance provider payments by LOB.
40.8.1.331	Provides capability to receive online requests from authorized users to retrieve paid claims data to produce Recipient Profiles by LOB and return the data in a printable electronic format	Met through configuration of interChange parameters and features. The recipient profile reporting will be a standard report in BIAR.
40.8.1.332	Provides capability to include all buy-in premium payments and adjustments in the online paid Claims History files and in Recipient Profile Reports	Met through configuration of interChange parameters and features. Buy-in payments are kept separately under the Medicare Buy-in A and B tables, by recipient. These are not

RFP No.	RFP Requirement	EDS Response
		in claims history (adjustments are); they can be exported to BIAR and included in any recipient-specific reporting.
40.8.1.333	Provides the capability to obtain approval from NC DHHS for the amount to be applied for payment prior to each checkwrite	Met by operational processes and procedures.
40.8.1.334	Provides the capability to check remaining balance as each payment amount is calculated to verify that the budgeted amount is not exceeded	Met by interChange. In the budget process, a cap can be set to hold claims until funds are available.
40.8.1.335	Provides capability to identify and calculate pricing amounts according to the fee schedules, per diems, rates, and business rules	Met by interChange. The pricing process and user configured business rules meet this functional requirement.
40.8.1.336	Provides capability to apply pricing and reimbursement methodologies to appropriately price claims according to NC DHHS pricing standards	Met through configuration of interChange parameters and features. Pricing methods and reimbursement rules will be added to adjudicate claims according to State standards.
40.8.1.337	Provides capability to price using any combination of procedure code, population group, billing provider, attending provider, and client	Met by interChange. The rules engine combines the rules for recipient, provider, and pricing for the specified service.
40.8.1.338	Provides capability to establish fee schedules based on procedures, procedure/modifier, or procedure/type of service, including provider specific rates, DRGs, anesthesia base units, and global surgery days	Met through configuration of interChange parameters and features. Rule variables will be added to allow for configuring the rules for each of the criteria listed when needed for the correct adjudication of the claim.
40.8.1.339	Provides capability to apply percentages for dual-eligible recipients	Met through configuration of interChange parameters and features. interChange will add a pricing method to cover the criteria the State provides for dual-eligible recipients.
40.8.1.340	Provides capability for pricing of pharmacy claims and reimbursement methodologies to appropriately price claims according to the appropriate financial payer or population group in accordance with State policy, including a dispensing fee and pricing actions	Met by interChange. The pricing methods meet this functional requirement.
40.8.1.341	Provides capability to determine calculations for the PAL tiers	Met through customization of interChange. Pricing method additions or changes will be customized to meet this requirement.
40.8.1.342	Provides capability to process and reimburse pharmacy-enhanced professional service fees as defined by State policy and business rules	Met through configuration of interChange parameters and features. The interChange claims rules engine will be customized to meet this requirement.
40.8.1.343	Provides capability to price pharmacy claims using lesser of logic incorporating all State-approved pricing methodologies	Met through configuration of interChange parameters and features.
40.8.1.344	Provides capability to price using State-specific services from the Prior Approval File	Met through customization of interChange. Pricing method additions or changes will be customized to meet this requirement.

RFP No.	RFP Requirement	EDS Response
40.8.1.345	Provides capability to apply recipient liability and co-pay rules, including varying co-pay amounts	Met by interChange. The pricing methods meet this functional requirement.
40.8.1.346	Provides capability to identify and calculate payment amounts for Health Check procedures when higher rate applies	Met through configuration of interChange parameters and features. An adjustment factor can be applied to standard pricing for Health Check procedures.
40.8.1.347	Provides capability to deduct either the provider reported or recipient database deductible amount	Met through configuration of interChange parameters and features. The State will provide the criteria for choosing which amount to use in this pricing method.
40.8.1.348	Provides capability to use non-Medicaid charges first and apply the remainder to allowed charges based on first bill received for processing for the deductible for recipients classed as medically needy	Met through customization of interChange. The claims engine will be customized to meet this functional requirement.
40.8.1.349	Provides capability to allow the deductible amount to be assigned to specific providers for recipients classed as medically needy	Met through configuration of interChange parameters and features. The claims engine will be customized and then configured to meet this functional requirement.
40.8.1.350	Provides capability to invoke State-approved "Medicare Suspect" procedures	Met through customization of interChange. The claims edit/audit function will be modified to meet this requirement. The State will specify the "Medicare Suspect" procedures so that new edits can be applied.
40.8.1.351	Provides capability to deduct or otherwise apply TPL amounts when pricing claims	Met by interChange. In the claims pricing process, TPL amounts are applied to the claim.
40.8.1.352	Provides capability to price procedure codes, allowing for multiple modifiers that enable reimbursement by program at varying percentages of allowable amounts	Met through customization of interChange. The pricing method will be customized to meet this functional requirement.
40.8.1.353	Provides capability to price units for procedures based on the cutback units	Met by interChange. The audit process and final pricing meet this functional requirement.
40.8.1.354	Provides capability to price encounter claims at equivalent fee for service payment less deductions, such as TPL or co-payments	Met through configuration of interChange. The pricing method will be configured to meet this functional requirement. Separate pricing methods can be set up for encounters. interChange calculates and stores the allowed amount for encounters for comparison with FFS claims. The actual price is informational, as the encounter's paid amount is stored in the reimbursement amount.
40.8.1.355	Provides capability to maintain multiple date-specific prices for each applicable provider, procedure code, revenue code, and DRG	Met by interChange. The Reference DRG Information panel, Reference Procedure panel, and the Revenue Information panel meet this functional requirement.
40.8.1.356	Provides capability to maintain multiple date-specific rates for each procedure code, population group, billing provider, attending provider, and/or client specific combination	Met through configuration of interChange parameters and features. The reference files contain date-specific segments for procedure codes. The provider and recipient data also is divided into date-specific eligibility segments. interChange will configure this function to meet this requirement.

RFP No.	RFP Requirement	EDS Response
40.8.1.357	Provides capability to ensure that NC DHHS programs are payers of last resort with respect to private insurance	Met by interChange. interChange can make sure Medicaid is the payer of last resort when compared to private insurance. The State will determine the hierarchy of benefit plans that relate to payers for internal processing.
40.8.1.358	Provides capability to ensure that claims with known TPL are reduced by the liability in accordance with NC DHHS standards	Met by interChange. interChange will comply with State standards for deducting TPL.
40.8.1.359	Provides capability to support application of State-specific services for claims processing	Met through customization of interChange. The additional edits to meet this requirement will be developed during DDI.
40.8.1.360	Provides capability to pay only out-of-plan services for capitated program enrollees as fee-for-service and deny in-plan services	Met by interChange. By properly setting up the coverage through the benefit plans, interChange provides the capability to pay only out-of-plan services for capitated program enrollees as FFS and deny in-plan services.
40.8.1.361	Provides capability to automate the calculation for Ambulatory Surgical Centers	Met through customization of interChange. The pricing method will be customized to meet this functional requirement.
40.8.1.362	Provides capability to apply Graduate Medical Education (GME), both direct and indirect, to inpatient claims	Met through customization of interChange. The pricing method will be customized to meet this requirement.
40.8.1.363	Provides capability to price NDC codes	Met by interChange. The claims pricing process meets this functional requirement. NDCs are priced within the claims engine's pricing modules for pharmacy claims.
40.8.1.364	Provides capability to price or deny claims with Medicare participation, including Medicare HMOs Part C, according to program pricing rules	Met through configuration of interChange parameters and features. Additional rules will be added to meet this pricing rule for crossover claims.
40.8.1.365	Provides capability to calculate a DRG per diem for undocumented alien's claims	Met through configuration of interChange parameters and features. Additional rules will be added to meet this pricing rule for undocumented alien benefit plans.
40.8.1.366	Provides capability to apply a percentage of an existing fee schedule rate for a different provider specialty	Met through configuration of interChange parameters and features. The pricing additions or changes function will be enhanced to meet this requirement.
40.8.1.367	Provides capability to apply variable recipient co-pay percentages to a claim from a prior approval	Met through customization of interChange. The claims processing rules will be customized to meet this functional requirement.
40.8.1.368	Provides capability to prorate monthly rate for days billed according to State business rules	Met through customization of interChange. The claims processing rules will be customized to meet this functional requirement.
40.8.1.369	Provides capability to calculate provider reimbursement according to business rules	Met by interChange. The rules allow multiple variables and rule intersections, providing accurate calculation of reimbursement amounts.
40.8.1.370	Provides capability to price pharmacy claims up to a maximum level allowed by current NCPDP and FDB	Met through configuration of interChange parameters and features. interChange supports standard pharmacy pricing

RFP No.	RFP Requirement	EDS Response
		methodologies, including maximum allowable cost (MAC), state maximum allowable cost (SMAC), federal upper limit (FUL), average wholesale price (AWP), and estimated acquisition cost (EAC). Additional pricing methods will be developed if needed.
40.8.1.371	Provides capability to price a claim at the lower of the maximum applicable rate, the provider's billed amount, applicable manual pricing, or invoice pricing	Met through customization of interChange. The pricing method will be customized to meet this functional requirement.
40.8.1.372	Provides capability to accommodate and provide for claims sampling specific to Payment Error Rate Measurement (PERM) Program requirements mandated by CMS and/or their Federal contract agent within designated timeframes Refer to *2007 PERM Data Submission Instructions-Jan 2007[1].pdf for* current PERM data submission requirements.	Met by interChange. The BIAR component of interChange meets this functional requirement.
40.8.1.373	Provides capability to process HIPP payments	Met by interChange. The HIPP process meets this functional requirement.
40.8.1.374	Provides capability to produce and send correspondence related to recipient premiums in the recipient's preferred language, including invoices, notices of non-payment, cancellation notices, receipts, and refunds	Met by interChange. The premium payment process meets this functional requirement.
40.8.1.375	Provides capability to collect recipient premium payments	Met by interChange. The premium payment process meets this functional requirement.
40.8.1.376	Provides capability to produce refunds of recipient premiums	Met by interChange. The premium payment process meets this functional requirement.
40.8.1.377	Provides capability to process financial accounting records for premium payments and refunds	Met by interChange. The premium payment process meets this functional requirement.
40.8.1.378	Provides capability to produce reports for recipient premium payment and cost-sharing (e.g., recipient co-insurance, deductibles, co-payments, etc.) processes	Met through customization of interChange. The addition of premium payment reports and cost-sharing reports will meet this functional requirement.
40.8.1.379	Provides capability to apply cost-sharing, e.g., recipient co-insurance, deductibles, co-payments	Met by interChange. The pricing function includes coinsurance, copayments, and deductibles in the pricing calculation.
40.8.1.380	Provides capability to ensure cost-sharing does not exceed threshold for the family group	Met through customization of interChange. A new check for threshold amounts and family group cost-sharing will be added to the pricing methods to meet this requirement.
40.8.1.381	Provides capability to produce and send recipient letters/notices and Explanations of Benefits (EOB) in the recipient's preferred language	Met through customization of interChange. interChange will enhance the reporting capability for recipient letters to be written in the recipient's preferred language.

40.9.1 Managed Care System Requirements

Our solution will provide a single repository for managed care information and processing based on the most current information. It will relate the various processes and data into a unified and consistent whole, supporting managed care from front-end enrollment through benefit management and claims and encounter processing to back-end reporting and program administration.

State of North Carolina

The base interChange managed care subsystem integrates provider, claims, reference, and recipient information to provide a single repository for managed care information and processing based on the most current information. The Replacement MMIS will allow the State to work with the managed care plan networks, offering flexible, targeted rate determination capability and convenient auto-assignments and encouraging participation in the plans.

interChange supports both capitated programs such as the Pre-Paid Inpatient Mental Health Plan (PIHP) and Primary Care Case Management (PCCM) models, as well as several others. These multiple managed care business functions in interChange give the State long-term policy flexibility. The system supports both styles of managed care, from front-end enrollment through benefit management and claims or encounter processing to back-end reporting and program administration.

When a recipient qualifies for managed care, a caseworker in the county office will provide the recipient with the appropriate choices for his or her primary care physician (PCP). This choice will be honored in the Replacement MMIS if it meets predefined conditions, such as the provider being in the same county and accepting additional patients. For recipients who are unwilling or unable to make a choice, the Replacement MMIS auto-enrollment process will be used.

The auto-enrollment process will compare the demographics of the recipient with the available, qualifying PCPs to determine the best fit. Specific individuals who do not qualify due to State-specified exemptions such as Medicare, level of care, or nursing facility participation will be excluded from the process. An ordered list of matching criteria will be attempted, with the assignment made as soon as a fit is found. A portion of that match criteria is as follows:

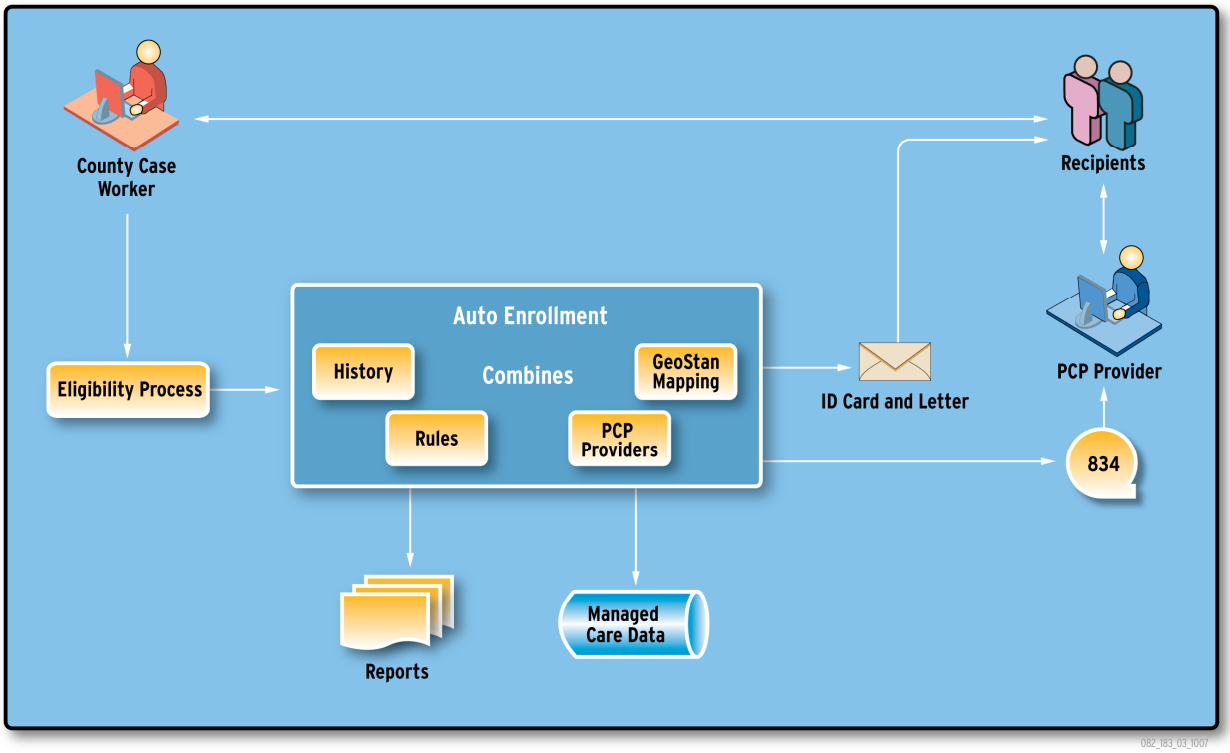
- Has the recipient been assigned to an available provider before?
- Has the recipient been provided medical service by an available provider in the past six months (compare claims)?
- Is the provider the appropriate type and specialty for the recipient (age, gender, or special needs considerations)?
- Is the provider within the specified distance of the recipient?

- Is the provider available for new patients?

If multiple providers meet the criteria, the auto-assignment will be given to the provider who was least recently given an auto-assignment. In short, the providers will be assigned new recipients in a revolving order.

The following exhibit, Provider Auto-Assignment Process Flow, shows the basic flow for a provider auto assignment. The process is similar for both the PIHP and PCCM models.

Provider Auto-Assignment Process Flow



If a recipient's choice is unavailable, the auto-enrollment system will combine available providers, history, and rules to make the best choice. The recipient will be notified of his or her PCP, and the provider will be notified of his or her new patient.

The Replacement MMIS managed care system will allow authorized users to completely manage the program. The system will have the following features:

- Ability to maintain detailed information about the PCP, such as available slots and any special recipients they are able to serve, including age-specific, OB/GYN, or family
- Ability for the provider networks to be updated manually through online panels or through batch file processing from MCOs
- Ability to maintain and use an infinite number of rate cells, both capitated and PCCM management fees, which reflect such items as age, gender,

benefit plan, or provider association and are date-specific and readily changeable to reflect new reimbursement requirements, including a percentage increase or decrease from prior rates

- Ability to generate automatic adjustments due to retroactive eligibility changes, where business rules determine when and how these adjustments are made
- Ability to fully support HIPAA-compliant ASC X12 834 roster and 820 payment transactions, as well as paper rosters and payment notification
- Ability to support mass disenrollments and panel transfers to effectively move recipients from one available PCP to another or back into the auto-enrollment process, if needed, for the capitated and PCCM models
- Automatic disenrollment when changes in eligibility or address require it, as well as automatic re-entry into the auto-enrollment process if appropriate

As shown in the following table, Managed Care Key Features and Benefits, the Replacement MMIS managed care system will offer many features and benefits designed to effectively and efficiently facilitate the present and future requirements of the State's Managed Care Program.

Managed Care Key Features and Benefits

Feature	Benefit
Standard reports that present auto-assignment details and capitated and administrative fee reporting by program, provider, fund code, and capitation category	Effective program management reporting
Generation of the same reporting for encounters and fee-for-service (FFS) claims	Administrative reporting that allows detailed comparisons of services, utilization rates, and populations.
FFS and encounter claims that are subject to a common set of edits and audits	Consistent claim and encounter adjudication, providing accurate and complete reporting
Out of network services that are strictly controlled through referral and prior approval override, with program and cross-program reporting	Close monitoring of service utilization and cost-effectiveness
Online panels that enable users to close a recipient's current PMP segment and transfer to a new PMP	Reduced transaction processing time
Automated nightly processes to determine who should be enrolled and who should be disenrolled	Prevention of concurrent program assignments in programs that are mutually exclusive
Online, on-demand letter and notice templates for system-generated or staff-initiated notification of changes to managed care program status or enrollment, the unavailability of a chosen plan, or changes to the managed care program, with the option to customize standard formats with free-form text	Consistent, efficient communication to recipients and providers

Feature	Benefit
Real-time updates to the browser pages that allow for immediate application to the claims processing and eligibility inquiries for the provider and recipient communities	Ability for authorized users to make immediate changes and assist recipients and providers without delay
Ability for providers and recipients to request an assignment to be terminated, with a system that tracks these requests and their reasons to prevent future auto-assignments from being made	Strong relationship management
Online audit trails that reveal when table-related changes were made and who made them	Strong audit capability and the ability to openly track changes

Approach to Customization and Modifications

The details of every state's managed care program differ. The interChange managed care system is designed to be flexible and highly configurable to enable EDS and State staff to work together to define criteria needed to support this system. Details such as which benefit plans need to be included in which program, what exclusion factors exempt an individual from managed care, what criteria are required for each rate cell, and hundreds of other questions will be discussed and documented. The vast majority of those constraints will be configurable through available attributes and parameters through online panels. Some requirements will require changes to existing code in interChange. Specific reporting requirements may need extensions to current code or additional queries added to the interChange BIAR module of the MMIS.

Enhancements to Functional Requirements

The interChange managed care system is a feature-rich reporting solution that provides online, parameter-driven reports for fast and accurate analysis of the State's healthcare programs. Specifically, we will make the following changes to the interChange managed care system:

- The specific North Carolina rules surrounding auto-assignment will need to be customized for the State.
- Additional State-specific letters and triggers and modification of existing letter templates will be required.
- Primary care sanction recoupment is supported by interChange, but State-specific criteria and notification will be added to the existing capability.
- Including the supervisor name into the online maintenance and file processing logging capability of interChange will require configuration.
- File exchanges with entities such as DIRM and the North Carolina State Health Plan are supported but will need to be customized to meet the specific requirements.

- Managed care recipient PMP assignment history information can be accessed by a number of methods, but it will be necessary to add procedure code and description search capabilities.
- Support for the PAL scorecard will need to be developed.
- A new quarterly utilization report will be created to support claim comparisons of all Community Care of North Carolina (CCNC) providers according to specified criteria.

Response to Managed Care System Requirements

The following table, EDS Response to Managed Care System Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Managed Care System Requirements

RFP No.	RFP Requirement	EDS Response
40.9.1.1	Provides capability for notes tracking for managed care provider complaints	Met by interChange. There are two areas in interChange where users can enter notes and comments. The Recipient Comments panel in the recipient data maintenance system allows the user to write information concerning the case, such as telephone calls and updates. The Notes panel in the Contact Tracking Management System (CTMS) allows users to enter and modify notes for a particular contact question within the contact tracking system.
40.9.1.2	Provides capability for online access to all recipient, provider, claims, and reference data related to Managed Care	Met by interChange. Managed care–related information will be accessible online through several different panels. The Recipient PMP Assignment History panel contains the managed care information. The Claims and Reference panels contain the claims and reference data.
40.9.1.3	Provides capability to support multiple Managed Care programs, including those currently in existence: • Primary Care Case Management (PCCM) • Pre-Paid Inpatient Mental Health Plan (PIHP)	Met by interChange. Multiple managed care programs such as PCCM and PIHP can be supported simultaneously through assignment of benefit plans and provider numbers.
40.9.1.4	Provides capability to maintain Managed Care capitation rates for specific groups of recipients	Met by interChange. The Standard Capitation Rates panel allows the user to maintain the default capitation rates. Managed care capitation rates for specific groups of recipients can be maintained as long as groups of recipients can be segregated into capitation rate cells.
40.9.1.5	Provides capability to apply edits/audits that prevent claims from being paid when Managed Care program recipients receive program-covered services from	Met through configuration of interChange parameters and features. The claims engine and the reference data maintenance system rules will prevent claims from being

RFP No.	RFP Requirement	EDS Response
	sources other than the capitated plans in which they are enrolled	paid when managed care program recipients receive program-covered services from sources other than the capitated plans in which they are enrolled.
40.9.1.6	Provides capability to apply edits/audits that prevent claims from being paid when a recipient has not received a referral or override approval when required by the Managed Care program or primary care provider with whom they are enrolled	Met through configuration of interChange parameters and features. Preventing payment when a recipient has not received a referral or override approval required by the managed care program or the PCP can be accomplished either by the claims engine and the reference data maintenance system rules or by edits.
40.9.1.7	Provides capability to track the utilization rates and costs for program enrollees and to compare such utilization rates and costs to comparable groups of non-Managed Care recipients and across different Managed Care plans to assure sufficient savings are achieved	Met through configuration of interChange parameters and features. Utilization rates and cost comparisons for enrollees to non—managed care recipients will be provided through the data warehouse subsystem, DSS, or through MAR claim utilization reports.
40.9.1.8	Provides capability to auto-assign recipients into a Managed Care program(s) See Auto Assignment Business Rules in the Managed Care DSD Exhibits in the Procurement Library.	Met through configuration of interChange parameters and features. This requirement will be satisfied through designing State-specific auto-assignment rules and the hierarchy for these rules.
40.9.1.9	Provides capability to automatically and on demand produce notices and letters to recipients about their eligibility, enrollment/disenrollment, unavailability of chosen plan, and Managed Care program changes	Met by interChange. The integrated COTS letter generator tool, DOC1, meets this requirement. The system can produce notices to recipients automatically and on demand, but the situations that create the generation of the letter must be determined and programmed.
40.9.1.10	Provides capability to calculate member months per Managed Care program by age groups and/or by aid categories	Met through customization of interChange. A new report will be created in the managed care system to calculate the member months per managed care program and provide the details regarding the age and/or aid category.
40.9.1.11	Provides capability to maintain an online audit trail of all updates to Managed Care data	Met by interChange. Audit reports of table data changes are available through online panels.
40.9.1.12	Provides capability for online, updateable letter templates for Managed Care recipient and provider letters with the ability to add free-form text and allow for online template changes	Met through COTS integration. With the COTS letter generator tool, DOC1, modifications to the letter generator templates for managed care will provide online, updateable letter templates with free-form text entry.
40.9.1.13	Provides capability to apply primary care provider sanctions by entering a provider-specific dollar amount or percentage that results in withholding, or repaying, suppressing, and releasing of all or part of the provider's monthly management/coordination fee up to one hundred (100) percent and notify the State of completed transaction	Met through configuration of interChange parameters and features. The financial system will be able to apply provider sanctions by provider-specific dollar amount or percentages that result in withholding, repaying, suppressing, and releasing management or coordination fees. The State notification process will need to be developed.
40.9.1.14	Provides capability for online logging and tracking of changes to capitation fees or administrative entity provider numbers, file maintenance initiation date,	Met through configuration of interChange parameters and features. The Managed Care panels, audit trails, and automated file processing logs provide details on who

RFP No.	RFP Requirement	EDS Response
	receipt date, file maintenance completion date, operator completing respective changes, name of supervisor, validation, and date	performed an update, and when. This process will be enhanced to allow for the name of the supervisor and validation.
40.9.1.15	Provides capability to support encounter processing data and costing for the following functions for generation of reports: • State History File • Finalized Claim Activity File • Storage of encounter fee for service equivalent cost	Met by interChange. Encounter data in the form of the State History file and Finalized Claim Activity file and the storage of encounter FFS equivalent cost data is maintained in the Claims History file, making it available for any history file searches.
40.9.1.16	Provides capability to produce monthly Managed Care enrollment reports	Met by interChange. The monthly PMP Enrollment Roster Report lists PMP enrollment information by recipient.
40.9.1.17	Provides capability to produce a file to DIRM/EIS on a weekly basis to report auto-assignment results	Met through configuration of interChange parameters and features. The system tracks auto-assignment results. The appropriate method of data exchange with DIRM/EIS will be developed.
40.9.1.18	Provides capability to produce county-specific Managed Care Provider Directory and transmit electronically to DIRM nightly	Met through customization of interChange. The managed care system can produce a county-specific managed care provider directory with the data that is present in the system. The method of transmission will be defined and developed.
40.9.1.19	Provides capability to produce a county-specific Provider Availability Report and transmit electronically to DIRM nightly	Met through customization of interChange. A county-specific Provider Availability Report will display current and future provider caseloads against maximum caseload and some other managed care provider data. The method of transmission will be defined and developed.
40.9.1.20	Provides capability to create an extract file containing North Carolina Health Choice recipients linked with a provider/administrative entity and send to the North Carolina State Health Plan by the third business day of each month	Met through customization of interChange. This requirement can be accomplished by an 834 transaction. It may also be an electronic file containing the recipients and their assignments, along with demographic data determined by the State.
40.9.1.21	Provides capability to generate management fees monthly	Met by interChange. The current configuration runs managed care jobs twice monthly: once for future months and once for reconciliation of previous months.
40.9.1.22	Provides capability to generate capitation payments monthly and retroactively for one (1) year	Met through configuration of interChange parameters and features. The Capitation Payment Reconciliation Report will be enhanced to support the generation of information retroactively for one year.
40.9.1.23	Provides capability to generate prorated capitation payments for a partial month of eligibility	Met by interChange. The Capitation Payment Reconciliation Report generates prorated capitation payments for a partial month of eligibility.
40.9.1.24	Provides capability to access Managed Care data by recipient identification number, recipient name, provider	Met by interChange, with a portion of the requirement requiring customization code. The Recipient PMP Assignment

RFP No.	RFP Requirement	EDS Response
	identification number, provider name, procedure code, procedure description, prior approval number, clerk identification, and any combinations thereof	History panel will be enhanced to provide access to data by procedure code. This panel currently provides access to data by recipient identification number, recipient name, provider identification number, provider name, prior approval number, and clerk identification.
40.9.1.25	Provides capability to generate a monthly Federal report of auto-assigned Medicaid recipients	Met through customization of interChange. A new report in the managed care system will be created to generate a monthly federal report of auto-assigned Medicaid recipients. The report layout and format will have to be determined.
40.9.1.26	Provides capability to produce PAL scorecard for Managed Care providers	Met through customization of interChange. A new report in the managed care system will be created to produce the PAL scorecard. The report layout and format will have to be determined.
40.9.1.27	Provides capability to adjust base management fees by percentage resulting in enhanced/reduced fees for all individual providers or administrative entities	Met through configuration of interChange parameters and features. The percentage function will need to be added to the Capitation Rate Override panel in the managed care system to adjust (either enhance or reduce) base management fees by percentage.
40.9.1.28	Provides capability to create notification letters to the provider/administrative entity regarding the adjustment to management fee rates and the reason for the adjustment	Met through COTS integration. With the COTS letter generator tool, DOC1, generation of notification letters to providers regarding management fee adjustments can be handled.
40.9.1.29	Provides capability to produce a monthly report of all adjusted management fees	Met by interChange. The managed care system provides the Capitation Payment Reconciliation Report that lists the adjustments created as a result of the automated adjustment process.
40.9.1.30	Provides capability to produce quarterly utilization reports based on paid claims for all Community Care of North Carolina (CCNC) providers, comparing each provider's service rates and per member per month (PMPM) costs to other primary care provider types within their peer group(s) This will include the ability to automate these reports and to produce the report(s) with varying parameters, including, but not limited to, date spans, provider, provider specialties, provider network, service categories, diagnosis codes, CPT codes, and DRG diagnostic-related groupings. This report shall also include the average total enrollment, adult enrollment, and child enrollment for each CCNC provider.	Met through customization of interChange. A new report will be created to use the data collected by the interChange systems to produce quarterly utilization reports for paid claims for CCNC providers. The report will be automated, and the user can select from the following parameters: date ranges, provider, provider specialties, provider network, service categories, diagnosis codes, CPT codes, and diagnostic-related groupings (DRG). The report will also include the average total enrollment, adult enrollment, and child enrollment for each CCNC provider.
40.9.1.31	Provides capability to calculate utilization outlier data for the purpose of provider education, utilization management, and quality improvement This data shall be produced in conjunction with the	Met by interChange. The interChange BIAR module allows for calculation of utilization outlier data for provider education, utilization management, and quality improvement. The user can query or report the detail data

RFP No.	RFP Requirement	EDS Response
	Utilization Review Report.	and evaluate the outliers for a specific report.
40.9.1.32	Provides capability to revise the Quarterly Utilization Report format to allow for more flexibility to revise the report parameters and data and to include, but not be limited to, disease management and system of care groupings, drug utilization, and other group comparisons, as well as the current peer group comparisons	Met through configuration of interChange parameters and features. The capability to revise the Quarterly Utilization Report format to allow for more flexibility to revise report parameters and data could potentially be handled through the decision support system (DSS).
40.9.1.33	Provides capability to produce recipient letters based on age, sex, and/or clinical data/medical services based on claim data	Met through COTS integration. The capability to produce recipient letters based on age, sex, and/or clinical data/medical services based on claim data can be done through DSS mail merges and/or the COTS letter generator tool, DOC1.
40.9.1.34	Provides capability to generate a report of mailed letters	Met through COTS integration. With the COTS letter generator tool, DOC1, system output reports from jobs can display the letters generated for the purpose outlined in the job.

40.10.1 Health Check System Requirements

We offer the technology and the experienced team support necessary for Health Check to function well in a dynamic regulatory environment now and in the future. Our solution incorporates flexibility with a comprehensive list of possible options for reporting and direct data access, permitting rapid adaptation to changing policy requirements and reporting needs.

State of North Carolina

North Carolina's Health Check program is a gateway to routine, preventive medical services for the State's underserved youth. While providing immunizations and regular checkups, Health Check identifies potentially chronic and disabling health conditions early and targets them for treatment, preventing more serious and costly future medical problems. North Carolina's battle for the long-term health of its youngest residents will be won or lost on this front.

Health Check has steadily improved its promotion of preventive healthcare since it began. According to the most recent CMS-416 report figures (2005), 74 percent of North Carolina's Medicaid population participates in Health Check, with 92 percent participation for infants less than 1 year old and 100 percent participation for children ages 6 to 9 years. This makes North Carolina the leading Southeastern state in recipient participation.

The EDS Provider and Recipient Services team, led by Chris Ferrell, will continue to support the State in reaching the eligible population for participation in the Health Check program. Although improving Health Check compliance in North Carolina depends on many factors, our solution addresses the significant technical aspects quickly and directly.

The following table, Health Check Features and Benefits, highlights the key features and benefits of the interChange Health Check Subsystem.

Health Check Features and Benefits

Feature	Benefit
Ability to process screening and immunization billings on one claim	• Faster, more accurate Health Check claims processing and adjudication • Less maintenance
Automatic and centralized updating of Automated Information Notification System (AINS) data for each county	• Increased efficiencies for county coordinators who will no longer have to mutually update their AINS data every month • Improved data security through security profiles that allow coordinators to view data for their counties while permitting providers to view their own provider-specific data • Improved follow-up with recipients who change county of residence

Feature	Benefit
	• Increased access to data through a secure Web portal for Health Check Coordinators (HCCs) and providers, allowing for improved recipient tracking
Online letter generator templates in Spanish and English	• Quick, easy means of modifying Health Check notices in English and Spanish without programmer involvement • Ability to change flash forms holding existing production notices and the rapid creation of custom notices for limited distribution • Online audit trail function • Timely responses to policy changes • Increased recipient understanding and compliance
Interactive Web pages, including online audit trail features	• Quick, easy viewing and modification of Health Check Periodicity schedules without programmer involvement • Decreased reimbursement and suspense errors that can negatively impact cycle time compliance
Web-based process for maintaining, updating, generating, and distributing the Monthly Accounting of Activities Report (MAAR)	• Easier, faster time entry for HCCs • Increased accuracy of time data entered through built-in Web page edits • Increased time efficiencies for Health Check staff, allowing for greater focus on claims adjudication • Decreased errors caused by built-in processing edits that display error messages for any calculations that do not meet preset criteria

In the following sections, we describe the capabilities inherent in the Health Check Subsystem:

- Features and Functional Ability of the Health Check Subsystem
- Contact Management

Features and Functional Ability of the Health Check Subsystem

The State will reap immediate benefits from the experience of the EDS North Carolina team and the features of interChange. This combination offers the technology and the experienced team support necessary for Health Check to function well in a dynamic regulatory environment now and in the future. The system incorporates flexibility in its design with a comprehensive list of possible options for reporting and direct data access, which permits rapid adaptation to changing policy requirements and reporting needs.

In the following sections, we offer a detailed description of North Carolina interChange features as applied to Health Check's core business processes:

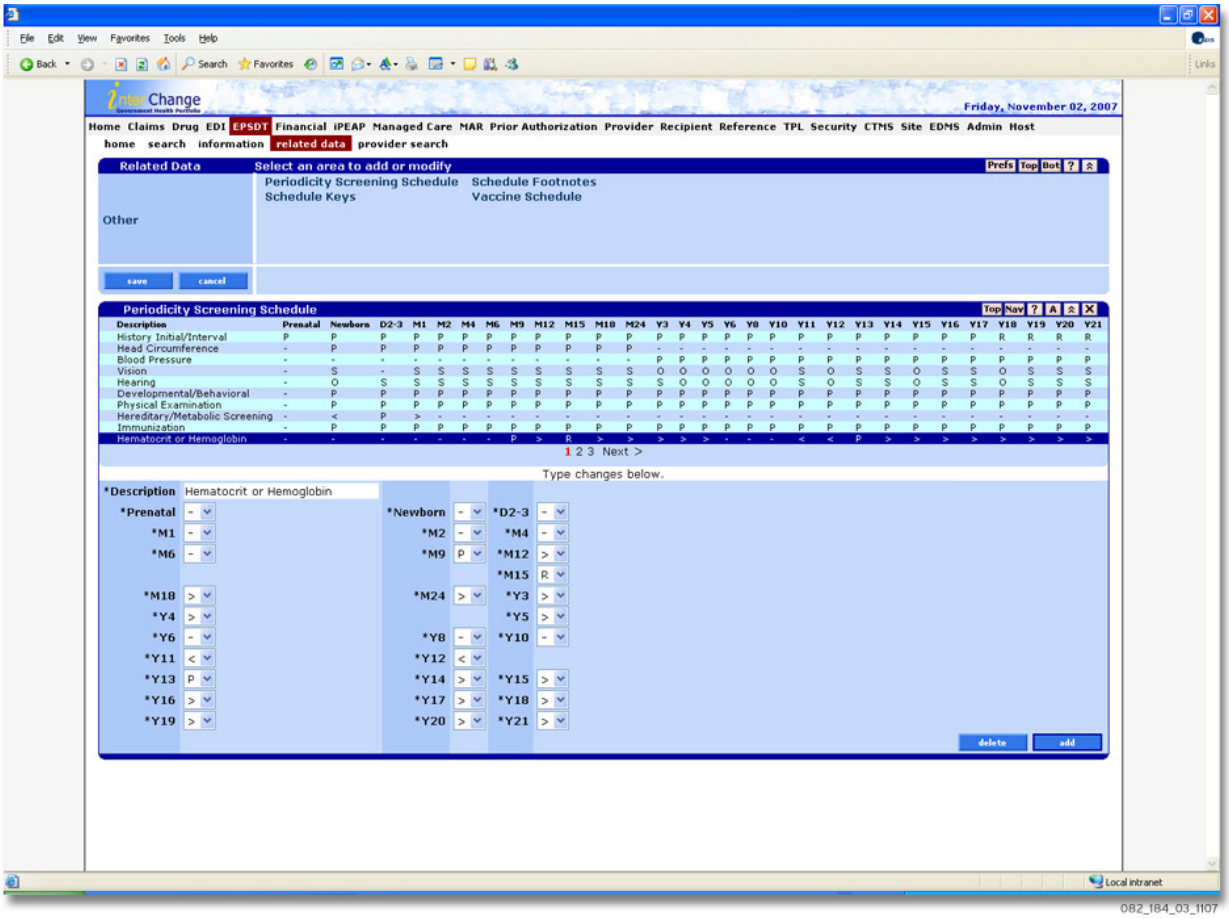
- Maintain Periodicity Schedule

- Provide Health Check Logic to Claims Processing
- Maintain Health Check Data

Maintain Periodicity Schedule

The American Academy of Pediatrics (AAP) Periodicity Schedule and its supplement will be available online, where authorized users can view them and easily change them in response to future CMS changes. The periodicity schedule details the types of screenings and the age at which each screening should be performed. The supplement is used to determine when a child is due for immunizations and additional test screenings. The periodicity schedule is accessed through the Periodicity and Screening Schedule Web page, while the supplement is accessed from the recipient Web page. As displayed in the following exhibit, Periodicity and Screening Schedule, interChange maintains the periodicity schedule and associated keys to document screening expectations.

Periodicity and Screening Schedule



The ability to maintain the periodicity and screening schedule through a Web page allows for quick file updates when changes occur.

Besides the standard periodicity and screening schedule, interChange also maintains accelerated schedules for those recipients who must "catch up" on recommended screenings. Accelerated screening schedules are available for the following participants:

- Ages 2-6
- Ages 7-17
- Ages 18 and older

Provide Health Check Logic to Claims Processing

Logic in the interChange Claims Processing Subsystem includes various Current Procedural Terminology (CPT) codes used by physicians who provide health screenings for Health Check-eligible recipients. Using these codes with the periodicity schedule, the system can accomplish the following:

- Identify Health Check claims that conform to or violate periodicity criteria
- Identify Health Check claims that show serious medical findings (abnormalities) needing further medical attention
- Track medical referrals for abnormal conditions and smoothly update the status of treatment received

Using the recipient file with the periodicity schedule, the system determines which recipients are due for routine screenings and which have not had screenings.

The claims processing subsystem allows claims with Health Check procedure codes to bypass third-party liability (TPL) edits. When new procedure codes are established for Health Check, they can be added to the edit logic through a Web page, eliminating programmer intervention and decreasing erroneous denials.

Maintain Health Check Data

interChange updates Health Check recipient data daily, automatically identifying recipients as eligible based on their age. This data is maintained in the recipient data maintenance functional area. The system receives the daily eligibility file and applies established data integrity edits to the information received. Edits verify that there are no overlapping dates, the date of birth and death are consistent with the eligibility record, and the fields are in the proper format. The system accepts online updates of abnormality referral status, notification responses, and screening information.

Although screening activities are crucial to preventive maintenance, after an abnormality has been identified, it must be tracked to verify that the recipient receives the medical care required to address the concern. interChange identifies and tracks resolution of abnormalities through claims processing and feeds that information to Health Check tables so that it can be viewed by authorized staff. Health Check abnormalities are tracked from date of detection to date of closure.

Besides identifying screening information by recipient, interChange also provides users access to screening information by provider. This information can be used to monitor provider activity regarding Health Check screenings and follow-up. Online access to provider specific Health Check data assists in the tracking of screening and follow-up activity for participating providers.

Online Update and Inquiry Features

- Users can access pertinent information through online browser pages. Additionally, county HCCs will have access to additional Web pages through which AINS data and MAAR information will be available. The following table, Web Page Features, summarizes the Web page functional ability available in interChange. Authorized users can update information such as the periodicity schedule.

Web Page Features

Web Page	Features
Health Check Provider Inquiry	The Health Check Provider Inquiry Web page is used by the State to view Health Check screening claims history performed for eligible recipients by Provider Number.
Periodicity and Screening Footnotes	The Periodicity and Screening Footnotes Web page is used as a reference for the footnotes noted on the periodicity and screening schedule and the supplement to the AAP Periodicity Schedule.
Periodicity and Screening Key	The Periodicity and Screening Key Web page is used as a reference for the valid values noted on the periodicity and screening schedule, supplement to the AAP Periodicity Schedule, and Accelerated Periodicity Web pages.
Periodicity and Screening Schedule	The AAP Periodicity Schedule and its supplement are used to determine when a recipient is due for immunizations and additional test screenings.
Recipient Health Check Abnormalities	This Web page is used by the State to view the abnormality history for a recipient. It also allows the user to update the status of an abnormality when it has been closed.
Recipient Health Check Screenings	The Recipient Health Check Screenings Web page is used by the State to view screening claims history and immunization claims history performed for Health Check–eligible recipients.

Contact Management

To keep recipients informed about the program and help them track screenings due or missed, Health Check uses the following three notices:

- **Introductory letters**—Sent to recipients when they are first added to the Health Check program to explain the benefits of the Health Check program

- **Standard reminder letters**—Sent to recipients to prompt them to receive Health Check screenings within the next three months
- **Urgent reminder letters**—Sent to recipients to prompt them to receive Health Check screenings within the next two weeks
- Using interChange's automated letter generation capability, any of these letters can be produced in Spanish or English with numerous formatting options. Additionally, new production and limited distribution letters can be created promptly to target certain groups.

To keep providers informed, our plans include the following elements:

- Periodic workshops in centralized locations with advance notice that facilitates travel planning
- Introductory training on program policies, processes, and billing practices
- Ongoing training at intermediate and advanced levels
- Access to our provider relations consultants, newsletters, and seminars
- Periodic meetings with provider associations, community workers, and hospitals

New providers and providers with high denial rates are targeted for training, including instruction in Health Check-related topics. Additionally, our provider representatives will use interChange and MAAR reports to target areas with few Health Check providers for Health Check program recruitment. We understand that primary care providers are the most important link in the provision of preventive services. We will work with providers and the State's Carolina Access program providers to identify areas where access is limited and actively encourage more providers and primary care givers to consider enrollment in Health Check to make sure that adequate and ample services can be provided to the eligible recipient population.

Approach to Customization and Modifications

interChange will be configured and customized to meet the RFP requirements. Often, the changes are to the Web portal, providing data directly to the providers and recipients and authorized users, such as county HCCs.

The configuration work includes making the correspondence letters generated through the DOC1 letter correspondence tool State-specific. This is standard configuration work performed during the DDI Phase of the project.

Enhancements to Functional Requirements

Enhancements that support these requirements include Web and panel interfaces that deliver program information to sources for support in this program. Often, we are adding data elements to existing Web portal panels, or creating new

reports. In other instances, we are adding additional features that will aid the State in better serving the recipients of Health Check services. Some of the notable enhancements to the application include the following:

- We will enable recipients to inquire about Health Check data through the AVRS and public Web portal.
- We will create Web portal Health Check pages for the entry of county staff information.
- We will create Web portal pages for a Health Check application for the creation and maintenance of Health Check information notifications, MAAR information, County Options Change Request (COCR) information, Full-Time Equivalency (FTE) information, and Health Check recipient data.

Response to Health Check System Requirements

The following table, EDS Response to Health Check System Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Health Check System Requirements

RFP No.	RFP Requirement	EDS Response
40.10.1.1	Provides capability to maintain the Health Check periodicity schedule	Met by interChange. The interChange application, through the Periodic Screening panel, meets the requirement to have the capability to maintain the Health Check periodicity schedule.
40.10.1.2	Provides capability for online inquiry to all Health Check data with access by recipient ID and provider number	Met through customization of interChange. Screening results are captured as part of a claim; therefore, a change will be made to capture this screening information from the associated claims as required.
40.10.1.3	Provides capability to maintain each Health Check-eligible recipient, the current and historical screening results, referral, diagnosis and treatment, and immunizations, including the provider numbers and dates	Met through customization of interChange. HCC management fees are a new feature to the interChange base. This feature will calculate HCC fees as required.
40.10.1.4	Provides capability to identify paid and denied screening claims	Met through customization of interChange. Changes will be made to the batch process that selects screening claims for the panel to include the denied claims. interChange displays the paid screening claims on the EPSDT Screening Search Results panel.

RFP No.	RFP Requirement	EDS Response
40.10.1.5	Provides capability to identify abnormal conditions by screening date and whether the condition was treated or referred for treatment	Met through customization of interChange. The Abnormalities panel includes only basic information about the abnormality and not the treatment. This requirement would require changes to the batch abnormality extract process and the Abnormalities panel to include the treatment.
40.10.1.6	Provides capability to update recipient Health Check data with screening results and dates and referral information	Met through customization of interChange. This requirement will necessitate the implementation of a new panel because this information cannot be entered online.
40.10.1.7	Provides capability for online, updateable letter templates for Health Check monthly notifications, standardized letters, and inserts	Met through COTS integration. The COTS DOC1 letter generation tool is used to meet this requirement.
40.10.1.8	Provides capability for automatic generation of monthly notifications to case heads for next screenings, screenings missed, and abnormal conditions not treated based on State criteria	Met through customization of interChange. Although interChange supports the generation of monthly notifications for screenings and missed screenings, it does not address abnormal screenings that are not treated. The existing screening letters will need to be updated to meet State specifics. We will work with the State to define "abnormal" conditions that should be monitored and reported.
40.10.1.9	Provides capability to maintain all notices sent, identifying case and recipient and date the notice was sent	Met through customization of interChange. The Notices History panel will be modified to display the identifying case, recipient, and date the notice was sent.
40.10.1.10	Provides capability to maintain an online audit trail of all updates to Health Check data	Met by interChange. Online panels and system data are properly tracked, and an audit trail is maintained and retained within interChange.
40.10.1.11	Provides capability for Web-based Health Check functionality that allows for the creation, update, and management of: • Health Check Information Notifications • Monthly Accounting of Activities Report (MAAR) Information • County Options Change Request (COCR) Information • Full-Time Equivalency (FTE) Information • Health Check Recipient Data	Met through customization of interChange. Changes will be made to the Web portal and the processes and panels that display this information, including accounting for security to only allow users to see data they are authorized to see.
40.10.1.12	Provides capability for the following Web-based functionality: • Search recipient data • Enter comments • Update notification suppression	Met through customization of interChange. Customization will be made to the interChange Web portal to allow for recipient data search, comments to be entered, notification suppression, and notifications to be sent.

RFP No.	RFP Requirement	EDS Response
	• Send standardized notifications	
40.10.1.13	Provides capability to calculate and system-generate Health Check Coordinator management fees	Met through customization of interChange. A new feature will be added to interChange to calculate the HCC management fees as required.
40.10.1.14	Provides capability to generate a monthly FTE report based on information received on the MAAR and COCR	Met through customization of interChange. A new monthly FTE report will be added to interChange to meet this requirement and provided online for viewing by authorized users.
40.10.1.15	Provides capability to capture and electronically store all Health Check county staff information	Met through customization of interChange. A new table and panel will be created to add, change, and delete county Health Check staff information. We have estimated that no more than 10 data elements will be required.
40.10.1.16	Provides Web-based access to current Health Check data to include new eligibles, new health check screenings, referral, etc.; provides access to each Health Check Coordinator (HCC) to their specific county information and provides ad hoc query capability for extraction of data to the desktop	Met through customization of interChange. A new extract file will be created to facilitate the downloading of information to the HCC database from the interChange Web portal. Authorized HCC users can access this secure Web portal to readily and easily download this information for their use as needed. The other requirements listed are either met by interChange today or covered by other enhancements noted in this section.
40.10.1.17	Provides capability to produce the Health Check Activity Report	Met by interChange. interChange has two reports that meet this requirement: EPSDT Summary of Notices Sent and EPSDT Provider Summary of Notices Sent.
40.10.1.18	Provides capability to convert HCC comments from legacy FoxPro Data Shell application into the Replacement MMIS	Met through customization of interChange. The HCC comments that are in the FoxPro Data Shell application will be converted.
40.10.1.19	Provides capability to generate EPSDT report for primary care providers and administrative entities monthly no later than the fifth day of the month for the preceding month's data This information should be available on the Web for providers to download for their practice only.	Met through customization of interChange. A new Web portal report will be created to meet this requirement.
40.10.1.20	Provides capability to produce monthly MAAR Summary reports	Met through customization of interChange. MAAR summary reports will be created in accordance with State requirements.
40.10.1.21	Provides capability to generate reports of recipients who have been in a particular practice for defined time periods, which includes the county and Statewide participation rates	Met through customization of interChange. A new, complex report will be created to meet this requirement.

40.11.1 TPL System Requirements

Our flexible TPL solution can configure and optimize third-party coverage data through easy-to-use browser pages, real-time access to information, and the automation of policy, accounts receivable, and rebilling and recovery tasks. These and other similar processing efficiencies will reduce manual work requirements and empower users without requiring the assistance of technical resources or system modifications.

State of North Carolina

The third-party liability (TPL) subsystem provides a critical mechanism for the State to recoup payments from insurance carriers for which the insurers are liable. The TPL subsystem and procedures make sure the State and other health assistance programs are the payers of last resort, thereby reducing program costs.

The main functions of the TPL subsystem are as follows:

- Make sure reasonable measures are taken to identify liable third parties
- Use these liable resources to minimize the State's healthcare program expenditures and the taxpayers' financial obligations
- Provide TPL information to providers of medical services to facilitate their direct billing of liable third parties
- Provide the third party Medicaid TPL services firm timely and accurate data for recovery services

The TPL function provides capabilities to manage the private health, Medicare, and other third-party resources of Medicaid recipients.

EDS understands that the State's TPL system requirements in this RFP are in support of DMA, DMH, DPH, and ORHCC, and we will meet these technical requirements, as demonstrated in this section. We also acknowledge that TPL operational support is limited to tasks in support of non-Medicaid entities, such as DPH, while DMA will continue to use other vendors for TPL operational recovery activities. Therefore, EDS will provide the necessary data to the State-approved entities, as required by the RFP.

The interChange TPL subsystem includes the flexibility to configure and optimize third-party coverage data through easy-to-use browser pages, real-time access to information, and the automation of tasks, including the following:

- Policy maintenance
- Accounts receivable (A/R) posting
- Rebilling and recovery notices, as well as other TPL notices
- Non-covered services bypass logic

These and other similar processing efficiencies reduce manual work requirements and empower authorized users without requiring the assistance of technical resources or system modifications. The claims and TPL systems are integrated for efficient processing and presentation of TPL and claims information for the coordination of benefits. Additionally, the TPL subsystem function supports the Health Insurance Premium Payment (HIPP) process that purchases health insurance for selected recipients, and EDS will support this RFP requirement.

We understand that the State's need for this cost recovery effort will be EDS' responsibility in support of the following:

- Suspension and/or denial of claims with TPL on file
- Entry and verification of TPL information taken from incoming claims and from the contact center for DPH enrollees
- Disposition of TPL receipts received through the EDS lockbox against claims history

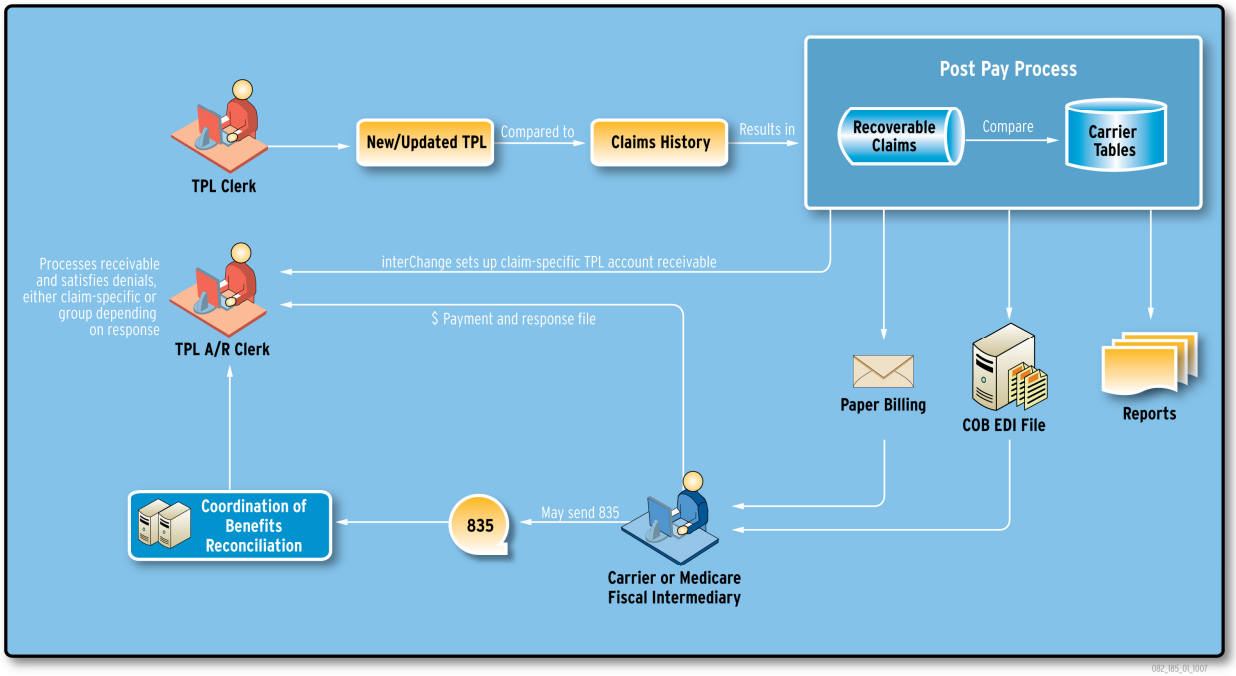
The TPL subsystem is designed to support flexibility in the benefit plans for Medicaid or non-Medicaid recipient groups in administering TPL rules for a subset of the population. For example, if a group of individuals was assigned to a discreet benefit plan associated with a developmental disability program, the TPL configuration could be tailored specifically for that benefit plan.

The TPL function works using cost avoidance (claim denial) and cost recovery (post-payment billing to insurers). interChange uses automated processes as much as possible for cost avoidance. Cost recovery will be used as a backup to the avoidance process.

Input and output transmissions and formats are HIPAA-compliant. The information maintained by the interChange TPL function includes recipient TPL resource data, insurance company data, and post-payment recovery-tracking data. TPL coverage type and threshold information are used by the Claims Processing function during claims adjudication.

The following exhibit, interChange TPL Process Overview, gives an overview of the interChange TPL process.

interChange TPL Process Overview

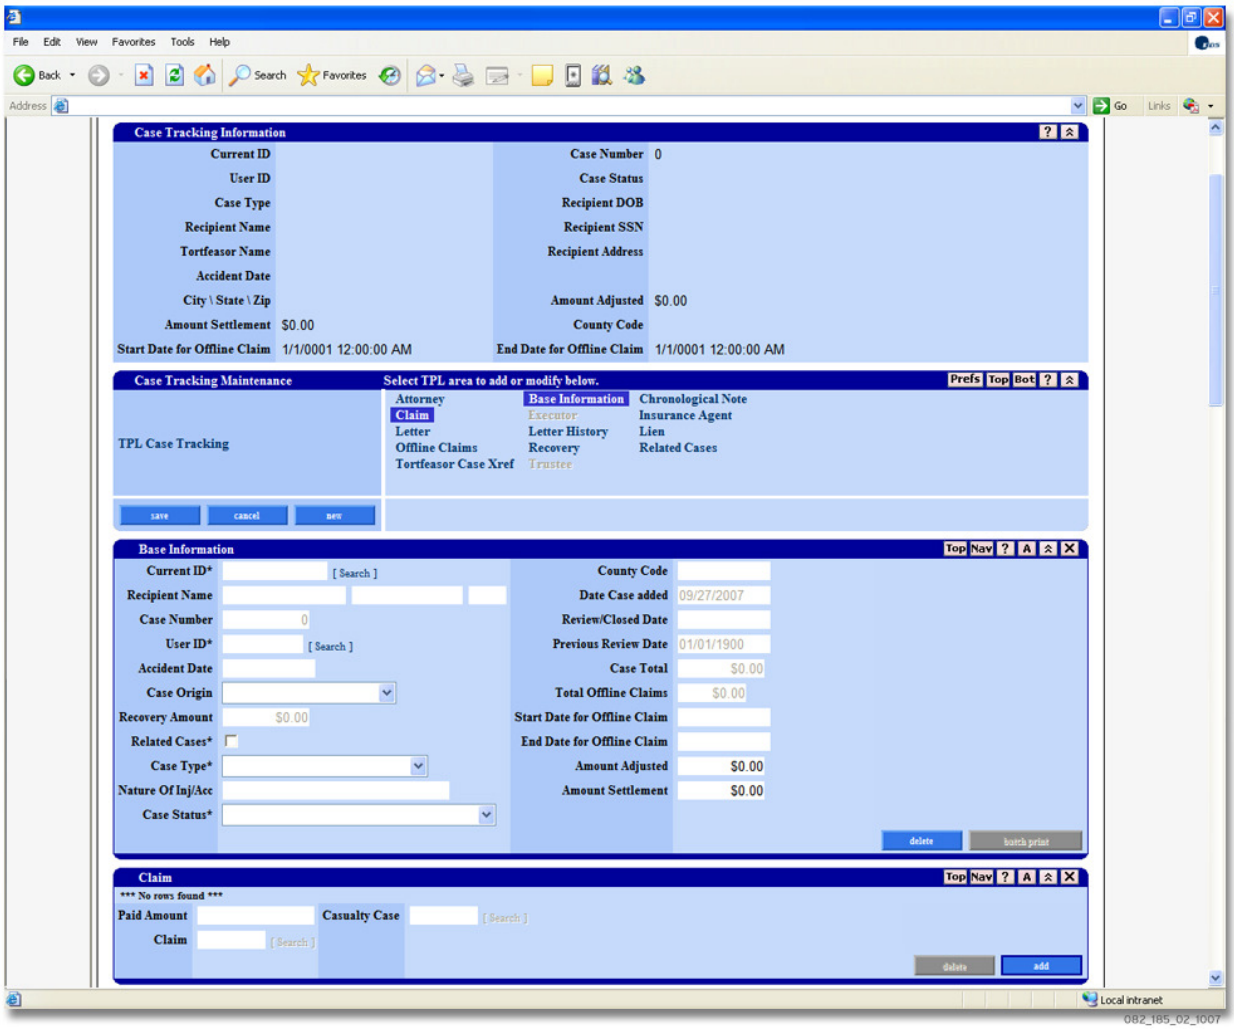


The TPL subsystem provides capabilities to manage the private health, Medicare, and other third-party resources of recipients and allows EDS and State TPL vendors to maximize TPL recoveries.

Estate Recovery

EDS will continue to provide estate recovery system processes in support of this State program. We will establish an interface to facilitate the timely and accurate flow of information related to estate recovery. The case-tracking tool in the interChange system contains the information related to the case such as amount identified to be recovered, the amount recovered to date, and the outstanding recovery balance. The case-tracking base Web page, shown in the following exhibit, Sample Case-Tracking Base Page, is used to monitor recovery data.

Sample Case-Tracking Base Page



The Case Tracking page provides current information on a case. The Case Tracking Maintenance panel lists the groupings of data to which the user has access, including claims, letter history, liens, and related cases. Each is organized into its own panel for easy navigation to the specific case information needed.

TPL Recovery

During the recovery process, claims paid by interChange may be billed to third parties in the expectation of receiving a recovery payment. interChange provides and maintains a robust case-tracking capability for tracking recoveries from identification to receipt. Access to accurate carrier information is critical to an efficient recovery process. interChange provides and maintains a carrier database that is easily searchable and free from duplicate and outdated information.

Standard TPL Business Functions

interChange accommodates TPL, Medicare Part A and Part B, and Medicare Advantage coverage for recipients. The flexible design of interChange also

allows the State to establish discreet benefit plans for QMB, Qualified Disabled Working Individual, and Specified Low-Income Medicare Beneficiary (SLMB).

interChange handles third-party coverage as an Other Insurance (OI) plan. The OI plan is date-specific and allows for "pay and chase" and cost avoidance with the following indicators:

- Insurance coverage type
- Invoice type
- Claim or encounter type
- Provider type
- Category of service
- Specific procedure codes
- Combinations of procedure and diagnosis codes
- Eligibility code
- Other program indicators

EDS will establish interfaces with the State's TPL contractor to exchange relevant program data, providing the most efficient, accurate TPL processing possible.

interChange provides the capability to apply, track, and report recovery amounts for claims and encounters. This does not affect claims and encounters payment or provider financial information. Reporting will be managed through an interface or performed by the operations team using interChange Web pages in the TPL subsystem.

interChange tracks claim and nonclaim-specific TPL recoveries. A check-related mass adjustment can be created based on user-specified criteria, such as procedure, date of service, or benefit plan to apply nonclaim-specific recoveries to multiple claims and encounters.

The interChange system provides claim-level posting of recoveries. EDS will enhance the system to accommodate line-level posting to accounts receivable. interChange provides the capability to maintain recipient data, and track changes and updates. Authorized users can enter the recipient's copayment and insurance requirements for each TPL policy using the interChange online browser Web pages.

The interChange TPL solution identifies potential coverage and recovery based on claim, accident, or injury-related data. The third-party accident trauma process identifies accident-related claims and encounters based on the diagnosis codes, procedure codes, or indicators on the claim. Claims and encounters processed totals are compiled for comparison against thresholds. interChange automatically reports recipients who meet the State defined criteria and/or the established thresholds and automatically generates questionnaires for recipients to determine the necessity to create a new case. The system generates a standard report to identify new potential cases. Additionally, the system automatically can load trauma cases into the TPL case-tracking system.

interChange can generate accident and trauma case reports. EDS will generate a weekly report identifying when recipient TPL information is added or modified retroactively, and historical claims and encounters exist for the recipient meeting the conditions of the TPL edit rules.

We assume recoveries against carriers, providers, and Medicare are by the TPL vendor, and interChange stores the information provided by these vendors. interChange provides the capability to identify claims and encounters that are associated with TPL information that has been added retroactively.

Claims adjustments are made through the interChange claims panels, and are governed by the appropriate TPL edit rules. EDS understands that recovery letters, facsimiles, and electronic transactions for recovery against carriers, providers, and Medicare are handled by the TPL vendor for Medicaid activities.

EDS understands this is an opt-out feature, where the recipient can choose to be covered completely by his or her employer's insurance. Based on this understanding, interChange will be modified to avoid payment for Medicaid claims and encounters if the recipient has been flagged as an opt-out.

We will work with the State to define the specific business processes necessary to support and maintain TPL and recovery business processes for non-Medicaid activities.

The case-tracking tool in interChange contains the information related to the case such as amount identified to be recovered, amount recovered to date, and outstanding recovery balance. interChange allows the inclusion of multiple payment sources, such as claims, HIPP, and managed care payments.

The integrated case-tracking tool allows the monitoring of liens related to the case and letters associated with the case. EDS understands the commercial, provider, and Medicare recoveries are managed by the TPL vendor for Medicaid activities. EDS understands the estate recovery cases are managed by the State's third-party department.

The interChange case-tracking tool tracks paid claims and encounters identified for recovery as part of a case through the recovery process. The claims and dollars recovered are tied to the case.

The interChange case-tracking tool searches the claims and encounters database along with financial transactions such as managed care capitation payments, buy-in premiums, and HIPPs premiums for records that meet the criteria for the case. Authorized users can indicate which records are to be included in the case. The tool allows the user to format the data into a printable, online report. We will update interChange to allow data exporting.

EDS will produce State-approved case-tracking reporting, including detailed and summary reports of case-tracking activity, and separate reports by type of case and type of action taken. We anticipate four new or customized reports that will

be configured to State requirements. The interChange case-tracking tool provides the capability for authorized users to enter case notes into a free-form text field.

The tool will have links to those relevant TPL document images in the electronic document system. The case-tracking tool also will contain links to letters produced. Authorized users can create customizable aging reports using the Business Intelligence and Analytical Reporting (BIAR) tools. Reports are generated indicating case aging and relative alert information. Using the clerk ID, cases can be assigned and reassigned to individual people, areas, or units. The case-tracking tool will be enhanced to add a priority field so cases can be prioritized within case type. The case-tracking tool contains review dates and case status that can be used to see when the next review is due.

Entries in the case-tracking tool are automatically date and time stamped along with capturing the ID of the person making the change. The audit trail function provides the capability to search for modifications made during a specific time and for each or only specific fields. The audit trail is specific to each panel.

Multiple addresses are maintained on the carrier file in interChange. This provides the capability to link carrier locations under one carrier ID. The interChange system produces an accident questionnaire based on diagnosis codes received on claims and encounters. The following exhibit, Sample Accident Questionnaire Based on Diagnosis Codes, is an example of a questionnaire from interChange.

Sample Accident Questionnaire Based on Diagnosis Codes

HEALTH INSURANCE AND INJURY/ACCIDENT QUESTIONNAIRE

John Johnson
123 MAIN STREET #45
Anytown, ST 99999

June 1, 2005
Recipient ID #: X999999 99
Date of Service: 01-01-01
Medical Provider: Provider Name Here, MD
Diagnosis: Injury or Accident

The State-Name Of Public Welfare has paid for medical care you received on the above date. Our records show the treatment was due to an injury/accident. The following information is needed to determine if another source should pay your medical bills(). Read all sides of this form and answer only those sections that apply to the injury listed at the top of this form. THIS FORM MUST BE RETURNED. FAILURE TO DO SO MAY RESULT IN TERMINATION OF YOUR MEDICAID BENEFITS. Please sign this form and return to us within 10 days in the enclosed self-addressed envelope. No postage is necessary.

IF THE ABOVE DIAGNOSIS IS RELATED TO AN INJURY, COMPLETE SECTION "A" THEN, GO TO THE NEXT SECTION THAT PERTAINS TO THAT INJURY. IF THE ABOVE DIAGNOSIS IS RELATED TO AN ILLNESS ONLY, PLEASE EXPLAIN HOW THE ILLNESS RELATES TO THE ABOVE DIAGNOSIS
THEN COMPLETE SECTION "A" AND PROCEED TO SECTION "K"(PART 2).

SECTION A (This section must be completed)

Are you covered by any type of group or individual HEALTH INSURANCE COVERAGE other than MEDICAID or MEDICARE? (examples are: Cancer Policy, Medicare Supplement, Champus, Etc.)
YES NO If yes, please provide the following information. Name/Address of insurance company
Policy # Group # Policyholders Name/Address

John Johnson

The interChange system automatically sends a questionnaire based on diagnosis codes.

Approach to Customization and Modifications

The interChange TPL subsystem is designed to maximize recoveries while minimizing the cost of administration.

EDS understands the importance of incorporating relevant program data with multiple appropriate data from other information systems in the most efficient, and accurate way possible. Certain report requirements will require the creation of custom online or batch reports.

Some specific system requirements are defined by the State that are considered to be managed by the Health Management Services (HMS) contract. These have been noted in the ensuing EDS Response to TPL System Requirements table.

Enhancements to Functional Requirements

interChange will require some enhancements to accommodate certain State requirements. Specifically, we will make the following changes to the TPL subsystem:

- Covered services will be customized for TPL Cost Avoidance using the coverage by Other Insurance (OI) Plan capability defined in the reference subsystem. Covered services can be set to pay, pay and chase, suspend, or deny for any specified procedure, diagnosis, revenue, or drug.
- We will work with the State to review interfaces to identify areas where existing information exchanges can be improved and applied to create more efficient and more effective business processes.
- We will expand the search capabilities, including the HIC, group name, and therapeutic information.
- We will create exclusion processing to exclude third-party insurance from claims processing on a per-person/per-policy basis for a set period and to allow the support of multiple exclusions per person/per policy.
- We will create North Carolina–specific reports, such as the Health Choice Recipient Activity reports and the TPL segment update frequency report.

Response to TPL System Requirements

The following table, EDS Response to TPL System Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to TPL System Requirements

RFP No.	RFP Requirement	EDS Response
40.11.1.1	Provides capability to search TPL database by recipient name, recipient number, policy number, policy holder name, policy holder ID number, SSN of the policy holder, by either the whole name or number or any part of the last name or number, or combination thereof	Met by interChange. The TPL Search panel meets this requirement without modification. EDS meets this requirement by also allowing search capability for Medicare ID, Recipient SSN, Recipient Date of Birth, and Carrier Number. The TPL Policy Search panel accesses a recipient's TPL records. Authorized users can access recipient TPL records and use the TPL Search panel to facilitate searches against recipient TPL records using various data combinations.
40.11.1.2	Provides capability to ensure that claims for preventive pediatric services and prenatal care for pregnant women are paid to providers and not cost-avoided if TPL is available	Met through configuration of interChange parameters and features. Covered services can be customized for TPL Cost Avoidance using the coverage by OI Plan capability defined in the reference subsystem, and can be set to pay, pay and chase, suspend, or deny for any specified procedure, diagnosis, revenue, or drug. The Coverage to Other Insurance panel cross-reference is used to define relationships between OI plans and TPL coverage codes to support the TPL matrix. The interChange TPL subsystem may need to be updated to add the needed data elements for State-specific data.
40.11.1.3	Provides capability to ensure that claims for inpatient hospital stays for pregnant women are cost avoided	Met through configuration of interChange parameters and features. Covered services can be customized for TPL cost avoidance using the OI Plan capability defined in the reference subsystem. Benefits Administration (BA) is the navigation panel for BA-related panels. This panel has links to Recipient Plan, Provider Contract, Other Insurance, Reimbursement Agreement, and Benefit Classification panels.
40.11.1.4	Provides capability for updating of insurance carrier information	Met through customization of interChange. Details regarding insurance carriers are established in interChange and will be associated with specific TPL policies for recipients.

RFP No.	RFP Requirement	EDS Response
40.11.1.5	Provides capability to retrieve/search third party resource information by the following: • Name (by any part of last name), ID number (by any part of ID number), date of birth, SSN (by any part of number) of eligible recipient, and relationship of covered individual to policy holder, or combination thereof • Insurance carrier • Policy number (by any part of number), Medicare Health Insurance Claim (HIC) number (by any part of number), or railroad number • Group name and number • Source code indicating source of suspect TPL information • Name, SSN, and/or ID number of policy holder (by any part of number) • Prescription number, whole number, or any part of number • Therapeutic code • Therapeutic class • User ID of individual entering or updating TPL record	Met through customization of interChange. The TPL Policy Search Web page is used to access a recipient's TPL records. The user can inquire about recipients with TPL. On the TPL Search panel, different combinations can be used to inquire on the recipient's TPL record. The search capability in TPL will need to be modified to provide for additional capability. The following changes will be made: • Fuzzy searches on fields • HIC and railroad number • Group name and number • Source • Prescription number, whole number, or any part of number • Therapeutic code • Therapeutic class • User ID of individual entering or updating TPL record
40.11.1.6	Provides capability to electronically store multiple, date-specific TPL resources for each recipient	Met by interChange. The carrier table contains information about other insurance companies that may have issued policies that cover Medicaid recipients. The claims submission address is used for claim facsimile billings. A separate correspondence address—if different from the claim submission address—is maintained on another panel. A unique TPL Resource is defined as Carrier, Policy Number, Recipient, and is further defined by unique coverage without overlapping dates. Additional TPL Resources can be added as needed provided the basic key is not duplicated.
40.11.1.7	~~Provides capability to electronically store multiple, date-specific TPL resources for each Medicare recipient~~	Cancelled. This requirement was deleted in RFP 30-DHHS-1228-08-R.
40.11.1.8	Provides capability to electronically store all third party resource information by recipient	Met by interChange. A unique TPL Resource is defined as Carrier, Policy Number, Recipient, and is further defined by unique coverage without overlapping dates. Additional TPL Resources can be added as needed provided the basic key is not duplicated.

RFP No.	RFP Requirement	EDS Response
40.11.1.9	Provides capability to electronically store third party carrier information	Met by interChange. A unique TPL Resource is defined as Carrier, Policy Number, Recipient, and is further defined by unique coverage without overlapping dates. Additional TPL Resources can be added as needed provided the basic key is not duplicated. Individual carriers are defined and associated with the resources.
40.11.1.10	Provides capability to identify all cost-avoided payments due to established TPL	Met through configuration of interChange parameters and features. The navigation panel for BA-related panels has links to the Recipient Plan, Provider Contract, Other Insurance, Reimbursement Agreement, and Benefit Classification panels. Covered services can be customized for TPL Cost Avoidance using the OI Plan capability defined in the Reference Subsystem. Covered services can be set to pay, pay and chase, suspend, or deny for any specified procedure, diagnosis, revenue, or drug. Claims denied because of cost avoidance are identified by a specific edit in the claims adjudication process.
40.11.1.11**	Provides capability to bill carriers for "pay and chase" claims and automatically create a "case" once claims have accumulated to defined threshold amount	Met through customization of interChange. Based on the response from the State to Question Number 74 of RFP Addendum Number 5 on September 17, 2007, we will change TPL billing jobs to extract non-Medicaid payer claims for recovery activities to meet this requirement.
40.11.1.12**	Provides capability to automatically identify previously paid claims for recovery when TPL resources are identified or verified retroactively and automatically creates a recovery "case" to initiate recovery within a period specified by the State	Met through customization of interChange. EDS will manage non-Medicaid activity.
40.11.1.13	Provides capability to identify claims and support recovery actions on paid claims when Medicare coverage is identified or verified after claims have been paid.	Met through customization of interChange. We will send the TPL recoveries vendor Medicaid paid claims, and the interChange TPL Post Paid Billing process will handle non-Medicaid recoveries.
40.11.1.14**	Provides capability to track and post recoveries to individual claim histories	Met through customization of interChange. We will send the State-approved TPL recovery vendors Medicaid paid claims, and the interChange TPL Post Paid Billing process will handle non-Medicaid recoveries.
40.11.1.15**	Provides capability for archival and retrieval of closed TPL recovery cases	Met through customization of interChange. We will send the State-approved TPL recovery vendors Medicaid paid claims, and the interChange TPL Post Paid Billing process will handle non-Medicaid recoveries.

RFP No.	RFP Requirement	EDS Response
40.11.1.16	Provides capability to identify accident/trauma claims and automatically generate questionnaire/reports	Met by interChange. The interChange system provides the ability to identify accident and trauma claims and automatically generate questionnaires and reports. interChange reviews claims weekly for diagnosis codes 800 through 999.99, excluding 994.6. The system generates letters to be mailed based on the claims. It also creates a summary report of those letters. The system tracks when letters are generated to make sure duplicate letters are not created.
40.11.1.17	Provides capability to approve or cancel trauma questionnaires	Met through customization of interChange. To accommodate pre-approval, interChange will need modifications to the programs that generate the accident trauma letters to put them into a temporary holding area for review and approval.
40.11.1.18	Provides capability to retrieve paid claims from history to assist in TPL recovery	Met by interChange. The Case Tracking Claim panel provides general information about the claims associated with a case, and allows authorized users to search for a claim in the system and associate the claim to a case. Paid claims in interChange are available to TPL for recovery.
40.11.1.19	Provides capability to maintain an online audit trail of all updates to TPL data	Met by interChange. The systemwide audit panel displays data change history for a given Navigator Item panel. Every insert, update, or delete that is performed on an auditable panel causes a “before” image of the data to be saved to the audit table. Users can use the audit panel to display this information.
40.11.1.20	Provides capability to generate carrier update transactions to the State	Met through customization of interChange. EDS will create a new interface to generate carrier update transactions.
40.11.1.21	Provides capability to provide online inquiry, add, and update to TPL data	Met by interChange. The TPL Base Information panel lists TPL resource information, and links to other TPL-related information. The basic TPL panels—for example, the TPL Search panel or the TPL Base Edit panel—provide online capabilities to find and update TPL data.
40.11.1.22**	Provides capability to enter or update recovery cases from recoveries received	Met by interChange. This basic feature is integral to the interChange system. The Case Tracking Base panel records fundamental information about a specific case and provides for posting of case recoveries at a group claim level versus individual claim level. We will send the State-approved TPL recovery vendors Medicaid paid claims, and the interChange TPL recovery update process will handle non-Medicaid recoveries.
40.11.1.23	Provides capability to ensure that if the recipient has a pharmacy policy on the date of service that the pharmacy policy is billed or displayed at point of sale rather than any medical policy	Met by interChange. These features are part of cost avoidance and use OI Plan features in the reference subsystem.

RFP No.	RFP Requirement	EDS Response
40.11.1.24	Provides capability to identify previously paid claims from the past three (3) years of claims history when TPL resources are identified or verified retroactively	Met through customization of interChange. We will modify interChange to provide previously paid claims from the past three years of claims history when TPL resources are identified or verified retroactively. This claims data will be provided to the State TPL vendors for use in Medicaid recoveries, and EDS will pursue non-Medicaid recoveries based on this data.
40.11.1.25	Provides capability to identify previously paid claims from Claims History for the allowed Medicare time limit for filing when Medicare resources are identified or verified after Medicaid payment has occurred	Met through customization of interChange. This claims data will be provided to the State TPL vendors for use in Medicaid recoveries, and EDS will pursue non-Medicaid recoveries based on this data.
40.11.1.26	Provides capability to produce and bill drug invoices for insurance carriers	Met through customization of interChange. We will generate drug recovery invoices for Medicaid and as required for non-Medicaid and issue/mail to carriers for recovery of TPL monies.
40.11.1.27	Provides capability to produce accident inquiry letters for identified recipients	Met by interChange. interChange provides the ability to identify accident and trauma claims and automatically generate questionnaires and reports. interChange reviews claims weekly for diagnosis codes 800 through 999.99, excluding 994.6. The system generates letters to be mailed based on the claims. It also creates a summary report of those letters. The system tracks when letters are generated to make sure duplicate letters are not created.
40.11.1.28	Provides capability to maintain recipient health insurance data for TPL through updates from EIS and ACTS to assist in claims processing	Met through customization of interChange. This requirement will be met by the creation of new interfaces with EIS and ACTS.
40.11.1.29	Provides capability to capture and maintain Estate Recovery Data, including claims, invoice data, and recovery data, on each individual that meets defined criteria.	Met by interChange. interChange will capture according to State-defined criteria estate recovery data for recipients. Estate recovery invoices will be issued and these cases tracked through the case-tracking panels of interChange. The State-authorized users will have access to update and post recoveries as needed against estate recovery cases.
40.11.1.30	Provides capability to flag and maintain Estate Recovery claims for a lifetime	Met by interChange. The TPL case-tracking feature can identify, flag, and maintain the estate recovery claims for retention through the life of the contract.
40.11.1.31	Provides capability to produce claims/invoices in order to bill for Estate Recovery	Met by interChange. The TPL case-tracking mechanism provides for the capture and production of claims/invoices for estate recovery.
40.11.1.32	Provides capability to track and report on invoices	Met by interChange. The TPL bill-tracking feature meets this requirement and can track and report on invoices.

RFP No.	RFP Requirement	EDS Response
40.11.1.33**	Provides capability to route specific DME claims to Medicaid after Children's Special Health Services (CSHS) has paid	Met through customization of interChange. The coordination of benefits feature in interChange will be customized to identify the CSHS claims that have been paid and are available for reprocessing through Medicaid.
40.11.1.34**	Provides capability for online updating and reporting function for cases to track open cases, type of case, amount of liens, amount of recoveries	Met by interChange. The Case Tracking panel is used to record payments received by the State in accordance with a settlement on a case. Settlements recovered on this panel are reflected on the Case Tracking Base Information panel, calculating into the Case Total field, and the Case Tracking Case Detail report. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.35	Provides capability to view the invoices for prescription drugs generated by Fiscal Agent, by carrier, or by recipient	Met by interChange. The BIAR reporting feature will have access to the data required to meet this requirement.
40.11.1.36	Provides capability for online updating, payment, and reporting for the HIPP Program	Met by interChange. interChange meets this requirement using the HIPP Case panels.
40.11.1.37**	Provides capability to systematically build recovery cases, allowing users to inquire, add, and update recovery case records	Met by interChange. interChange meets this requirement using the Case-Tracking Claims panel. This panel provides general information about the claims associated with a case, and also allows authorized users to search for claims and associate a claim to a case. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.38**	Provides capability to search recovery case records by unique recovery case identification number, case type, policy number, policy holder name, policy holder SSN, claim number, recipient name or number, carrier name, carrier number, provider name or number, attorney name, accident number, or a combination of these data elements	Met through customization of interChange. The Case-Tracking Search panel can be used to determine if a lead has been received on a specific case. Available search criteria are Recipient ID; Recipient Last Name With Recipient First Name; Recipient Last Name With Any Other Field; Case Number; Case Type; User ID; and Recipient Birth Date With At Least One Other Field. interChange will be modified to allow for additional search capabilities. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.39**	Provides capability to include attorney name, attention line, address, and telephone number in a recovery case record	Met by interChange. The Case-Tracking Attorney panel meets this requirement. This panel allows authorized users to add and delete attorney information. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.40**	Provides capability to view all TPL receivables online in determining which claim details have not be completed and the total amount not posted	Met by interChange. The TPL billing and accounts receivable features meet this requirement. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.

RFP No.	RFP Requirement	EDS Response
40.11.1.41**	Provides capability to add or delete claims that are included in any recovery case	Met by interChange. The Case-Tracking Claims panels allow authorized users to inquire on the itemized list of claims related to a specific case. This panel provides general information about the claims associated with a case and allows users to search for a claim and associate the claim to a case. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.42**	Provides capability to add and update the TPL threshold amount online	Met by interChange. TPL threshold amounts can be controlled in interChange by using code tables. These code tables are user-configurable. The Threshold Type panel is used to update threshold amounts and the number of months to accumulate claims. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.43**	Provides capability to enter free-form text in a recovery case	Met by interChange. The interChange TPL Case-Tracking panel allows authorized users to enter free-form text using the Case-Tracking Chronological Notes. The user can capture data concerning the case—such as telephone calls or physician updates. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.44**	Provides capability to maintain all open recovery cases online until closed by authorized user	Met by interChange. The Case Tracking Base Information panel meets this requirement. The user can indicate the status of the case with the Case Status field. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.45**	Provides capability to maintain and flag claims that are part of a TPL recovery/cost avoidance case online for three (3) years after the case is closed before archiving	Met by interChange. Our solution contains the space required to store this claims data for the life of the contract. These claims will be available through the user interface. This includes the 10 years of converted claims history and operational data. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.46**	Provides capability to flag a recipient for which a TPL recovery case has been created	Met through customization of interChange. interChange will be modified to add a TPL recover case flag to the Recipient Information panel in the Recipient Subsystem. This panel allows authorized users to view a summary of the recipient's information. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.

RFP No.	RFP Requirement	EDS Response
40.11.1.47**	Provides capability to generate unique Case Identification Numbers	Met by interChange. The system automatically generates unique, sequential ID numbers. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.48**	Provides capability to close a case without full recovery	Met by interChange. The status of a case is controlled by the Case Status field on the Base Information panel. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.49	Provides capability to reproduce a claim and send either by fax, mail or electronically	Met by interChange. The EDMS solution meets this requirement with the retention of claims information and the ability to inquire, reproduce, and transmit as appropriate.
40.11.1.50**	Provides the capability to flag claims for recipients who have reached a defined threshold	Met by interChange. The Threshold Type panel is used to update threshold amounts and the number of months to accumulate claims. TPL Threshold amounts can be controlled in the interChange system by user-configurable code tables. The State TPL vendors will handle this activity in support of Medicaid, and EDS will handle the non-Medicaid activity.
40.11.1.51	Provides capability for online access and update to TPL data by State-designated staff	Met by interChange. The TPL Menu panel displays the relevant TPL submenus.
40.11.1.52	Provides capability for batch and/or online real-time access to TPL data between EIS, Mental Health Eligibility Inquiry, CSDW, Medicaid Quality Control, Online Verification, ACTS, and HIS and the Replacement MMIS using API and SOA concepts	Met through customization of interChange. New, custom interfaces will be built for the following: EIS, Mental Health Eligibility Inquiry, CSDW, Medicaid Quality Control, Online Verification, ACTS, and HIS.
40.11.1.53	Provides capability for daily (next business day) transmission logs showing successful transmission of TPL data to DIRM for CSDW, ACTS, and EIS	Met through customization of interChange. This feature will be built into the new custom interfaces, namely EIS, Mental Health Eligibility Inquiry, CSDW, Medicaid Quality Control, Online Verification, ACTS, and HIS.
40.11.1.54	Provides capability to exclude third party insurance from claims processing on a per-person/per-policy basis, for a set period; provides capability to support multiple exclusions per person/per policy	Met through customization of interChange. The ability to exclude TPL insurance from claims processing and the ability to support multiple exclusions per person and policy will be built for North Carolina processing.
40.11.1.55	Provides capability to process and pay claims when policy limits are exhausted for individuals related to a specific service either annual or lifetime benefits	Met by interChange. During TPL editing on the claims processing, an edit checks for the exhaust flag on the TPL Coverage panel.
40.11.1.56	Provides capability to associate and track Non-Custodial Parent (NCP) policy holder information to covered individuals	Met by interChange. interChange allows the association of Non-Custodial Parent information to a covered individual.

RFP No.	RFP Requirement	EDS Response
40.11.1.57	Provides capability to pend updates to TPL resource data received from Child Support for Medicaid recipients	Met by interChange. interChange uses the Suspect Code on the base information panel in TPL. A status of manual can indicate pended, or a new status code can be added to the table.
40.11.1.58	Provides the capability to pend TPL updates for recipients who are covered by Breast and Cervical Cancer Medicaid (BCCM) or Health Choice programs and display a notification message that the recipient has BCCM or Health Choice	Met through customization of interChange. interChange will be modified to display BCCM or Health Choice notifications.
40.11.1.59	Provides capability to produce a report of TPL segments that have been updated more than once in thirty (30) days	Met through customization of interChange. A report will be created for TPL segments that have been updated more than once in 30 days.
40.11.1.60	Provides capability to produce a Health Choice Recipient Activity Report in addition to the reports listed in the Design documentation	Met through customization of interChange. The DDI team will work during the DDI process to define and create the Health Choice Recipient Activity report. For additional capability to produce reports on the health check information, users can create their own reports during the Operations Phase of the contract using the BIAR reporting solution.
40.11.1.61	Provides capability to provide TPL edit/error report(s) for ACTS for State staff access	Met through customization of interChange. This requirement will be met as part of the change for the ACTS interface.
40.11.1.62	Provides capability to extract and process TPL data transmitted by ACTS from the DIRM electronic File Cabinet	Met through customization of interChange. This requirement will be met as part of the change for the ACTS and DIRM interfaces.
40.11.1.63	Provides capability to produce a daily extract of TPL carrier and recipient resource data for ACTS, CSDW, and EIS	Met through customization of interChange. This requirement will be met as part of the change for the EIS, CSDW, and ACTS interfaces.
40.11.1.64	Provides capability to produce an extract of updates to TPL recipient resource data for ACTS for Medicaid recipients referred to Child Support	Met through customization of interChange. This requirement will be met as part of the change for the ACTS interface.
40.11.1.65	Provides capability for batch access to TPL data using API and SOA concepts between EIS, ACTS, and the Replacement MMIS	Met through customization of interChange. This requirement will be met as part of the change for the EIS and ACTS interfaces.
40.11.1.66**	Provides capability to produce system-generated letters to providers, recipients, and county offices.	Met through COTS integration. Through the integration of the DOC1 letter generation software, the interChange solution can produce system-generated letters to the providers, recipients, and county offices.

40.12.1 Drug Rebate System Requirements

Our drug rebate solution will allow the State to maximize the efficiency of drug rebate collections, minimize dispute resolutions, and provide greater savings to the State. Because our system has been successfully implemented in many other states, we have the experience, knowledge, and technology to support your drug rebate program.

State of North Carolina

EDS has successfully managed North Carolina's drug rebate program since 1991. In those 16 years, we have invoiced $2.86 billion for the State, collecting 99.75 percent of that total. In the last three years (2004 to 2006), we have collected $1,157,745,936 for the State from drug suppliers.

EDS intends to build on our strong history of service in the State through the installation and configuration of the market-leading MMIS, interChange. Our interChange drug rebate solution provides an innovative drug rebate system and process that allows the State to maximize collections and create a workable and effective process. The interChange drug rebate system has been successfully implemented in many other states, providing EDS with the necessary experience, knowledge, and technology to implement and support the North Carolina drug rebate program. EDS is confident our solution will maximize the efficiency of drug rebate collections, minimize dispute resolutions, and provide greater savings to the State.

The interChange solution uses a secure, thin-client browser interface to provide a single point of entry for the application. The Replacement MMIS application will be integrated into the current North Carolina State Portal. The system incorporates user-friendly navigation that allows users to move freely throughout the system using drop-down menus and "point-and-click" navigation. This approach will reduce the learning curve for new users, which is typically a significant concern when introducing a new system. System access, display, and navigation will be standard for all users of the Replacement MMIS, including users from other agencies and entities.

The following summarizes the key features and benefits of the interChange drug rebate subsystem:

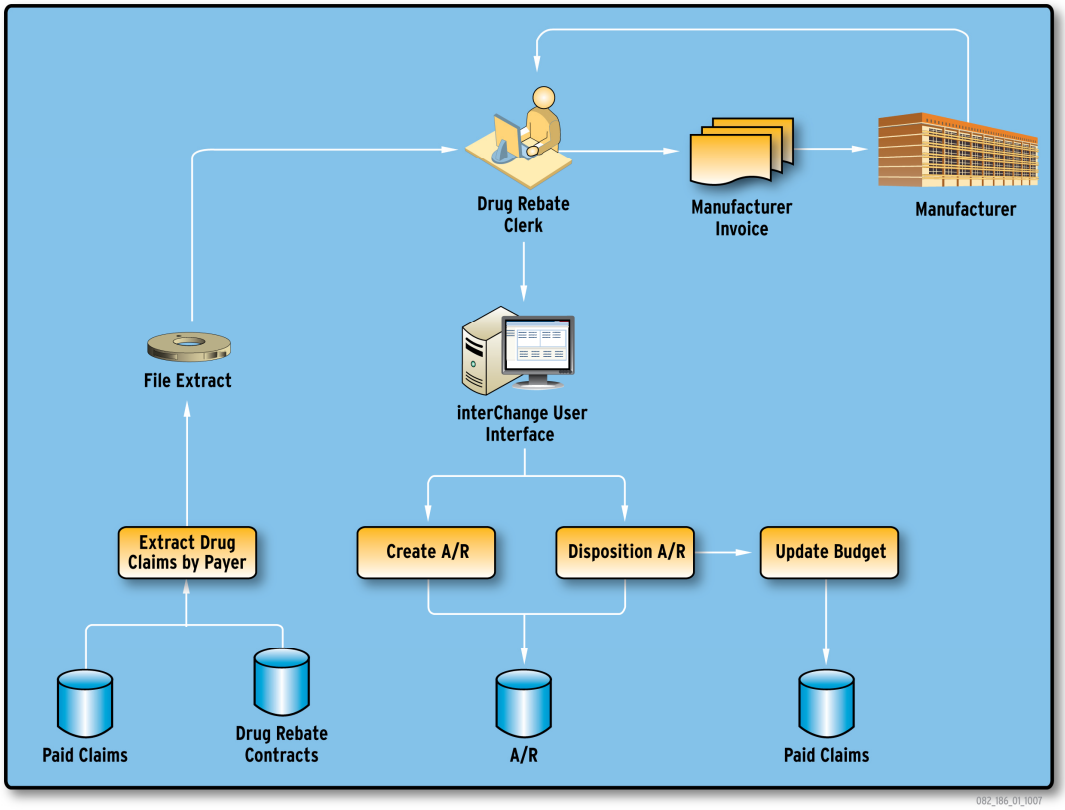
- A robust audit trail of all changes made to invoices
- The ability to identify and generate invoices for HCPCS codes on rebateable drugs billed to the State and a unit conversion to ensure the units are correctly converted from a Jcode unit to a NDC unit
- The ability to exclude Public Health Service (PHS) (340B providers) from the quarterly invoices

- The ability to request outstanding accounts receivable data online
- The ability to calculate interest online
- The ability to create separate invoices and reports for the federal rebate programs and state rebate programs
- The ability to log and track disputes
- The ability to generate collection letters and follow-up collection letters with tracking capabilities
- The ability to maintain rebate contact information and allow updates, including an e-mail contact

EDS will meet the system requirements identified in this section of the RFP. We will use our experienced, expert drug rebate staff and the Replacement MMIS' Drug Rebate detailed capabilities to fully support the complete and accurate accounting, invoicing and collection of payments for multiple programs.

The following exhibit, Drug Rebate Logical Data Flow, depicts the logical flow of drug rebate data in interChange.

Drug Rebate Logical Data Flow



The drug rebate subsystem provides the required drug rebate features and interfaces.

The interChange drug rebate subsystem provides the system functionality required by the State and supports the required processes. It also supports the State's objectives for the Replacement MMIS, as follows:

- **Provides flexibility to address future changes—**The interChange relational database management system provides easier access to data and greater flexibility in reporting and manipulating data.
- **Reduces risk during development and implementation—**Our CMS-certified system requires minimal modifications to support the State's drug rebate policies and our experienced drug rebate staff are highly knowledgeable about North Carolina drug rebate policy.

In the following sections, we present an overview of our approach to drug rebate and the system requirements needed to meet the State's needs:

Receiving the Quarterly CMS Tape and Producing Invoices

Our solution will meet the drug rebate electronic data interchange (EDI) requirements specified in the RFP. We will receive the quarterly CMS rate tape and load it in the Replacement MMIS. The tape contains NDC-level data as well as Drug Efficacy Study Implementation (DESI) and labeler address information. EDS will merge claims data with the data on the CMS rate tape to create quarterly invoices and reports. The last step of the drug rebate invoice process is to produce a tape with State utilization data. This tape will be forwarded to CMS for processing. We will create the tape in the CMS-mandated format. We will send a confirmation letter to the State and CMS for audit trail purposes, including the file name, volume serial number, and the date we sent the cartridge. EDS has provided CMS with state utilization data since the inception of the drug rebate program.

EDS will work with the State to define the process for the other programs that will be invoiced in addition to Medicaid. interChange provides the capability to separately identify drug rebate amounts by program, including but not limited to Medicaid, the Division of Public Health and Office of Rural Health and Community Care Programs.

interChange provides the capability to invoice manufacturers electronically. By sending manufacturers electronic invoices, we decrease the turnaround time for drug rebate collections. interChange also allows assignment of a manufacturer's identification number, allowing manufacturers to log into the Web site to electronically download invoices. Electronic media enables us to reduce the workload required in handling paper invoices. The drug rebate staff posts manufacturer media preferences in the system on the drug rebate labeler file.

The system calculates quarterly rebate amounts due based on the number of units per NDC from pharmacy and professional claims and the CMS list of

quarterly unit rebate amounts. Using the interChange Unit Conversion browser-based page, users can verify units are converted to an invoice correctly so that disputes are minimized and collections maximized.

interChange provides the capability to suppress invoices where the rebate amount is less than the State-defined threshold.

Maintaining Manufacturer Contact Information

The system maintains CMS current manufacturer rebate agreement data online, including contact information. This information is updated quarterly from the CMS tape. Additionally, it includes the time period for which the rebate agreement is in effect and a retroactive indicator. The system can accept reference data from the quarterly CMS tape, and it can be modified to accept State-specific data, including an e-mail address.

Posting Drug Rebate Payments

The rebate specialist has access to user-friendly, drop-down menus that support fast, accurate payment disposition. Prior period adjustments reflect the manufacturer's changes in the rebate amount per unit or number of units for a specific NDC and invoice period. As the rebate specialist enters payments, he or she can enter prior period adjustments in the drug rebate PPA Rate Maintenance browser-based panel. The panel automatically updates the invoice detail and invoice status information.

The interChange drug rebate subsystem allows payment down to the NDC, yearly or quarterly, and records this payment by units and dollars paid. Checks received are first posted and tracked with basic information, such as deposit date, issuer, postmark date, amount, and check number. The daily deposit must balance to the checks posted.

Communication with the drug manufacturers is tracked in interChange in a comment field, which can be entered at the invoice or NDC level. This allows the user to record the date of contact with a drug manufacturer, the type of contact, and the resolution. The system automatically stamps the record each time it is updated so there is an audit trail of who made changes.

The interChange drug rebate subsystem maintains total amount owed and credits, original units and adjustments, original rates, and adjustments. Payments are reconciled at the paid unit and dollar amount level to provide the most accurate database for accounts receivable (A/R) and PPAs. Provider claim-level adjustments are applied to the quarter in which the original claim was paid. The labeler is provided with an adjustment invoice quarterly.

interChange allows the user to associate specific check payment amounts to the appropriate drug rebate invoice period, and to inquire on payment information through the invoice payment application Web page. A check may be associated to multiple invoices; therefore, several online edits are in place to confirm the

check amount balances to the applied and disposition amount for the specific invoice period. The system monitors the correction according to the type of adjustments that created the correction. Corrections consist of rate, dispute resolution, and utilization changes. The corrections will automatically update the invoice details based on changes entered that promote interactive invoice data. The State will benefit from our dependable and proven drug rebate subsystem, which provides a full level of services to support and focus on emerging strategies of the drug rebate program and pharmaceutical industry standards.

Performing Drug Rebate Dispute Resolution

The interChange drug rebate subsystem orchestrates communication between the manufacturers and our business support group to resolve detailed discrepancies. By comparing invoices to remittance advices returned by the manufacturer, it can determine which NDC line item is in dispute. The system reports payment discrepancies, disputes, and online information necessary to support dispute resolution when a manufacturer disagrees with the invoiced rebate amount. The user can inquire or add dispute information from a variety of screens, eliminating the need to enter data multiple times. Users may enter dispute information through the Invoice Payment Designation panel when they receive payment. The system automatically creates basic dispute information when the drug rebate accountant dispositions a payment to the NDC-level detail using a dispute reason code. Users record distinct dispute codes for each NDC based on CMS guidelines to indicate the reason the manufacturer disputed the NDC. The data is readily available online to easily analyze and trend dispute data. If the manufacturer requests the claims level detail, the system can transmit detailed drug claim listings, including pharmacy TPL, to them electronically.

The system provides accurate claim-level detail and a clear audit trail of corrections. This capability provides the information required to justify rebate calculations. The drug rebate specialist requests claim-level detail online, where the detail can be reviewed or downloaded to an Excel spreadsheet to allow for easy sorting based on review criteria. Authorized users can also request the claim detail report to review the claims. The claim detail report lists all claims associated with a specific NDC for a specific invoice period.

Providing Drug Rebate Reporting, Collections, and Follow-up

The interChange drug rebate subsystem produces numerous reports to assist in the overall management of program operations. It reports payment discrepancies, disputes, and online information necessary to support dispute resolution when manufacturers and the State differ with respect to calculation of rebate amounts. interChange offers flexible, on-demand, desktop inquiry and reporting through the easy-to-use, Web-based browser. Inquiry results are presented immediately in formatted Web pages.

The interChange drug rebate subsystem provides many letters that can be produced and mailed out to assist in collecting money on a timely basis. The letters allow for free-form text to supplement standard letter text, if that is needed. All mailings and communication can be tracked for a response, supporting the need to document collection attempts.

Performing Drug Rebate Accounting and Interest Assessment

The interChange drug rebate subsystem includes various monthly reports that support monthly financial balancing. It confirms that all checks are dispositioned correctly and that all checks received are entered into the system. After the end of month financial processing is verified, interest is calculated on outstanding balances that are not in a disputed status.

Approach to Customization and Modifications

The base interChange drug rebate solution is architected to meet many standard or common functions of the rebate process. Most of the drug rebate enhancements required during the DDI Phase of the project will be the customization of reports to meet State-specific requirements. Some reports will need to be modified slightly, and others will need to be created.

The interChange drug rebate subsystem will be modified to include an automated tickler file to flag, track, and/or report quarterly on responding and non-responding manufacturers and disputes. The ability to freeze invoices after a specified timeframe will be changed in the invoice module.

Enhancements to Functional Requirements

The interChange drug rebate solution is an extremely flexible and user-friendly system that meets the mandated federal requirements for management of a drug rebate program. However, changes to interChange will be required to meet a few of the drug rebate requirements of the RFP, namely the following:

- The EDS team will work with the State to define the additional reports currently not defined in interChange. However, most reports are currently available in the North Carolina Foxpro drug rebate subsystem.
- The EDS team will enable interest to be applied at the NDC level.

Response to Drug Rebate System Requirements

The following table, EDS Response to Drug Rebate System Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to Drug Rebate System Requirements

RFP No.	RFP Requirement	EDS Response
40.12.1.1	Provides capability to maintain and update data on manufacturers with whom rebate agreements exist, including: • Manufacturer ID numbers and labeler codes • Indication of collection media • Indication of invoicing media • Contact name, mailing and e-mail address, phone and fax numbers • Manufacturer (labeler) enrollment, termination and reinstatement dates • Manufacturer Unit Rebate Amount (URA) • Manufacturer units of measure	Met by interChange. The Labeler Maintenance, Labeler Base Information, Labeler Contact Information, Labeler Status List, NDC RPU History, and Reference Drug panels will meet this functional requirement.
40.12.1.2	Provides capability to capture CMS drug unit rebate amount and units of measure and provides capability to capture T-bill rates for interest calculation	Met by interChange. interChange captures all URAs for all NDCs and displays the historical records on the NDC RPU History panel. The unit of measure is listed on the Reference Drug panels. The T Bill Rates are maintained and updated manually by the Drug Rebate analyst by retrieving the rate information from the designated websites.
40.12.1.3	Provides capability to validate units of measure from CMS file to Replacement MMIS drug file for consistency and reporting on exceptions	Met by interChange. The Drug Rebate CMS Unit Discrepancy report will display the differences in units of measure.
40.12.1.4	Provides capability to calculate and generate rebate adjustments by program and/or labeler based on retroactively corrected CMS and North Carolina rebate data	Met by interChange. The Drug Rebate Invoice Historical Records panel will provide this function. All types of adjustments (claim utilization and/or rebate per unit) can be generated and retroactively applied per program/or by labeler. All adjustments to an NDC can be viewed in the Historical Record Panels.
40.12.1.5	Provides capability to determine the amount of rebates due by NDC and UPC, using paid claim data and eligible data from both the pharmacy program and NDCs from the physician drug program procedure codes	Met by interChange. The drug rebate capability function within interChange meets this functional requirement. The Drug Rebate Original Invoice, Drug Rebate Adjustment Invoice, Drug Rebate PPA Invoice, and Drug Rebate Invoice Summary reports meet this functional requirement.
40.12.1.6	Provides capability to generate invoices and regenerate invoices that separately identify rebate amounts and interest amounts by program, labeler, and rebate quarter	Met through configuration of interChange parameters and features. The configuration values of the four specific State divisions will be done during DDI.
40.12.1.7	Provides capability to maintain identification of the original drug rebate quarter for the claim throughout any adjustments made to the claim	Met by interChange. The drug rebate function within interChange meets this functional requirement. The original claim can be identified no matter how many times it is adjusted.

RFP No.	RFP Requirement	EDS Response
40.12.1.8	Provides capability for system determination of the rebate amounts and adjustments overdue, calculates interest, and generates new invoices, separately identifying rebate amounts and interest by program, labeler, and rebate quarter	Met through configuration of interChange parameters and features. The division of the amounts by the State-specific divisions is configurable and will be established during DDI.
40.12.1.9	Provides capability for system generation of invoice details and post-payment details that are consistent with the State's reconciliation of invoices and prior quarter adjustment statement	Met through customization of interChange. The existing drug rebate system will be customized to meet the State's reconciliation of invoice and prior quarter adjustment processes.
40.12.1.10	Provides capability to generate invoice cover letters, collection letters, and follow-up collection letters	Met by interChange. The COTS letter generation tool will use the existing invoice, collection, and follow-up letters as the basis for meeting this requirement.
40.12.1.11	Provides capability for online, updateable letter templates, including templates for invoice letters, collection letters, follow-up collection letters, allowing for a free-form comments section	Met through COTS integration. interChange has templates in place for all current letters. These letters are created using the COTS letter component and can be controlled for live editing to allow or disallow this option.
40.12.1.12	Provides capability to maintain and retrieve history of letters sent to manufacturers	Met by interChange. The Drug Rebate Late Notice panel currently shows the history of the delinquent letters sent to the drug manufacturer. The letter generator will hold all letters sent and the user will have the capability to review and resend letters if needed.
40.12.1.13	Provides capability to update payment details and adjustments to the Replacement MMIS accounting system	Met by interChange. The drug rebate capability function within the base interChange application meets this functional requirement. All payments or adjustments are entered on the Invoice Detail Panel under Payment. Adjustments can also be entered on the Prior Period Adjustment panel.
40.12.1.14	Provides capability to maintain and retrieve drug rebate invoice and payment data indefinitely, including CMS drug data, claim data, and operational comments	Met by interChange. The drug rebate capability function within interChange meets this functional requirement. The labeler search panel allows users to view all invoices generated. They also can view the specific invoice amounts, payments made, write-offs, interest billed and paid, and balances due as of that day. The Related Claim panel shows all claims data for a specified NDC and quarter. It also allows users to export this data into Microsoft Excel and send the file directly to the drug manufacturer. Audit trails allow the CMS drug data to be viewed. Operational comments can be entered at the invoice and NDC level.
40.12.1.15	Provides capability for system identification and exclusion of claims for drugs not eligible for drug rebate program	Met through customization of interChange. An indicator will be placed on the drug reference file that indicates whether or not the NDC is rebate eligible. This indicator will be displayed through the reference panel.
40.12.1.16	Provides capability for system identification and exclusion of claims from dispensing pharmacies that are	Met by interChange. The Drug Rebate Pharmacy Provider

RFP No.	RFP Requirement	EDS Response
	not eligible for drug rebate program (340B providers)	panel will identify these claims.
40.12.1.17	Provides capability for online access by the State to quarterly manufacturer drug rebate invoice detail and balances	Met by interChange. The Drug Rebate Invoice Information and Drug Rebate Invoice Detail panels will display the invoice and balance information.
40.12.1.18	Provides capability for online access to five (5) years of historical drug rebate invoices, including supporting claims-level detail with selection criteria by labeler, quarter, NDC, or any combination of criteria	Met by inter Change. The Drug Rebate Related Claims Search panel provides this function.
40.12.1.19	Provides capability for online posting of accounts receivables labeler, NDC for each quarter, rebates receivable, and interest receivable	Met by interChange. The Drug Rebate Entity Maintenance Search and Drug Rebate Payment panels allow for online posting of detail.
40.12.1.20	Provides capability for unit conversion of units paid per claim to CMS units billed and CMS units billed to units paid per claim	Met by interChange. The Drug Rebate Related Data Unit Conversion Maintenance table will provide this functionality.
40.12.1.21	Provides capability to maintain units paid (as used to calculate claims pricing) and CMS units billed for drug rebate on Claims History	Met by interChange. The drug rebate capability function within interChange meets this functional requirement. The related claims panel contains all the claims associated to a specific NDC and quarter. As adjustments process, this panel is updated so that the most current units are listed. There is functionality to display the Jcode NDC conversion and unit conversion based on unit of measure issues (Drug Rebate CMS Unit Discrepancy report).
40.12.1.22	Provides capability for online access to accounts receivable data, invoice history, payment history, adjustment history, and the audit trail at the labeler, quarter, and NDC level	Met by interChange. The drug rebate capability function within interChange meets this functional requirement. The labeler search and NDC search panels allow the user to view all invoices or specified NDCs. They also can view what was invoiced, payments made, write-offs, interest billed and paid, and balance due as of that day. All panels that have update capabilities have an audit trail.
40.12.1.23	Provides capability to adjust accounts receivable balances for: • Rebates only at labeler/quarter level • Interest only at labeler/quarter level • Rebates and units at NDC level, which would also update labeler/quarter balances • Adjustments and State approved write-offs • Interest only at the drug detail level	Met through customization of interChange. interChange meets the requirements except for the ability to apply interest at the NDC level. Currently, interChange only allows interest to be applied at the header level. interChange will be enhanced to allow this capability at the NDC level.
40.12.1.24	Provides capability for online maintenance of comprehensive dispute tracking, including an automated tickler file to flag, track, and/or report quarterly on responding and non-responding manufacturers and disputes	Met through customization of interChange. The Drug Rebate Dispute Detail Resolution panel, Drug Rebate Dispute Information panel, and Drug Rebate Amount Greater than Reimbursement Amount report will be modified to meet this requirement.

RFP No.	RFP Requirement	EDS Response
40.12.1.25	Provides capability for logging and tracking all telephone conversations, letters, inquiries, and other correspondence and actions taken by manufacturers, the State, and others related to drug rebate processing	Met by interChange. interChange has two free-form comment fields. One is at the invoice level and the other is at the NDC level. The form contains the clerk ID and date and time of entry.
40.12.1.26	Provides capability for generation of manufacturer mailing labels on request	Met through customization of interChange. A process to request and generate manufacturer mailing labels on demand will be created.
40.12.1.27	Provides capability for an online audit trail of all activities and updates to drug rebate data	Met by interChange. interChange has inherent audit trail functionality to capture modifications made through the user interfaces. It tracks when data fields change, who made the change, and what the before and after values are.
40.12.1.28	Provides capability for online update for Drug Rebate accounts receivable via the NDC with data such as labeler check number and check receipt date to monitor all Drug Rebate accounts receivable activity	Met by interChange. The drug rebate capability function within interChange meets this functional requirement. Invoice Payment Header Base Information displays the Check Date, Check Amount, Amount Dispositioned, Amount Applied and Postmark Date. The payment CCN on the Invoice Detail panel will display check amount, deposit date, disposition date, dispositioned amount, and postmark date at the NDC level.
40.12.1.29	Provides capability to make available to the State the total Medicaid expenditures for multiple source drugs (annually) as well as other drugs (every three [3] years); provides capability to include mathematical or statistical computations, comparisons, and any other pertinent records to support pricing changes as they occur	Met through customization of interChange. The Business Intelligence and Analytical Reporting (BIAR) MMIS ad hoc component will contain the data enabling the State to build reports of the total Medicaid expenditures for multiple source drugs and other drugs including mathematical or statistical computations and comparisons in support of pricing changes.
40.12.1.30	Provides capability for adjustment and State-approved write-off records	Met by interChange. The drug rebate capability function within interChange meets this functional requirement. The PPA Maintenance panel allows users to update units or PPA data per state or federal guidelines. The Write Off panel allows users to write off thresholds per state or federal guidelines.
40.12.1.31	Provides capability for system interest calculation on outstanding Drug Rebate balances and applies results to DRS Accounts Receivable File	Met by interChange and operational processes and procedures. The drug rebate capability function within the base interChange application meets this functional requirement. The interest calculator will give the user the interest due amount to enter into the accounts receivable.
40.12.1.32	Provides capability to perform end-of-month balancing process	Met by interChange. The Drug Rebate Accounts Receivable – By Period, Drug Rebate Delinquent Payments, Drug Rebate Payments Received, and Drug Rebate Amounts Billed and Adjusted and Collected reports will be used to support these functions for each program.
40.12.1.33	Provides capability to load all pharmacy claims to the Drug Rebate business area weekly, regardless of where	Met through customization of interChange. A modification

RFP No.	RFP Requirement	EDS Response
	they are paid	will be made to meet the weekly frequency as requested.
40.12.1.34	Provides capability to maintain the Drug Rebate Labeler Data, facilitating automatic updating with information from CMS and the State	Met by interChange. The Drug Rebate Labeler Mini Search and Labeler Address Information panels support this requirement.
40.12.1.35	Provides capability to maintain online Drug Rebate Claims Detail generated from the Drug Rebate History File of paid claims and adjustment activity that balances to each Labeler invoice by State entity	Met by interChange. The Drug Rebate Drugs Invoice panel provides this function.
40.12.1.36	Provides capability for audits that ensure consistency of data from detail level to summary level	Met through customization of interChange. Audit reporting will be customized to allow a review of the consistency of data.
40.12.1.37	Provides capability to ensure automated electronic transfer of invoice data and detail history to CMS and the State in their respectively approved formats	Met by interChange. The drug rebate capability function within interChange meets this functional requirement. This is an automated process.
40.12.1.38	Provides capability to freeze invoices so they can no longer be recalculated	Met through customization of interChange. New interChange drug rebate functions will be created to provide the feature to freeze an invoice.
40.12.1.39	Provides capability to create a report showing a list of all invoices for a specified rebate program and quarter; provides capability to allow users to view invoices before or after being frozen and allow user determination of whether to include under-threshold invoices	Met through customization of interChange. A new report will be generated to show a listing of the rebate program and quarter before and after being frozen.
40.12.1.40	Provides capability to create a report showing quarterly changes to amounts due in the format required for inclusion in the CMS 64 Report	Met through customization of interChange. interChange will be enhanced to build this report to be used for inclusion in the CMS 64 Report.
40.12.1.41	Provides capability to produce Payment Summary Report to display payments received during a specified date range and balances due by quarter within manufacturer	Met by interChange. The Drug Rebate Payments Received and Drug Rebate Amounts Billed and Adjusted and Collected reports are used to display this information.
40.12.1.42	Provides capability to produce Rebate Summary Report to display payments received, invoiced amounts, and disputed amounts by quarter or by year	Met through customization of interChange. The Drug Rebate Amounts Billed and Adjusted and Collected reports will be modified to meet this requirement.
40.12.1.43	Provides capability to produce Quarterly Payment Report to give summary of payments received versus the original and current invoiced amounts per manufacturer	Met through customization of interChange. We will create a new report to meet this requirement.
40.12.1.44	Provides capability to produce the NDC Detail Report to give summary data by quarter for selected NDCs	Met by interChange. The drug rebate function within interChange meets this functional requirement. The Drug Rebate Claim Detail and Drug Rebate Claim Utilization for Labeler reports meet this requirement.
40.12.1.45	Provides capability to produce the NDC History Report to display all the activities that have occurred for a selected	Met by interChange. The Drug Rebate Rate panel meets this functional requirement.

RFP No.	RFP Requirement	EDS Response
	drug by quarter	
40.12.1.46	Provides capability to produce the Manufacturer Summary Report to display information by quarter, including amounts invoiced, paid, and disputed	Met by interChange. The Drug Rebate Accounts Receivable By Labeler and Drug Rebate Accounts Receivable By Period reports meet this functional requirement.
40.12.1.47	Provides capability to produce the Reconciliation of State Invoice (ROSI)/Prior Quarter Adjustment Report to display the amounts allocated for a selected manufacturer or NDC	Met by interChange. This functionality is part of the system's invoices.
40.12.1.48	Provides capability to produce the Unallocated Balance Report to display unallocated balances selected according to user-supplied criteria	Met through customization of interChange. We will create a new report to meet this requirement.
40.12.1.49	Provides capability to produce the Adjusted Claims Report to display claims where the number of units considered for invoicing differed from those originally supplied by the claims processing system	Met through customization of interChange. We will create a new report to meet this requirement.
40.12.1.50	Provides capability to produce a Drug Rebate Distribution Report, listing Drug Rebate Collections by county, with Federal, State, and county share specified	Met through customization of interChange. We will create a new report to meet this requirement.
40.12.1.51	Provides capability to produce an Excluded Provider Report, listing those providers whose claims will not be included in Drug Rebate invoices	Met by interChange. The Drug Rebate Excluded Provider Listing report meets this functional requirement.
40.12.1.52	Provides capability to produce Excluded Provider Listing, displaying the claims paid for providers not subject to rebate	Met through customization of interChange. We will use the Drug Rebate Excluded Provider Listing report to identify and report the claims listing from these providers.
40.12.1.53	Provides capability to produce a XIX-CMS Utilization Mismatch Report, showing drugs where the Unit Type from CMS does not match that on the Drug File	Met through customization of interChange. We will create a new report to meet this requirement.
40.12.1.54	Provides capability to produce an Invoice Billing for Quarter Report, showing a summary of drug utilization billed to manufacturers for the quarter	Met by interChange. The Drug Rebate Invoice Summary report meets this functional requirement.
40.12.1.55	Provides capability to produce a Balance Due Report listing the top ten (10) credit balances at run time	Met by interChange. The current report exceeds this requirement by displaying all credit balances.
40.12.1.56	Provides capability to produce a Balance Due Report listing the top twenty (20) debit balances at run time	Met by interChange. The current report exceeds this requirement by displaying all labelers with balances due.
40.12.1.57	Provides capability to produce a Check/Deposit Comparison Report for reconciliation with deposit slips	Met by interChange. The Daily Cash Receipts Log by Unit report meets this functional requirement.
40.12.1.58	Provides capability to produce a Check/Voucher Comparison Report, comparing the Check Voucher Total and the Interest Voucher Total and the Interest Voucher Total with the Check Table Total	Met through customization of interChange. A new report will be created to meet this requirement.
40.12.1.59	Provides capability to produce a Disputes Activity Report to display disputes by Unassigned, Assigned, and	Met through customization of interChange. A new report will

RFP No.	RFP Requirement	EDS Response
	Resolved dispute types	be created to meet this requirement.
40.12.1.60	Provides capability to produce an Interest Activity Report to display all interest overrides	Met through customization of interChange. A new report will be created to meet this requirement.
40.12.1.61	Provides capability to produce an Interest Detail Report to display all interest for a labeler and quarter	Met through customization of interChange. A new report will be created to meet this requirement.
40.12.1.62	Provides capability to produce a report of invoiced amounts greater than the sum of claim reimbursement amounts	Met by interChange. The Drug Rebate Amount Greater than Reimbursement Amount report meets this requirement.
40.12.1.63	Provides capability to produce an Invoice not Paid Report, showing all invoices for which no payment has been received	Met by interChange. The Drug Rebate Delinquent Payments report meets this functional requirement.
40.12.1.64	Provides capability to produce a report that will list all codes (HCPCS) from medical claims, including J codes, M codes, Q codes, and others that have been converted to NDCs	Met through customization of interChange. A new report will be created to support this requirement.
40.12.1.65	Provides capability to produce a Monthly Balance Report to summarize the balance due per labeler per quarter and across all labelers	Met by interChange. The drug rebate capability function within interChange meets this functional requirement.
40.12.1.66	Provides capability to produce a report of payments received for drugs with CMS URA of zero	Met by interChange. The Drug Rebate RAPU History report meets this functional requirement.
40.12.1.67	Provides capability to produce a Recapitulation Report that notifies manufacturers of corrected balances after dispute resolution procedures have been completed for one (1) or more quarters.	Met through customization of interChange. A new report will be created to meet this requirement.
40.12.1.68	Provides capability to produce a Generic/Non-Generic Report that lists drug rebate amounts invoiced by brand, generic, and multi-source, further divided into brand and generic, plus total for a selected period, and percentages	Met through customization of interChange. A new report will be created to meet this requirement.
40.12.1.69	Provides capability to produce ad hoc reports, including, but not limited to, ad hoc reporting on utilization detail by GCN, GC3 (therapeutic class), and GCN-Sequence	Met by interChange. The detailed drug rebate data will be incorporated into the BIAR MMIS ad hoc reporting solution.
40.12.1.70	Provides capability to access current and historical URA amounts for all rebateable drugs	Met by interChange. The Drug Rebate Rate panel meets this functional requirement.

40.13.1 MARS Requirements

Our MARS solution is a comprehensive management tool that will provide information on program status and trends, analyze historical trends, and predict the impact of policy changes on programs. It is flexible enough to meet existing and proposed changes in format and data requirements of federal and state management statistical reporting, without major reprogramming or expense.

State of North Carolina

The purpose of the Management and Administrative Reporting (MAR) function is to provide program, financial, and statistical reports to assist the State and federal government with fiscal planning, control, monitoring, program and policy development, and evaluation of the State Medical Assistance Programs.

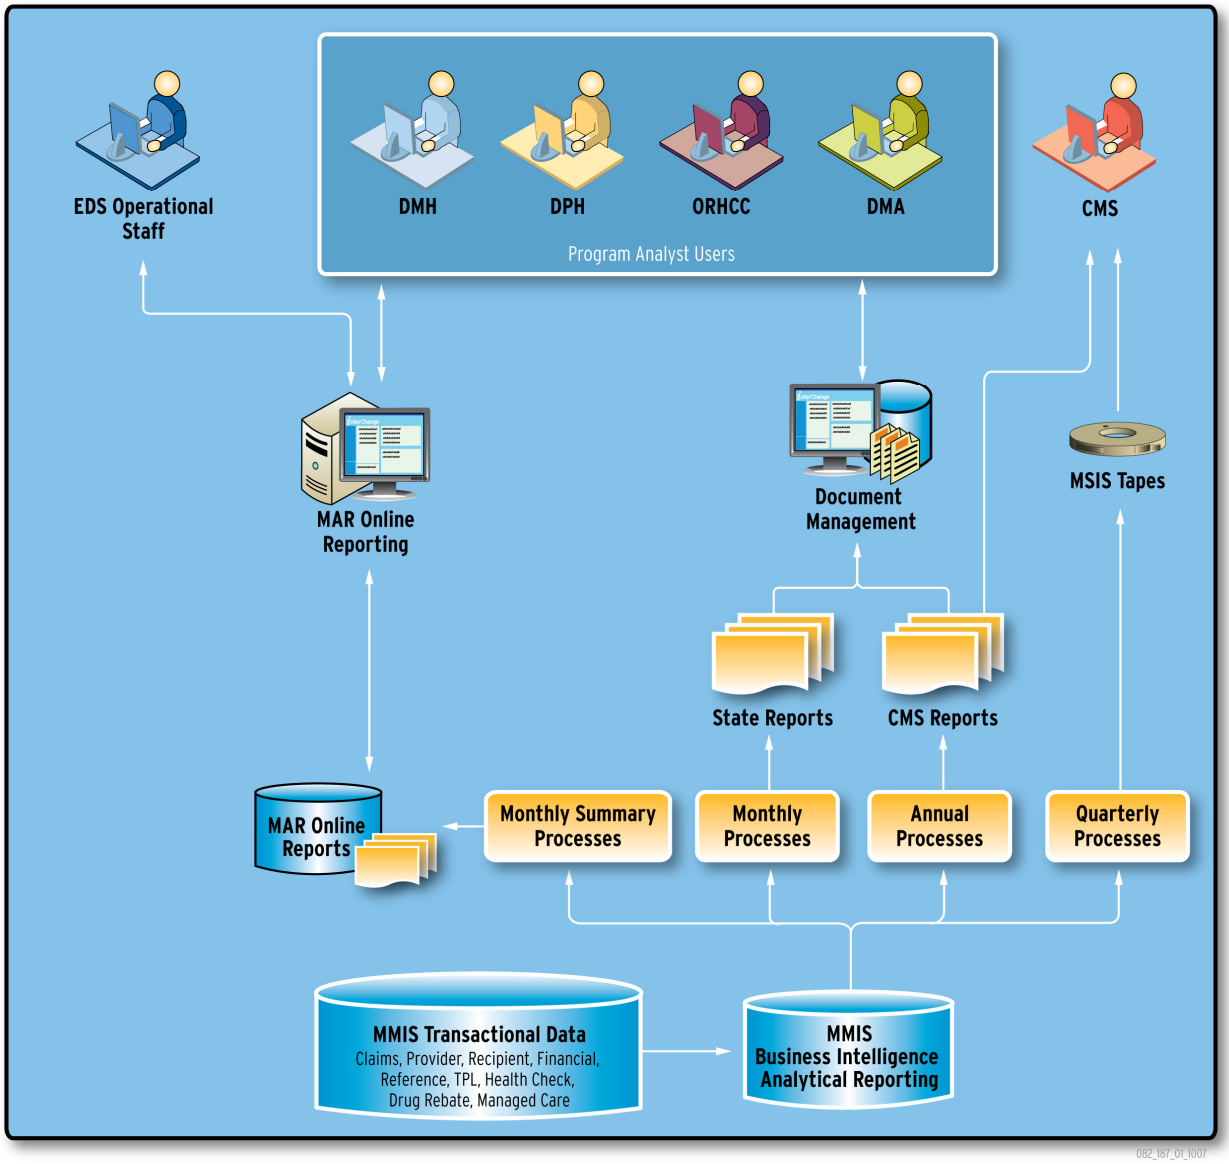
Our MAR solution is a comprehensive management tool that will provide information on program status and trends, analyze historical trends, and predict the impact of policy changes on programs. This tool will use key information from other MMIS functions to generate standard reports.

The major inputs to MAR are data from the claims processing functions and the financial, recipient, reference, managed care, and provider areas. The major process is the generation of reports and program data, and the major outputs are financial, statistical, and summary reports and data required by federal regulations. It also creates other reports and data that assist the State in managing and administering State Medical Assistance Programs.

This function is flexible enough to meet existing and proposed changes in format and data requirements of federal and state management statistical reporting without major reprogramming or expense.

The following exhibit, Replacement MMIS MAR Process Flow, shows how our MAR process is structured and how the many user communities are serviced through various report distribution methods. The interChange MAR solution has taken the traditional MMIS reporting solution and opened up the data access channels, enabling user-driven reporting and thus speeding up State users' research without the need for technical intervention.

Replacement MMIS MAR Process Flow



MAR outputs include financial, statistical, and summary reports and data required by federal regulations, as well as other reports and data that assist the State in managing and administering its programs.

Major MAR features that exist in interChange include the following:

- Online parameter-driven query system
- Medicaid Statistical Information System (MSIS) quarterly tapes
- CMS 372 Waiver reporting
- State batch reporting

As noted in the preceding exhibit, the MAR system produces reports and data in a variety of formats, including online reports, batch reports that are sent to the document management system, and MSIS tape files that are sent to CMS. Some

of the CMS batch reports are sent directly to CMS, and others are sent to the document management system. The reports that are sent to the document management system are then used as input when the State enters information into CMS' Medicaid Budget Expenditure System (MBES)/sCHIP Budget Expenditure System (CBES) online system.

Online Parameter-Driven Query System

The interChange MAR online query system is a set of 27 browser-based, parameter-driven reports. The reports are snapshots of financial, eligibles, participation, and filing statistics. The reports list their results by various data elements, such as State Category of Service, Place of Service, Provider Type and Specialty, County, Provider ID, Recipient ID, and Revenue Code. These snapshots are stored in a summary datamart so that a user can refer to prior periods to compare results.

Users customize the online reports they want through the selection of search criteria displayed in drop-down lists. Users also can specify the output format of the report, choosing HTML, Excel, or PDF. Users specify the time period for the report and can produce multiple online reports that they can toggle between to compare data from different time periods. These online reports support fast research and analysis that provides assistance to many business groups, including budgeting, policy assessment, and provider relations.

MSIS Quarterly Tapes

The interChange MAR team will provide MSIS reporting (CMS-2082). The paper 2082 reports are no longer required or accepted by CMS. States are now required to produce the MSIS tapes on a quarterly basis. The interChange team follows the procedures that are outlined in the current version of the CMS document "MSIS Tape Specifications and Data Dictionary."

CMS 372 Waiver Reporting

The interChange MAR function produces automated annual CMS-372 reports for approved 1915(c) waivers. These reports may be output in either the long or short 372 form and will be customized for North Carolina's waiver programs.

State Batch Reporting

Common Medicaid batch reports already exist in interChange, and new batch reports can be created to meet State-specific needs. The existing reports include the Medicare Participation report and Abortion, Sterilization, and Delivery reports. These reports can be produced for any time frame desired by the State.

Approach to Customization and Modifications

A majority of the MAR work during the DDI Phase of the project will be the configuration work of the MAR Category of Service mappings that need to be

evaluated and set for the North Carolina healthcare environment. These mappings directly affect the generation of the MSIS files sent quarterly to the federal government. Also, we identified some specific reporting requirements that will require the creation of a custom online or batch report; therefore, they are included in our DDI work plan and effort.

MAR also works in conjunction with the overall conversion effort to bring legacy data into the new system. EDS will bring five prior years of legacy data into the MAR online query system to start the Operations Phase of the contract.

Enhancements to Functional Requirements

The interChange MAR subsystem reporting solution is an extremely feature-rich reporting solution that spans the mandated federal reporting and State reporting needs. It provides online, parameter-driven reports for fast and accurate analysis of the State's healthcare programs. EDS has reviewed the State's reporting requirements, and our reporting solution is a strong match, as demonstrated in our detailed responses that follow. However, there are some changes to the MAR subsystem that will be made to meet specific State requirements, namely the following:

- The MAR solution will be expanded to store, maintain, and report on the Medco and Health Check data that is not part of its data store.
- The interChange team will work with the State to define as many as 10 State-specific batch reports.

Response to MARS Requirements

The following table, EDS Response to MARS Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

EDS Response to MARS Requirements

RFP No.	RFP Requirement	EDS Response
40.13.1.1	Provides capability to maintain source data from all other functions of the Replacement MMIS to create State and Federal reports at frequencies defined by the State	Met by interChange. The interChange data warehouse claims analysis data model meets this functional requirement. Claims, reference, financial, recipient, managed care, and provider data is stored through an Extraction-Transformation-Load (ETL) process to support MAR reporting.
40.13.1.2	Provides capability for compiling subtotals, totals, averages, variances, and percents of items and dollars on all reports, as appropriate	Met by interChange. The interChange MAR online and batch reports contain various types of information that meet this functional requirement. Examples of these existing reports are as follows:

RFP No.	RFP Requirement	EDS Response
		• Operational Performance—Averages and Percents • Operational Performance—Dollars • Operational Performance—Provider • Payment Comparison by Category of Service (COS) • Provider Participation Average • Provider Participation Total
40.13.1.3	Provides capability to generate user-identified reports on a State-specified schedule	Met by interChange. The 27 MAR online reports meet this functional requirement and may be generated by the user from their desktop at any time and for user-defined payment reporting periods aligned to monthly boundaries. System-generated batch reports may be produced according to any State-defined time period—such as monthly, quarterly, and annually.
40.13.1.4	Provides capability to generate reports to include the results of all State-initiated financial transactions, by State-specified categories, whether claim-specific or non-claim-specific	Met by interChange. The data stored in the interChange data warehouse claims analysis data model, which is the source for MAR, meets this functional requirement. MAR assigns a source code value to each transaction to identify types such as original claim, void, adjustment, and nonclaim types such as capitation payments and expenditures. Examples of existing reports that include this source code value as a search criteria are as follows: • Payment Statistics by COS • Payment Statistics by Provider Type
40.13.1.5	Provides capability to identify, separately or in combination as requested by the State, the various types of recoupments and collections	Met by interChange. The functional requirements are met by the interChange financial and MAR subsystems. Financial has many reports and inquiry panels that identify and display recoupment and collection data. MAR assigns a source code value to each transaction to identify types such as original claim, void, adjustment, and nonclaim types such as capitation payments and expenditures. Examples of existing reports that include this source code value as a search criteria are as follows: • Payment Statistics by COS • Payment Statistics by Provider Type
40.13.1.6	~~Provides capability to meet all enhanced requirements for the Replacement MMIS~~	Cancelled. This requirement was deleted by RFP 30-DHHS-1228-08-R.
40.13.1.7	Provides capability for uniformity, comparability, and balancing of data through the MARS reports and between these and other functions' reports, including reconciliation of all financial reports with claims processing reports	Met by interChange. This functional requirement is met through the existing MAR balancing reports: • Balancing by COS • Balancing by Aid Category

RFP No.	RFP Requirement	EDS Response
		• MAR Reconciliation • Payment Statistics by COS • Participation Analysis by Aid Category These reports balance parts of MAR to each other, and operational balancing procedures balance MAR data to financial data. The interChange financial subsystem has separate procedures for balancing claims to financial.
40.13.1.8	Provides capability for detailed and summary-level counts of services by service, program, and eligibility category, based on State-specified units (days, visits, prescriptions, or other); provides capability for counts of claims, counts of unduplicated paid participating and eligible recipients, and counts of providers by State-specified categories	Met by interChange. The MAR online query system meets this functional requirement by providing various summary-level claim counts, eligible and recipient counts, recipient and provider participation statistics, and dollar amounts for many different types of criteria. Examples of these existing reports are as follows: • Expenditure Analysis by COS and Aid Category • Participation Analysis by Aid Category • Participation Analysis by COS • Provider Participation Average • Provider Participation Total • Recipient Participation by County The detailed-level requirement will be met through the interChange Claims search panels, as MAR does not provide detail claim history reports through a request system.
40.13.1.9	Provides capability for a statistically valid trend methodology approved by the State for generating MARS reports	Met by interChange. The MAR online query system meets this functional requirement. It can generate reports for different time periods to review potential trends. For example, the user can run a report for a time period this year, and run a report for the same period last year. Or, the user can run a report for each of the last four quarters and compare results and trends in expenses or participant counts. Additionally, some existing MAR online reports have built-in trend comparisons: • Payment Comparison by COS • Payment Comparison by Provider Type These two reports compare the selected month with the same month last year, and display the State Fiscal Year-to-Date figures to the same figures from the prior year.
40.13.1.10	Provides capability for charge, expenditure, program, recipient eligibility, and utilization data to support State and Federal budget forecasts, tracking, and modeling, to include: • Participating and non-participating eligible recipient	Met by interChange. This functional requirement is met by the MAR online report system, which includes 27 browser-based reports that allow user selection of parameters such as provider type or specialty, summary and detail category of service, benefit plan, funding code, and reporting periods.

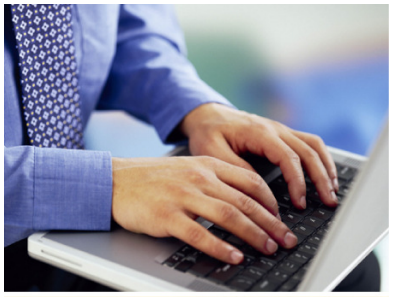
RFP No.	RFP Requirement	EDS Response
	counts and trends by program and category of eligibility • Utilization patterns by program, recipient medical coverage groups, provider type, and summary and detailed category of service • Charges, expenditures, and trends by program and summary and detailed category of service • Lag factors between date of service and date of payment to determine billing and cash flow trends • Any combination of the above	These options promote customization of report periods to review for trending and past use. Provider enrollment and recipient eligibility counts are included on multiple panels to allow comparison of enrollment to participation. These existing online reports include the following: • Recipient Participation by County • Expenditure Analysis by COS and Aid Category • Participation Analysis by COS • Payment Statistics by COS • Payment Comparison by Provider Type • Payment Statistics by Provider Type There also is an existing batch report called the Service Date Reimbursement report, which compares the lag time between date of service and date of payment.
40.13.1.11	Provides capability to describe codes and values to be included on reports	Met by interChange. The online MAR reports meet this functional requirement. Online MAR reports provide descriptions for codes in drop-down criteria lists when users are selecting values. Descriptions are displayed with codes in the generated report. This is a standard part of online and batch MAR reports and does not require customer specification of which fields should have descriptions.
40.13.1.12	Provides capability for users to specify selection, summarization, and un-duplication criteria when requesting claim detail reports from Claims History	Met by interChange. The detailed-level functional requirement will be met through the interChange Claims search panels, as MAR does not provide detail claim history reports through a request system.
40.13.1.13	Provides capability to capture and maintain online at least four (4) years of MARS reports and five (5) years of annual reports, with reports over four (4) years archived and available to NC DHHS within twenty-four (24) hours of the request	Met by interChange. The MAR batch reports meet this functional requirement. MAR batch reports will be retained from implementation date forward for the time periods outlined in this requirement. Browser-based reports are created on demand by the user, and we will retain at least five years of data by payment month in MAR database tables to support the generation of annual period reports.
40.13.1.14	Provides capability to generate all MARS reports that will be sent to CMS in the format specified by Federal requirements	Met by interChange. The MAR subsystem produces the following CMS-required outputs: • MSIS tapes • CMS 416 (met in EPSDT subsystem) • CMS 372 Waiver reporting Existing interChange code meets the functional requirements for these items. The federal guidelines for these items are outlined in the CMS Publication 45 - State

RFP No.	RFP Requirement	EDS Response
		Medicaid Manual, Chapter 2 - State Organization. Additionally, the 27 MAR online reports provide the type of management and operational reports that CMS expects in a certified MARS. These existing reports include the following: • Claims Throughput Analysis—DOR to DOP • Medicare Participation • Medicare Participation Parts A & B • Place of Service Analysis • Provider Filing Analysis • Provider Ranking • Third-Party Payment Ranking
40.13.1.15	Provides capability for the maintenance of the integrity of data element sources used by the MARS reporting function and integrates the necessary data elements to produce MARS reports and analysis	Met by interChange. Our data element maintenance meets this functional requirement. Maintenance of data elements is handled by storing them in the claims analysis database tables. Some configuration related to custom values such as copay categories, age groupings, and categories of service are needed.
40.13.1.16	Provides capability for system checkpoints that ensure changes made to programs, category of service, etc. are accurately reflected in MARS reports	Met by interChange. This functional requirement is met through various tools such as testing environments (model office or UAT) to verify system changes are brought through to MAR as expected. Category of service checkpoints also occur through the existing Unknown COS batch report that lists categories assigned as a default.
40.13.1.17	Provides capability for consistent transaction processing cutoff points to ensure the consistency and comparability of all reports	Met by interChange. The payment date process meets this functional requirement. Payment date is used as the standard transaction cutoff period.
40.13.1.18	Provides capability to ensure all MARS report data supports accurate balancing, uniformity, and comparability of data to ensure internal validity and to non-MARS reports to ensure external validity (including reconciliation between comparable reports and all financial reports)	Met by interChange. This functional requirement is met through the existing MAR balancing reports: • Balancing by COS • Balancing by Aid Category • MAR Reconciliation • Payment Statistics by COS • Participation Analysis by Aid Category interChange balances parts of MAR to each other, and operational balancing procedures balance MAR data to financial data.
40.13.1.19	Provides capability for an audit trail for balanced reporting	Met by interChange. This functional requirement is met by internal balancing reports and operational procedures to verify balancing to expected reports and data.

RFP No.	RFP Requirement	EDS Response
40.13.1.20	Provides capability for a standard date of service/date of procedure cutoff for cost audit data with the capability to report prior year data separately from current year data, as well as summary data for all claims	Met by interChange. This functional requirement is met in MAR summary tables through use of the reporting period. New data is added each payment month. The detail tables MAR uses include payment periods and service date periods. Each transaction is assigned payment and service month periods to make sure of standard definitions for cutoff dates and are available for report creation.
40.13.1.21	Provides capability for the MARS database to include the following types of data: • Adjudicated claims data • Adjustment/void data • Financial transactions for the reporting period • Reference data for the reporting period • Provider data for the reporting period • Recipient data (including LTC, EPSDT, cost of care, co-pays, benefits used, and insurance information) for the reporting period • Budget data from the NCAS • Financial data, for the reporting period • Other, such as Medco and Health Check, inputs not available from or through the Replacement MMIS claims financial function	Met through customization of interChange. Much of the data listed in this requirement is already included in MAR summary tables or the detail source tables (interChange data warehouse). The MARS extracts data from several interChange subsystems, including Provider, Recipient, Reference, Financial, Claims, and Managed Care. Additional modules will be added to bring the additional required external data (from NCAS, Medco, and Health Check) into MAR. MAR assigns a source code value to each transaction to identify types such as original claim, void, adjustment, and nonclaim types such as capitation payments and expenditures. Examples of these existing reports are as follows: • LTC Payments by Revenue Code • Payment Statistics by COS • Payment Statistics by Provider Type • Recipient Copayment by Aid Category
40.13.1.22	Provides capability to capture and maintain the necessary data to meet all Federal and State requirements for MARS, with the Vendor identifying and providing all Federal MARS reports required to meet and maintain CMS certification	Met by interChange. MARS meets this functional requirement. The MARS produces the following CMS-required outputs: • MSIS tapes • CMS 416 (met in EPSDT subsystem) • CMS 372 Waiver reporting Existing interChange code meets the functional requirements for these items. The federal guidelines for these items are outlined in the CMS Publication 45 - State Medicaid Manual, Chapter 2 - State Organization.
40.13.1.23	Provides capability to generate reports at monthly, quarterly, semiannual, annual, and biannual intervals, as specified by the State and Federal requirements	Met by interChange. The MAR online reports meet this functional requirement. Through MAR online reports, users can specify beginning and ending payment periods for display of report data. System-generated batch reports may be generated for any of the periods specified in this requirement.
40.13.1.24	Provides capability to create all required MMA file and	Met by interChange. This is the main feature of the Part D

RFP No.	RFP Requirement	EDS Response
	MMA State Response File reports	processing incorporated into interChange.
40.13.1.25	Provides capability to produce MARS reports by program, plan, county, and population group; reports for other State programs in addition to the standard MARS reports will need to be developed	Met through customization of interChange. Examples of existing reports are as follows: • Recipient Participation by County • Recipient Copayment by Aid Category • Expenditure Analysis by COS and Aid Category The interChange team will work with the State to define as many as 10 State-specific batch reports. In addition, the interChange solution includes the COTS BusinessObjects reporting tool. This tool allows users to create their own reports based on data and criteria they select.

40.14.1 Financial Management and Accounting System Requirements



Financial management is about much more than simply accounting for claims payments. The entire gamut of financial services must differentiate between the payers and present a unified, but separately identifiable, reporting framework. Our Replacement MMIS is a single solution that will bring maximum flexibility and configurability to the State.

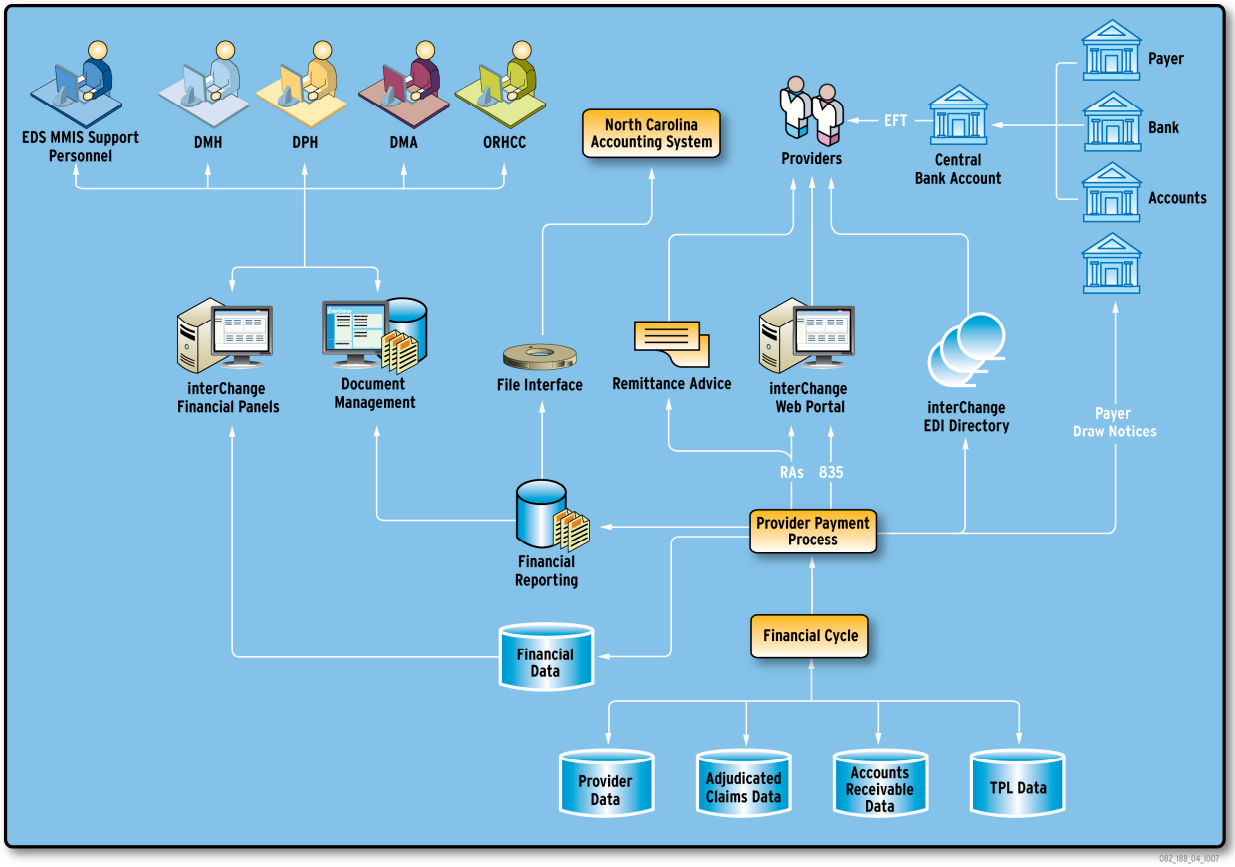
State of North Carolina

The State is seeking a Replacement MMIS that processes healthcare claims for multiple divisions and also provides a financial management and accounting function to accurately account for those services in a multi-payer framework. Our solution meets these requirements. The interChange financial management and accounting subsystem has been architected to delineate funding sources and apply each payer's unique funding process. It provides a centralized system, allowing multiple payers to process claims and receive payment to accommodate the multiple divisions represented.

Financial management is about much more than simply accounting for claims payments. The entire gamut of financial services—including accounts receivable, accounts payable, liens, and bank reconciliation—must differentiate between the payers and present a unified, but separately identifiable, reporting framework. The financial management and accounting system of the Replacement MMIS also will interface with the North Carolina Accounting System (NCAS) for the supported divisions to achieve the required results.

The following exhibit, Replacement MMIS Financial Management Process, gives a high-level overview of the process and data flows through the financial management system within the Replacement MMIS. Using panels and reports, authorized staff can perform the required tasks and mange the budgets and funding of the Replacement MMIS. Providers will be informed of their payments and withholdings through remittance advice (RA) and 835 files. Bank accounts will be credited, debited, and reconciled based on the flow of financial data, and the interface with NCAS will be used to keep the NCAS current.

Replacement MMIS Financial Management Process



The financial system will manage the multi-payer budgets, accounting, reporting, and balancing services for the Replacement MMIS.

Financial management and accounting has a number of processes orchestrated within interChange as a single solution that brings maximum flexibility and configurability to the State. A discussion of the following processes provides clarity on how each plays a part in the Replacement MMIS solution:

- Funding Sources
- State Program Funding
- Payment Estimation Reporting
- Payment Holds
- Provider Payments
- Remittance Advice
- Liens/Levies
- Accounts Receivable
- Returned Checks and Provider Refunds
- Financial Transactions
- Financial Cycle Balancing

Funding Sources

Every claim or financial transaction in interChange is associated with a defined funding source. These funding sources represent not only which State agency budgets are affected, they also indicate whether these transactions are financed with state-only funds or partial state and federal funds, as in Medicaid. These funding sources will drive how data across the Replacement MMIS is reported, and the funding source designation will be used to accurately aggregate and report spending at the agency level. For example, the interChange Management and Administrative Reporting Subsystem (MARS) uses the funding source designation to accurately report at the appropriate agency level.

If multiple sources of funding exist for certain programs, a hierarchy of funding sources can be established and will consist of a primary funding source and one or more alternate funding sources. The hierarchy may also be used to simplify reporting at different levels within the hierarchy.

interChange allows for the control of the maintenance and configuration of funding sources. For example, authorized users are able to perform the following real-time activities:

- Add new funding sources and the associated assignment criteria
- Update existing funding sources with assignment criteria
- Establish alternate funding sources, if appropriate
- Build assignment and reporting hierarchies that determine the order in which primary and alternate funding sources will be assigned to claims
- Define funding sources to correspond to an associated accounting code and cost center and determine the amount of federal financial participation associated with each fund
- Decide when to open and close available funds
- Adjust appropriated funding source dollars by cost center

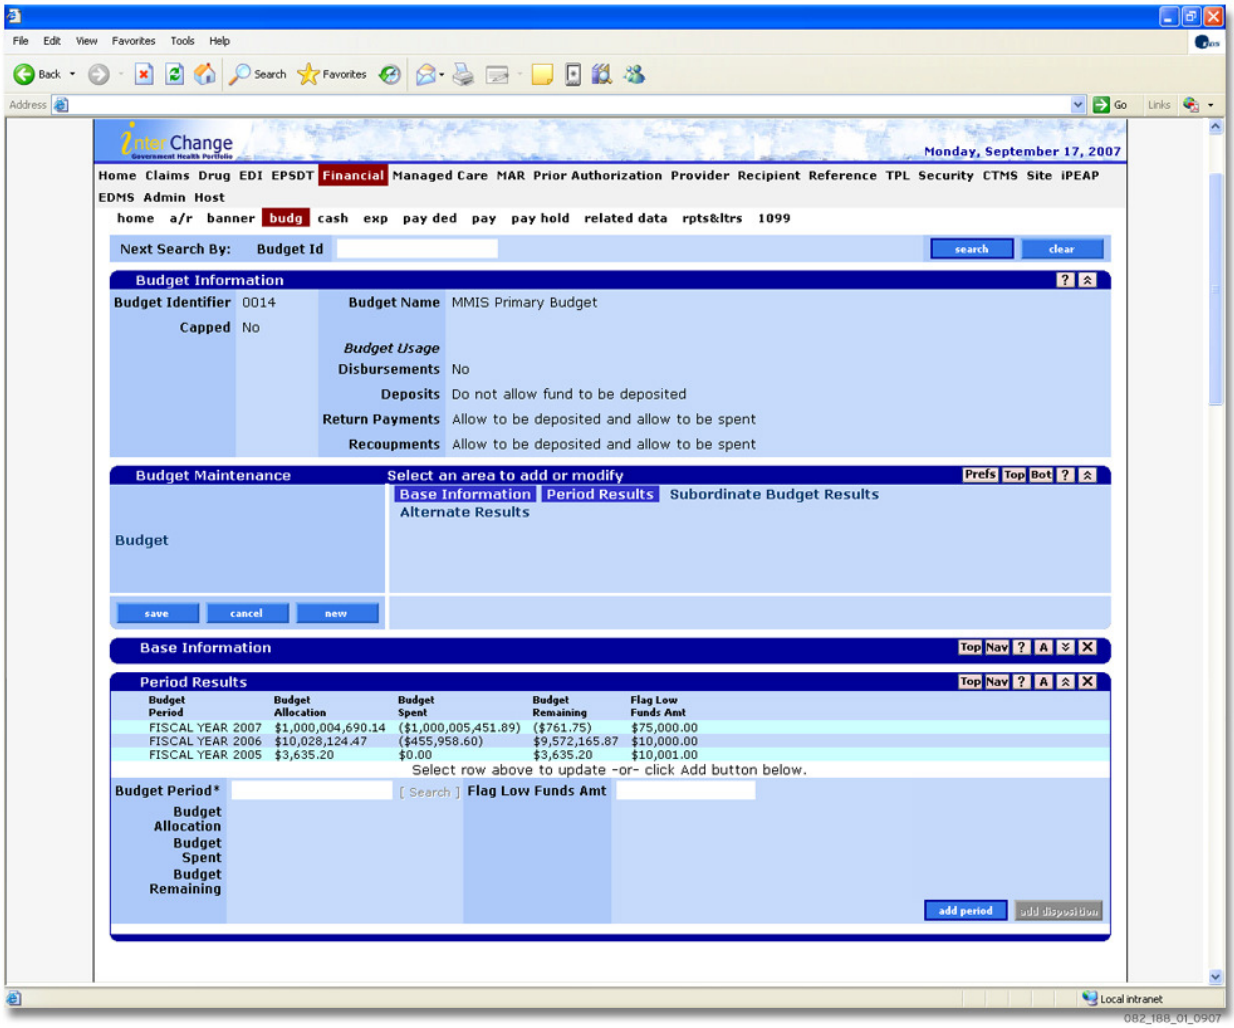
State Program Funding

The State will have the flexibility to set the criteria and hierarchy for claims payment to a particular cost center and account code, decide when to open and close budgets, and adjust budget dollars by cost center. At the start of each fiscal year, budgeted appropriations dollars will be loaded by individual funding source into the Replacement MMIS. These amounts can be updated throughout the year at intervals needed by the State through the integrated Financial Budget Setup/Maintenance page. Budget reporting is provided to reflect current, month-to-date, and year-to-date financial activity.

The following exhibit, Sample Budget Panel, provides an example of the budget panel and the reporting period information for previous fiscal year budgets. This

shows the ability to set the flag for low funds remaining in the budget. Once configured, this can help control whether payments will be suspended.

Sample Budget Panel



The budget maintenance panel allows real-time viewing of budget allocations and utilization. Through the Capped feature, budgets can be configured to allow expenditures to exceed available funds or they can be set up to deny or suspend transactions that would exceed the budget.

Payment Estimation Reporting

The real-time processing of the Replacement MMIS will allow the State to have a much better view of payments over the course of a payment period, rather than waiting until the end of a payment run. By using the on-demand capabilities of the financial cycle, interChange allows authorized users to determine the estimated checkwrite at any time between weekly financial cycle runs. This is made possible by interChange transaction-processing claims at all times, rather than holding or batching claims and processing on a defined schedule. The Replacement MMIS will fully adjudicate claims, including determining allowed

amounts immediately on receipt of the claim, enabling the benefit of forecasting the payments through the financial cycle. The architecture of interChange directly lends itself to real-time access of information, relational database management system (RDBMS) for the data storage and access, service-based access components to the RDBMS, and well-defined interfaces being consumed by the user interface (UI) layer as well as the claims processor.

Having access to this information improves decision-making concerning whether sufficient funds exist to authorize a check write. This information also will provide the State with a mechanism to estimate how many dollars must be moved from investments to cover the check write. This improves cash flow by allowing the State to better estimate cash needs and leave unencumbered funds in investment-bearing accounts.

Payment Holds

During every payment cycle, the Replacement MMIS will check and validate the funding source assigned to each approved claim to determine if funding is available. Payments for services for which no funding remains can be pended or denied according to the business rules established by the State.

Automated reports will be provided by the Replacement MMIS to notify the State when year-to-date budget expenditures exceed budget appropriations.

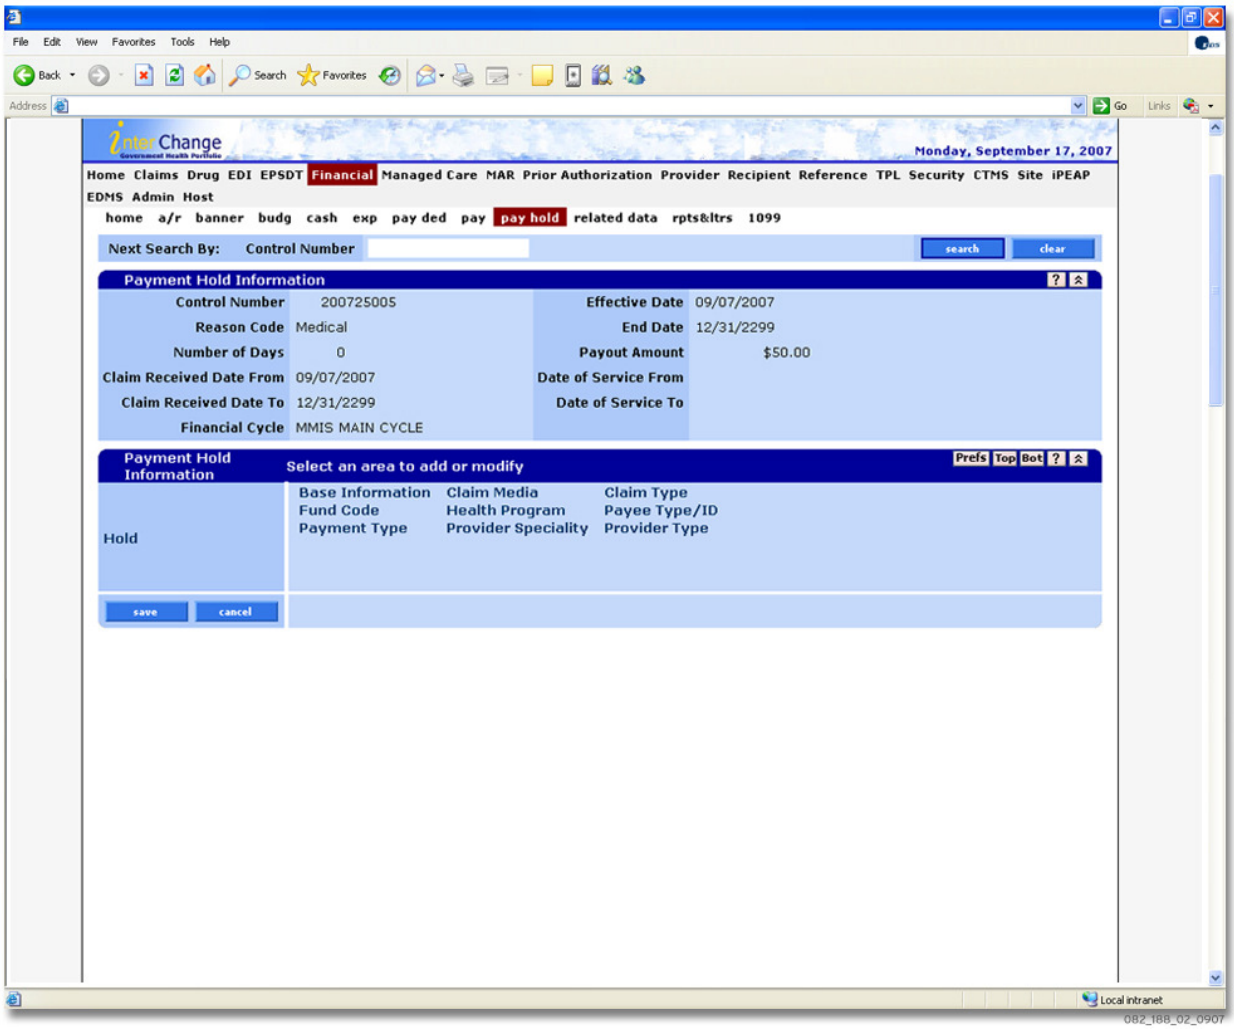
When the spending in a particular budget reaches a user-specified level, the Replacement MMIS will alert the State. The integrated budget and payment hold features of the Replacement MMIS will automatically detect situations when approved payments will exceed the remaining appropriated budget. When this occurs, the system will rely on the user-driven payment hold and budget settings established by the State financial users to determine whether payments should be pended or issued. When funding is again available, the State can release payments that were previously in a pended status.

The Replacement MMIS' automated, estimated payments can be run at any time before a payment cycle so the State can make informed decisions about how the payment hold parameters should be set and adjust appropriations balances, if necessary.

The integrated Financial Budget Setup/Maintenance panel allows authorized financial users of interChange to update appropriations amounts without requiring the assistance of a technical resource.

The following exhibit, Sample Payment Holds Panel, demonstrates the overall functional capability and configurability within interChange for establishing payment holds.

Sample Payment Holds Panel



By enabling payment holds to target specific criteria such as provider types and specialties or benefit plans, the State will have tremendous control over exactly which claims will be held and which will be allowed to pay without involving technical assistance.

Payment holds can be generated based on the following criteria or combination of criteria:

- Provider type
- Provider number
- Claim media (paper or electronic)
- Claim type
- Fund code (payer and budget)
- Payment type (check or electronic funds transfer)

Using the Payment Holds panel, authorized users can define the specific profile of a payment hold, including ranges of claim received dates and specific financial cycles to apply the hold. Additional panels are available to the user from this

navigation panel, where specific claim types can be identified for payment holds, claim media, and specific health programs or benefit plans.

Provider Payments

In interChange, the financial cycle includes paid, denied, and suspended claims and takes into consideration accounts receivable, payment holds, liens, and non–claim-specific transactions such as payouts.

When provider payments are generated, interChange follows the provider-designated method of payment of either paper checks or electronic funds transfer (EFT) payments. If funds are due to the provider, the check or EFT notification, called a warrant, is produced with the RA. interChange links the check or EFT control number to each transaction. For example, internal control numbers (ICNs) of claims that are paid by check or EFT are linked to the check or EFT control number. If funds are held to cover an outstanding accounts receivable, the accounts receivable disposition is tied to the check or EFT control number.

Throughout interChange, the appropriate hypertext links satisfy audit requirements that each dollar expended or collected by the program be tracked to its detailed transaction. These links allow authorized users to view the content of each claim or account receivable disposition directly from the Warrant panel.

Remittance Advice

RAs will be created by the Replacement MMIS for providers with the associated claim or financial activity during the week. The RA will display paid, denied, and pended claims for the week, with appropriate explanations for claim denials and suspensions. Error codes will be reported at the header or detail level, informing providers of needed corrections for claim resubmissions. If necessary, actual payments through check or EFT can be suspended, with the RA still being generated for notification purposes.

Providers can access their RAs through two methods: electronic RAs published to the provider portal for provider access through download, or EDI 835 transaction delivered to the electronic location on file for the provider. The EDI 835 also can be downloaded from the provider's area of the secure Web portal. The following is a short discussion on the capabilities interChange offers for each of the delivery vehicles for RAs.

HIPAA provides specifications for the format and content of ASC X12 835 transactions. The financial system generates the HIPAA-compliant ASC X12 835 transactions for electronic delivery, as well as augmenting the information to the provider by generating ASC X12 277 claim status transactions for claims in a pended state. Providers choosing to exchange EDI must complete a Trading Partner Agreement (TPA). Any providers choosing to use a billing vendor can specify delivery of ASC X12 transactions to the vendor.

The primary reconciliation document that providers rely on is the RA, which therefore must provide sufficient information for account postings. The RA document generated out of the Replacement MMIS will provide the information listed in the following table, Required Information for RAs.

Required Information for RAs

Section	Description
Paid Claims	Lists paid claims by claim type
Denied Claims	Lists denied claims, with error codes, by claim type
Suspended Claims	Lists suspended claims, with error codes, by claim type
Adjusted Claims	Lists adjusted claims by claim type, including the adjusted claim and original claim information and adjustments generated by adjustment request or through a refund check
TPL Information	Lists third-party liability (TPL) information pertinent to the claims listed within the RA
EOB Code Descriptions	Lists the explanation of benefits (EOB) codes pertinent to the claims listed within the RA
Financial Transactions	Details the provider's weekly financial activity for both payouts and non–claim-specific refunds received and applied during the current financial cycle and lists outstanding accounts receivables in A/R number order
Summary	Summarizes claim and financial information for a provider for each financial cycle and reports year-to-date totals of claim and financial activity

Liens/Levies

The flexible design of interChange allows the processing of liens against providers at the State's request, including splitting provider checks where necessary. Lien and assignment information will be maintained in the Replacement MMIS and used in directing or splitting payments to the provider and lienholder. Monies for liens will be recouped either by a percentage of the payment amount or a set payment rate.

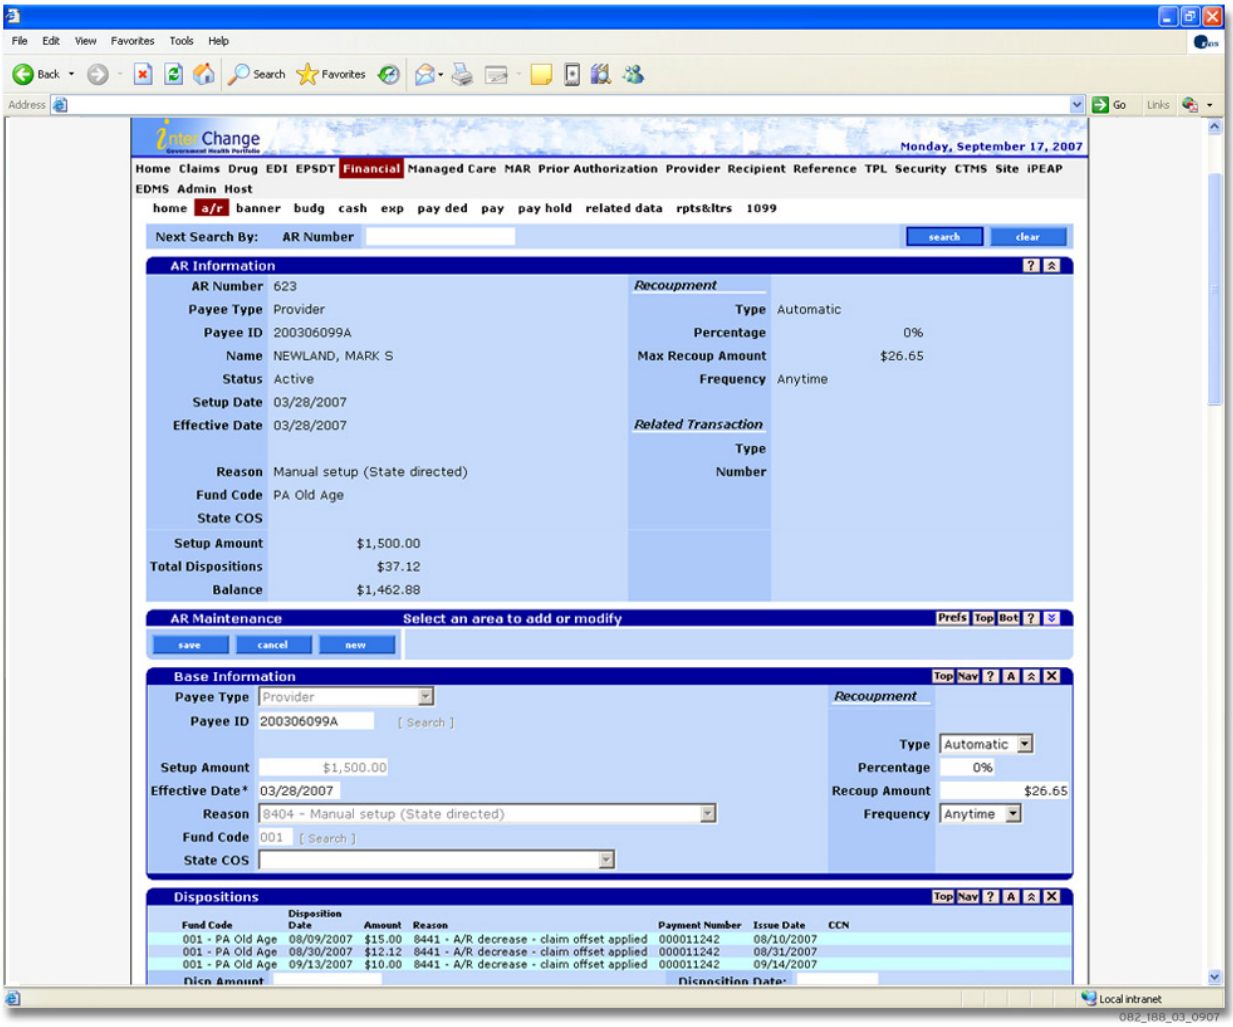
Accounts Receivable

interChange maintains the capability to process accounts receivables (A/Rs) and claims against the A/R account. The A/R Maintenance panels are used to establish an A/R record for providers, recipients, and other entities such as counties.

interChange also allows users to choose how the system will recoup money. The system can recover either a user-specified percentage of each payment or a user-specified weekly maximum recoupment amount for a provider/service location from the Provider A/R Maintenance panels. Authorized users are able to establish and update transaction reason codes easily without assistance from a programmer.

The following exhibit, Sample A/R Record, shows an A/R record with configurable options for reason codes, frequency of recoupment, and historical information of past recoupment transactions.

Sample A/R Record



interChange allows authorized users to limit the amount of an A/R to be collected weekly as either a percent of the total provider payment or a maximum amount. This allows providers to still retain cash flow while paying back overpayments.

Penalties and interest can be configured to be assessed on A/R balances, as well as one-time penalties. These receivable records are attached to the principal receivable record and are included in any transfers that occur. If the State desires a receivable that has been collected to be paid back out to the provider, the interChange expenditure function can be used.

A/R notification letters created through the integrated letter generation COTS tool, DOC1, are sent to providers to notify them that they owe money to the State and that the State is requesting a refund because of insufficient claims activity by

the providers. By setting up the A/R record, as the provider begins submitting claims, no further maintenance is required; the system will recoup funds based on the percentages in the A/R record. This provides for accurate reporting of the receivable. The current A/R collection rate is approximately 99 percent of receivables initiated.

Returned Checks and Provider Refunds

When a financial transaction such as a returned check or provider refund is processed in interChange, the associated claims are voided and the corresponding budget account is credited with the returned amount. Claims history retains the voided claim record for recording purposes only. Providers may return erroneous payments using a personal check.

Provider refunds and returned checks can be viewed through the Cash Receipt Search panel. Searches can be performed by provider name, cash control number, check amount, check date, and check number.

Financial Transactions

Manual or automated transactions, such as manual recoupments, mass adjustments, cash receipts, write-offs, and State-authorized payouts, are accepted in interChange. These payouts are recognized by the system as State-authorized expenditures. Expenditures are reported not only on the RA but also are viewable in interChange, allowing for easier research and a complete audit trail. The interChange financial function can accept updates, including claims history, provider or recipient history, current month financial reporting, A/R, and other appropriate files. Manual or automated updates of financial transactions include changes, deletes, suspensions, and write-offs.

Any non–claim-specific transaction will be fully documented and will link to the transaction that generates it; for example, the A/R or cash receipt. Additionally, the check or EFT that disbursed the funds requested will be tied to the transaction. Provider-specific transactions, either claims or financial transactions, are accounted for and presented in the annual 1099 processing and reporting.

Financial Cycle Balancing

interChange maintains financial activity according to generally accepted accounting principles (GAAP) and contains excellent controls to track each financial transaction, balance each batch, and maintain the appropriate audit trails on the claims history and consolidated A/R system. interChange processes all claims and financial (nonclaim) transactions through the financial and accounting management system without the need to mock-up claim or capitation claim transactions. The financial balancing job compares expenditures, EFTs transmitted, manual checks issued and reissued, State transfers, and system checks issued to notify the State of funding requirements.

Automated cycle balancing occurs after critical system processing milestones. Additionally, the system generates several reports to validate that the cycle is in balance and no errors have occurred. The financial balancing report is just one example of an automated balancing report. It contains system-generated financial counts and dollar totals on claim and financial (nonclaim) transactions processed in the weekly financial cycle.

The provider earnings file will be compared on a daily and year-to-date basis to the expenditure file and the payment transactions file to validate that all three are equal. Financial transactions and activities will be automatically balanced across business functions. Financial counts and dollar amounts will be compared on claim and financial (nonclaim) transactions between files to validate consistency and accuracy.

interChange provides the following check registers and balancing reports:

- Daily Manual Check Register
- Payment Register by Payment Type
- Payment Register—Summary of Counts
- Payment Register—Totals by Financial Category of Service
- Provider YTD Check Balancing
- Provider YTD Expenditure Balancing
- Provider YTD Offset Balancing
- Provider YTD Refund Balancing
- Provider YTD Void Balancing

The financial balancing process within interChange is executed every week as part of the financial cycle.

Approach to Customization and Modifications

The interChange financial management and accounting components are fully functional as the baseline system. In a product such as interChange, it is always necessary to configure and customize certain behavior of the system to match the specific needs of the State.

Most customization and modifications necessary to make interChange specific to North Carolina will require the configuration of financial parameters, accounts, hierarchies, funding sources, and code values. During DDI, knowledgeable business analysts will work to understand the intricacies of the needs of the State financials and configure interChange to meet those needs. Most of these configurations will be performed through the online panels of the interChange product.

There are requirements that necessitate some additional changes to the interChange system objects to meet the State's specific needs. Other required system modifications include changes to certain report layouts or adding additional summary data to a few reports. The financial subsystem also includes

the integration of the COTS letter generator tool, DOC1, to create new letters and processing logic to determine the need to generate the letter and process the receipt of the updated form.

Enhancements to Functional Requirements

The interChange financial management and accounting system is a feature-rich component of the interChange product, providing broad capabilities of a multi-payer healthcare program. Even as feature-rich and configurable as interChange is, there are areas that must be enhanced to meet the specific needs of the State.

interChange has a well-defined interface schema for external data exchanges; however, the interChange format must be transformed to match that of the external system. The following is a summary of enhancements that will be made to interChange for North Carolina:

- The financial data exchanges will be custom-mapped to match the receiving or sending system. For example, the specifics of the interfaces to the NCAS will need to be defined and implemented.
- The current A/R process does not process multiple A/R accounts for the same entity on a defined hierarchy. This enhancement will require additional data structures and changes to the processing orchestration.
- The existing recipient cost-sharing and premium payment reporting will be enhanced to meet the specified requirements.
- Requests to providers of updated W-9 forms are not part of the baseline system and will require enhancements to panels.

The EDS team will work with the State to define the specifics of each of these areas of enhancement.

Response to Financial Management and Accounting System Requirements

The following tables map the detailed solutions to the system requirements of the financial and accounting functional area. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

General Financial Management and Accounting System Requirements

The following table, EDS Response to General Financial Management and Accounting System Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Financial Management and Accounting System Requirements

RFP No.	RFP Requirement	EDS Response
40.14.1.1	Provides capability to create and update Financial Participation Rate Tables	Met by interChange. Each fund code within interChange has a cross-reference table which indicates the code rate type (federal, state, or agency) and the percentage that code rate participates in this budget. The total of all rate types must equal 100%.
40.14.1.2	Provides capability to create withholds, advance payments, and recovery of advance payments	Met by interChange and operational processes and procedures. The Accounts Receivable Base and Expenditure Base panels meet this requirement.
40.14.1.3	Provides capability to record liens and levy data	Met by interChange and operational processes and procedures. The Accounts Receivable Base panel will be used to capture requests received from the State.
40.14.1.4	Provides capability to process retroactive changes to deductible, TPL retroactive changes, and retroactive changes to program codes (from State-funded to Title XIX)	Met by interChange and operational processes and procedures. If a retroactive change in a recipient's deductible or TPL is identified, the claims that would be affected can be identified through the mass adjustment panels and reprocessed. If a claim or financial transaction has been associated with a fund code and reported, and a retroactive change to that fund code is requested, then the claims and financial transactions would need to be identified and reprocessed to allow for the retroactively changed fund code to take effect.
40.14.1.5	Provides capability to process transactions containing total amount of dollars, per check, received by the State for TPL recoveries, drug rebates, medical refunds, Fraud and Abuse Detection System (FADS) recoveries, and any cash receipts that should be applied to the Replacement MMIS	Met by interChange. The Cash Receipt Information panel meets this requirement. Through this existing panel, the application can process cash receipts that need to be applied to the Replacement MMIS.
40.14.1.6	Provides capability to accept and process Fiscal Agent bank transactions of check and EFT statuses, such as paid, void, and stop payment transactions	Met by interChange. The Cash Receipt Base and the Cash Receipt Information panels meet this requirement.
40.14.1.7	Provides capability for fully integrated financial operations, including general ledger, accounts receivable, claims payment/accounts payable, cash receiving, receipts dispositioning, and apportionment functions	Met by interChange. The combination of financial panels and reports meets this requirement. The interChange financial business area supports fully integrated financial operations.
40.14.1.8	Provides capability to automatically compute financial participation (State, Federal, county, and other)	Met by interChange. The Budget Funding Percentage table is used to calculate the amount of money attributable to each portion of FFP for each fund.
40.14.1.9	Provides capability for the accounting of all program financial transactions in a manner that provides timely and accurate production of State and CMS reporting	Met by interChange. The combination of financial panels and reports meets this requirement. The interChange application is CMS certified, including the reporting features of the MMIS.

RFP No.	RFP Requirement	EDS Response
	requirements	
40.14.1.10	Provides capability to deduct or add appropriate amounts and/or percentages from processed payments, regardless of origin of the transaction in accordance with GAAP via system financial management and accounting functions with online update and inquiry capability	Met by interChange. The Financial Payment Deduction Maintenance panel meets this requirement.
40.14.1.11	Provides capability for transactions that use existing State accounting and financial reason codes and descriptions (including division, LOB, benefit plan, NCAS Cost Accounting Code [CAC], Period code, Reason Code, Category of Service Code (COS) Code, County Code, type, and provider) that supports production of required financial reports without the need for maintenance of conversion tables	Met by interChange, with a portion of the requirement requiring customization code. The financial system is designed for integrating into a State's specific accounting system and generally configuration is all that is needed. If there are specific gaps identified in the available data attributes or formats, they will be customized to meet the requirement.
40.14.1.12	Provides capability to meet CMS requirement to reduce program expenditures for provider accounts receivable that are not collected within sixty (60) days of the date they are discovered	Met by interChange. There are systematic processes in the interChange system to address accounts receivables that are outstanding for more than 60 days.
40.14.1.13	Provides capability to produce NCAS interface file weekly to support checkwrite activity	Met through customization of interChange. Interfaces are mapped to match the interChange internal format. Specific additional attributes or logic will be developed if needed.
40.14.1.14	Provides capability to apply special "timely filing" edits at the end of the State fiscal year	Met through configuration of interChange parameters and features.
40.14.1.15	Provides capability for tracking calls regarding Fiscal Agent-related issues, claims, and complaints; provides capability for easy access to the call information by all users	Met by interChange and operational processes and procedures. The Contract Tracking Management System (CTMS) meets this requirement with the operations staff receiving and documenting calls.
40.14.1.16	Provides capability to identify and update payment data with each payment cycle	Met by interChange. The combination of financial panels and reports meets this requirement.
40.14.1.17	Provides capability to interface with NCAS for accounts receivable and accounts payable functions	Met through customization of interChange. Interfaces are mapped to match the interChange internal format. Specific additional attributes or logic will be developed if needed.
40.14.1.18**	Provides capability for a Client Data Warehouse extract of DMH data	Met through customization of interChange. Interfaces are mapped to match the interChange internal format. Specific additional attributes or logic will be developed if needed.

MMIS Accounts Payable Processes Requirements

The following table, EDS Response to MMIS Accounts Payable Processes Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to MMIS Accounts Payable Processes Requirements

RFP No.	RFP Requirement	EDS Response
40.14.1.19	Provides capability for accounts payable functionality for all programs	Met by interChange. The Financial Payment Maintenance panel meets this requirement.
40.14.1.20	Provides capability to identify providers with credit balances and no claim activity, by program, during a State-specified number of months	Met by interChange. The Business Intelligence and Analytical Reporting (BIAR) component of interChange meets this requirement by giving users access to the detailed data required to do this research.
40.14.1.21	Provides capability to process transactions for checks from outside systems, generating a Claims History record	Met by interChange. The Check Information panel and the Financial Transaction panel meet this requirement.
40.14.1.22	Provides capability for online access to check voucher reconciliation information by provider number or check voucher number and/or issue date, displaying the following information: • Provider number • Issue date • Check voucher number • Amount • Disposition • Disposition date	Met by interChange. The Check Information panel displays these data elements and meets this requirement.
40.14.1.23	Provides capability for online inquiry access and update ability on selected individual fields	Met by interChange. Field level security in the interChange system meets this requirement.
40.14.1.24	Provides capability to generate a stop payment or cancel transaction	Met by interChange. The Stop/Void/Reissue panel meets this requirement.
40.14.1.25	Provides capability to process the check voucher returned file for failed EFTs	Met by interChange. The stop-pay reissue process handles voids, stops, reissues and returned checks.
40.14.1.26	Provides capability to update funding sources and criteria lists based on financial participation rate information received from the State	Met by interChange. The Fund Base Information panels allow updates to fund source, criteria and FFP rates.
40.14.1.27	Provides capability to ensure that weekly budget reporting is consistent with the costs allocated during the checkwrite	Met by interChange. The Financial Budget Search and Maintenance panels provide real-time access to budget allocation and usage.
40.14.1.28	Provides capability to produce a provider voucher account payable upon receipt of a State Payout Authorization Form signed by an authorized State Official; provides capability to schedule payment of the voucher by the system in a future checkwrite cycle	Met by interChange and operational processes and procedures. Operations staff will use the Financial Payment Search and Payment Base Information panels to capture requests for authorized payouts to meet this requirement.

RFP No.	RFP Requirement	EDS Response
40.14.1.29	Provides capability to support Cost Settlement transaction, which includes disburse payments upon request, recoup receivables, deposit receipts, set up and post the associated accounts receivable/accounts payable transactions, and produce MMIS reports by provider that are required by the DMA Audit Section to support the cost settlement process	Met by interChange, with a portion of the requirement requiring customization code. The interChange financial system can disburse payments on request, recoup receivables, deposit receipts, set up and post the associated accounts receivable/accounts payable transactions. There may need to be some customization to meet reporting requirements.
40.14.1.30	~~Provides capability to support an uncompensated services payment process and pay disproportionate share hospitals for uncompensated services in four (4) quarterly payments, with payments made updated and available for online inquiry~~	Cancelled. This requirement was deleted by RFP 30-DHHS-1228-08-R.
40.14.1.31	Provides capability to set up an accounts payable for non-provider-specific payments, issue payment, and adjust the financial reporting	Met by interChange. The Expenditure base information and expenditure supplemental panels meet this requirement.

MMIS Accounts Receivable Process Requirements

The following table, EDS Response to MMIS Accounts Receivable Process Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to MMIS Accounts Receivable Process Requirements

RFP No.	RFP Requirement	EDS Response
40.14.1.32	Provides capability to ensure accurate collection and management of account receivables	Met by interChange. The Accounts Receivable Maintenance, A/R Base, A/R Dispositions and A/R Supplemental Information panels meet this requirement.
40.14.1.33	Provides capability for summary-level provider accounts receivable and payable data and pending recoupment amounts that are automatically updated after each claims processing payment cycle, with summary-level data consisting of calendar week-to-date, month-to-date, year-to-date, State, and Federal fiscal year-to-date totals	Met by interChange, with a portion of the requirement requiring customization code. The weekly financial summary, accounts receivable summary, activity, and year-to-date balancing reports meet most of these requirements. Certain extensions for the week-to-date, month-to-date, and federal year-to-date reporting will be developed.
40.14.1.34	Provides capability to maintain an accounts receivable detail and summary section for each account	Met by interChange. Financial A/R Search and A/R base Information panels show all A/R records and meet this requirement.

RFP No.	RFP Requirement	EDS Response
40.14.1.35	Provides capability for automated and manual establishment of accounts receivable for a provider and to alert the other Financial Processing portion of this function if the net transaction of claims and financial transactions results in a negative amount (balance due)	Met by interChange and operational processes and procedures. Operations users will use the A/R Base Information panel to capture manual A/R requests submitted by the State.
40.14.1.36	Provides capability to monitor the status of each account receivable and report weekly and monthly to the State in aggregate and/or individual accounts, on paper and online	Met by interChange. The Accounts Receivable Summary report and the A/R Search panels meet this requirement.
40.14.1.37	Provides capability to produce collection letters within the financial processing function of the checkwrite cycle	Met by interChange. The letter generator component of interChange meets this requirement.
40.14.1.38	Provides capability to establish systematic payment plans or recoupments for provider receivable balances, as directed by the State	Met by interChange. The A/R Base Information and A/R Dispositions panels meet this requirement. Recoupments can be set up in total, by percentage of payment or by weekly amount.
40.14.1.39	Provides capability to "write off" outstanding account receivables when approved by the State	Met by interChange and operational processes and procedures. The A/R Dispositions panel will be used to capture the 'write off' disposition and meet this requirement.
40.14.1.40	Provides capability to set up multiple open accounts receivable items for recoupment against provider claims payable in the financial system, subject to a hierarchy table; provides capability for the system to withhold the money from provider claims payable for all receivable items meeting recoupment criteria until the provider payable balance for all receivables have been fully recouped or the payable balance is equal zero	Met by interChange, with a portion of the requirement requiring customization code. The A/R Base Information panel can set up multiple open accounts receivable items. A hierarchy table of withholdings will need to be developed. Current logic is first in, first out (FIFO) in satisfying multiple receivables.
40.14.1.41	Provides capability to perform the cash control processing cycle, updating master files for bank reconciliation, cash receipts, and accounts receivables and producing applicable cash control reports, including the cash receipts and accounts receivable detail from the checkwrite cycle	Met by interChange, with a portion of the requirement requiring customization code. These functions are part of the interChange financial system capability. State-specific extensions or customizations will be necessary to fully meet this requirement.
40.14.1.42	Provides capability to accept claim-specific and gross recoveries, regardless of submitter (provider, carrier, recipient, drug manufacturer); provides capability to apply gross recoveries to providers and/or recipients as identifiable	Met by interChange. The A/R Base Information and A/R Disposition panels meet this requirement.

RFP No.	RFP Requirement	EDS Response
40.14.1.43	Provides capability to set up receivables and recoup payments to the provider for services after a recipient's date of death	Met by interChange and operational processes and procedures. Reprocessing the paid claim after the date of death before the date of service has been entered into the system will set up an account receivable.
40.14.1.44	Provides capability for an online hierarchy table by fund code or recoupment type for the recovery of monies from claims payable to a provider, such as: • Claims paid in error • Cost settlements receivables • Program integrity receivables • Provider advances tax withholding • Tax levies	Met through customization of interChange. The use of hierarchies in A/R will need to be established in interChange to meet this requirement.
40.14.1.45	Provides capability for an online accounts receivable process with the ability to request recoupments by the following portions of the receivable amount during one (1) payment cycle: • Percent • Dollar amount • Total amount	Met by interChange. The A/R Base Information panel meets this requirement.
40.14.1.46	Provides capability to automatically recoup accounts receivables by either deductions from claims payments or through direct payment by the provider or combinations of both	Met by interChange. The A/R Disposition panel meets this requirement.
40.14.1.47	Provides capability to apply cash received and recoupments to the accounts receivable, including a history of the RA date, number, and amount and have related information available online	Met by interChange. The A/R Disposition panel meets this requirement.
40.14.1.48	Provides capability to apply claims payments recoupments to more than one (1) account receivable at a time	Met by interChange. A single claim will not satisfy more than one account receivable, but several claims can be used to satisfy multiple accounts receivables in a single checkwrite.
40.14.1.49	Provides capability to allow the portion of payments made against each account receivable to be controlled by State staff	Met by interChange. The A/R Disposition panel meets this requirement.
40.14.1.50	Provides capability to remove accounts and produce reports on a monthly basis when a provider record has been inactive for one (1) year	Met by interChange. The Weekly Accounts Receivable Summary report and the A/R Search, A/R Base information, and A/R Dispositions panels meet this requirement.

RFP No.	RFP Requirement	EDS Response
40.14.1.51	Provides capability to generate transactions to the system for each accounts receivable item created and invoiced, accounts receivable adjustments, payments received and, recouped and write-offs	Met by interChange. Generally, many of these will not be specific transactions but will become table entries which will be associated with specific claims or other financial transactions. Hypertext links will allow viewing of related information.
40.14.1.52	Provides capability for online daily receipts and recoupment information to the unit responsible for dispositioning the detail, for example TPL, drug rebate, medical refund, FADS recoveries, and any other cash receipts received by the State	Met by interChange. Reason codes are used to distinguish Drug Rebate, TPL or Audit initiated receipts and recoupments as well as numerous other sources. A common system—securely linked to the User ID—keeps TPL analysts from using an Audit Unit reason code.
40.14.1.53	Provides capability to produce and send correspondence related to recipient premiums in the recipient's preferred language, including invoices, notices of non-payment, cancellation notices, receipts, and refunds	Met by interChange, with a portion of the requirement requiring customization code. The interChange premium payment system handles invoices, payments, refunds, notices of nonpayment, and cancellation notices. The letter generator component of interChange meets the correspondence requirement. Certain State-specific customizations will be developed if necessary.
40.14.1.54	Provides capability to collect recipient premium payments	Met by interChange and operational processes and procedures. The interChange premium payment system handles invoices, payments, refunds, notices of nonpayment, and cancellation notices.
40.14.1.55	Provides capability to produce refunds of recipient premiums	Met by interChange and operational processes and procedures. The interChange premium payment system handles invoices, payments, refunds, notices of nonpayment, and cancellation notices.
40.14.1.56	Provides capability to process financial accounting records for premium payments and refunds	Met by interChange. The interChange premium payment system handles invoices, payments, refunds, notices of nonpayment, and cancellation notices. These are tied directly to the financial system.
40.14.1.57	Provides capability to produce reports for recipient premium payment and cost-sharing (e.g., recipient co-insurance, deductibles, co-payments, etc.) processes	Met by interChange, with a portion of the requirement requiring customization code. There is a series of online reports that meet this requirement. These will be reviewed to determine if State-specific customization is required.
40.14.1.58	Provides capability to apply cost-sharing, e.g., recipient co-insurance, deductibles, co-payments	Met by interChange, with a portion of the requirement requiring customization code. The interChange system supports recipient cost sharing in several ways, including through benefit plan pricing methodologies. These will be reviewed to determine if State-specific customization is required.
40.14.1.59	Provides capability to ensure cost-sharing does not exceed threshold for the family group	Met by interChange, with a portion of the requirement requiring customization code. Spenddown is tracked at the case level to make sure a family does not jointly exceed the limitations. The recipient premium payment plan also is capable of handling premiums at an individual or family basis.

RFP No.	RFP Requirement	EDS Response
		These will be reviewed to determine if State-specific customization is required.
40.14.1.60	Provides capability to produce and send recipient letters/notices and Explanations of Benefits (EOB) in the recipient's preferred language	Met by interChange. The recipient EOMB process uses online pages to configure standard or specific criteria for generating monthly EOMB notifications. The monthly EOMB summary report indicates who received EOMB letters and the number of claims and dollar amount listed.

Financial Accounting and Reporting Processes Requirements

The following table, EDS Response to Financial Accounting and Reporting Processes Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Financial Accounting and Reporting Processes Requirements

RFP No.	RFP Requirement	EDS Response
40.14.1.61	Provides capability to perform financial cycles upon completion of each checkwrite and at month-end, summarize paid claims and financial transactions, update account balances and transaction files, and produce interface files and reports	Met by interChange. The interChange financial batch processing system is designed to meet this requirement.
40.14.1.62	Provides capability to account for and report to the State all program funds paid out and recovered in accordance with State-accounting codes and report specifications	Met by interChange. Numerous financial reports detail each aspect of the financial cycle from the gross, summary level into the detailed appropriations by funding code.
40.14.1.63	Provides capability for a process to designate which Federal fiscal year claim adjustments and other financial transactions are to be reported	Met by interChange and operational processes and procedures. The EDS Financial Management and Accounting organization performs these business function requirements.
40.14.1.64	Provides capability to prepare fiduciary statements in accordance with GAAP to account for all program funds received and disbursed under the Fiscal Agent contract	Met by customization of interChange. A new report will be created to meet this requirement.
40.14.1.65	Provides capability to produce general ledger to correspond to the checkwrites over the State's fiscal year; adjusts the general ledger account balances on June 30th to reflect activity between the last June checkwrite and June 30th	Met by interChange and operational processes and procedures. The EDS Financial Management and Accounting organization performs these business function requirements.
40.14.1.66	Provides capability to summarize checkwrite activity in the Financial Participation Report and general expenditure reports on a year-to-date basis and within ten (10) days of the State's fiscal year's end on June 30 ; provides capability to generate these	Met by interChange, with a portion of the requirement requiring customization code. There are several year-to-date balancing and summarization reports that detail the financial activity of the MMIS. If changes in the format, media, distribution, and frequency are needed, they will be

RFP No.	RFP Requirement	EDS Response
	reports in accordance with State-approved format, media, distribution, and frequency	developed.
40.14.1.67	Provides capability to summarize financial data to meet reporting requirements on a State and Federal fiscal-year basis	Met by interChange. The series of financial reports is stored in the online document management system. Additionally, the detailed financial data is available for MMIS ad hoc reporting through the interChange BIAR component.
40.14.1.68	Provides capability to ensure all reporting cross-checks and balances to other reports using the same data	Met by interChange. There are numerous balancing and cross-reference reports throughout the financial system that meet this requirement. The weekly financial balancing report details the balancing across numerous criteria.
40.14.1.69	Provides capability to produce reporting on providers required by the Federal False Claims Act	Met by customization of interChange. A new report will be created to meet this requirement.
40.14.1.70	Provides capability to maintain all records and reports of administrative expenses permitting the State to verify that the Fiscal Agent bills are accurate and appropriate to enable the State to claim Federal financial participation (FFP) on the Fiscal Agent fees at the appropriate rate	Met by interChange and operational processes and procedures. The EDS Financial Management and Accounting organization performs these business function requirements.
40.14.1.71	Provides capability to ensure that all financial reports can be tied into the basic financial activity recorded in Provider History	Met by interChange and operational processes and procedures with features. The EDS Financial Management and Accounting organization performs these business function requirements.
40.14.1.72	Provides capability to generate weekly, monthly, quarterly, and annual Medicaid and other EOB financial reports after checkwrites in accordance with State approved specifications, basis of accounting, and reporting deadlines	Met by interChange, with a portion of the requirement requiring customization code. The series of reports generated from interChange should meet this requirement. If additions or modifications are discovered during requirements validation, they will be developed.
40.14.1.73	Provides capability to balance details posted to each receivable transaction and update Claims History and Provider paid claims summary information	Met by interChange and operational processes and procedures. The EDS Financial Management and Accounting organization performs these business function requirements.
40.14.1.74	Provides capability to incorporate data from State-approved automated systems to satisfy accounting and record keeping objectives	Met by interChange, with a portion of the requirement requiring customization code. interChange accepts data exchanges from several entities such as banks or the state accounting system. If additional interfaces are necessary, they will be developed.
40.14.1.75	Provides capability for system-generated letters to providers requesting updated W-9s or a special IRS form depending on whether they are a first or second B-Notice	Met by customization of interChange. The creation of new UI panels, new letters in the letter generator component of interChange, and new batch processes will be developed to meet this requirement.
40.14.1.76	Provides capability for system logging and tracking of receipt date of each withholding and penalty request and completion date of withholding or penalty	Met by interChange. The A/R Disposition panel meets this requirement.

RFP No.	RFP Requirement	EDS Response
40.14.1.77	Provides capability to provide the State with confirmation and validation for each completed date of withholding or penalty	Met by interChange. The A/R Disposition panel meets this requirement.
40.14.1.78	Provides capability to implement backup withholding from all providers who do not respond to the notices within the required timeframes	Met by interChange and operational processes and procedures. The EDS Financial Management and Accounting organization performs these business function requirements.
40.14.1.79	Provides capability for mechanized copies of documentation to support compliance with IRS procedures and efforts to obtain information from providers in order to abate penalties assessed	Met by interChange. Documentation is stored and available through iTRACE and the EMC | Documentum image retrieval system. Letters are stored and retrievable through the Pitney Bowes DOC1 letter repository.
40.14.1.80	Provides capability to report year-to-date provider 1099 earnings	Met by interChange. The 1099 summary payment report meets this requirement.
40.14.1.81	Provides capability to create end-of-year 1099 for providers whose earnings exceed $600 on a calendar year basis and meet IRS criteria for issuance	Met by interChange. The Paper 1099 print report meets this requirement.
40.14.1.82	Provides capability to generate provider 1099 file and reports annually that indicate LOB, the total paid claims, plus or minus any appropriate adjustments and financial transactions	Met by interChange. The Paper 1099 print report meets this requirement.
40.14.1.83	Provides capability to issue corrected 1099s to providers prior to March 31st each year; provides capability to ensure that corrections are incorporated into the IRS file to report earnings for the prior year	Met by interChange. The Paper 1099 print report meets this requirement.

Cash Control and Bank Accounts Requirements

The following table, EDS Response to Cash Control and Bank Accounts Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Cash Control and Bank Accounts Requirements

RFP No.	RFP Requirement	EDS Response
40.14.1.84	Provides capability to automate and apply NC DHHS Cash Management Plan business rules and procedures to receive all program receipts in a State Treasurer designated bank Refer to *DHHS Cash Management Plan* in the Procurement Library.	Met by interChange and operational processes and procedures.
40.14.1.85	Provides capability for automated application of cash receipts and provide for online posting of the detail of receipts received to the system with simultaneous notice to for TPL recovery, Drug Rebates, FADS	Met by interChange and operational processes and procedures. The Weekly Accounts Receivable Summary report and the A/R Search, A/R Base information, and A/R Dispositions panels meet this requirement.

RFP No.	RFP Requirement	EDS Response
	recoveries business areas	
40.14.1.86	Provides capability for indexed images of checks and all written correspondence from or to the provider for audit purposes throughout the life of the Contract	Met through COTS integration. The COTS electronic document management system, Documentum, meets this requirement.
40.14.1.87	Provides capability to process and post transactions for all program cash receipts received in Fiscal Agent/bank managed lock-boxes	Met by interChange. The Financial Cash Receipt panel meets this requirement.
40.14.1.88	Provides capability to assign and retain a unique transaction control number, the date of receipt, the remitter's name, the remitter's bank name, purpose or reason code, the check/money order number, the transaction amount, and the unit to which the receipt is directed for dispositioning when there is no matching account receivable	Met by interChange. The Financial Cash Receipt panel meets this requirement.
40.14.1.89	Provides capability to account for disposition of all program cash receipts and adjustments within the month of receipt	Met by interChange and operational processes and procedures.
40.14.1.90	Provides capability for an audit trail of corrections to posted transactions	Met by interChange. Online viewing of audit trails is available throughout the financial system.

Budget Checking Prior To Payment of Claims Requirements

The following table, EDS Response to Budget Checking Prior To Payment of Claims Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Budget Checking Prior To Payment of Claims Requirements

RFP No.	RFP Requirement	EDS Response
40.14.1.91	Provides capability to link the detail financial transaction to the claim detail level activity	Met by interChange. The Financial Cash Receipt Base Information panel meets this requirement.
40.14.1.92**	Provides capability to produce balancing reports available online at detail and summary levels on budget availability	Met by interChange. The financial budgets and the period results panels give real-time information about each budget, how much has been used, and at what threshold a low-budget notification should be sent.
40.14.1.93	Provides capability to produce exception reports on un-reconciled balances or undefined chart of accounts shall be available online	Met through customization of interChange. A new report will be created to meet this requirement.

Accounting Processes Requirement

The following table, EDS Response to Accounting Processes Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Accounting Processes Requirement

RFP No.	RFP Requirement	EDS Response
40.14.1.94	Provides capability for integration of all Medicaid Accounting System (MAS) legacy system functionality, processes, data, reports and interfaces Refer to *Approved MAS Requirements & Business Rules—Updated 12-06-06* and attachments in the Procurement Library.	Met by interChange, with a portion of the requirement requiring customization code. The interChange system is designed to integrate with a state accounting system and most of the attributes are configurable to match the State's needs. If specific customization is necessary, it will be developed.

General Accounts Receivable/Accounts Payable Requirement

The following table, EDS Response to General Accounts Receivable/Accounts Payable Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to General Accounts Receivable/Accounts Payable Requirement

RFP No.	RFP Requirement	EDS Response
40.14.1.95	Provides capability for accounts receivable and accounts payable functionality that is integrated with case management and billing using the open item method to support collection of program overpayments from providers and amounts determined to be due from third parties Refer to *Approved AR-AP Requirements & Business Rules—Updated 12-19-06* in the Procurement Library.	Met by interChange, with a portion of the requirement requiring customization code. Accounts Payable and Accounts Receivable processing is fundamental to the interChange system. If specific customization is needed to meet this requirement, it will be developed.

Proposed Work Site for DDI Phase

RFP Reference: 50.2.4.1.1, Bullet 5, Page 274

EDS will continue its presence locally in Raleigh and will expand the current site at 2610 Wycliff Road, Raleigh, NC 27607. This will be the home of EDS' operations in support of the Replacement MMIS. This office is conveniently located within 15 miles of the State office at DHHS headquarters.

Our EDS facility will provide a professional business environment to facilitate a productive working atmosphere capable of accommodating required State personnel, EDS employees, and any supporting subcontractor staff. The facility will have the proper security, monitoring, and climate control capabilities that enable the North Carolina–based staff to fulfill their required technical and operational business functions.

The EDS facility will house portions of the required staff and data center supporting the DDI Phase of the Replacement MMIS project. This facility will provide the following:

- Private office space reserved for three State employees with Internet access.
- A training room accommodating up to 50 attendees
- Space supporting 25 on-site and/or remote State testers
- A data center capable of supporting the processing needs with the following features:
  - Uninterruptible power supply (UPS)
  - Power conditioning
  - Internal environmental controls
  - Fire-retardant capabilities, smoke and electrical detectors, and fire alarms monitored by security personnel

EDS has resources dedicated to the implementation of interChange throughout the United States, specifically in Plano, Texas; Vancouver, Wash.; and Herndon, Va. We also will use our leveraged applications delivery services teams across the United States, specifically in Lansing, Mich., and El Paso, Texas. These leveraged teams have been involved in our current and past MMIS implementations and are considered subject-matter experts for interChange, bringing their specialized skills to the overall team. Additionally, our Global

Testing Organization is primarily based out of Michigan but has resources across the United States. These EDS teams are located in facilities that provide the technical infrastructure capable of supporting the DDI Phase and are fully secured in accordance with the State's security policy.

Scope and Duration of Warranty

RFP Reference: 50.2.4.1.1, Page 274

EDS will provide an industry-standard six-month Replacement MMIS warranty, following the final delivery of the Replacement MMIS.

EDS' warranty covers repairs in defects in system and non-system deliverables during the warranty period. EDS will use technical staff to identify the root cause of such defects during the warranty period. We will use our information Tracking Repository and Collaboration Exchange (iTRACE) browser-based project management tool to track current defect status and progress toward defect resolution. With iTRACE, State personnel can check on the status of defects at any time. We also will report on defect status at the regularly scheduled project meetings with the State.

During this warranty period, any detailed system design changes implemented will be documented to incorporate modifications made as a result of correcting these defects. After identifying and reporting a problem or issue, we will develop and implement a corrective action plan. In the corrective action plan, we will document the issue or problem and research the situation to identify its root cause. We will develop alternative solutions and prioritize tasks in relationship to the work plan. We will evaluate the effect on the existing project schedule and look to any contingency plan activities, if needed.

When we have implemented the corrective action, we will update or correct corresponding documentation and revisit any affected training activities. We also will communicate the action taken with other areas of the project team.

We will have a formal change control process to document any discrepancies and their resolution and to manage changes to programs and libraries. If defects or issues are discovered, we will immediately have the responsible technical resource identify the cause of the problem, correct the problem, and complete retesting activities. We also will perform internal regression testing on the component to validate that no unintended changes have occurred to previously working functions. We will convene the change control board (CCB) to prioritize the repair and remediation work. This group will assign a priority based on defined project urgency levels and the consideration of both fiscal and program impacts. In response to emergencies, we will collaborate to resolve issues and address special needs.

Because some changes are driven by making corresponding changes in the rules engine and interChange tables, an advantage offered by the proposed solution is that we can address these changes quickly with an immediate update of a table that does not require technical intervention. The flexibility of the system and the quickness with which these changes can be applied and tested poses minimal risk to the implementation schedule and the start of operations.

50.2.4.1.2 Software Development and Systems Engineering Methodology

RFP Reference: 50.2.4.1.2 Software Development and Systems Engineering Methodology, Page 274; 10.9 Software and Systems Engineering Objectives, Paragraphs 1-2, Page 9

A project's success depends largely on using a methodology that provides a solid foundation for software development. It also depends on recognized tools and techniques used to effectively manage and control the project. EDS is committed to achieving project success by using a disciplined and proven approach to software development and system engineering processes.

State of North Carolina

A project's success depends largely on using a methodology that provides a solid foundation for software development. Project success also depends on a set of recognized tools and techniques that are used to effectively manage and control the project. EDS is committed to achieving project success by using a disciplined and proven approach to software development, system engineering processes, and project management.

We will use our Systems Life Cycle, Version 3 (SLC 3) and Project Management methodology, Version 2 (PM 2) methodologies to develop and maintain the Replacement MMIS for North Carolina. SLC 3 establishes a common development cycle for supporting orderly system development with client input and involvement. PM 2 reflects the industry standards and guidelines as outlined in the Software Engineering Institute's (SEI's) Capability Maturity Model (CMM) and the Project Management Institute's (PMI's) Project Management Body of Knowledge (PMBOK). These project tools are part of our corporate standards and have been used on our application implementations, regardless of industry, market segment, or project size. They have been enhanced over time by lessons learned and changes in the marketplace.

The State directly benefits from the EDS experiences in applying this development approach to similar projects. The EDS methodologies and project management principles were used successfully for previous interChange implementations; namely, Kansas, Oklahoma, Pennsylvania, Tennessee, and Kentucky. In addition, EDS is using SLC 3 and PM 2 in current implementations in Alabama, Connecticut, Florida, Massachusetts, Oregon, Wisconsin, and Ohio. Led by Implementation Manager Dean Taunton, the development team in North Carolina will use the knowledge and insight gained from these development projects as lessons learned are shared and subsequently used to improve our interChange development process.

The following table, Project Phases and Roles, outlines our software development approach.

Project Phases and Roles

Phase	Our Approach	EDS Role	State Role	Benefit
Requirements Analysis (Define/ Analyze)	Conduct requirements validation (RV) sessions with resources that have State business knowledge and interChange expertise	Conduct RV sessions with the State and document decisions and assumptions with the key project stakeholders	Meet with EDS to answer questions and clarify requirements and review and approve requirements analysis documentation	Clear understanding of the project requirements and expectations from the beginning of the project that lays the foundation for the following phases
Design	Match business and technical requirements with interChange functions or operational processes	Design configurable and customized changes and design business processes and technical solution	Review and approve business process and technical design documentation	Clear identification of the necessary modifications and establishment of reasonable time frames for deploying each type of change
Construction (Produce)	Apply proven construction processes, tools, and appropriate reuse of interChange components	Update configurable items, construct program changes, and perform unit testing for defined change orders	Provide input on configurable items and review progress of change orders	Increased speed and efficiency of constructing components by using existing tools and processes
Testing (Optimize)	Verify the interChange work product through multiple stages of testing	Execute test plans and verify individual and integrated components	Verify test results and approve product for implementation	Confirmation that the product delivered is accurate and acceptable for operations in a production environment
Deployment (Implement)	Create and maintain a detailed deployment/rollout work plan to transition	Prepare narrative plans and detailed task plans and maintain calendar to plan and track progress	Approve and execute transition plans with EDS	A successful transition from the Legacy MMIS+ to the Replacement MMIS that minimizes impact to project stakeholders
Documentation	Document standardized system and project documentation in a central repository, iTRACE	Create and maintain documents using standard forms and templates	Review system and business documentation	System and business documentation that is always current and easily available to authorized users
Quality Assurance	Conduct internal checkpoints and walkthroughs during each phase of the project and monitor current metrics through iTRACE	Perform work product reviews (WPRs) before State delivery, perform technical walkthroughs, and review key reports such as defect listings	Review and approve project deliverables during each development phase	Defects and anomalies that are identified early in the development process and resolved more efficiently than if they were discovered in later project phases

interChange

One important aspect to the software development approach for the Replacement MMIS is that the base version of the multi-payer interChange system already exists. After the infrastructure is established and interChange is installed, interChange will be available for configuration. At the start of the project, configuration of reference files will begin. Policy definition of provider contracts, recipient aid category groupings, and the defined benefit plans will indicate which recipient is available to receive services from which provider for a given agency. Each payer will be involved from the beginning of the development process in verifying the defined code sets and the policy rules configured in interChange. Additionally, modifications to interChange will be developed to meet the State-specific requirements to support the State's healthcare coverage programs.

As a result of having two different project work types, two types of software development will be used during the project life cycle. The following two types of changes are structured to follow the EDS SLC 3 methodology and managed using PM 2:

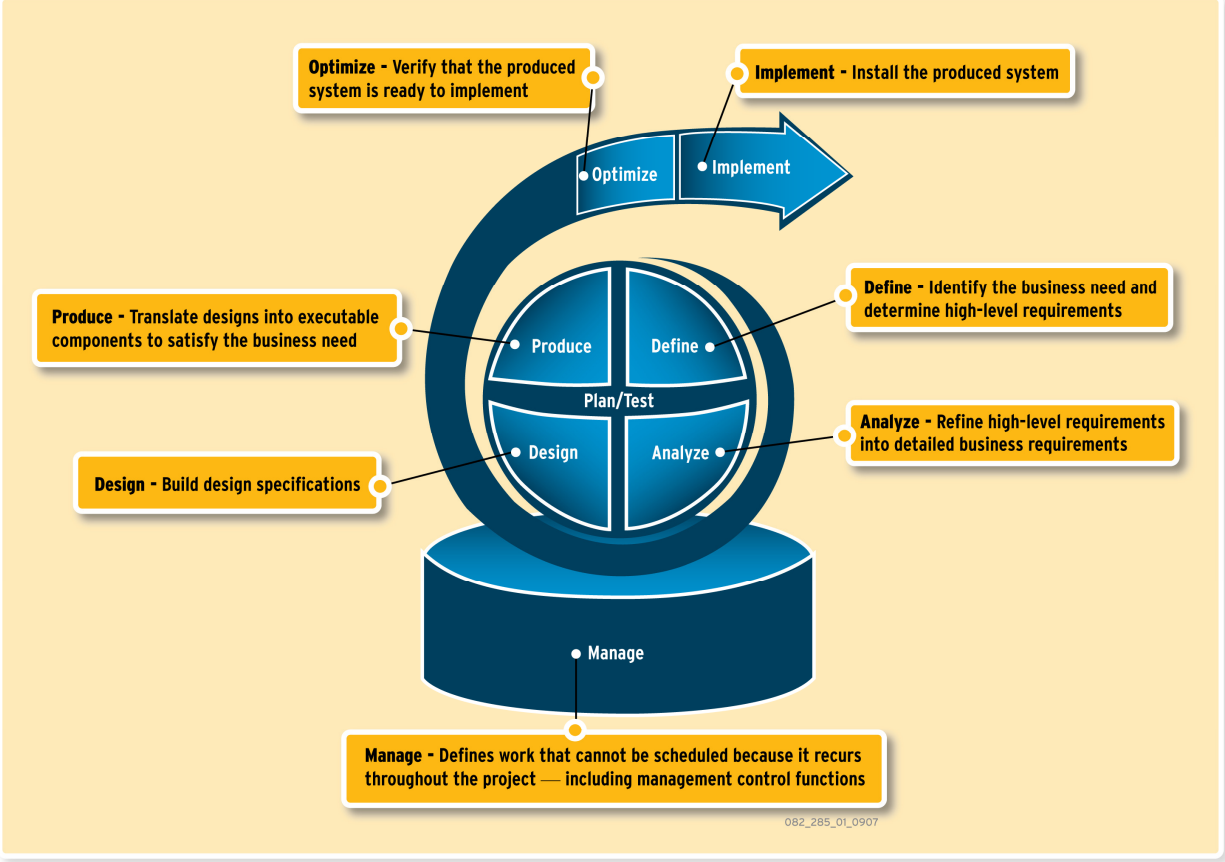
- **Configurable items—**System functions available in interChange and configured to meet State business requirements
- **Change orders—**System functions unique to the State and not currently in interChange, where interChange is customized to meet State business requirements

SLC 3

SLC 3 is the EDS systems engineering methodology that evolved from our collective systems engineering experience, academic knowledge, and industry insight. It closely follows the development approaches recommended by SEI. SLC 3 integrates with the CMM Integration (CMMI) framework by supporting the CMMI key process areas at the detail level.

The following exhibit, Systems Life Cycle, Version 3, summarizes the SLC 3 methodology.

Systems Life Cycle, Version 3



SLC 3 balances iteration with management control to develop solid business solutions.

SLC 3 consists of a six-phase spiral approach that blends planned iteration of phases with management control. The methodology provides the means to focus on the appropriate use of iteration to manage and mitigate risk and enable project success.

The six phases of the SLC 3 methodology are described as follows:

- **Define—**Identify the business needs and set project direction, determine high-level requirements, and secure agreement on the baseline project scope
- **Analyze—**Refine high-level requirements to address the business needs within the project direction; define, validate, and trace detailed business requirements; and collaborate with clients to define business processes and roles
- **Design—**Design solutions to satisfy detailed business requirements, create design specifications that support the business and technology solutions, and devise conversion and migration procedures

- **Produce—**Translate designs into executable components, make sure hardware and software configuration required for the testing and transition environment is functional, and execute and verify system testing
- **Optimize—**Achieve optimal system performance, verify that the produced system is ready to implement, and obtain formal acceptance from client and implementation approval
- **Implement—**Install the solution and complete the transition, verify that implementation plans are thorough and contingencies and risks are considered, and conduct project close-down, capturing feedback for continuous improvement

The six phases in SLC 3 are supported by the Manage component. This function emphasizes the importance of providing management control of the phases throughout the life of the project. A repository of common process sets organized in the EDS Global Applications Delivery Quality Management System (GAD QMS) supports this component. GAD QMS provides the team with detailed project information on processes, tools, roles, and responsibilities that have proven to be effective for the delivery of applications. The materials provide sufficient flexibility so that when they are leveraged for the State, they can be customized and still maintain their original value to the process.

Each phase and iteration also contains the Plan/Test components to verify and validate results as development progresses. This cycle repeats for each phase, as follows:

- **Plan—**Represents the preparation required to perform the objectives of the phase effectively
- **Do—**Represents the actual performance of defined work within each phase
- **Test—**Verifies that the work is performed as specified and the business need is properly addressed

SLC 3 emphasizes the iterative nature of application engineering to facilitate solutions that meet rapidly changing client business needs. SLC 3 lets us deliver value to the State by providing a strong combination of engineering discipline and flexibility. SLC 3 decreases systems engineering risks by using the State's active involvement throughout the process and using planned iterations to validate intermediate results. The methodology supports the participation of multiple stakeholders. In North Carolina, this is applicable with multiple agency involvement in the development process.

As shown in the preceding exhibit, the SLC 3 structure is logical rather than sequential. It provides the flexibility necessary for application configuration, customization and continuous process improvement during the systems life

cycle. Most of the development in SLC 3 occurs in the planned repetition of a series of the four phases described above: Define, Analyze, Design, and Produce.

Adherence to the SLC 3 methodology is supported on the following organizational levels:

- **By leader expectation—**Project leaders are accountable for the processes, procedures, and checkpoints.
- **By peer expectation—**The standard requirements and deliverables are communicated and reviewed for accuracy and completion by peer review.
- **By security permissions—**Software modifications cannot progress from testing environments to production environments without the specific approval of someone with the appropriate authorization.
- **By State review—**Checkpoints during the processes require review and approval from the State.

SLC 3 complements CMMI and PMBOK principles and other EDS methodologies such as those that establish business direction, identify business process change opportunities, and set technology direction at an enterprise level.

GAD QMS consists of project management tools, including PM 2, and a best practices repository from EDS organizations around the globe. GAD QMS enables the project team to employ increasingly mature processes consistent with those required of the SEI CMMI levels.

Iteration

SLC 3 balances iterative development, the repetition of certain phases, with management control to develop business solutions. The appropriate use of iteration evolves the business solution, thereby providing the State with opportunities to clarify expectations and anticipate changing business needs. Iteration allows the project team to selectively perform a portion of work, verify and validate results with key stakeholders, then have those results available to support the next portion of work.

In SLC 3, there are two iteration strategies. One approach is incremental iteration, where each iteration focuses on specific areas of functional capability. The second approach is called evolutionary iteration. In evolutionary iteration, the entire solution is within the realm of each iteration, but the levels of investigated detail and refinement increase in each successive iteration. Most projects will incorporate a combination of both approaches.

Incremental iteration may be used during interChange development when development may be focused on one system area such as the recipient management function during the first iteration and the eligibility verification system in a following iteration.

Evolutionary iteration is applied when setting up claim edit and audit criteria in interChange. The rules established can be constructed, tested, modified, and retested until the State and EDS are satisfied that the results will reflect current policy.

SLC 3 does not dictate how to use iteration in a project. The iterative strategy is based on the specific work involved. The number of iterations and the scope of each iteration are determined with the best information available early in the project. Many factors, such as the complexity of the application, understanding of the business needs, and the client's availability, are considered.

Iteration is managed to reduce project risks, anticipate and respond effectively to changes in project requirements, improve client communication, and confirm the usability of the final solution.

Iterative software development offers the following benefits to the State:

- Applying the learning from previous iterations creates the best overall solution.
- Providing a clearer concept of the intended solution as early as possible in the project life cycle verifies and validates the business solution.
- Using preliminary iterations validates decisions that may be based on major assumptions and other related decisions. Necessary adjustments can then be made before spending unnecessary time and resources.
- Using the results of intermediate iterations shows the State and other key stakeholders actual results and project progression.
- Involving key stakeholders at the right time throughout the project fosters client satisfaction and delivery of an effective solution.
- Focusing resources and management on appropriate portions of the solution improves both quality and productivity.

iTRACE

The SLC 3 and PM 2 methodologies are closely integrated within our browser-based information Tracking Repository and Collaboration Exchange (iTRACE) tool, which is based on industry-standard project management guidelines and quality assurance principles. The iTRACE tool provides the central location for project documentation, and it facilitates communication between project team members from EDS and the State. The iTRACE user interface is available through each authorized user's browser, allowing direct access to the latest in system development documentation that can be viewed the instant it is updated. The iTRACE repository of information is woven into our development methodology's work patterns, leading to consistent monitoring and management of how requirements are being met and the status of the DDI project effort. The tool has proven to be effective during previous MMIS projects in other states

where EDS has implemented interChange. Furthermore, each of the other states have continued to use iTRACE after they implemented interChange and recognize it as a valuable tool for maintaining the application during ongoing operations.

iTRACE tracks, manages, and reports work items for the following process areas and project workflows:

- Requirements
- Design specifications
- Walkthrough documentation
- Issues
- Risks
- Change orders
- System release schedules
- Test cases
- Test data examples
- Test results
- System objects (Web pages, panels, report, tables)
- System function documentation (workflow, processes)
- Data element dictionary
- Publications (training documentation, user manuals, HIPAA guides)
- Meeting minutes
- Sign-off/approval documents
- Quality metrics

iTRACE is used in each phase of the development life cycle. Because it is integral to the development work patterns, it is always up to date, presenting the most current project documentation and application information. At the beginning of the project, EDS will record initial project requirements into iTRACE to establish a requirements baseline. In fact, the requirements submitted by the State in the RFP have already been loaded into a North Carolina iTRACE instance.

Requirements were assigned a gap analysis categorization to assist in understanding the interChange function that is already in place and the customization that will be required to meet each of the State's business needs. The values defined for the requirement type include the following:

- Met by interChange
- Met by interChange with configuration
- Met by customization code
- Met by COTS
- Met by operational process
- Met by interChange and operational process
- interChange exceeds requirement

- Informational
- Cancelled

As part of requirements validation, and as changes are identified, the changes will be associated to the original requirements in iTRACE. Likewise, as a detailed design is performed, requirements are linked to each system component or object. When test cases are created, they are linked to the requirements and system components as well.

The process of associating work items facilitates change management and supports the impact assessment process performed during the analysis and approval phases. iTRACE tracks, manages, and reports the changes made to a customer service request (CSR), including identifying the changes made, the individuals making the changes, and the dates and times of the changes. The State can easily track the history of change orders initiated for a CSR, the individual who made the request, and the time and date of the request. Historical information also includes the estimated and actual cost and duration for any change order, as well as cumulative cost and schedule impacts for any change for any period the State specifies.

Complete and thorough documentation will be maintained in iTRACE and available for review by the State and the Centers for Medicare & Medicaid Services (CMS). State staff can see the current status of virtually any aspect of the project by simply linking to the appropriate page in iTRACE.

For ongoing operations, iTRACE will assist the State and EDS in establishing reasonable completion dates and setting priorities of projects. The State and EDS management staff also will review current priorities and time lines, change priorities by adding new tasks and target dates, and immediately see the effect of the new priorities on pre-existing priorities and their target dates.

Potential and approved change orders will be entered and tracked within iTRACE. This information will support the prioritization process because it allows the State to review the existing work yet to be completed and the cost/benefit of the change requested. Change requests that are not approved will have their status changed to cancelled.

The following sections describe each of the processes during software development and how iTRACE is used to effectively manage and control these phases of the project.

Requirements Analysis

The requirements analysis process is performed during the Define and Analyze phases of the SLC 3 methodology. The result of these phases is to determine detailed technical and business requirements that are clear, complete, appropriate, and verifiable. EDS places emphasis on this process by assigning

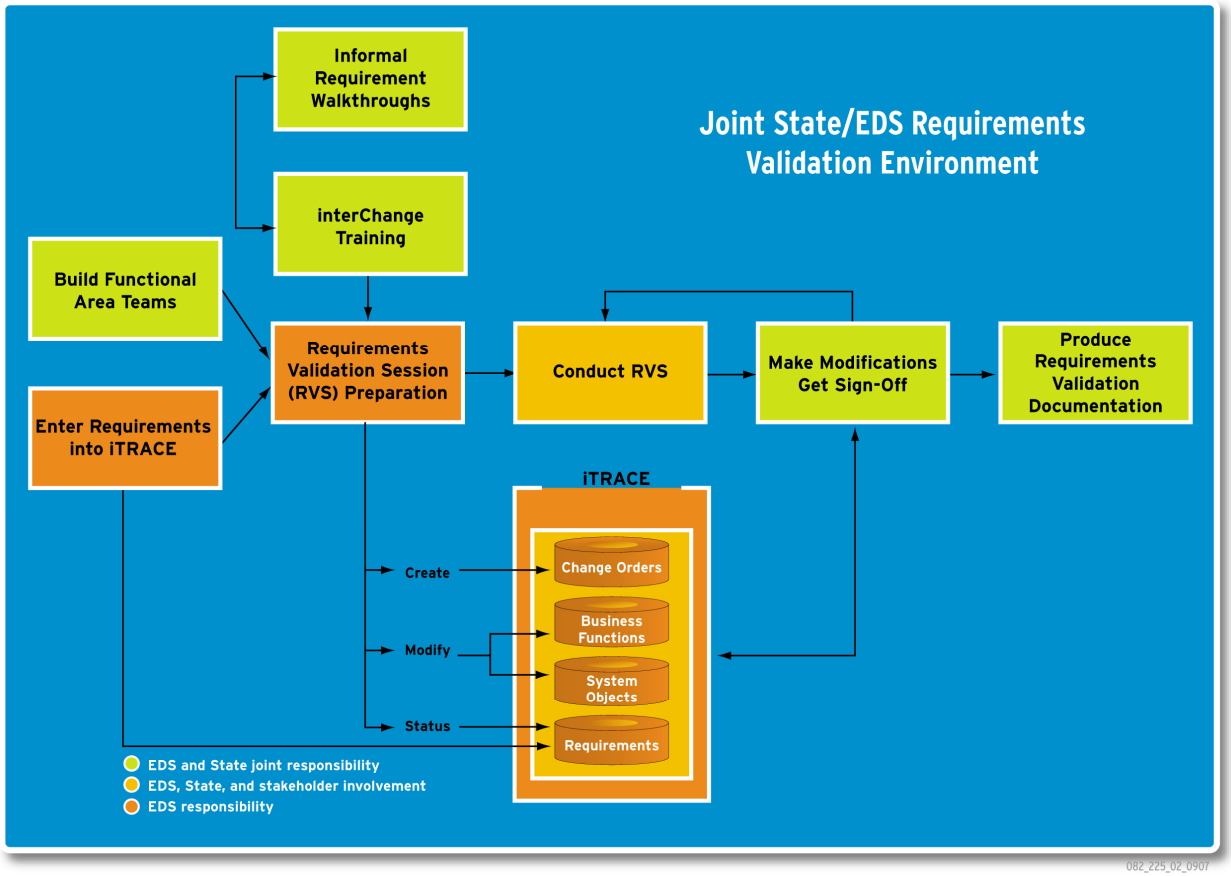
people with business knowledge of North Carolina healthcare programs and expertise in interChange functions and configuration.

During this time, requirements validation (RV) sessions are conducted with the State staff members. These sessions are designed to define the specific technical and business process requirements for the State. They focus on clarifying requirements for the system and reviewing how both system and business processes are needed to meet the requirements.

Documenting the effect or non-effect of requirements on each payer in the State is an important part of this process. The input from each payer is critical to the success of this phase. This will be our opportunity to confirm the evaluations that were performed as part of the gap analysis that occurred in responding to the RFP. The assigned requirement type is used to assist with understanding the interChange function already in place and the customization that will be required to meet each of the business needs.

The following exhibit, Requirements Validation Work Pattern, depicts the work pattern that EDS follows for medium and large projects so that stakeholders have a common understanding of the requirements.

Requirements Validation Work Pattern



Requirements validation builds a common understanding and agreement for interChange.

The steps in this work pattern are further described as follows:

- **Build functional area teams—**Successful requirements validation requires dedicated participation from DMA, DMH, DPH, ORHCC, and EDS. In addition, other key stakeholders may be identified that will provide constructive input to the process. The functional area teams are built from business and technical staff members that have strong familiarity with the business requirements and the technical system objects.
- **Enter requirements into iTRACE—**Every requirement for the Replacement MMIS has been entered into a database and will be available online in iTRACE for authorized users from DMA, DMH, DPH, ORHCC, and other State users to see. Information includes RFP requirement text, proposal questions and answers, EDS' proposal response, requirement status and notes, system objects, links to other related requirements, and test case information.
- **Prepare for RV sessions—**Preparation for validating requirements occurs when the functional area team members review the requirements information stored in iTRACE. Documentation is available from previous reviewers that may contain assumptions or notes about the requirement.
- **Conduct informal requirements walkthroughs—**The informal requirements walkthrough sessions are used to gain a mutual understanding of the requirements for a functional area and how interChange meets them. These reviews provide an opportunity for project stakeholders to collaborate on requirements, discuss potential solutions, and resolve issues early in the development process.
- **Conduct interChange training—**Training sessions are held so that project stakeholders can gain knowledge of how interChange operates and gain an initial understanding of the functions already present within the base interChange application.
- **Conduct RV sessions—**The purpose of the RV session is for each functional area team to confirm each team member's understanding of the requirement disposition. Requirements are assigned a type based on whether interChange meets the RFP. Subject-matter experts (SMEs) from each functional area participate in the RV sessions. These resources collaborate with the team members to focus on the requirements that will result in change orders.
- **Make modifications and obtain sign-off—**As a result of the RV sessions, requirements that require system modifications will be either met by configuring interChange or met by customizing interChange. The modifications are documented and tracked through change orders in iTRACE. State sign-off is obtained after each type of requirement is in an acceptable status.

- **Produce RV documentation—**RV documentation is generated from the iTRACE database of requirements. Documentation is created by extracting the content of iTRACE for the functional area and delivering it to the State as a single deliverable. The deliverable is a culmination of approvals for each requirement during the review sessions.

Every project requirement is loaded into the iTRACE database for tracking purposes. Each requirement is associated with other key elements such as technical area, system objects, and test cases. The status and status history of each requirement also are maintained.

As shown in the following exhibit, Sample Requirements Analysis Page, the activities during requirements analysis are managed and controlled in iTRACE.

Sample Requirements Analysis Page

Every project requirement is loaded into the iTRACE database for tracking purposes. The Requirements Analysis page displays the most current project information and provides links to related documentation such as the associated use and test cases.

The Requirements Analysis Phase also includes two related work efforts that are critical to the success of the project. Data conversion tasks are performed that analyze each payer's files and data sources so that EDS can accurately and efficiently transfer required data from the legacy files to the Replacement MMIS files. In addition, the specific policy rules are researched and configuration tasks are performed to extract and document the State's edits and audits for each payer.

Design

The purpose of the design process is to build design specifications that will be used to produce and implement a system that satisfies the requirements. Both business and technical components are considered during the Design phase. During this time, EDS will match the existing interChange functions with the requirements that were defined during the Define and Analyze phases. The activities during Design are managed and controlled in iTRACE. iTRACE provides a place to store, link, and access design artifacts and documentation. It supports the traceability of requirements.

The design of each functional area is organized in iTRACE, as demonstrated in the following exhibit, Sample Design Artifacts Page.

iTRACE provides a place to store, link, and access design artifacts and documentation. The technical details used to design modifications are provided, including file and data field attributes. In addition, the associated requirements are displayed.

Construction

The construction process is performed during the Produce phase of the SLC 3 methodology. The purpose of this phase is to translate design specifications into automated and nonautomated components that meet the client's requirements. These components are tested both as independent units and as an integrated system.

For interChange, there are two different types of Produce activities. In some cases a requirement can be met by configuring parameters or rules that already exist in interChange. In other cases, components are constructed as a result of change orders (CO) that are created during the Business and Technical Design phases of the project.

iTRACE provides a central location for interChange developers to produce their components. The Developer section provides documentation on the processes and tools for making changes in each environment. In addition, iTRACE is valuable in managing the COs. COs are grouped by system area, where each modification is estimated and actual effort is tracked, as shown in the following exhibit, Sample Change Order Management Page.

Sample Change Order Management Page

iTRACE is valuable in managing the COs, which are grouped by system area. The CO pages provide valuable information to project members, including solution information, requirement references, status history, and estimated and actual hours for the associated modifications.

Testing

The testing process occurs during the Produce and Optimize phases of the SLC 3 methodology. Various levels of structured testing are performed throughout the systems life cycle. More than 16,000 test cases will be executed to validate the interChange application. In summary, the following stages of testing are used for successfully implementing the Replacement MMIS with interChange:

- **Unit testing—**Individual component testing performed and verified by the EDS development team
- **System testing—**Combined component testing performed and verified by EDS
- **Inter-system testing—**Testing performed for the major components and interfacing systems and verified by EDS, the State, and external application testing teams
- **Data conversion testing—**Converted data from the existing legacy systems to the Replacement MMIS structure verified by EDS and the State
- **User acceptance testing—**User-defined test cases executed and verified by the State with EDS assistance
- **Parallel testing—**Test cases that validate the accuracy of claim adjudication between the existing system and the Replacement MMIS
- **Volume/stress/performance testing—**High volumes of claim transactions executed to identify possible performance issues
- **Regression testing—**Test cases executed to validate that subsequent system changes do not adversely impact previously working functions

A set of powerful, industry-standard tools are used during several stages of testing. The suite of HP testing tools is used for automating test cases and tracking test progress. HP LoadRunner will be used for performance testing. Additionally, Critical Logic's Right From The Start (RFTS)/TMX tools are used for automated test case generation and execution during unit and system testing. The approach to testing is described in detail in proposal section 50.2.5.3 Master Test Process and Quality Assurance Approach, where the V Model shows the testing-related activities that occur in each development phase of the project.

The common tool used to manage each of the testing artifacts is iTRACE. iTRACE supports the testing and verification process efforts by providing an organized structure to testing. The following exhibit, Sample Test Case Page, shows how a test case is documented in iTRACE.

Notebook	Use Case Name	Test Case Status**	Release
Eligibility Determination	EL-002 - Maintain Recipient Data		

**Test Case Status: (x) Not Run, (P) Passed, (F) Failed, (D) Deferred, (B) Blocked: blocked by another failure or availability of data, etc

Associated Requirements

Requirement ID	*Description*
40.2.2.6.sub2.d	Retain fields from source files and allow editing to systematically link individual recipient information with case/family members;
40.2.2.6.sub2.o	Record head of household and payee information from FLORIDA and other source files, and allow usage to be controlled by rules set by the State; and
40.2.9.1	**Recipient Maintenance Overview** FMMIS/DSS must maintain comprehensive information on all Medicaid recipients, including demographic information, multiple addresses, head of household and family relationship information. It must contain all eligibility information from source files, including all relevant spans and categories of eligibility. Most recipient data fields cannot be changed in FMMIS/DSS, as they are updated automatically from source systems. However, there must be a means of posting notes to the recipient file to be used by Contractor and State staff in resolving discrepancies with the source files. In rare cases, FMMIS/DSS must allow limited fields of data to be entered by State or Contractor staff and to override information from source files. For example, State staff may know a recipient's county of residence to be different than the source file indicates. In that case, FMMIS/DSS must allow the State staff member to post the new county of residence to a new field, which FMMIS/DSS must recognize during the Recipient Enrollment process. The Contractor must provide mechanisms for authorized individuals to view, enter and correct certain recipient information. This functionality should be Web-based and meet the design standards of Section 40.1.3.1. FMMIS/DSS must log all manual entries and changes to recipient files, and include the author of each. The Contractor must perform Quality Control and recipient file error sampling. All recipient files, including log files must be available to Medicaid staff authorized by the State.
40.2.9.6.sub2.c	Allow users to access all recipient related information, including recipient eligibility, demographics, family relationships, Benefit Plan assignments, choice selections, service limitations, spend-down, and all other recipient information maintained in FMMIS/DSS;
40.2.9.6.sub2.d	Provide navigation links to view related family members;

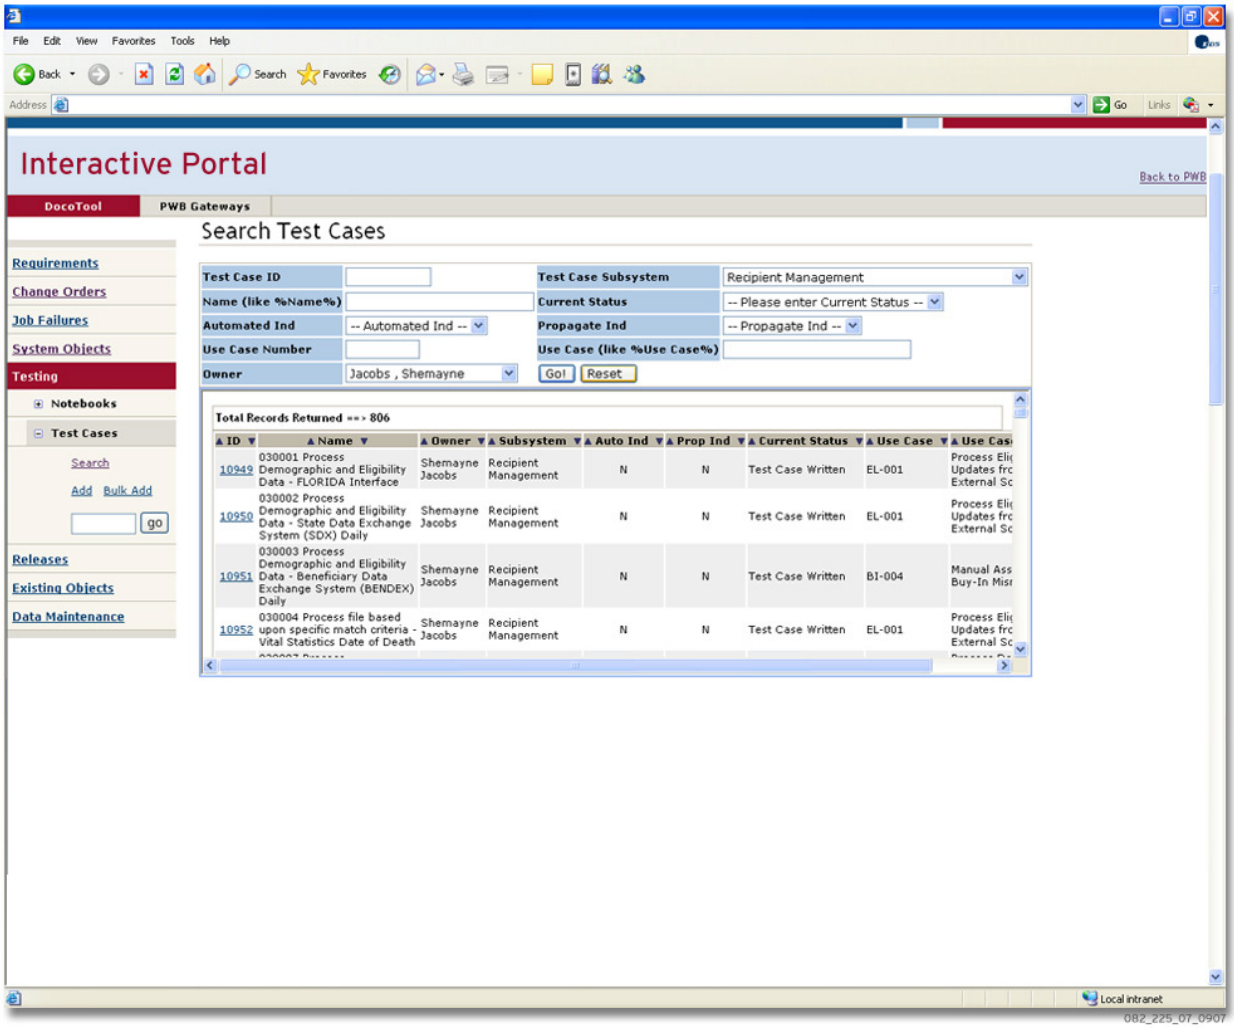
iTRACE supports the verification process efforts by providing an organized structure to testing. Each test case is displayed with its status history. In addition, iTRACE provides convenient links to detailed information such as the associated requirements, associated system objects, test data, and test results.

The status of testing is easily obtained through simple queries against the iTRACE data, as shown in the following exhibit, Sample Search Test Cases Page.

Sample Search Test Cases Page



Users can conduct queries against iTRACE data to check the status of testing. Users can easily click on the iTRACE links to access the current details of a test case.

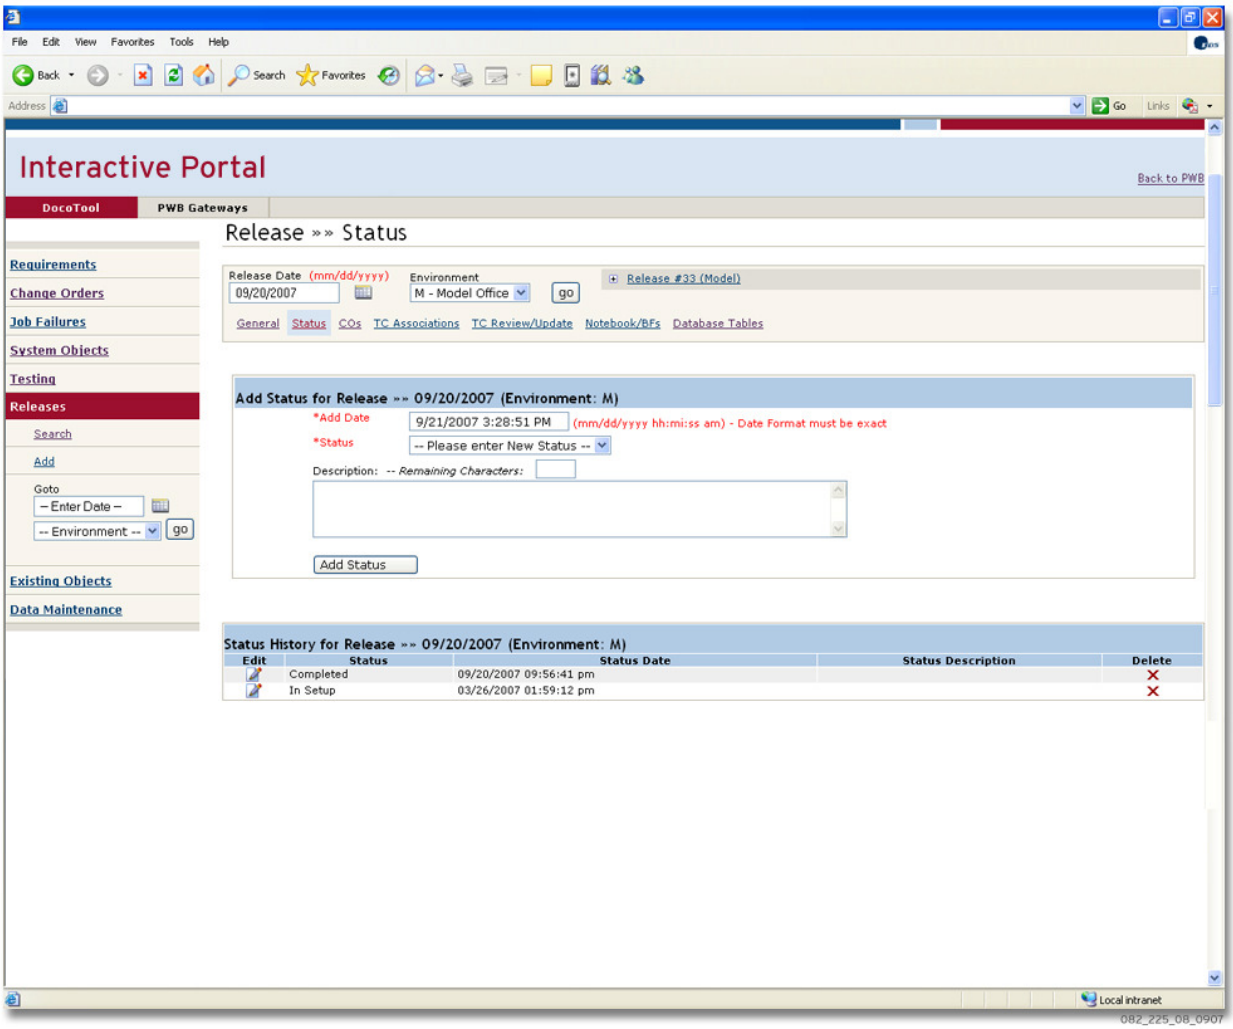
Deployment

The deployment process occurs during the Implement phase of the SLC 3 methodology. EDS will create and maintain a Deployment/Rollout work plan that will detail the processes and planning activities that are necessary for a successful transition from the Legacy MMIS+ to the Replacement MMIS. Our 30 years of experience supporting the State and the variety of North Carolina stakeholders gives us the insight into scheduling the cutover activities that will minimize impact to affected areas.

The detailed deployment/rollout plan prepared by EDS will use narrative plans, detailed task plans, and a daily calendar of activities to plan for and track progress toward the final implementation date.

Modifications are organized by software release. The specifics of each release are documented in iTRACE, and detailed information is easily accessed, as shown in the following exhibit, Sample Release Status Page.

Sample Release Status Page



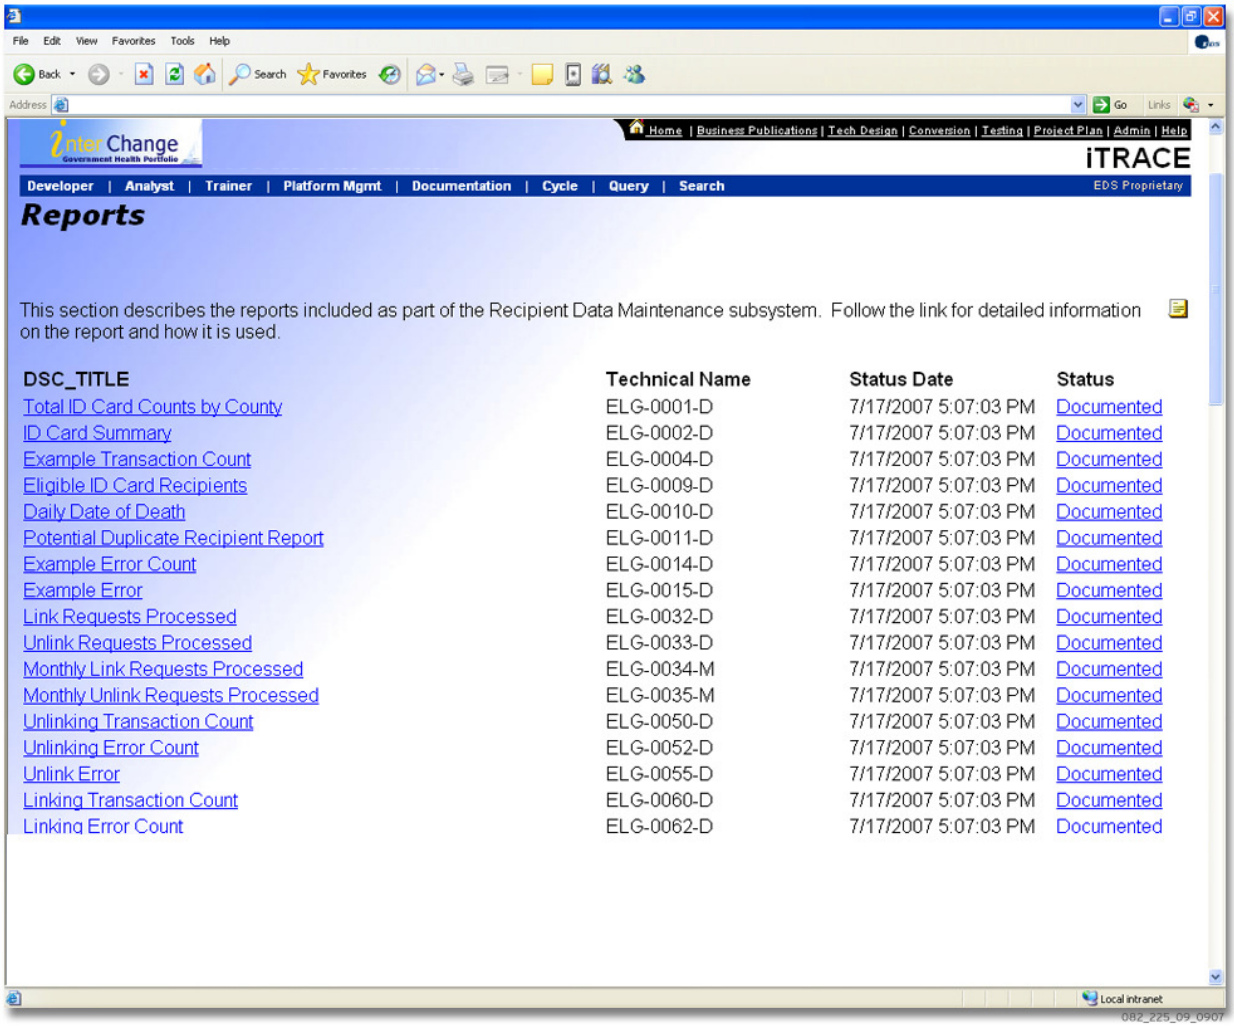
iTRACE is used to document the specifics of each software release, such as status history and environment, and provides links to related information such as requirements, COs, job failures, system objects, and the testing artifacts.

Documentation

Documentation is critical to the success of developing and maintaining the Replacement MMIS. Additionally, it is critical for accurate communication with stakeholders at the State. Documentation is finalized during the Deployment/Rollout Phase.

iTRACE is the central repository of project and system documentation. System documentation is organized by functional system area. Each system area contains reports, job streams, panels, data models, data element definitions, and more. The following exhibit, Sample Reports Page, shows how iTRACE provides access to report documentation.

Sample Reports Page



iTRACE is the central repository of all project and system documentation. The links in the Reports page provide users quick access to the most current system information.

Quality Assurance

The processes supporting quality assurance are integrated throughout the SLC 3 methodology. EDS will develop and maintain a quality plan for the project, which will define the processes to be used to validate conformance by the type of work product. Each phase of the SLC 3 contains an informal or formal checkpoint review of the outputs or deliverable. For example, during Requirements Analysis and Testing phases, the work product for each process

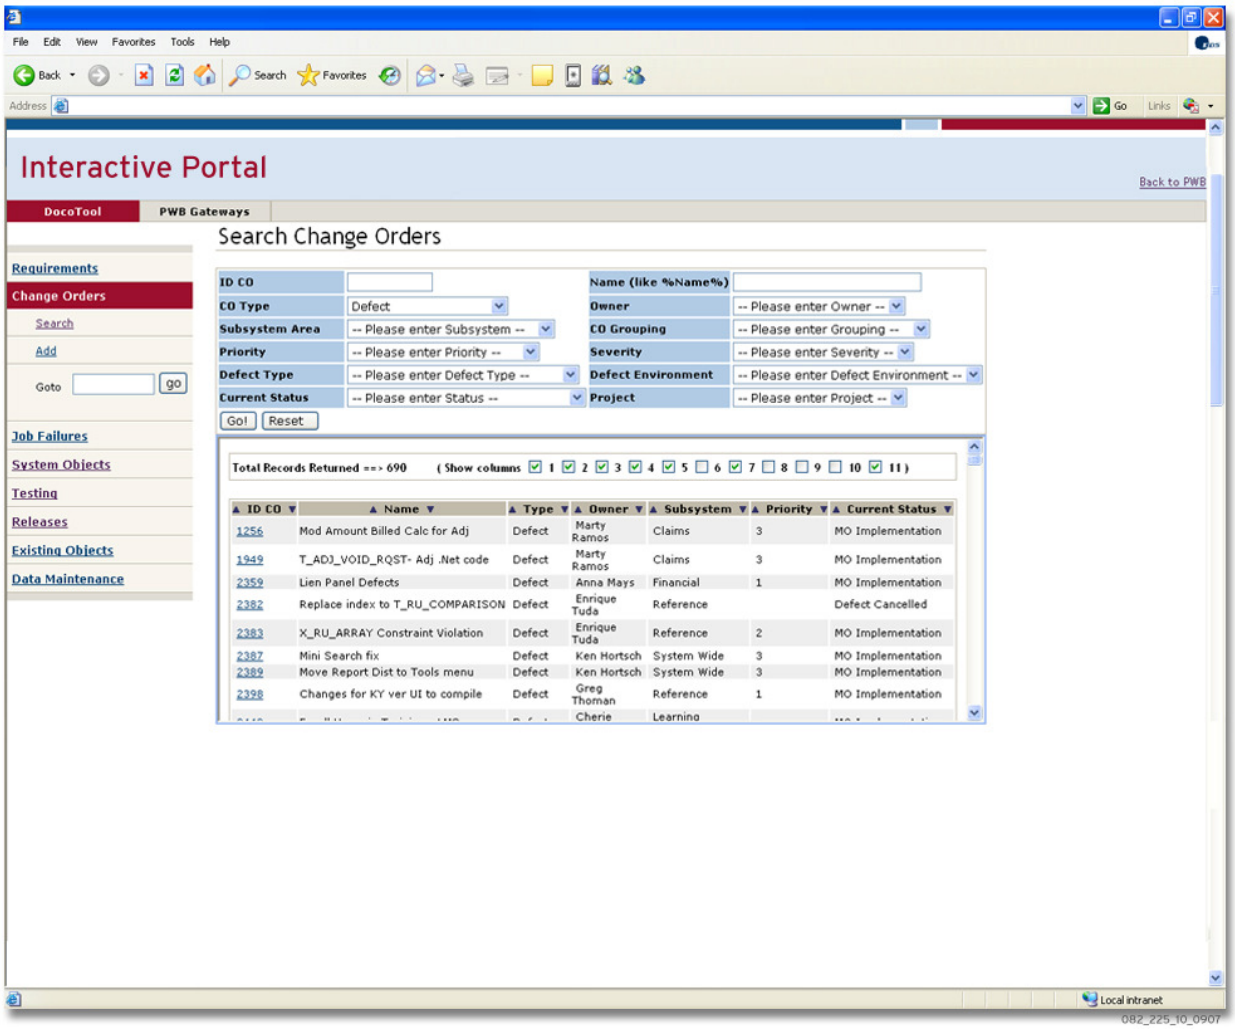
area will be examined through a work product review (WPR) before delivery to the State. During construction, a technical walkthrough is performed with developers to review components and unit testing results.

Defects identified during testing are managed through TestDirector and iTRACE so that issues can be resolved as efficiently as possible. Defects are assigned a severity, status, and owner so that issues can be appropriately managed. Quality metrics can easily be produced using the information contained in the Metric Reporting Suite in iTRACE. The following are examples of reports that are set up in iTRACE:

- Defects Outstanding Listing
- Defects by Status
- Defects by Subsystem
- Defects by Owner
- Defects by Developer
- Defect Age Listing

Additionally, customized queries can be executed to provide insight into defects. The results are used to verify that issues are being addressed and will help to assess the quality of the product at various levels. The results of the queries can be logically displayed on the page or exported to Microsoft Excel. The following exhibit, Sample Query Results, shows the results of a sample query of defects.

Sample Query Results



Query results can be logically displayed on the page or exported to Microsoft Excel. Users can easily sort the results and focus their attention on specific areas, knowing that they are viewing the most current project data.

Quality assurance assessment reports are easily created using iTRACE. The metrics in these reports are critical in identifying areas that need improvement. Because the project data is maintained and associated in iTRACE, processes are examined at many levels; for example, by system area, error type, or resource. The metrics information on these reports is closely examined to identify trends and problem areas and take corrective action.

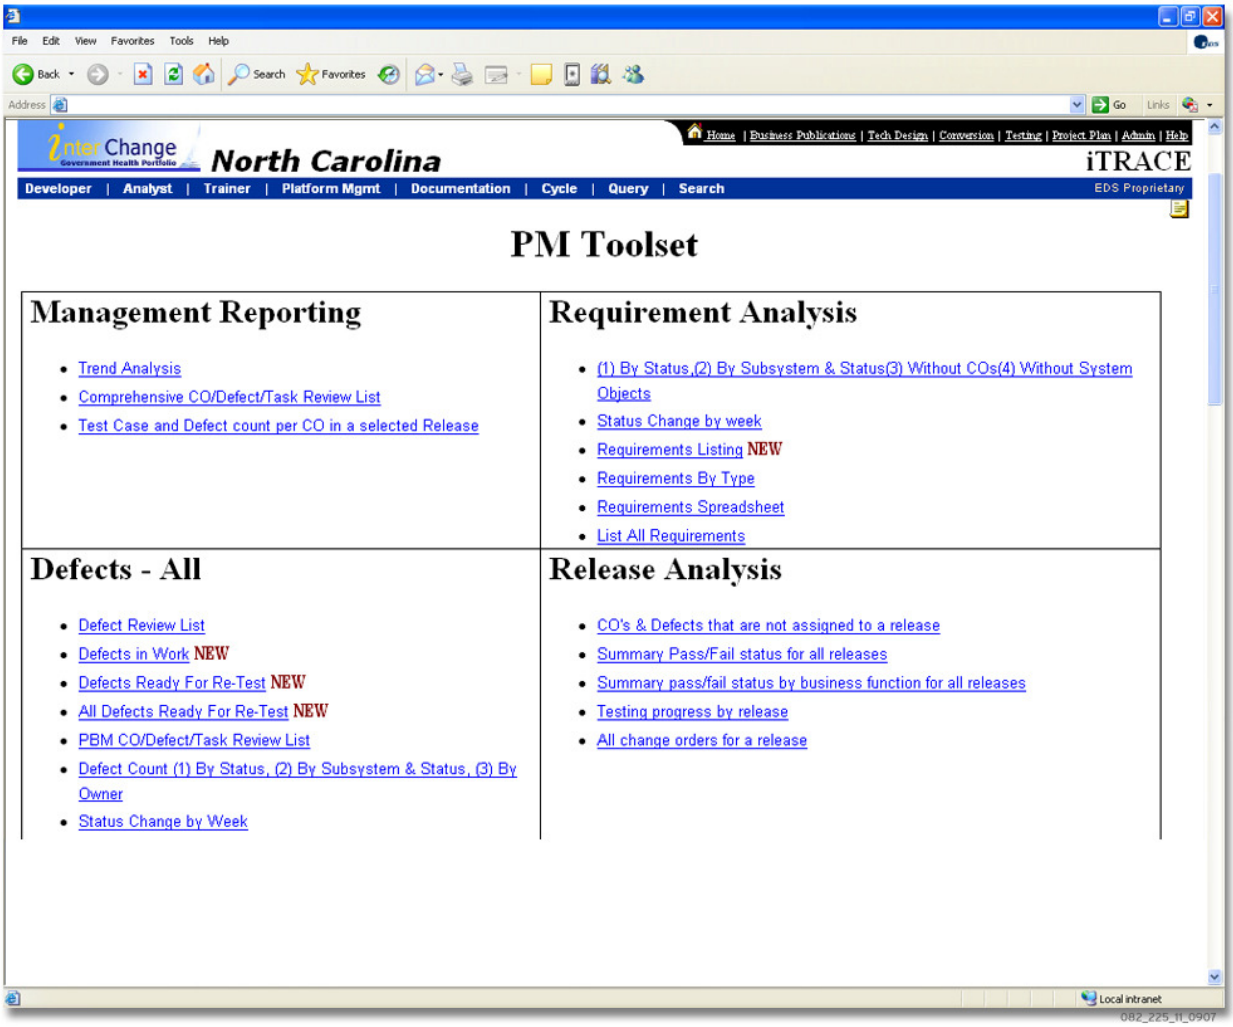
Risk and Issue Management

The management of project risk and issues is effectively performed during the entire project life cycle following the processes defined in the PM 2 methodology. Project managers have a set of tools in iTRACE to identify, document, mitigate, and monitor risk during each phase of interChange development. Risk

information is documented in the project's risk identification log (risk log) and is easily accessed by the risk management work group and other authorized users through iTRACE. The risk log contains complete information on the identified risks and links to associated materials, such as the risk response plan.

The inputs project managers use to evaluate risk are the tools available in iTRACE. These and other project management functions are available in the PM Toolset in iTRACE, as shown in the following exhibit, Sample PM Toolset.

Sample PM Toolset



Project managers have a set of tools in iTRACE to identify, document, mitigate, and monitor risk.

EDS Development Methodologies

The following table, EDS' Development Methodology Differentiators, summarizes the EDS software development methodologies and the differentiation of our methodologies from other vendors.

EDS' Development Methodology Differentiators

Methodology	Description	Differentiation
SLC 3	SLC 3 is a systems engineering methodology that has evolved from EDS' collective systems engineering experience and from industry insight. SLC 3 can be customized to support various work types, such as maintenance, minor enhancements, new development, or systems integration. SLC 3 also provides the flexibility to support systems engineering on various platforms and tools, from mainframe to desktop. SLC 3 balances iteration within six phases, the repetition of certain phases, with management control to develop the business solution. The appropriate use of iteration evolves the business solutions, thereby providing clients with early opportunities to clarify expectations and anticipate changing business needs.	SLC 3 has evolved over time, taking the best practices for iterative development into consideration. It is used every day, globally, to deliver thousands of projects to thousands of clients. While the SLC 3 is prescriptive in nature, it is also customizable to meet the needs of a project.
PM 2	EDS PM2 establishes a standard approach to managing projects, thereby providing a solid foundation that enables project managers to create project plans and effectively manage change. EDS bases its approach to project management on work by PMI. PM2 follows guidelines of SEI's CMMI. It is a defined, systematic process for planning, directing, monitoring, adjusting, and controlling a series of interrelated activities. The methodology provides proven techniques and practical tips and suggests job aids to help the project manager achieve defined objectives while faced with constraints of budget, time, resources, and technology.	PM 2 follows the SEI CMMI processes, and allows for iterative systems life cycle management. PMI standards are included. We can supplement the methodology with client-specific practices without losing the PM discipline. There are global project management communities within EDS for collaboration.
GAD QMS	GAD QMS is a common integrated global process set used to manage every aspect of applications delivery. It is based on corporate tools, methods, and best practices, and it complies with recognized industry standards. The GAD QMS framework is built on the objectives of the EDS' Global Delivery Model, addressing critical business functions and core application development activities.	GAD QMS provides time, effort, and cost reduction through efficiencies and productivity gains and common global processes followed around the world. It can be tailored to client-specific needs, improving quality based on defined quality assurance tools and methods. It can be transported across multiple EDS locations globally to facilitate smooth delivery, and continuous process improvement suggestions can be offered by organizations from around the globe.

SLC 3 and PM 2 Benefits

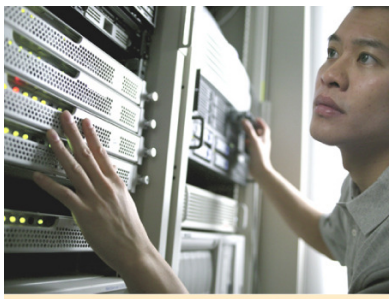
In summary, the SLC 3 and PM 2 methodologies provide the following benefits to the State:

- Align IT with the State's business and policy needs
- Support communication between EDS and each division
- Use best practices for software development
- Use best practices for project management
- Reduce risk by applying appropriate iteration to validate results
- Facilitate customization to meet needs across the State
- Reinforce consistent, repeatable processes
- Facilitate continuous improvement as we develop new processes, standards, and technologies throughout EDS

Our software development and system engineering methodology is designed to support the creation of quality product deliverables and effectively manage the risks associated with projects of this size. The SLC 3 and PM 2 methodologies have a proven track record of success in developing and maintaining systems for multiple industries and technologies, and specifically for projects similar to the Replacement MMIS. EDS has intimate experience in applying these methodologies and will use them to enable the successful deployment and maintenance of the interChange-based Replacement MMIS in North Carolina.

50.2.4.1.3 Data Conversion and Migration Approach

RFP Reference: 50.2.4.1.3 Data Conversion and Migration Approach, Page 274-275; 10.9 Software and Systems Engineering Objectives, Paragraph 9, Page 10



We have used our data conversion and migration process with great success on all of our interChange implementations. We will build on this success by applying our experience and knowledge of your current systems to develop a plan that manages a timely and accurate data conversion for your new multi-payer Replacement MMIS.

State of North Carolina

Our approach to the State's data conversion is based on a mature process that we have enhanced over the past few years using lessons learned and improved tool sets from previous interChange implementations. In fact, the process we propose to use for North Carolina has been successfully used on all other interChange implementations. For example, this process supported the successful conversion of more than 600 million claims in Pennsylvania, 500 million in Tennessee, and 440 million in Kentucky.

Working with the State, we will apply our experience and knowledge of the current systems to develop a plan that addresses the size, complexity, resource requirements, testing protocols, and management of the State's timely and accurate data conversion, which is critical to the successful implementation of the multi-payer Replacement MMIS. It is expected that the size and complexity of the conversion effort will be above average because of the inclusion of data from the individual and unique systems used to support the four divisions: the Division of Medical Assistance (DMA), Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH), Division of Public Health (DPH), and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC).

The conversion process will include the identification and cross-walk of data necessary for the continued application of edits, audits, and prior approvals (PAs) and precertifications, including units used, drug exception requests, rebates, and calculations. It also must verify that we can meet the data requirements of the external systems that interface with the Replacement MMIS. This detailed and methodical process must be applied to the required data and stated interfaces of the four divisions that will be using the Replacement MMIS.

The State's participation and review is critical in every step of the process. Our careful, rigorous approach and understanding of the technology, data, and processes will enable the State and EDS to meet the data conversion objectives and minimize risk during implementation of our solution.

In the following subsections, we provide our data conversion approach:

- Formal Data Conversion Plan
- Approach to Data Conversion

The approach described in this section is reflective of the data conversion and migration plan, a deliverable submitted during the DDI Phase. The proposed first submission date for the data conversion and migration plan is December 12, 2008.

Formal Data Conversion Plan

Conversion planning starts early in the DDI Phase. The first step is to create a global conversion plan with the State. We will provide a formal data conversion plan that addresses the conversion requirements and processes before the Requirements Analysis Phase is complete. We recognize that complete and accurate data conversion is critical to the successful implementation of the Replacement MMIS. We also recognize that each data conversion is unique. Gaining a complete understanding of the source data is critical to the overall success of the conversion. EDS will take advantage of the deep knowledge and experience of the current EDS North Carolina staff to provide an effective data conversion plan for the DMA and DMH programs. We also look to the cooperation of the State in helping us understand the current data structures and business policies of the DPH and ORHCC programs so we can formulate an effective data conversion plan for those programs.

We describe our formal data conversion plan in the following subsections:

- Data Conversion Management and Experience
- Data Conversion Scope

Data Conversion Management and Experience

Our experience managing large-scale data conversions from legacy MMISs to relational systems will translate into a high-quality, low-risk conversion for the State. In recent years, EDS has successfully managed many unique and complex data conversions from legacy systems to interChange. Each of these conversions involved the migration and transformation of data from 10 to 14 different business functions with multiple data sources.

EDS will use the resources, processes, and North Carolina MMIS–specific experience for a low-risk, successful conversion for the Replacement MMIS. Besides system implementations, EDS has extensive experience in converting and integrating systems to be HIPAA-compliant as a result of HIPAA remediation of MMISs in 17 states.

EDS will convert data from the identified existing MMIS sources to the Replacement MMIS. We will convert 10 years of historical data from the existing MMIS. During the Operations Phase, the database will hold at least 10 years of history.

A key feature of our conversion approach for the State is the identification of data integrity issues using analysis tools before executing the conversion. This feature of our approach is the result of our experience gained in other state Medicaid programs with different MMIS hardware platforms and system architectures.

Analysis tools profile and map the data for validity and accuracy. Data anomalies will be dealt with early, reducing the likelihood of problems during final conversion.

The integrity of the data converted from the State's current data systems is critical to minimizing service interruptions for a successful implementation. Our processes, as described in the following sections, will deal with issues common in these environments, such as potentially redundant data, code values being possibly altered over time, and data corruption. Our processes will confirm the following:

- No data is lost or otherwise missing.
- Discrepancies are resolved before the new system goes live.
- Data is properly transformed and synchronized with the Replacement MMIS relational database and business practices.

Our success in converting data is the result of many years of experience with different system platforms and architectures and our expertise in converting them to relational models. In most of our implementation states, this experience includes traditional mainframe virtual sequential access method (VSAM) file conversions. Recently, in Connecticut, it also included relational-to-relational conversions. As will be the case in North Carolina, EDS has experience in Wisconsin, Kentucky, Connecticut, and Oregon with converting data from multiple input source systems into a single target system.

Data Conversion Scope

The following table, Boundaries of the Data Conversion Effort, shows the expected tasks in a conversion project, our approach, and where in this section details can be found.

Boundaries of the Data Conversion Effort

Boundary	Description
Conversion objectives, impact, and resources	Our conversion plan addresses the objectives, impacts, and resources in the Global Conversion Plan section.
Files and data that will be converted or linked to the new system as an interface	The handling of files and data to be converted and interfaces are addressed in the Analysis and Data Conversion Plan sections.

Boundary	Description
Plans for normalization of data to be converted	The normalization of data to be converted is addressed in the Analysis and Data Conversion Plan sections. In this context, normalization means making sure we do not have redundant data in the database. For instance, a provider's address may be in both the claim and in the provider reference data. In the Replacement MMIS, there will be only one provider address record.
Processes that will be used to complete the conversion, including verification procedures and acceptance responsibilities	The processes used to complete the conversion, including verification procedures and acceptance responsibilities, are discussed in the Global Conversion Plan, Data Conversion Development and Testing, and Final Data Conversion sections.
Conversion support requirements, including use of the system, policy issues, and hardware	The conversion support requirements, including system use, policy issues, and hardware, are discussed in the Global Conversion Plan section.
List of conversion tools	A list of conversion tools is provided in the Global Conversion Plan and Conversion Tools sections.
Schedule for completing the conversion processes	The schedule for completing the conversion process is discussed in the Conversion Development and Testing and Final Data Conversion sections.
Conversion preparation task outline	The conversion preparation task outline is discussed in the Global Conversion Plan and Final Data Conversion sections.
Plans for necessary manual conversion and data cleanup activities	The need for manual conversion and data cleanup is addressed in the Data Conversion Plan, Data Conversion Development and Testing, and Post-Implementation sections.
Approach to validate the accuracy of the converted data	The approach to validating the accuracy of converted data is discussed in the Global Conversion Plan, Conversion Development and Testing, Parallel Testing, Final Data Conversion, and Post-Implementation sections.
Plans for conversion of data from the existing image storage system	The Technical Conversion team will be responsible for the assessment, planning, and execution of this conversion activity.

Approach to Data Conversion

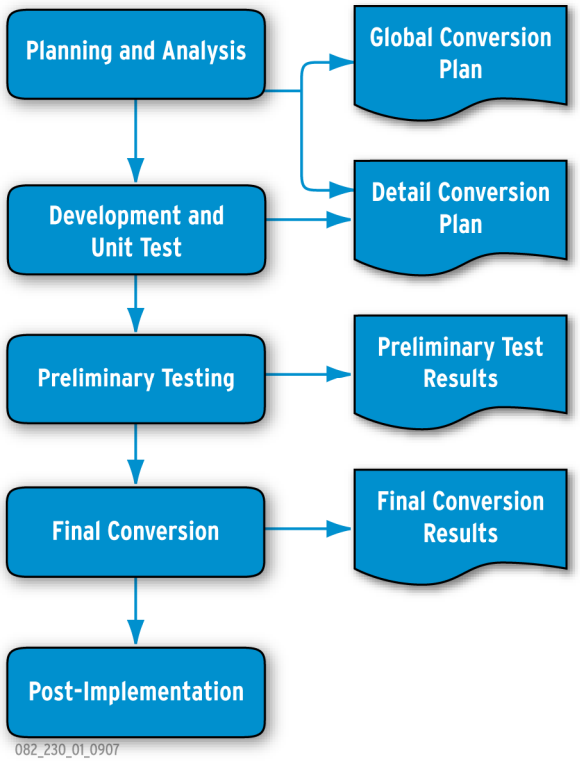
The EDS conversion strategy is an approach that is proven and has matured during multiple implementations with improved processes and tools. We base our conversion strategy on a proven method that has been successful in previous interChange implementations, which included conversions from older, legacy MMISs. We continually improve our strategy as we incorporate the lessons learned from each project to enhance the process.

In our conversion strategy, we will provide a detailed explanation of the conversion process and methods to be used, a description of how the conversion deliverables will be met, and the assumptions that will govern the Replacement MMIS data conversion process.

The data conversion manager will lead the team responsible for converting data from the existing MMIS used for DMA and DMH and from the current DMH and OHRCC systems to the Replacement MMIS. Data required to effectively operate the Replacement MMIS will be managed within the data conversion effort. Our conversion strategy will confirm that the data needed to support business functions will be present in the Replacement MMIS.

The following exhibit, Conversion Process Overview, shows a high-level flow of the process and the outputs of those processes.

Conversion Process Overview



Our conversion strategy and process will confirm that the Replacement MMIS contains accurate and complete data required to meet the State's needs.

We discuss our approach to data conversion in the following sections:

- Data Conversion Activities
- Data Conversion Planning and Analysis
- Data Conversion Development and Testing
- Preliminary Test Results

- Final Data Conversion
- Post-Implementation

Data Conversion Activities

During the data conversion task, the Conversion team will work with the State to meet the following objectives:

- Plan, develop, test, and coordinate the conversion of data and files required to support the operation of the new Replacement MMIS
- Allow continued application of edits, audits, and service authorizations and precertifications, including units used, drug exception requests, rebates, and calculations to meet system processing requirements (data will cross-walk)
- Allow production of reports required for system operation, policy decision-making, and federal and state reporting requirements (data will cross-walk)
- Identify elements required to support the Replacement MMIS processes and those that need to be converted
- Identify files or data that will be linked to the Replacement MMIS as interfaces
- Identify the source of the data as manual, automated file, or primary data collection
- Secure the data
- Develop data conversion requirements
- Develop conversion software and manual procedures
- Test conversion programs and procedures
- Provide preliminary test results of files
- Provide for normalization of converted data during and after the conversion process
- Validate and correct, where applicable, referential integrity of the data in the Replacement MMIS
- Identify converted data as distinguishable from new data and make the converted data date-sensitive
- Demonstrate through comprehensive testing that data required to support the Replacement MMIS processing will be available and accurate
- Perform the final conversion and report the results

- Follow up during post-implementation on data discrepancies and make corrections as necessary

Data Conversion Planning and Analysis

Conversion planning starts early in the DDI Phase. The first step will be to create with the State a global conversion plan, which will be the guiding document for the conversion tasks. The document will set the ground rules and expectations for data conversions. The second step will be to determine the detail functional area requirements. To show that we are meeting the requirements, we will create the following artifacts: the list of files that need to be converted, the data element mappings, the default values, and the test plans.

We describe our data conversion planning and analysis in the following sections:

- Global Conversion Plan
- Analysis
- Conversion Tools
- Data Conversion Plan

Global Conversion Plan

The global conversion plan will comprise the following subsections:

- Conversion objectives
- Roles and responsibilities
- Description of the conversion process, including process and environment diagrams
- Status reporting standards
- Statistical and error-reporting standards
- Procedures for notification, tracking, and correcting conversion problems
- Conversion preparation task outline
- Procedures for verifying the integrity and accuracy of the converted files, including quality control and sampling verifications
- A narrative and plan for the management of the conversion effort, including strategies for dealing with delays, a backup plan, backup personnel, and any significant issues
- Conversion support requirements, including use of the system and hardware
- List of conversion tools
- Procedures to handle manual conversion and data-cleanup activities

- Conversion data volume considerations, including the size of the database and the amount of data to be converted
- Development schedule
- User work and delivery schedules and time frame for reports
- Conversion deliverable outlines

To facilitate a smooth State approval process, EDS will conduct a walkthrough of the global conversion plan before submitting it for State approval.

Analysis

EDS will identify detailed conversion requirements and sources of data for functional areas necessary to meet the specifications in the RFP.

Extraction and data analysis are the first and most critical steps of the conversion activity. Essential to this step is the participation of the State's and EDS' business and technical subject-matter experts (SMEs), who will work with our team to identify and understand the source and target data structures and data element content. Cooperation from the current Legacy MMIS+ Operations team and State staff also is required for this task. Data analysis tools will be used to quickly and efficiently perform a complete analysis of source data. Detailed knowledge of the values and anomalies in the data will be identified early in the conversion cycle and used to help prevent unexpected results later in the process.

During the Analysis Phase, we will perform the following activities:

- Conduct extensive analysis at the data element level to normalize the data model, confirm valid values, check data element integrity, validate business and technical rules, and determine field-level distinct values
- Analyze data content within key fields across records within the same file and records across different files
- Perform a gap analysis between the source data and the Replacement MMIS to determine data compatibility
- Identify and resolve differences in field-level data contents, valid values, field lengths, and field formats
- Match critical and key data elements from the source data to the Replacement MMIS and document elements for which a clear match is not identified
- Identify and resolve with the State key elements not accounted for in the source data

During the analysis process, files that will be linked to the system as interfaces will be identified. Interfaces will be managed through the functional areas in

which they are used. For example, an eligibility file from an external entity will be managed and documented by the recipient functional area.

Conversion Tools

Understanding how data is used to represent information is critical to a successful conversion; therefore, one of the most intensive tasks in data analysis is determining the meaning of the data. EDS has integrated into the conversion process the use of Informatica's Data Explorer to facilitate the Analysis Phase. Data Explorer will automate the manual data-profiling process to better understand the content, quality, and structure of source data and produce metadata that is complete and accurate.

The software also will automate the data-profiling process of the target data. This will facilitate the conversion verification process by analyzing the content and structure of the conversion results. It can import relational, VSAM, or flat file structures to extract data from a source system that will be profiled by Data Explorer. When the data is imported into the tool, automated data profiling can be performed.

The source-to-target data-mapping process will be documented in Data Explorer. During the mapping process, Data Explorer will identify and alert the user if there are issues with any assigned mappings, such as data-type conflicts. Data maps and transformation specifications are outputs of the tool that are used for reviews and to develop the conversion programs.

Data Conversion Plan

The data conversion plan will document how data required by the Replacement MMIS will get populated. It also will identify unused data items from the current system and how that data will be handled. The detailed conversion requirements will primarily reside in iTRACE and Data Explorer software, as described in the preceding Conversion Tools subsection. Additionally, the conversion functional area test plans will be determined in this phase.

The data conversion plan for each subsystem will include the following:

- A description of files to be converted and whether it will be a manual conversion, an automated conversion, or a combination of the two
- An understanding of the function of the data in the old system and the determination of whether the use will be the same or different in the new system
- An understanding of the order in which data is processed in the old system and how that affects the integrity of the data in the new system

- Data element mapping cross-walks (including values) of the old system data elements to the new system data elements and vice versa so that data elements are addressed
- Normalization of data from the old system into the new relational model
- Data transformation logic comprising special logic or functions needed to transfer the data into the Replacement MMIS
- Configuration and code table data cross-walks, such as provider type and specialty
- A function-specific plan for testing and verifying conversion programs and procedures to accommodate differences in functional areas
- Approach for organizing and presenting the conversion test results, including type of results to be provided
- Approach for handling obsolete or unused data that is not converted, to be archived subject to the retention periods specified

The detailed conversion requirements and test plan will be reviewed and approved by each State division leader and EDS functional area team leader before submission for State approval. This approach will allow the State and EDS to review the plan in components, easing the volume of material to review and approve. The review status and approval will be documented in the functional area conversion status reports available online in iTRACE. After the State approves each of the functional areas, EDS will submit a formal data conversion plan document summarizing the Requirements Phase results and noting any outstanding issues.

Data Conversion Development and Testing

During data conversion development and testing, our team will construct programs that facilitate the transformation of each data element from each input source file to the associated Replacement MMIS target table and column.

We will include input and output record counts into each conversion program. Statistics reports that track the number of records read, number of records considered for conversion, and the number of records converted will be part of each input source file. Counts for the number of records read and loaded into each Replacement MMIS target table also will be available. These balance counts will be our initial mechanism to account for records within each source file input into the conversion process.

The conversion programs will include error reports that track the number of records with errors that prevented the record's conversion. The key identifying information for the unconverted record and an associated error condition message also will be part of this report.

Data validation methods will be included in the programs. These validation methods may include such things as determining expected counts and valid value editing. Validations also may need to be performed between files (cross-validation relationships validation).

Unit testing will validate that each conversion program accounted for the data elements and transformation logic for those data elements. We will conduct unit testing using a sample of actual source data separately for each individual conversion program. Unit testing will be stand-alone testing intended to demonstrate that each individual conversion program functions as expected, independent of other conversion programs.

We discuss conversion development and testing in the following subsections:

- Accuracy of the Converted Data
- Test Plan
- Preliminary Testing Methods

Accuracy of the Converted Data

The Conversion team will review the unit testing results for completeness and accuracy. Before executing any further conversion steps, we will require approval by the conversion manager and Conversion team members for each program.

Our unit testing validation will be extensive and include the following:

- Record count balancing
- Validation of converted values for key fields using the Data Explorer data-profiling tools
- Validation of those fields with transformation logic

We may perform validation by full file review or by data sampling when the size of the converted data is too large. We will verify statistic and error reports from unit testing and review any input record in error.

Test Plan

The conversion test plan will be created during the detailed requirements validation process. The test plan is an agreement between the State and EDS on how the conversion will be tested and verified for each functional area. Data conversion routines will be tested and approved by the State before application.

Test data results will be presented in a format preapproved by the State and EDS. Because of the uniqueness of each functional area and division, test data verification methods will be determined by each area during the Analysis Phase and documented in the test plan.

We recommend the verification method of manually comparing data online in the Legacy MMIS+ and converting the data through the Replacement MMIS' online applications. Other methods available but not frequently used include manually reviewing sample data entered for "keyed" tables to validate data quality and reviewing selected or random samples of before and after versions of records and associated tables to validate converted records. In some cases, the data may not be available online and the raw data must be reviewed.

Preliminary Testing Methods

EDS will conduct extensive preliminary testing to verify the accuracy of the data. The test plan is first created to set expectations and goals for the testing effort. Two testing initiatives are undertaken: mock conversion and parallel testing.

Mock Conversion

Mock conversion is an iterative test of real production data that will be run through pilot cycles to verify the quality of the converted data. To prepare for the final conversion, EDS will execute the mock conversion in a production-ready environment with full file data. Further, we will execute multiple iterations of the mock conversion so the final conversion cycle is smooth and efficient. We will validate the conversion results of each iteration of mock conversion and send them to the State for approval before final conversion.

The mock conversion cycle schedule will reflect the chronology in which the conversion must occur to maintain data and referential integrity within the Replacement MMIS database. We will present error records from the mock conversion to the State so we may resolve these errors before final conversion. Data converted within the mock conversion will facilitate systems and acceptance testing within the Replacement MMIS implementation project.

From the mock conversions we will determine the approximate run times, space requirements, and record counts for the final conversion. This step also will be important for determining whether the data content in the production files is the same as expected. We will correct and retest any discrepancies uncovered in the mock conversions before final conversion.

At the conclusion of the mock conversion, the following tasks will occur:

- The preliminary test results deliverable will be submitted to the State for approval.
- The final conversion cycle schedule will be included in the implementation plan. The cycle schedule will include specific start dates, start times, end dates, end times, dependencies, and the responsible person for each step of the conversion cycle.

Parallel Testing

As required by the RFP, EDS will include parallel testing as an additional method to verify data quality. In this phase, a high volume of claims will be run against the converted data. The input claims will be generated from converted claims history files. The claim output will be compared to preconversion history to verify that reference, provider, or recipient data conversions produce the expected results. This evaluation will be part of our comprehensive parallel test and provide a valuable analysis of the converted data for the Replacement MMIS. Output from the claims volume testing will be made available to the back-end processes, such as management and administrative reporting (MAR) and third-party liability (TPL), which rely on the output from claims to perform individual business function analysis and testing.

Preliminary Test Results

Results from the mock conversion will be documented in the functional area conversion status report. The status report will include statistics and errors found during the conversion. The errors will be tracked with the responsible party and target date in the status report until resolution.

The time line for resolution of errors depends on the party responsible for correction and the overall conversion schedule. For example, it may be necessary for bad data to be manually corrected in the current MMIS. This would be noted in the status report with a target date for completion. Errors discovered in parallel testing will be forwarded to the Conversion team and documented in the status report.

We further discuss preliminary test results in the following subsections:

- Verification Procedures and Acceptance Responsibilities
- Preliminary Converted Files/Conversion Test Results

Verification Procedures and Acceptance Responsibilities

The conversion status reports will include the following detail regarding errors and statistics:

- Number of MMIS records considered for conversion
- Number of MMIS records not considered for conversion
- Number of MMIS records converted
- Percentage of MMIS records considered for conversion that were converted
- Number of errors encountered

- Number of Replacement MMIS database rows, by table, created by the conversion

More specific statistics may be created by each functional area to further validate the output data. For example, field-level validation and dollar amounts, where applicable, will be summed and compared. Paid or billed amounts for claims within a specific time frame, receivable, or other dollar amounts will be captured from source and target data and compared for accuracy.

EDS suggests balancing standards by comparing input record counts with output record counts for automated conversions so the counts are the same or are explainable. If one file is responsible for record additions to multiple tables, counts for each output table will be generated and verified.

The report will list any errors encountered during the conversion process. Information includes the following:

- Record key
- Data error
- Error message that describes the field in error and the error situation
- Number of MMIS records considered for conversion
- Number of records with errors
- Percentage of MMIS records with errors
- Number of total errors reported

The State team will perform verification to manually compare counts from the current MMIS to the Replacement MMIS. The State will receive a report of input records that will not be selected for conversion because of data problems and a report of errors that occurred during conversion.

EDS will keep the State fully informed of the conversion status. We will track issues and progress against the conversion schedule and share this information with the State regularly and promptly through iTRACE and project status meetings.

We will provide status reporting, as outlined previously, on each preliminary file conversion within one business day of the completion of each scheduled file conversion. It will include test results and problems encountered. Test results will be provided as agreed to in the documented test plan. We also will provide a semiweekly summary of the status of the overall conversion, including schedule progress, significant outstanding issues, and the effect of any findings on the implementation schedule.

The process for resolution of errors will be as follows:

- Modification to conversion program and reconversion
- Modification of individual data records through previously developed applications

- Automated or manual insertion of corrected data
- Addition of new default values to the conversion program
- Acceptance of the record as an error and not allowing the record or data to be converted because of the inappropriateness of the data

If an error or omission is detected that causes a significant change in the resultant data to that point, the program will be updated and the data reconverted until it is accepted. The accurate definition, analysis, and initial testing before executing conversion programs will serve to prevent these occurrences.

EDS will conduct ongoing individual functional area status meetings and walkthroughs of conversion test results with the State to review the results and converted data. A walkthrough will promote an accurate understanding of the initial file conversions before acceptance testing activities.

EDS will determine and conduct the required reconversions if discrepancies or nonconformances are identified with the preliminary conversions. With State approval, we will make any resulting modifications to the implementation schedule. Additionally, we will make available versions of manually and automated converted files for review online, where appropriate.

Preliminary Converted Files/Conversion Test Results

During conversion development and testing, reports will be made available using the status-reporting channels. These status reports will be used to document the results of the initial file conversions, indicate discrepancies between actual and expected results, and identify problems encountered during the conversion process. Versions of the converted files will be made available online or formatted for review by nontechnical personnel, as agreed to in the test plan.

The formal deliverable will include two sections. The first is a summary of the cumulative results of functional area tests and the approval that the final conversion can commence as scheduled, which will include the following:

- Summary of the conversion plan results and status of the conversion software
- Identification of any significant outstanding deficiencies or limitations
- Effect of any outstanding deficiency on the remainder of the conversion schedule and recommended solutions for correcting the deficiency
- Assessment of how the test environment may differ from the operational environment and how this may affect the test results

- Recommendations for improving the design, operation, or testing of conversion software

The second section is a detailed report of the conversion plan and results, which will include the following:

- Results of the conversion testing formatted as defined in the conversion plan and approved by the State
- Completion status of each test case of the testing plan
- Identification of test cases where the result was not as expected, an explanation of the problem that occurred, and the procedure in which the problem occurred
- Chronological record of the testing covered by the conversion test results report, including dates, times, and locations of testing
- Identification of the hardware and software configurations used for testing
- Log of dates and times of testing activity, including the individual performing the testing

Before final conversion, the State will approve conversion for each functional area. State sign-off will indicate that the test plan and preliminary conversion for a specific functional area are complete and accurate. This will be documented in the sign-off section of the status report.

Final Data Conversion

Final data conversion will commence as specified in the outlined conversion tasks and detailed on the overall project schedule and implementation plan. The implementation plan for the Replacement MMIS will not require a phased approach that requires data to be fed back to the Legacy MMIS+.

Our approach involves implementing a step-by-step implementation plan. Components of the system, such as provider enrollment and eligibility, will be implemented before the core claims processing system. Doing so will enable key values to be used in subsequent conversions and enhance the referential integrity of the conversion data.

These implementations will be independent of the Legacy MMIS+. Any data maintained within both systems will be independently processed in each system.

EDS will conduct final Replacement MMIS file and data conversion as scheduled in the implementation plan. This conversion will include files and any pending inventories. We will complete conversion of claims-related files and data as smoothly and efficiently as possible, which will minimize risk and save the State time and effort.

As discussed in the preceding Preliminary Test Results subsection, the timing and duration of the production conversion tasks will be determined during the testing phase. Because of the large volume of data that needs to be converted, specifically historical claims and encounters, these conversions will need to start well before the system cutover. EDS will perform preliminary production-level conversions of files needed to support the early start of claim and encounter conversion.

The files will be converted again at final conversion and will maintain key values used in the preliminary final conversion. The detailed conversion tasks will be planned within the detailed implementation plan. During the final weeks of cutover, there will be times that limited access to data may be required. We will work with the State so limited access will be minimized and kept within acceptable time frames as approved by the State.

After each functional area conversion, the conversion results will include the following:

- Problems encountered and the impact on the remaining conversion schedule
- Final results formatted as agreed to and documented in the status report

State personnel will be notified of the completion of the final conversion to enable timely final review before the go-live date.

After final file conversion, EDS will prepare a final conversion results report, including the appropriate statistics and balance totals. We will correct any problems identified during the final conversion.

Post-Implementation

EDS will continue to work with the State to resolve data cleanup issues identified during final conversion by tracking them through the processes defined in the global conversion plan. Post-implementation data cleanup will be resolved through the following methods:

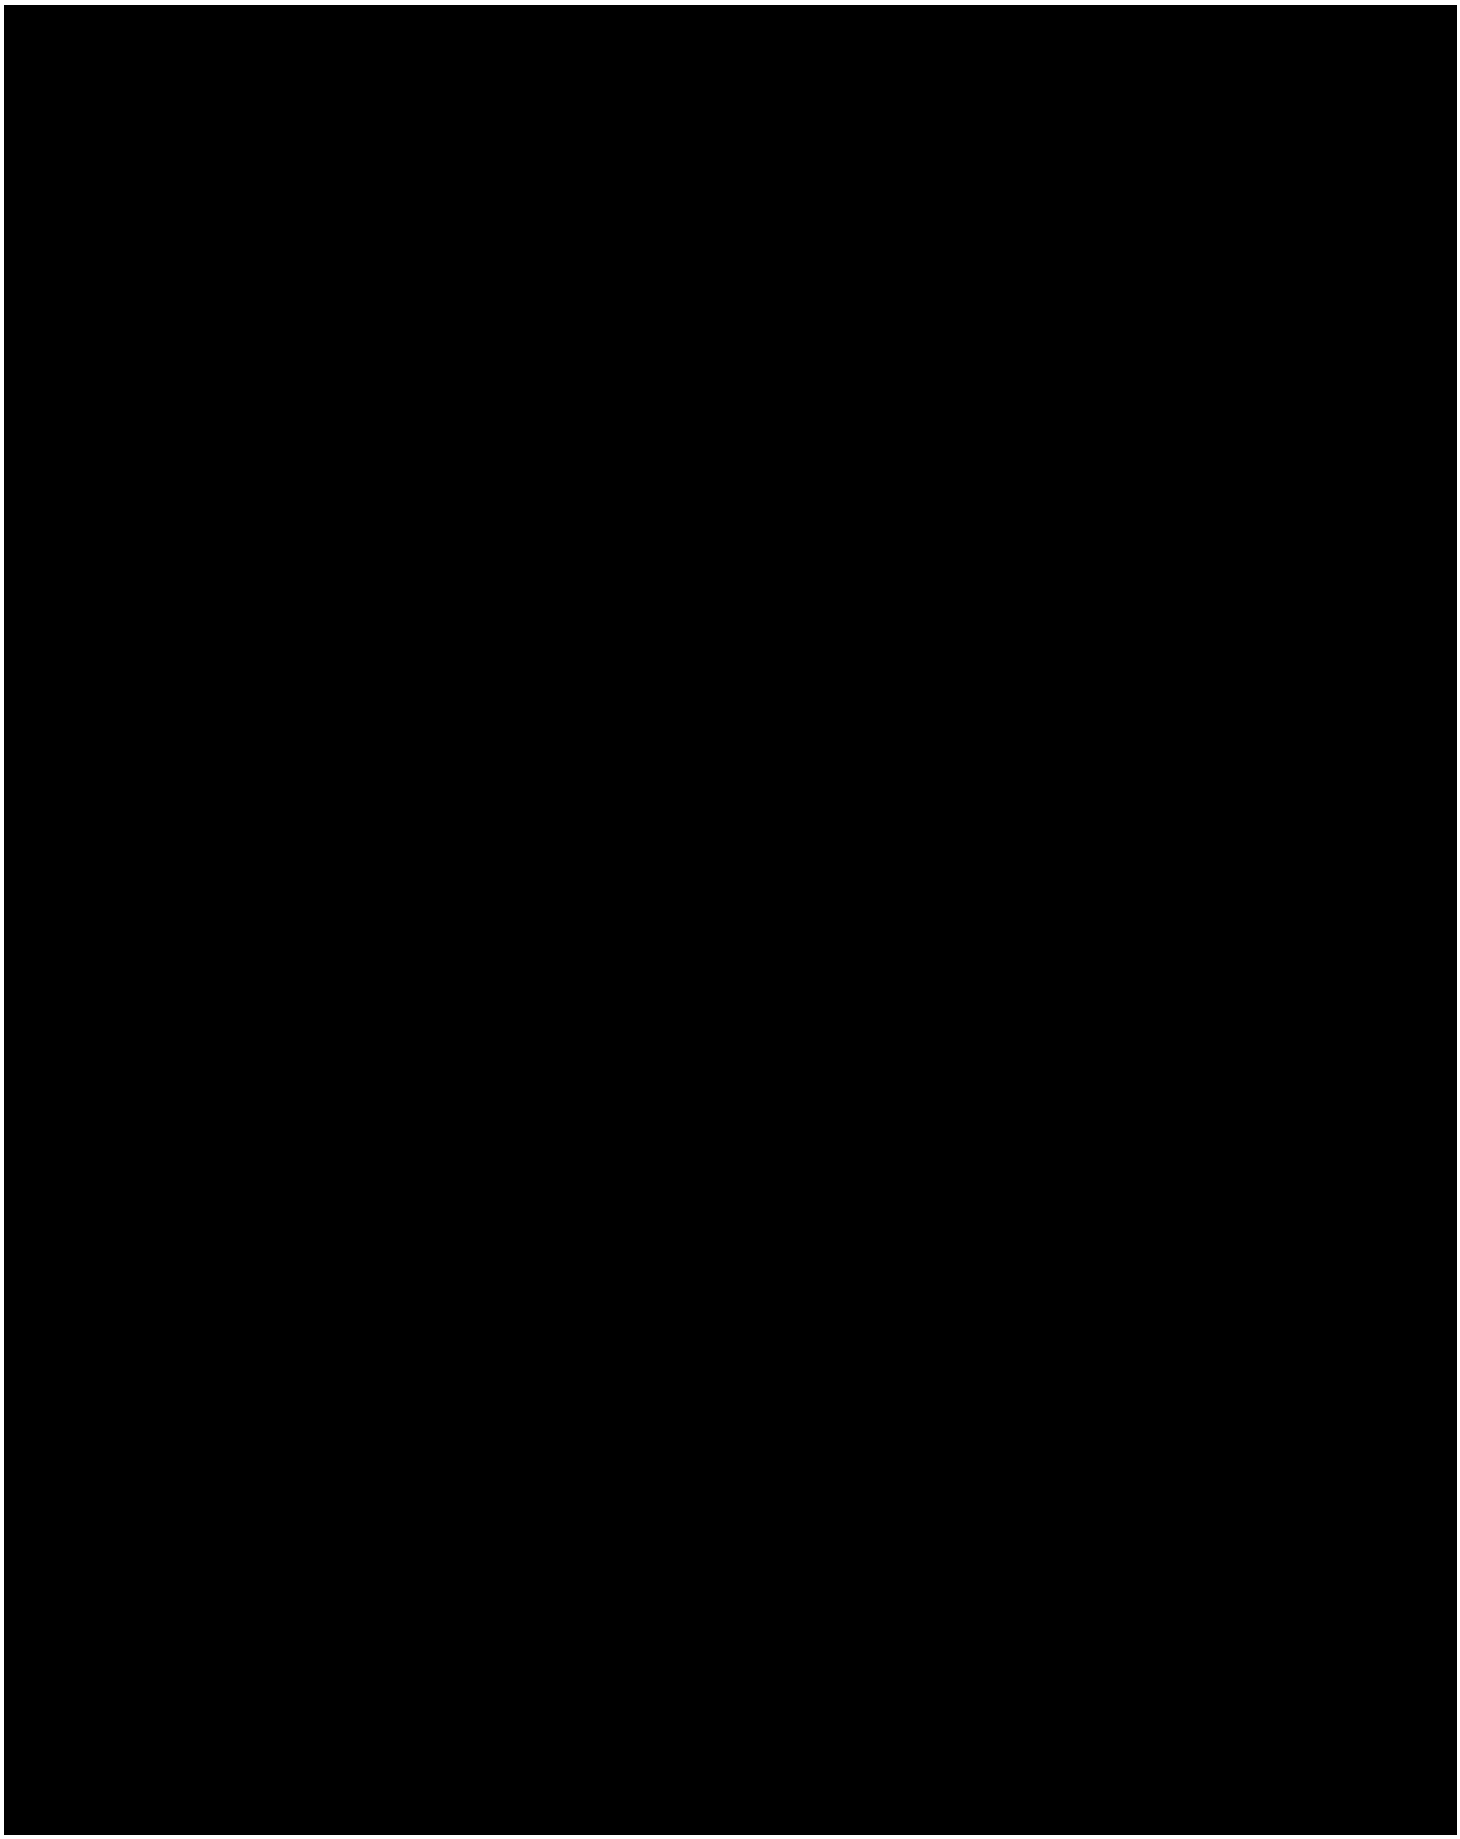
- **Online manual—**If there are only a few data items to fix or if there is no pattern to the bad data, an online manual fix may be used.
- **Batch programmatic—**If there are many data items to correct, programs can be created to correct the data in a batch mode.
- **Reconvert—**If the situation is such that a reconvert of the data is the best solution, the conversion programs can be corrected and rerun to replace the bad data without affecting the current data that may have been established since go-live.

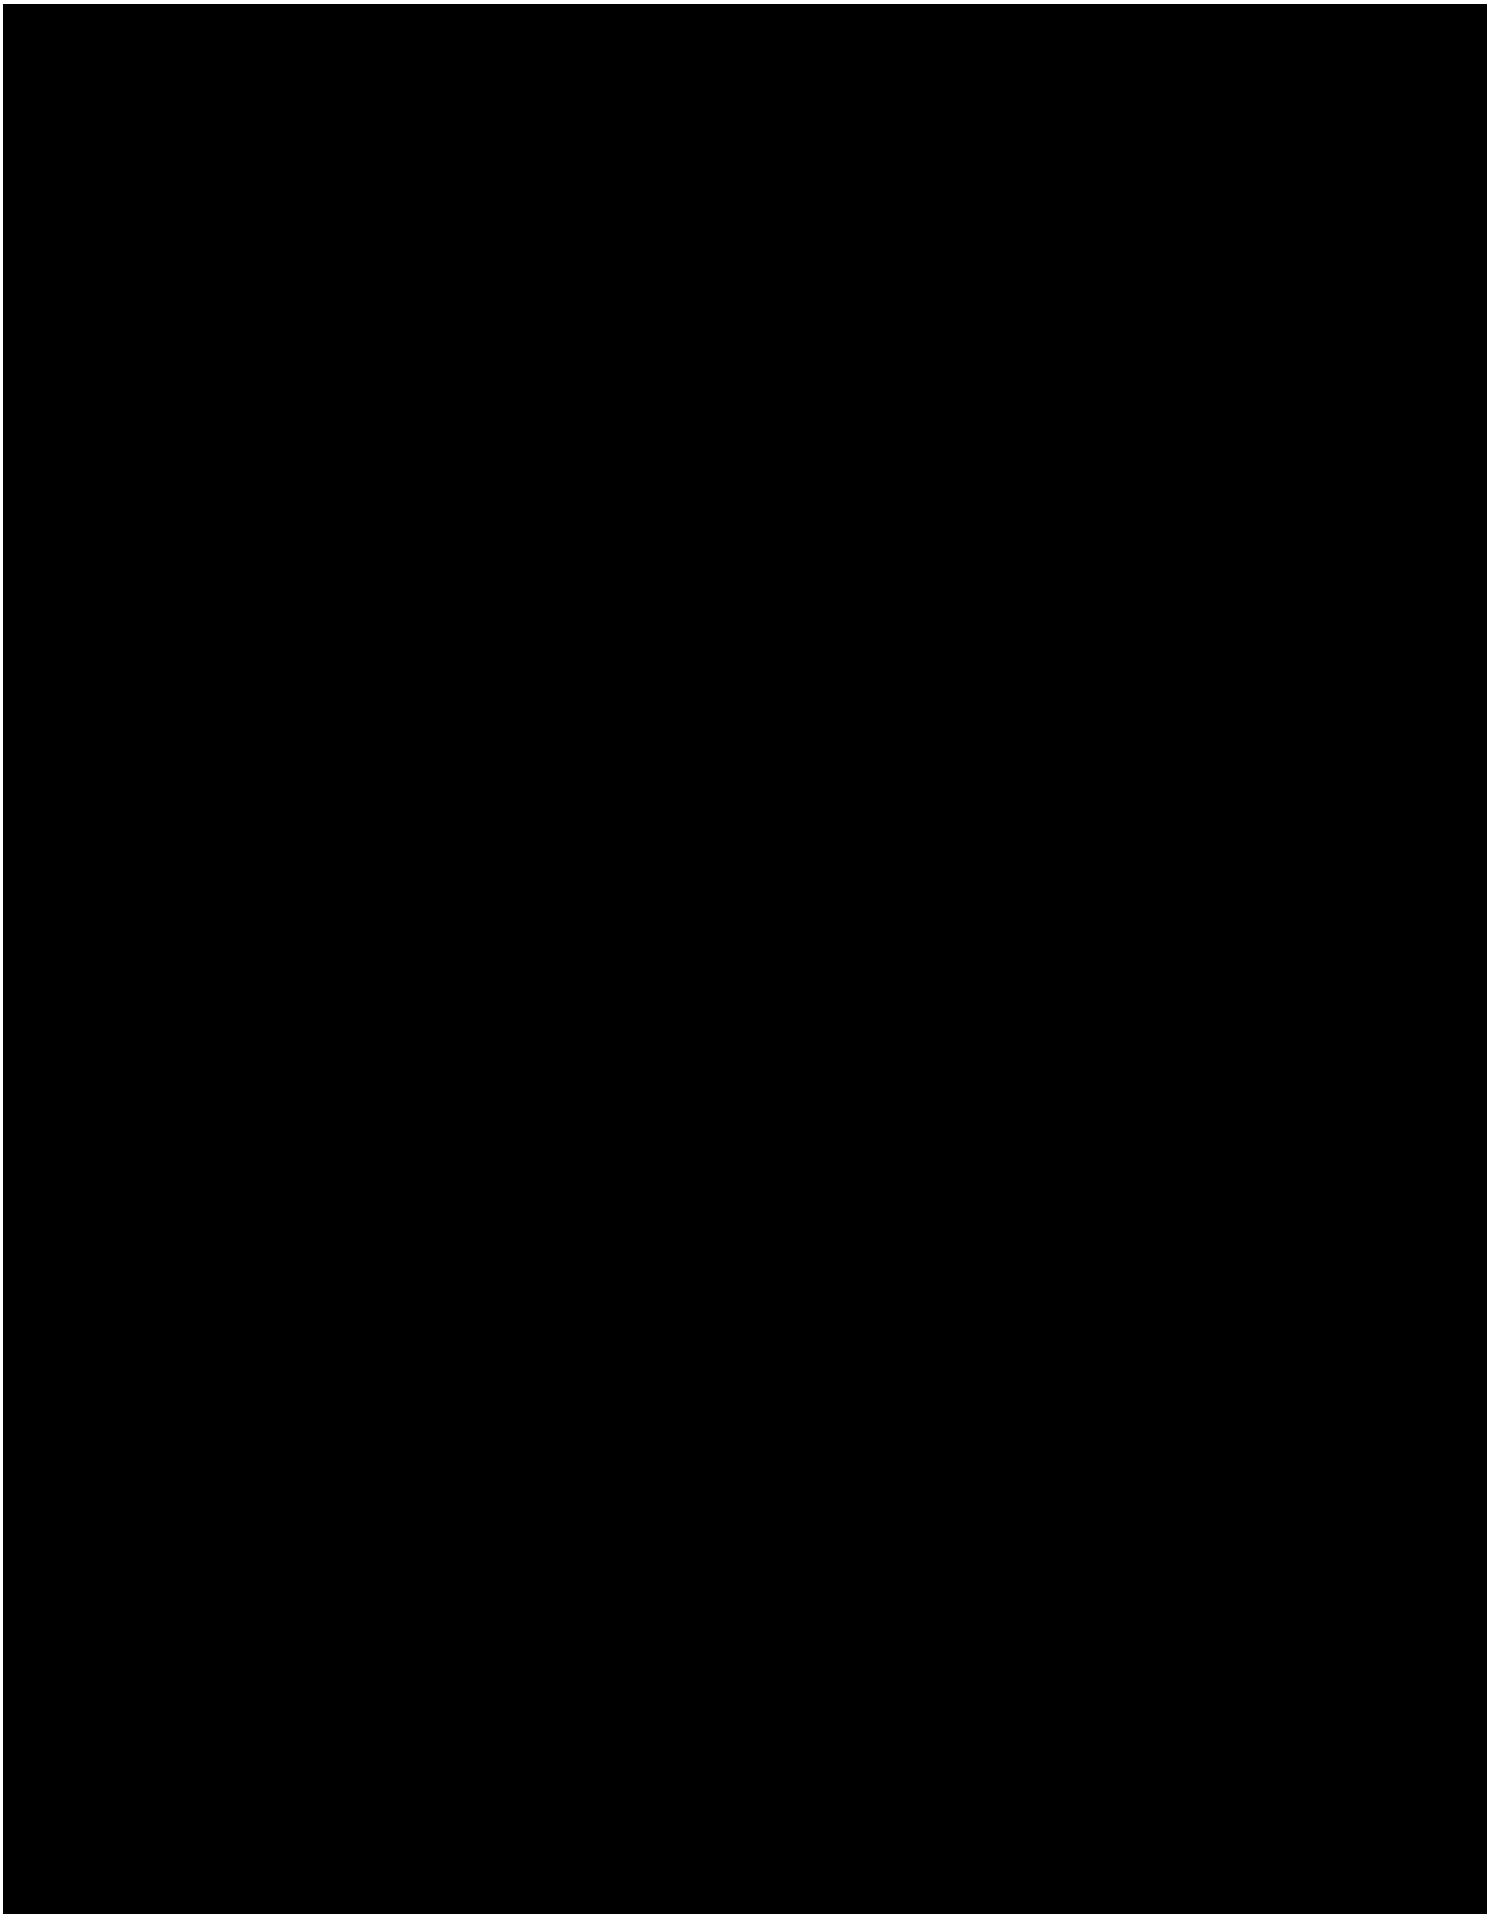
If post-implementation problems arise, EDS will correct any problems identified during the final conversion and resubmit final conversion results reports,

including the appropriate statistics and balance totals. We will continue to work with the State to resolve any problems identified.

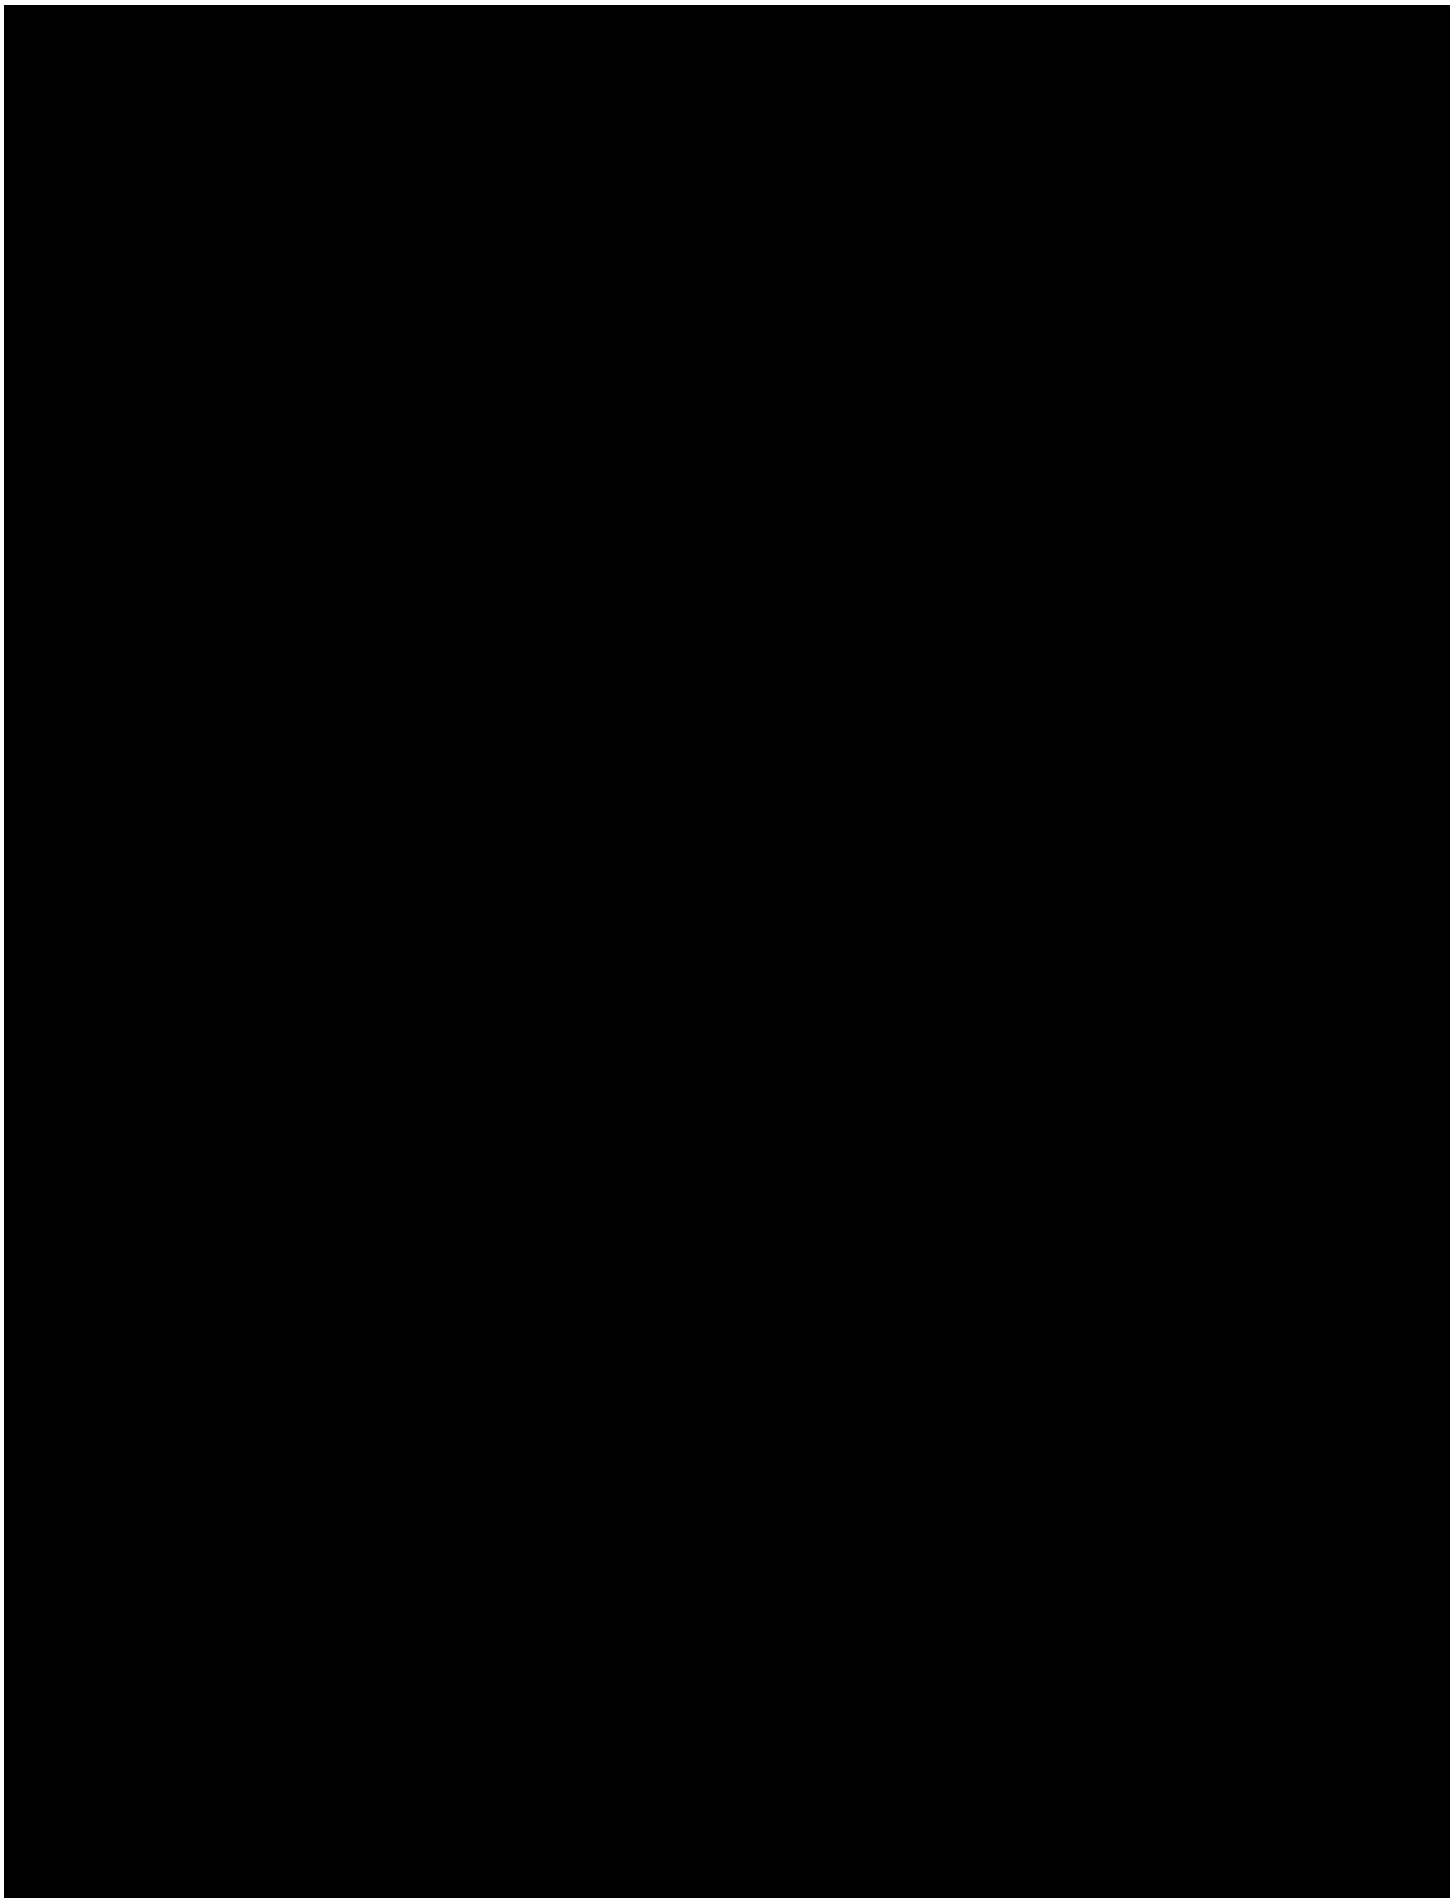
EDS possesses the North Carolina people and the North Carolina knowledge, processes, and conversion experience to successfully complete the conversion tasks. The State's support and participation from strategy planning through testing and final conversion will enable the successful implementation of the Replacement MMIS.

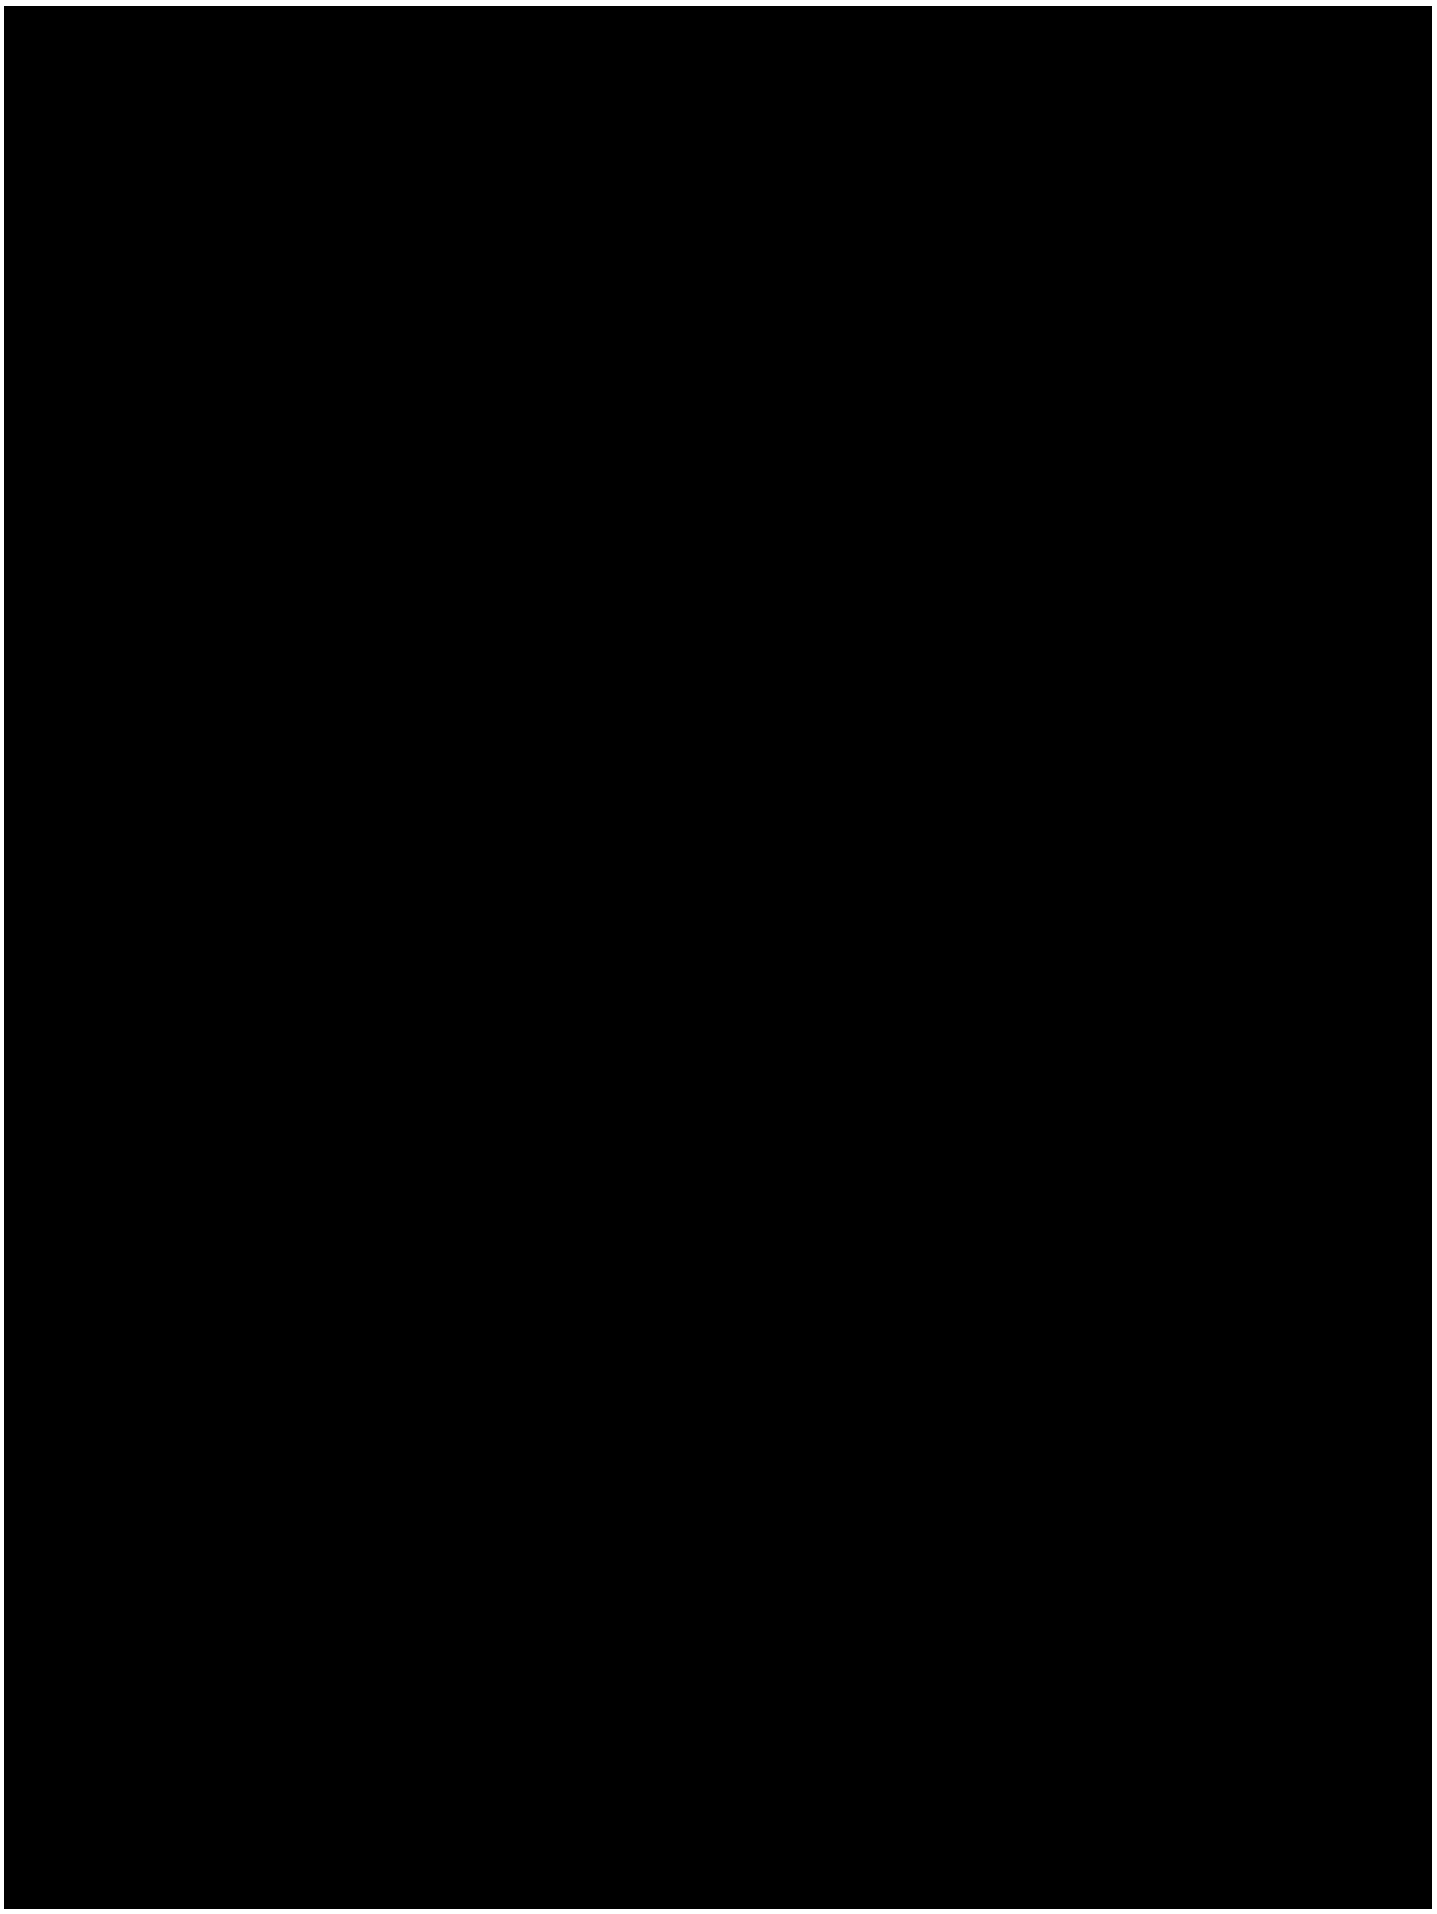
To demonstrate our successful approach to data conversion, we provide a sample excerpt from the Kentucky MMIS Global Conversion Plan following this page. As stated in RFP section 50.2 Technical Proposal Requirements, this sample does not count toward any page limit.

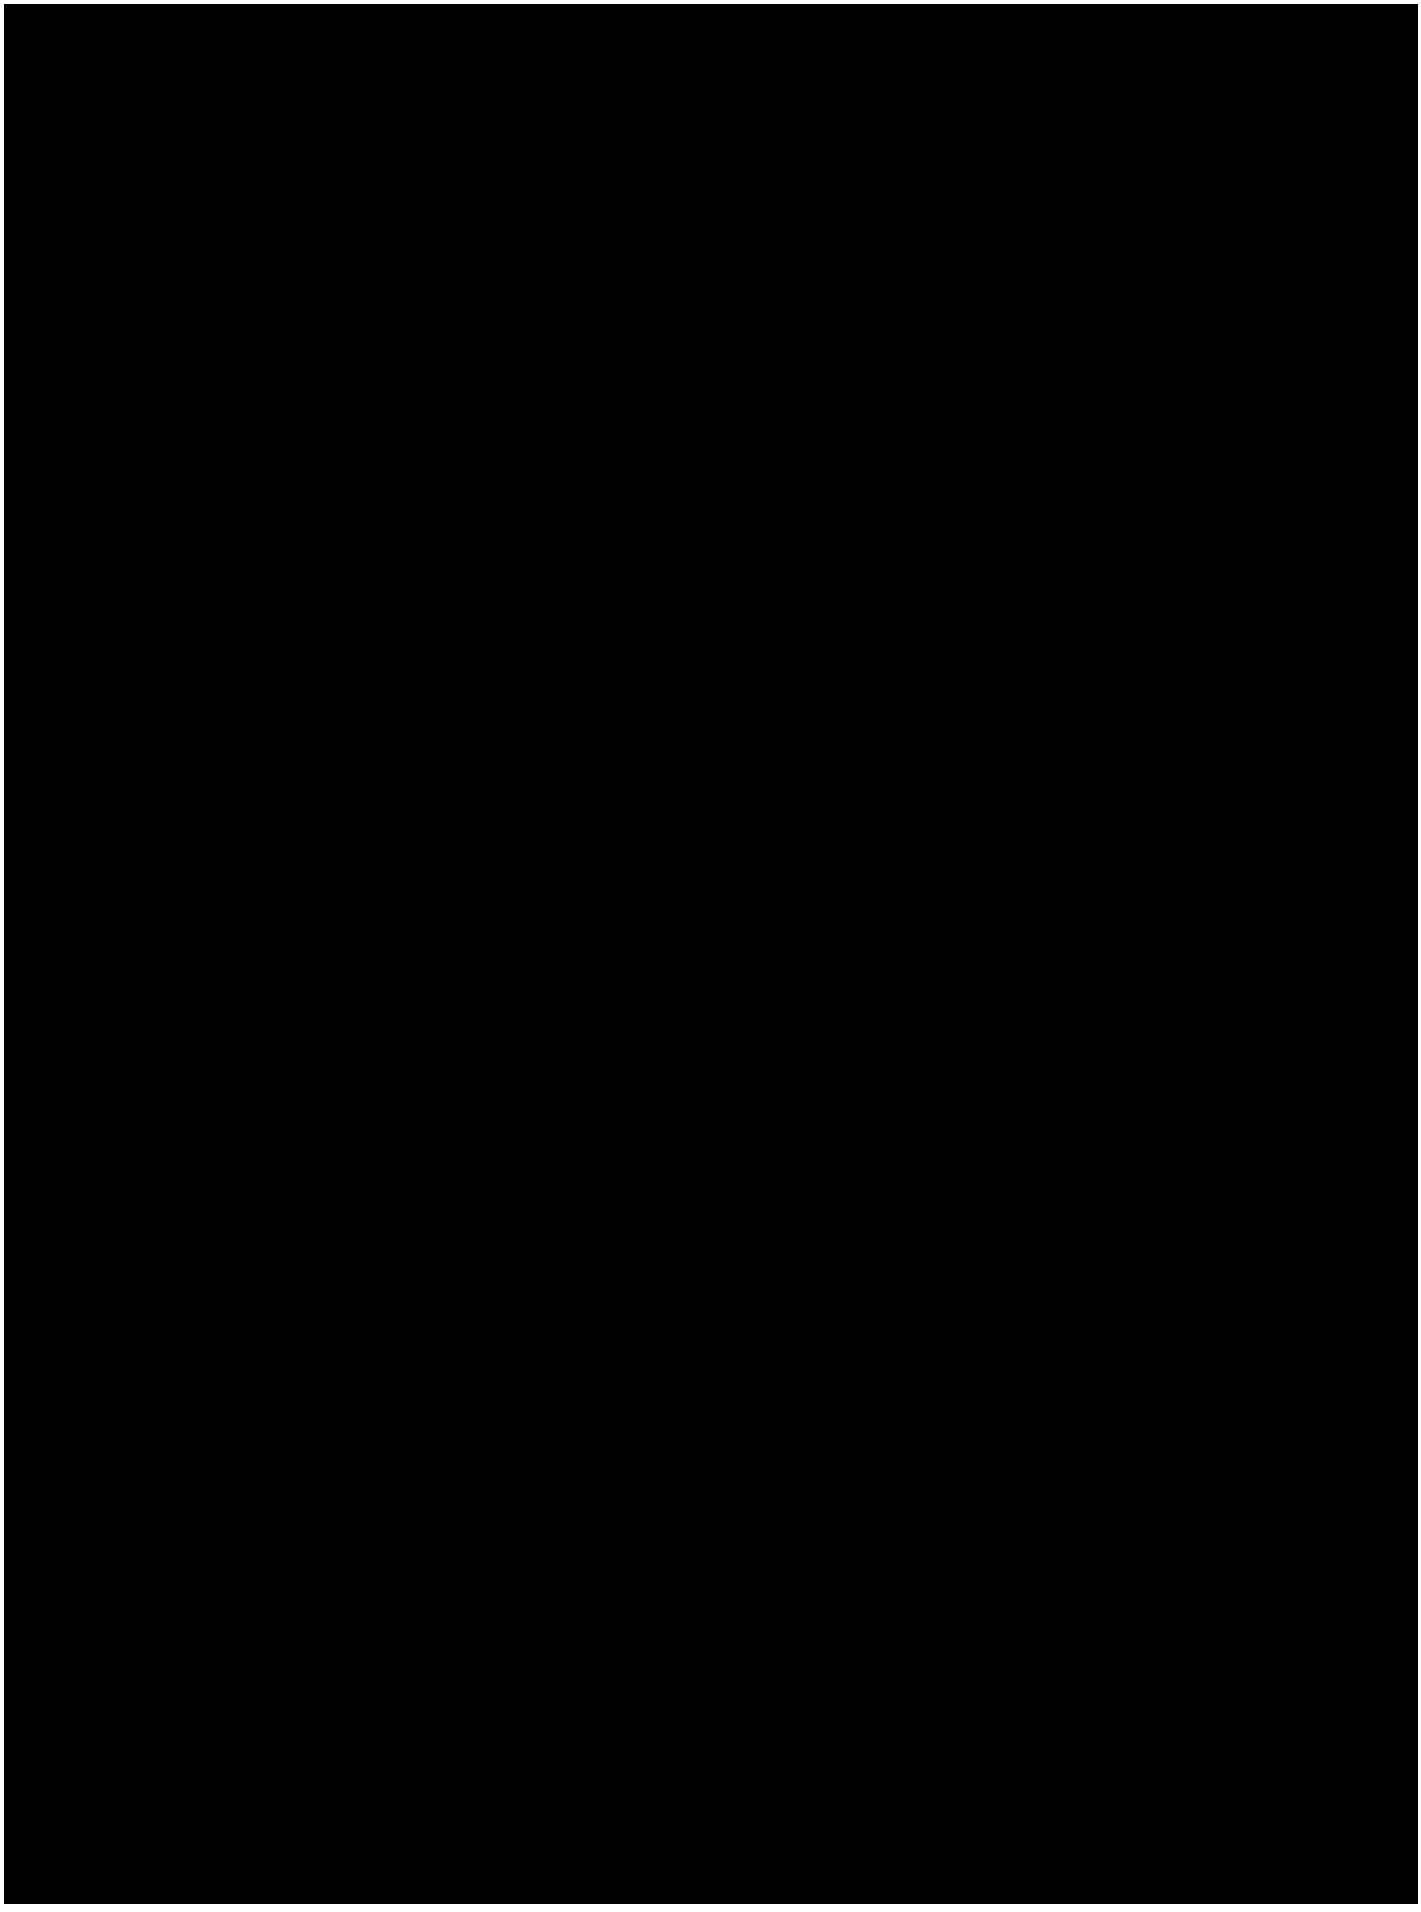


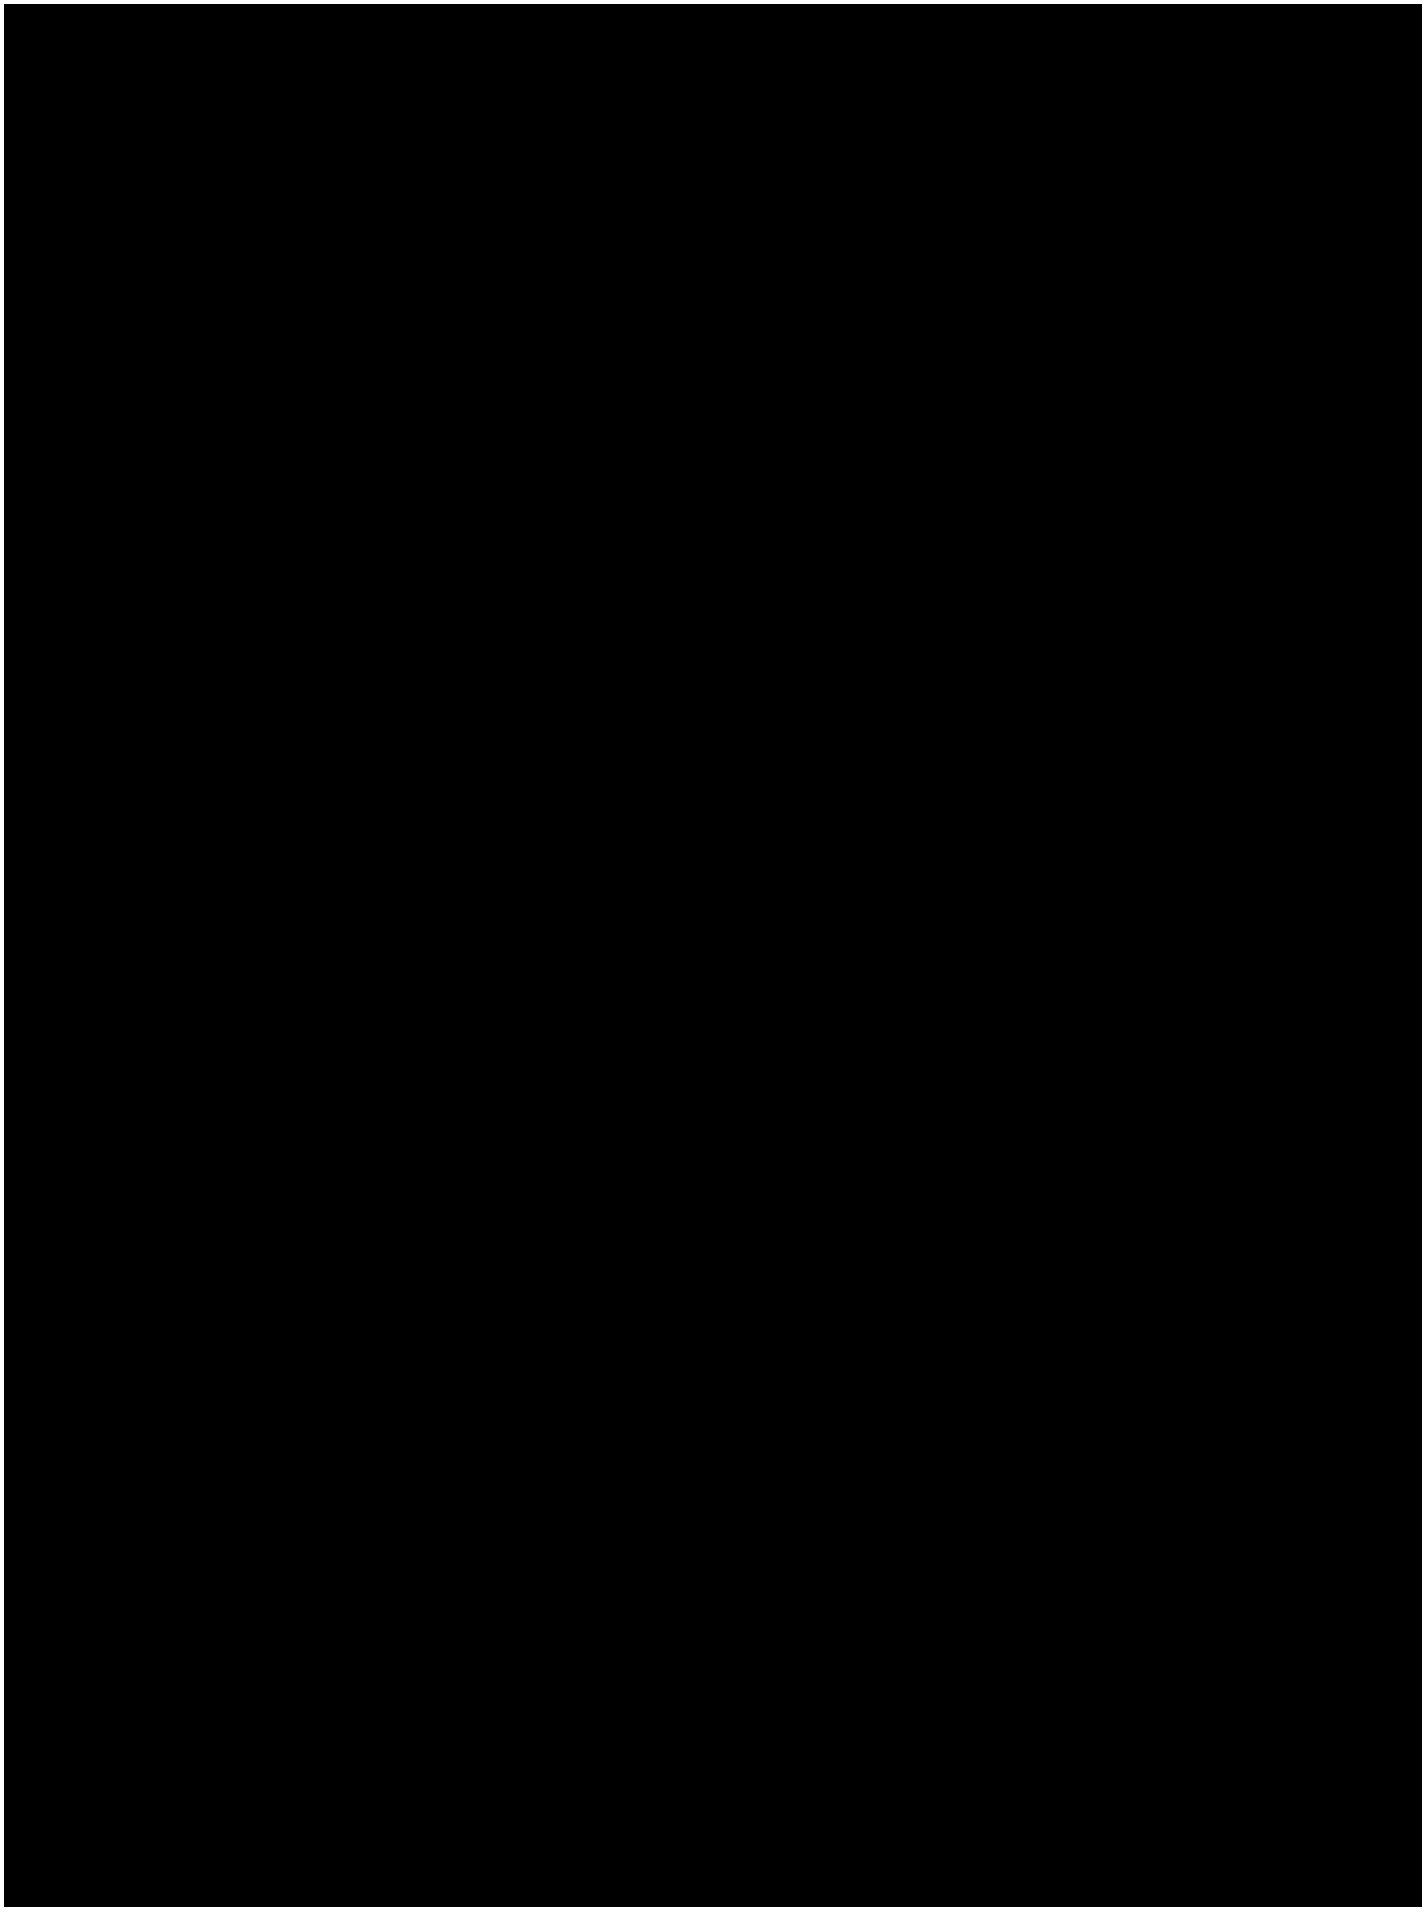


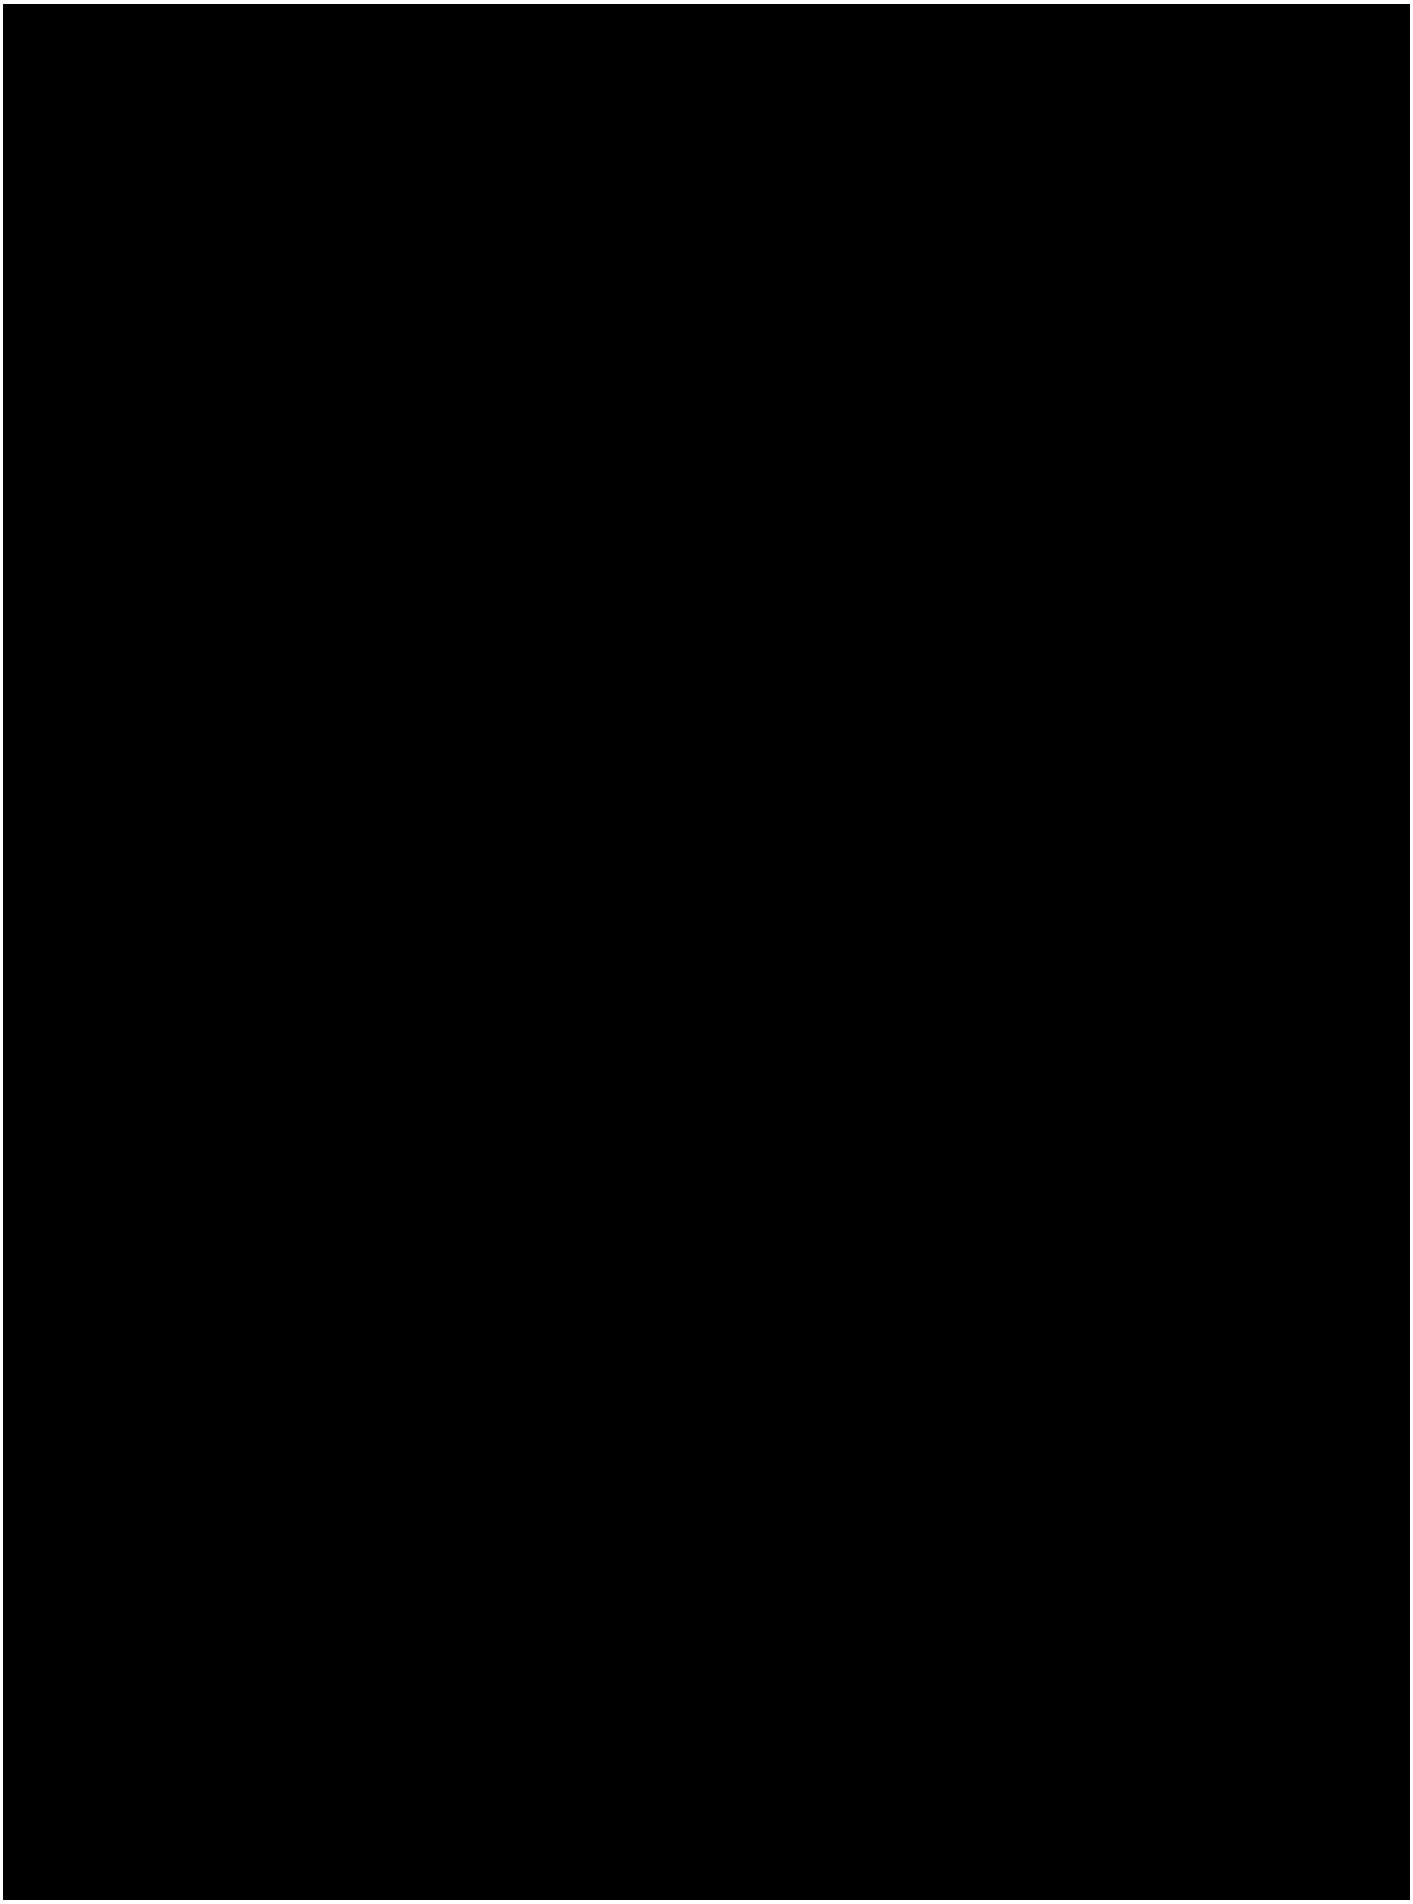
[redacted]

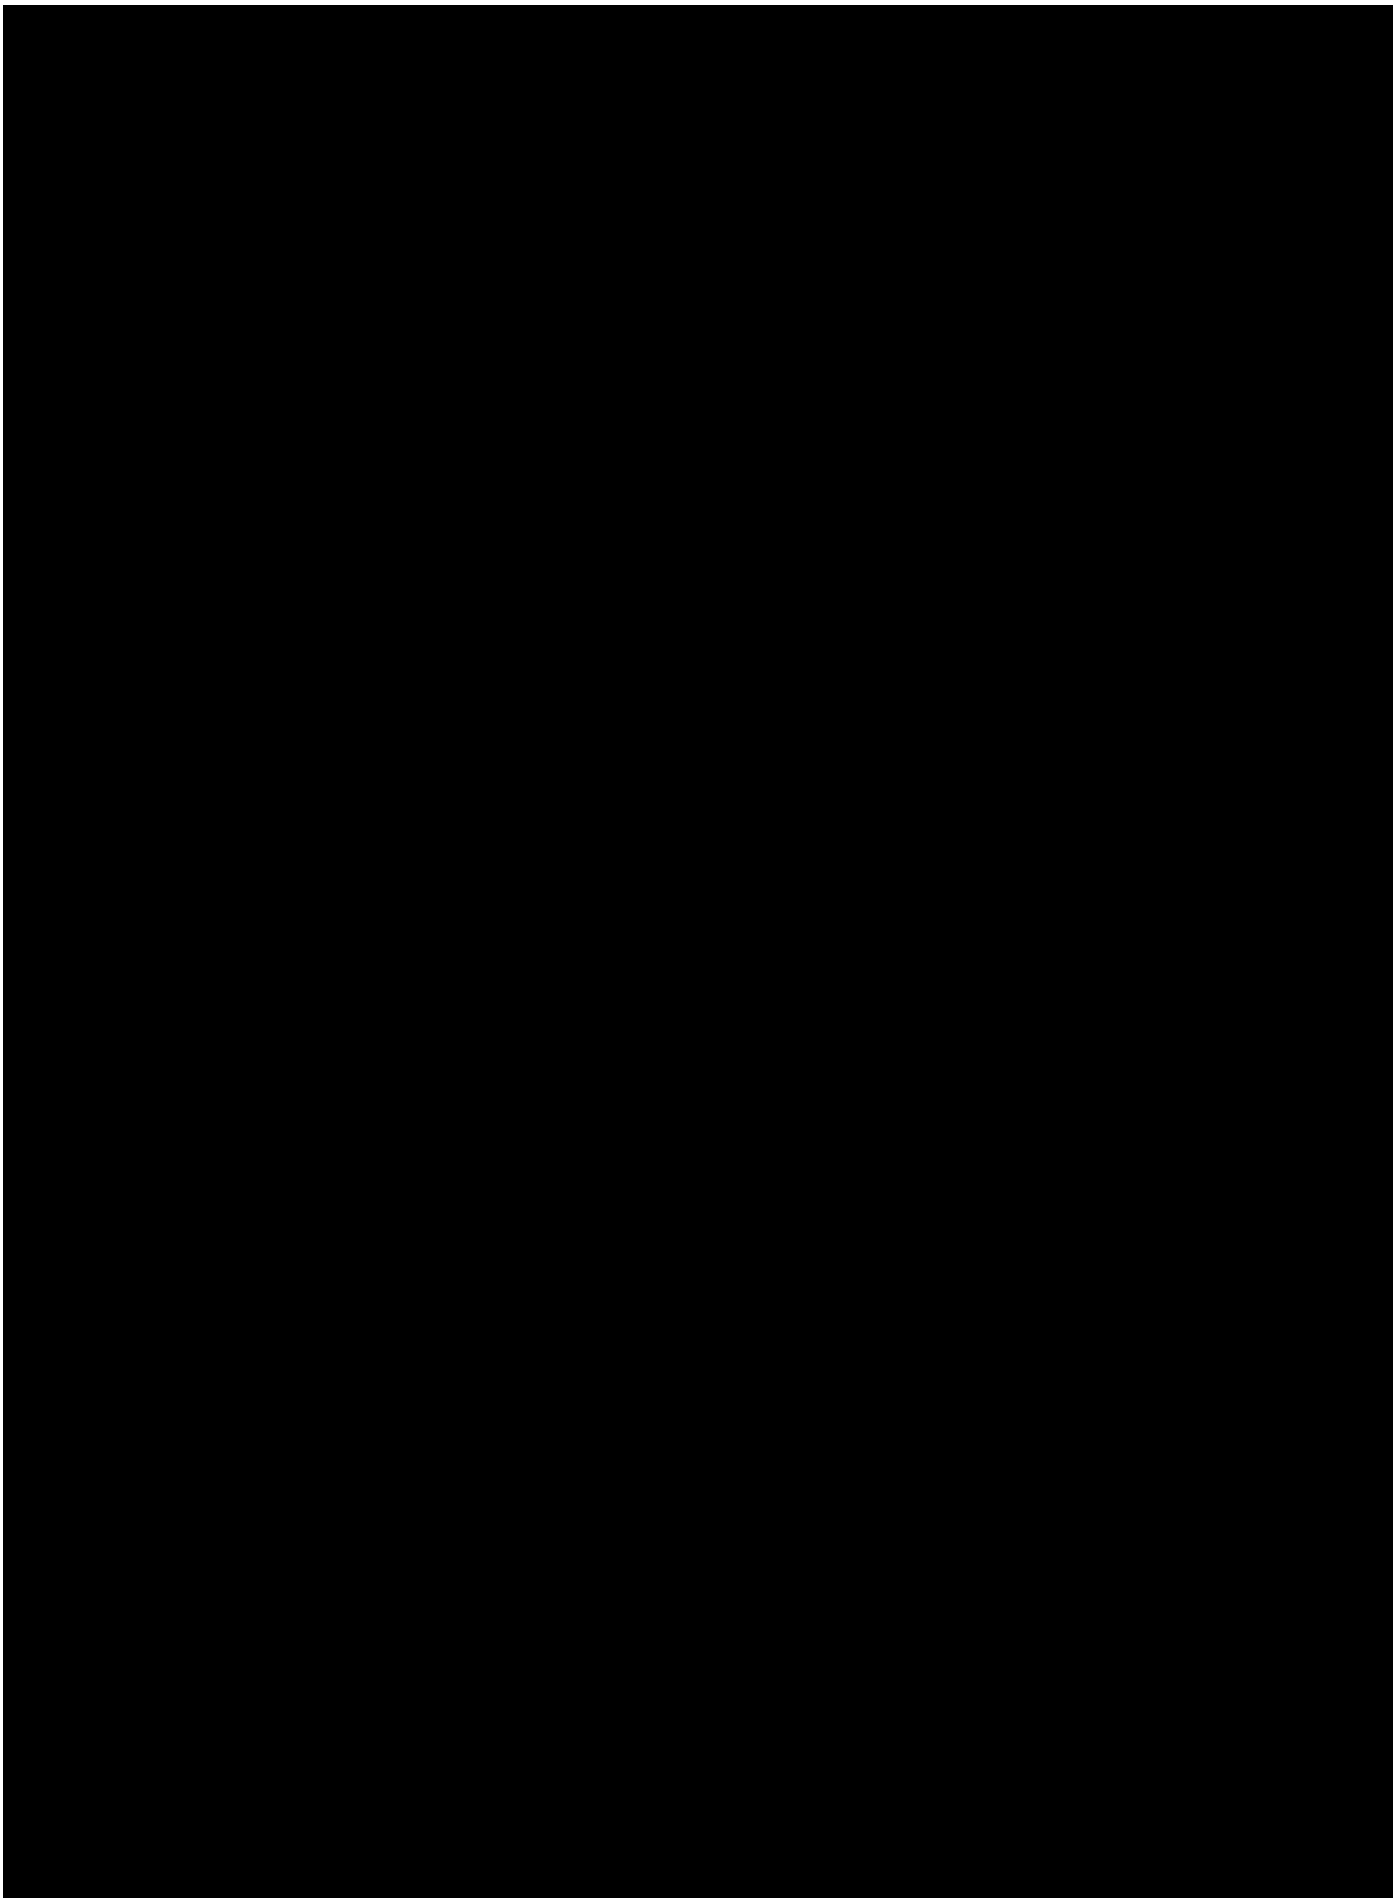


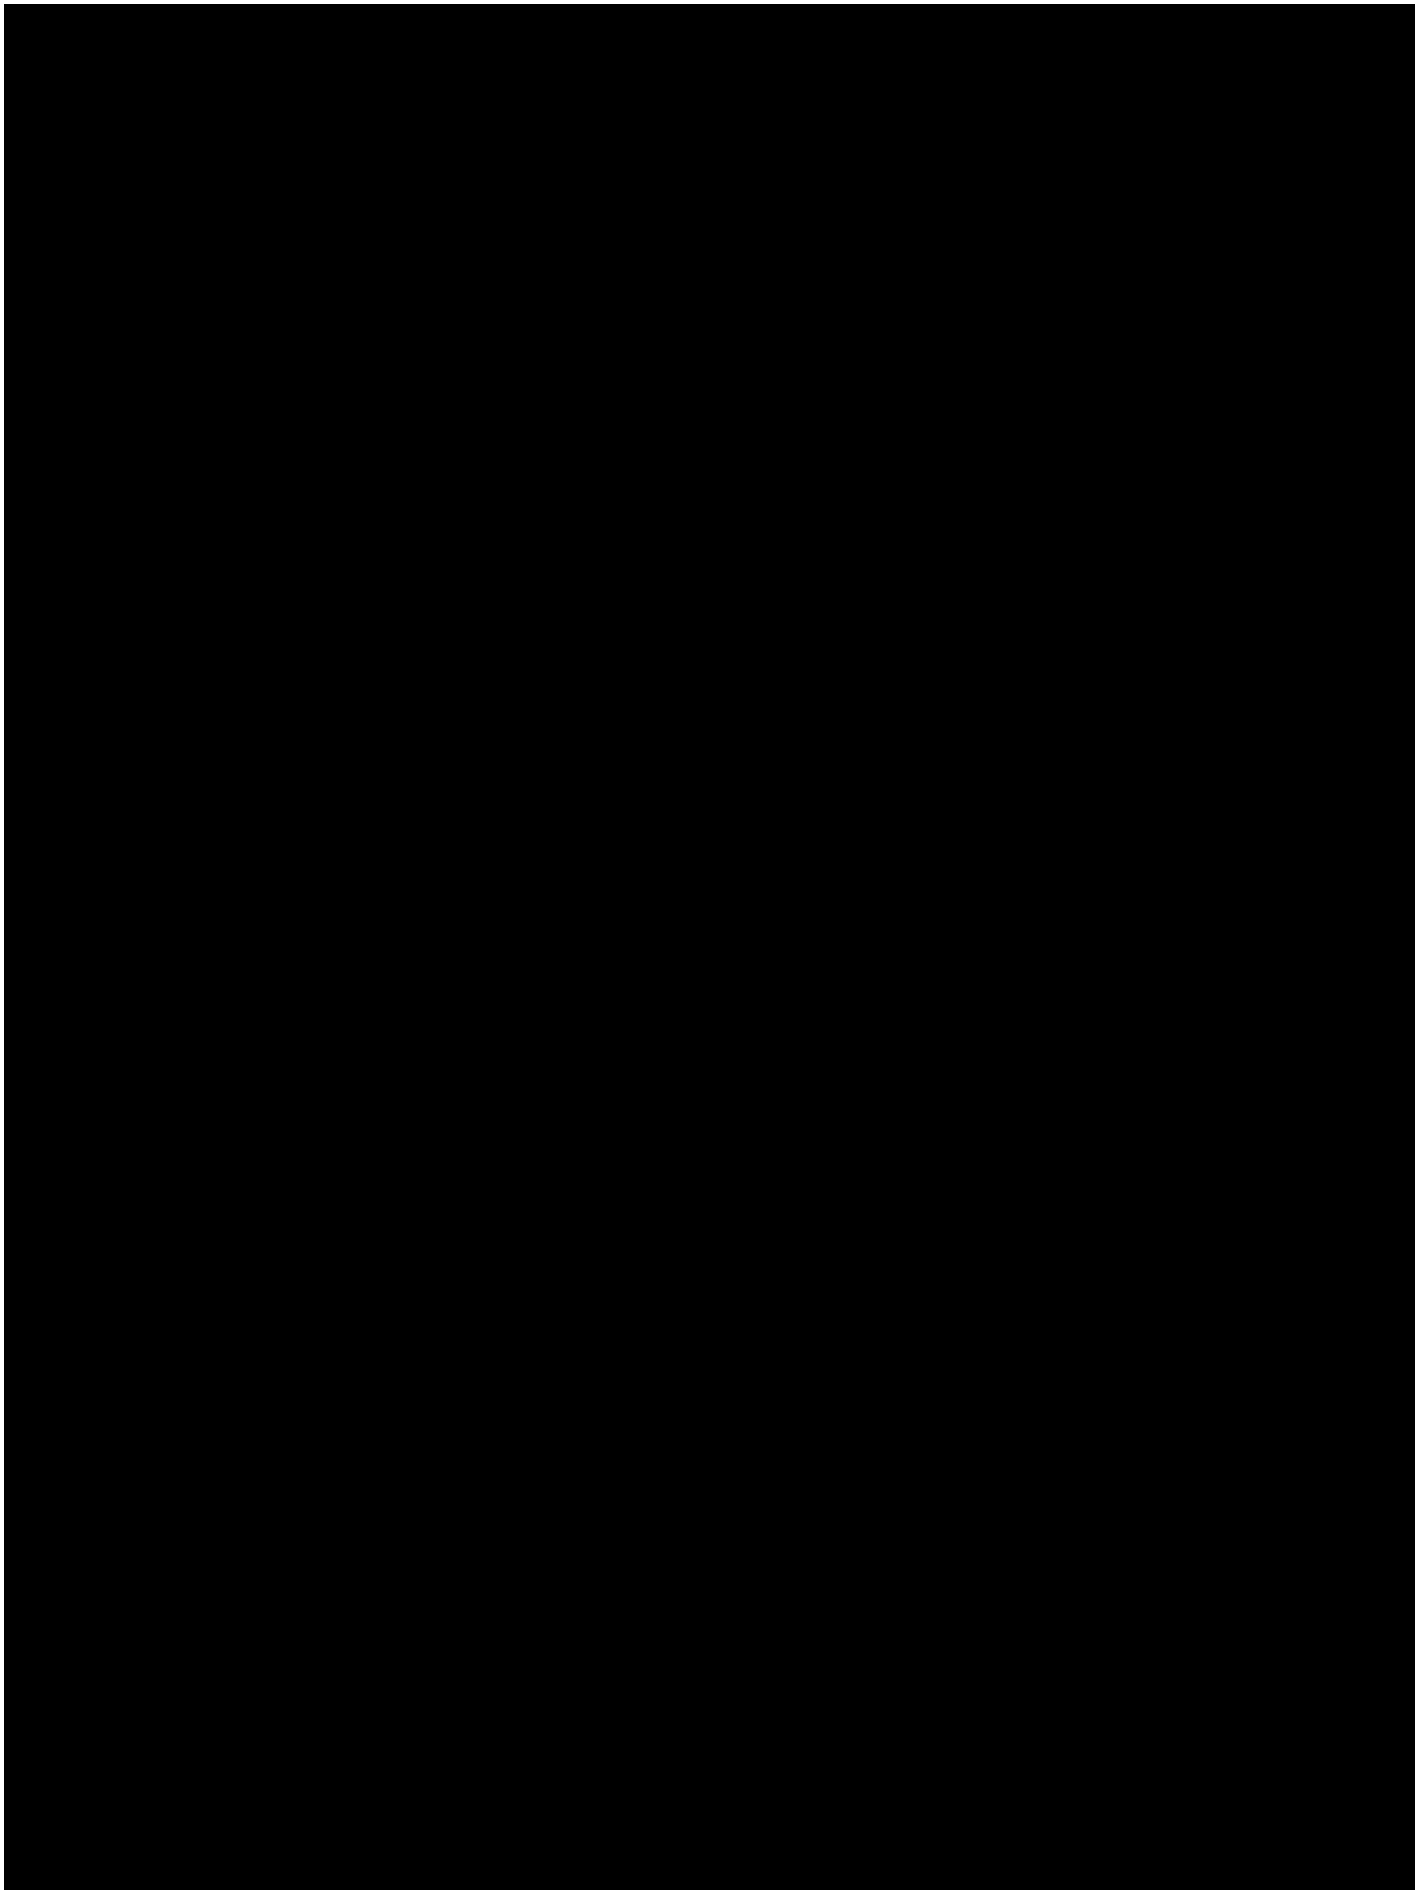


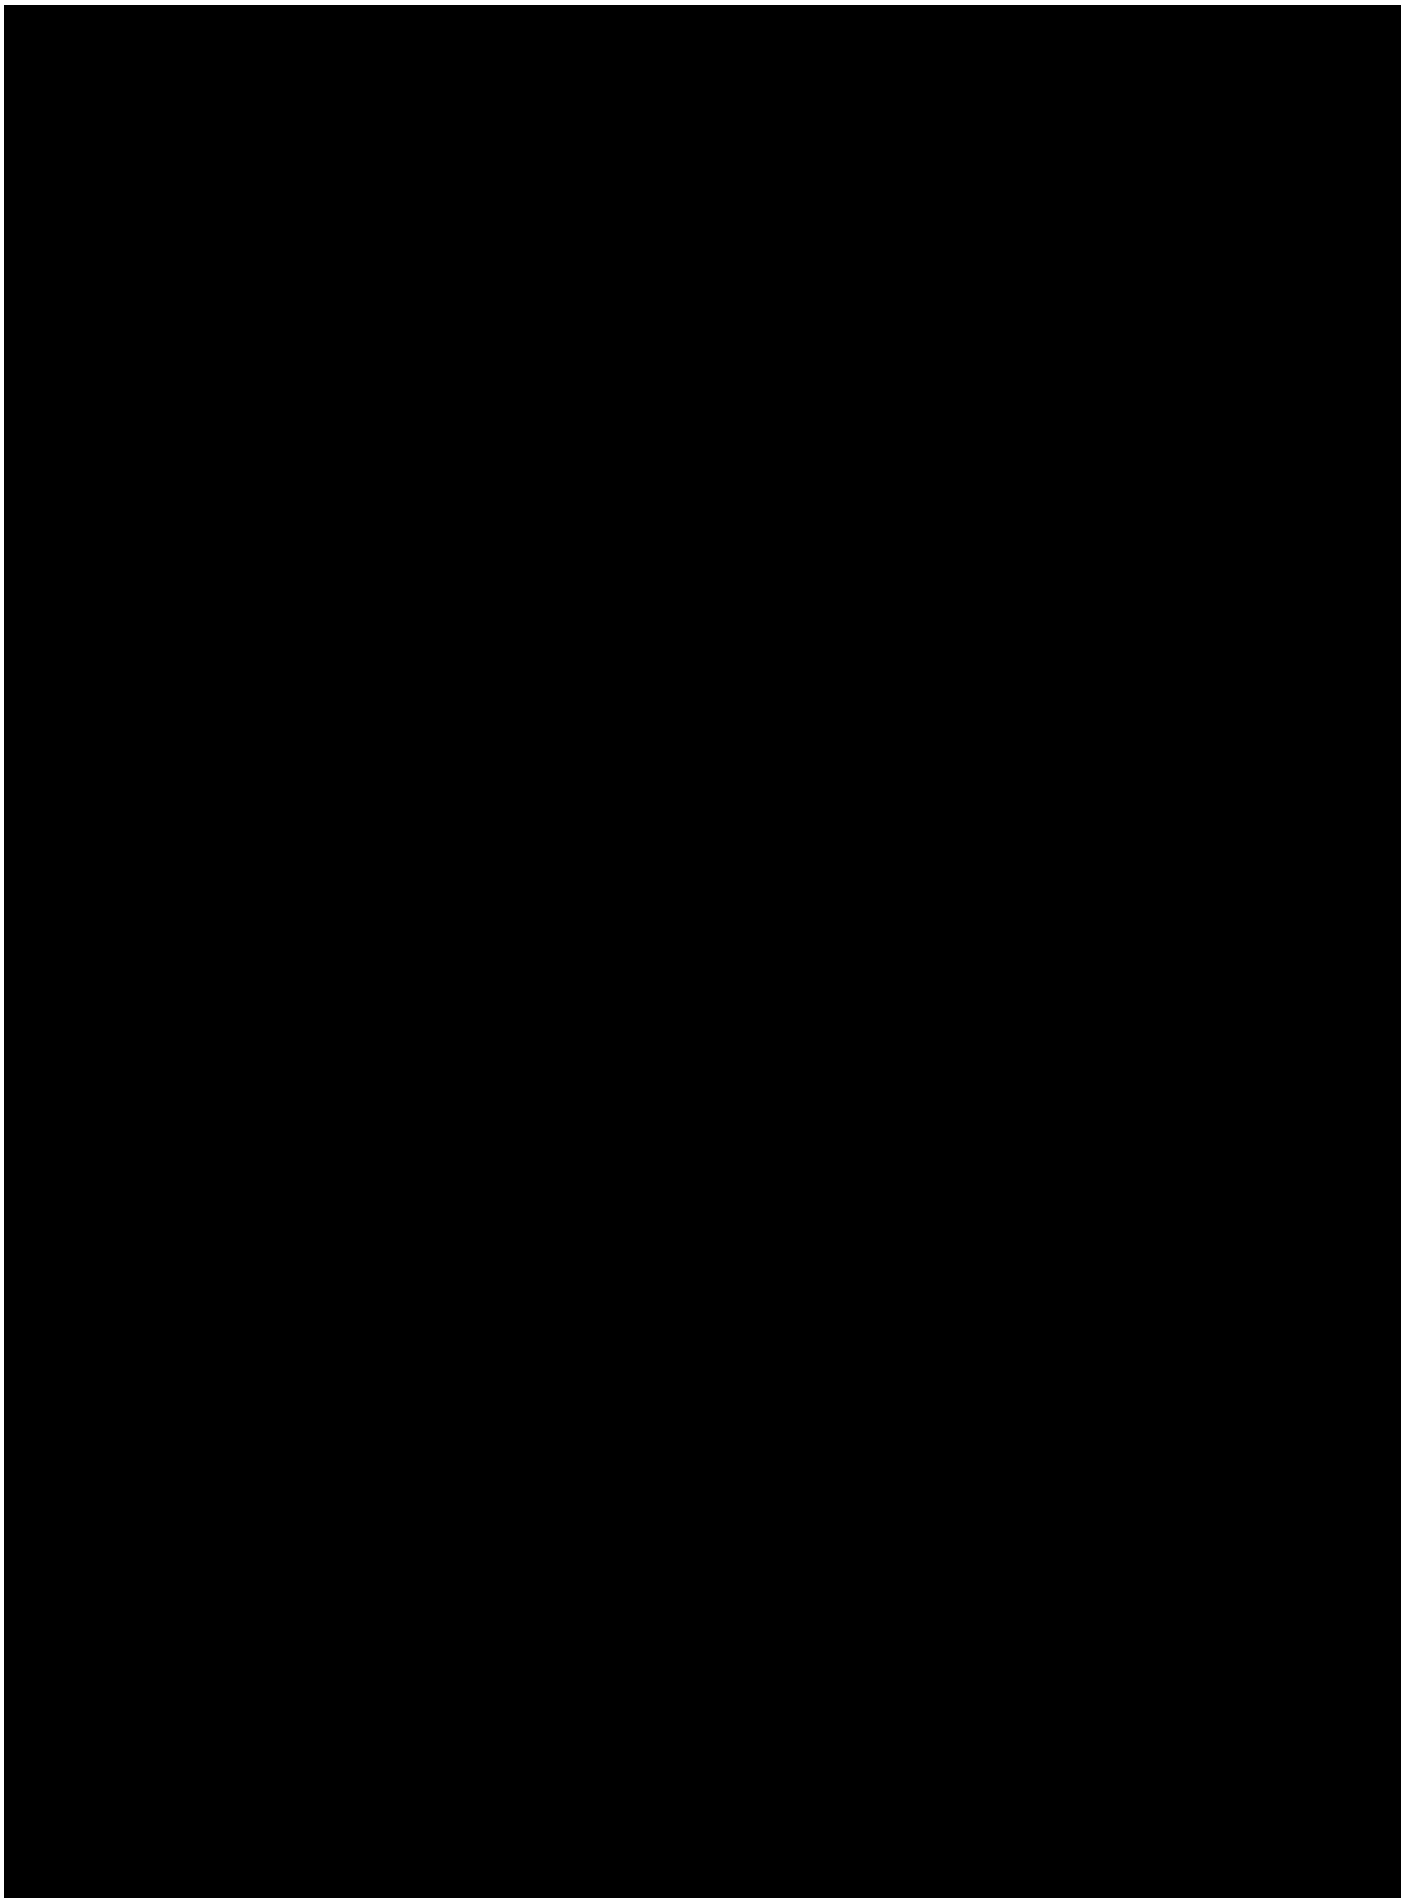


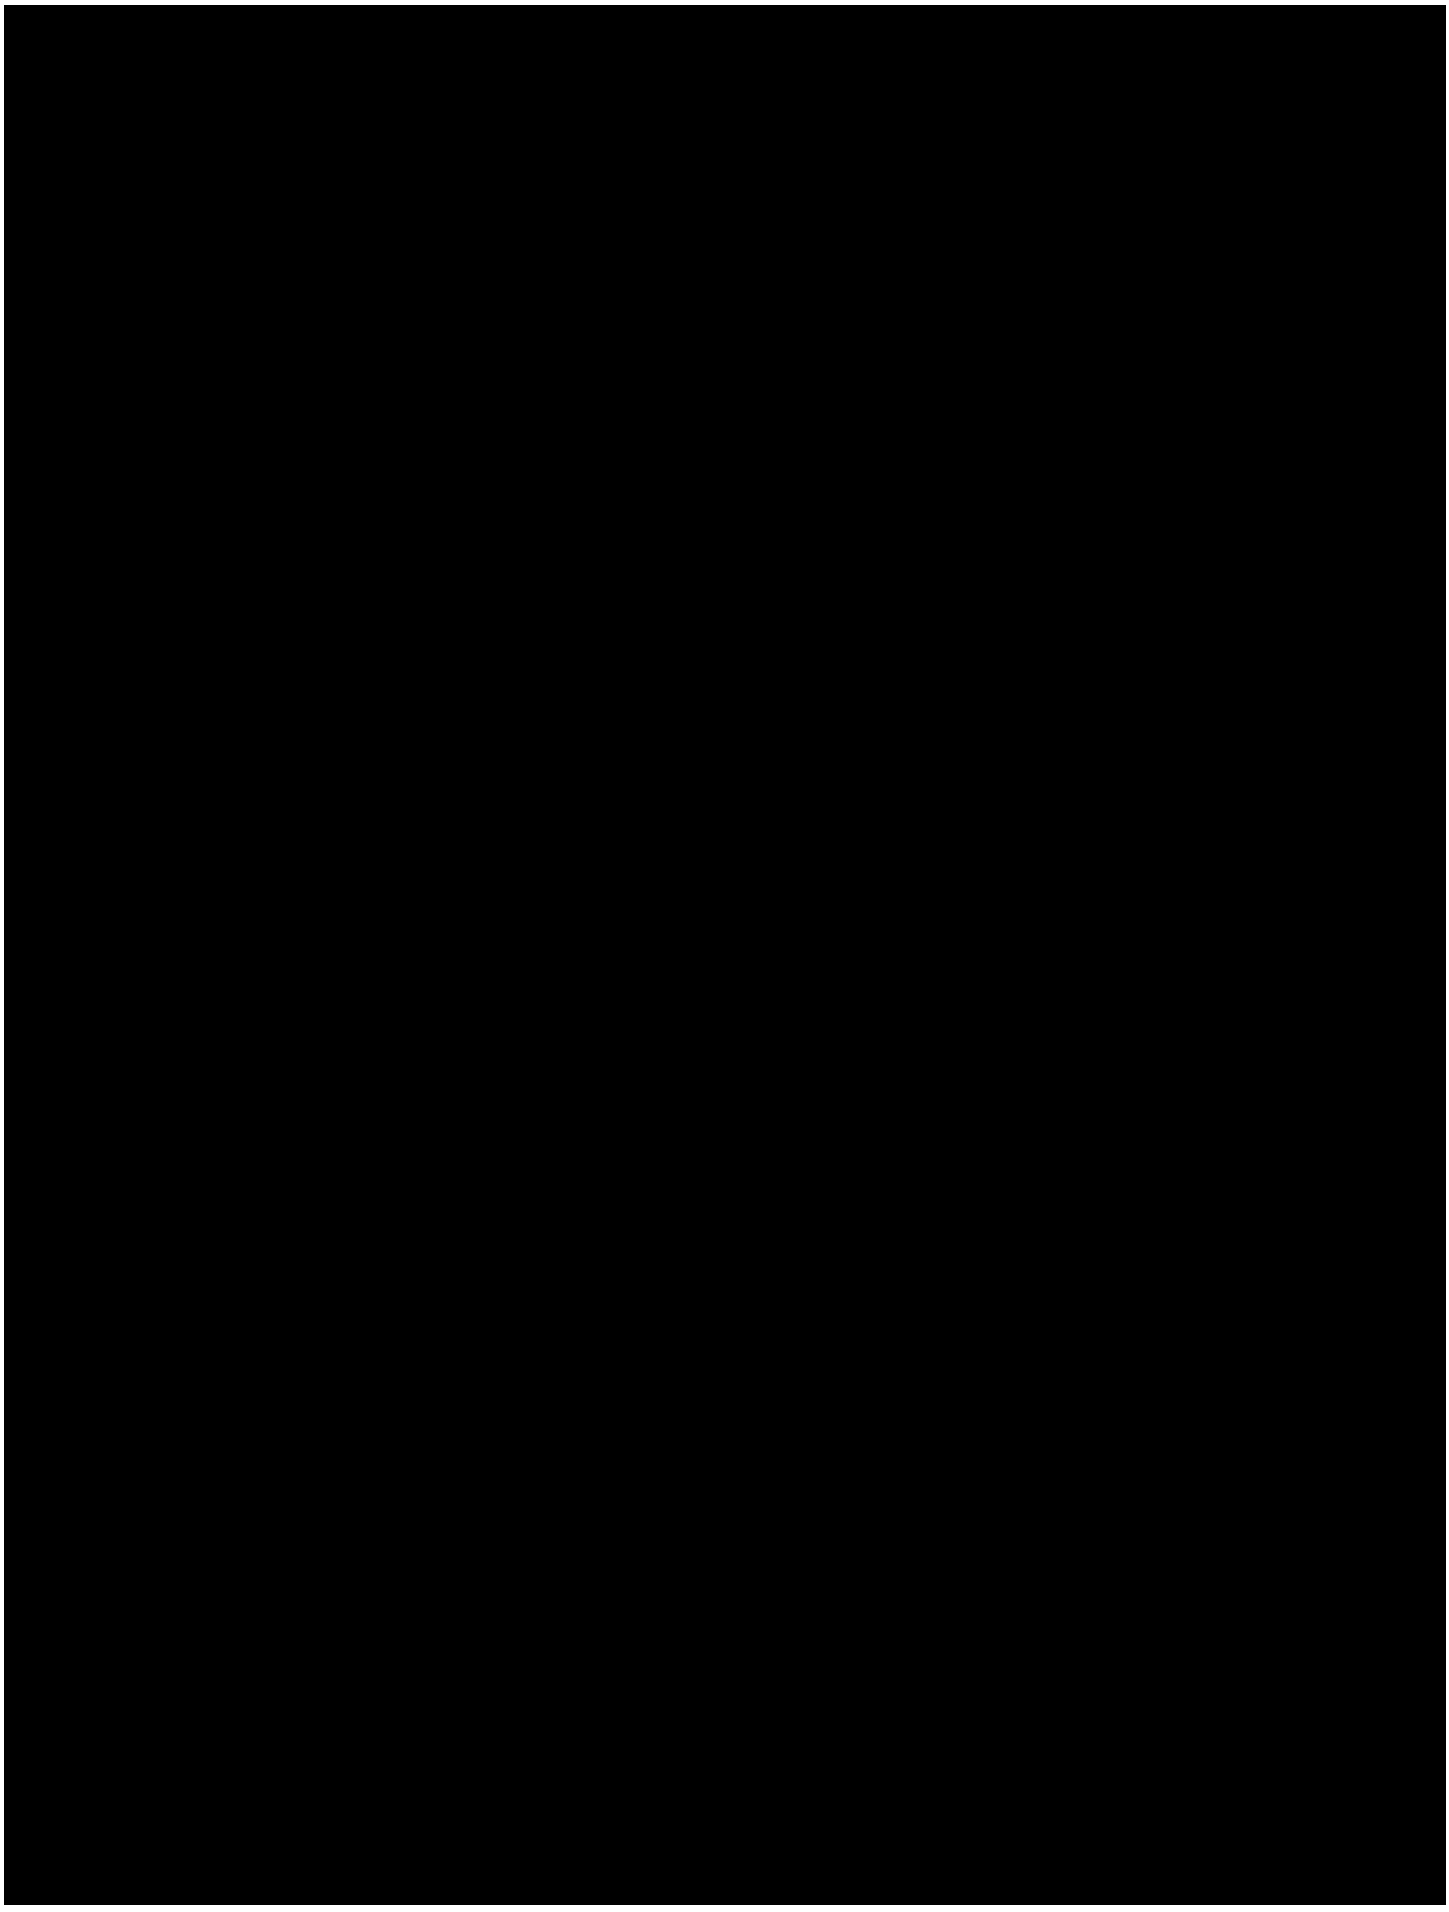


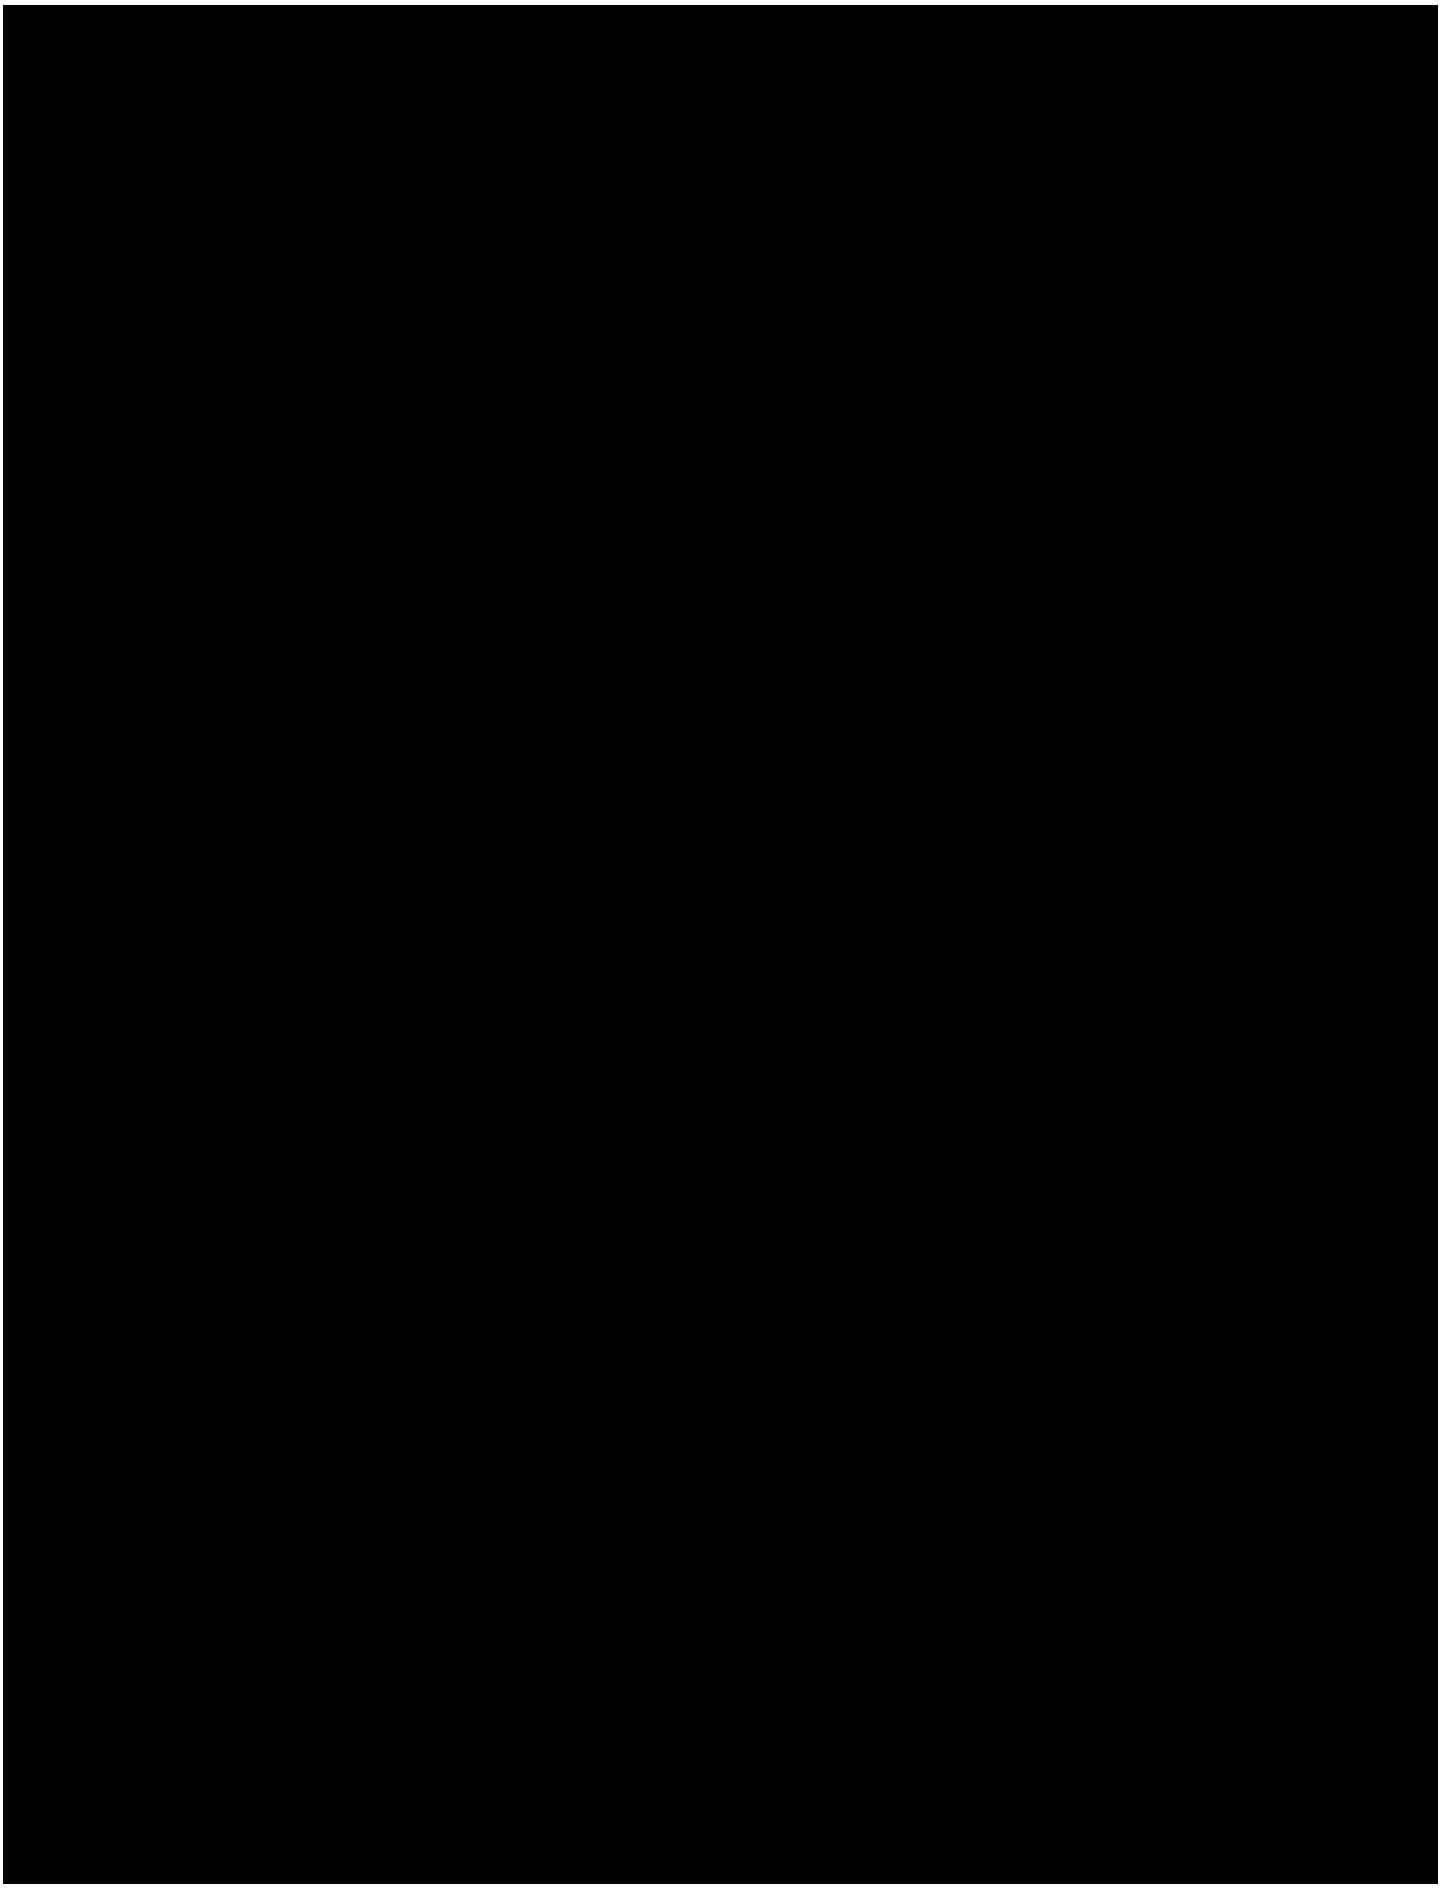


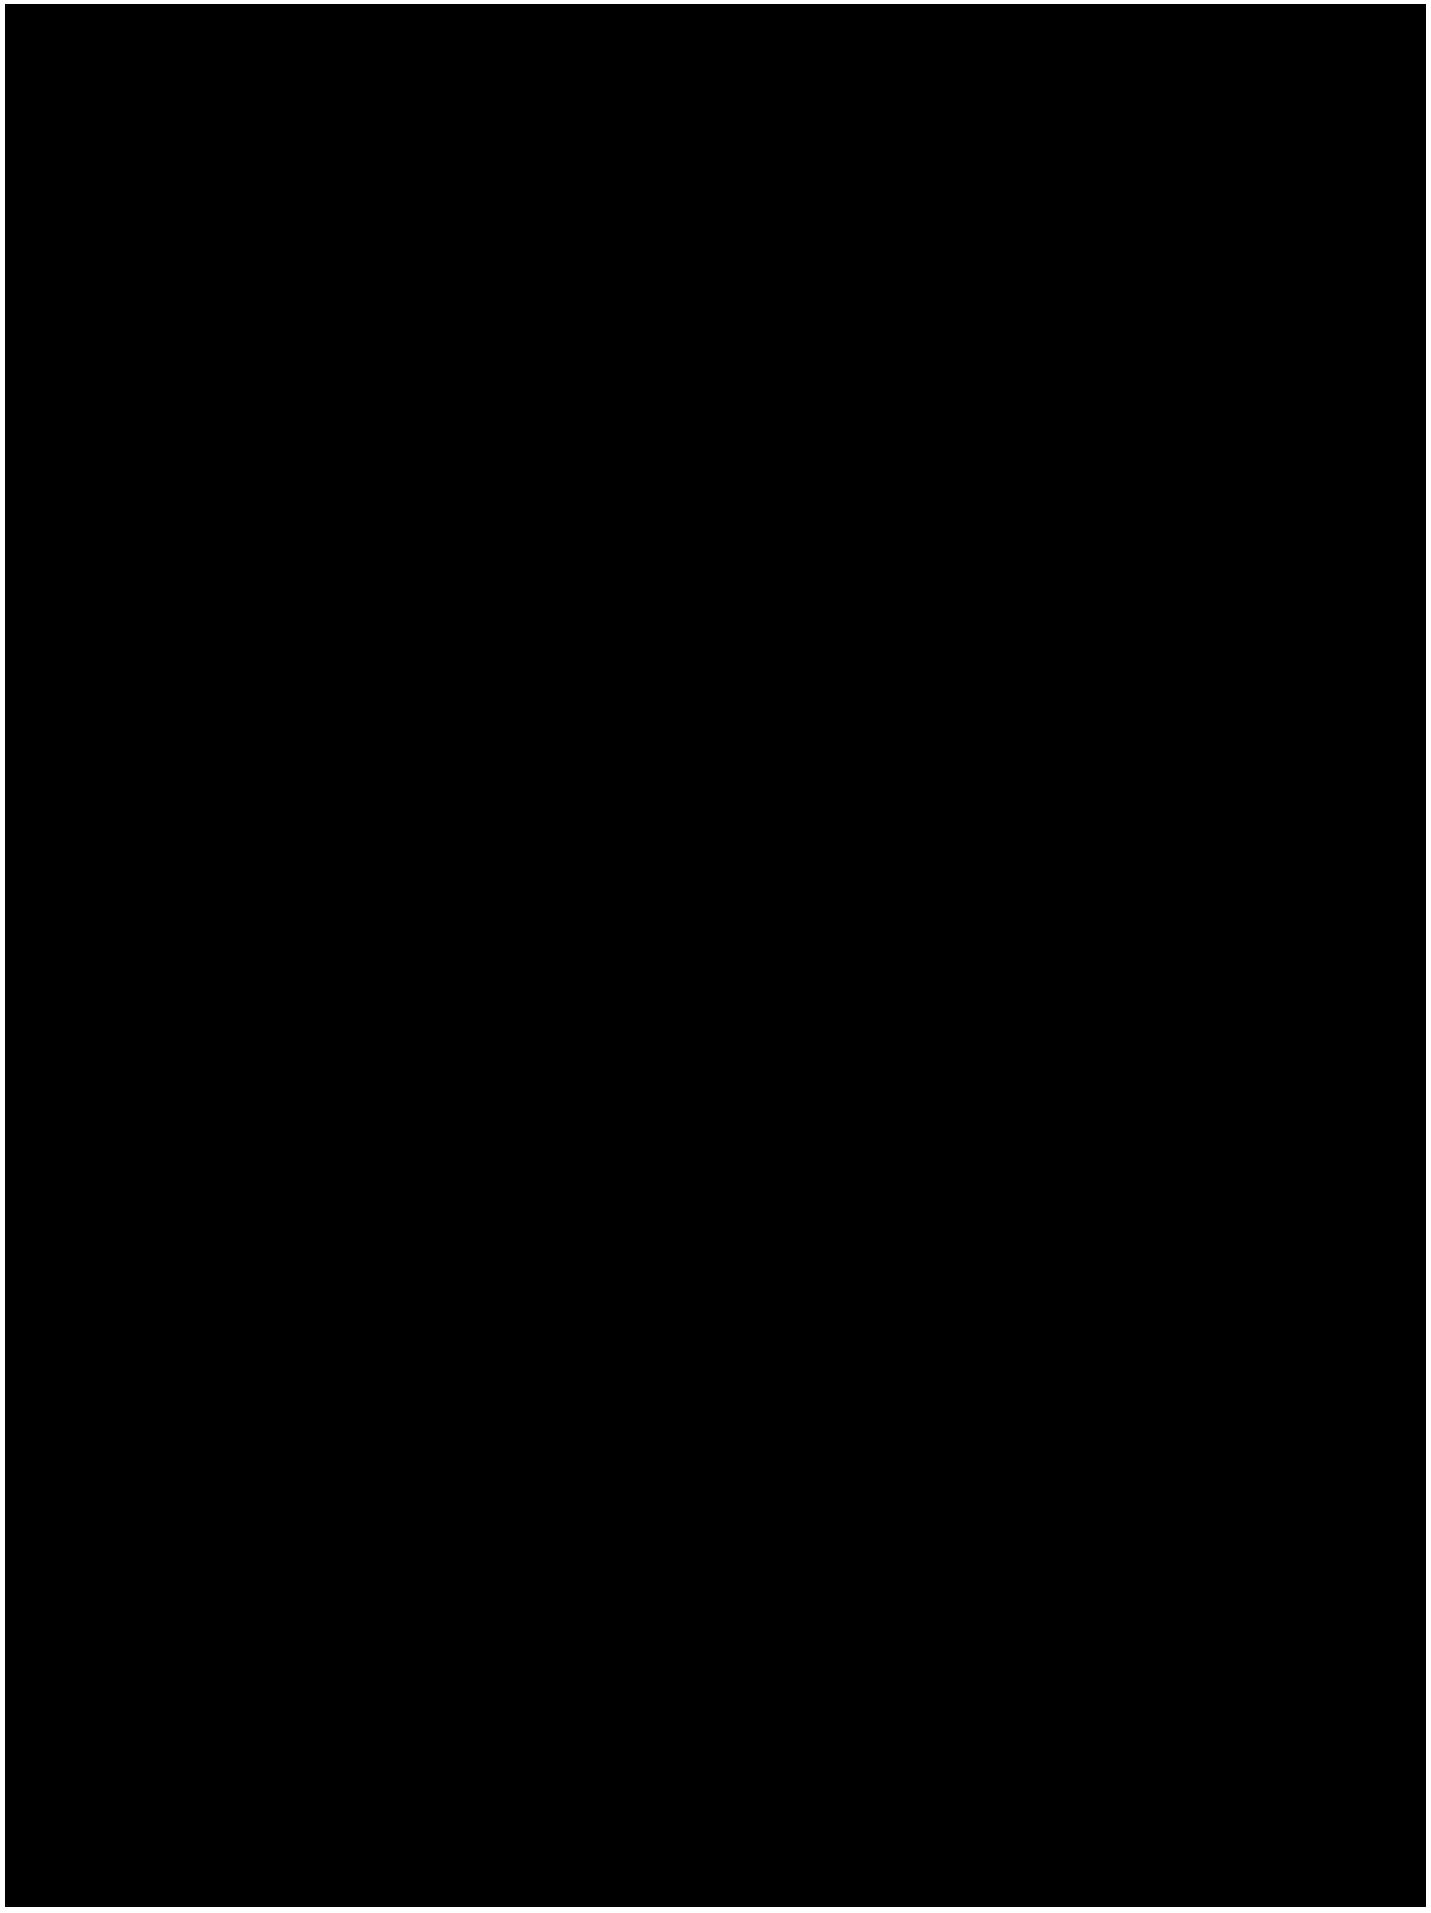


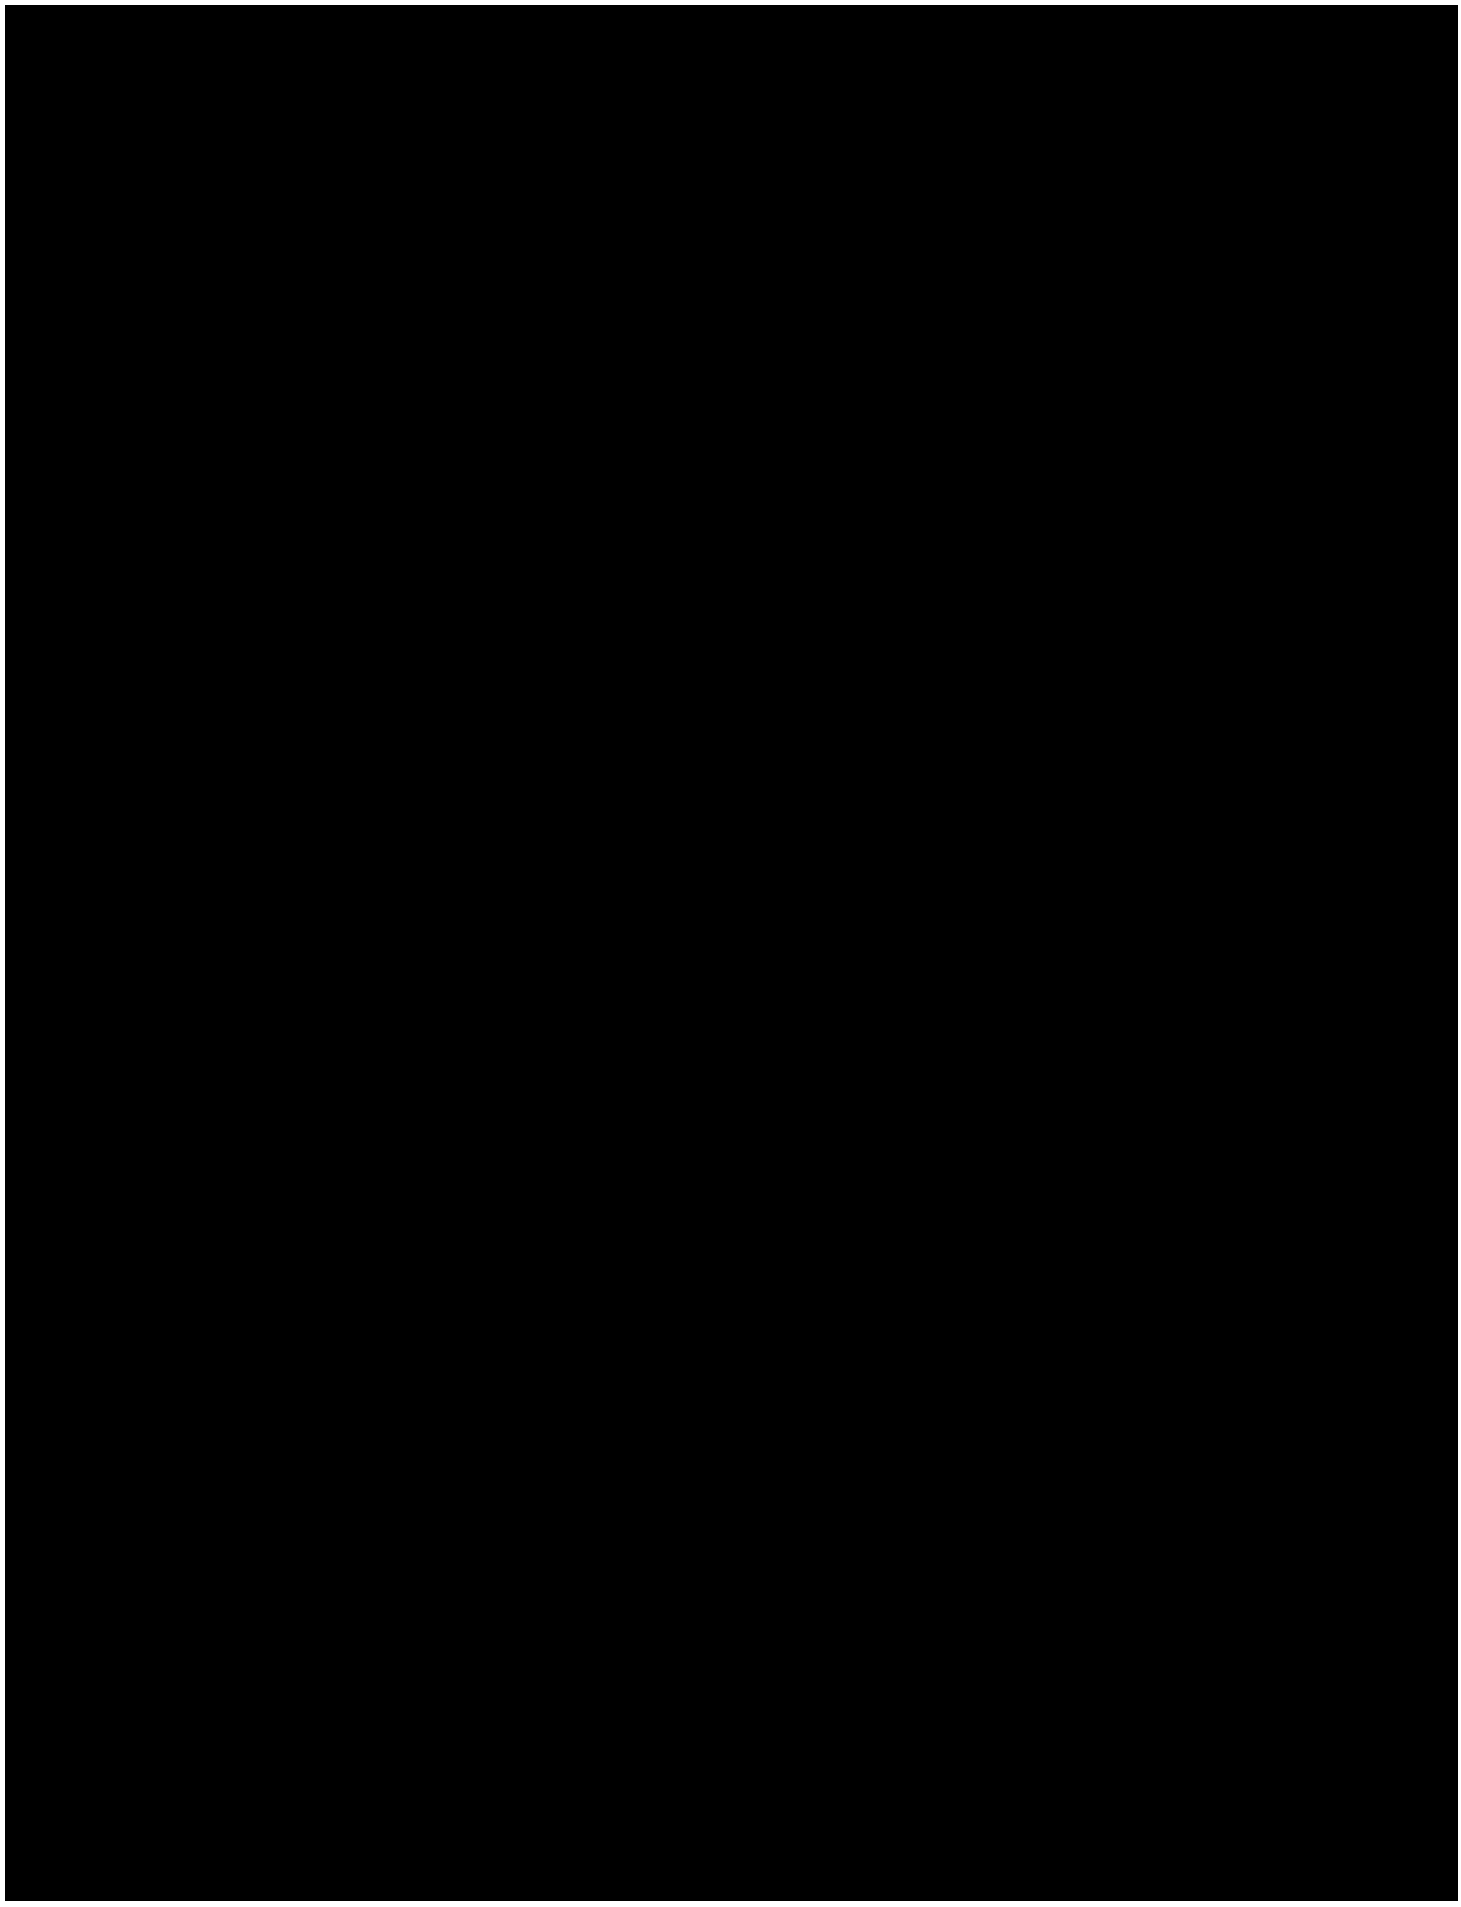


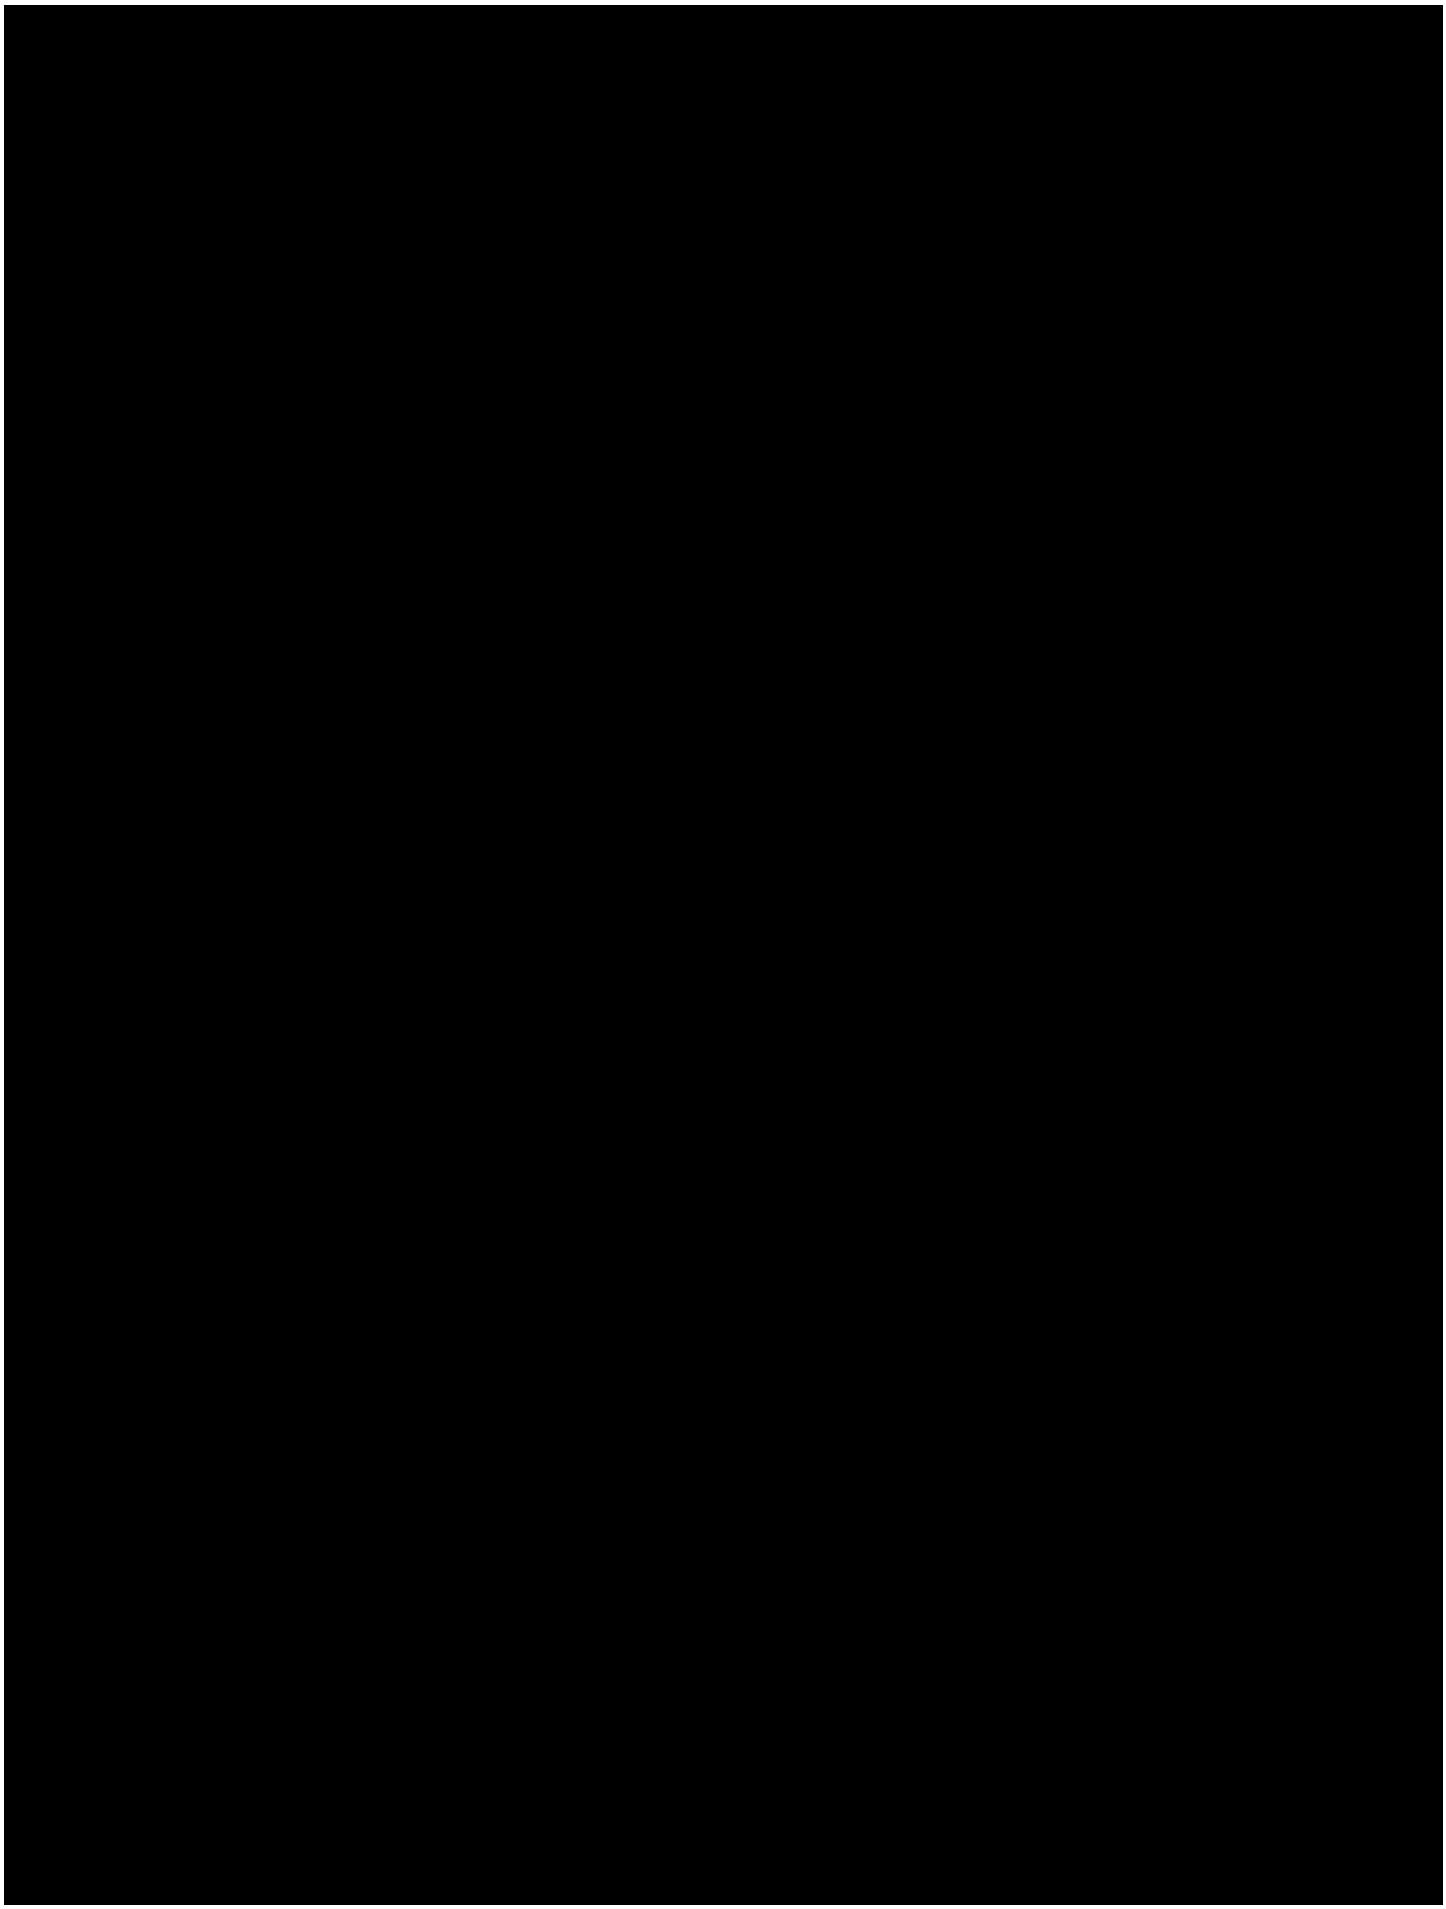


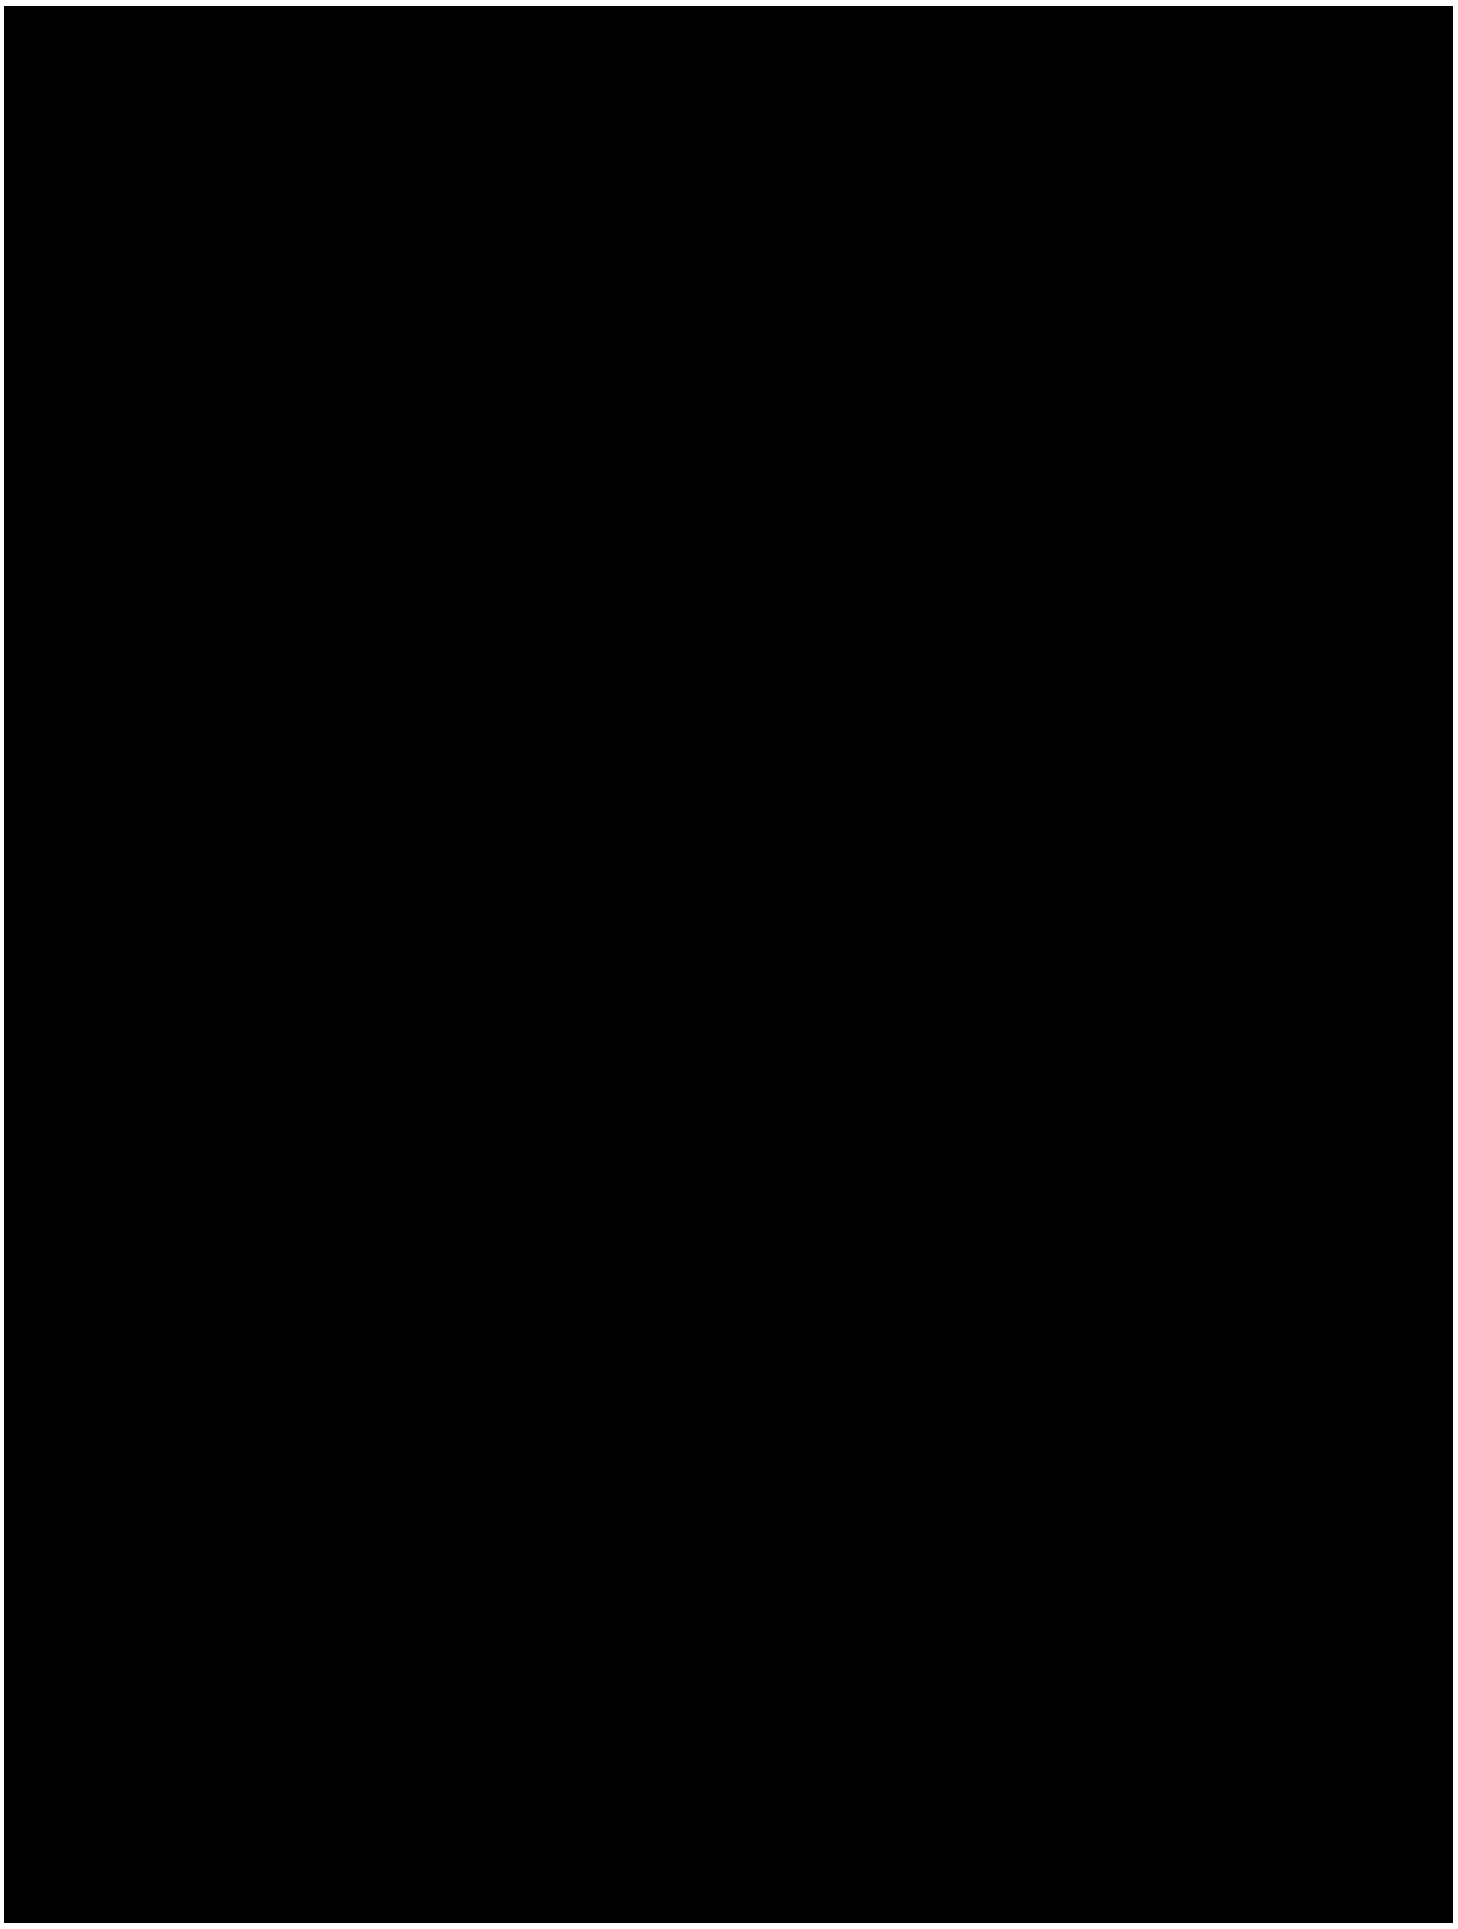


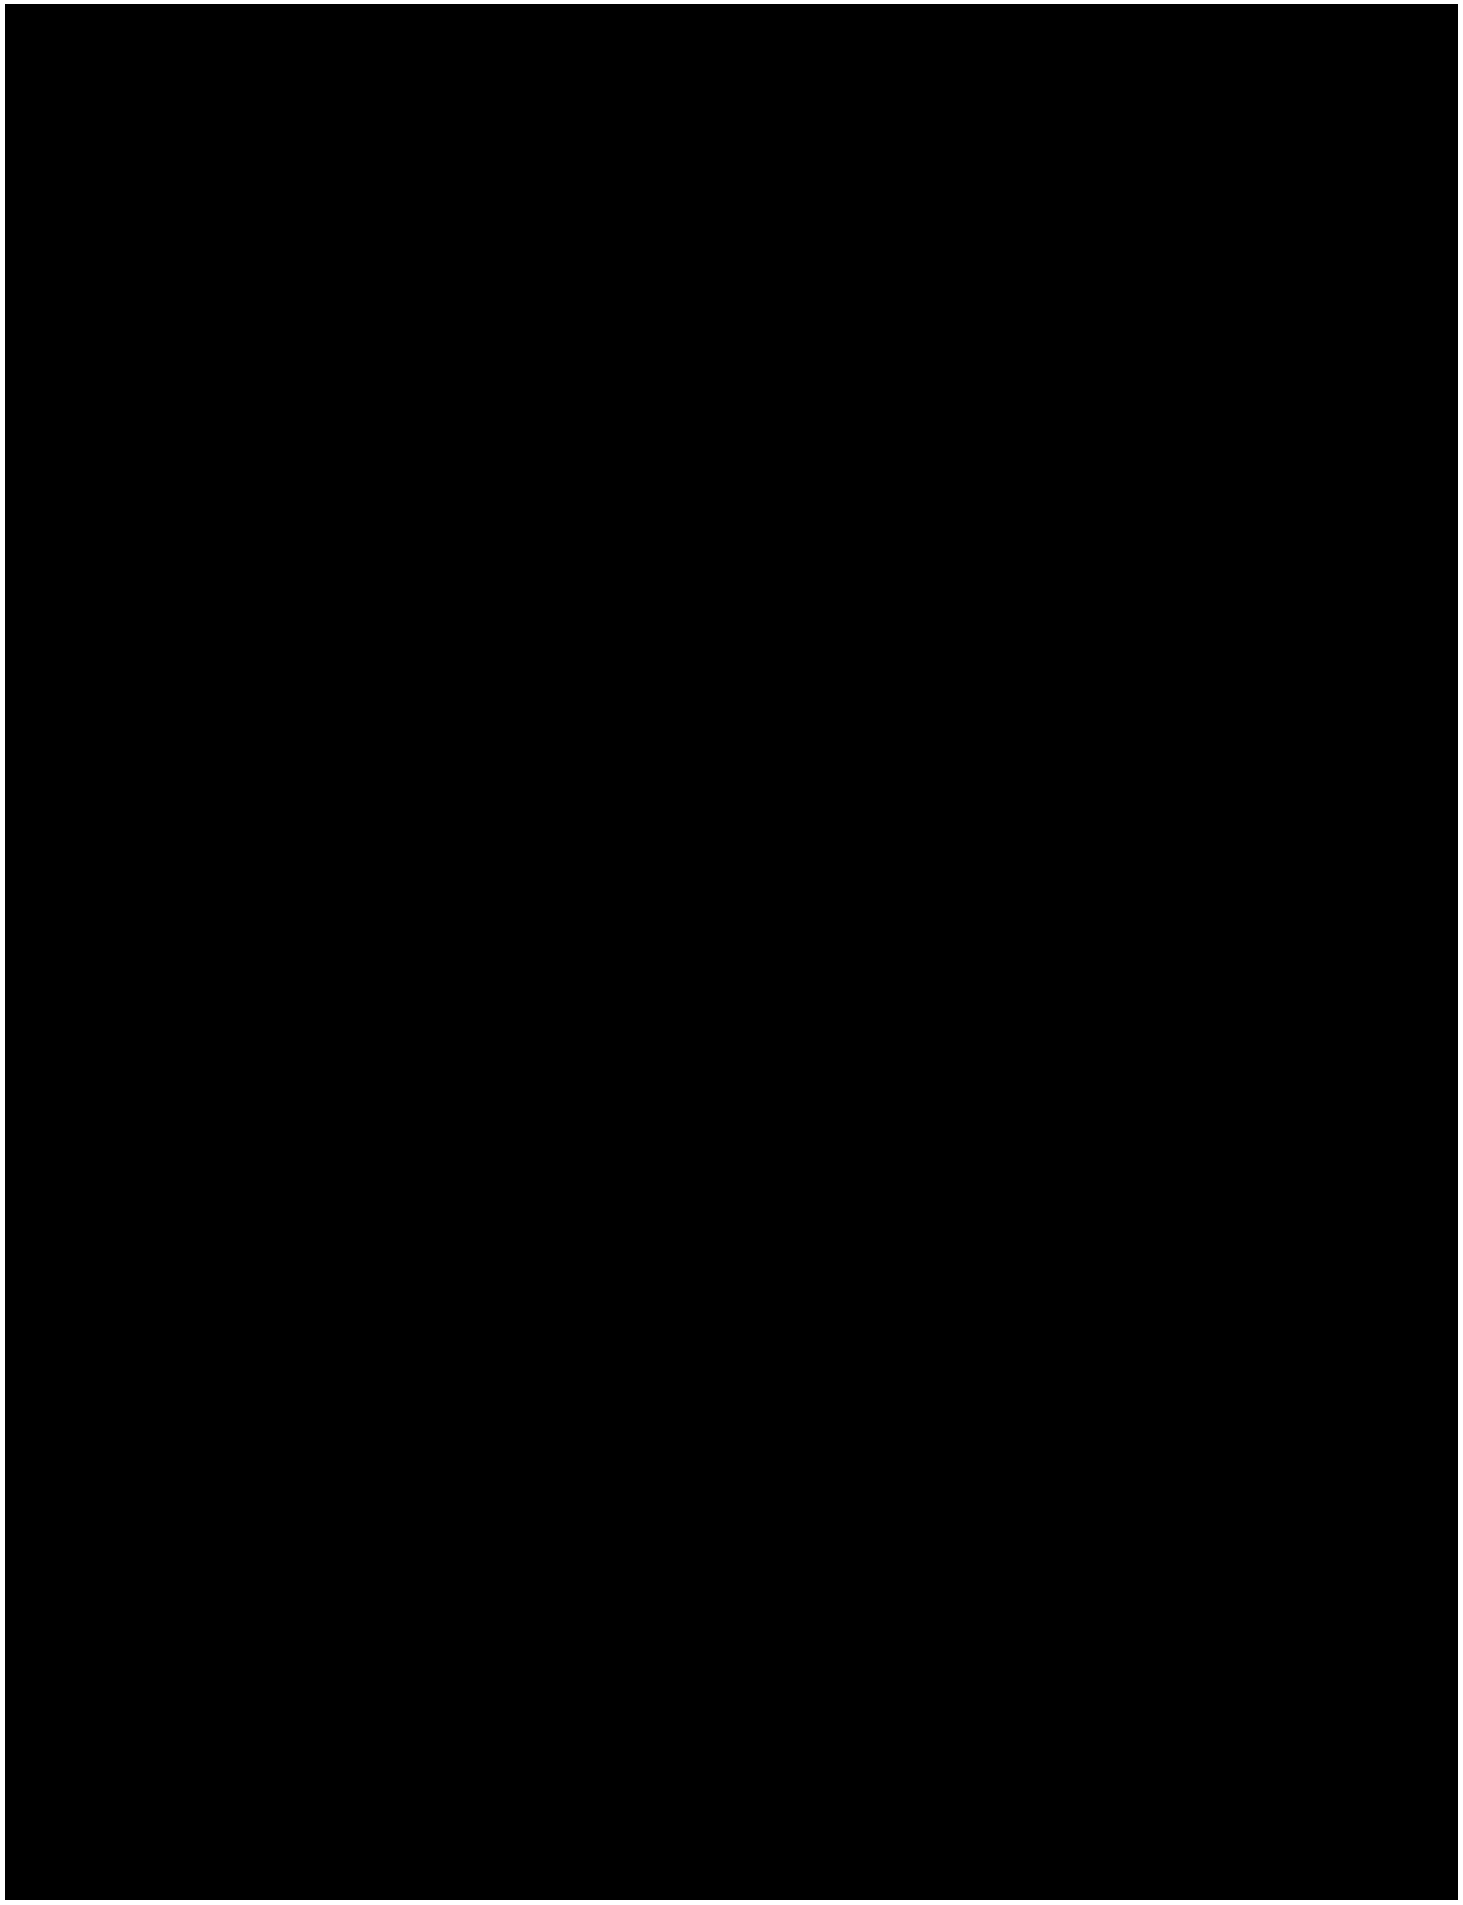


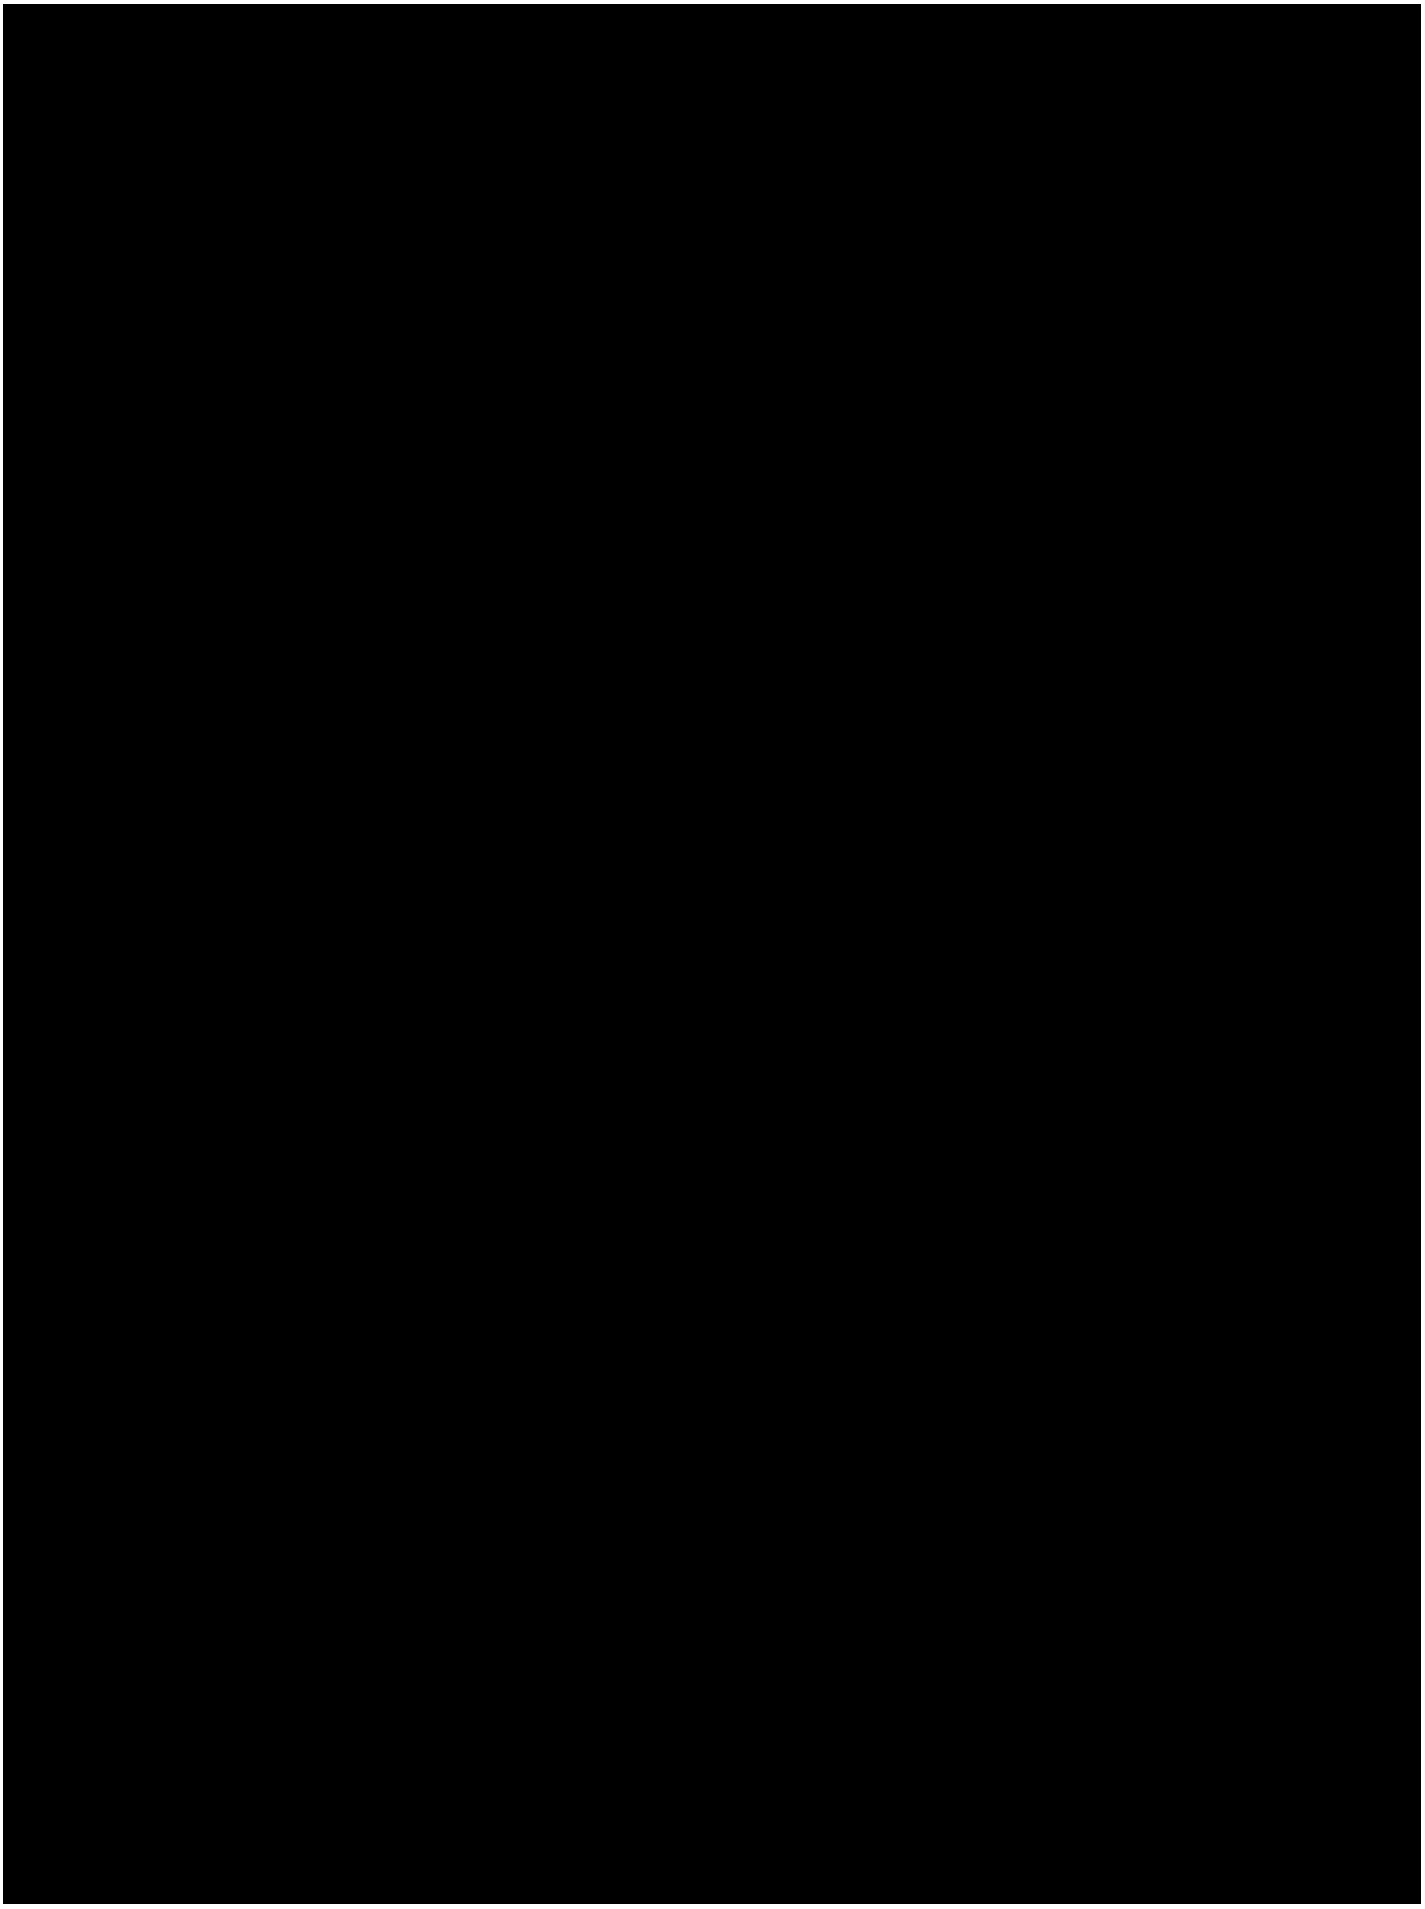


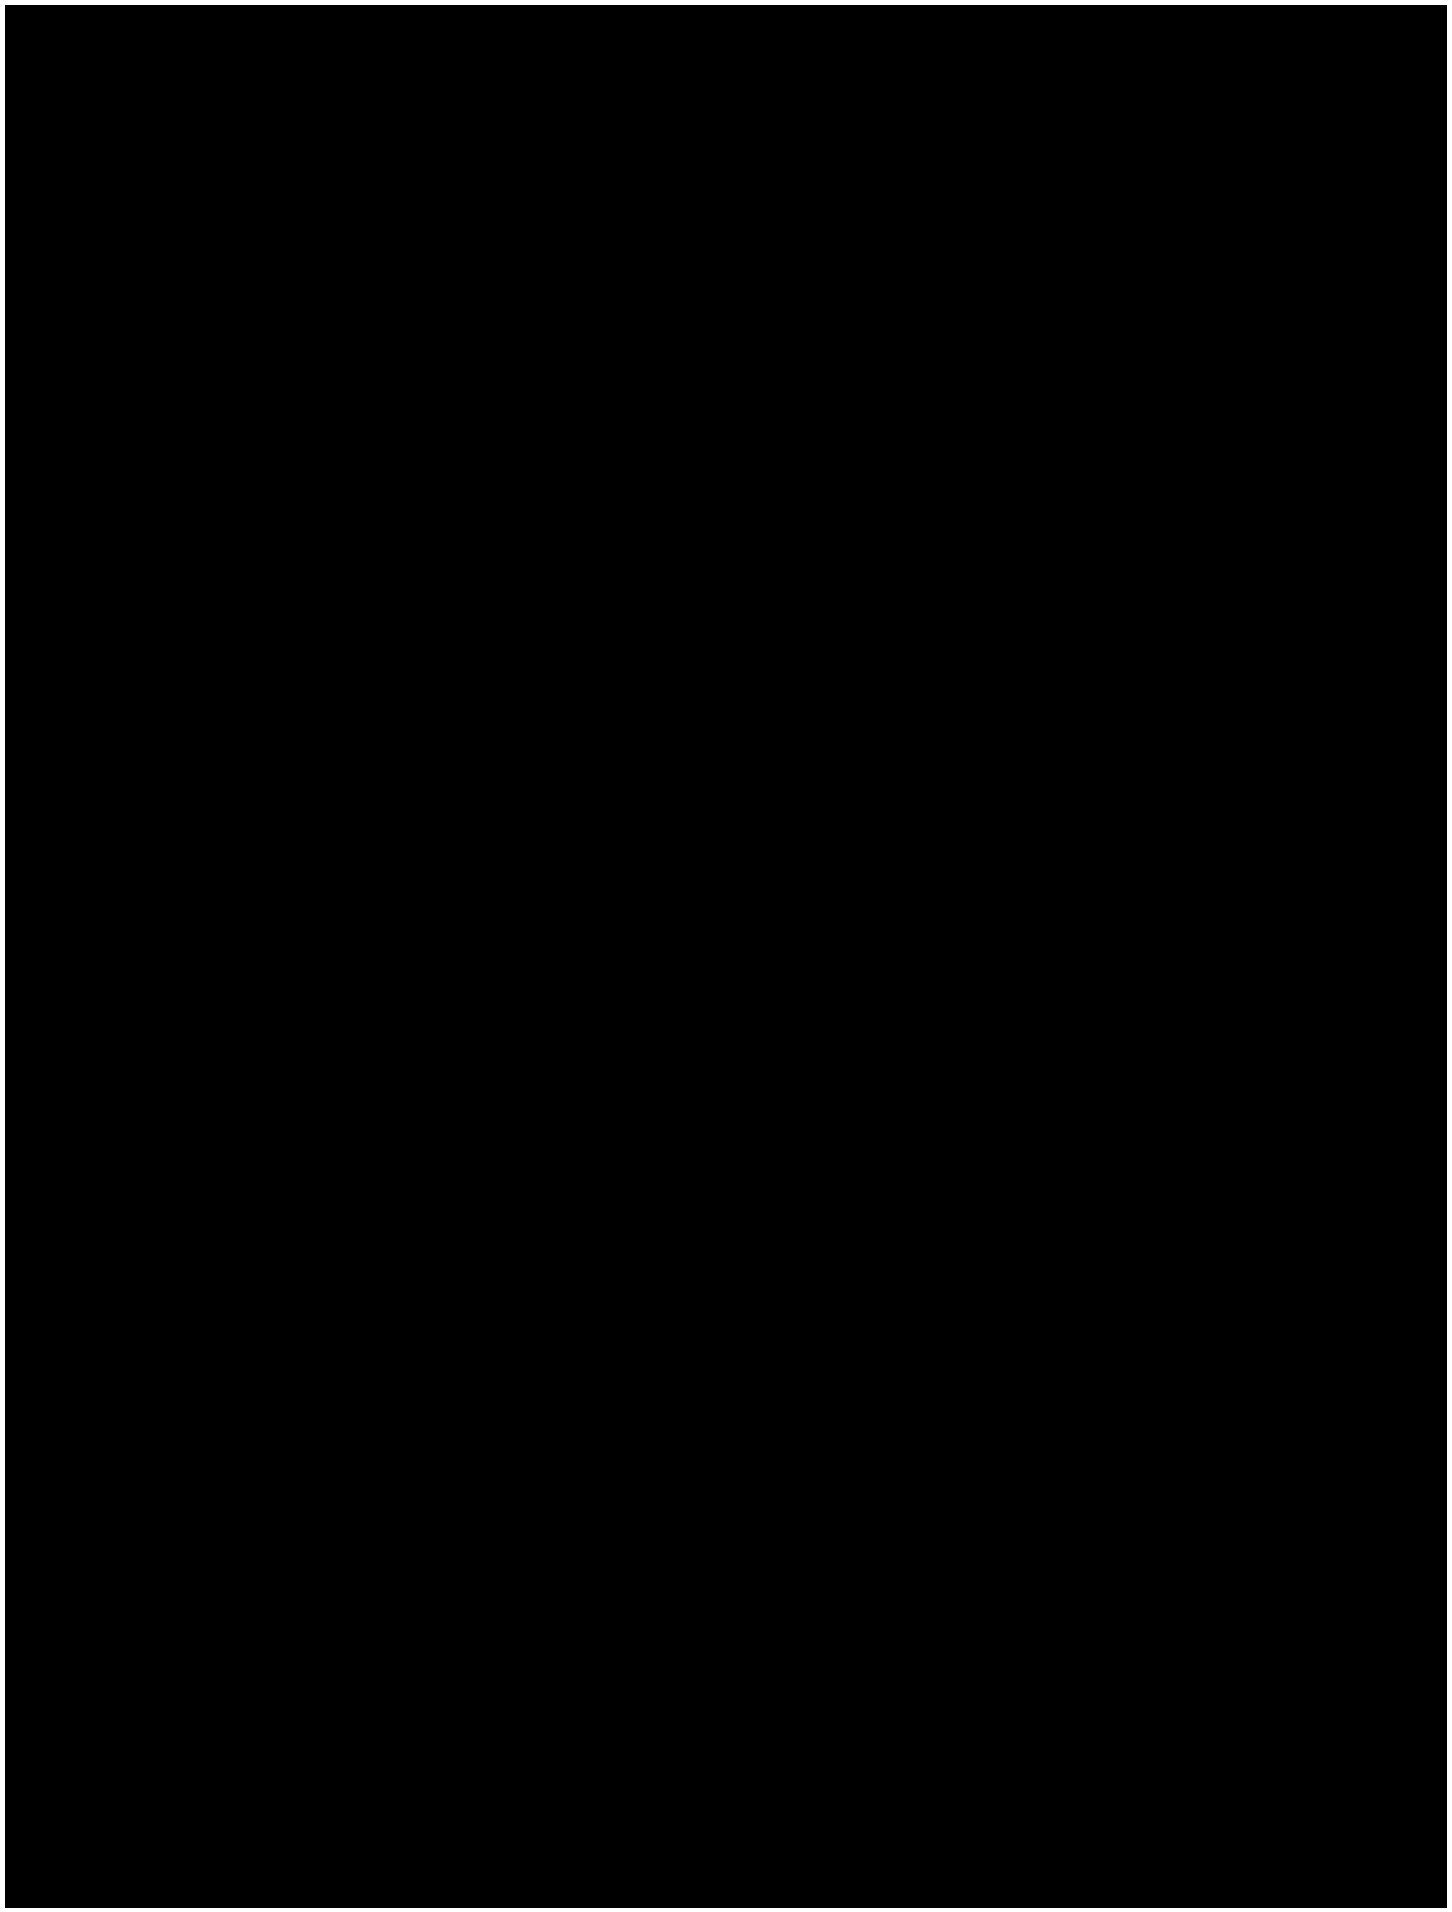


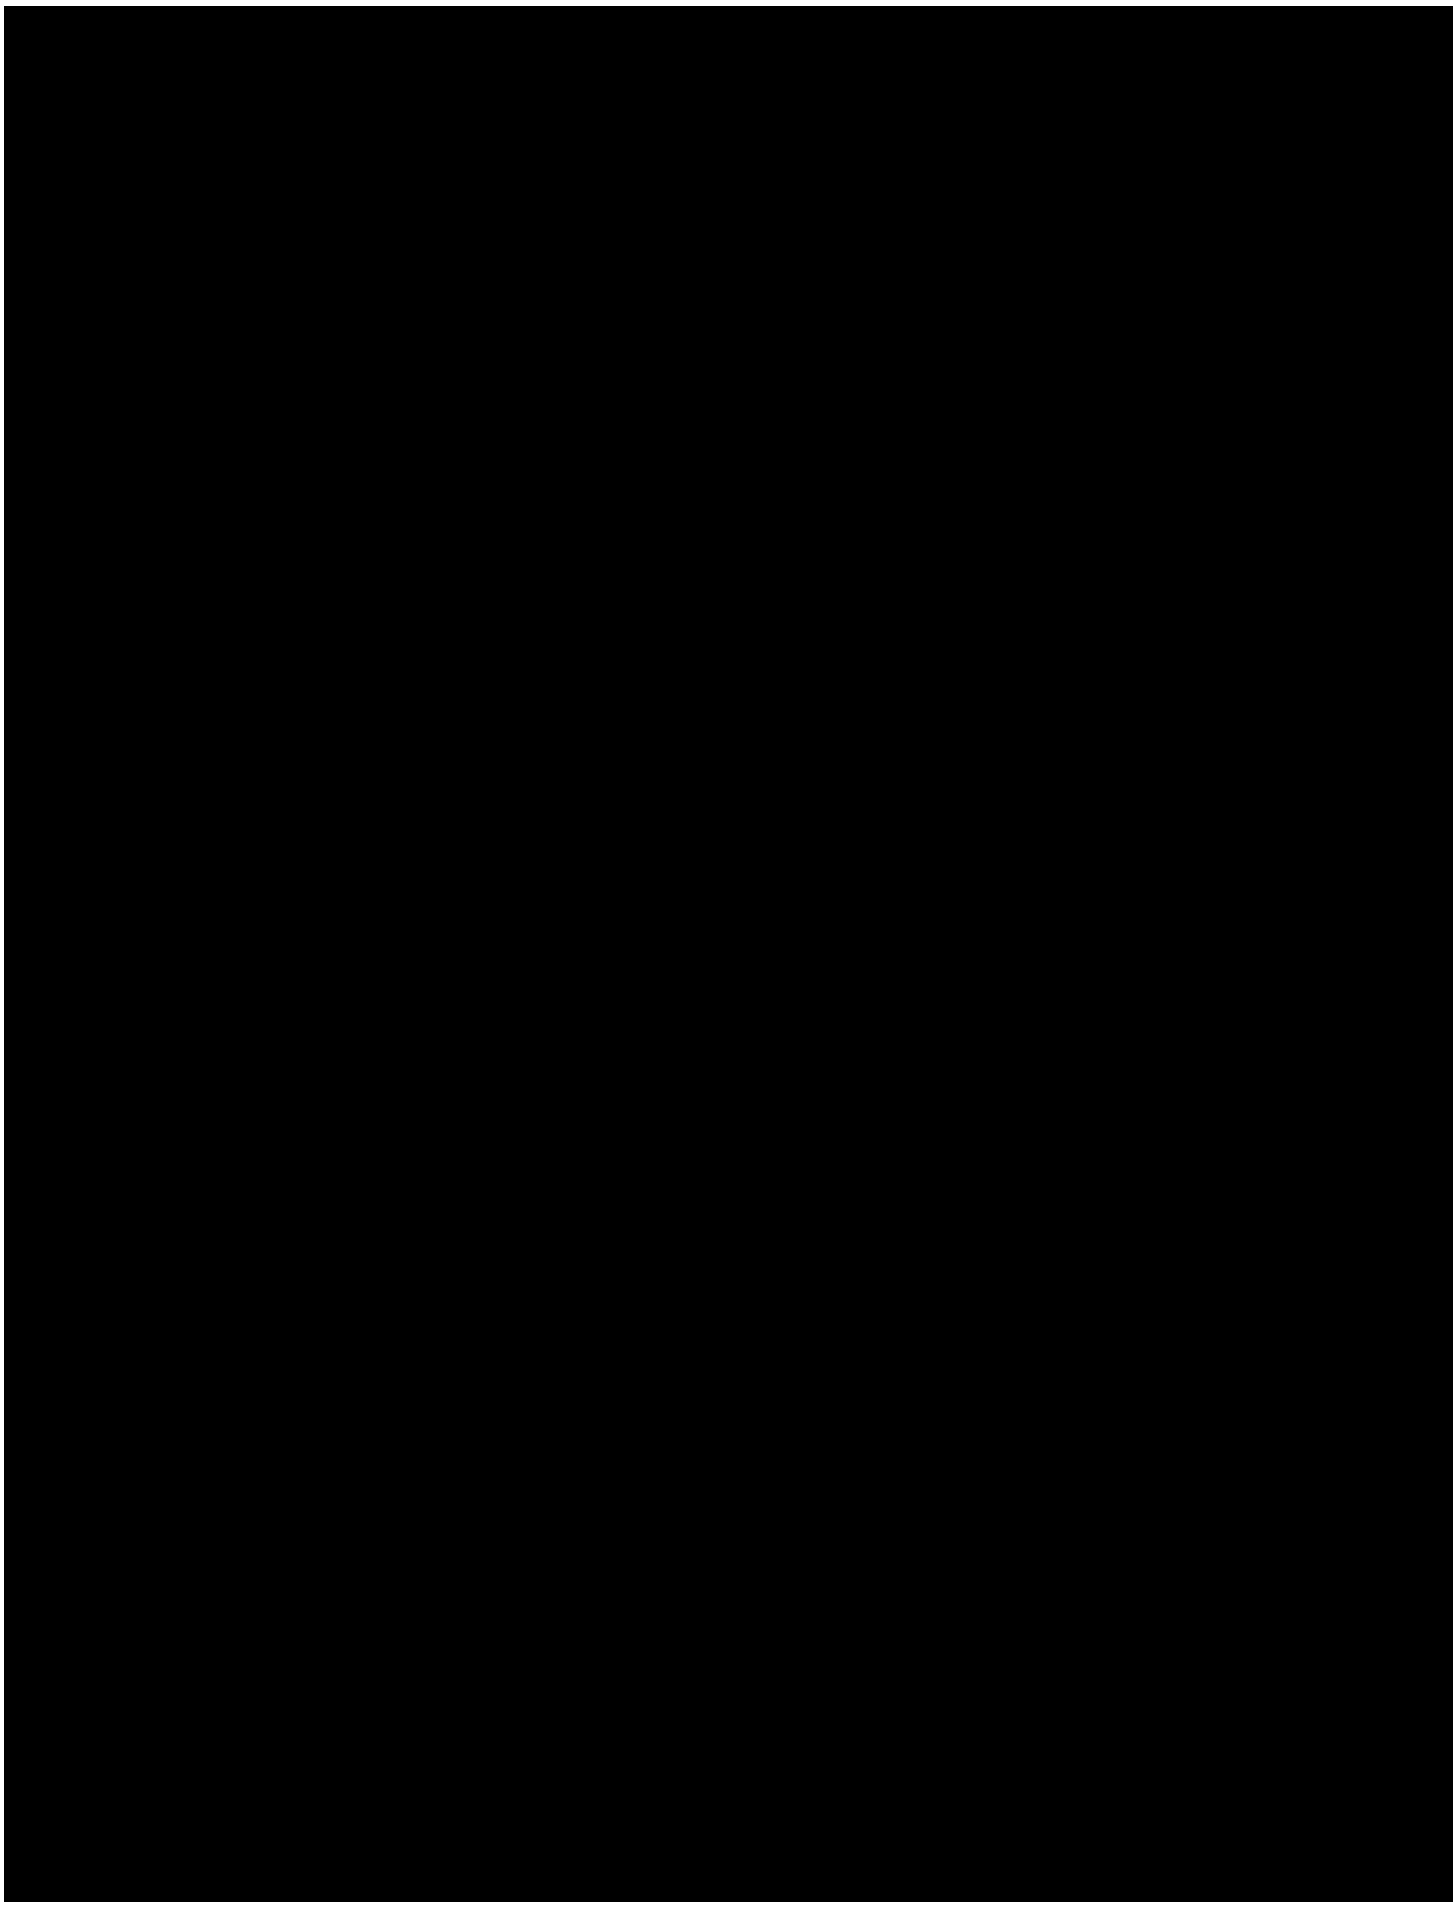


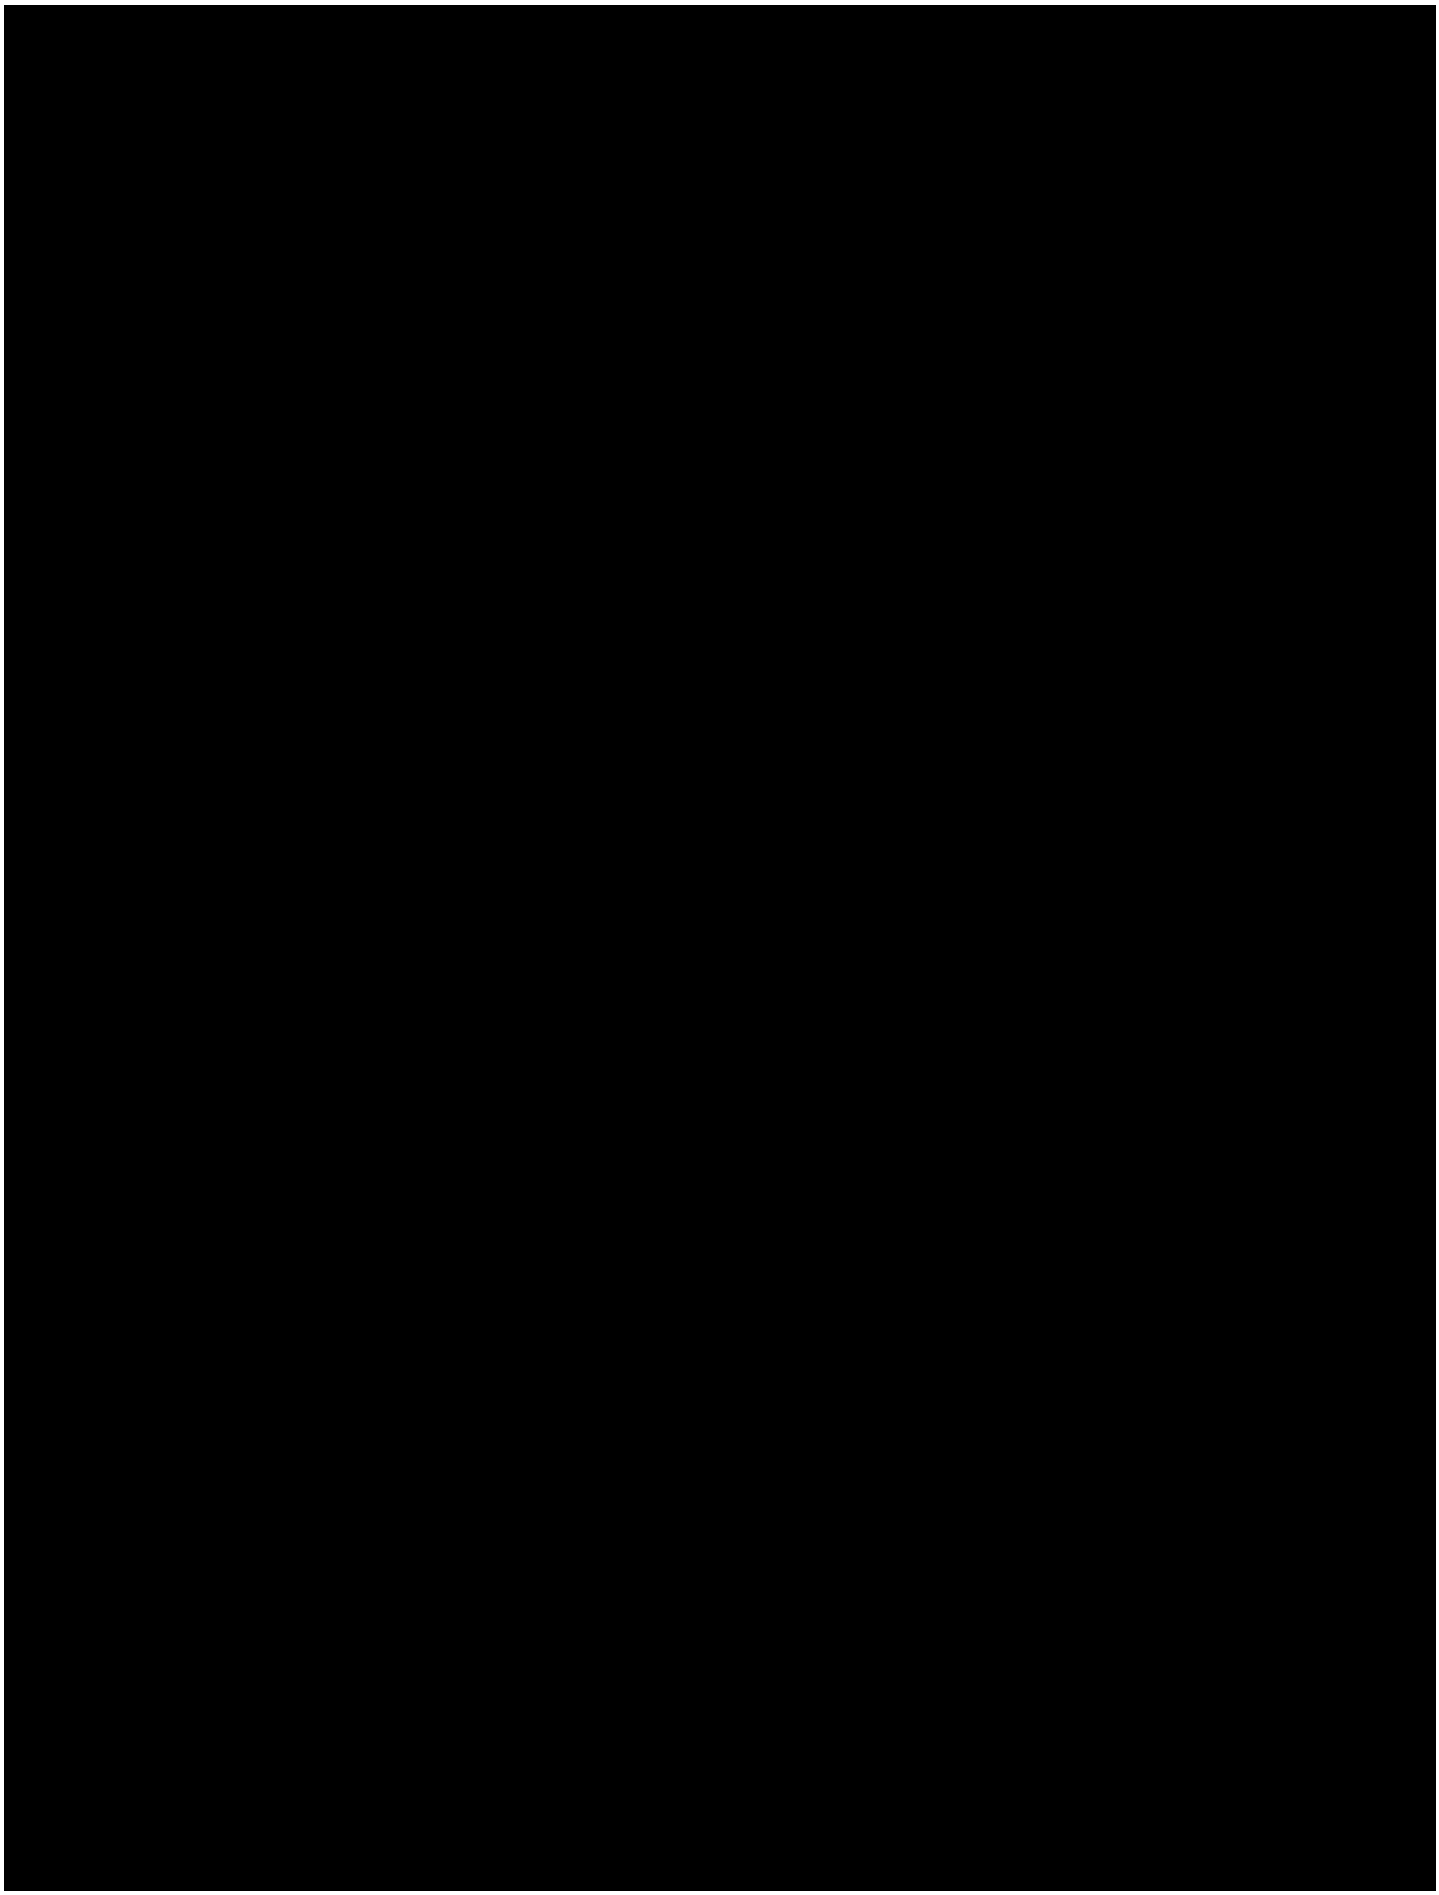


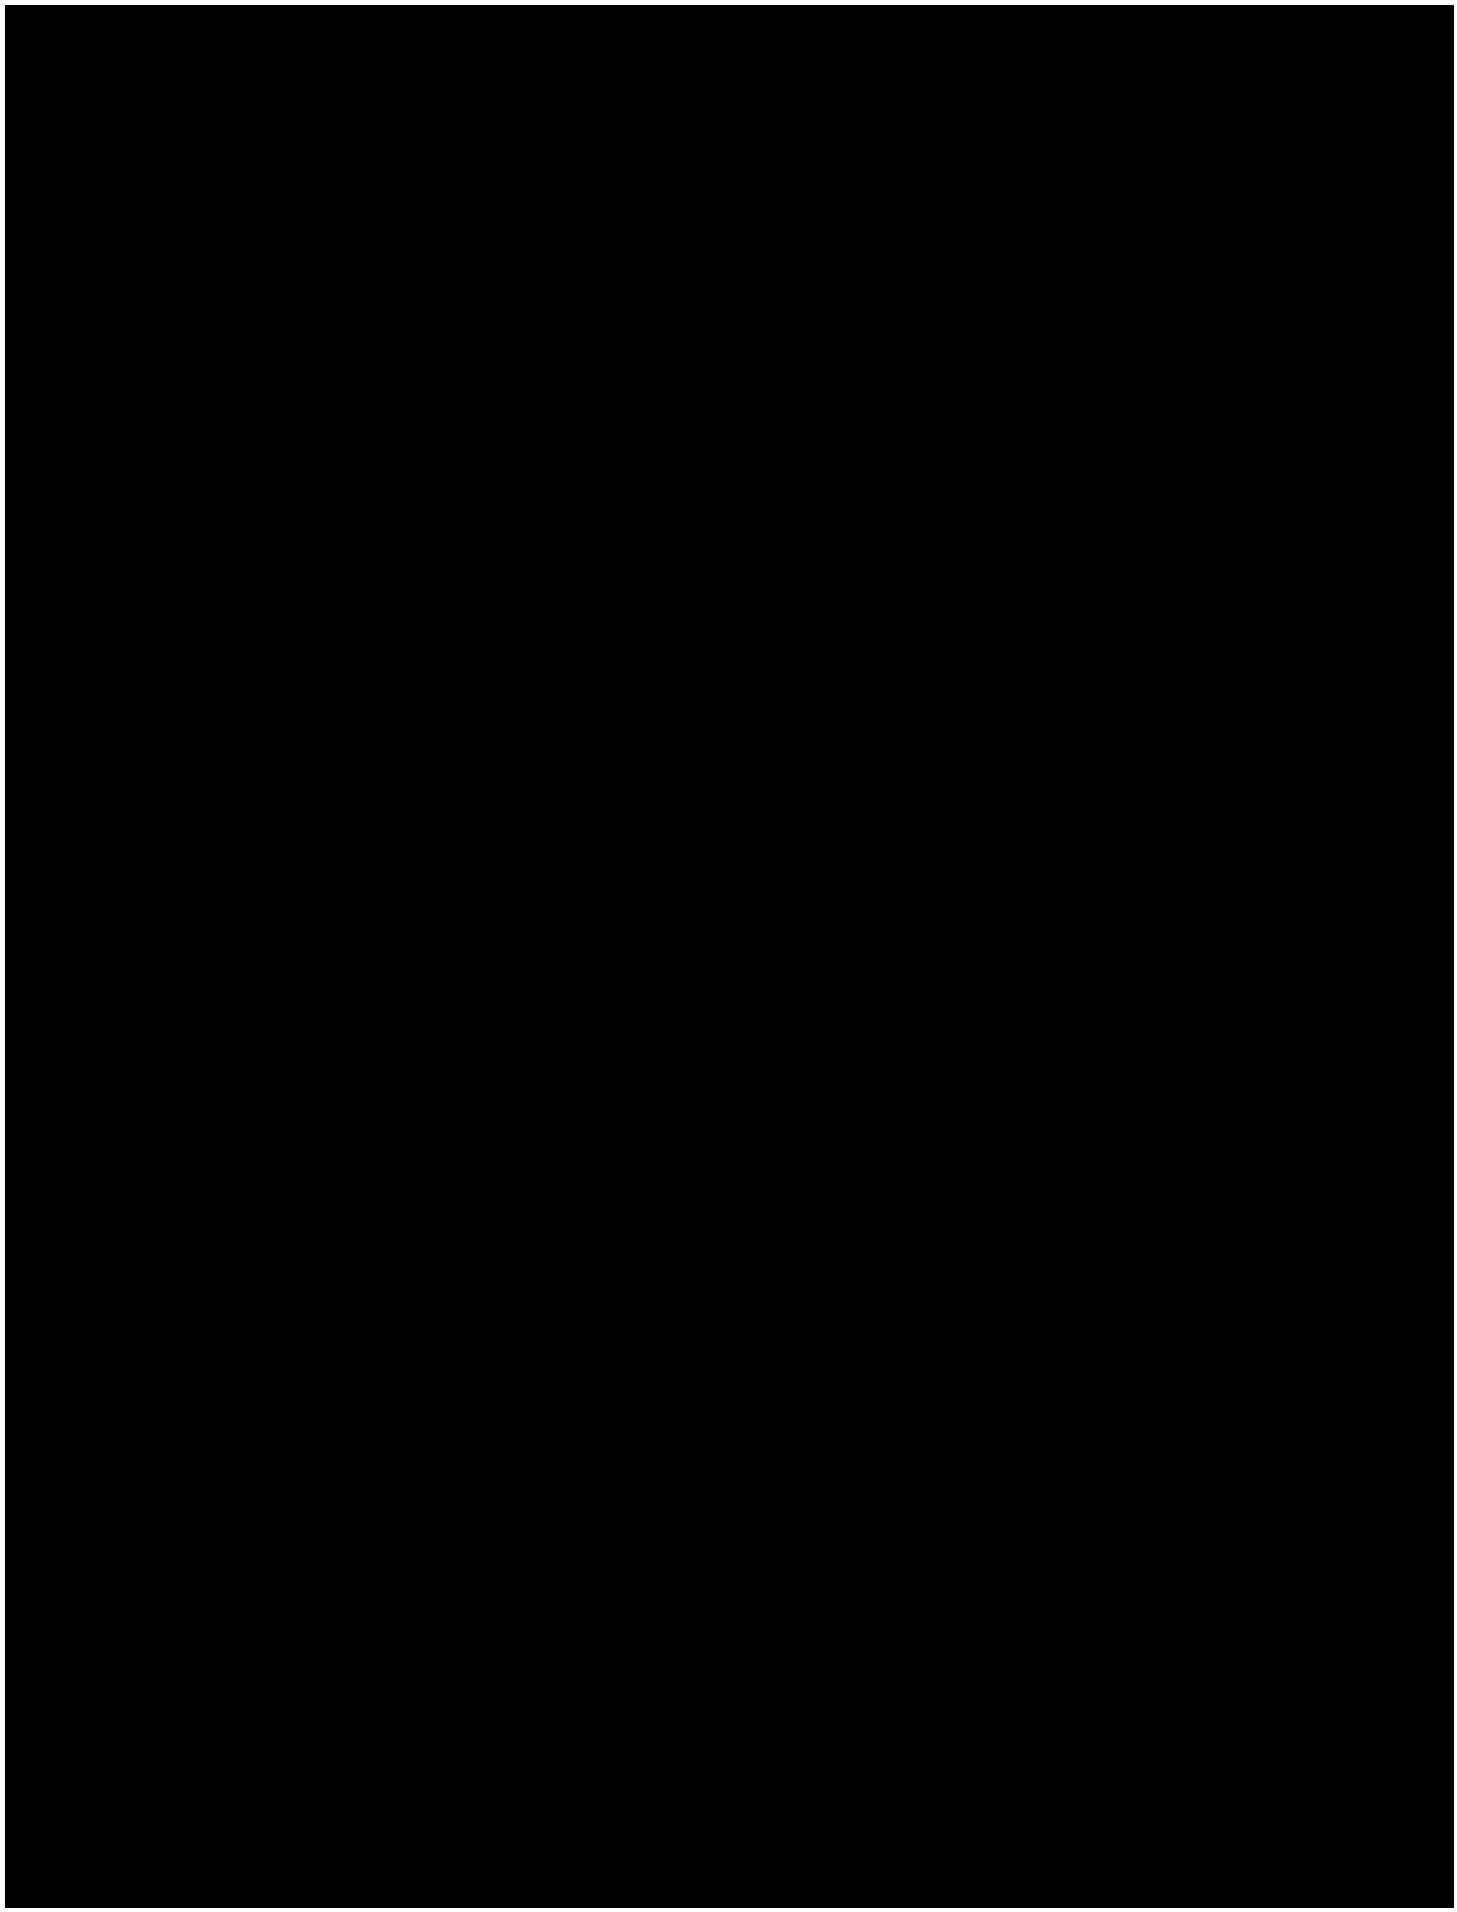


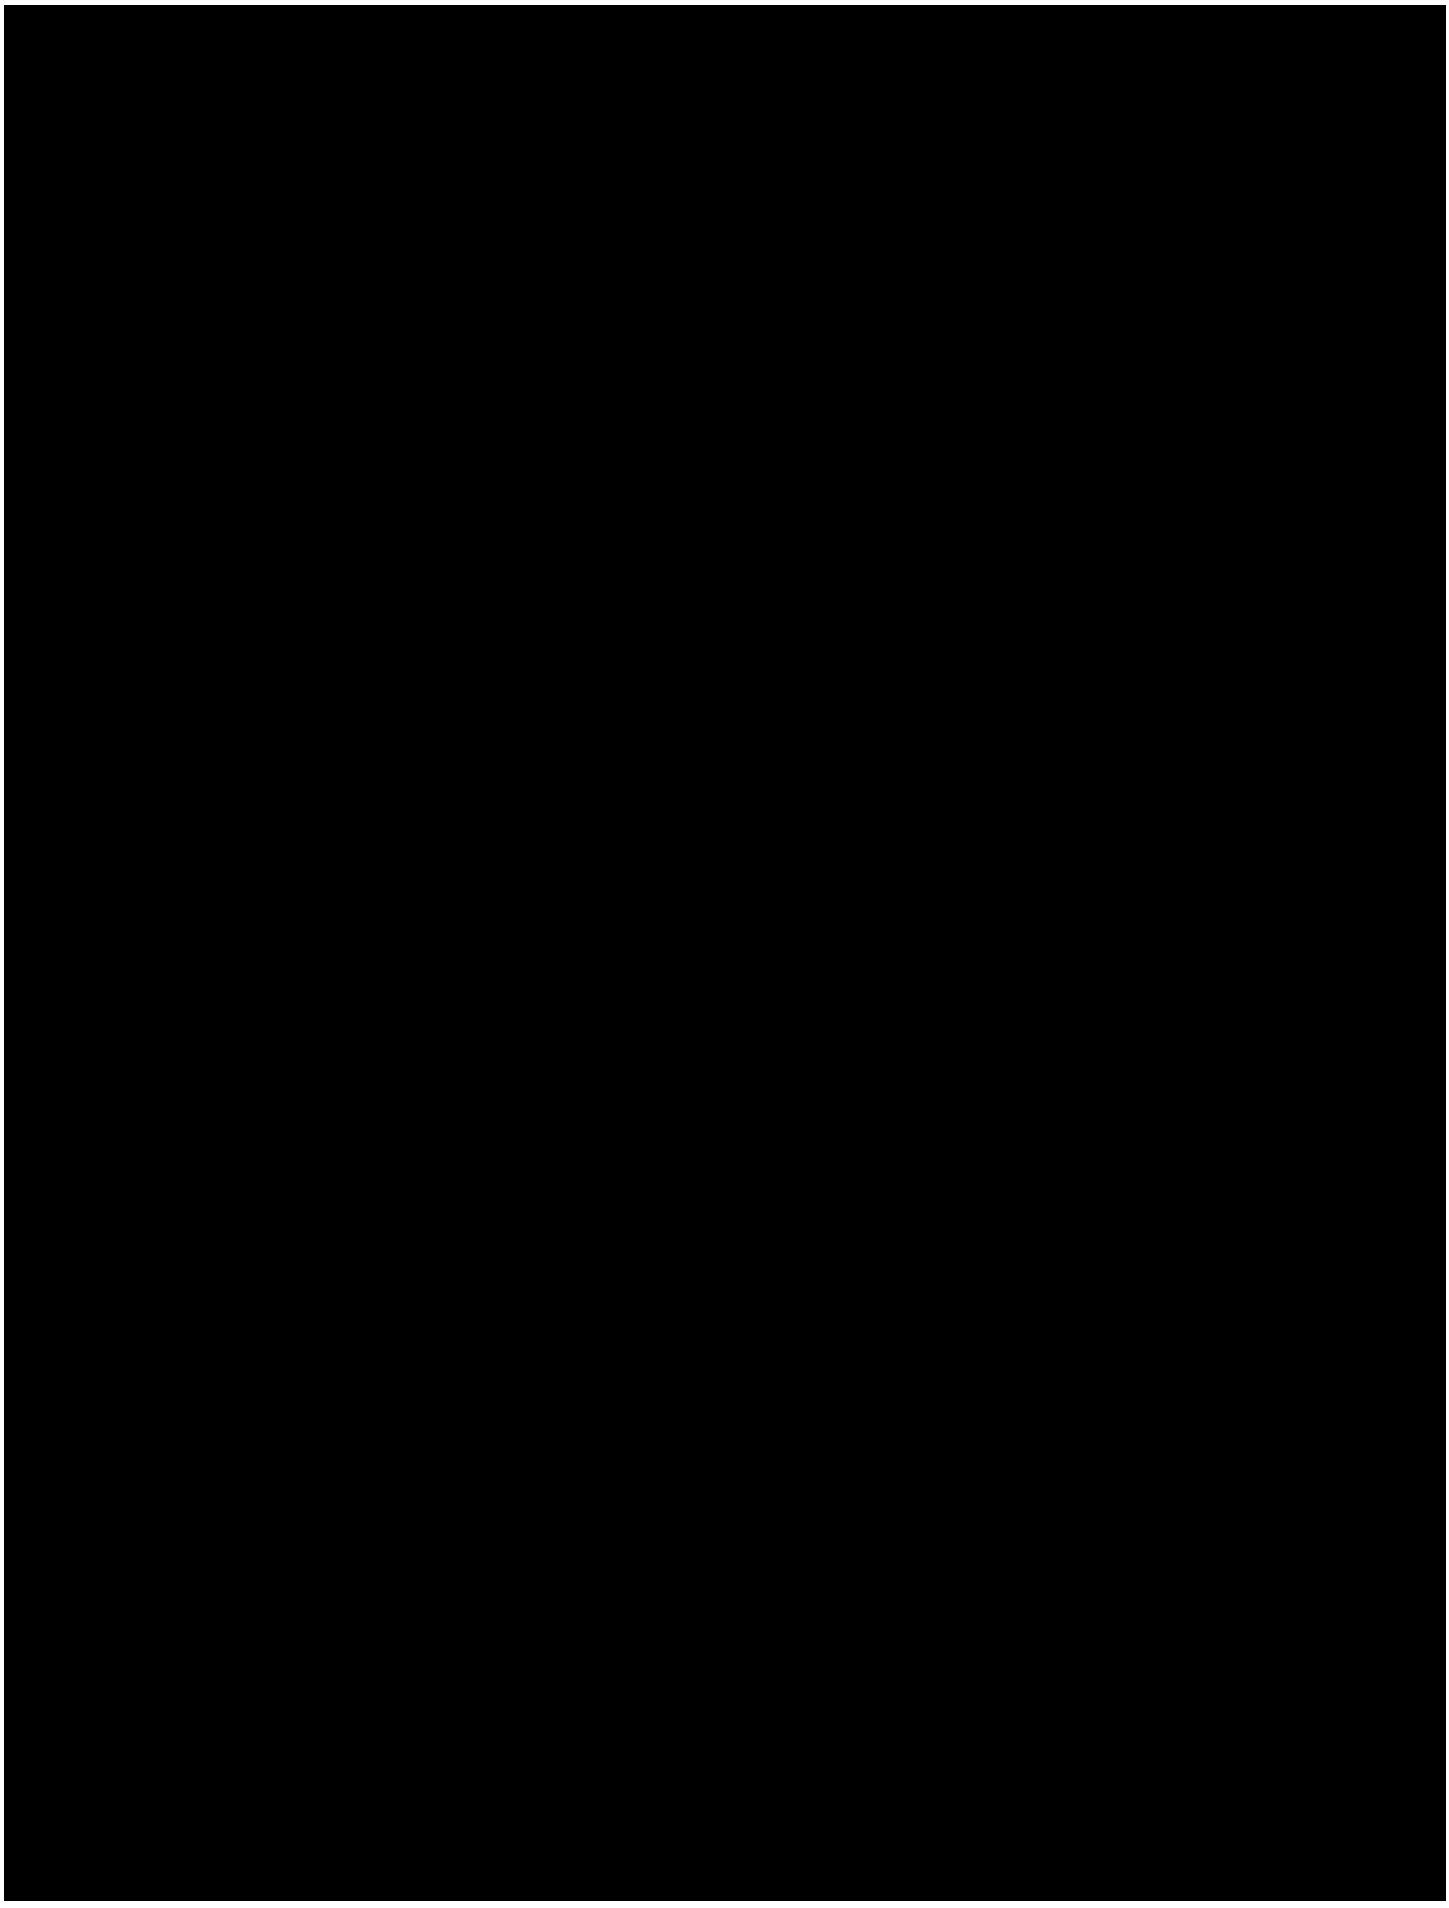


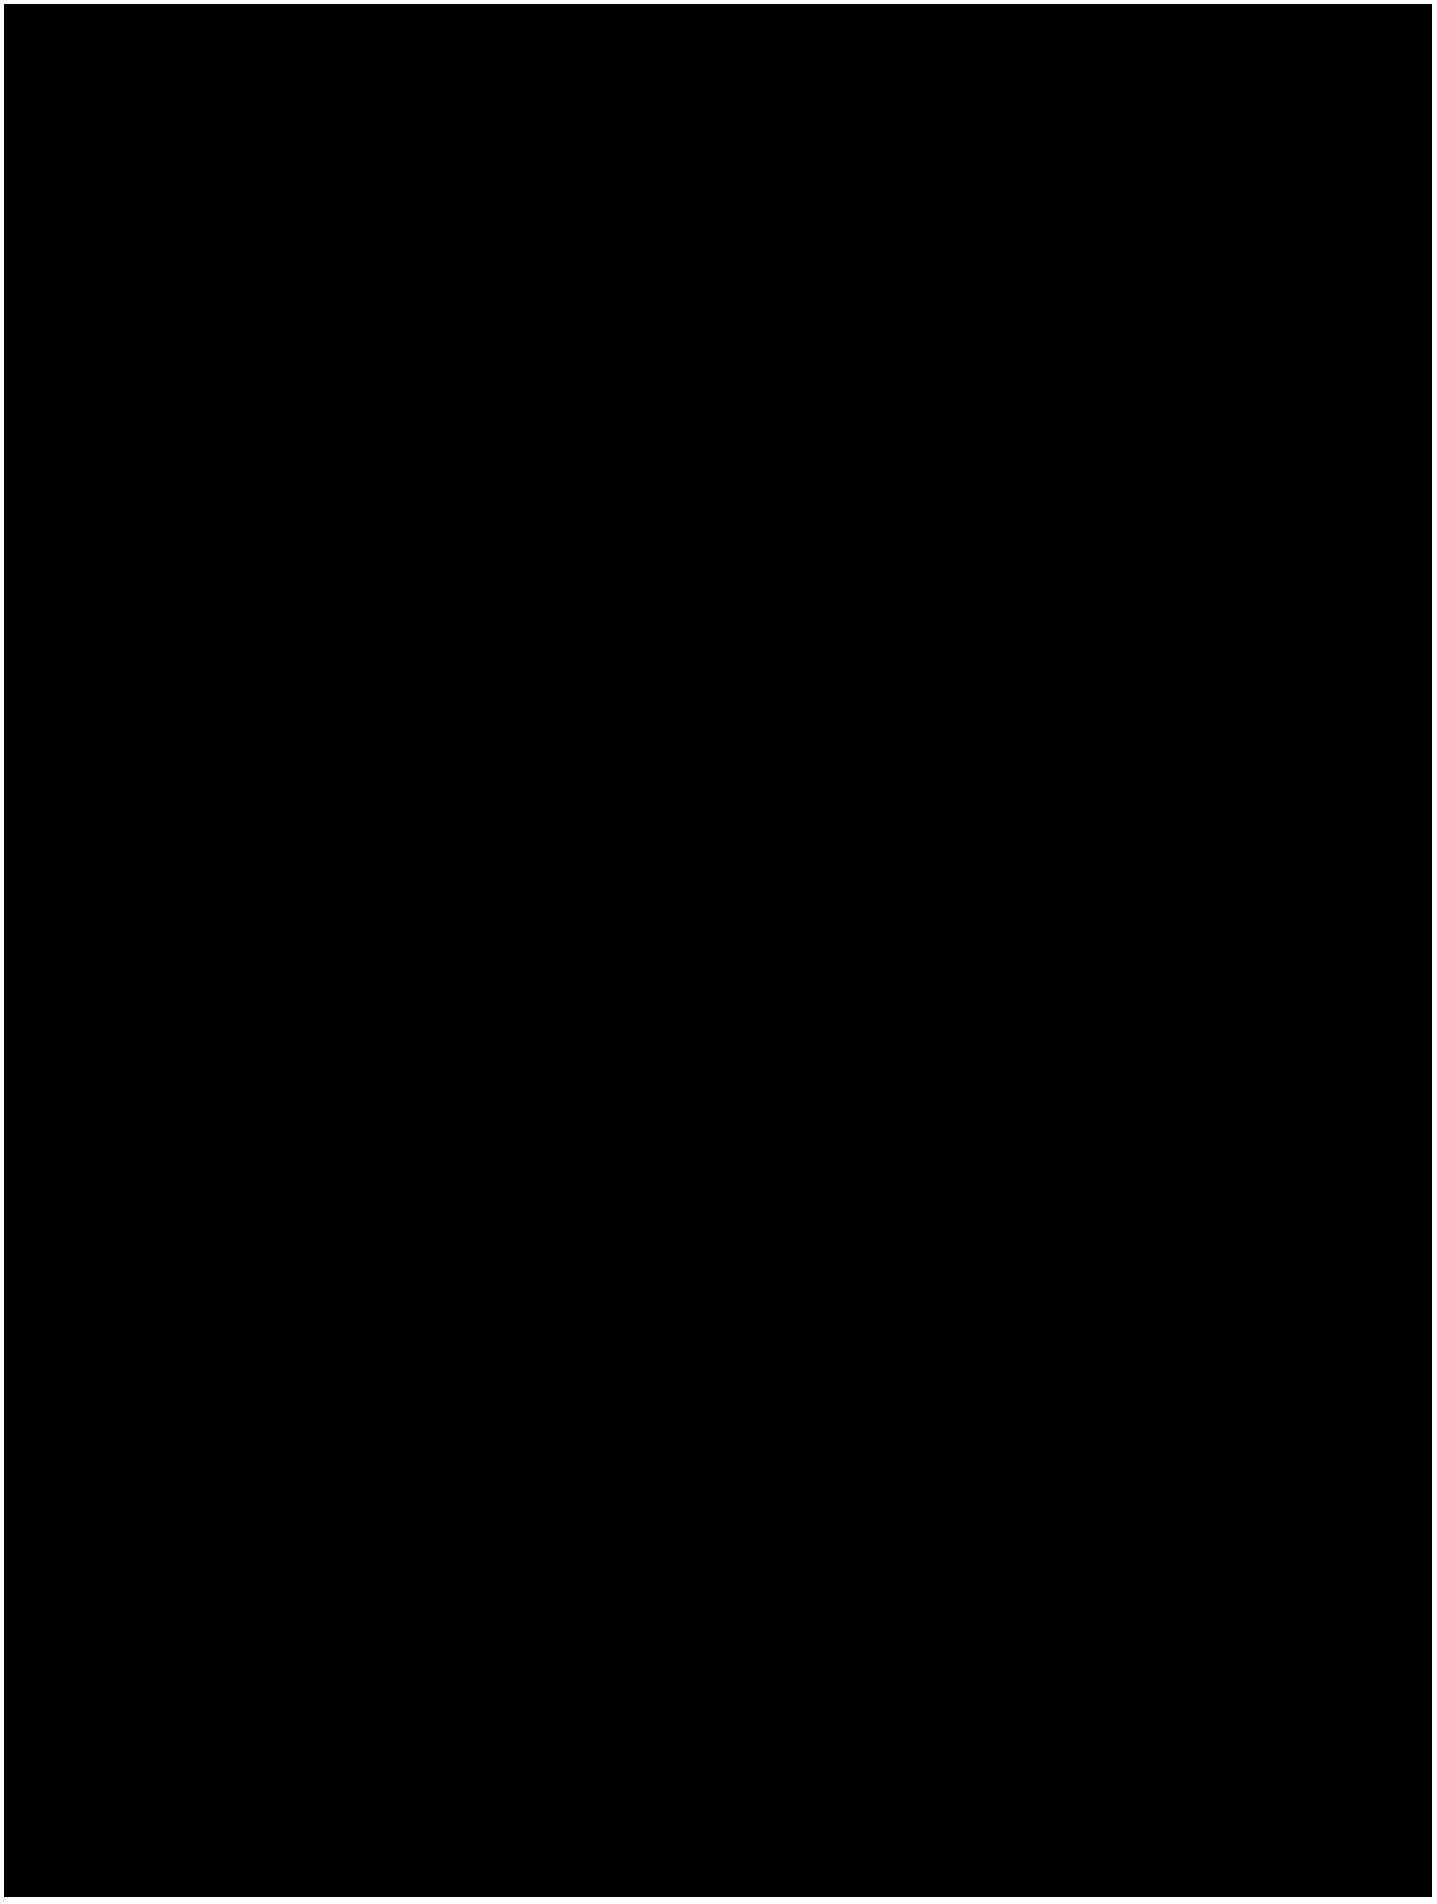


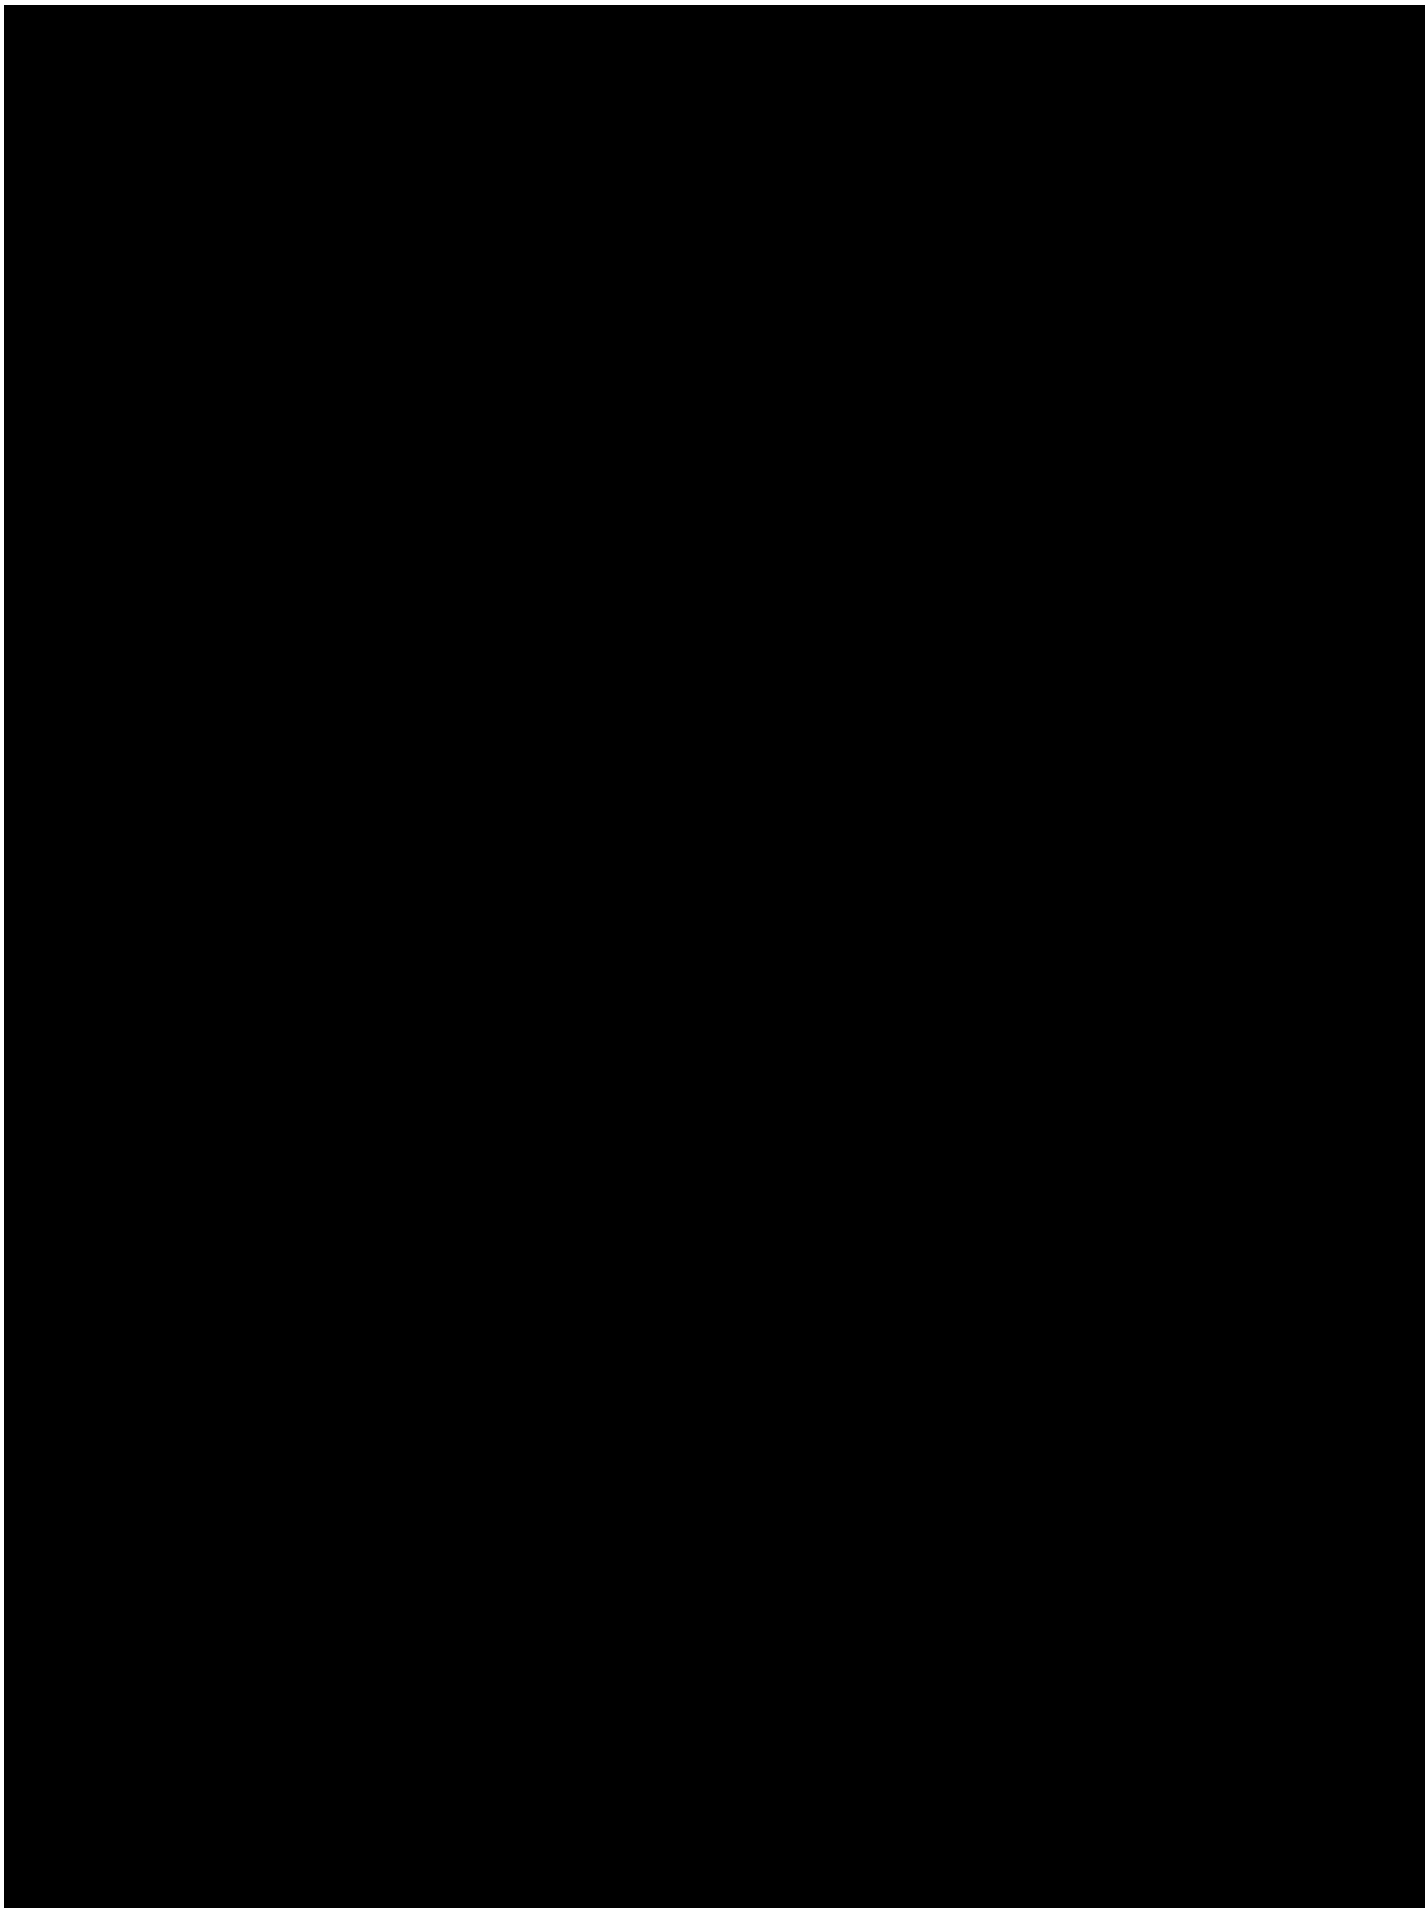


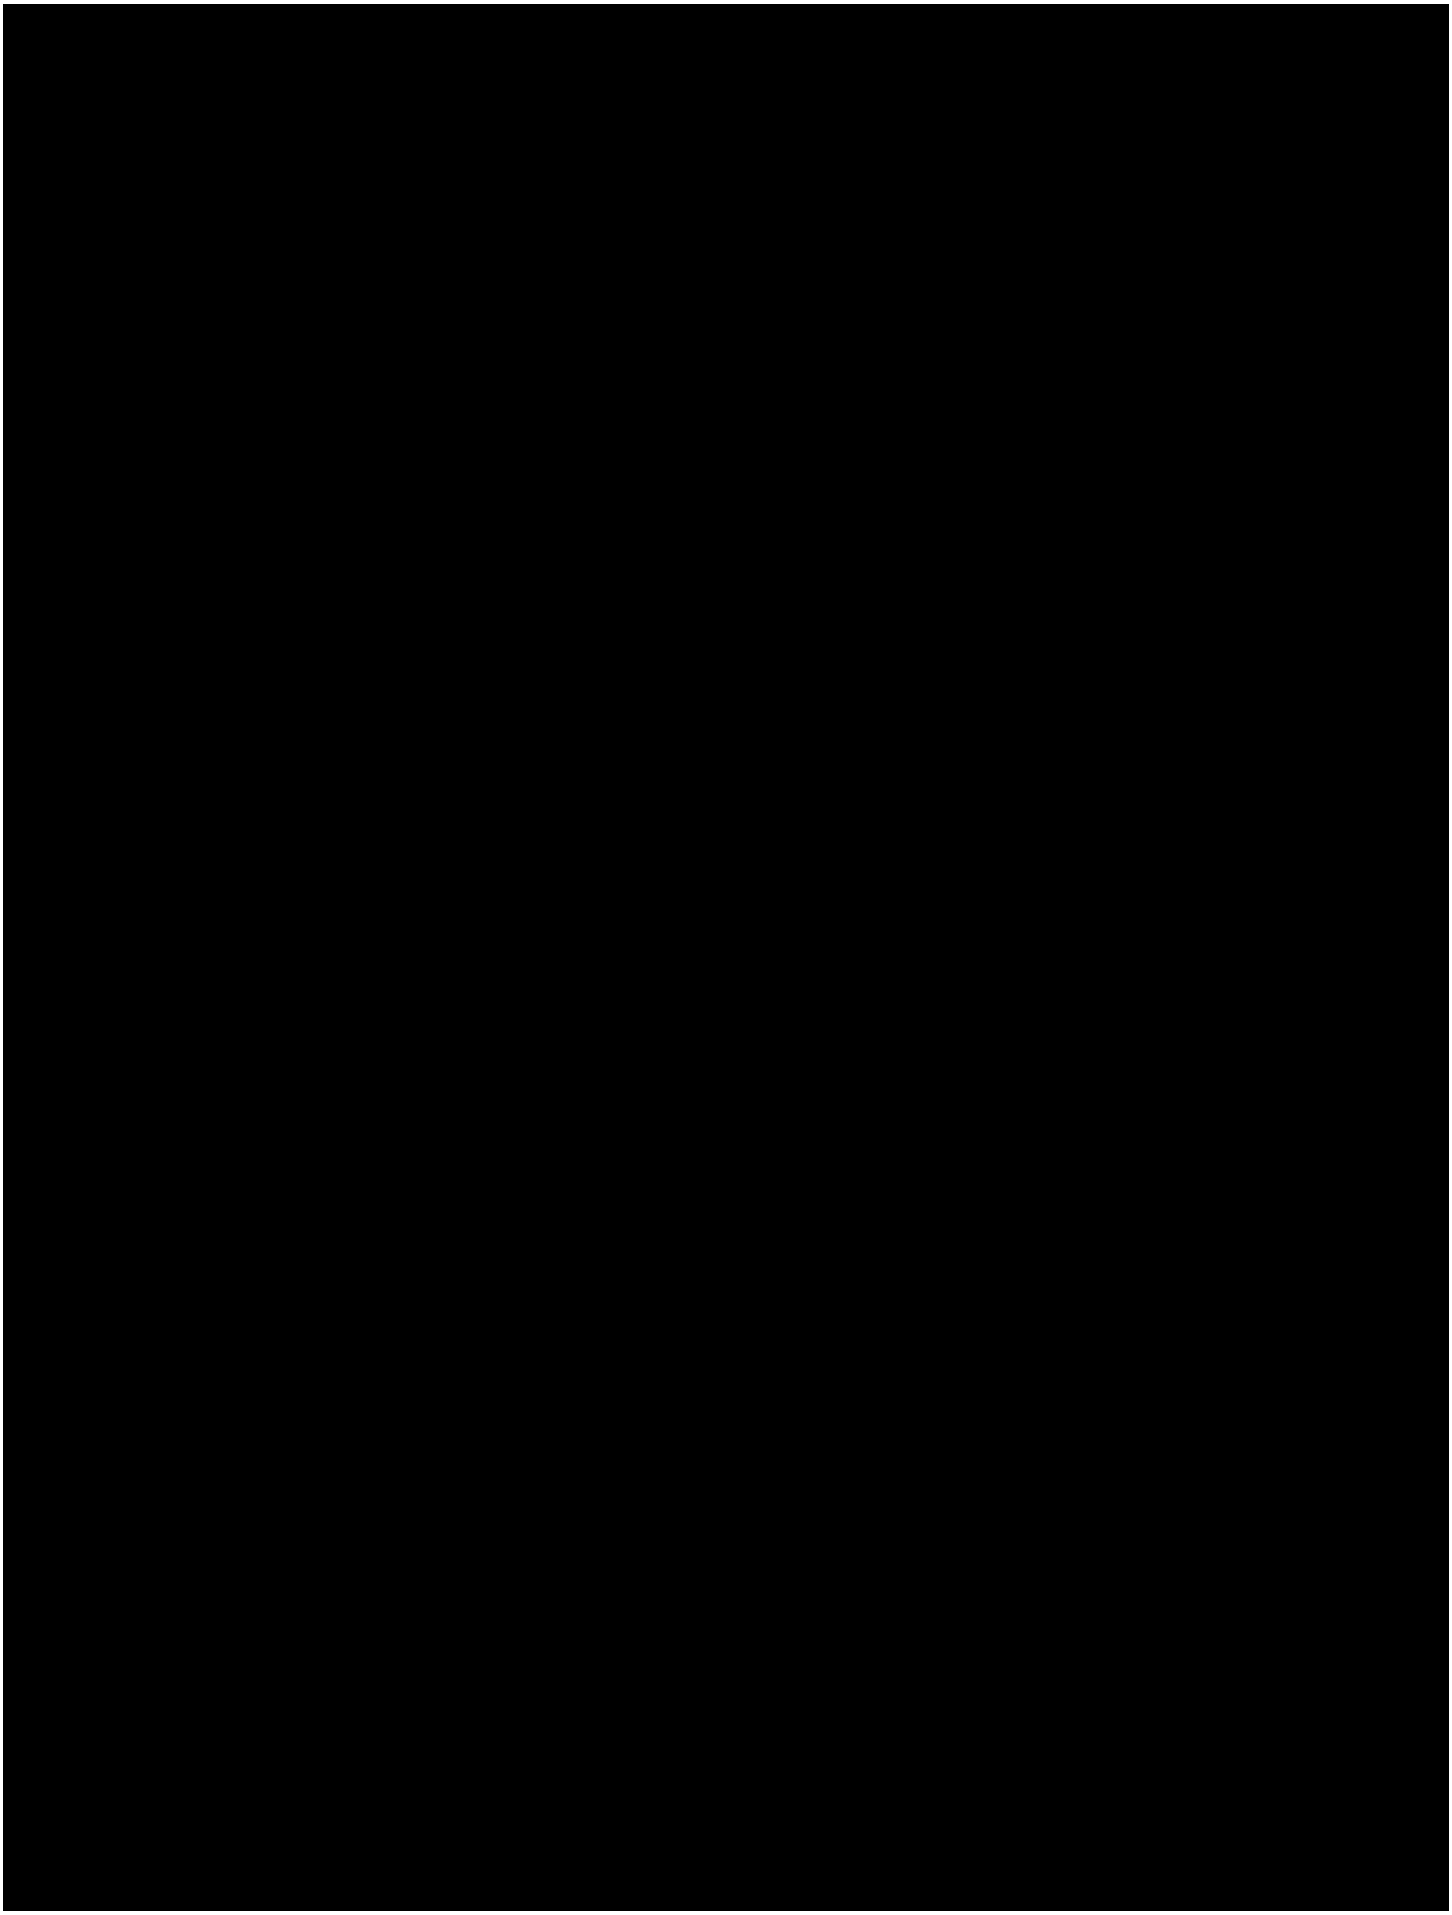


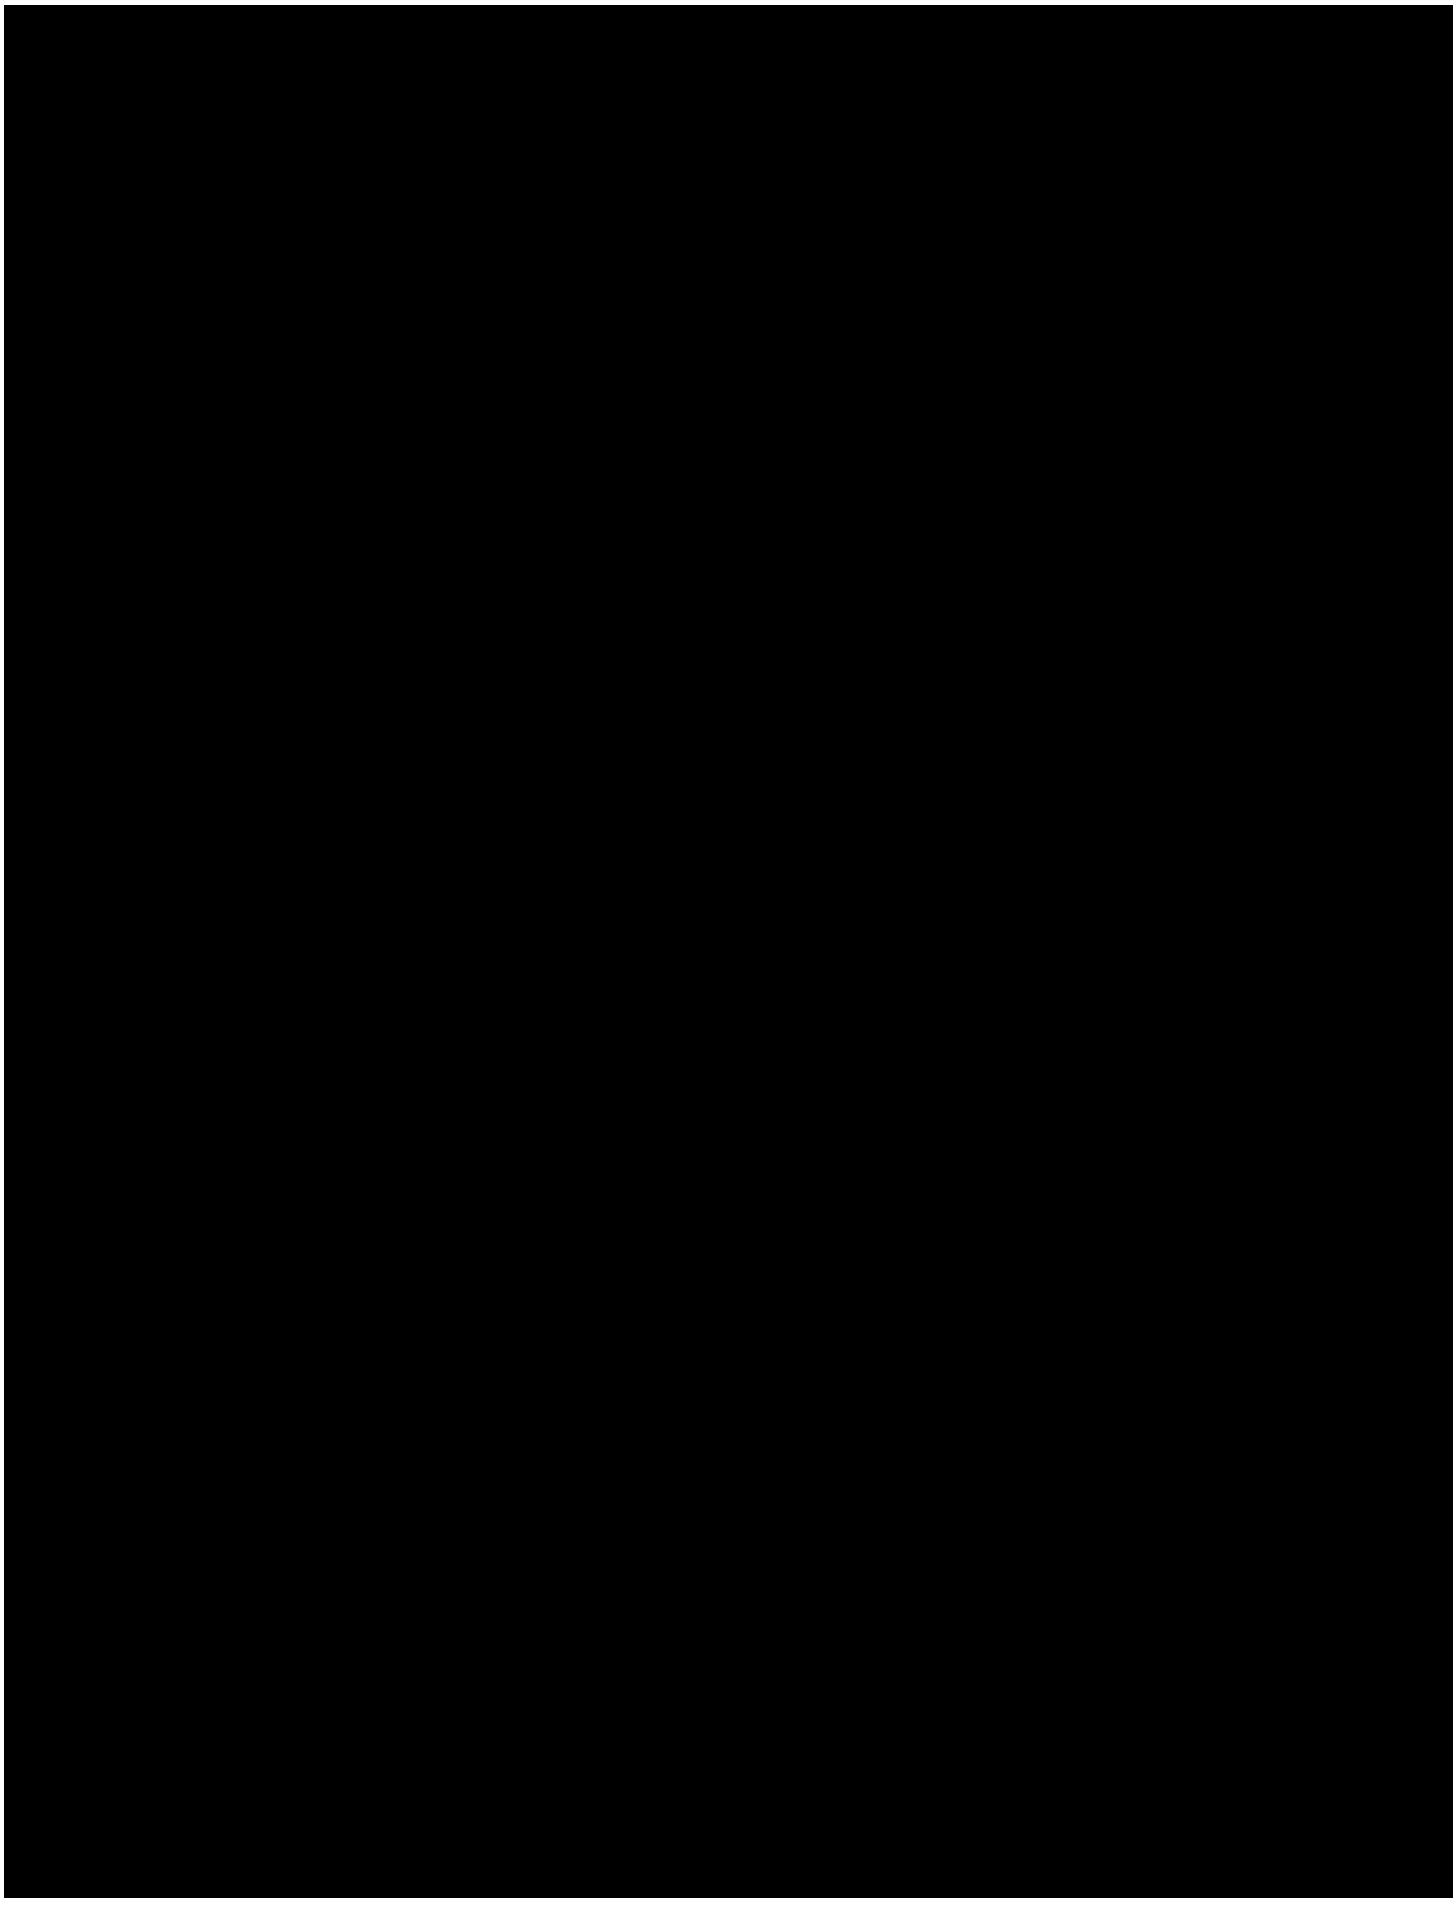


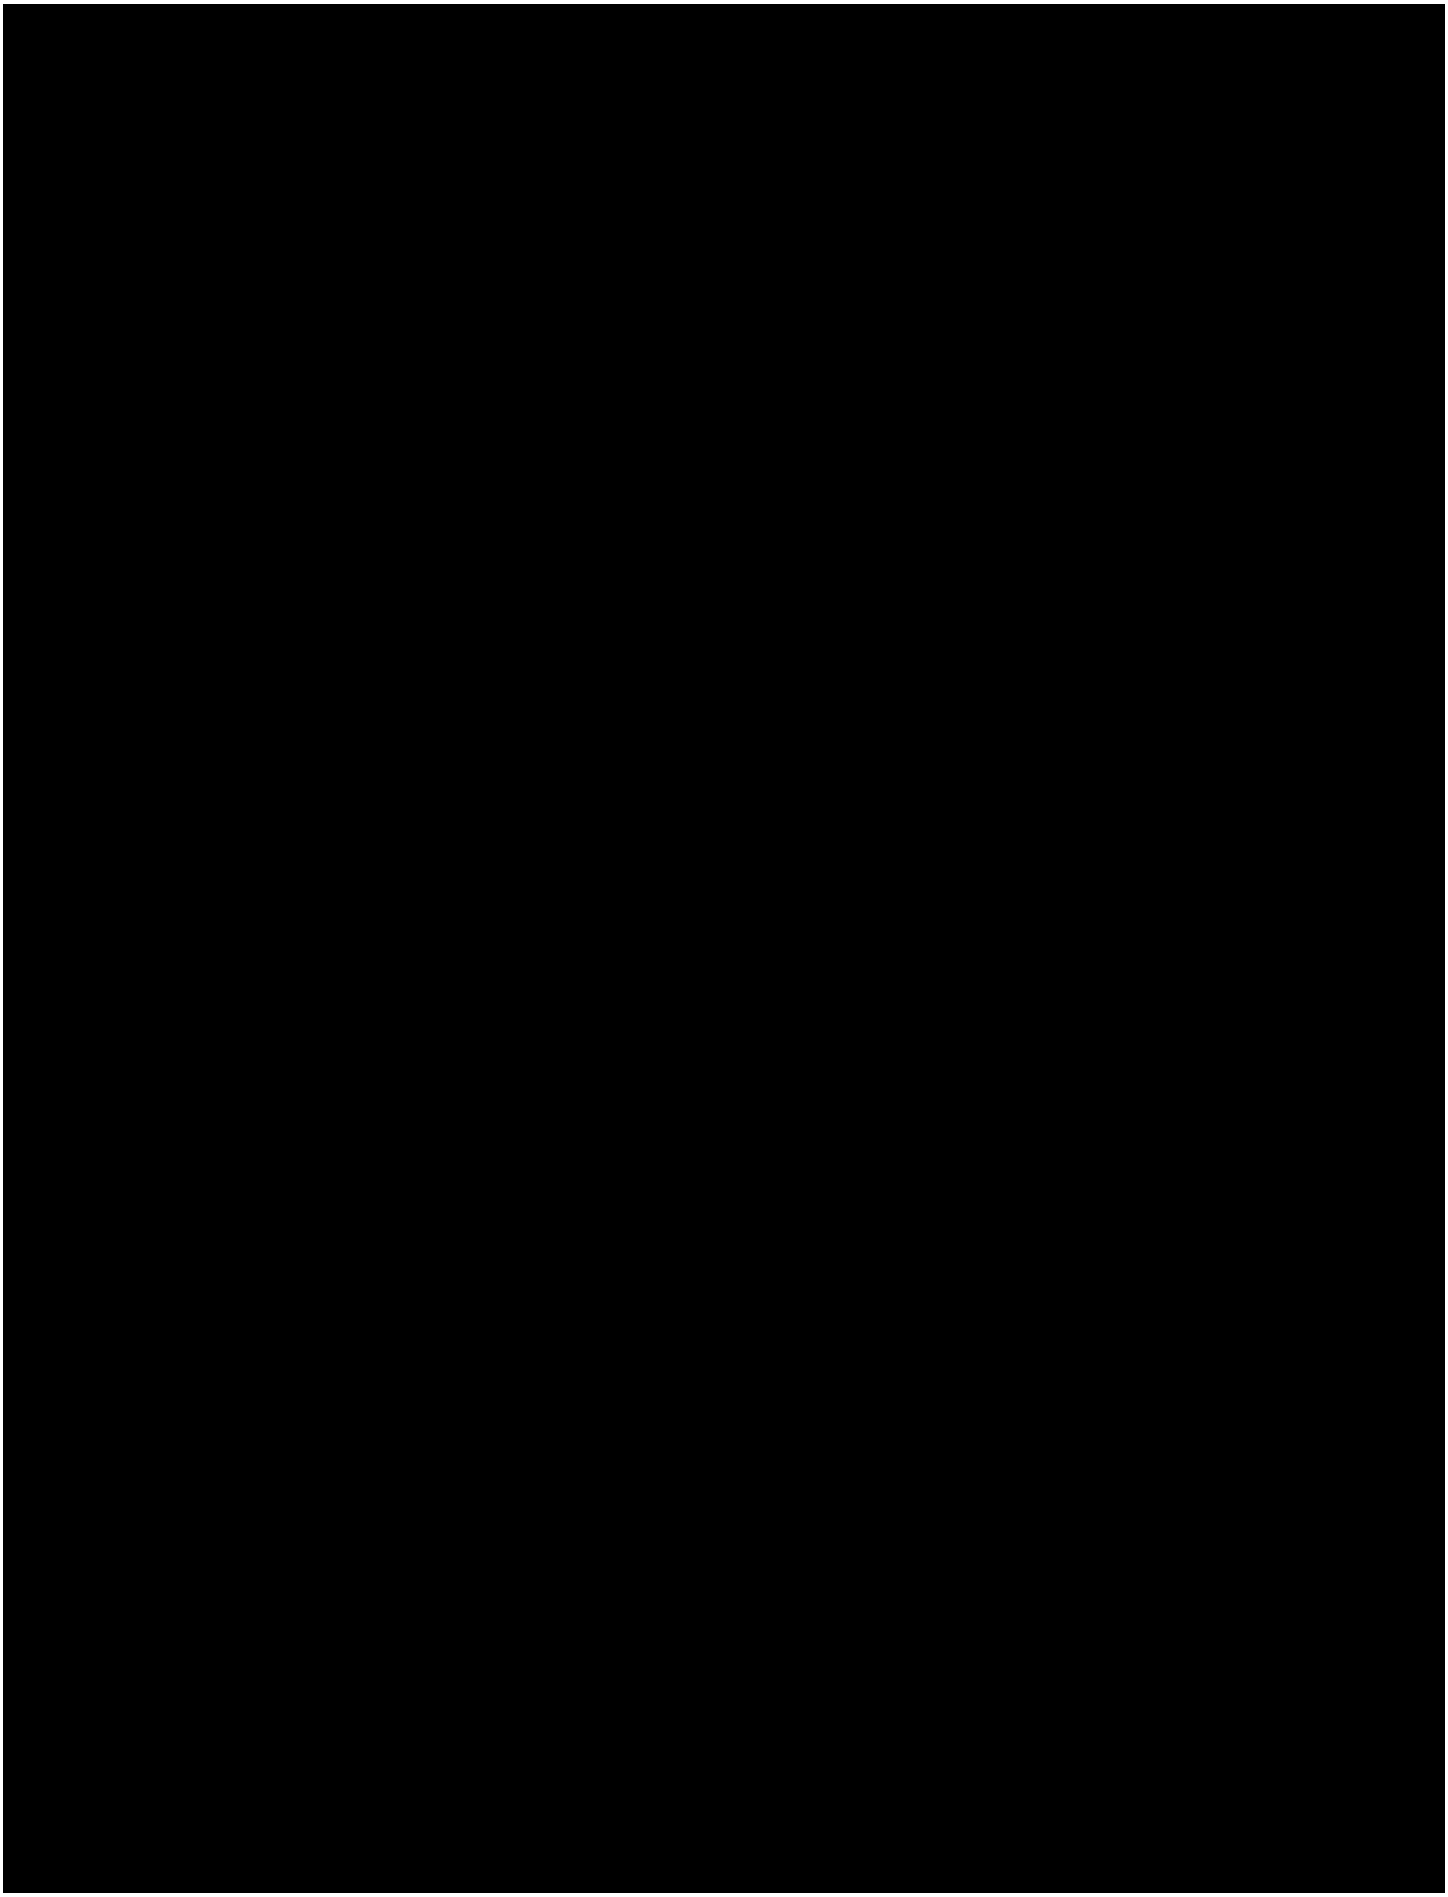


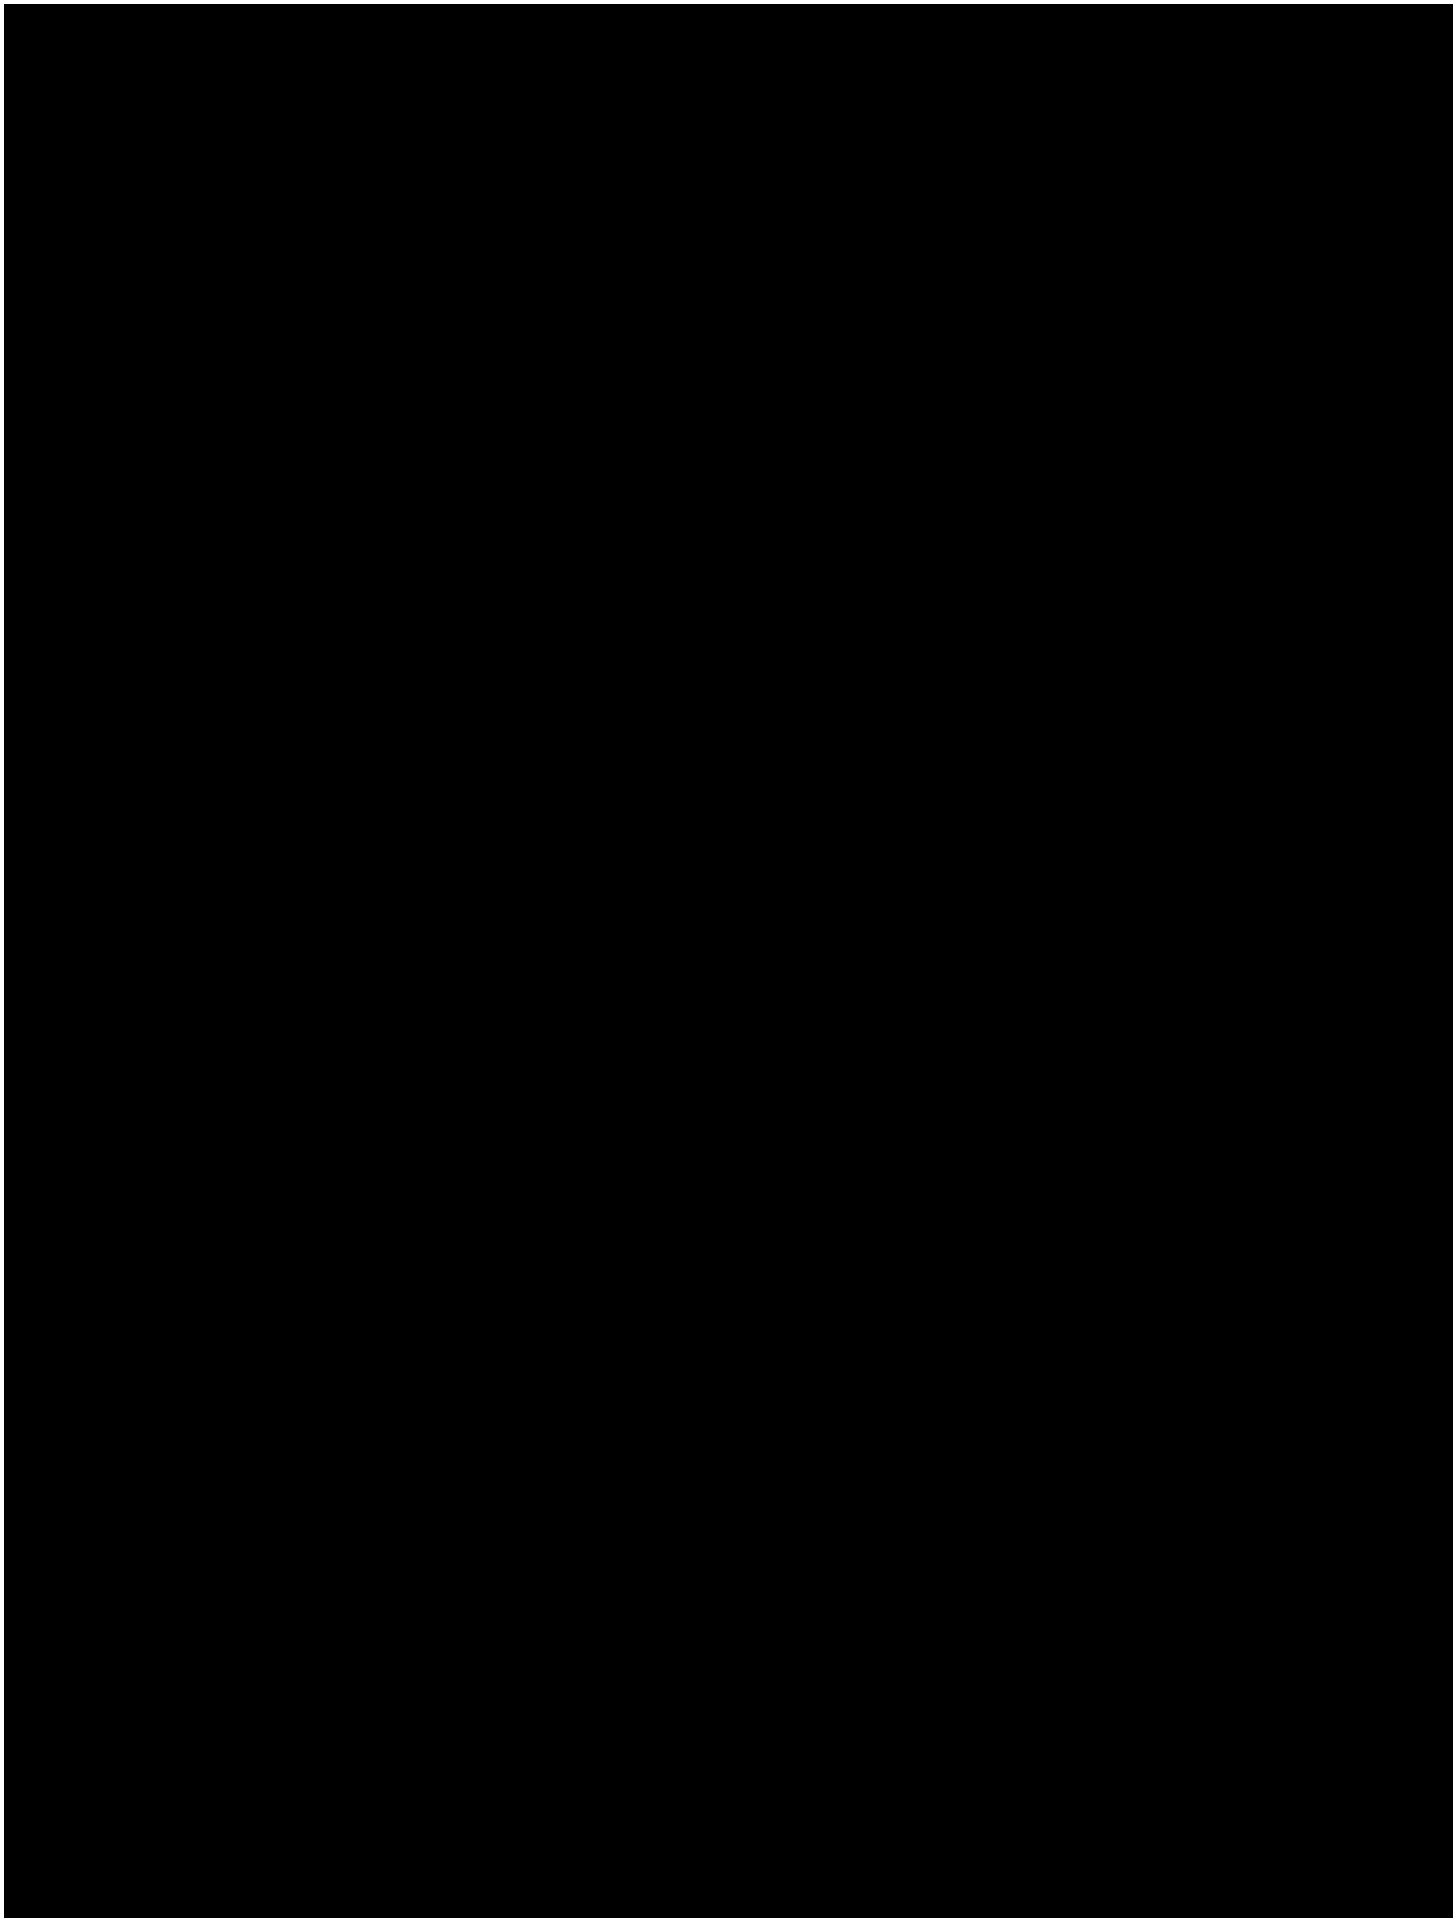


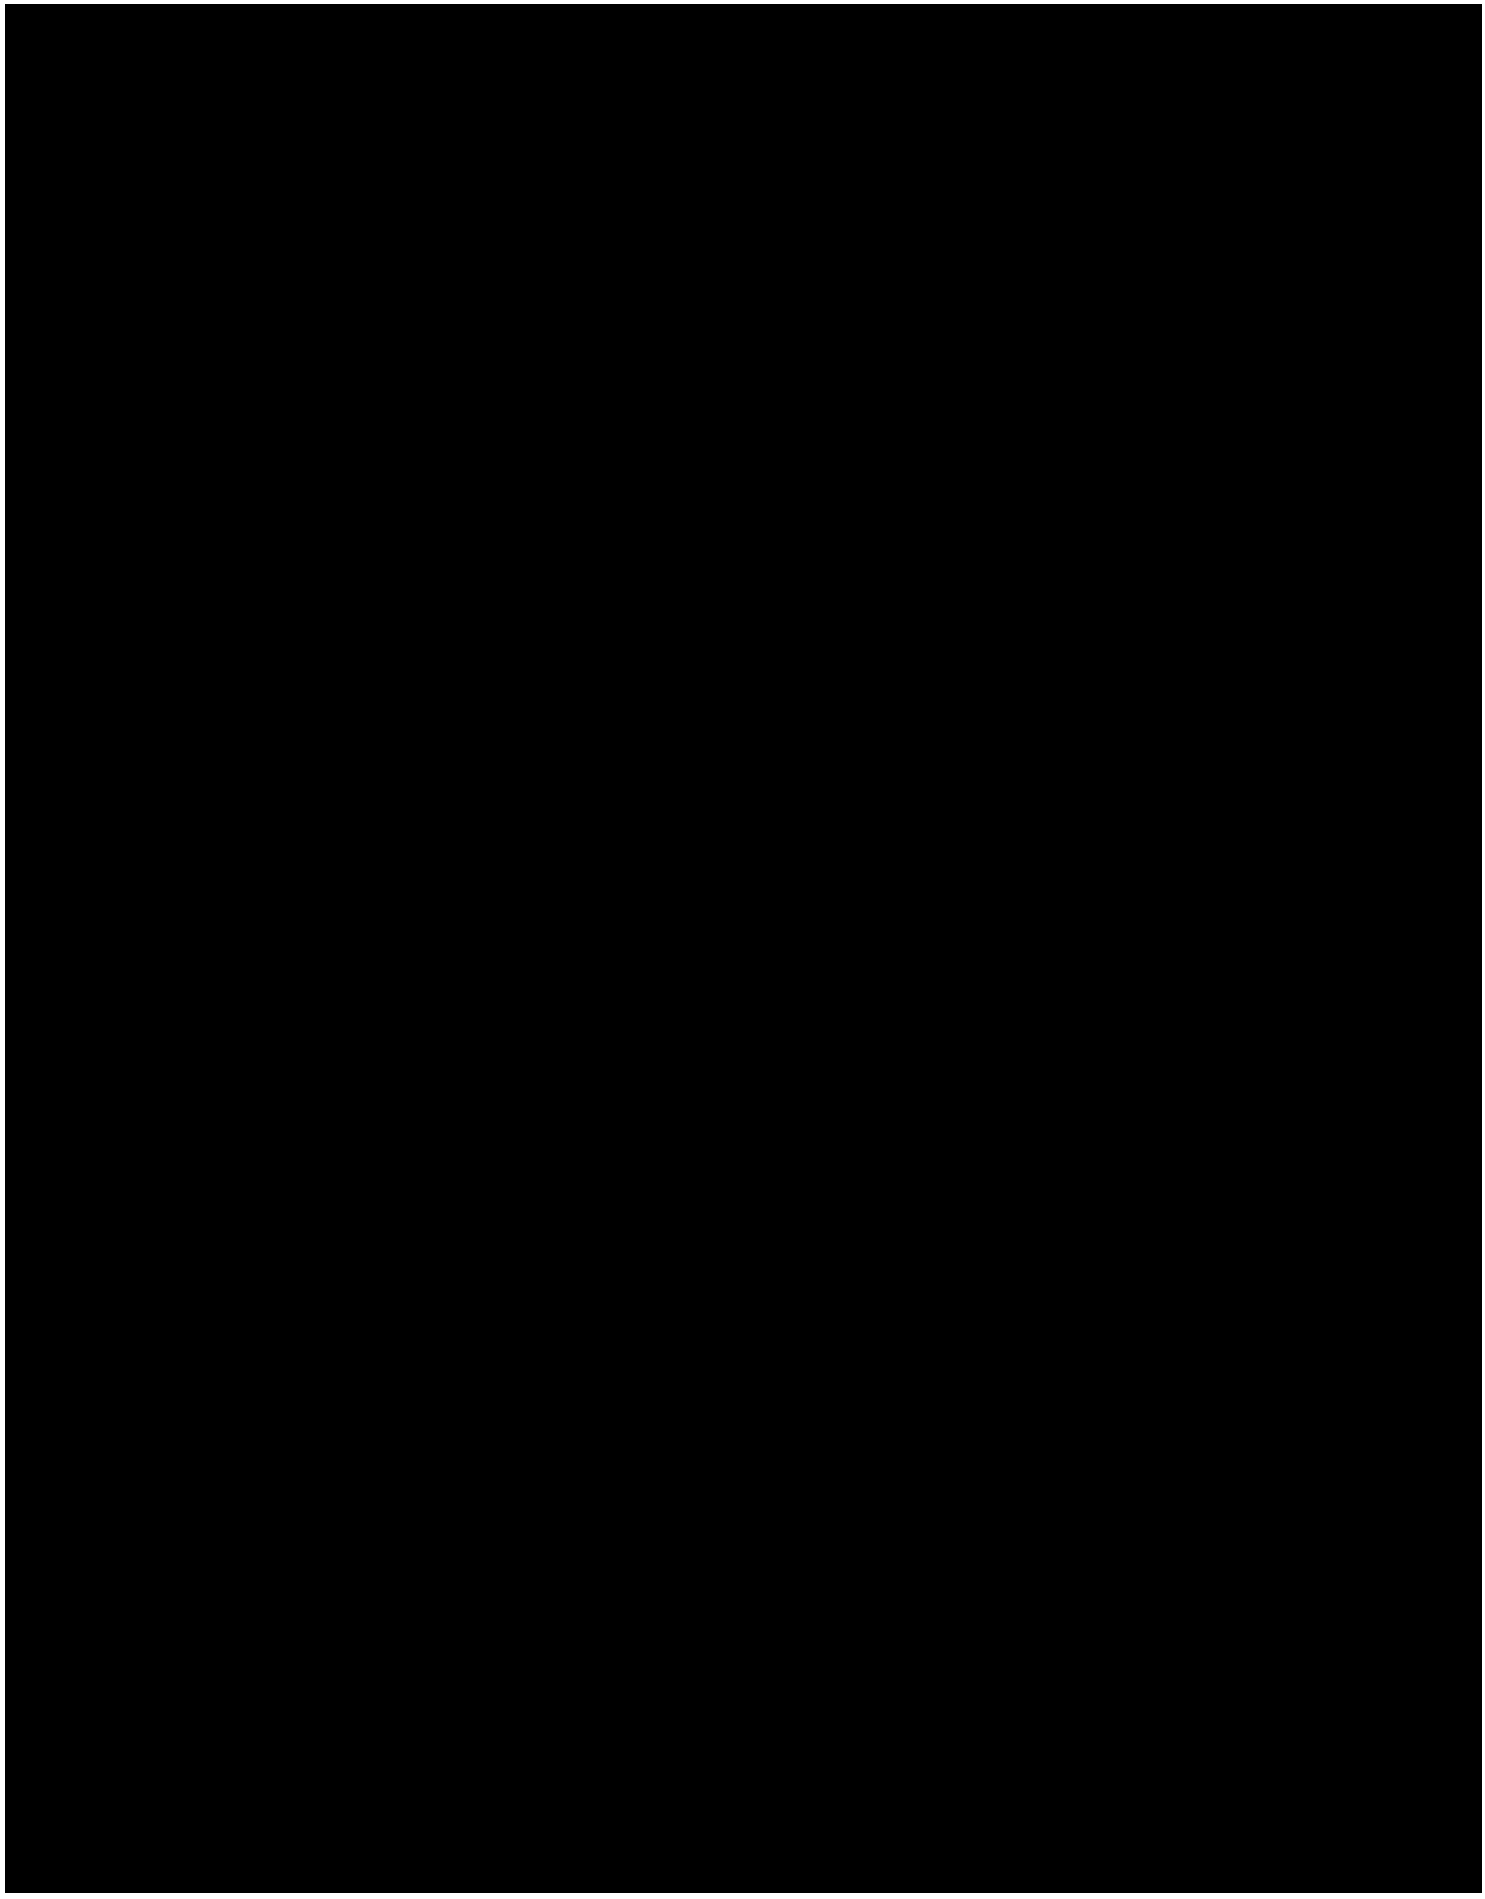


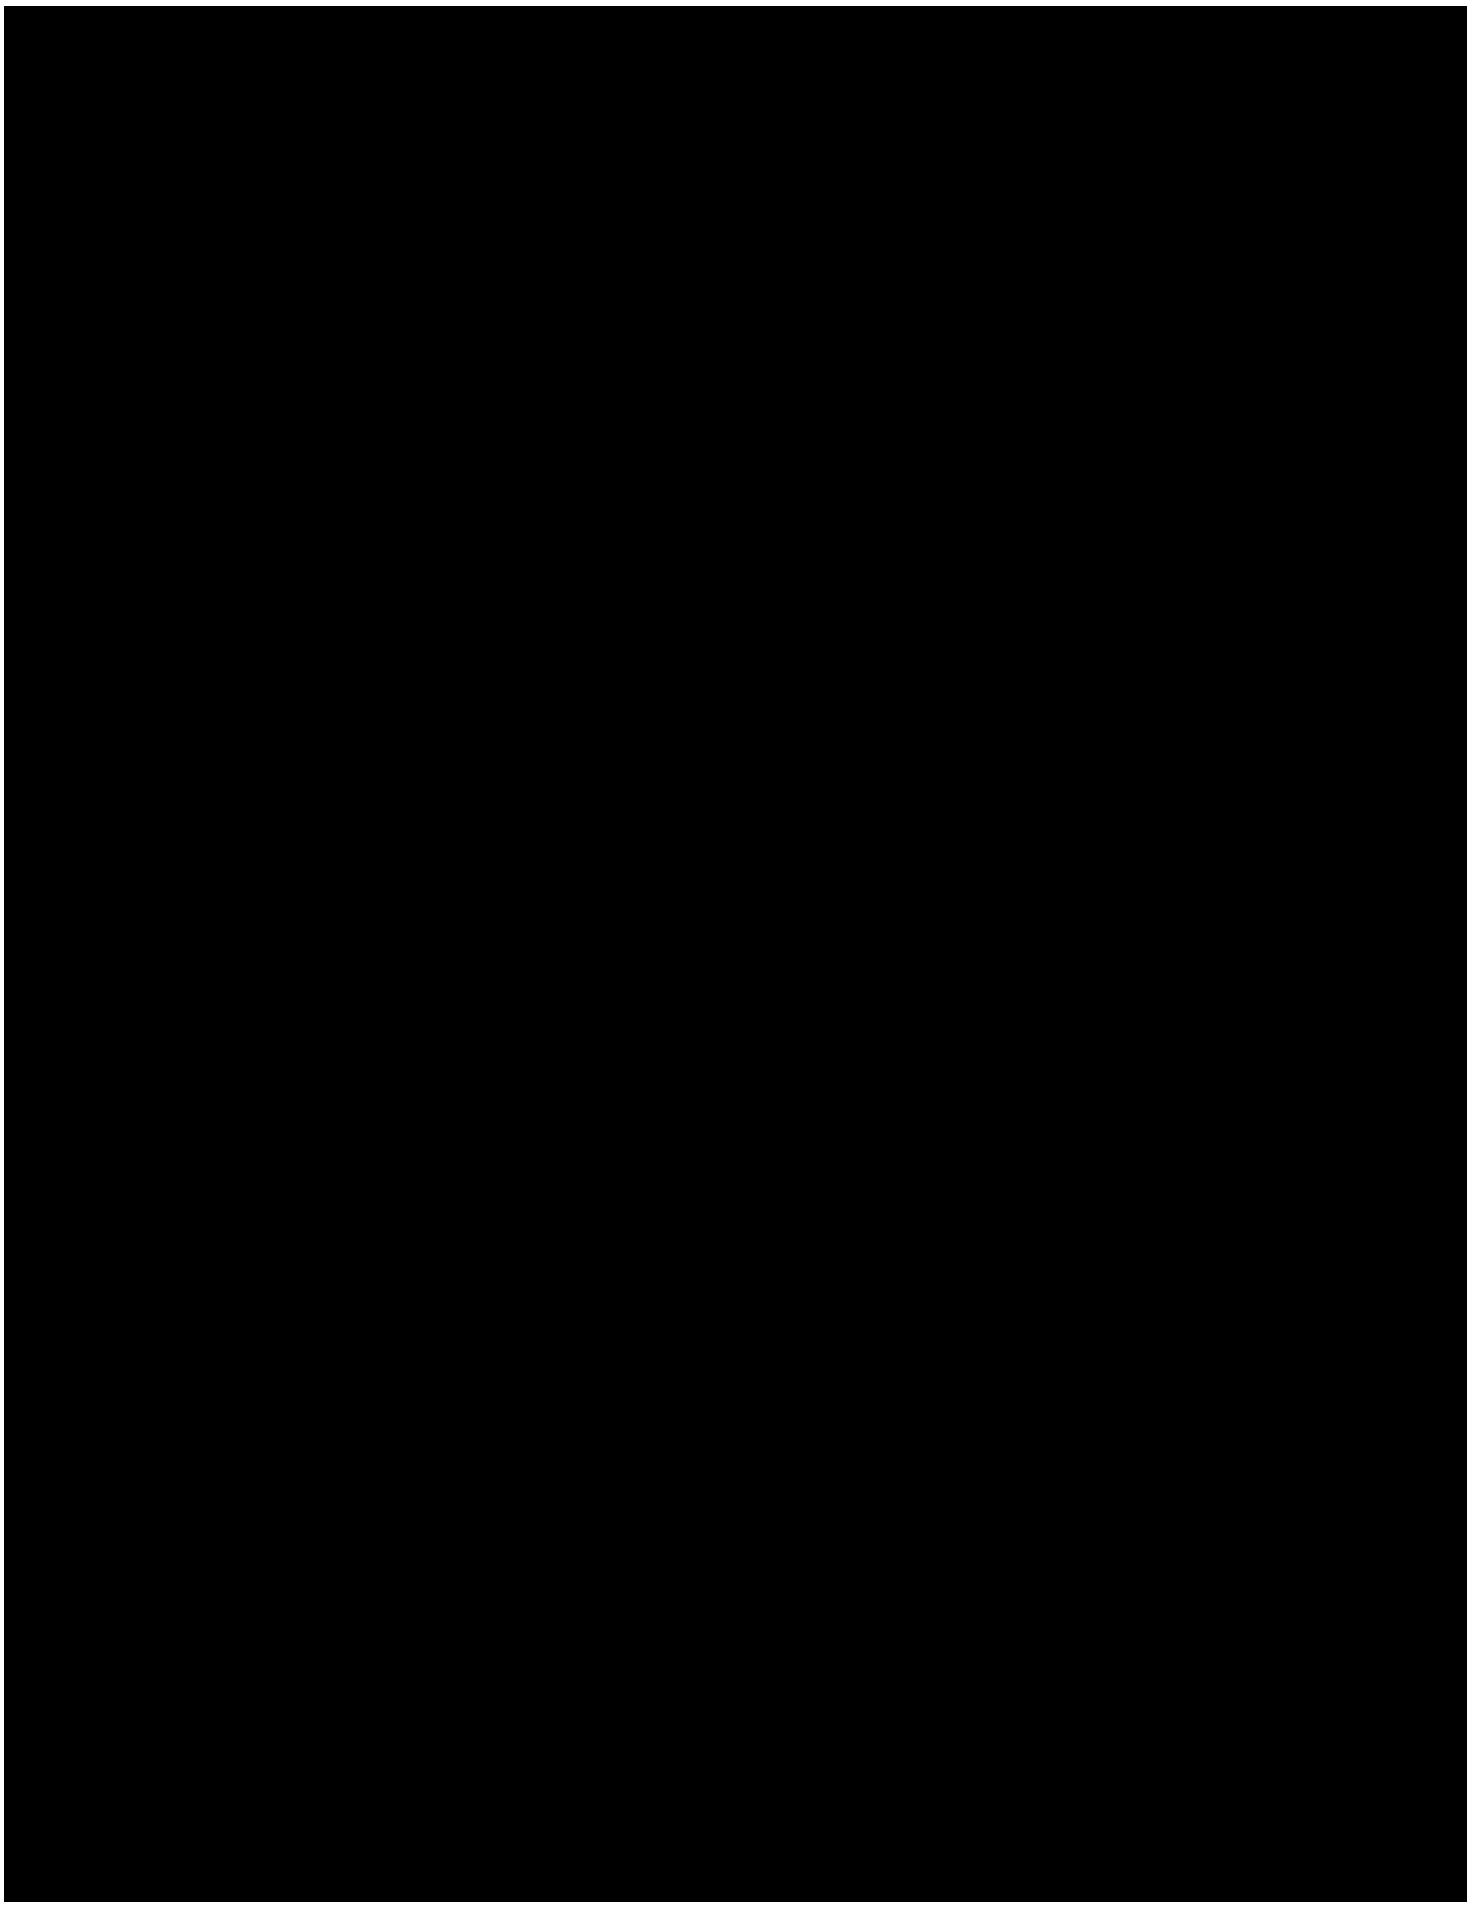


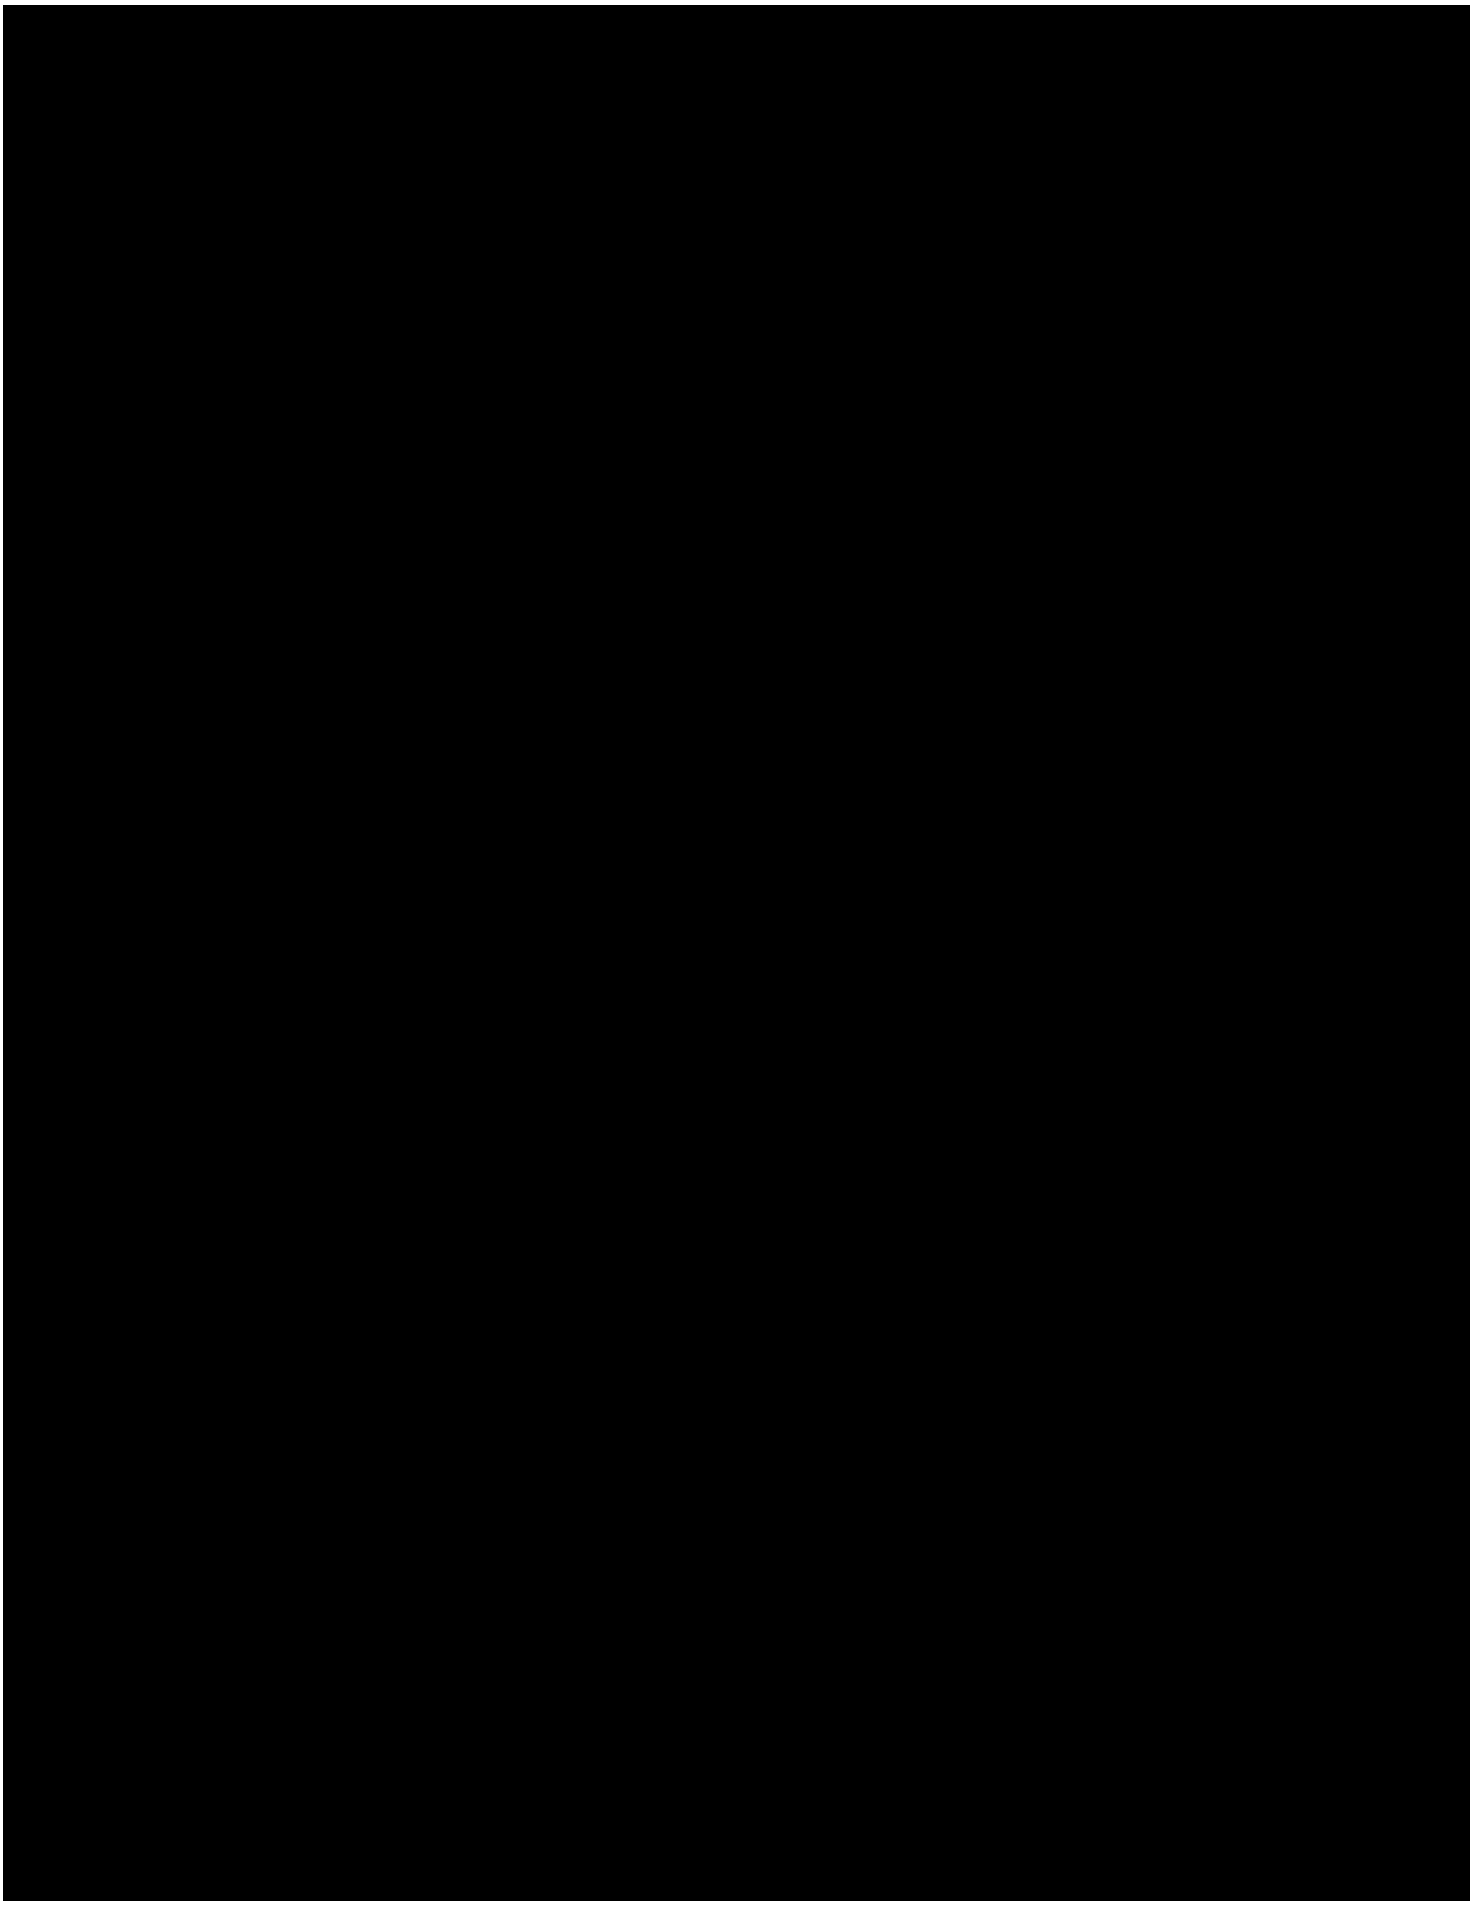


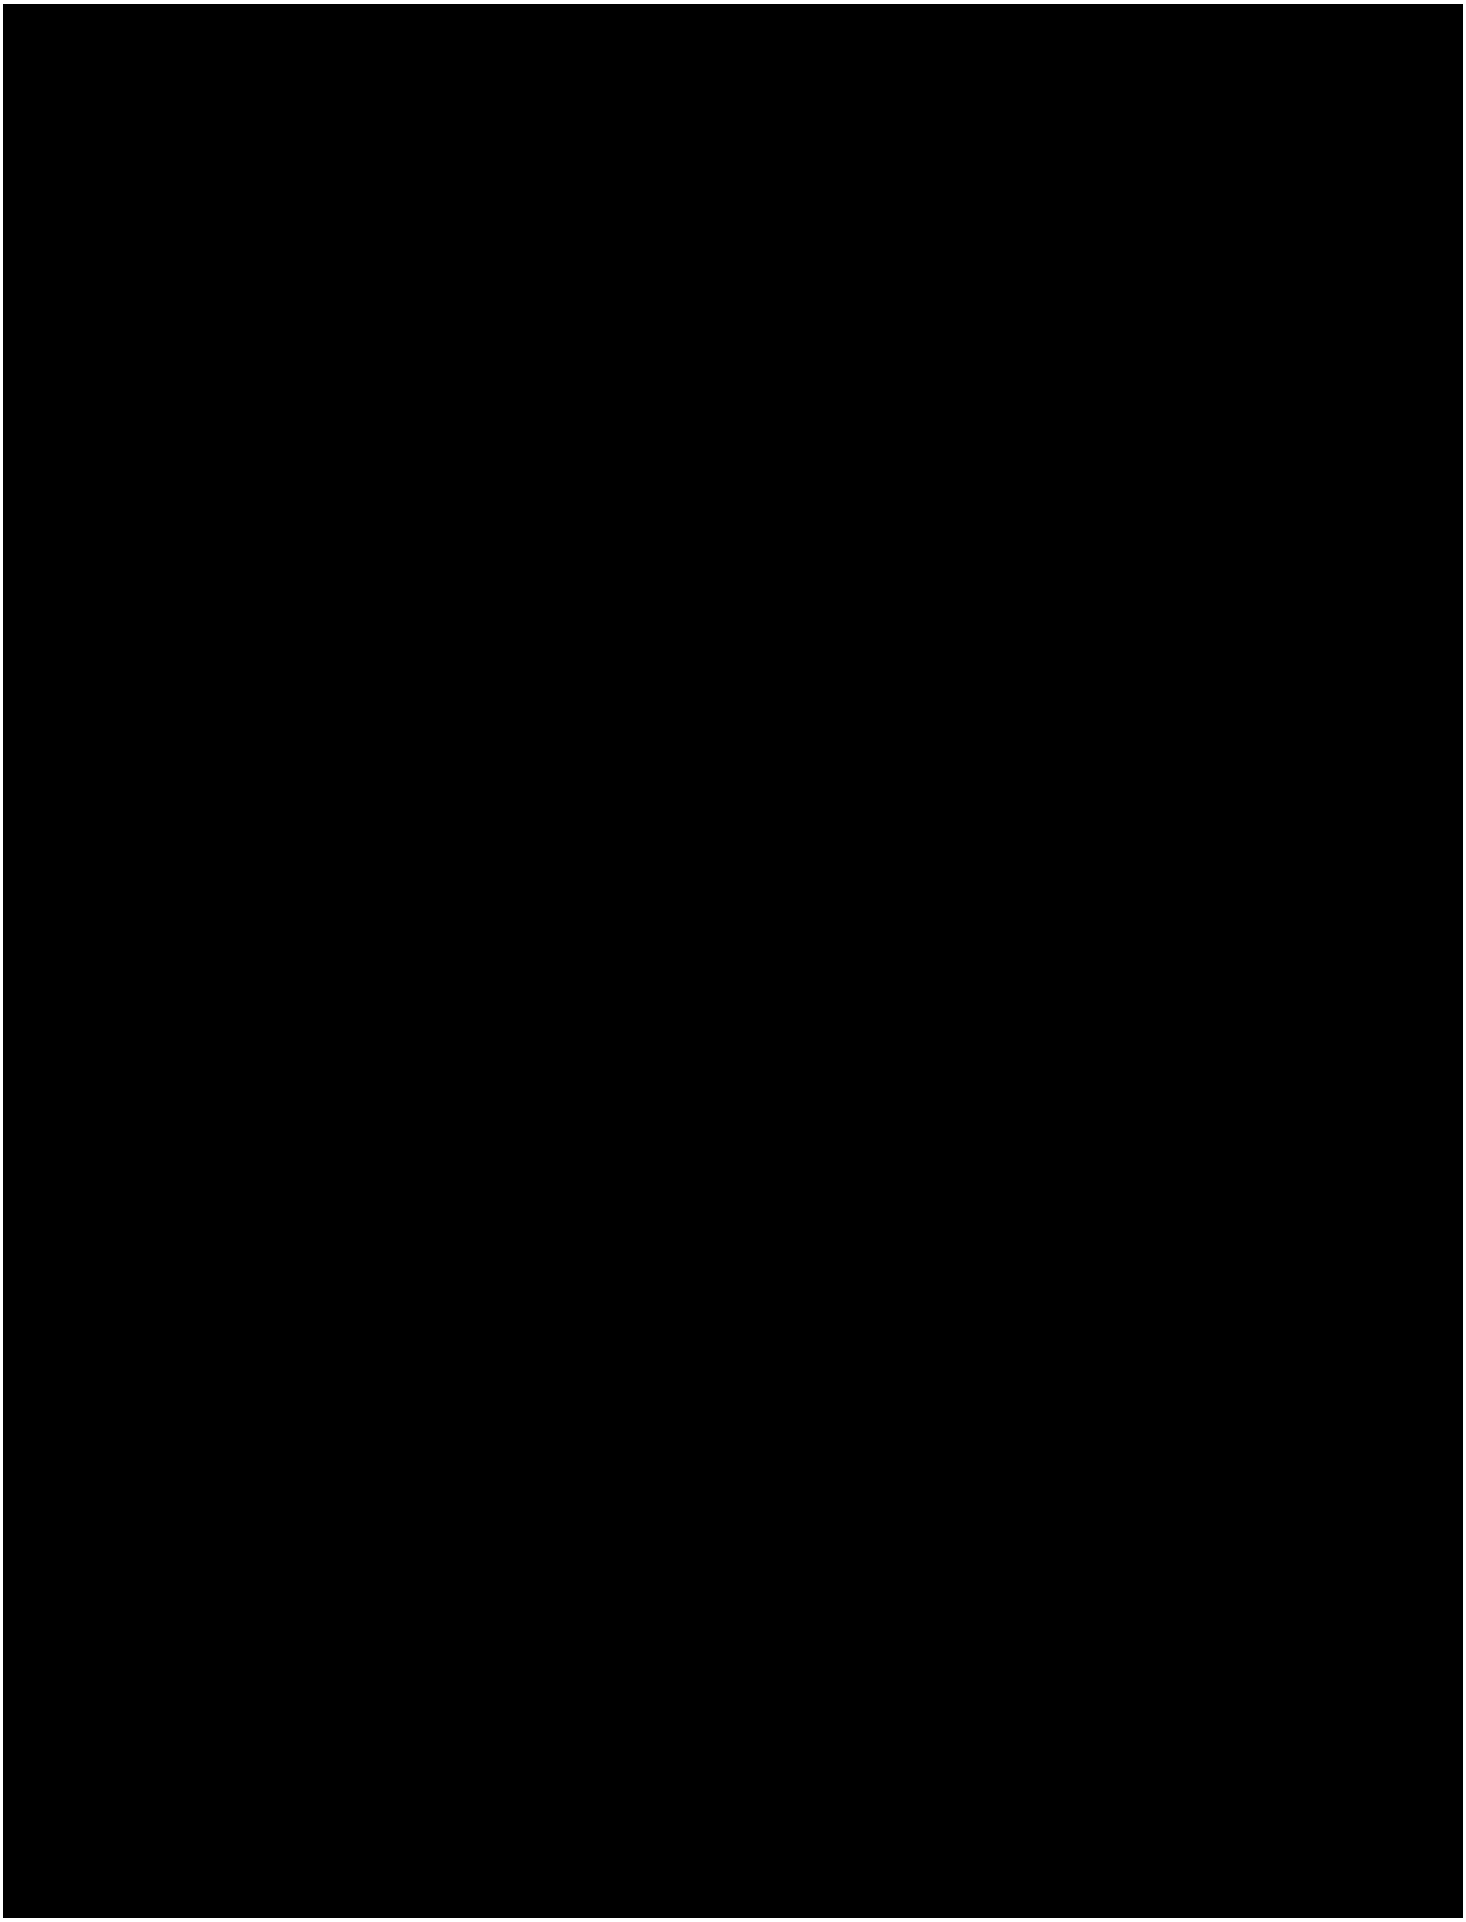


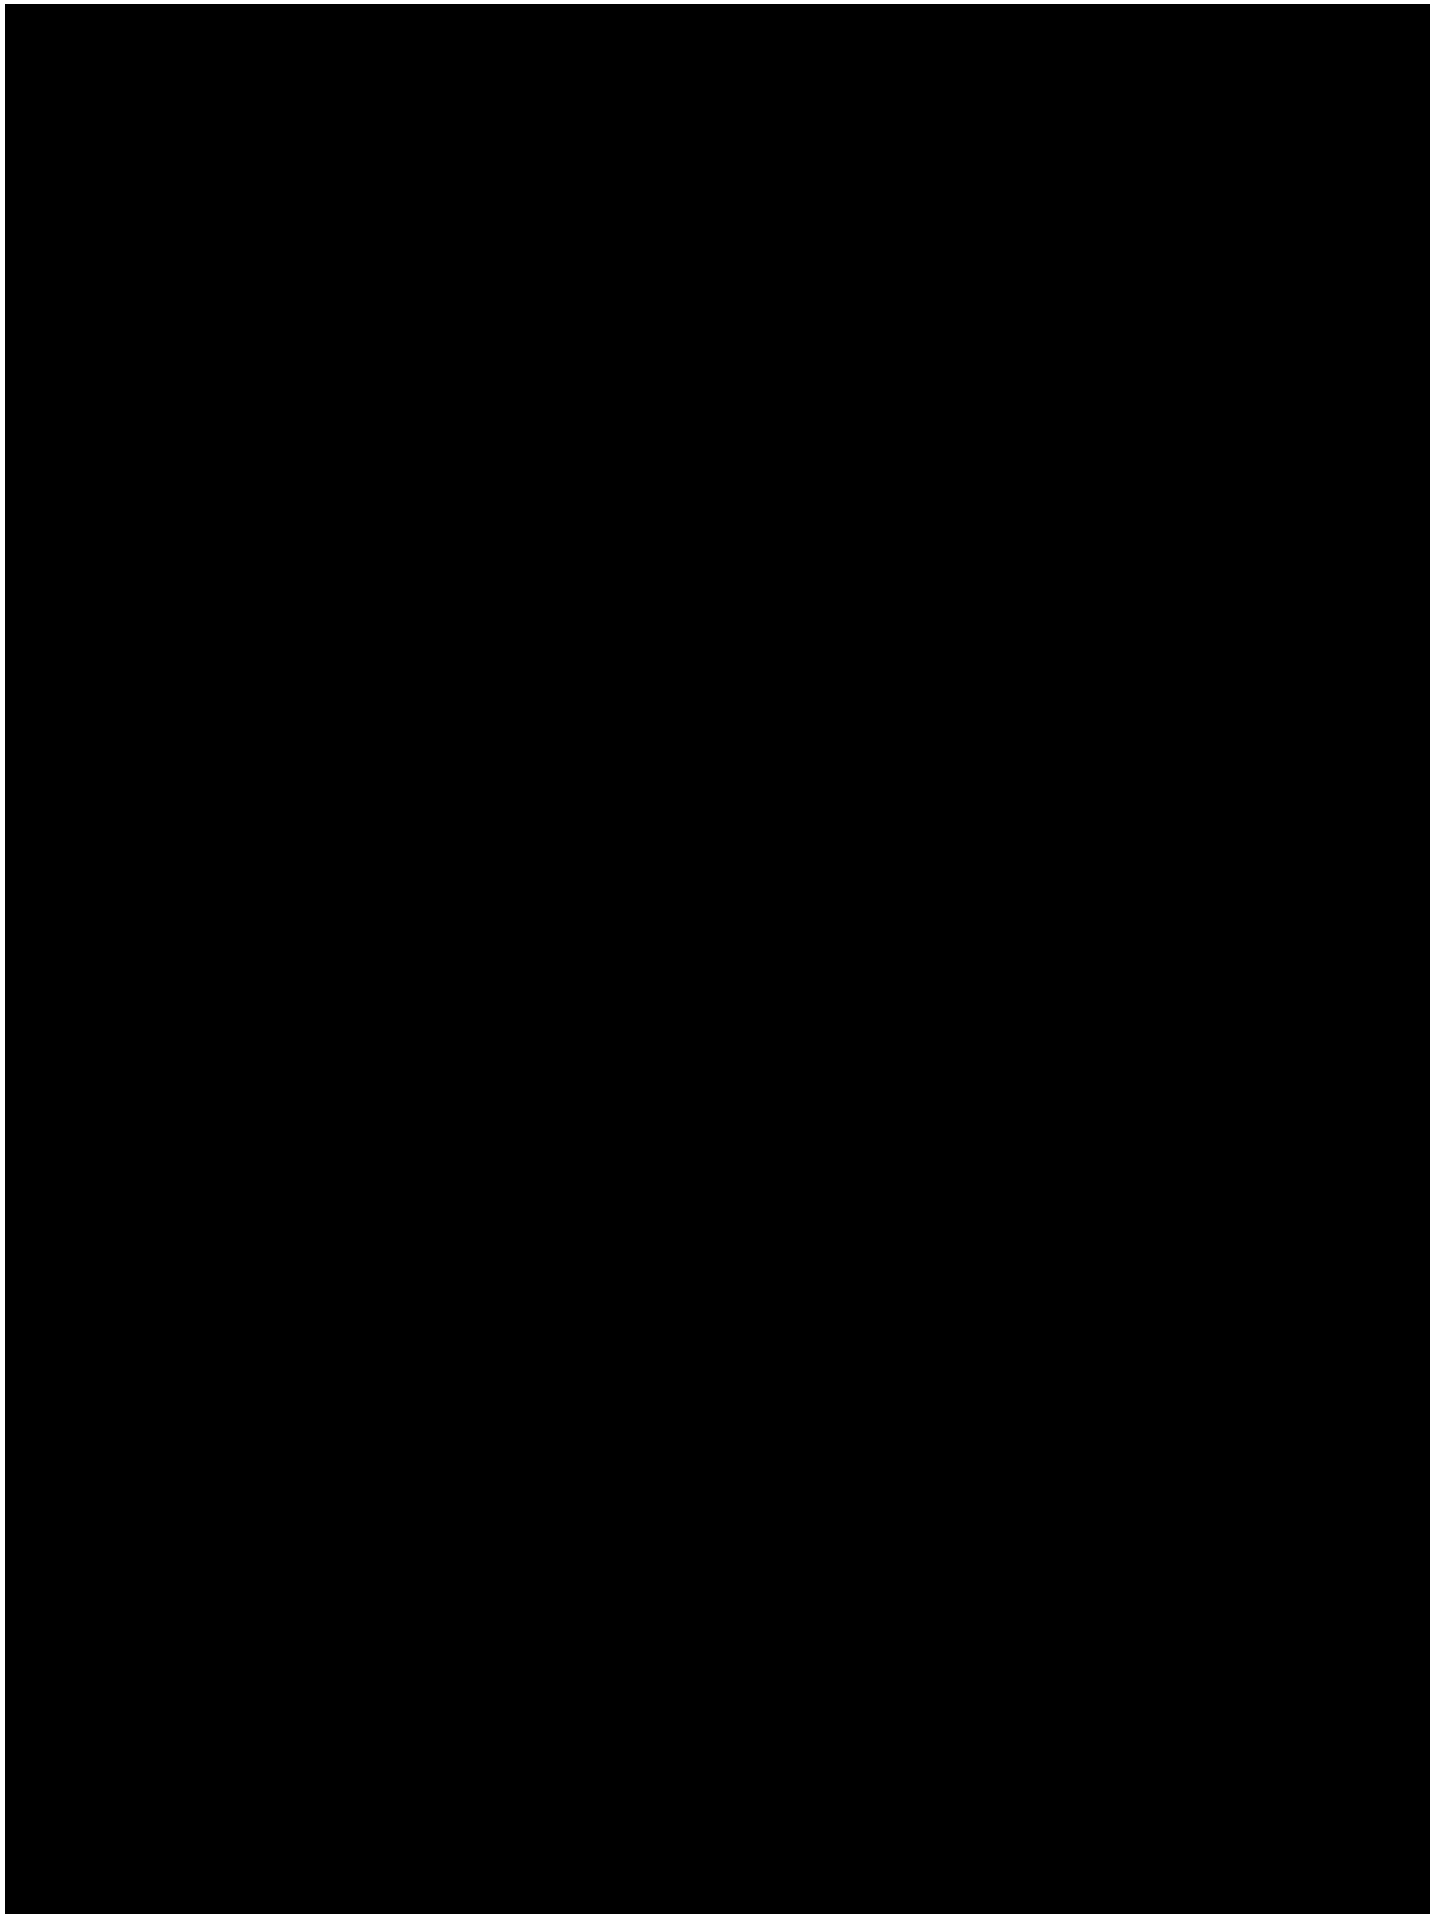


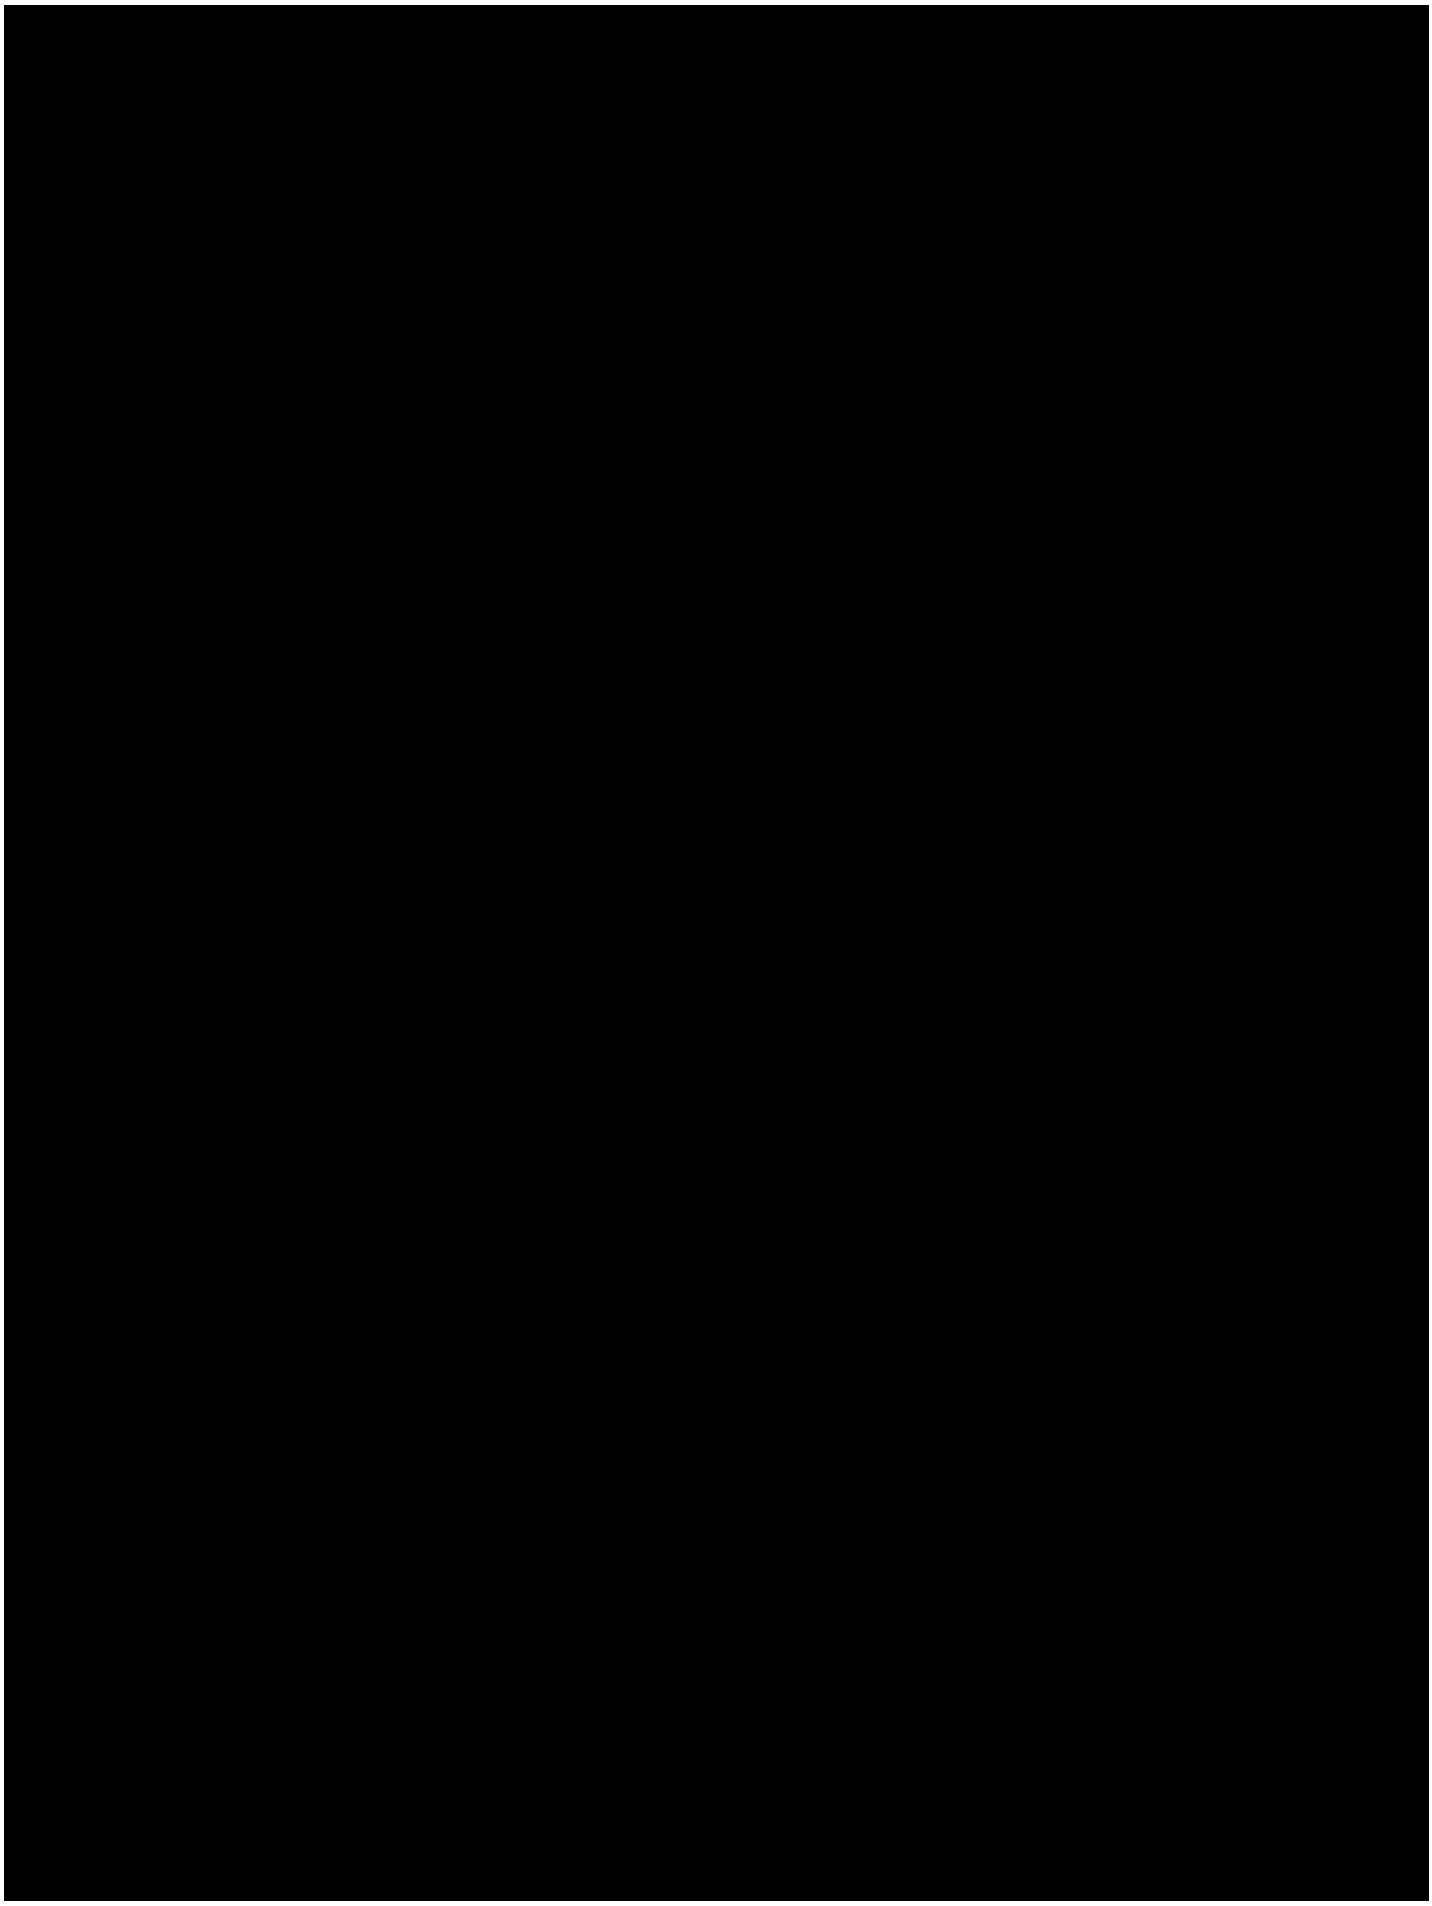


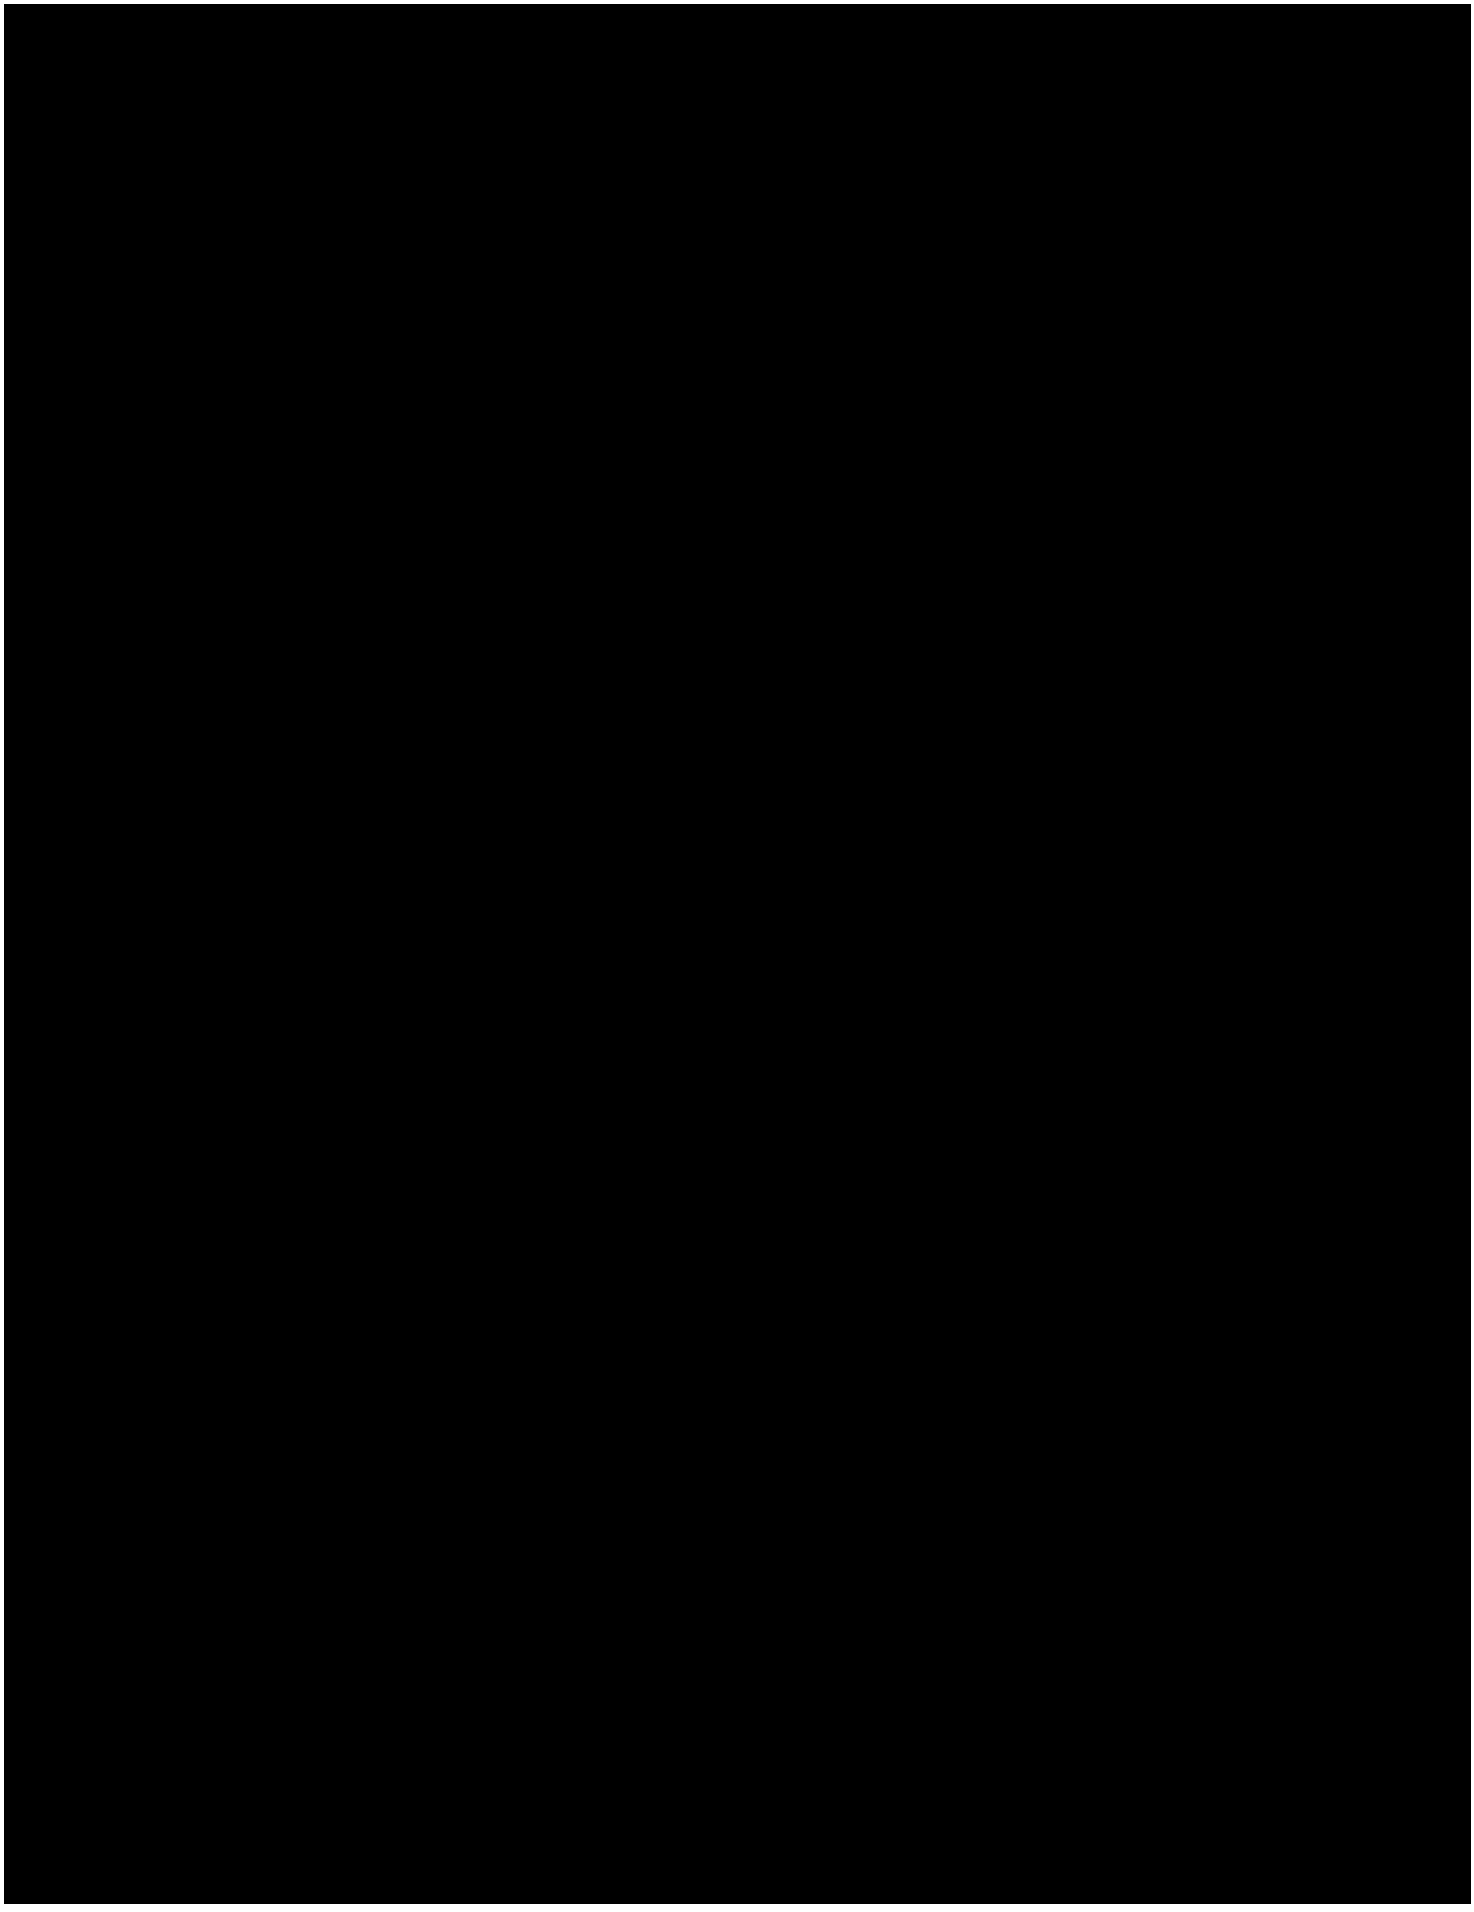












50.2.4.1.4 Deployment/Rollout Approach

RFP Reference: 50.2.4.1.4 Deployment/Rollout Approach, Page 275; 10.12.2 Deployment/ Rollout and Turnover, Page 15; Deployment/Rollout Plan CDRL, Page 267

As a trusted collaborator with significant knowledge of Medicaid in general and North Carolina healthcare programs in particular, we are the best vendor to mitigate your risk. We understand the steps required for a successful MMIS implementation, and we know how to execute these steps successfully to provide a smooth transition to your Replacement MMIS.

State of North Carolina

The deployment and rollout approach described in this section is a vital component of the Replacement MMIS implementation. Our approach will be developed into the plan required by the RFP's Deployment/Rollout Plan CDRL. The proposed first submission date for the deployment/rollout plan is November 21, 2008.

Based on intensive and recent nationwide experience, EDS understands the steps required for a successful Replacement MMIS implementation, and more importantly, we know how to execute these steps quickly and successfully to provide a smooth transition. Together, we will benefit from the lessons learned and the best practices knowledgeable interChange staff members have developed during recent implementations.

We will use proven project management methodologies, such as EDS' Project Management methodology, Version 2 (PM 2), which is based on the Project Management Institute (PMI) Project Management Body of Knowledge (PMBOK), to minimize risk, enhance communication, and provide on-time quality deliverables. In the Deployment/Rollout Phase, our experienced North Carolina and interChange staff will conduct detailed planning with the State to prepare the stakeholders for the successful implementation of a new generation multi-payer MMIS to serve North Carolina recipients and providers without disruption to service.

A key component of our approach to this phase is clear communication between the State agencies' representatives and the Implementation Planning team, led by DDI Implementation Manager Dean Taunton. This will promote our shared understanding of the implementation tasks and deliverables and facilitate achieving scheduled milestones. Dean's successful experience as the implementation manager for the Kentucky interChange MMIS provides North Carolina with proven Medicaid and hands-on application knowledge for enabling an organized and smooth deployment and rollout of the Replacement MMIS.

We provide a thorough, reliable, and proven methodology to manage the transfer of interChange to North Carolina. Through our years of project management experience, we have learned how to mitigate risk and eliminate barriers; this experience differentiates us from our competitors. EDS will meet your project objectives and requirements by combining our systematic approach to project management and successful, repeatable processes managed by a highly experienced project management team. We have demonstrated that this project management approach produces solid results and forms strong working relationships.

Our approach to implementation will be the culmination of myriad well-defined tasks and a State-approved project plan. A comprehensive Replacement MMIS implementation plan will result in a smooth transition to the Replacement MMIS and promote continued provider and recipient services. Activities defined in the detailed MMIS implementation plan follow our established development and deployment model. Development detail line items are further clarified and refined during the requirements validation sessions, conversion planning, system and acceptance testing, and the shared experience of the State Office of MMIS, DMA, DMH, DPH, ORHCC, and EDS.

Assigning roles and responsibilities and tracking daily tasks are critical to managing the final implementation activities and aiding in early identification of any potential problems. During the final weeks before going live with the Replacement MMIS, our Implementation team leadership and project management staff will meet with the State and identified stakeholders frequently to review progress. As the final days approach, these meetings may increase in frequency just as the pace of activity increases during this critical period.

During the Deployment/Rollout Phase, the State and EDS will work together to convert existing data and implement interChange into full production mode. We also will work with the State to develop an approved cutover plan from the current operations to the new one, addressing any possible backlog of claims and encounters. From recent experience, this plan will in part be composed of many checklists to be executed by each subsystem to smoothly transition from the legacy MMIS to the Replacement MMIS. Because we will take steps to promote a smooth transition, this cutover will not affect your provider community. The implementation will take place without interruption in recipient eligibility verification, provider enrollment, claims payment, or encounter processing.

Conversion of legacy data is a critical success factor. Our experience with converting legacy MMISs is proven and will be further refined in the coming months in several states. Our intimate knowledge of the North Carolina Legacy MMIS+ application and DMA and DMH data cannot be found anywhere else from any other vendor. This knowledge will be directly applied to the conversion effort, providing a high degree of data integrity achieved in a timely fashion. By already understanding DMH and DMA provider, recipient, claims,

and financial data, our Implementation team essentially has a head start on the multi-payer Replacement MMIS project.

During the support warranty period, EDS will monitor the Replacement MMIS for quality control and verify that activities are performing as designed. We will support system performance reviews and quickly address any functions that are not meeting the standards identified during the system definition and the quality planning process. Procedures outlined in the reporting of corrections and adjustments will comply with the severity and timing requirements provided by the State.

We will develop contingency plans that provide reassurance that any problems that may arise will addressed and quickly resolved or mitigated.

The end of the Deployment/Rollout Phase is determined by the successful completion of milestones and deliverables, including the approval of the implementation schedule, documentation of installed components, ongoing status and progress reports, and the completion of the correction and adjustment activities. Through our performance and commitment to the needs of North Carolina, the State can rely on EDS for expert implementation of the Replacement MMIS.

In the following sections, our response covers EDS' technical approach to deployment and rollout:

- Planning
- Deployment
- Correction and Adjustment Activities
- Execution of Contingency Plans
- Deployment Schedule
- Early Deployment of Selected Functions
- Ongoing Status and Progress Reports
- Staffing for Deployment

Planning

Our implementation approach has been an essential element of EDS' success in implementing technically advanced MMIS solutions for the Medicaid programs in Kentucky, Tennessee, Kansas, Oklahoma, and Pennsylvania. The State will gain open access to project status information for the Replacement MMIS implementation as a result of EDS' best practices and tools for planning and project management.

EDS' project management approach has supported us in meeting deadlines and living up to our promises in five other interChange implementations.

Our approach features the following:

- Open and timely communication with the State and a positive and productive working relationship to achieve the overall goal of satisfactory performance within budget
- Cooperation with the State in every aspect of the project
- Clear leadership accountability for project management responsibilities
- Repeatable project management processes consistent with PMI's PMBOK
- Open access to project schedule, status, and progress information through our browser-based iTRACE documentation repository application

The Deployment/Rollout Phase will include a coordinated effort by the EDS team and the DDI implementation manager, Dean Taunton, to develop the detailed deployment and rollout work plan and schedule, as described in the RFP's Deployment/Rollout Plan CDRL. This plan will detail the processes and planning activities, roles and responsibilities, and schedules for the activities related to the cutover from the Legacy MMIS+ to the Replacement MMIS. This plan will be structured so as to avoid negative impact to the system processing. We will establish success criteria and provide for a postimplementation evaluation that will include metrics for measurement of successful implementation.

Our plan will incorporate our Systems Life Cycle, Version 3 (SLC 3) process for developing the Replacement MMIS. Our PMO team will use our best practices and PM 2, based on PMI fundamentals, to manage and execute the plan. The plan will include the following:

- Systems and user documentation
- User and provider training
- Readiness testing period
- Assumptions, constraints, and issues
- Risk management plan
- Process usage plan
- Team management plan
- Project schedule
- Work breakdown structure (WBS)
- Communication management plan
- Configuration management plan

Dean Taunton will then lead in coordinating, controlling, and managing the implementation activities.

Our approach to controlling the implementation project phase involves monitoring performance and risk and formally updating the implementation

plan by coordinating changes to the plan with the State using a formal change control process to verify compliance.

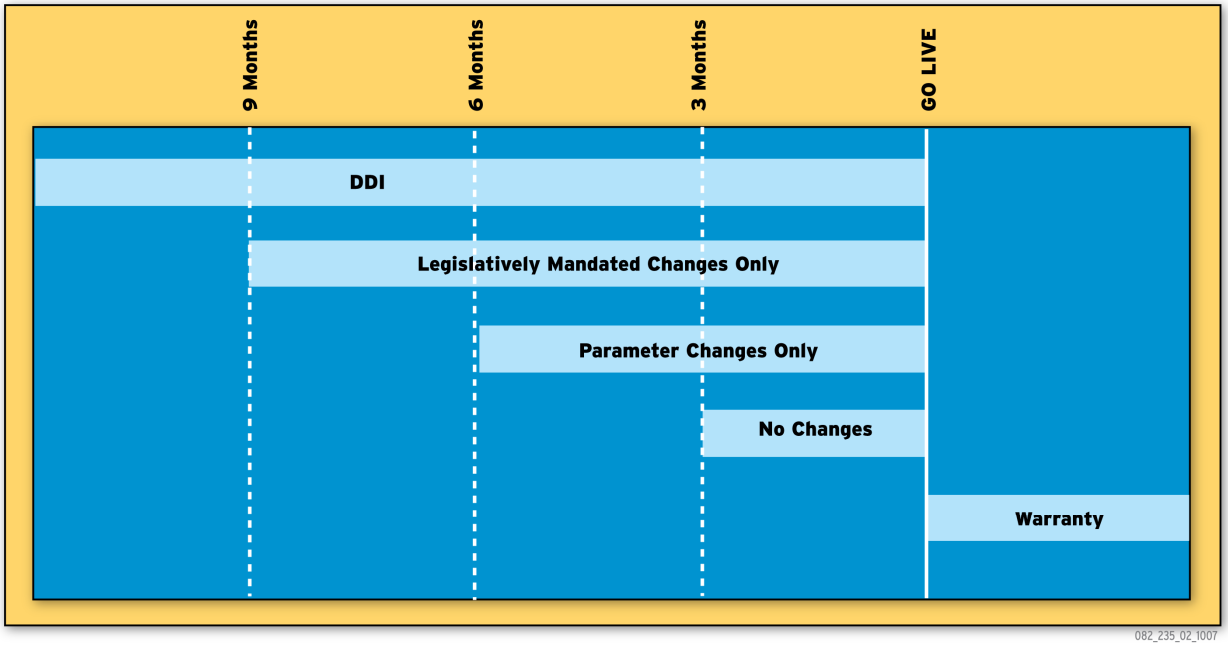
We will collect and disseminate performance information, including status reporting and progress measurement of schedule and budget, and take appropriate corrective action as necessary. We will demonstrate our control over implementation activities by presenting the State with weekly status updates from our Microsoft Project plan.

The Replacement MMIS is a mission-critical installation that will require stability in the legacy system for some time prior to deployment and rollout. We will minimize risk by slowing and then halting changes to the Legacy MMIS+ according to the following schedule:

- Nine months before deployment and rollout, all but legislatively mandated system code changes will be frozen.
- Six months before go-live, all system code changes will be frozen and only parameter changes, such as some rates and other configurable items, will be changed.
- Three months before go-live, all changes of any type, including parameters and other easily configuration items, will be frozen.

The following exhibit, High-Level Deployment/Rollout Time Line, identifies the essential milestones of this phase.

High-Level Deployment/Rollout Time Line



This time line summarizes key events in the final days of the Legacy MMIS+ and implementation of the Replacement MMIS.

Deployment

We will work with the State during the review of the final dates for the implementation of components, based on phased dates in the approved deployment/rollout schedule. During the Deployment/Rollout Phase, we will convert existing data, train State and EDS users, and implement the Replacement MMIS without interruption to provider or recipient services of all four divisions.

Today's environment is one of continuous healthcare policy evolution. Our team includes the experienced leadership and professionals with project management skills and technical and operational expertise to meet these challenges. EDS brings a committed team that recognizes the distinct challenges of implementing a Medicaid Information Technology Architecture (MITA)–compliant information system in this challenging marketplace.

We consider this implementation a unique opportunity to transform the State's business processes, data flow, and technology with the Replacement MMIS.

Implementation and full responsibility of fiscal agent activities without disruption to recipient care or provider payments are priorities shared by the State and EDS. The State can rely on EDS' Replacement MMIS and fiscal agent solution to improve customer service, enable cost containment, and easily adapt to changes in Medicaid policies.

Our team focuses on structured development and implementation procedures, a proven approach to quality management, and a project management methodology that produces outstanding results that are cost-effective and within agreed-on delivery time frames. We will use our knowledge, experience, and proven work patterns from multiple successful implementations as a proven approach to this phase.

The implementation tasks will cover activities from the close of design and development through the full functioning of fiscal agent responsibilities (the start of the Operations Phase). These tasks will overlap the implementation planning, systems testing, conversion, and acceptance testing subtasks.

The deployment/rollout plan will include tasks for EDS and the State to work collaboratively in developing an acceptance criteria document. This document includes a concrete list of deliverables and criteria needed for deployment and rollout to be considered complete and successful. Also included is a list of key activities that must occur during the final months of implementation to verify the following:

- Correction and adjustment activities have taken place.
- Contingency plans have been created.
- Deliverables have been met.
- Components have been implemented.

The deployment/rollout plan will serve as the planning document and road map for the tasks required to transition from the current Legacy MMIS+ to the

Replacement MMIS, and it supports those activities required to confirm that the system and the Operations team are ready for operation.

The deployment/rollout plan will continue to evolve as additional tasks, events, and responsibilities are identified. It is intended to provide as much detail and guidance as possible at the time of delivery. The deployment/rollout plan is a living document to the team, so some components will be modified, refined, and enhanced as we move forward with the project.

Updated transition planning documents will be available for collaborative review with the key stakeholders from each division and DHHS oversight leadership.

We will provide a quality, detailed deployment/rollout plan to facilitate a smooth transition to the Replacement MMIS that will promote provider and recipient satisfaction. Activities defined in the detailed deployment/rollout plan will be based on the requirements gathered during the requirements validation sessions, conversion planning, and system and acceptance testing.

We will list assigned responsibilities and daily activities to track final deployment and rollout activities and aid in the early identification of potential problems. During the final month, EDS will conduct frequent review meetings with the appropriate parties to confirm that the project is on track for a successful implementation.

The detailed deployment/rollout plan prepared by EDS will use narrative plans, detailed task plans, and a daily calendar of activities to plan for and track progress toward the final implementation date. We will incorporate each of the RFP-defined content requirements for the MMIS deployment/rollout plan into our methodology for this deliverable.

During the Deployment/Rollout Phase, the team will finalize all documentation. We will develop documentation using the deliverable outlines and key sign-off criteria as approved by the State. The documentation will be easily accessible through the iTRACE repository. We will assemble the documentation from several approved deliverables and outputs from the previous phases' activities. This documentation will provide users of the new system with a comprehensive understanding of its features and capabilities.

Our combined team of dedicated North Carolina and interChange professionals has the skills and experience base to address each of the identified components and fiscal agent responsibilities required to be in place and functional by the start of the Operations Phase. We welcome the State's participation to provide the feedback and measures necessary to gauge progress and address any checkpoints.

Correction and Adjustment Activities

We will support the State in a comprehensive evaluation of the system and operations of the Replacement MMIS for quality control and verification that activities are functioning properly. We will resolve problems or deficiencies identified not only during this evaluation process, but also throughout the course of subsequent phases of this project.

Through our testing processes, we provide a reliable and comprehensive method to promote the operational readiness of the Replacement MMIS. We will manage an orderly testing process, providing you with access to timely, accurate testing results. We will verify that the system is functioning properly, offering uninterrupted service to the State, North Carolina providers, and recipients.

The Deployment/Rollout Phase activities require a plan that is well executed. The plan will include thorough verification and will make sure our existing seasoned North Carolina team is in place and prepared before the start of contract operations. Our team will have people with many years of experience working with the State, as well as many veteran interChange personnel. As with the other phase activities, we will work with the State to develop the specific processes and quality assurance measures to manage the deployment and rollout. We will include a time line for each supporting event and its assigned owner and the repository that will be used to collect and analyze noted corrections and adjustments.

Prompt problem identification and resolution is critical to ongoing project activities. We propose a clear process for problem identification and a solution for tracking issues to resolution.

We recognize that at some point during the Deployment/Rollout Phase, we will identify issues and adjustments that need to be addressed. We will report issues as soon as they occur so that the State is aware of them and knows how we are addressing them.

Our team will use iTRACE as the common repository to document issues, recommendations, and resolution status. We will inform identified State representatives of any significant problem that will affect the start of operations, and we will quickly repair or remedy any function that does not meet standards set during system definition and the quality planning process. A report will be maintained in iTRACE, and we will update it as the issue progresses to resolution.

We will maintain candid, open communication with the State. As a result, you will be prepared for potential inquiries, and the project will not be compromised. Working closely with you, we will successfully fulfill correction and adjustment task requirements.

In the following sections, we provide our approach to correction and adjustment activities for this phase:

- Monitoring the Implemented MMIS
- Repair and Remedy
- Informing the State of Implementation Problems

Monitoring the Implemented MMIS

We will implement the Replacement MMIS with no major interruptions to key activities, including recipient eligibility verification, provider enrollment, and claims and encounters processing and payment.

Our Replacement MMIS is designed to provide easy, flexible access for users. This capability will help verify that during the monitoring and evaluation process, the State will have access to review parts of the system whenever necessary. Access to review operational areas of our support also will be provided.

Implementation Manager Dean Taunton, technical and business process leaders, and quality assurance representatives will establish routine reviews, or project health checks, of Replacement MMIS reports, performance measures, and system output to identify any inconsistencies or discrepancies in meeting RFP-required business functions.

Our PMO and Quality Assurance team members will be responsible for the quality and control measures as the Replacement MMIS transitions from implementation through the onset of operations. These specialists will use balancing reports and other outputs to verify that performance-based measures fall within established bounds and transactions, claims, and encounters are processed correctly.

During this phase of monitoring the implemented Replacement MMIS, we will continue to use the structured approach of the user acceptance test (UAT) task with automated regression testing to retest claims and encounters. We will verify that claims and encounters test scenarios that previously passed continue to pass in each new cycle executed. We will post the results of testing in iTRACE, which will provide reports identifying which claims and encounters passed or failed. It also will facilitate the identification of areas that need to be addressed so that corrections and adjustments are handled efficiently, quickly, and thoroughly.

Through the introduction of the Performance Management Dashboard component of the interChange solution, both State and EDS leadership have desktop access to key MMIS metrics that increases structured measurement and monitoring of the Replacement MMIS. Leaders can filter on the specific metrics they care to review, and alerts can be configured to automatically notify leadership when a metric exceeds a defined threshold. This dynamic approach to monitoring increases communication and quality of the operational activities.

As the State's Medicaid fiscal agent for the past 30 years, we are best positioned to verify the system's readiness for operations. We will work with entities to monitor interfaces, Internet access, and other requirements. We will demonstrate our ability to continue the full realm of responsibilities allocated to the State's fiscal agent for DMA and DMH and the two additional organizations, DPH and ORHCC. Additionally, with any new or modified functions, we will verify that the Replacement MMIS claims and encounters processing environment is operational with the newly added or modified features and validate that documentation is complete and current.

Repair and Remedy

After identifying and reporting a problem or issue, we will develop and implement a corrective action plan. In the corrective action plan, we will document the issue or problem and research the situation to identify its cause. We will develop alternative solutions and prioritize tasks in relationship to the work plan. We will evaluate the effect on the existing project schedule and look to any contingency plan activities, if needed.

When we have implemented the corrective action, we will update or correct corresponding documentation and revisit any affected training activities. We also will communicate the action taken to other areas of the project team.

We will have a formal change control process to document any discrepancies and their resolution and to manage changes to programs and libraries. If defects or issues are discovered, we will immediately have the responsible technical personnel identify the cause of the problem, correct the problem, and complete retesting activities. We also will perform internal regression testing on the component to make sure no unintended changes have occurred to previously working functions. Additionally, automated regression testing will take place to validate that the system as a whole has not been affected by any changes to the component.

We will convene the change control board (CCB) to prioritize the repair and remediation work. This group will assign a priority based on defined project urgency levels and the consideration of both fiscal and program impacts. In response to emergencies, we will collaboratively resolve the problem.

Because some changes are driven by making corresponding changes in the rules engine and tables, an advantage offered by the interChange application is that we can address these changes quickly with an immediate update of a table that does not require technical intervention. The flexibility of the system and the quickness with which these changes can be applied and tested poses minimal risk to the implementation schedule and the start of operations.

The structured acceptance test will be designed to test the existence and proper functioning of the Replacement MMIS based on the State's system requirements, including the following:

- Testing Web pages, edits, and audits
- Processing the accuracy of claims and encounter payments and file maintenance
- Testing system performance
- Testing the format and content of system inputs and outputs, including outputs from reporting functions such as management and administrative reporting (MAR) and utilization management
- Testing the receipt and exchange of data with VANs, providers, and other external entities

We will validate that we are ready to process inputs, price claims and encounters correctly, meet reporting requirements, use a properly functioning data communications network, and meet system performance requirements. Testing also will include a volume test for claims and encounters and financial processing of several days of production capacity to demonstrate that the Replacement MMIS and personnel are prepared for full production.

Informing the State of Implementation Problems

When we identify a defect that does not affect the schedule and we clearly understand how it should be resolved, we will begin working toward resolution and will document the necessary steps in the defect report. We will keep the State informed of our progress to resolve these types of defects through regular status reports and meetings. If an identified defect does affect the schedule or we are uncertain about how the problem should be resolved, we will document the finding and notify State representatives of our awareness of the occurrence, and incorporate discussion of that defect in a written notification.

Our team will communicate and collaborate with the State throughout operational readiness planning, deployment and rollout transition planning, and testing activities. As test results become available, we can compare the actual results to the expected outcome. When test results are satisfactory, we will use checklists and sign-off documents approved by the State to acknowledge that the system is operating as specified.

If the test produces unsatisfactory results, we will make appropriate modifications and re-execute the test until we receive satisfactory results and approval from the State.

Execution of Contingency Plans

We understand the complexities and intricacies involved in the deployment and rollout of the Replacement MMIS and assumption of fiscal agent responsibilities. We therefore recognize the need for contingency planning if any part of the MMIS does not perform according to specification. In the following sections, we describe how we will meet this requirement:

- Responsiveness
- Preparation
- Monitoring and Control
- Experience

Responsiveness

EDS has earned a reputation for responding to client needs and an outstanding record of providing uninterrupted service in the MMIS market. When problems occur, the State can rely on us to support continuous service to providers, recipients, and other stakeholders.

Account Manager Melissa Robinson and account staff will lead the EDS team in coordinating efforts for dealing with contingencies. As proven over the past 40 years as a corporation and 30 years in North Carolina, EDS personnel can meet the needs of stakeholders beyond deliverables.

In preparation for the start of operations, EDS will provide in-depth training; establish detailed user manuals, online help, CBTs, and hands-on training for State and EDS users; and perform rigorous operational readiness testing to make sure the system, providers, and staff are ready to go live. The contingency plans developed in concert with the State will be available in the unlikely event of a contingency action being triggered at or near the go-live date.

Preparation

EDS is confident in our ability to provide the State with on-time delivery of the Replacement MMIS without disruption in services or payments. To mitigate issues and risks before they affect service, EDS will implement risk management and contingency planning strategies proven successful on previous MMIS implementations.

For example, in June 2002, four days before the Kansas operational takeover date, our project team experienced a storm in Kansas that caused water damage, resulting in the loss of 25 percent of the new facility. EDS' contingency plan included a backup facility in the same city. It allowed us to respond quickly to establish staff, furniture, equipment, and telecommunications lines before the takeover date. This example shows how we can mobilize our resources to address even the most unexpected events and still meet commitments to our

clients. We will employ this type of risk management and contingency planning activity in North Carolina to prepare for events that may adversely affect this project.

We have proven our ability to implement new MMISs successfully in five states in the last five years. In every case, we implemented the systems without disruption to providers or recipients. That track record continues in the seven states where we are implementing our interChange solution.

Our unique position in the marketplace enables us to provide superior backup and quick-response processes. We have the computing resources and available personnel to respond quickly if the need arises. We will provide the State with the right resources and apply the necessary procedures to correct unexpected events.

Monitoring and Control

The reality is that risks are associated with any project, and they are magnified by the size and complexity of implementing a new, multi-payer MMIS. By continually monitoring the project and assessing the project work plan, however, the State and EDS will quickly identify potential issues that could delay the transition.

Our vigorous testing process includes documenting defects and retesting until we achieve appropriate confirmation that the system is working as intended. We will document, communicate, fix, retest, review, and report our results in our status reports so that the State is continually informed of project status. As we address risks, we will communicate constantly and openly with the State on the status of the deployment and rollout using tools such as iTRACE.

Experience

EDS' in-depth experience with MMIS implementations of similar size and complexity substantially minimizes risk for the State. We have successfully navigated the obstacles associated with implementing large systems, and we have the industry's best record of on-time delivery of new MMISs. The following are highlights of EDS' experienced people, processes, and applications leveraged for the benefit of North Carolina:

- **Experienced people—**The following team members represent the caliber of people we are committing to the Replacement MMIS project:
  - **Melissa Robinson—**Melissa has 14 years of experience on our local North Carolina team.
  - **Dean Taunton—**Dean has five years of experience in support of North Carolina, has 25 years of leadership and project management expertise, and managed the successful implementation of Kentucky's interChange MMIS.

  - **Scott Lowry—**Scott has five years of interChange experience and functioned as the interChange MMIS technical architect for the successful Kentucky implementation.

- **Implementation monitoring—**The implementation begins and ends with monitoring, using a proven project plan and associated project management review and risk mitigation processes.
- **Track record of success—**The interChange multi-payer system is the most successful MMIS installed and operating, as evidenced by our multiple successes in the past five years.

EDS is adept at managing the needs and complexities of a Medicaid program. A key benefit of our Replacement MMIS solution for the State is the use of proven procedures and technology with experienced personnel who understand the needs of stakeholders. Our in-depth knowledge, extensive resources, and proactive approach to risk management allow us to mitigate and eliminate risks so that implementation goals are not affected. We are confident that EDS will achieve the State's objective of an on-time delivery of the Replacement MMIS and a smooth transition of operations to EDS as the new fiscal agent for all four divisions.

Deployment Schedule

The State will have access to the updated project work plan, including the deployment and rollout schedule, throughout the project.

We will develop a complete list of milestones, which includes the scheduled and actual date for completion of each milestone. Each subsystem will develop a checklist of activities and tasks that will occur in the final days prior to deployment. These checklists will be created based on the knowledge gleaned from many previous interChange installations, and they will be thoroughly reviewed by EDS and the State.

The full deployment/rollout project plan will be available on the date specified in our completed Deployment/Rollout Plan CDRL, which is provided in proposal section 50.2.7 Section G—Contract Data Requirements List.

Early Deployment of Selected Functions

We propose the following items for early implementation during the development of the Replacement MMIS:

- Provider enrollment, credentialing, and verification
- Electronic Document Management System for claims and adjustments
- Retro-DUR
- Performance Dashboard

[redacted]

The EDS team selected these components carefully to increase key business services, provide greater access to electronic information, and transform the way North Carolina healthcare is reviewed and policy evaluated.

Each of these early implementations will have its own deployment/rollout plan and schedule. The final deployment/rollout of the Replacement MMIS will include appropriate tasks related to integrating these early implementation solutions into the full Replacement MMIS.

We describe these early deployments in detail in the Proposed Early Implementations subsection of proposal section 50.2.4.1 Proposed System Solution and Solution for DDI.

Ongoing Status and Progress Reports

EDS provides a project status report of weekly activities and weekly, monthly, and quarterly statistics. The project status report comprises a series of templates combined to report the status of project activities. Cumulative information is reported in the form of monthly and quarterly reports.

Staffing for Deployment

The State will benefit from the successful interChange implementations that EDS has completed and those that we are currently managing. These implementations are providing interChange and Medicaid program experience for hundreds of EDS' technical and professional healthcare personnel. The implementations are scheduled to complete in late 2007 and early 2008, just in time for these individuals to be available to the Replacement MMIS development and deployment and rollout effort.

Mustering Resources and Resolving Staffing Issues in the Deployment/Rollout Phase

With the support of the corporation, EDS Account Manager Melissa Robinson has the authority to identify and acquire resources and resolve staffing issues that may arise during the Deployment/Rollout Phase. Because of her long-term service within EDS' Medicaid business, specifically in North Carolina, she knows the leadership in EDS' government healthcare unit (at the Medicaid accounts and in the technical support organization). With these contacts, she can reach deep into the EDS organization to muster resources when needed. She will be supported by a defined recruiting process that uses EDS corporate and local resources to provide required staffing.

Transition of Staffing Into Operations

To provide unbroken continuity from the DDI phases into the Operations Phase, many of the core leadership team members will retain their positions and

continue to provide guidance and leadership in operations. The organization that is trained and in place at the end of deployment and rollout will transition into operations. This team will comprise people who have many years of experience working with the State and people with in-depth knowledge and expertise in interChange. Proposal section 50.2.5.4 Staffing Approach discusses staffing in more detail.

To further enhance this smooth transition from DDI into operations, our staffing plan includes the gradual ramp-up of operational staff before going live. This ramp-up period will serve as a transition period for orientation, training, and, in some cases, support with testing activities. In addition, these staff members will serve as resources to providers and recipients who may have questions as we approach the move into production. We have closely scrutinized this important element of our staffing plan to validate that we will have the right people at the right time as we move into the Operations Phase of the contract. As stated earlier, this team will be a "best of both worlds" when considering experience in North Carolina and expertise with interChange.

In addition, EDS has planned for increased staffing levels to support post-implementation activities. These staff members will support the tracking and reporting of any problems, resolution steps, and corrections or adjustments, if such support is needed.

Transition to Production

As we receive validation of progress and status, we will develop a schedule to define when elements of the Replacement MMIS will move into production and when supporting tasks will occur.

As activities for the DDI planning phases near completion, the State will authorize final dates for the implementation of components, specifying the phased dates in the approved deployment/rollout schedule. EDS will apply the skill and experience of our people, the thoroughness of our proven processes, and our collaborative relationship with the State to implement the Replacement MMIS without interruption.

EDS will rely on leadership and project management staff identified in the DDI planning phases to execute the requirements of the Deployment/Rollout Phase. The activities that will be completed during this phase include the following:

- Development and delivery of a deployment/rollout schedule for approval by the State
- On-time delivery and completion of each component of the Replacement MMIS
- Complete documentation of the components implemented

- Thorough tracking and reporting of any problems with implementation and the resolution steps taken, including the completion of correction and adjustment activities
- Development of ongoing status and progress reports

Sound project management during the project initiation and planning execution efforts for the Design and Development Phase and the Deployment/Rollout Planning Phase will create a foundation for the smooth execution of large project activities in the Deployment/Rollout Phase. Program knowledge, system expertise, and synchronized State and EDS project teams are critical to a smooth implementation. Therefore, the continuation of staff from these two phases is a key component for Deployment/Rollout Phase success.

Deployment/Rollout: Not the End But the Beginning

The Deployment/Rollout Phase marks the final stage of DDI. More importantly, however, it marks the beginning of the Replacement MMIS' operation. During deployment and rollout, we will combine our North Carolina staff members and their first-hand understanding of the programs' policies with the Replacement MMIS and its unlimited potential. With many critical DDI tasks—such as testing, training, staffing, and documentation—reaching their successful conclusion during this phase, the Replacement MMIS will be ready for many years of successful service to the State and its many divisions and stakeholders.

To demonstrate our successful approach to deployment and rollout, we provide a sample excerpt from the Kentucky MMIS DDI Implementation Plan following this page. As stated in RFP section 50.2 Technical Proposal Requirements, this sample does not count toward any page limit.

KY DDI Implementation Plan

Kentucky MMIS Project

Cabinet for Health and Family Services
Kentucky Medicaid Office

October 8, 2006

SAMPLE EXCERPT

This document describes and provides examples of the structure for the Implementation Plan. The contents of this document displays examples of the information that will be included in the final document.

50.2.4.1.5 State Requirements Matrix

RFP Reference: 50.2.4.1.5 State Requirements Matrix, Page 275

When reviewers combine this State Requirements Matrix review with our function point analysis and our detailed requirement responses, it will become clear that the interChange multi-payer offering is the MMIS best positioned to leverage a proven, certifiable system that is agile enough to meet the challenges for DMA, DMH, DPH, and ORHCC today and for years to come.

State of North Carolina

This section contains EDS' completed State Requirements Matrix, documenting which capabilities are met through our base system and COTS software, which require configuration or software changes to the base system and COTS software, and which require new, custom functionality to be added to the base system during the DDI effort.

There are many ways to evaluate a proposed MMIS in relation to the defined requirements of a multi-payer healthcare system. In the introduction to proposal section 50.2.4.1.1 Overview of System Solution and Solution for DDI, we explain our approach to the detailed responses that describe how we meet the requirements listed in RFP Section 40: Replacement MMIS Requirements. By listing the base interChange system objects used, the COTS products integrated, or the custom code to be developed, our detailed responses directly map to this State Requirements Matrix. Some requirements are met through a combination of system capabilities and operational services. We marked these requirements as "met" in the State Requirements Matrix, with the additional details provided in proposal sections 50.2.4.1.1 Overview of System Solution and Solution for DDI and 50.2.4.2.1 Proposed Solution for Operations.

In completing the State Requirements Matrix, we followed the directions provided in RFP section 50.2.4.1.5 State Requirements Matrix. However, to make sure our completion of this matrix is clear and straightforward for reviewers, we provide the following examples.

Where the base interChange system meets the requirements, the matrix is represented as follows:

Requirement	Requirement Description	A	B	C	D	E
#	Description	N	N	N	Section-page number	Y

Where the base interChange system or COTS software requires configuration through a table entry to meet the requirement, the matrix is represented as follows:

Requirement	Requirement Description	A	B	C	D	E
#	Description	Y			Section-page number	Y

Where the base interChange system or COTS software either requires integration of the COTS package with interChange, or most of the functionality exists but additional functionality is required to meet all components of the requirement, the matrix is represented as follows:

Requirement	Requirement Description	A	B	C	D	E
#	Description		Y		Section-page number	Y

Where both table entries and code changes are required to meet the requirement, the matrix is represented as follows:

Requirement	Requirement Description	A	B	C	D	E
#	Description	Y	Y		Section-page number	Y

Where new, custom functionality must be added to the base interChange system to meet the requirements, the matrix is represented as follows:

Requirement	Requirement Description	A	B	C	D	E
#	Description			Y	Section-page number	Y

Where only operational processes or procedures are required to meet the requirement, the matrix is represented as follows:

Requirement	Requirement Description	A	B	C	D	E
#	Description				Section-page number	Y

Where the requirement is met by the base system and also requires an operational process or procedure, the matrix is represented as follows:

Requirement	Requirement Description	A	B	C	D	E
#	Description	N	N	N	Section-page number	Y

Whenever Column E is in **blue print**, it indicates that an operational process or procedure also is required to meet the requirement.

In Column D, the section and page numbers point back to our detailed responses in proposal sections 50.2.4.1.1 Overview of System Solution and Solution for DDI and 50.2.4.2.1 Proposed Solution for Operations, where we have done one of the following:

- Listed the requirement as "Met by interChange" and described the online panel, report, or process that fulfills the requirement
- Stated what work, if any, is needed to meet the requirement

By taking this cross-referenced approach to the matrix, our intent is to demonstrate the careful thought and consideration that went into the matrix evaluation process.

When performing this matrix analysis, a few facts stand out. First, interChange is a strong match for the requirements, as demonstrated by the number of requirements met by the base application. Second, where it logically makes sense, the interChange solution extends the business analyst role into a policy and rule configuration role, making the long-term maintenance of the Replacement MMIS more cost-effective to maintain and update based on changing program needs. Third, the architecture makes logical use of COTS software to integrate business functions as needed. Finally, when the reviewer combines this requirements matrix review with the function point analysis and the detailed requirement responses, it will become clear that the interChange multi-payer offering is the MMIS best positioned to leverage a proven, certifiable system that is agile enough to meet the challenges for DMA, DMH, DPH, and ORHCC today and for years to come.

Appendix 50, Attachment C, Exhibit 1: State Requirements Matrix

Table Legend:

- **(A)** System capability is in the Baseline System or COTS and configuration is required via manual table updates to meet proposed solution (Y/N)*
- **(B)** System capability is in the Baseline System or COTS and software modification is required to meet proposed solution (Y/N)*
- **(C)** System capability is not in the Baseline System and requires new functionality via software modification to meet proposed solution (Y/N)
- **(D)** Enter the Proposal Section (A–L) that reflects the fulfillment of the Section 40 of this RFP requirement and page number(s).
- **(E)** Will meet requirement (Y/N)

* If both A and B above apply, indicate Yes (Y) in each column.
** Non-Medicaid only

40.1 General Requirements

40.1.1 General System Requirements

Requirement #	Requirement Description	A	B	C	D	E
	Multi-Payer Requirements					
40.1.1.1	Provides capability in a Replacement MMIS to provide a single system process to coordinate recipient benefits among the DMA, DMH, DPH, and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC) and to ensure the proper assignment of the financially responsible payer, benefit plan, and pricing methodology for each service tendered in a claim	N	N	N	D-28	Y
40.1.1.2	Provides capability to create and maintain each health benefit program offered and administered by the State; health benefit programs shall be realized by one or more benefit plans that define the scope of benefits, eligibility criteria, and pricing methods applicable to a health benefit program	Y			D-28	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.3	Provides capability to allow recipients and providers to enroll in one (1) or more benefits plans	N	N	N	D-28	Y
40.1.1.4	Provides capability for benefits plan to be implemented through a rule or a design that allows simple and easy implementation of new benefit programs and modifications to existing benefit programs with little or no programmatic changes to the claims processing software	Y			D-28	Y
40.1.1.5	Provides capability for benefits plans to be maintained and administered through user-interface views with entries for defining and configuring the scope of benefits, eligibility criteria, and the pricing method criteria that will be used for determining admissibility under a given benefit plan	Y			D-28	Y
40.1.1.6	Provides capability for the claims adjudication process to use information from the benefit plans applicable to both the recipient and provider of a submitted claim to identify and assign the financially responsible payer and benefit program applicable to each service tendered in the claim, including retrospective review of eligibility and funding availability	N	N	N	D-28	Y
40.1.1.7	Provides capability for the determination of the financially responsible payer and benefit program for each claim service using a set of payer and benefit program ranking criteria to resolve any potential contention when the claim service is covered by more than one benefit plan	N	N	N	D-29	Y
40.1.1.8	Provides capability for the claims adjudication process to use information from the pricing method criteria tables to identify and assign the pricing methodology applicable to each service tendered in the claim	N	N	N	D-29	Y
40.1.1.9	Provides capability for financially responsible payers, benefit programs, and pricing methodologies assigned to a claim to be used to support and direct various aspects of the claims adjudication process, including the edits, audits, pricing, payment (e.g., checkwrite), and financial (e.g., budget management) functions	N	N	N	D-29	Y
40.1.1.10	Provides capability to track and report current and historical claims detail and associated funding sources	N	N	N	D-29	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.11	Provides capability for batch and/or online real-time access between external systems and Replacement MMIS functional areas using Application Program Interface (API) - based Service-Oriented Architecture (SOA) concepts		Y		D-29	Y
40.1.1.12	Provides capability to track, report, reproduce, and/or forward recipient mail that is undeliverable		Y		D-29	Y
40.1.1.13	Fiscal Agent shall shred recipient correspondence that is returned to the Fiscal Agent as non-deliverable				D-29	Y
40.1.1.14	Provides capability for data validation editing for all online and Web entry views	N	N	N	D-30	Y
	Data Transfer and Conversion					
Requirement Deleted 40.1.1.15	~~Provides capability to make all historic and new electronic documents available to Fiscal Agent and State staff from implementation of any and all Replacement MMIS capabilities~~					
	Interfaces					
40.1.1.16	Provides capability to interface in a timely manner “To” and “From” all external interfaces, to include, without limitation, those listed in Appendix 40, Attachment H of this RFP		Y	Y	D-36	Y
	Security					
40.1.1.17	Provides capability to adopt current industry and State standards and address the State’s Security Program Planning and Management, Access Controls, Application Software Development and Change Controls, System Software Controls, and Service Continuity Controls	N	N	N	D-52	Y
40.1.1.18	Provides capability for initial batch loading of security records and profiles prior to implementation	N	N	N	D-52	Y
	User Access Authentication and Authorization					

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.19	Provides capability for a user interface design to incorporate the North Carolina Identity Enterprise Service (NCID), version 7 (or later), Model 2 Refer to *DHHS Application Integration with NCID* in the Procurement Library.			Y	D-53	Y
40.1.1.20	Provides capability to adhere to the role-based access control model in compliance with NC DHHS Security policies Refer to *Replacement MMIS Security Business Rules* in the Procurement Library.	N	N	N	D-54	Y
	Architecture Reference *Appendix 40, Attachment B, DMA Network Diagram* and *Appendix 40, Attachment C, DMH Network Diagram* of this RFP for information purposes only.					
40.1.1.21	**Goal**: Provides capability for the architecture to be: ▪ Adaptable ▪ Available ▪ Extensible ▪ Interoperable ▪ Manageable ▪ Redundant ▪ Resilient ▪ Scalable ▪ Securable	N	N	N	D-56	Y
40.1.1.22	**Goal**: Provides capability for the architecture to align with the principles and practices in the North Carolina Statewide Technical Architecture (STA)	N	N	N	D-56	Y
40.1.1.23	Provides capability for all applicable components of the proposed solution to perform efficiently on State desktop office tools consistent with the current State standards and versions (i.e., no more than [1] major release behind the current supported levels). See	N	N	N	D-56	Y

Requirement #	Requirement Description	A	B	C	D	E
	Appendix 40, Attachment J for State Standards.					
40.1.1.24	**Goal**: Provides capability for the client user interface to be decoupled (a clear physical separation) from the business rules layer and limited to presentation of data, capturing of input, and control of application flow	N	N	N	D-56	Y
40.1.1.25	**Goal**: Provides capability for the architecture to use Web services-based solutions that are designed using either a 3/N-tier or Service-Oriented Architecture (SOA) approach	N	N	N	D-57	Y
	System Software Controls					
40.1.1.26	Provides capability to update records to reflect changes such as merging or decoupling of recipient and provider IDs	N	N	N	D-61	Y
	User Interface and Navigation					
40.1.1.27	Provides capability for standard user interface characteristics, data accessibility, and navigation across all Replacement MMIS business areas	N	N	N	D-68	Y
40.1.1.28	Provides capability for compliance with language and accessibility requirements as defined in the Regulatory Compliance Section	N	N	N	D-68	Y
40.1.1.29	**Goal**: Provides capability for a secure, interactive Web Portal for users twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year	N	N	N	D-68	Y
40.1.1.30	Provides capability for a secure, interactive Web Portal to have an informational/introductory Web page twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year	N	N	N	D-68	Y
40.1.1.31	Provides capability for real-time interaction with all business areas, enabling routine inquiries	N	N	N	D-68	Y
40.1.1.32	Provides capability for multiple business area views to be displayed concurrently and to facilitate interaction between business area views	N	N	N	D-68	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.33	Provides capability for consistency in displaying view/file/report titles, dates, times, and other business area-specific requirements	N	N	N	D-68	Y
40.1.1.34	Provides capability to display error messages, interactive help views and tables, accessible reference files, and hypertext links to appropriate additional files/reports	N	N	N	D-69	Y
	Document Management and Correspondence Tracking					
40.1.1.35	Provides capability to electronically store and view online in an easily readable format all inbound and outbound transactions and correspondence within the Replacement MMIS		Y		D-74	Y
40.1.1.36	Provides capability for integrated document management and correspondence tracking across all Replacement MMIS business areas		Y		D-74	Y
40.1.1.37	Provides capability for online access to Replacement MMIS and document management and correspondence tracking with a single log-on		Y		D-75	Y
40.1.1.38	Provides capability to capture and electronically store all documents, both incoming and outgoing, including claims, claim attachments, data entry forms, images, medical records, X-rays, correspondence, incoming and outgoing fax documents and system-generated reports, tracking date, and time of receipt		Y		D-75	Y
40.1.1.39	Provides capability to receive, electronically store, and retrieve intraoral/extraoral photographs, digital radiographs, and digital versions of orthodontic models (casts)		Y		D-75	Y
40.1.1.40	Provides capability to link incoming documents, correspondence, and supporting documentation to related documents and correspondence already on file		Y		D-75	Y
40.1.1.41	Provides capability to assign a unique document identifier to each document		Y		D-75	Y
40.1.1.42	Provides capability to retrieve all linked documents with one (1) request		Y		D-75	Y
40.1.1.43	Provides capability for documents to be electronically stored by unique document identifier and accessible by online search via hypertext link from all views that reference		Y		D-75	Y

Requirement #	Requirement Description	A	B	C	D	E
	the image					
40.1.1.44	Provides capability to retain electronic documents for ten (10) years online; once the electronic document has been verified, it becomes the official copy of the document		Y		D-75	Y
40.1.1.45	Provides capability to archive electronic documents offline after ten (10) years and retrieve them for online viewing within two (2) business days of a request		Y		D-76	Y
40.1.1.46	Provides capability for data retrieved from offline storage to be retained online for ten (10) business days, unless otherwise requested		Y		D-76	Y
40.1.1.47	Provides capability to print hard copies of electronically stored documents		Y		D-76	Y
40.1.1.48	Provides capability to print and fax documents		Y		D-76	Y
40.1.1.49	Provides capability for State and Fiscal Agent staff to retrieve and display any electronically stored documents within eight (8) seconds for the first page, within five (5) seconds for the second page, and within three (3), two (2), and one (1) second(s) or less for subsequent pages		Y		D-76	Y
40.1.1.50	Provides capability to make all documents available to the State within two (2) business days of creation		Y		D-76	Y
40.1.1.51	Provides capability to accept input in frequencies as defined in business areas and from multiple sources, types, and formats, including: ▪ Required electronic transaction formats, (e.g., X12) ▪ Scanners (e.g., paper claims/written correspondence) ▪ Electronic text (e.g., e-mail, e-fax, voice media files) ▪ Paper documents (e.g., correspondence, claims forms, faxes) ▪ Portable media (e.g., magnetic tapes, 3.5” floppy drives, CD/DVD drives)		Y		D-76	Y
40.1.1.52	Provides capability for all data input (e.g., images of scanned paper documents, voice media files, electronic and EDI transactions) to be transformed as needed for further		Y		D-77	Y

Requirement #	Requirement Description	A	B	C	D	E
	processing					
40.1.1.53	Provides capability to protect all stored images and electronic copies from direct access while allowing authorized copies to be used for further processing		Y		D-77	Y
	Audit Trail					
40.1.1.54	Provides capability to track through audit trail data with date/time stamps: ▪ All access, activity, and system identifier of users or persons making adds, changes, deletes, or queries ▪ All activity that causes any additions, changes, deletions, or queries ▪ All transactions that result in a claim being entered into the system, including EDI transactions, a prior approval being entered into the system, Third Party Liability (TPL) transactions, a financial result (incoming and outgoing financial transactions and system-generated financial transactions), adding, changing, or deleting recipient or provider data, adding, changing, or deleting reference or code data, drug rebate activity, financial activity, and reference file changes	N	N	N	D-79	Y
40.1.1.55	Provides capability to maintain an automated audit trail of all update transactions, both batch and online, including date and time of change, before and after data field contents, and operator identifier or source of the update	N	N	N	D-79	Y
40.1.1.56	Provides capability to create audit trail data that can be accessed online in a user-friendly, indexed, searchable format that has the capability to reflect the complete history of the transaction	N	N	N	D-79	Y
	Online Help					
40.1.1.57	Provides capability for selectable online help views for user functionality that duplicate or link to system documentation	N	N	N	D-83	Y
40.1.1.58	Provides capability for online help for all features, functions, and data element fields as well as descriptions and resolutions for error messages, using help features, including indexing, searching, tool tips, mouse-over, field value options, hypertext links to files,	N	N	N	D-83	Y

Requirement #	Requirement Description	A	B	C	D	E
	reports, and context-sensitive help topics					
40.1.1.59	Provides capability for context-sensitive help to view, window, or dialog	N	N	N	D-83	Y
	Search and Query					
40.1.1.60	Provides capability to allow all records to be selectable and searchable by record elements, as specified within business areas	N	N	N	D-88	Y
40.1.1.61	Provides capability to query and search information based on user-defined criteria or by data elements as specified within the business areas	N	N	N	D-88	Y
40.1.1.62	Provides capability for search by phonetic/mnemonic, full-text, partial-text, keyword, Boolean operators, specific date, date ranges, partial Postal/zip code, and wildcard	N	N	N	D-88	Y
40.1.1.63	Provides capability for users to query via parameterized standard reports and view online production data	N	N	N	D-88	Y
40.1.1.64	Provides capability to generate descriptive alerts that specify any invalid query parameter(s) and to generate alerts when the anticipated return time on a query or search exceeds a defined time limit	N	N	N	D-88	Y
40.1.1.65	Provides capability to permit users to easily locate specific information in the online documentation, e.g., user manual, operating procedures, and online system help	N	N	N	D-89	Y
40.1.1.66	Provides capability to govern queries so that run time does not exceed defined limits	N	N	N	D-89	Y
	Correspondence and Letters					
40.1.1.67	Provides capability to produce system-generated standardized letters as specified in business area requirements and to electronically store saved images of each letter produced		Y		D-90	Y
40.1.1.68	Provides capability to produce updatable, form-based, version-controlled, customized templates for letter generation with capability for free-form text as specified in business		Y		D-90	Y

Requirement #	Requirement Description	A	B	C	D	E
	area requirements and to electronically store saved images of each letter produced from the templates in an easily accessible, searchable format					
40.1.1.69	Provides capability for letter and template generation to comply with US DHHS Title VI Language Access Policy based on flag that defines recipient language preference	Y	Y		D-90	Y
40.1.1.70	Provides capability to create and manage stakeholder correspondence, clinical policy documentation, bulletins/publication, business rules, and business forms		Y		D-91	Y
40.1.1.71	Provides capability to perform desktop publishing of documents for all stakeholders		Y		D-91	Y
40.1.1.72	Provides capability for on-demand and batch-driven correspondence creation and mailing		Y		D-91	Y
40.1.1.73	Provides capability for letter-generation solution that has the flexibility to use form letters and/or on-demand text generation		Y		D-91	Y
40.1.1.74	Provides capability for all stakeholders to create and electronically store correspondence templates for private and community use		Y		D-91	Y
40.1.1.75	Provides capability to use spellchecker functionality			Y	D-92	Y
40.1.1.76	Provides capability to use business rules intelligence to determine the best choice for correspondence communication and allow for the identification of the best selection for combination of address(es), USPS, fax, e-mail	N	N	N	D-92	Y
40.1.1.77	Provides capability to bulk distribute to target populations messages and communications via e-mail, fax, or Really Simple Syndication (RSS) feed		Y		D-92	Y
40.1.1.78	Provides capability to integrate the letter-generation solution with the Replacement MMIS and import required data elements identified in the business rules that must be included in the letter text		Y		D-92	Y
40.1.1.79	Provides capability to send correspondence through workflow management for approval, where business rules require secondary approval	Y	Y		D-92	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.80	Provides capability to integrate and link all correspondence to the document management solution in real-time from point of origin (State, county, Fiscal Agent, or other State-contracted entity's location)		Y		D-92	Y
40.1.1.81	Provides capability to track the correspondence creator, date, recipient, and time stamp and maintain this information historically		Y		D-92	Y
40.1.1.82	Provides capability to enclose attachments to meet recipient's language requirements	Y	Y		D-93	Y
40.1.1.83	Provides capability to create and distribute documents to multiple addresses	Y	Y		D-93	Y
40.1.1.84	Provides capability to redistribute static letters		Y		D-93	Y
40.1.1.85	Provides capability to create performance reporting associated with correspondence		Y		D-93	Y
40.1.1.86	Provides capability to allow user to designate address to be used			Y	D-93	Y
40.1.1.87	Provides capability to enforce security rules to control who issues each type of letter and to designate and enforce a chain of review for certain letters	N	N	N	D-93	Y
40.1.1.88	Provides capability for a user-friendly, English-text index that allows easy access to templates and easy retrieval of initial letters generated per requested parameters: business area, date of generation, topic, recipient name, etc.	N	N	N	D-94	Y
	Reports					
40.1.1.89	Provides capability for system-generated reporting to include, without limitation: ▪ Federal- and State-required report and distribution ▪ Reports identified in Appendix 40, Attachment G of this RFP ▪ Fiscal Agent operations and system performance ▪ Contract compliance ▪ Cost allocation	N	N	N	D-100	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Contract invoicing ▪ Standard pre-formatted reports with parameters selection criteria					
40.1.1.90	Provides capability for online access for users (based on role-based security) to reports, enabling downloads for export/import into multiple software formats and availability for use in multiple media	N	N	N	D-100	Y
40.1.1.91	Provides capability to maintain all reports that cannot be regenerated to reflect the report contents as originally represented		Y		D-100	Y
	Workflow Management					
40.1.1.92	Provides capability to maximize work queue technologies that enable a business rule empowered workflow, end-to-end enterprise-wide strategic solution that generates prioritized, sequential first-in/first-out delivery of work items that are generated as either media event or application event work items Provides capability to support: ▪ Documentation retrieval (link to imaged documentation) ▪ Alert agent on events such as work item creation, assignment, work item updates, and status changes ▪ Assignment tracking and retrieval ▪ Aging report(s) ▪ Work item monitoring ▪ Work item reassignment		Y		D-105	Y
40.1.1.93	Provides capability to input requests/inquiries into the workflow/imaging application to enable processing to be automated and forwarded to designated work and print queues		Y		D-105	Y
40.1.1.94	Provides capability to move requests to the next work queue based on expertise required for completion		Y		D-106	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.95	Provides capability to allow the assignment or routing of tasks by the user		Y		D-106	Y
40.1.1.96	Provides capability for tickler and/or to-do list capability		Y		D-106	Y
40.1.1.97	Provides capability to support the tracking and resolution of contacts, including calls, on-site visits, override requests, prior approvals, and written inquiries			Y	D-106	Y
40.1.1.98	Provides capability for the unlimited entry of notes with date/time stamp, user identity, and categorization as to type of note			Y	D-106	Y
40.1.1.99	Provides capability to designate certain notes as confidential and restrict access to notes to authorized users			Y	D-106	Y
40.1.1.100	Provides capability for automated work load balancing		Y		D-106	Y
40.1.1.101	Provides capability for convenient, instant access to current and historical information without requiring a separate sign-on beyond the initial Replacement MMIS sign-on			Y	D-106	Y
40.1.1.102	Provides capability to produce work management reports to include, without limitation, performance measures online by individual business unit and business process and compare them to actual performance			Y	D-106	Y
40.1.1.103	Provides capability to use user-defined templates that support various workflow processes		Y		D-106	Y
40.1.1.104	Provides capability for a graphical interface to support the development and maintenance of the business processes; provides capability to allow users to create a visual capability or flowchart that controls the sequencing of manual and automated tasks performed throughout the business cycle		Y		D-106	Y
40.1.1.105	Provides capability of integrating with a rules engine			Y	D-106	Y
40.1.1.106	Provides capability to allow State access to work queue to assist in evaluation and disposition of work queue items		Y		D-106	Y

Requirement #	Requirement Description	A	B	C	D	E
	Rules Engine					
40.1.1.107	Provides capability to register, classify, inquire, manage, and automate date-specific business rules in a graphical, user-friendly rules engine	N	N	N	D-113	Y
40.1.1.108	Provides capability to modify rules, allowing the application to be adaptable with the dynamic rules	N	N	N	D-113	Y
40.1.1.109	Provides capability for generating media events or application events as a result of the execution of a business rule			Y	D-113	Y
40.1.1.110	Provides capability to structure in a modular concept so the same rules engine can be used by different services or be called as a service itself	N	N	N	D-113	Y
40.1.1.111	Provides capability for a debugging process that automatically analyzes and identifies logical errors (i.e., conflict, redundancy, and incompleteness) across business rules	N	N	N	D-113	Y
40.1.1.112	Provides capability to allow for rules to be tested against production data prior to installation	N	N	N	D-113	**Y**
40.1.1.113	Provides capability for a built-in rule review and approval process that will identify any conflicts in business rules as they are being developed	N	N	N	D-113	Y
40.1.1.114	Provides capability to track and report rules usage	N	N	N	D-114	Y
40.1.1.115	Provides capability to produce and maintain documentation regarding all business rules	N	N	N	D-114	Y
40.1.1.116	Provides capability for integration with a workflow management process	N	N	N	D-114	Y
40.1.1.117	Provides capability to identify impact of business rule changes to claims adjudication	N	N	N	D-114	**Y**
40.1.1.118	Provides capability to reuse business rules across processes	N	N	N	D-114	Y
40.1.1.119	Provides capability to change business rules independent of process	Y			D-114	Y

Requirement #	Requirement Description	A	B	C	D	E
New Requirement 40.1.1.120	Provides capability to apply Procedure Code Pricing (PR) File Cleanup business rules against current Procedure Code Pricing (PR) File	N	N	N	D-114	Y
	Integrated Test Facility					
40.1.1.121	Provides capability for an Integrated Test Facility (ITF) with multiple test environments to allow for different phases of testing to be conducted concurrently during the DDI Phase and throughout the life of the Contract				D-116	Y
40.1.1.122	Provides capability for the ITF environment to operate independently from production, either physically or logically separated, so that performance within the production and ITF environments are not adversely affected by the other, regardless of activity level				D-116	Y
40.1.1.123	Provides capability to maintain the ITF environment as a mirror image of the production system environment to be used for testing all Replacement MMIS changes throughout the life of the Contract			Y	D-116	Y
40.1.1.124	Provides capability for the automated migration of new business areas and application fixes between the ITF environments and production environment	N	N	N	D-116	Y
40.1.1.125	Provides capability to perform assessments without affecting production and/or data	N	N	N	D-116	Y
40.1.1.126	Provides capability for State access to all test system files	N	N	N	D-116	Y
40.1.1.127	Provides capability for version control in the ITF	N	N	N	D-116	Y
40.1.1.128	Provides capability to synchronize the ITF with the production environment when updating the Replacement MMIS production system	N	N	N	D-116	Y
	Training					
40.1.1.129	Provides capability for computer-based-training (CBT) courses for all users (State staff, Fiscal Agent staff, county staff, local agency staff, and providers)			Y	D-118	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.130	Provides capability for online CBT courses for all Replacement MMIS application systems			Y	D-118	Y
40.1.1.131	Provides capability for proficiency testing, quality reviews, and retraining, as needed, for Fiscal Agent staff			Y	D-118	Y
40.1.1.132	Provides capability to deliver provider training through Web-based services and electronic media			Y	D-118	Y
40.1.1.133	Provides capability for a Web Portal to access training news, schedules, training registration and evaluation forms, CBT and Web-based training content, provider bulletins, and frequently asked questions (FAQs) by provider type and subject			Y	D-118	Y
40.1.1.134	Provides capability for the Web Portal to include document management, version control, and contextual queries related to Replacement MMIS rules and operations	Y			D-118	Y
40.1.1.135	Provides capability for Web-accessible downloads of training documentation that will be synchronized with provider policy and billing updates			Y	D-118	Y
40.1.1.136	Provides capability for a training evaluation tool to analyze and report to the State on training effectiveness			Y	D-118	Y
	Call Center Services					
40.1.1.137	Provides capability for Customer Service Call Center/Help Desk to include, without limitation, hardware, software, and toll-free telephone access to operate the Customer Service Call Center/Help Desk System			Y	D-121	**Y**
40.1.1.138	Provides capability for an automatic phone attendant that provides a hierarchical, menu-driven capability for directing calls to appropriate Replacement MMIS Program Fiscal Agent or State staff		Y		D-121	Y
40.1.1.139	Provides capability to receive, appropriately route, and manage all telephone inquiries from Federal, State, local, and county workforce members, recipients, and in-state and out-of-state providers regarding prior approval, technical support, provider services, etc.		Y	Y	D-121	**Y**

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.140	Provides capability to integrate voice and electronic transactions into a single workflow with integrated queues that allow work blending and load balancing		Y		D-121	Y
40.1.1.141	Provides capability to support requirements of Civil Rights Act for Persons of Limited English Proficiency (LEP) and Hearing Impaired	N	N	N	D-121	Y
40.1.1.142	Provides capability for call monitoring by supervisors and State monitors		Y		D-121	Y
40.1.1.143	Provides capability for automated call-tracking of all calls received to include, without limitation, online display, inquiry, and updating of call records that will also be available to State staff	N	N	N	D-122	Y
40.1.1.144	Provides capability to maintain free-form notes for each call record, coordinate these notes in the document management and correspondence tracking business area, and make the notes available for State and Fiscal Agent access	N	N	N	D-122	Y
40.1.1.145	Provides capability for the automated population of call views with relevant recipient and provider information; provides capability for the system to track information such as time and date of call, identifying information on caller (provider, recipient, and others), call type, call category, inquiry description, customer service clerk ID for each call, and response description	N	N	N	D-122	Y
40.1.1.146	Provides capability to automatically fax back (or e-mail back, when there is no protected health information involved) to callers with attachments containing requested information, such as claims histories, copies of pertinent policy or rules, and provider letters	N	N	N	D-122	Y
40.1.1.147	Provides capability to transfer calls, along with all related documentation that was collected			Y	D-122	Y
40.1.1.148	Provides capability for callers to interact with an automated attendant or speak to a customer service representative	N	N	N	D-122	Y
40.1.1.149	Provides capability for technical help desk to support inquiries on system processes and system troubleshooting from providers, value-added networks (VANs), State, and Fiscal		Y		D-122	Y

Requirement #	Requirement Description	A	B	C	D	E
	Agent users					
	System Availability					
40.1.1.150	Provides capability for the system to be consistently and persistently accessible to authorized users in compliance with the System Availability Policy in Appendix 40, Attachment I of this RFP	N	N	N	D-124	Y
40.1.1.151	Provides capability for the system to be available and substantially compliant with its complete specification for ninety-nine and six tenths (99.6) percent of the time on a monthly basis during production hours of operations, excluding planned system down-time	N	N	N	D-124	Y
40.1.1.152	Provides capability for transaction response time to be consistent for all users directly interacting with the production environment, based on a common Web Portal access for network access point, processed and returned to the network access point; provides capability for: ▪ Ninety (90) percent of transactions to occur in four (4) seconds or less ▪ Ninety-five (95) percent of transactions to occur in five (5) seconds or less ▪ Ninety-seven (97) percent of transactions to occur in six (6) seconds or less ▪ Ninety-nine (99) percent of transactions to occur in seven (7) seconds or less	N	N	N	D-124	Y
	Customer Service Request Tracking System					
40.1.1.153	Provides capability for online tracking and workflow management of requests for service	N	N	N	D-128	Y
40.1.1.154	Provides capability to track the system Change Management Life Cycle Phases, schedule, and work breakdown structure (WBS) for systems maintenance and modification requests	N	N	N	D-128	Y
40.1.1.155	Provides capability to track resources for all CSR work breakdown structure, including maintenance and modification requests during the DDI and Operations Phases	N	N	N	D-128	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.156	Provides capability for tracking CSR status by multiple data elements consistent with the Change Management Process	N	N	N	D-128	Y
40.1.1.157	Provides capability to generate reports for request management tracking, with flexibility for variable content, format, sort, and selection criteria to meet State and Fiscal Agent reporting needs	N	N	N	D-128	Y
40.1.1.158	Provides capability to maintain accessibility to all completed project requests for analytical purposes throughout the life of the Contract	N	N	N	D-128	Y
	Web Portal					
40.1.1.159	Provides capability for Web Portal access to the Replacement MMIS by the State staff, providers, government employees, and the general public	N	N	N	D-136	Y
40.1.1.160	Provides capability for a Web Portal that adheres to the State's User Interface and Navigation requirements and simplified sign-on			Y	D-136	Y
40.1.1.161	Provides capability for browser independence and to ensure the browser has broad usage (approximately 500,000 users nationally) and the version is consistent with State usage	N	N	N	D-137	Y
40.1.1.162	Provides capability to post announcements or alerts that are displayed at user sign-on	N	N	N	D-137	Y
40.1.1.163	Provides capability to maintain archives of posted announcements and non-provider specific alerts, including the date and message	N	N	N	D-137	Y
40.1.1.164	Provides capability to access, complete, and submit online surveys		Y		D-137	Y
40.1.1.165	Provides capability to link to CBT course presentations			Y	D-138	Y
40.1.1.166	Provides capability to create, organize by topic, and post FAQs and responses online			Y	D-138	Y
40.1.1.167	Provides capability to maintain version history of previous forms, user manuals, etc.			Y	D-138	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.1.168	Provides capability to create configurable Web pages of Replacement MMIS functions	N	N	N	D-138	Y
40.1.1.169	Provides capability to view and download standard Replacement MMIS reports in a readable format	N	N	N	D-139	Y
40.1.1.170	Provides capability to request and view parameter-driven standard formatted reports	N	N	N	D-139	Y
40.1.1.171	Provides capability to link to stakeholder Web sites			Y	D-139	Y
40.1.1.172	Provides capability to populate user/security profile-related data for Web Portal access prior to implementation	N	N	N	D-139	Y
	Data Integrity					
40.1.1.173	Provides capability for each record or file to be saved as created, not overwritten by updates or changes, to allow a historical review of individually dated versions	N	N	N	D-140	Y

40.1.2 General Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
	Fiscal Agent Data Center and Offices					
40.1.2.1	Fiscal Agent (DDI and Operations Phases) shall perform all Fiscal Agent functions at State-approved facilities and sites, including the Fiscal Agent's data center and any subcontractor locations unless otherwise contractually agreed on. These facilities and sites must comply with appropriate State and Federal privacy and physical safeguards.				D-571	Y
40.1.2.2	Fiscal Agent (Operations Phase) shall perform all operations, system maintenance, and modifications or other work under this Contract at prior-approved locations.				D-571	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.2.3	Fiscal Agent (DDI and Operations Phases) shall locate its local facility within fifteen (15) miles of the State office at NC DHHS headquarters or as directed by the State.				D-571	Y
40.1.2.4	Fiscal Agent (DDI and Operations Phases) shall locate key personnel, business units, and the mailroom at the local site.				D-571	Y
40.1.2.5	Fiscal Agent (DDI and Operations Phases) shall include secure, private office space for three (3) State employees. Fiscal Agent shall also provide assistance and access to any operations, information, or data set elements necessary to support State staff responsibilities. The private office space should include, without limitation: ▪ Lockable desks ▪ Ergonomically correct chairs ▪ IBM-compatible PCs, monitors, and printers with appropriate LAN/WAN connections, Internet access, and e-mail access, at a minimum meeting State standards ▪ Lockable file cabinets ▪ Telephones ▪ Office supplies.				D-571	Y
40.1.2.6	Fiscal Agent (DDI and Operations Phases) shall provide a common area with three (3) or more computers for Internet access for State employees.				D-572	Y
40.1.2.7	Fiscal Agent (DDI and Operations Phases) shall retain ownership of the equipment issued to the State and shall procure, manage, and bear the cost of repairs or replacement, if required, during the life of the Contract.				D-572	Y
40.1.2.8	Fiscal Agent (DDI and Operations Phases) shall upgrade and maintain the personal computers (PCs) and desktop software issued by the Fiscal Agent for State use commensurate with Fiscal Agent PC and software upgrades.				D-572	Y
40.1.2.9	Fiscal Agent (DDI and Operations Phases) shall provide access for the on-site State staff				D-572	Y

Requirement #	Requirement Description	A	B	C	D	E
	to use copier, scanner, and fax machines.					
40.1.2.10	Fiscal Agent (Operations Phase) shall provide equipment for traveling Fiscal Agent representatives that include laptops and cellular telephones that comply with Fiscal Agent's security plan.				D-572	Y
40.1.2.11	Fiscal Agent (DDI and Operations Phases) shall meet periodically as directed by the State to review programs, issues, and status with State operational area staff.				D-573	Y
	Regulatory Compliance					
40.1.2.12	Fiscal Agent (DDI and Operations Phases) shall ensure that the Replacement MMIS incorporates compliance with appropriate Federal and State regulations, statutes, and policies concerning the protection of personally identifiable information and/or financial information. Regulations, statutes, and policies include, without limitation: ▪ 45 CFR Parts 160, 164 (Health Insurance Portability and Accountability Act) ▪ 42 U.S.C. 1320(d) (Public Health, Approval of Special Projects) ▪ 42 CFR Parts 2, 51, 431 (Confidentiality of Mental Health and Substance Abuse information) ▪ 42 CFR Parts 430-502 (Applicable to Medicare/Medicaid) ▪ 42 U.S.C. § 1396d(a) [1905(a) of the Social Security Act. ▪ Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d et. seq. ▪ Title XIX, Section 1903 (42 U.S.C. 1396b) Social Security: Payment to States ▪ Title XIX, Section 1927 (42 U.S.C. 1396r-8) Social Security: Payment for covered outpatient drugs ▪ Federal MMIS certification standards ▪ Financial Accounting Standards Board Generally Accepted Accounting Principles (GAAP) ▪ Part 11 of the State Medicaid Manual	N	N	N	D-573	**Y**

Requirement #	Requirement Description	A	B	C	D	E
	▪ North Carolina State Plans for Medicaid, Mental Health, Developmental Disabilities, and Substance Abuse, and Public Health ▪ US DHHS Title VI Language Access Policy ▪ Recipient eligibility policies from the NC DHHS Eligibility Information System (EIS) and the Common Name Data Service (CNDS) ▪ NC State Law S 1048 (Identity Theft Protection Act) ▪ 10A NCAC Chapters 21 & 22, Medical Assistance ▪ 10A NCAC 26B (Confidentiality Rules For Mental Health, Developmental Disabilities, and Substance Abuse Services) ▪ 10A NCAC Chapter 45, DPH Payment Programs ▪ NC DHHS OSP. 2005. DHHS Application Security Policy. ▪ NC OSCIO. 2004. Application Security Policy with Guidelines, Statewide Information Technology Policy. ▪ N.C.G.S. §126: State Personnel System ▪ N.C.G.S. § 131D: Inspection and Licensing of Facilities ▪ N.C.G.S. §131E: Health Care Facilities and Services ▪ N.C.G.S. § 132: Public Records ▪ The Privacy Act of 1974 5 U.S.C. § 552a ▪ NCAC 10A Chapter 13 - NC Medical Care Commission ▪ NCAC 10 A Chapter 14 - Division of Facility Services ▪ NCAC 10A Chapter 26 - Mental Health, General ▪ NCAC 10A Chapter 27 - Mental Health, Community Facility and Services ▪ NCAC 10A Chapter 28 - Mental Health, State Operated Facilities ▪ Government Auditing Standards (http://www.gao.gov/govaud/yb2003.pdf) ▪ Information Systems Audit Standards (http://www.isaca.org/stand1.htm).					

Requirement #	Requirement Description	A	B	C	D	E
	▪ NC DHHS Privacy and Security policies ▪ Federal Section 508(http://www.section508.gov)					
	Data Transfer and Conversion					
40.1.2.13	Fiscal Agent (DDI and Operations Phases) shall lead the coordination with the State and the incumbent Fiscal Agent to perform all activities required for the successful transfer and conversion of legacy data for the DDI Phase and ongoing operations.			Y	D-575	Y
40.1.2.14	Fiscal Agent (DDI and Operations Phases) shall provide the converted data to other State users and/or vendors as required for its processing needs identified by the State.			Y	D-575	Y
40.1.2.15	Fiscal Agent (DDI and Operations Phases) shall provide hardware, software, and data support for the State during all phases of conversion and testing during the DDI Phase and throughout the life of the Contract.				D-575	Y
40.1.2.16	Fiscal Agent (DDI and Operations Phases) shall provide capability for storing all conversion-related artifacts in an easily retrievable format for access by the State for the later of life of the Contract or the commencement of processing by a subsequent contractor.	N	N	N	D-575	Y
40.1.2.17	Fiscal Agent (Operations Phase) shall convert all the claim TIFF images with claim numbers and all the associated claim electronic files and related index information from Legacy MMIS+ in an indexed and retrievable format.			Y	D-575	Y
40.1.2.18	Fiscal Agent (Operations Phase) shall transfer, or convert where appropriate, all existing Legacy MMIS+ reports and report-related data, including reports in Legacy MMIS+ and/or stored in Report2Web (R2W).			Y	D-575	Y
40.1.2.19	Fiscal Agent (Operations Phase) shall convert all legacy data from DMA, DMH, DPH, and the Migrant Health Program in the ORHCC.			Y	D-576	Y
40.1.2.20	Fiscal Agent (Operations Phase) shall convert all legacy data from DMA, DMH, DPH, and the Migrant Health Program in the ORHCC to maintain benefit plans and data	Y			D-576	Y

Requirement #	Requirement Description	A	B	C	D	E
	relationships in a multi-payer aspect.					
40.1.2.21	Fiscal Agent (DDI Phase) shall convert and configure all business rules data into a rules engine.	Y			D-576	Y
	Interfaces					
40.1.2.22	Fiscal Agent (DDI and Operations Phases) shall coordinate with the Reporting and Analytics (R&A) Vendor for the activities required for interfacing with R&A system.	Y			D-577	Y
40.1.2.23	Fiscal Agent (DDI and Operations Phases) shall develop and maintain a complete inventory of Replacement MMIS internal and external interfaces with all relevant information throughout the life of the Contract.				D-577	Y
40.1.2.24	Fiscal Agent (DDI and Operations Phases) shall provide the specifications for interfaces that will be created and maintained throughout the life of the Contract.				D-577	Y
40.1.2.25	Fiscal Agent (DDI and Operations Phases) shall maintain data sharing capability, either manual or electronic as required, between the Replacement MMIS and DHSR.				D-577	Y
	Security					Y
40.1.2.26	Fiscal Agent (DDI and Operations Phases) shall be required to test backup and recovery plans annually through simulated disasters and lower-level infrastructure failures and provide awareness training on recovery plans to Fiscal Agent and State staff.				D-577	Y
40.1.2.27	Fiscal Agent (DDI Phase) shall assess and document the security threats and vulnerabilities for the proposed Replacement MMIS and shall implement the recommended controls and countermeasures to eliminate or reduce the associated risks.				D-577	Y
40.1.2.28	Fiscal Agent (DDI) shall develop, implement, and test an approach that will protect individually identifiable health information (IIHI) and protected health information (PHI) exchange during DDI Phase testing and conversion of legacy files, including acceptance and return or disposal of the data or media containing the data.				D-578	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.2.29	Fiscal Agent (DDI Phase) shall develop, implement, and test a security incident response plan for responding to and reporting about service interruptions that do not lead to disaster recovery initiation, including a central means of collection and correlation of events for resolution and prevention of future problems.				D-578	Y
40.1.2.30	Fiscal Agent (DDI Phase) shall prepare for and comply with an internal security assessment/audit performed by NC DHHS representatives, based on documentation assembled during DDI Phase prior to the formal acceptance of Replacement MMIS.				D-578	Y
.	**Data Protection Assurance**					
40.1.2.31	Fiscal Agent (DDI and Operations Phases) shall use commercial best practices to safeguard and protect physical data and media, documents, files, tapes, disks, diskettes, and other materials received from the State or the agency from loss, destruction, or erasure during performance of any contractual obligation. Practices shall include encryption technologies where applicable.	N	N	N	D-578	Y
40.1.2.32	Fiscal Agent (DDI and Operations Phases) shall use commercial best practices to safeguard and protect all information transmitted internally (within the Fiscal Agent Offices and network) or externally (beyond the Fiscal Agent network perimeter), protecting from alteration, capture or destruction. Practices shall include encryption technologies where applicable.	N	N	N	D-579	Y
40.1.2.33	Fiscal Agent shall provide all encryption or identification codes or authorizations that are necessary or proper for the operation of the licensed Software.				D-579	Y
40.1.2.34	Fiscal Agent (DDI and Operations Phases) shall provide audit evidence that all of its employees and third party contractors or subcontractors are subject to a non-disclosure and confidentiality agreement enforceable in North Carolina.				D-579	Y
	Enterprise Security Approach					Y
40.1.2.35	Fiscal Agent (DDI and Operations Phases) shall establish a technical management organizational structure to manage and protect the system and data for all environments				D-580	Y

Requirement #	Requirement Description	A	B	C	D	E
	(e.g. development, test, load, UAT, production).					
40.1.2.36	Fiscal Agent (DDI and Operations Phases) shall demonstrate security awareness and provide training to Fiscal Agent and State staff in security policies and procedures.				D-580	Y
40.1.2.37	Fiscal Agent (Operations Phase) shall initiate, implement, test, and document on an annual basis a risk assessment policy and process to mitigate the overall enterprise security risk. This policy and plan shall include, without limitation, security process review, controls testing, mitigation procedures, personnel responsibility, and a process for State notification.				D-580	Y
40.1.2.38	Fiscal Agent (Operations Phase) shall develop the policy and plans for an annual Business Impact Analysis (BIA) and Business Criticality Analysis (BCA) that shall identify the impacts resulting from major disruptions and set or modify the appropriate Recovery Time Objectives (RTO) and Recovery Point Objectives (RPO). The RTOs and RPOs shall be established in consultation with and approved by the State.				D-580	Y
40.1.2.39	Fiscal Agent (DDI and Operations Phases) shall document policies to implement operational practices preventing any person(s) from establishing unauthorized control over the privacy, security, and processing of critical information. Operational procedures must conform to the NC DHHS Privacy and Security policies and procedures.				D-581	Y
40.1.2.40	Fiscal Agent (DDI and Operations Phases) shall maintain preventive, detective, and corrective audit and control features of the Replacement MMIS for the duration of the Contract in conformance with NC DHHS Privacy and Security Policy.				D-581	Y
40.1.2.41	Fiscal Agent (Operations Phase) shall assist the State in the annual Replacement MMIS security audit in accordance with Government Auditing Standards and Information Systems Audit Standards.				D-581	Y
40.1.2.42	Fiscal Agent (Operations Phase) shall be required to test backup and recovery plans annually through simulated disasters and lower-level failures and provide awareness training on recovery plans to Fiscal Agent and State staff. These tests must include, without limitation, joint participation by the Fiscal Agent and State staff.				D-582	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.2.43	Fiscal Agent (DDI and Operations Phases) shall include, without limitation, audit evidence in system testing results (e.g., from system change management, upgrades, backups, etc.) cross-referenced to the expected test.	N	N	N	D-582	Y
	Facility Access					Y
40.1.2.44	Fiscal Agent (DDI and Operations Phases) shall implement controls to restrict access to data processing facilities and secured electronic or physical storage areas only to authorized individuals.				D-582	Y
40.1.2.45	Fiscal Agent (DDI and Operations Phases) shall provide accountability control to record facility access.				D-582	Y
40.1.2.46	Fiscal Agent (DDI and Operations Phases) shall record and supervise visitor and unauthorized user access to the Fiscal Agent's local site as well as any other sites used by the Fiscal Agent for Replacement MMIS processing or related activities and shall control access by unauthorized persons in conformance with NC DHHS Security Policy.				D-582	Y
40.1.2.47	Fiscal Agent (DDI and Operations Phases) shall safeguard processor site(s) through provision of uninterruptible power supply, power conditioning, internal environmental controls, fire retardant capabilities, and smoke and electrical detectors and alarms monitored by security personnel.				D-582	Y
40.1.2.48	Fiscal Agent (DDI and Operations Phases) shall restrict access to the facility server area during regular operations and in disaster and emergency situations in accordance with NC DHHS Security Policy.				D-583	Y
New Requirement 40.1.2.49	Fiscal Agent (DDI and Operations Phases) shall document policies to implement operational practices preventing unauthorized access to data or systems and prevent fraudulent activities that may result from the use of this information. Operational procedures must conform to the NC DHHS Privacy and Security policies and procedures.				D-583	Y
	User Access Authentication and Authorization					

Requirement #	Requirement Description	A	B	C	D	E
40.1.2.50	Fiscal Agent (Operations Phase) shall provide all authorized users (employees, contractors, providers, citizens, other government workers) of the Replacement MMIS with access to appropriate business areas, databases, files, reports, archives, etc. through a common, consistent interface that restricts access based on authentication and authorization to appropriate data derived from role-based security.				D-583	Y
40.1.2.51	Fiscal Agent (Operations Phase) shall implement a managed workflow process for user account provisioning to eliminate the use of paper documents, ensure timely response to requests, and retain profiles for each user containing identification, authorization, organizational demographics, group memberships, and functional permissions derived from role-based security.				D-583	Y
	Application Systems Change Control					
40.1.2.52	Fiscal Agent (DDI and Operations Phases) shall perform security impact reviews of the change management process and share and collaborate on such reviews with State staff during the DDI Phase and throughout the life of the Contract.				D-584	Y
.	**System Software Controls**					
40.1.2.53	Fiscal Agent (DDI and Operations Phases) shall control and monitor global access to systems and files such that no single individual will be able to affect system operations in isolation.		Y		D-584	**Y**
40.1.2.54	Fiscal Agent (Operations Phase) shall monitor application platforms with industry standard technology and tools (hardware and software) and respond according to agreed-upon Service Level Agreements to developing problems.				D-585	Y
40.1.2.55	Fiscal Agent (DDI and Operations Phases) shall implement a comprehensive security monitoring solution to include, without limitation, industry standard technology and tools, including monitoring of wireless communication to monitor all aspects of the proposed solution (e.g., perimeter and internal network, server farms, operating systems, application software, and application data). Wireless communication at the Fiscal Agent site shall conform to the established NC DHHS Security Policy.		Y		D-585	**Y**

Requirement #	Requirement Description	A	B	C	D	E
40.1.2.56	Fiscal Agent (Operations Phase) shall retain copies of all server operating system and configuration software, system utilities and tools, network device configuration settings, and software license agreements in a location remote from the production server location, updating the copies as the operating environment changes.				D-585	Y
	Logging and Reporting					
40.1.2.57	Fiscal Agent (DDI and Operations Phases) shall identify and document all network activity events involved with the non-application operations of the Replacement MMIS.				D-585	Y
40.1.2.58	Fiscal Agent (Operations Phase) shall produce an alert notification for the Operations Incident Management function for follow up and review to every event that precipitates a security incident.				D-585	Y
	Service Continuity Controls					
40.1.2.59	Fiscal Agent (Operations Phase) shall initiate and document an Operations Incident Management function and group to act as a single, central point of notification, review, and assessment of all incidents that affect the continuous operations of the production environment and access to the data and information.				D-586	Y
40.1.2.60	Fiscal Agent (Operations Phase) shall respond to each network activity and personally observed incident with a mitigation plan that follows standard data collecting, evidence preservation practices, and organizational escalation procedures in accordance with guidelines established by the NC DHHS Privacy and Security Office				D-586	Y
.	**Data Backup and Recovery**					
40.1.2.61	Fiscal Agent (Operations Phase) shall store backup system data and files separately from the production server storage at a remote location sufficiently distant from the production servers to prevent a simultaneous disastrous loss of both environments.				D-586	Y
40.1.2.62	The Fiscal Agent (Operations Phase) shall ensure that individual files, collections of files,				D-586	Y

Requirement #	Requirement Description	A	B	C	D	E
	data base instances and other production information can be recovered from the back-up storage to production servers upon inadvertent deletion or corruption of the production information.					
.	**Records Retention**					
40.1.2.63	Fiscal Agent (Operations Phase) shall archive information, including, without limitation, data files, images, transactions, master files, system and source program libraries, and other appropriate records and electronically store the information physically or logically separate from production information in compliance with State Record Retention Policy.				D-587	Y
	User Interface and Navigation					
40.1.2.64	Fiscal Agent (DDI and Operations Phases) shall employ industry standards and best practices for user interface design and navigation consistently throughout the Replacement MMIS throughout the life of the Contract.	N	N	N	D-587	Y
40.1.2.65	Fiscal Agent (DDI and Operations Phases) shall standardize all views, windows, and reports, including: ▪ Format and content of all views ▪ All headings and footers ▪ Current date and time. Zip codes shall display nine digits. All references to dates shall be displayed consistently throughout the system (MM/DD/YYYY). All data labels and definitions used shall be consistent throughout the system and clearly defined in user manuals and data element dictionaries. All Replacement MMIS-generated messages shall be clear, user-friendly, and sufficiently descriptive to provide enough information for problem correction. All Replacement MMIS views shall display the generating program identification name and/or number. The display shall be consistent from view to view.	N	N	N	D-589	Y

Requirement #	Requirement Description	A	B	C	D	E
	Workflow Management					
40.1.2.66	Fiscal Agent (Operations Phase) shall perform manual workload balancing.		Y		D-589	Y
40.1.2.67	Fiscal Agent (Operations Phase) shall perform work item reassignments.		Y		D-590	Y
.	**Rules Engine**					
40.1.2.68	Fiscal Agent (Operations Phase) shall configure and maintain all business rules in the rules engine throughout the life of the Contract.	Y			D-590	Y
40.1.2.69	Fiscal Agent (Operations Phase) shall maintain up-to-date business rule documentation.	N	N	N	D-590	Y
40.1.2.70	Fiscal Agent (Operations Phase) shall perform business rule changes on a release basis.	N	N	N	D-590	Y
	Integrated Test Facility					
40.1.2.71	Fiscal Agent (DDI and Operations Phases) Fiscal Agent shall provide the State with access to the ITF as required for testing on site, from State office, and/or remotely throughout the life of the Contract.				D-591	Y
40.1.2.72	Fiscal Agent (DDI Phase) shall support a minimum of twenty-five (25) simultaneous State testers, either at the local Fiscal Agent site and/or remotely.				D-591	Y
40.1.2.73	Fiscal Agent (DDI and Operations Phases) shall coordinate with State agencies for online and batch testing and execute online and batch testing as required to support State applications throughout the life of the Contract.				D-591	Y
40.1.2.74	Fiscal Agent (DDI and Operations Phases) shall execute online testing and batch test cycles and related activities to support State testing.				D-591	Y
40.1.2.75	Fiscal Agent (DDI and Operations Phases) shall support all ITF functions, files, and data elements necessary to meet the RFP requirements.				D-591	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.2.76	Fiscal Agent (DDI and Operations Phases) shall coordinate with the State and DHSR IT system vendor to perform appropriate system tests during implementation of the DHSR IT system.				D-591	Y
	Training					
40.1.2.77	Fiscal Agent (DDI and Operations Phases) shall develop training to incorporate policy, procedures, regulatory guidelines, business rules, and claim processes to ensure a comprehensive approach to meeting the training requirements of the State.				D-592	Y
40.1.2.78	Fiscal Agent (DDI and Operations Phases) shall develop State-approved training materials for all users and make them available online.				D-592	Y
40.1.2.79	Fiscal Agent (Operations Phase) shall submit the Training Plan to the State no less than ninety (90) days prior to the beginning of each Contract year.				D-592	Y
40.1.2.80	Fiscal Agent (DDI and Operations Phases) shall conduct instructor-led classroom training for all users prior to Replacement MMIS implementation and throughout the life of the Contract.				D-592	Y
40.1.2.81	Fiscal Agent (DDI and Operations Phases) shall provide and maintain a training classroom(s) and equipment within the Fiscal Agent's Raleigh, NC, facility, providing at least one (1) pre-scheduled classroom session per month for all users. Sessions shall accommodate up to fifty (50) attendees.				D-593	Y
40.1.2.82	Fiscal Agent (DDI and Operations Phases) shall monitor, track, and evaluate effectiveness of training using training industry standard methodologies.				D-593	Y
40.1.2.83	Fiscal Agent (DDI and Operations Phases) shall provide blended, consistent training for State, local agency, and Fiscal Agent staff for all Replacement MMIS application systems.				D-593	Y
40.1.2.84	Fiscal Agent (Operations Phase) shall report to the State monthly on Fiscal Agent staff training and proficiencies.				D-594	Y

Requirement #	Requirement Description	A	B	C	D	E
40.1.2.85	Fiscal Agent (DDI and Operations Phases) shall develop instructor-led classroom and CBT courses for provider education and training for all provider types.				D-594	Y
40.1.2.86	Fiscal Agent (Operations Phase) shall conduct seventy (70) instructor-based training workshops annually on State-approved content in geographical areas across the State after Replacement MMIS implementation.				D-594	Y
40.1.2.87	Fiscal Agent (Operations Phase) shall participate in semi-annual Finance and Reimbursement Officers (FARO) conferences as requested by the State.				D-594	Y
40.1.2.88	Fiscal Agent (Operations Phase) shall plan, organize, and conduct the annual Medicaid Fair.				D-594	Y
40.1.2.89	Fiscal Agent (Operations Phase) shall conduct on-site training sessions based on claims processing performance criteria or requests from providers, billing groups, or State/county staff.				D-595	Y
	Call Center Services					
40.1.2.90	Fiscal Agent (Operations Phase) shall provide sufficient staff for all call centers and help desks so that ninety (90) percent of all phone calls are not on hold for more than sixty (60) seconds before a staff person, not an automated answering device, answers.				D-595	Y
40.1.2.91	Fiscal Agent (Operations Phase) shall provide sufficient staff and phone lines for all call centers and help desks so that less than one (1) percent of all phone calls are abandoned, dropped, or receive a busy signal.				D-595	Y
40.1.2.92	Fiscal Agent (Operations Phase) shall provide technical Help Desk support during all hours of system availability.				D-596	Y
	LAN/WAN Management Operational Requirement					
40.1.2.93	Fiscal Agent (Operations Phase) shall provide technical expertise for the management, performance, and configuration of the Replacement MMIS network, LAN/WAN				D-596	Y

Requirement #	Requirement Description	A	B	C	D	E
	management, and support.					
	Audit					
40.1.2.94	Fiscal Agent (Operations Phase) shall provide assistance to the State, or any reviewing entity identified by the State, with resources, data, and reports in the audit of Fiscal Agent performance, compliance, and system reviews.				D-596	Y
40.1.2.95	Fiscal Agent (Operations Phase) shall contract with an independent qualified audit firm to perform a Statement on Auditing Standards (SAS) 70 audit of the Replacement MMIS and produce a SAS 70 Type 2 Report. The audit and report shall include the operations of the Fiscal Agent's local site as well as any other sites used by the Fiscal Agent for Replacement MMIS processing or related activities. Specific requirements of the SAS 70 Type 2 Report are identified in Appendix 40, Attachment D of this RFP.				D-596	Y
	System/Software Maintenance					
40.1.2.96	Fiscal Agent (Operations Phase) shall be required to perform system maintenance to the Replacement MMIS based on State-approved CSRs.				D-597	Y
40.1.2.97	Fiscal Agent (Operations Phase) shall develop specifications, impact statements, cost analysis, and consideration as to the long-term value of performing the maintenance requirements for the State's evaluation.				D-597	Y
40.1.2.98	Fiscal Agent (Operations Phase) shall perform timely updates to system and user documentation, desk procedures, provider manuals, and training materials prior to the release of changes into production.				D-597	Y
40.1.2.99	Fiscal Agent (Operations Phase) shall perform maintenance to include, without limitation: ▪ activities necessary for the system to meet the requirements described in the RFP; ▪ activities related to file growth and partitioning; ▪ support of updates to all files and databases;				D-597	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ software and hardware updates, as directed by the State; ▪ RDBMS routine activities; ▪ LAN/WAN administration and maintenance to ensure performance standards are met; ▪ activities necessary to ensure that all data, files, programs, utilities, and system and user documentation are current and that errors found are corrected; ▪ file maintenance, including manual table entry and programming, to support file maintenance changes, performance tuning, capacity planning, backup and recovery tasks, and archival tasks; ▪ all ongoing tasks, such as CPT, Healthcare Common Procedure Coding System (HCPCS), and Diagnosis-Related Group (DRG) International Classification of Diseases (ICD)-9/ICD-10 updates, to ensure system tuning, performance, response time, capacity planning, database stability, and processing conforming to the minimum requirements of this Contract; ▪ changes to tables for edit criteria; ▪ activities in support of updates to all files and databases, including the rules engine; ▪ add new values or changes to existing values found within internal program tables; ▪ enact rate changes, individual or mass adjustments, purging of files, research, system recycling, minor modifications, and repetitive requests that are done on a set frequency that have not been incorporated into the system by the Fiscal Agent, e.g., Healthcare Coordinator monthly payments, 1099s, monthly, quarterly, year-end, and fiscal year-end reporting; ▪ process improvements; ▪ State-approved recoupments and adjustments not related to errors and omissions that are the responsibility of the Fiscal Agent requiring programming support Operations Incident Reporting; and ▪ Rules engine configuration and maintenance.					

Requirement #	Requirement Description	A	B	C	D	E
	System Modifications					
40.1.2.100	Fiscal Agent (DDI and Operations Phases) shall perform system modifications when the State or the Fiscal Agent determines that an additional requirement must be met or that a modification to an existing file structure or current processing (outside of those discussed above as maintenance activities) is needed. Fiscal Agent billing for modification shall be in compliance with Section 30 of this RFP.				D-598	Y
40.1.2.101	Fiscal Agent (DDI and Operations Phases) shall develop specifications, impact statements, cost analysis, and consideration as to long-term value of performing the modification requirements for the State's evaluation.				D-599	Y
40.1.2.102	Fiscal Agent (Operations Phase) shall perform timely updates to system and user documentation, desk procedures, provider manuals, and training materials prior to the release of the modification into production.				D-599	Y
40.1.2.103	Fiscal Agent (Operations Phase) shall allocate system modification tasks against productive hours.				D-599	Y
40.1.2.104	Fiscal Agent (DDI and Operations Phases) shall manage system modification activities using the change management process.				D-599	Y
40.1.2.105	Fiscal Agent shall submit to the State for review and approval all modifications and other work estimate prior to beginning the work.				D-599	Y
40.1.2.106	Fiscal Agent (Operations Phase) shall assess only productive work hours against the modification hour pools, and the hours shall directly contribute to the modification of the Replacement MMIS.				D-599	Y
40.1.2.107	Fiscal Agent (Operations Phase) shall not allocate supervisory or other project work accomplished by key personnel towards the productive hours. The hours devoted to supervision or management by non-key personnel may be counted as productive hours, but they can make up no more than fifteen (15) percent of the total hours reported.				D-599	Y

Requirement #	Requirement Description	A	B	C	D	E
	Data Integrity					
40.1.2.108	Fiscal Agent (DDI and Operations Phases) shall maintain a copy of all documentation related to all versions of changed records and files that were saved and a mechanism to retrieve in their historical format	N	N	N	D-600	Y

40.1.3 Personnel Staffing

Requirement #	Requirement Description	A	B	C	D	E
40.1.3.1	The Fiscal Agent shall maintain documentation regarding current license and certification status for all who are required to be licensed or certified throughout the life of the Contract. The Fiscal Agent shall provide such documentation to the State, when requested. Refer to Appendix 50, Attachment I.				D-600	Y

40.2 Recipient Requirements

40.2.1 Recipient System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.1	Provides capability for access to recipient data using any combination of name or partial name, date of birth (DOB), gender, Medicare Health Insurance Claim Number (HICN), and/or county	N	N	N	D-157	Y
40.2.1.2	Provides capability for access to recipient data using any recipient ID number or SSN without other qualifiers	N	N	N	D-157	Y
40.2.1.3	Provides capability for name and partial-name search through use of a proven	N	N	N	D-157	Y

Requirement #	Requirement Description	A	B	C	D	E
	phonetic/mnemonic algorithm, such as Soundex or a State-approved alternative					
40.2.1.4	Provides capability to maintain an online audit trail of all updates to recipient data and provides online access to audit trail for all State-authorized individuals	N	N	N	D-157	Y
40.2.1.5	Provides capability to support classification of recipients into multiple concurrent eligibility groups by health benefit program and benefit plan based on State entities' concurrency rules	N	N	N	D-157	Y
40.2.1.6	Provides capability to accept and process online and batch update transactions of recipient data for all recipients from the State eligibility systems, EIS, CNDS, local managing entities (LMEs), and other State-authorized users			Y	D-157	Y
40.2.1.7	Provides capability to perform editing of eligibility transactions and report on transactions that updated successfully, transactions that updated successfully but received soft edits, and transactions that did not update due to receiving hard edits		Y		D-158	Y
40.2.1.8	Provides capability to identify and report on exact duplicate and potential duplicate recipient records within and across lines of business		Y		D-158	Y
40.2.1.9	Provides capability for maintenance of current and historical recipient identification numbers	N	N	N	D-158	Y
40.2.1.10	Provides capability to de-link recipient data when it is discovered that a recipient's eligibility has been collapsed erroneously into another recipient or re-link recipient's eligibility that has been erroneously split out from the recipient; this includes eligibility data, TPL, buy-in data, prior approvals, service limits, consents, and any other data identified by the State		Y		D-158	Y
40.2.1.11	Provides capability to use Enrollment Database (EDB) information to detect Medicare and Medicare HMO entitlement for use in claims processing	N	N	N	D-158	Y
40.2.1.12	Provides capability to maintain five (5) years of historical recipient information online and five (5) years near-line, including history of changes to name, DOB, SSN, and recipient address	N	N	N	D-158	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.13	Provides capability for notes tracking by recipient to accommodate tracking of calls regarding claims, complaints, customer service, and TPL, and provides easy access to the call information by authorized users	N	N	N	D-159	Y
40.2.1.14	Provides capability for updating recipient letter templates with free-form text to support cases specific to a recipient data issue or specific applicant/recipient		Y		D-159	Y
40.2.1.15	Provides capability to reconcile CNDS data with Replacement MMIS data each State business day in order to verify that all records and segments received through the CNDS interface are processed or are listed on error reports	N	N	N	D-159	Y
40.2.1.16	Provides capability to reconcile State-entity DMA eligibility data with the Replacement MMIS each State business day in order to verify that all records and segments received through the EIS interface are processed or are listed on error reports	N	N	N	D-159	Y
40.2.1.17**	Provides capability to reconcile DMH Accredited Standard Committee (ASC) X12N 834 transactions eligibility data with the Replacement MMIS each State business day in order to verify that all records and segments received via the 834 transaction are processed or are listed on error reports	N	N	N	D-159	Y
40.2.1.18	Provides capability for State staff to enter online recipient-specific overrides to the timely billing edit for claims processing			Y	D-159	Y
40.2.1.19	Provides capability to receive and process State entities' Eligibility History data from DIRM or ITS prior to operational startup	N	N	N	D-159	Y
40.2.1.20	Provides capability for Recipient/Client Eligibility Cross-Reference data for State entities, including all CNDS updates by participating organizations as appropriate to the State entity		Y		D-159	Y
40.2.1.21	Provides capability to allow access to the entire recipient record via a common CNDS ID for recipients with multiple cross-referenced IDs, regardless of the number of cross-references, including claims data, eligibility data, TPL data, buy-in data, prior approvals, service limits, and consents	N	N	N	D-160	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.22	Provides capability to retain the CNDS ID used for Federal reporting when recipient IDs are combined	N	N	N	D-160	Y
40.2.1.23	Provides capability for online updates to the CNDS for maintenance of cross-reference and demographic information	N	N	N	D-160	Y
40.2.1.24	Provides capability for online updates for performing client “combine” functions when multiple CNDS IDs are identified for a single client, according to CNDS rules	N	N	N	D-160	Y
40.2.1.25	Provides capability to produce a report of CNDS cross-reference ID updates within and across lines of business		Y		D-160	Y
40.2.1.26	Provides capability for online updates of fields not updated through the State’s eligibility update	N	N	N	D-160	Y
40.2.1.27	Provides capability to receive and process deductible information from the recipient eligibility record and make it available for claims processing	N	N	N	D-160	Y
40.2.1.28	Provides capability to process updates to recipients of North Carolina Health Choice for Children (NCHC) as any other recipient eligibility update (NCHC is equivalent to State Children's Health Insurance Program.)	N	N	N	D-160	Y
40.2.1.29	Provides capability to accept recipient eligibility segments from EIS and CNDS with no limitations on the number of eligibility segments maintained within the Replacement MMIS	N	N	N	D-161	Y
40.2.1.30	Provides capability to process and reconcile the full file of EIS and the Replacement MMIS recipient eligibility records		Y		D-161	Y
40.2.1.31	Provides capability for transmission and receipt of buy-in data to and from CMS via DIRM interface in accordance with CMS Redesign practices	N	N	N	D-161	Y
40.2.1.32	Provides capability to produce buy-in update transactions for Warrant Calculation and Previously Unknown County Warrant Calculation for Medicare Parts A and B	N	N	N	D-161	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.33	Provides capability to edit all buy-in transactions for completeness of required fields, reasonability of dates, accuracy of converted Railroad Retirement numbers, presence on the Replacement MMIS eligibility file, and unwanted duplication	N	N	N	D-161	Y
40.2.1.34	Provides capability for online inquiry into buy-in current status and full buy-in history for all affected individuals on the Replacement MMIS eligibility file(s)	N	N	N	D-161	Y
40.2.1.35	Provides capability to automatically create a buy-in deletion transaction in the month in which death of the recipient or termination of the Medicaid case is recorded on the Replacement MMIS file Date of death and termination of the Medicaid case are included in the eligibility record received from EIS.	N	N	N	D-161	Y
40.2.1.36	Provides capability to process buy-in updates from CMS via DIRM interface in accordance with CMS Redesign practices	N	N	N	D-161	Y
40.2.1.37	Provides capability to produce reports after each buy-in update to identify all transactions received, all transactions that processed successfully, and all transactions that had errors, invalid data, and/or could not be matched to a recipient in accordance with CMS Redesign practices	N	N	N	D-161	Y
40.2.1.38	Provides capability to void eligibility segments	N	N	N	D-162	Y
40.2.1.39**	Provides capability for State staff to enter an online request for a recipient ID card	N	N	N	D-162	Y
40.2.1.40	Provides capability for system notification from MMIS Recipient business area to MMIS Managed Care business area whenever retroactive managed care enrollment/disenrollment occurs		Y		D-162	Y
40.2.1.41	Provides capability to notify TPL electronically whenever retroactive Medicare enrollment occurs	N	N	N	D-162	Y
40.2.1.42	Provides capability to notify claims electronically whenever retroactive Medicaid eligibility occurs for a recipient eligible in another health benefit program	N	N	N	D-162	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.43	Provides capability to create claim financial transactions for each CMS buy-in update record		Y		D-162	Y
40.2.1.44	Provides capability to allow adjustments to buy-in claim financial transactions	N	N	N	D-162	Y
40.2.1.45	Provides capability to run the final buy-in cycle for receipt by CMS no later than the 25th of each month Date of final monthly cycle runs shall be directed by the State.	N	N	N	D-162	Y
40.2.1.46	Provides capability upon completion of the final cycle run to immediately produce buy-in final cycle reports on paper, if requested, and deliver to the State within two (2) business days	N	N	N	D-163	Y
40.2.1.47	Provides capability to accept and process updates to the EDB from CMS via DIRM interface	N	N	N	D-163	Y
40.2.1.48	Provides capability to accept and process updates to the Beneficiary Data Exchange (BENDEX) from the Social Security Administration via a DIRM interface	N	N	N	D-163	Y
40.2.1.49	Provides capability to edit online recipient update transactions for completeness, consistency, and valid values	N	N	N	D-163	Y
40.2.1.50	Provides capability to identify the correct eligibility group and associated premium using information on the recipient's eligibility record		Y		D-163	Y
40.2.1.51	Provides capability to produce and send correspondence related to recipient premiums—including invoices, notices of non-payment, cancellation notices, receipts, and refunds—in the recipient's preferred language		Y		D-163	Y
40.2.1.52	Provides capability to collect recipient premium payments		Y		D-163	Y
40.2.1.53	Provides capability to produce refunds of recipient premiums	N	N	N	D-163	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.54	Provides capability to process financial accounting records for premium payments and refunds	N	N	N	D-164	Y
40.2.1.55	Provides capability to produce reports for recipient premium payment and cost-sharing processes	N	N	N	D-164	Y
40.2.1.56	Provides capability to apply cost-sharing	N	N	N	D-164	Y
40.2.1.57	Provides capability to ensure cost-sharing does not exceed threshold for the family group		Y		D-164	Y
40.2.1.58	Provides capability to associate multiple cases in a family together to ensure cost-sharing does not exceed threshold			Y	D-164	Y
40.2.1.59	Provides capability to send recipient notices and Explanations of Benefits (EOB) in recipient's preferred language		Y		D-164	Y
40.2.1.60	Provides capability to produce a Certificate of Creditable Coverage (COCC) for each recipient deleted/terminated from specified Medicaid coverage		Y		D-164	Y
40.2.1.61	Provides capability to produce a COCC for a specific period if requested by the recipient/client or by the State	N	N	N	D-164	Y
40.2.1.62	Provides capability for an online request function to allow the State to request a COCC for a specific recipient for a specific period	N	N	N	D-164	Y
40.2.1.63	Provides capability to produce a Monthly Summary Report indicating all COCCs mailed to recipients per month that includes: ▪ Total number of COCCs mailed ▪ Total number of COCCs mailed within five (5) days of date of termination/request ▪ Total number of COCCs mailed later than five (5) days from the date of termination/request		Y		D-164	Y
40.2.1.64	Provides capability to use transfer of assets data on the Medicaid recipient record in		Y		D-165	Y

Requirement #	Requirement Description	A	B	C	D	E
	claims processing					
40.2.1.65	Provides capability to create a report of recipients with paid claims for targeted services for whom a transfer of assets indicator is not on file		Y		D-165	Y
40.2.1.66	Provides capability to provide DIRM an electronic copy of the report of recipients with paid claims for targeted services for whom a transfer of assets indicator is not on file for publication for county Department of Social Services (DSS) agencies		Y		D-165	Y
40.2.1.67	Provides capability to create a report of individuals with a transfer of assets sanction		Y		D-165	Y
40.2.1.68	Provides capability to provide DIRM an electronic copy of the report of individuals with a transfer of assets sanction for publication for county DSS agencies		Y		D-165	Y
40.2.1.69	Provides capability to create the Medicare Modernization Act (MMA) Enrollment File based on selection criteria provided by the State in the format specified by CMS		Y		D-165	Y
40.2.1.70	Provides capability to include data in the MMA Enrollment File necessary to count the number of enrollees for the phased-down State contribution payment	N	N	N	D-166	Y
40.2.1.71	Provides capability to include records in the MMA Enrollment File for those individuals for whom the State has made an enrollment determination for the Part D low income subsidy	N	N	N	D-166	Y
40.2.1.72	Provides capability to transmit the MMA Enrollment File to DIRM for transmission to CMS	N	N	N	D-166	Y
40.2.1.73	Provides capability to process the MMA Enrollment Response File from CMS transmitted via DIRM interface	N	N	N	D-166	Y
40.2.1.74	Provides capability to produce a report of all records transmitted on the MMA Enrollment File	N	N	N	D-166	Y
40.2.1.75	Provides capability to produce a report of all records received on the MMA Response File, identifying any errors, records unable to be matched to a recipient on the Replacement MMIS, and records unable to be processed	N	N	N	D-166	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.76	Provides capability for online access to MMA Response File records that were in error or unable to be matched with a recipient on the Replacement MMIS	N	N	N	D-166	Y
40.2.1.77	Provides capability for online access to a summary of the recipient's MMA Enrollment and Response File records	N	N	N	D-166	Y
40.2.1.78	Provides capability for online access to the MMA record selected from the summary	N	N	N	D-166	Y
40.2.1.79	Provides capability for online access to Medicare coverage data from EIS for Parts A, B, C, and D for Medicaid recipients		Y		D-166	Y
40.2.1.80	Provides capability to accept and process Medicaid/Medicare coverage data from EIS and make it available for claims processing	N	N	N	D-166	Y
40.2.1.81**	Provides capability for online access to add, update, and inquire into Medicare data for DMH and DPH recipients	N	N	N	D-167	Y
40.2.1.82	Provides capability to produce eligibility extracts for contractors with whom DMA does business		Y		D-167	Y
40.2.1.83	Provides capability to use CNDS governance rules to determine which demographic data has priority when a recipient is enrolled concurrently in multiple lines of business and benefit plans		Y		D-167	Y
40.2.1.84	Provides capability for multiple types of recipient addresses per line of business (LOB)		Y		D-167	Y
40.2.1.85	Provides capability for a Client Services Data Warehouse (CSDW) extract of recipient data		Y		D-167	Y
40.2.1.86	Provides capability to produce letters/notices to applicants/recipients		Y		D-167	Y
40.2.1.87	Provides capability to send, receive, and update Provider data between DHSR and the Replacement MMIS for placement of eligible recipient		Y		D-167	Y

Requirement #	Requirement Description	A	B	C	D	E
	DPH Online Enrollment					
40.2.1.88**	Provides capability to accept Web-submitted and hard copy financial eligibility applications (DHHS 3014) for program participation		Y		D-168	Y
40.2.1.89**	Provides capability for enrollment instructions and guidelines for supporting functions by selected enrollment options		Y		D-168	Y
40.2.1.90**	Provides capability to accept Web-submitted and hard copy supporting documentation for financial eligibility applications		Y		D-168	Y
40.2.1.91**	Provides capability to upload attachments electronically and associate attachments with submitted financial eligibility applications		Y		D-168	Y
40.2.1.92**	Provides capability to receive paper and facsimile documentation, scan it so it can be viewed online, and associate documentation with the submitted financial eligibility application		Y		D-168	Y
40.2.1.93**	Provides capability to identify and assign the applicant's CNDS ID and associate/link it to the financial eligibility application in accordance with CNDS Governance Rules		Y		D-168	Y
40.2.1.94**	Provides capability for State DPH staff to enter the status of the application as either complete or incomplete		Y		D-168	Y
40.2.1.95**	Provides capability to place all applications in an online work queue for State DPH eligibility staff to review		Y		D-168	Y
40.2.1.96**	Provides capability for State DPH staff to accept, reject, and/or modify income and deductions provided on the application and provides capability to indicate the reason income and/or deductions are rejected or modified		Y		D-169	Y
40.2.1.97**	Provides capability for State DPH staff to indicate if an application is complete and ready for disposition		Y		D-169	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.98**	Provides capability to calculate recipient income based on information provided on an application and compare it to program thresholds to determine financial eligibility		Y		D-169	Y
40.2.1.99**	Provides capability to electronically store and maintain DPH eligibility data in the Recipient business area		Y		D-169	Y
40.2.1.100**	Provides capability to electronically store and maintain multiple addresses for one recipient, including correspondence mailing, pharmacy mailing, residence, and alternate and to maintain history of addresses		Y		D-169	Y
40.2.1.101**	Provides capability to electronically store and maintain the name, mailing address, and agency of the application interviewer		Y		D-169	Y
40.2.1.102**	Provides capability to electronically store and maintain the name, mailing address, and relationship of an individual other than the applicant/recipient to receive copies of notices and letters if requested		Y		D-169	Y
40.2.1.103**	Provides capability to produce system-generated letters/notices of approvals or denials		Y		D-169	Y
40.2.1.104**	Provides capability to maintain the necessary data elements to produce reports on demand with date span parameters based on application and/or recipient characteristics		Y		D-169	Y
40.2.1.105**	Provides capability for inquiry selection for one (1) or more applications/records that meet specified criteria, by any of the following: ▪ Application/case number ▪ Applicant name (partial or complete) ▪ Applicant name phonetic (partial or complete) ▪ CNDS ID, ▪ SSN ▪ Date of birth		Y		D-170	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.106**	Provides capability to store abandoned or incomplete applications indefinitely		Y		D-170	Y
40.2.1.107**	Provides capability to store and maintain all applications for program participation			Y	D-170	Y
40.2.1.108**	Provides capability to maintain an audit trail to document time stamp and user ID information for all applications added to the application file	N	N	N	D-170	Y
40.2.1.109**	Provides capability to maintain an audit trail to document before and after image of changed data, time stamp of the change, and the user ID information for all changes made to the application data	N	N	N	D-170	Y
40.2.1.110**	Provides capability to document date and time of receipt of supporting documentation for applications		Y		D-170	Y
40.2.1.111**	Provides capability to produce a weekly aging report that lists work queue status		Y		D-170	Y
40.2.1.112**	Provides capability to produce identification cards for approved recipients; the card must identify the recipient, provide the recipient's identification number, and not contain eligibility information	N	N	N	D-170	Y
40.2.1.113	Provides capability for recipient lock-in/lock-out to a specific pharmacy and/or primary care provider and/or prescriber	N	N	N	D-170	Y
40.2.1.114	Provides capability for recipient lock-in/lock-out from a specific pharmacy and/or primary care provider and/or prescriber	N	N	N	D-171	Y
40.2.1.115	Provides capability for claims exceptions to process automatically when prior authorized by the lock-in/lock-out primary care provider or prescriber in accordance with State policy	N	N	N	D-171	Y
40.2.1.116	Provides capability for historical begin and end dates for each lock-in and lock-out segment, as well as the reason for lock-in/lock-out	N	N	N	D-171	Y
40.2.1.117	Provides capability for an unlimited number of lock-in/lock-out segments per recipient	N	N	N	D-171	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.1.118	Provides capability for multiple concurrent active lock-in/lock-out segments of any type	N	N	N	D-171	Y
40.2.1.119	Provides capability for online inquiry and update into lock-in/lock-out segments	N	N	N	D-171	Y
40.2.1.120	Provides capability to maintain an audit trail of all changes to lock-in/lock-out segments	N	N	N	D-171	Y
40.2.1.121	Provides capability for online inquiry into audit trail	N	N	N	D-171	Y
40.2.1.122**	Provides capability for confidential enrollment (when a potential client is unable or unwilling to identify himself or herself) for DMH These recipients will require separate tracking to avoid potential duplicate enrollment of applicants when they become clients.		Y		D-171	Y
40.2.1.123	Provides capability to associate an individual with a specific provider, including long-term care and group living arrangements, with a begin and end date for each segment, including sponsoring agency, authorizer, level of care, date certified, date of next certification, and patient share of cost, including deductibles and patient liability	N	N	N	D-171	Y

40.2.2 Recipient Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.2.2.1	Fiscal Agent shall reconcile specified CNDS data with the Replacement MMIS each State business day. This reconciliation process will verify that all records and segments received through the CNDS interface are processed or are listed on error reports.			Y	D-602	Y
40.2.2.2	Fiscal Agent shall reconcile specified State-entity DMA eligibility data with EIS each State business day. This reconciliation process will verify that all records and segments received through the EIS interface are processed or are listed on error reports.			Y	D-602	Y
40.2.2.3**	Fiscal Agent shall reconcile specified State-entity DMH eligibility data with ASC X12N 834 transactions each State business day. This reconciliation process will verify that all	N	N	N	D-602	Y

Requirement #	Requirement Description	A	B	C	D	E
	records and segments received via the 834 transaction are processed or are listed on error reports.					
40.2.2.4	Fiscal Agent shall coordinate with the applicable State entity to resolve Medicare enrollment problems.				D-602	Y
40.2.2.5	Fiscal Agent shall perform buy-in functions for the North Carolina Medicaid Program using automated and manual operating procedures.	N	N	N	D-602	Y
40.2.2.6**	Fiscal Agent shall support training requirements for LMEs, local health departments, Developmental Evaluation Centers/Children's Developmental Services Agencies (DECs/CDSAs), DPH, and other State-approved local entities.				D-602	Y
40.2.2.7	Fiscal Agent shall communicate with recipients and employers regarding COCCs verbally and in written correspondence.	N	N	N	D-603	Y
40.2.2.8**	Fiscal Agent shall identify and assign the applicant's CNDS ID and associate/link it to the financial eligibility application in accordance with CNDS Governance Rules.			Y	D-603	Y

40.2.3 Recipient Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.2.3.1	Fiscal Agent shall provide online access to State entities' eligibility edit/error reports by 7:00 A.M. Eastern Time each State business day.	N	N	N	D-604	Y
40.2.3.2	Fiscal Agent shall update the Replacement MMIS with batch eligibility data from each State entity by 7:00 A.M. Eastern Time each State business day.	N	N	N	D-604	Y
40.2.3.3	Fiscal Agent shall update each State entity's Eligibility Data from online processes for State EIS, CNDS, LMEs, and DPH in near-real time.	Y			D-604	Y

Requirement #	Requirement Description	A	B	C	D	E
40.2.3.4	Fiscal Agent shall generate COCC and log the mail date for each COCC mailed. Fiscal Agent shall provide a monthly report with the number of recipients/clients terminated from each health plan and the number of COCC mailed within one (1) month of the termination.			Y	D-604	Y

40.3 Eligibility Verification System Requirements

40.3.1 EVS System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.3.1.1	Provides capability to receive and process ASC X12N 270/271 eligibility inquiry and response transactions in real-time and batch transactions	N	N	N	D-175	Y
40.3.1.2	Provides capability for inquiry via ASC X12N 270 transactions by recipient identification number, recipient full name and DOB, recipient partial name and DOB, and recipient SSN and DOB	N	N	N	D-176	Y
40.3.1.3	Provides capability for ensuring safeguards in responses via ASC X12N 271 transactions, including: ▪ Limiting access to eligibility information to authorized medical providers, VANs, and authorized State personnel only; and ▪ Protecting the confidentiality of all recipient information	N	N	N	D-176	Y
40.3.1.4	Provides capability for access to eligibility verification inquiry to inquire for dates of service within the preceding twelve (12) months	N	N	N	D-176	Y
40.3.1.5	Provides capability for an online audit trail of all inquiries and verification responses made, the information conveyed, and to whom the information was conveyed	N	N	N	D-176	Y
40.3.1.6	Provides capability to report all EVS transactions online, segregating transaction data by provider and source of inquiry (Automated Voice Response System [AVRS], Web, EVS,	N	N	N	D-176	Y

Requirement #	Requirement Description	A	B	C	D	E
	etc.) at a minimum					
40.3.1.7	Provides capability to uniquely identify and track each EVS recipient eligibility verification inquiry and response	N	N	N	D-176	Y
40.3.1.8	Provides capability to issue a reference number to a provider for any Medicaid eligibility inquiry and response issued from the EVS	N	N	N	D-176	Y

40.3.2 EVS Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.3.2.1	Fiscal Agent shall obtain State approval and demonstrate acceptable test results to the State prior to implementing each VAN.				D-606	Y
40.3.2.2	Fiscal Agent shall provide necessary file specifications and testing assistance to VANs on how to access EVS.				D-606	Y
40.3.2.3	Fiscal Agent shall provide the necessary instructions to State and VANs in how to use the EVS. *Note: The VANS are responsible for training the providers who contract with them.*				D-606	Y

40.3.3 EVS Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.3.3.1	Fiscal Agent shall provide for a response from the EVS in three (3) seconds or less ninety-eight (98) percent of the time, twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year.				D-607	Y

Requirement #	Requirement Description	A	B	C	D	E
40.3.3.2	Fiscal Agent shall provide applicable documentation and successful test data for State approval within ten (10) State business days prior to VAN Replacement MMIS implementation.				D-607	Y
40.3.3.3	Fiscal Agent shall ensure the EVS is available ninety-nine and nine tenths (99.9) percent of the time, twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year, except for scheduled downtimes.				D-607	Y

40.4 Automated Voice Response System Requirements

40.4.1 AVRS System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.4.1.1	Provides AVRS capability and toll-free telephone access for providers and Medicaid recipients to access information from the Replacement MMIS AVRS, twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year except for agreed-upon scheduled down-time for maintenance	N	N	N	D-179	Y
40.4.1.2	Provides capability for an online audit trail of all inquiries and verification responses made, the information conveyed, and to whom the information was conveyed	N	N	N	D-179	Y
40.4.1.3	Provides capability for eligibility verification inquiry by recipient identification number, or SSN and DOB, and date of service			Y	D-179	Y
40.4.1.4	Provides capability for access to eligibility verification for dates of service within the preceding 365 days			Y	D-179	Y
40.4.1.5	Provides capability for access to eligibility verification for dates of service not greater than the current date for Medicaid recipients	N	N	N	D-179	Y
40.4.1.6**	Provides capability for access to eligibility verification for dates of service not greater than			Y	D-180	Y

Requirement #	Requirement Description	A	B	C	D	E
	the current date plus 365 days for DPH recipients					
40.4.1.7	Provides capability for system-generated monthly reporting of AVRS daily system availability checks				D-180	Y
40.4.1.8	Provides capability for an AVRS menu Help option, accessible at any time during the call, which allows callers a choice of being transferred to the Fiscal Agent call center or being directed to a specific Web site where detailed, written instructions are available			Y	D-180	Y
40.4.1.9	Provides capability for menu options to distinguish between NC DHHS provider and Medicaid recipient callers; designs cascading options appropriate to these two (2) caller types			Y	D-180	Y
40.4.1.10	Provides capability for AVRS to repeat to caller the recipient's full name and spelling of full name exactly as defined in the Recipient business area			Y	D-180	Y
40.4.1.11	Provides capability to process inquiries made by enrolled providers entering either a National Provider Identifier (NPI) or a legacy provider ID number (for atypical providers)			Y	D-180	Y
40.4.1.12	Provides capability to process inquiries made by Medicaid recipients entering the recipient's Medicaid ID number, DOB, and SSN			Y	D-180	Y
40.4.1.13	Provides capability to report all AVRS transactions online, segregating transaction data by caller type (provider or recipient), inquiry type (eligibility, claim status, etc.), and inquiry source (AVRS, Web, EVS, etc.)	Y			D-180	Y
40.4.1.14**	Provides capability to allow access by providers, aides, potential employers, etc. via AVRS to the Division of Health Service Regulation (DHSR) Health Care Personnel Registry (HCPR) and the DHSR Nurse Aide Training & Registry (NATRA) for inquiry on DHSR registry information			Y	D-180	Y
40.4.1.15	Provides capability to allow callers to interact with the AVRS by interactive voice response (IVR) or by touch-tone telephone keypad			Y	D-181	Y
40.4.1.16	Provides capability to retain and transfer all information entered and received when the			Y	D-181	Y

Requirement #	Requirement Description	A	B	C	D	E
	caller chooses to be transferred to the Fiscal Agent call center					
40.4.1.17	Provides capability to switch from English to other languages for all Medicaid recipient inquiry options			Y	D-181	Y
40.4.1.18	Provides capability to refer or transfer recipient calls for information about additional translator services				D-181	Y
40.4.1.19	Provides capability for providers to enter real-time requests for prior approval adjudication via AVRS			Y	D-181	Y
40.4.1.20	Provides capability to interface with the communication solution that will execute a fax verification (and/or e-mail verification, if no protected health information is involved) of entry, approval, or denial of a prior approval request			Y	D-181	Y
40.4.1.21	Provides capability for providers to request printed copies of their Remittance Advice (RA) statements			Y	D-181	Y
40.4.1.22	Provides capability for call flows for the following provider inquiry types: ▪ Claim status ▪ Checkwrite ▪ Drug coverage ▪ Procedure code pricing ▪ Modifier verification ▪ Procedure code and modifier combination ▪ Procedure code pricing for Medicaid Community Alternatives Program services ▪ Prior approval for procedure code ▪ Medicaid dental benefit limitations ▪ Medicaid refraction and eyeglass benefits ▪ Medicaid prior approval for durable medical equipment (DME), orthotics, and	Y	Y		D-181	Y

Requirement #	Requirement Description	A	B	C	D	E
	prosthetics ▪ Prior Approval for DPH benefits ▪ Recipient eligibility, enrollment, and Medicaid service limits ▪ Sterilization consent and hysterectomy statement inquiry ▪ Referrals ▪ Medicaid Carolina ACCESS Emergency Authorization Overrides					
40.4.1.23	Provides capability to allow the Carolina ACCESS referring provider and the Carolina ACCESS referred-to provider to inquire on the primary care provider referral status			Y	D-182	Y
40.4.1.24	Provides capability for call flows for responses for the following Medicaid recipient inquiry types: ▪ Medicaid eligibility ▪ Managed care enrollment information, including the primary care provider name, address, and daytime and after-hours phone numbers ▪ Third party liability ▪ Medicare coverage ▪ Well child checkup dates ▪ Hospice eligibility			Y	D-182	Y
40.4.1.25	Provides capability to uniquely identify and track each AVRS recipient eligibility verification inquiry and response	Y			D-182	Y
40.4.1.26	Provides capability to return a reference number to a provider for any DMA/Medicaid eligibility verification inquiry and response issued from the AVRS			Y	D-183	Y
40.4.1.27	Provides capability for Web-accessible downloads of AVRS training documentation that will be synchronized with application system updates	Y			D-183	Y

Requirement #	Requirement Description	A	B	C	D	E
	Web Inquiry					
40.4.1.28	Provides capability for an online, HIPAA-compliant inquiry of all information available via the AVRS	N	N	N	D-183	Y
40.4.1.29	Provides capability to return a reference number to a provider for any DMA/Medicaid eligibility verification inquiry and response issued from the Web			Y	D-183	Y
40.4.1.30	Provides capability for Medicaid recipient access to recipient eligibility and enrollment information, including: ▪ Medicaid eligibility ▪ Carolina ACCESS enrollment information to include the primary care provider name, address, and daytime and after-hours phone numbers ▪ Third party liability ▪ Medicare coverage ▪ Well child checkup dates ▪ Hospice eligibility	Y			D-183	
40.4.1.31	Provides capability for the option to switch from English to non-English (Spanish, Russian, Hmong, etc.) static content on each non-secure page that is targeted for consumers/recipients for all Medicaid recipient inquiry options			Y	D-183	Y
40.4.1.32	Provides capability for the option to switch from English to non-English (Spanish, Russian, Hmong, etc.) static content on each secure page targeted for recipients for all Medicaid recipient inquiries and responses			Y	D-184	Y
40.4.1.33	Provides capability for English and non-English (Spanish, Russian, Hmong, etc.) versions of all downloadable written materials targeted for recipients/consumers	N	N	N	D-184	Y
40.4.1.34	Provides capability to report all Web inquiry transactions online, segregating transaction data by provider and recipient inquiry, by inquiry type (eligibility, claim status, etc.), and			Y	D-184	Y

Requirement #	Requirement Description	A	B	C	D	E
	inquiry source (AVRS, Web, EVS, etc.)					
40.4.1.35	Provides capability to uniquely identify and track each online recipient eligibility verification and nurse aide verification inquiry and response			Y	D-184	Y
40.4.1.36**	Provides capability to provide access to providers, nurse aides, potential employers of nurse aides, etc., via the Web query functionality to the DHSR Health Care Personnel Registry (HCPR) and the DHSR Nurse Aide Training & Registry (NATRA) for inquiry on DHSR registry information			Y	D-184	Y
40.4.1.37	Provides capability to report all Web Inquiry transactions online, segregating transaction data by caller type (provider or recipient), inquiry type (eligibility, claim status, etc.) and inquiry source (AVRS, Web, EVS, etc.)			Y	D-184	Y

40.4.2 AVRS Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.4.2.1	Fiscal Agent shall perform daily systems check to ensure that the AVRS electronic interface is working properly and report the findings monthly.	N	N	N	D-609	Y
40.4.2.2	Fiscal Agent shall perform transaction analysis by hour of the day, indicate the number of transactions processed, and report the findings monthly.	N	N	N	D-609	Y
40.4.2.3	Fiscal Agent shall perform telephone analysis by hour of the day, track the number of transactions, number of transactions with less than a ten-second (10-second) response time, and number of transactions with greater than a ten-second (10-second) response time, and report the findings monthly.	N	N	N	D-609	Y
40.4.2.4	Fiscal Agent shall operate and maintain a Web site for providers and recipients, nurse aides, potential employers of nurse aides, etc. twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year, with the exception of State-approved scheduled maintenance.	N	N	N	D-609	Y

40.4.3 AVRS Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.4.3.1	Fiscal Agent shall provide for a response from the AVRS in three (3) seconds or less ninety-eight (98) percent of the time, twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year, with the exception of State-approved scheduled system maintenance.	N	N	N	D-610	Y
40.4.3.2	Fiscal Agent shall provide system checks to the AVRS daily and log the findings.	N	N	N	D-610	Y
40.4.3.3	Fiscal Agent shall provide monthly AVRS logs within five (5) State business days from the end of the previous month.	N	N	N	D-610	Y
40.4.3.4	Fiscal Agent shall ensure the Web inquiry functionality is available twenty-four (24) a day, seven (7) days a week, three hundred sixty-five (365) days a year, except during State-approved maintenance periods.	N	N	N	D-611	Y

40.5 Provider Requirements

40.5.1 Provider System Requirements

Requirement #	Requirement Description	A	B	C	D	E
	Provider Enrollment					
40.5.1.1	Provides capability to interactively enroll eligible providers in a multi-payer environment using a single enrollment strategy to eliminate process redundancy	N	N	N	D-194	Y
40.5.1.2	Provides capability to generate and accept electronic and hard copy supporting documentation for enrollment and re-enrollment or verification functions	N	N	N	D-194	Y
40.5.1.3	Provides capability for provider access to online and batch enrollment functionality			Y	D-194	Y

Requirement #	Requirement Description	A	B	C	D	E
40.5.1.4	Provides capability for secure log-on that allows providers to retrieve and update incomplete application or check status of a submitted application	N	N	N	D-194	Y
40.5.1.5	Provides capability for a provider to download application for paper submission	Y			D-194	Y
40.5.1.6	Provides capability to edit against duplicate provider record during enrollment, addition, or change processes			Y	D-194	Y
40.5.1.7	Provides capability to image, link, and reference all provider correspondence, enrollment applications, contracts, and supporting documentation to be retrieved by the Fiscal Agent or State-authorized staff		Y		D-194	Y
40.5.1.8	Provides capability for a provider to select services that will be provided at a practice location or by the provider entity	N	N	N	D-194	Y
40.5.1.9	Provides capability to capture and maintain demographic information of the LME from which the provider is seeking and/or has received endorsement			Y	D-194	Y
40.5.1.10	Provides capability to capture and maintain Medicare numbers and crossover information	N	N	N	D-195	Y
40.5.1.11	Provides capability for a provider to access enrollment functions, download enrollment package, recall a saved application, submit, and check the status of an application online	N	N	N	D-195	Y
40.5.1.12	Provides capability to receive, image, and link hard copy attachments, executed contracts, and signatory documentation to the provider application		Y		D-195	Y
40.5.1.13	Provides capability to capture and maintain all provider data elements necessary to support the enrollment, credentialing, inquiry, and participation by program	N	N	N	D-195	Y
40.5.1.14	Provides capability to electronically store multiple historic provider identifiers	N	N	N	D-195	Y
40.5.1.15	Provides capability to accept and electronically store multiple occurrences of provider demographic information, including e-mail	N	N	N	D-195	Y

Requirement #	Requirement Description	A	B	C	D	E
40.5.1.16	Provides capability to capture information on provider billing agents	N	N	N	D-195	Y
40.5.1.17	Provides capability to present customized enrollment application options	Y	Y		D-195	Y
40.5.1.18	Provides capability to edit data during the enrollment process to ensure that all required information is captured based on provider's participation and contractual requirements	N	N	N	D-195	Y
40.5.1.19	Provides capability to present enrollment instructions and guidelines for supporting functions by selected enrollment options	N	N	N	D-195	Y
40.5.1.20	Provides capability to system-generate application attachments based on required criteria and affirmative responses			Y	D-195	Y
40.5.1.21	Provides capability to identify and enroll providers classified as special, atypical, State-funded, or funded by other assistance programs	N	N	N	D-195	Y
40.5.1.22	Provides capability to identify and assign unique identifiers to providers	N	N	N	D-195	Y
40.5.1.23	Provides capability to support a time-limited, abbreviated, or expedited enrollment process that collects a limited amount of information to enroll a provider for a limited period	N	N	N	D-196	Y
40.5.1.24	Provides capability to capture the requestor, sender, and status for all hard copy provider enrollment form requests	N	N	N	D-196	Y
40.5.1.25	Provides capability to capture all enrollment events	N	N	N	D-196	Y
40.5.1.26	Provides capability to accept and electronically store electronic funds transfer (EFT) information	N	N	N	D-196	Y
40.5.1.27	Provides capability to flag provider records to support operational activities	N	N	N	D-196	Y
40.5.1.28	Provides capability to capture and validate nine-digit (9-digit) zip code to geographic location	N	N	N	D-196	Y

Requirement #	Requirement Description	A	B	C	D	E
40.5.1.29	Provides capability to store abandoned or incomplete applications for ninety (90) days	N	N	N	D-196	Y
40.5.1.30	Provides capability to capture provider eligibility, program eligibility, and participation status codes with associated affiliations, effective dates, and end dates	N	N	N	D-196	Y
40.5.1.31	Provides capability to capture the providers' preference to use electronic submittal of claims, remittance, and/or EFT	N	N	N	D-196	Y
40.5.1.32	Provides capability to capture, link, and reference multiple provider affiliations, specialties, and taxonomies, by program, with associated effective and end dates	N	N	N	D-196	Y
40.5.1.33	Provides capability to capture providers' legal business filing status, including Non-profit, Corporate, State-owned, Federally owned, For Profit, and Tribal-owned	N	N	N	D-196	Y
40.5.1.34	Provides capability to capture, verify, and cross-reference provider ownership information	N	N	N	D-196	Y
40.5.1.35	Provides capability to recognize predefined events requiring State determination or intervention		Y		D-196	Y
40.5.1.36	Provides capability to accommodate NPI and multiple associated taxonomies	N	N	N	D-197	Y
40.5.1.37	Provides capability to validate all NPIs	N	N	N	D-197	Y
40.5.1.38	Provides capability for option selection for a provider to indicate preference to receive a paper RA	N	N	N	D-197	Y
40.5.1.39	Provides capability for the system to capture electronic signatures			Y	D-197	Y
40.5.1.40	Provides capability to use workflow functionality to forward a completed application for credentialing/re-credentialing or verification		Y		D-197	Y
40.5.1.41	Provides capability for batch and/or online real-time access between EIS, Mental Health Eligibility Inquiry, CSDW, Medicaid Quality Control, Online Verification, Automated Collection and Tracking System (ACTS), and Health Information System (HIS) and the			Y	D-197	Y

Requirement #	Requirement Description	A	B	C	D	E
	Replacement MMIS using API and SOA concepts					
40.5.1.42	Provides capability to send, receive, and update data between DHSR and the Replacement MMIS in support of provider participation for enrollment functionality		Y		D-197	Y
	Provider Credentialing					
40.5.1.43	Provides capability to conduct provider credentialing and source verification of provider participation criteria and requirements		Y		D-197	Y
40.5.1.44	Provides capability for credentialing to include Office of Inspector General (OIG) participation “exclusion” data or capability to receive and employ OIG file interface		Y		D-197	Y
40.5.1.45	Provides capability for credentialing process to include criminal background checks and query of the North Carolina State Provider Penalty Tracking “exclusions” data		Y		D-197	Y
40.5.1.46	Provides capability to restrict or eliminate provider billable services if the service requirements are no longer supported (by endorsement, certification, or licensure) with associated begin and end date by service	N	N	N	D-198	Y
40.5.1.47	Provides capability to send and receive electronic communications to support credentialing data verifications		Y		D-198	Y
40.5.1.48	Provides capability to exclude a provider from licensure requirements based on provider type or category		Y		D-198	Y
40.5.1.49	Provides capability to generate notification to providers of status, changes, enrollment, termination, credentialing, re-verification, penalties, and termination		Y		D-198	Y
40.5.1.50	Provides capability to capture and electronically store critical credentialing data missing from current Legacy MMIS+ to support licensure, credentialing, and verification processes		Y		D-198	Y
40.5.1.51	Provides capability to share licensure, endorsement, and accreditation information with issuing agencies, authorized State entities, and users	N	N	N	D-198	Y

Requirement #	Requirement Description	A	B	C	D	E
40.5.1.52	Provides capability to send notification to a provider of impending renewal	Y			D-198	Y
40.5.1.53	Provides capability to send notification to providers who failed to respond to renewal information requests	Y			D-198	Y
40.5.1.54	Provides capability to send, receive, and update data between DHSR and the Replacement MMIS in support of provider credentialing functionality		Y		D-198	Y
	Provider Maintenance					
40.5.1.55	Provides capability to present to the provider selected data for verification and update	N	N	N	D-199	Y
40.5.1.56	Provides capability to support different business rule definitions by program and services to be provided	N	N	N	D-199	Y
40.5.1.57	Provides capability to make State-approved forms available online	Y			D-199	Y
40.5.1.58	Provides capability to process online requests for generation and distribution of provider contracts			Y	D-199	Y
40.5.1.59	Provides capability to accept and process online requests for additions and changes to the provider data	N	N	N	D-199	Y
40.5.1.60	Provides capability to capture, identify, and report suspected duplicate provider identification numbers and applicable expiration dates	N	N	N	D-199	Y
40.5.1.61	Provides capability to capture, update, and maintain Clinical Laboratory Improvement Amendments (CLIA) information for providers	N	N	N	D-199	Y
40.5.1.62	Provides capability to track, identify, and provide notification the status of licenses, certifications, endorsements, and State-defined participation requirements or criteria	N	N	N	D-199	Y
40.5.1.63	Provides capability to systematically suspend and notify providers who do not meet enrollment or participation criteria			Y	D-199	Y

Requirement #	Requirement Description	A	B	C	D	E
40.5.1.64	Provides capability to cross-reference all provider identifiers that correspond to the providers' tax identification/reporting number	N	N	N	D-199	Y
40.5.1.65	Provides capability for online access of providers to training materials, training registrations, and tracking, including audit history of all provider trainings				D-199	Y
40.5.1.66	Provides capability to generate on-demand reports with date span parameters for provider data	N	N	N	D-199	Y
40.5.1.67	Provides capability to enter and maintain tax and financial information, including budget codes for accessing State funds	N	N	N	D-199	Y
40.5.1.68	Provides capability to capture data regarding agency-specific provider incentives, sanctions, withholds, and review processes by issuing agency with beginning and end dates	N	N	N	D-200	Y
40.5.1.69	Provides capability to capture the providers who participate in the Competitive Acquisition Program with begin and end dates by program	N	N	N	D-200	Y
40.5.1.70	Provides capability to suspend, sanction, or terminate providers	N	N	N	D-200	Y
40.5.1.71	Provides capability to identify and report on out-of-state provider claims denied for non-enrollment	N	N	N	D-200	Y
40.5.1.72	Provides capability to maintain 1099 and associated payment summary data	N	N	N	D-200	Y
40.5.1.73	Provides capability to identify and reference ownership across multiple occurrences and entities	N	N	N	D-200	Y
40.5.1.74	Provides capability to generate provider notifications of licensure, certification, accreditation, and endorsement renewals or expirations and monitor all response activity	N	N	N	D-200	Y
40.5.1.75	Provides capability for providers to enter requested updates to data and identify instances that require operational review	N	N	N	D-200	Y

Requirement #	Requirement Description	A	B	C	D	E
40.5.1.76	Provides capability to identify to the State those providers with issues under review, giving the State equal access to work queue and documents to support the business decision process	N	N	N	D-200	Y
40.5.1.77	Provides capability to identify providers for whom mail has been returned and suppress all printing and claims activity				D-200	Y
40.5.1.78	Provides capability to place the provider on pre-payment, post-payment, payment review, compliance payment withholds, and denial as directed by the State	N	N	N	D-200	Y
40.5.1.79	Provides capability to leverage electronic listserv technology to allow providers to register for notifications and facilitate communications		Y		D-200	Y
40.5.1.80	Provides capability for online access by State-authorized users to view and update information on sanctioned providers by LOB	N	N	N	D-200	Y
40.5.1.81	Provides capability to perform manual and automated updates to provider data	N	N	N	D-200	Y
40.5.1.82	Provides capability for online real-time access to Provider data using API and SOA concepts between EIS and the Replacement MMIS			Y	D-201	Y
40.5.1.83	Provides capability for a daily provider table extract			Y	D-201	Y
40.5.1.84	Provides capability for online, real-time responses to EIS and DIRM applications for all provider data processing transactions	N	N	N	D-201	Y
40.5.1.85	Provides capability to send, receive, and update data between DHSR and the Replacement MMIS in support of provider maintenance functionality		Y		D-201	Y
	Provider Training					
40.5.1.86	Provides capability for online automated provider training and related documentation access		Y		D-201	Y

Requirement #	Requirement Description	A	B	C	D	E
40.5.1.87	Provides capability to capture and maintain provider-written, verbal, or electronic correspondence requesting an on-site visit or training	Y			D-201	Y
40.5.1.88	Provides capability for automated workflow functionalities to process call center and provider training requests and educational monitoring activities		Y		D-201	Y
40.5.1.89	Provides capability for an online provider training tutorial that can be tailored by selection to facilitate training in a variety of subject matters	Y			D-201	Y
40.5.1.90	Provides capability to image, maintain, and make accessible all (current and historic) course instructional materials	N	N	N	D-201	Y
40.5.1.91	Provides capability to image instructional materials, training evaluations, and other correspondence linked to a site visit to the provider record		Y		D-201	Y
40.5.1.92	Provides capability to track and report on provider requested visits	Y			D-201	Y
40.5.1.93	Provides capability for online and on-site training evaluation questionnaires for providers to complete		Y		D-202	Y
40.5.1.94	Provides capability to develop a State-approved training evaluation process				D-202	Y
40.5.1.95	Provides capability to maintain and submit to the State provider training sessions participants				D-202	Y
40.5.1.96	Provides capability to identify providers with a claims denial rates of twenty (20) percent or higher	N	N	N	D-202	Y
40.5.1.97	Provides capability to maintain State-approved instructional materials for viewing and retrieval				D-202	Y
40.5.1.98	Provides capability for initial and updated State-approved Provider Basic Training Tutorials to be available through Web access	Y			D-202	Y

Requirement #	Requirement Description	A	B	C	D	E
	Secure, Browser-Based, Web-Enabled Capability To Record and Track All Verbal Communication between State/Fiscal Agent and Providers					
40.5.1.99	Provides capability to record, track, and report on provider and recipient communication			Y	D-202	Y
40.5.1.100	Provides capability to make provider contact data accessible and retrievable	N	N	N	D-202	Y
40.5.1.101	Provides capability to report on queries for call-related data			Y	D-202	Y
40.5.1.102	Provides capability for communication tracking business area to interface with other MMIS functional areas	N	N	N	D-202	Y
40.5.1.103	Provides capability for individual access to query tools	N	N	N	D-202	Y
40.5.1.104	Provides capability to auto-populate Replacement MMIS provider data into the Web-based provider enrollment and maintenance functions	N	N	N	D-202	Y

40.5.2 Provider Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
	General					Y
40.5.2.1	Fiscal Agent shall provide State-authorized access to the Provider database.	N	N	N	D-613	Y
40.5.2.2	Fiscal Agent shall receive and process provider complaints and summarize this activity in the Status Report.	N	N	N	D-613	**Y**
40.5.2.3	Fiscal Agent shall respond to and report on activities and outcomes of all inquiries referred by the State.	N	N	N	D-613	**Y**
40.5.2.4	Fiscal Agent shall perform imaging of all provider documents, contracts, agreements,	N	N	N	D-613	**Y**

Requirement #	Requirement Description	A	B	C	D	E
	attachments, training and publication material and forms, and on-site visitation documentation, linking them to the provider for viewing and retrieval by State and Fiscal Agent staff.					
40.5.2.5	Fiscal Agent shall provide the capability to link provider applications in PDF format for retrieval via a document management system.		Y		D-613	Y
40.5.2.6	Fiscal Agent shall initiate and complete re-credentialing procedures on all providers who have not been previously credentialed and on providers whose data indicates expiration of any license, accreditation, certification, or other authorizing agencies. All re-credentialing and credentialing should be completed within twelve (12) months of contract start up.	N	N	N	D-613	Y
40.5.2.7	Fiscal Agent shall generate and distribute provider contract renewals to providers seventy-five (75) days before expiration.		Y		D-614	Y
40.5.2.8**	Fiscal Agent shall accept, process, and maintain DMH attending-only provider records entered by the LME	Y			D-614	Y
	Provider Enrollment, Credentialing, and Verification					
40.5.2.9	Fiscal Agent shall implement at the direction of the State suspension or termination action for providers whose licenses have been revoked or suspended by State licensing or accrediting bodies.	N	N	N	D-614	Y
40.5.2.10	Fiscal Agent shall conduct activities to suspend, terminate, or withhold payments, percentages, and incentives from providers under investigation by State or Federal agencies at the sole discretion of the State.	Y			D-614	Y
40.5.2.11	Fiscal Agent shall implement provider sanctions, as directed by the State.	N	N	N	D-614	Y
40.5.2.12	Fiscal Agent shall initiate recoupment/collection of claims and non-claims payments made subsequent to the effective date of an action or sanction, as directed by the State.	N	N	N	D-614	Y
40.5.2.13	Fiscal Agent shall send enrollment information and instructions to a provider whose				D-615	Y

Requirement #	Requirement Description	A	B	C	D	E
	claims have denied for non-enrollment.					
40.5.2.14	Fiscal Agent shall retain all active and historical provider documents, contracts, participation agreements, and supporting documentation for control, balance, audit, and State retrieval.		Y		D-615	Y
40.5.2.15	Fiscal Agent shall capture and maintain information on all billing agents, including information necessary to identify and contact billing agents and providers using each billing agent within a specified timeframe.	N	N	N	D-615	Y
40.5.2.16	Fiscal Agent shall test potential Trading Partners to be implemented into MMIS production and maintain signed and State-approved Trading Partner Agreements.	N	N	N	D-615	Y
40.5.2.17	Fiscal Agent shall obtain and maintain all executed EFT Agreements.	N	N	N	D-615	Y
40.5.2.18	Fiscal Agent shall create and distribute to each independent enrolled provider or provider site a New Provider Participation Packet.				D-615	Y
40.5.2.19	Fiscal Agent shall respond to provider requests for participation in a NC DHHS program.				D-615	Y
40.5.2.20	Fiscal Agent shall review applications and contracts for completeness, original signature, and required participation criteria.				D-615	Y
40.5.2.21	Fiscal Agent shall update provider data based on information received during the credentialing, re-credentialing, and subsequent enrollment of the provider.	N	N	N	D-616	Y
40.5.2.22	Fiscal Agent shall initiate communication to providers advising them of the potential for suspension of services.		Y		D-616	Y
40.5.2.23	Fiscal Agent shall route any incomplete credentialing or re-credentialing requests to the State for final disposition as to the provider's initial or ongoing participation.		Y		D-616	Y
	Urgent Reviews					

Requirement #	Requirement Description	A	B	C	D	E
40.5.2.24	Fiscal Agent shall perform "Urgent Reviews" when the State or Fiscal Agent has become aware of negative provider information that may affect the provider's participation status.			Y	D-616	Y
40.5.2.25	Fiscal Agent shall route imaged data regarding Urgent Review through Workflow to the Quality Review/Appeals Coordinator for assessment.			Y	D-616	Y
40.5.2.26	Fiscal Agent shall send a system-generated letter to the provider advising disposition of the case and appeal process procedures.		Y		D-616	Y
40.5.2.27	Fiscal Agent shall notify the State's Medical Board or other appropriate agencies of its intent to suspend/terminate a provider's participation.		Y		D-617	Y
	Appeals					
40.5.2.28	Fiscal Agent shall receive, image, and link provider appeals correspondence to the provider record.	N	N	N	D-617	Y
40.5.2.29	Fiscal Agent shall system-generate appeal letters advising the provider of the date the appeal request is received and that a written response shall be sent within thirty (30) days.	Y			D-617	Y
40.5.2.30	Fiscal Agent shall ensure the Review/Appeals Coordinator obtains any additional information to provide to the State Review Committee to support an informed decision.				D-617	Y
40.5.2.31	Fiscal Agent shall route appeals and all supporting documentation to the State Review Committee Work Queue for disposition.			Y	D-617	Y
40.5.2.32	Fiscal Agent shall update Provider data with the completed dates and disposition of appeal information.	N	N	N	D-617	Y
	Provider Communications					
40.5.2.33	Fiscal Agent shall staff a separate Provider communications business function area to include toll-free telephone lines that are staffed from 8 A.M. to 5:00 P.M. Eastern Time	N	N	N	D-618	Y

Requirement #	Requirement Description	A	B	C	D	E
	Monday through Friday, except for State-approved holidays.					
40.5.2.34	Fiscal Agent shall respond to all verbal provider inquiries immediately. If an immediate response is not possible, then a written or verbal response shall be provided within two (2) business days.	N	N	N	D-618	Y
40.5.2.35	Fiscal Agent shall track and report on all State-referred or provider-initiated calls and/or complaints.			Y	D-618	Y
40.5.2.36	Fiscal Agent shall respond in writing to written provider inquiries within five (5) business days of the date of receipt.	N	N	N	D-618	Y
40.5.2.37	Fiscal Agent shall refer questions regarding eligibility and program benefits to the State.				D-618	Y
40.5.2.38	Fiscal Agent shall refer questions regarding rates and budgets to the State.				D-618	Y
40.5.2.39	Fiscal Agent shall respond to all other provider inquiries as referred by the State.				D-618	Y
40.5.2.40	Fiscal Agent shall track and trend the number and nature of inquiries or complaints and status of resolution, referring clarification of policy issues to the State.			Y	D-618	Y
40.5.2.41	Fiscal Agent shall coordinate and conduct all training for new and ongoing State and Fiscal Agent employees on Fiscal Agent MMIS procedures.				D-618	Y
	Provider Publications					
40.5.2.42	Fiscal Agent shall prepare and post provider publications and instructions online.	N	N	N	D-619	Y
40.5.2.43	Fiscal Agent shall publish approved bulletins via e-mail and Web.	N	N	N	D-619	Y
40.5.2.44	Fiscal Agent shall provide the State with current update of MMIS-related forms to be accessible via the State's Web site.				D-619	Y
40.5.2.45	Fiscal Agent shall use the workflow management tools to publish drafts and receive approvals of all provider publications, e.g., bulletins, training materials, standard letters,			Y	D-619	Y

Requirement #	Requirement Description	A	B	C	D	E
	etc.					
	Provider Training					
40.5.2.46	Fiscal Agent shall present mock training sessions to the State for approval prior to conducting provider training workshops.				D-619	Y
40.5.2.47	Fiscal Agent shall determine topics for workshops by assessing and targeting provider types with special need.				D-620	Y
40.5.2.48	Fiscal Agent shall track and report on provider requested visits.	N	N	N	D-620	**Y**
40.5.2.49	Fiscal Agent shall implement annual marketing plans for electronic commerce options.	N	N	N	D-620	**Y**
40.5.2.50	Fiscal Agent shall conduct provider workshops at State-approved locations.				D-620	Y
40.5.2.51	Fiscal Agent shall assist the State with annual meetings of billing providers.				D-620	Y
40.5.2.52	Fiscal Agent shall assist the State with quarterly training conferences.				D-620	Y
40.5.2.53	Fiscal Agent shall distribute on-site training evaluation questionnaires for providers to complete.				D-620	Y
40.5.2.54	Fiscal Agent shall analyze completed evaluation questionnaires and provide the State with a compiled summary report within five (5) business days from the training seminar date.				D-620	Y
40.5.2.55	Fiscal Agent shall maintain and submit to the State lists of provider training session participants.				D-620	Y
40.5.2.56	Fiscal Agent shall prepare State-approved online provider enrollment and billing instructions, ensuring the inclusion of all revisions and policy-related communications, such as special bulletins and/or newsletters, in the format and number specified by the State.	N	N	N	D-620	**Y**

Requirement #	Requirement Description	A	B	C	D	E
40.5.2.57	Fiscal Agent shall ensure the accuracy and consistency of initial and ongoing updated State-approved tutorials.				D-621	Y
40.5.2.58	Fiscal Agent shall ensure that whenever changes are made that affect the information available on the tutorials that State-approved changes are made as a part of the CSR change documentation, provider publication/ALERT, or as directed by the State.				D-621	Y
40.5.2.59	Fiscal Agent shall maintain State-approved instructional materials for viewing and retrieval.	N	N	N	D-621	Y
40.5.2.60	Fiscal Agent shall provide training workshop materials and evaluations imaged and electronically available with ninety-nine and nine tenths (99.9) percent accuracy.	N	N	N	D-621	Y
	Imaging Provider Communications					
40.5.2.61	Fiscal Agent shall image all provider written communications.	N	N	N	D-621	Y
	Imaging Provider On-Site Visit Materials and Evaluation					
40.5.2.62	Fiscal Agent shall perform imaging of all materials and the provider on-site evaluation applicable to a provider site visit, linking to the provider identification number for complete profile data retrieval.	N	N	N	D-622	Y
	Imaging Provider Training Workshop Materials and Provider Evaluation Forms					
40.5.2.63	Fiscal Agent shall perform imaging of all Provider Training Workshop materials and Provider Training Evaluations, linking to the provider identification number for complete profile data retrieval.		Y		D-622	Y
40.5.2.64	Fiscal Agent shall provide training to State staff in the use of the Customer Call Center System, initially and on an ongoing basis.				D-622	Y
40.5.2.65	Fiscal Agent shall provide all Customer Service Call Center reports according to State specification.	Y			D-622	Y

Requirement #	Requirement Description	A	B	C	D	E
40.5.2.66	Fiscal Agent shall maintain up-to-date complete system and user documentation.	N	N	N	D-622	Y
40.5.2.67	Fiscal Agent shall develop workflow processes for customer service support activities.	N	N	N	D-622	Y
	E-mail Communications					
40.5.2.68	Fiscal Agent shall produce listserv lists that are updated as appropriate to new enrollments, disenrollments, and provider change requests for individual or mass communications based on State protocols and approval for types of communications.		Y		D-623	Y
	Recording/Tracking Provider/Recipient Verbal Communications					
40.5.2.69	Fiscal Agent shall ensure recording and tracking verbal communications with provider and recipients are available for use between the hours of 7:00 A.M. to 11:00 P.M. Eastern Time Monday through Friday and from 7:00 A.M. to 6:00 P.M. Saturday and Sunday.	N	N	N	D-623	Y
40.5.2.70	Fiscal Agent shall perform daily system checks to ensure that the recording/tracking business area is functioning as designed and provides system logging of check date, time, operator, comments, and reporting as directed by the State.	N	N	N	D-623	Y
40.5.2.71	Fiscal Agent shall provide State-approved instructional materials and secure, browser-based, Web-enabled tutorial for use of the Recording/Tracking Provider/Recipient Communications function/query tool.			Y	D-624	Y
40.5.2.72	Fiscal Agent shall provide appropriate staff to monitor and support the continuous availability of the recording/tracking query tool.				D-624	Y

40.5.3 Provider Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.5.3.1	Fiscal Agent shall log and image all hard copy provider applications received within one	N	N	N	D-624	Y

Requirement #	Requirement Description	A	B	C	D	E
	(1) State business day of receipt.					
40.5.3.2	Fiscal Agent shall initiate credentialing and source verification to ensure participation guidelines are met on all completed applications within three (3) business days.	N	N	N	D-625	Y
40.5.3.3	Fiscal Agent shall complete and approve all providers for participation who have no negative responses to credentialing requirements within two (2) State business days of receipt of all data necessary to adjudicate the application.	N	N	N	D-625	Y
40.5.3.4	Fiscal Agent shall send approval letters and other State-required information within one (1) State business day of provider participation approval.	N	N	N	D-625	Y
40.5.3.5	Fiscal Agent shall send denial letters and other State-required information within one (1) State business day of provider participation denial.	N	N	N	D-625	Y
40.5.3.6	Fiscal Agent shall initiate Urgent Reviews within one (1) State business day of receipt of any adverse provider information.	N	N	N	D-625	Y
40.5.3.7	Fiscal Agent shall acknowledge receipt of provider appeal requests within one (1) State business day of receipt.	N	N	N	D-625	Y
40.5.3.8	Fiscal Agent shall ensure that all appeals are adjudicated within thirty (30) calendar days of receipt unless permission for delay is received from the State.				D-625	Y
40.5.3.9	Fiscal Agent shall provide the State with an extract of the MMIS Provider tables each business night.			Y	D-625	Y
40.5.3.10	Fiscal Agent shall support online real-time access between EIS, Mental Health Eligibility Inquiry, Medicaid Quality Control, Online Verification, ACTS, and HIS and the Replacement MMIS using API and SOA concepts, from 7:00 A.M. until 7:00 P.M. Eastern Time Monday through Friday, including non-State business days when EIS is available for online processing, and from 10:00 A.M. to 5:00 P.M. Eastern Time on weekends when EIS is available for online processing.			Y	D-626	Y
40.5.3.11	Fiscal Agent shall provide online real-time access to provider data for State-designated	N	N	N	D-626	Y

Requirement #	Requirement Description	A	B	C	D	E
	staff using API and SOA concepts between EIS and the Replacement MMIS 7:00 A.M. until 8:00 p.m. Eastern Time Monday through Friday, including non-State business days when EIS is available for online processing, and from 10:00 A.M. to 5:00 P.M. Eastern Time on weekends and when EIS is available for online processing.					
40.5.3.12	Fiscal Agent shall provide batch access to provider data using API and SOA concepts between EIS and the Replacement MMIS from 5:30 P.M. Eastern Time Monday through Friday until batch processing is completed.			Y	D-626	Y
40.5.3.13	Fiscal Agent shall provide online real-time access to Provider data for State-designated staff using API and SOA concepts between EIS and the Replacement MMIS.	N	N	N	D-626	Y
40.5.3.14	Fiscal Agent shall provide initial and ongoing updated e-mail listservs based on initial and ongoing provider enrollments, disenrollments, and change requests the same day the transaction occurs ninety-nine and nine tenths (99.9) percent of the time.		Y		D-626	Y
40.5.3.15	Fiscal Agent shall provide initial and ongoing capability for recording and tracking communications with providers and recipients during State business days between the hours of 7:00 A.M. to 11:00 P.M. Eastern Time Monday through Friday and from 7:00 A.M. to 6:00 P.M. Saturday and Sunday ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-626	Y
40.5.3.16	Fiscal Agent shall provide monthly system check logs in the content, frequency, format, and media as directed by the State.	N	N	N	D-627	Y
40.5.3.17	Fiscal Agent shall produce State-approved initial and ongoing updates to training materials and secure, browser-based, Web-enabled tutorials in the content, frequency, format, and all media as directed by the State.			Y	D-627	Y

40.6 Reference Requirements

40.6.1 Reference System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.6.1.1	Provides capability for necessary data to accommodate multiple population groups, their benefit packages, and payment methodologies	N	N	N	D-217	Y
40.6.1.2	Provides capability for online access to all Reference and pricing data	N	N	N	D-218	Y
40.6.1.3	Provides capability to accept online and batch updates, additions, and deletions to all Reference data with the capability to make changes to individual records or mass changes to groups or classes/records	N	N	N	D-218	Y
40.6.1.4	Provides capability to identify all covered and non-covered ICD-9/ICD-10 Diagnosis codes and any field value differences based upon a match of the Replacement MMIS Diagnosis Codes to the Diagnosis Update Tape/data			Y	D-218	Y
40.6.1.5	Provides capability to produce a report that demonstrates the differences of all covered and non-covered ICD-9/ICD-10 Diagnosis codes and any field value differences based upon a match of the Legacy MMIS+ Diagnosis Codes to the Diagnosis Update Tape/Data for State use in determining appropriateness to update ICD-9/ICD-10 data	N	N	N	D-218	Y
40.6.1.6	Provides capability for diagnosis codes to be accessible from the National Council of Prescription Drug Programs (NCPDP) claims and physician drug program	N	N	N	D-218	Y
40.6.1.7	Provides capability to configure maximum rates and algorithms that permit rates to be assigned based on one of the following for all providers: ▪ Financial payer ▪ Billing provider (i.e., single county or multi-county) ▪ Population group ▪ Procedure code ▪ Begin and end date of service	Y			D-218	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Attending provider (i.e., single county or multi-county) ▪ Recipient					
40.6.1.8	Provides capability to allow reformatting of automated files to develop or update fee schedules and/or rate files			Y	D-219	**Y**
40.6.1.9	Provides capability for system logging of receipt date of each Reference File Maintenance Request, file maintenance initiation completion date, operator completing request, and supervisor validation date	N	N	N	D-219	**Y**
40.6.1.10	Provides capability for parameter-driven, ad hoc activity logging reports	N	N	N	D-219	Y
40.6.1.11	Provides capability to ensure appropriate tracking, controls, and audit logs are associated with all file updates	N	N	N	D-219	**Y**
40.6.1.12	Provides capability to link Reference File updates to applicable edits/audits	Y			D-219	Y
40.6.1.13	Provides capability to maintain the diagnosis data set using State-approved number of characters of the ICD-9/ICD-10 coding system that supports relationship between diagnosis code and claim information, including: ▪ Valid age ▪ Valid gender ▪ Family planning indicator ▪ Health Check indicator ▪ Prior approval requirements ▪ Reference indicator ▪ TPL, emergency, accident trauma diagnosis, and cause code/indicator ▪ Inpatient length of stay criteria ▪ Description of the diagnosis	N	N	N	D-219	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Attachment required ▪ Primary and secondary diagnosis code usage ▪ Cross-reference to procedure codes ▪ Drug by designated parameters					
40.6.1.14	Provides capability for online, updateable edit disposition tables and files that contain unlimited edit numbers with: ▪ Description of edit ▪ Description of edit for RA per RA media ▪ RA print indicator, exception print detail, or list indicator ▪ Disposition, force indicator, deny indicator, location code, prior approval override indicator, location override per claim type, per claim media, per program, per provider ▪ Cross-referencing edits/audits ▪ Information line	N	N	N	D-220	Y
40.6.1.15	Provides capability to audit HCPCS codes and associated National Drug Codes (NDCs) against pharmacy NDCs to prevent duplicative services	N	N	N	D-220	Y
40.6.1.16	Provides capability to maintain an online, updateable claims Edit Resolution Manual that reflects correct processes for adjudicating edits and audits	N	N	N	D-220	Y
40.6.1.17	Provides capability to cross-reference new CPT codes and ICD-9/ICD-10 codes to Replacement MMIS edits and audits that support the code's data set within the same or specified range	N	N	N	D-220	Y
40.6.1.18	Provides capability to generate a report of edits/audits associated with codes that will be end-dated			Y	D-221	Y
40.6.1.19	Provides capability to categorize edits/audits	N	N	N	D-221	Y

Requirement #	Requirement Description	A	B	C	D	E
40.6.1.20	Provides capability to link each procedure code, diagnosis code, revenue code, dental code, etc. to the associated current and reverse (historical) edit	N	N	N	D-221	Y
40.6.1.21	Provides capability to create online Edit Manuals that enables access by edit or specific procedure code, revenue code, diagnosis code, dental code, etc. that displays: ▪ Edit relationships ▪ Other procedure, revenue, diagnosis, dental codes ▪ Modifiers related ▪ Sex, age indicators (by day, month, year) ▪ State Memo effective date with a link to a separate promulgated policy file to obtain policy or related detail information ▪ Any other parameters that drive the edit			Y	D-221	Y
40.6.1.22	Provides capability to upload State-approved HCPCS updates from CMS, including Resource-Based Relative Value Scale (RBRVS)	N	N	N	D-221	Y
40.6.1.23	Provides capability for a procedure code data set that contains the current five-character (5-character) HCPCS/CPT code and can accommodate the future six-character (6-character) HCPCS codes, second-level HCPCS codes, State-specific local Level III codes, and ICD-9 procedure codes and can accommodate the future ICD-10 procedure codes, acceptance of a one-character (1-character) or a two-character (2-character) field for HCPCS pricing modifier(s); and at a minimum, the following elements: ▪ Valid tooth surface codes and tooth number/quadrant designation ▪ Date-specific pricing segments by program code, provider taxonomy, and/or provider type and or specialty ▪ Five (5) date-specific pricing segments, including two (2) occurrences of pricing action ▪ Five (5) status code segments with effective beginning and end dates for each segment	Y			D-221	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Indicator of covered/not-covered and effective and end dates by program code ▪ Allowed amount for each pricing segment ▪ Multiple modifiers and the percentage of the allowed price applicable to each modifier or procedure code/modifier combination ▪ State-specified restrictions on conditions to be met for a claim to be paid, including, but not limited to: o Recipient eligibility o Pricing Action Code o Category of service o Specialty o Lab certification o Recipient age/sex restrictions o Allowed diagnosis codes o Prior approval required o Medical review required o Place of service o Pre- and post-operative days o Appropriate diagnosis o Acceptable place of service o Units of service o Once-in-a-lifetime indicator o Attachments required o Valid provider type/specialty o NDC codes and units					

Requirement #	Requirement Description	A	B	C	D	E
	○ Claim type ○ Purge criteria ○ Provider subspecialty ○ Drug Coverage (effective/term dates) ○ Health Check reporting indicator ○ Family Planning indicator ○ Family Planning Waiver Indicator ▪ Narrative language of procedure codes in both short and long description ▪ Indication of when or whether claims for the procedure can be archived from online history (such as once-in-a-lifetime procedures) ▪ Indication of TPL actions, such as cost avoidance, benefit recovery, or pay and chase by procedure code ▪ Indication of third party payers, non-coverage by managed care organizations by managed care organization type ▪ Other information, such as accident/trauma indicators for possible TPL, Federal cost-sharing indicators, and Medicare coverage indicator					
40.6.1.24	Provides capability to maintain Pharmacy Point-of-Sale (POS) reference files that include: ▪ NDC number ▪ Generic Code Number (GCN) or formulation ID ▪ Generic Code Number-Sequence (GCN-Sequence) or clinical formulation ID ▪ Therapeutic class-specific (TxCL) or Therapeutic class code (General Classification Code 3 [GC3]) ▪ Ingredient list ID (HICL-S, relational and non-relational) ▪ HICL sequence number			Y	D-223	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Med ID ▪ Routed DF Med ID ▪ Routed MED ID ▪ Med Name ID ▪ HIC Sequence ▪ Generic name (GNN) ▪ Ingredient List ID (HICL) ▪ Brand name ▪ Label name ▪ Manufacturer ▪ Enhanced Therapeutic Classification (ETC) system ▪ American Hospital Formulary (AHF) classification ▪ Universal Product Code (UPC) Search criteria should also include edit description, claim exceptions, explanation of benefits (EOBs), and NCPDP rejects.					
40.6.1.25	Provides capability for the procedure code data set to contain a minimum of five (5) years of data to support claims online history	N	N	N	D-224	Y
40.6.1.26	Provides capability to upload annual Diagnosis Related Group (DRG) and Medicare Code Editors (MCE) software based on a Federal fiscal year no later than October 1st each year and report all errors that occur in processing of the annual DRG code update		Y		D-224	Y
40.6.1.27	Provides capability to receive all weekly, biweekly, or daily drug updates from the drug update service vendor and upload within one (1) business day, including all new modules developed by the Vendor	N	N	N	D-224	Y
40.6.1.28	Provides capability to process updates from the contracted or State-owned drug update service upon receipt without overwriting exact updates previously made by the State or at			Y	D-224	Y

Requirement #	Requirement Description	A	B	C	D	E
	the request of the State					
40.6.1.29	Provides capability to produce a report that identifies contracted drug updates bypassed identifying the data on the database and the update received from the State-owned or contracted drug update service			Y	D-224	Y
40.6.1.30	Provides capability for State-specified customized updates to the drug file from a contracted or State-owned drug update service			Y	D-224	Y
40.6.1.31	Provides capability for specific “facility rate times DRG weight” as well as appropriate facility disproportionate share information for inpatient reimbursement annually	N	N	N	D-224	Y
40.6.1.32	Provides capability to maintain rate files for all services and institutional rates to support pricing that conforms to program requirements	N	N	N	D-224	Y
40.6.1.33	Provides capability to create NC Title XIX Tables Manual and Edit Resolution Manuals	N	N	N	D-225	Y
40.6.1.34	Provides capability to apply edit criteria across claim types, provider type, and specialty types of service, provider taxonomy, provider type and/or specialty by procedure code and therapeutic class, generic product indicator, generic code, and all other drug codes		Y		D-225	Y
40.6.1.35	Provides capability to electronically store State-assigned EOB and ESC message descriptions	N	N	N	D-225	Y
40.6.1.36	Provides capability to store unlimited policy changes received via State/Fiscal Agent Memo regarding file changes for procedure codes, diagnosis codes, revenue codes, dental codes, etc.	N	N	N	D-225	Y
40.6.1.37	Provides capability to electronically store accommodation rate data	N	N	N	D-225	Y
40.6.1.38	Provides capability to maintain indefinitely procedure codes that have timeframe limitations	N	N	N	D-225	Y
40.6.1.39	Provides capability to electronically store modifier information with appropriate multiple modifier and payment calculations	N	N	N	D-225	Y

Requirement #	Requirement Description	A	B	C	D	E
40.6.1.40	Provides capability to produce electronic copies of Reference Files				D-225	Y
40.6.1.41	Provides capability to electronically store an unlimited number of pricing files and methodologies by date range that support NC DHHS program requirements	Y			D-226	Y
40.6.1.42	Provides capability to create crosswalk of all claim type/provider type/taxonomy combinations to State, Family Planning, and Federal Categories of Service for all Types of Service	Y			D-226	Y
40.6.1.43	Provides capability to apply State-approved policy to: ▪ HCPCS, including CPT, American Dental Association (ADA) codes, HCPCS Level II codes, NDCs, State local codes, International Classification of Diseases diagnosis and procedure codes (ICD-9) and future ICD codes ▪ Drug codes ▪ Edits ▪ Rate methodology and calculations ▪ Professional services fees	Y			D-226	Y
40.6.1.44	Provides capability for the Replacement MMIS Reference diagnosis file to interface with pharmacy claims processing to ensure that the diagnosis data is the same in both systems	N	N	N	D-226	Y
40.6.1.45	Provides capability to maintain a Reference Modifier File that contains procedure code and modifier information, including sub-database/matrix that supports State/Fiscal Agent staff-authorized access by procedure code and modifier that displays: ▪ Narrative of procedure code ▪ Narrative of modifier, including effective end dates by either date of service, date of processing, or date of receipt ▪ Modifier and narrative applicable to the use of the procedure code/modifier combination	N	N	N	D-226	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Modifier pricing information, including effective end dates by either date of service, date of processing, or date of receipt ▪ Applicable modifier combinations ▪ Applicable procedure/modifier combinations ▪ Applicable providers for each modifier, including effective and end dates					
40.6.1.46	Provides capability to maintain Reference data with all procedure codes and pricing action codes (PAC) that indicate where pricing occurs based on: ▪ Procedure code, type of service, and/or modifier ▪ Provider type, provider specialty, taxonomy, and procedure code ▪ Type of service ▪ Place of service ▪ Provider and per diem rate ▪ Provider, DRG rate, and financial payer ▪ Provider accommodation code ▪ Provider number, percentage of charges, and financial payer ▪ Pharmacy dispensing fee ▪ Enhanced pharmacist professional services fee for performing cognitive services and State-approved interventions ▪ Revenue code ▪ Accommodation code on the Accommodation Rate File ▪ Capitation payments and management fees	N	N	N	D-227	Y
40.6.1.47	Provides capability to indicate whether pricing is performed on the revenue code or the CPT code when a combination of the two is billed	Y			D-227	Y
40.6.1.48	Provides capability to determine if auditing/editing occurs on procedure code or revenue	Y			D-227	Y

Requirement #	Requirement Description	A	B	C	D	E
	code when a combination of revenue code and procedure code is used					
40.6.1.49	Provides capability to search for drugs using the following search criteria: ▪ NDC number ▪ Generic code number or formulation ID ▪ Generic sequence number or clinical formulation ID ▪ Therapeutic class specific or Therapeutic class code ▪ Ingredient list ID (HICL-S, relational and non-relational) ▪ HICL sequence number ▪ Med ID ▪ Routed DF Med ID ▪ Routed Med ID ▪ Med Name ID ▪ HIC Sequence ▪ Generic name (GNN) ▪ Ingredient List ID (HICL) ▪ Brand name ▪ Label name ▪ Manufacturer ▪ Enhanced Therapeutic Classification (ETC) ▪ AHF classification ▪ UPC		Y		D-228	Y
40.6.1.50	Provides capability to search for Drug Utilization Review (DUR) parameter data, drug name, NDC, TxCL, GCN, GCN-Sequence, or State-defined data elements			Y	D-228	Y

Requirement #	Requirement Description	A	B	C	D	E
40.6.1.51	Provides capability for an online, updateable GCN data set to maintain references and associations of drugs with similar indications/therapeutic benefits	N	N	N	D-228	Y
40.6.1.52	Provides capability for an online, updateable GCN data set to identify acute level and duration of a drug before prior approval is required	N	N	N	D-228	Y
40.6.1.53	Provides capability to electronically store and maintain all State-approved pharmacy pricing methodologies	Y			D-228	Y
40.6.1.54	Provides capability to create a crosswalk of HCPCS Level I and Level II codes in the Physician Drug Program (PDP) to NDC/GC3 codes	N	N	N	D-229	Y
40.6.1.55	Provides capability to create a crosswalk of HCPCS Level I and Level II codes to rebateable NDCs	N	N	N	D-229	Y
40.6.1.56	Provides capability to identify Drug Efficacy Study Implementation (DESI) drugs	N	N	N	D-229	
40.6.1.57	Provides capability for State-approved provider maximum reimbursement rates for claims processing to ensure the ability to modify, add, or delete any rates on an individual provider basis or mass provider basis	N	N	N	D-229	
40.6.1.58	Provides capability to electronically store maximum reimbursement rates for DME by procedure code priced for rental or purchase (new or used)	N	N	N	D-229	Y
40.6.1.59	Provides capability to electronically store laboratory maximum reimbursement rates for individual and “panel” laboratory procedures	N	N	N	D-229	Y
40.6.1.60	Provides capability to maintain an online audit trail of all updates to Reference data, including PRO-DUR data, identifying source of the change, CSR number, memo number, before and after images, and change dates to assure State and Federal auditing requirements are met			Y	D-229	Y
40.6.1.61	Provides capability to receive memos from the State online and send memos to the State online for approval	N	N	N	D-229	Y

Requirement #	Requirement Description	A	B	C	D	E
40.6.1.62	Provides capability to electronically store and track State Memos with online status updates	N	N	N	D-229	Y
40.6.1.63	Provides capability to generate an online status report of State Memos	N	N	N	D-229	Y
40.6.1.64	Provides capability for note entry	N	N	N	D-229	Y
40.6.1.65	Provides capability for electronic storage of unlimited policy changes received via State/Fiscal Agent Memos and link to all the memo contents for all record changes				D-229	Y
40.6.1.66	Provides capability to link a State/Fiscal Agent Memo with associated procedure codes			Y	D-230	Y
40.6.1.67**	Provides capability to maintain budget criteria information	N	N	N	D-230	Y
40.6.1.68	Provides capability to replicate rates from one (1) type of provider and service to another like type of provider when the service and rate are equal	N	N	N	D-230	Y
40.6.1.69	Provides capability to supply claims pricing information to the Division of Vocational Rehabilitation and the Division of Services for the Blind			Y	D-230	Y
40.6.1.70	Provides capability to retain MMIS Reference data change requests received from the State in the format received for control, balance, and audit purposes for the life of the Fiscal Agent Contract				D-230	Y
40.6.1.71	Provides capability for a user-controlled method to maintain edit criteria online	Y			D-230	Y
40.6.1.72	Provides capability to access or link with State online policies to facilitate search of policies for changes in CPT and ICD-9/ICD-10 codes			Y	D-230	Y
40.6.1.73	Provides capability for inquiry, entry, and updates to group-level pricing parameters for the determination of pharmacy reimbursement calculations	N	N	N	D-230	Y
40.6.1.74	Provides capability to maintain and electronically store pharmacy pricing methodologies to appropriately price claims according to the appropriate financial payer or population	Y			D-231	Y

Requirement #	Requirement Description	A	B	C	D	E
	according to State policy and business rules					
40.6.1.75	Provides capability to maintain and electronically store new pricing methodologies, criteria, and/or parameters	Y			D-231	Y
40.6.1.76	Provides capability to search for drug data using as primary search criteria: ▪ NDC ▪ Generic code number ▪ Generic sequence number ▪ Therapeutic class ▪ Drug name ▪ Any State-identified First DataBank (FDB) data element			Y	D-231	Y
40.6.1.77	Provides capability for inquiry, entry, and updates of existing and new drug data for a specific drug	N	N	N	D-231	Y
40.6.1.78	Provides capability to search for claim exception parameter data using primary and/or secondary search criteria		Y		D-231	Y
40.6.1.79	Provides capability to search by phonetic and partial description or user-defined selection criteria	N	N	N	D-231	Y
40.6.1.80	Provides capability to electronically store and update drug rates on a schedule determined by the State that allows drug price indicator to be turned on or off for coverage	Y			D-231	Y
40.6.1.81	Provides capability to restrict pharmacy services according to State policy and business rules	N	N	N	D-232	Y
40.6.1.82	Provides capability to handle recipient opt-in to specified lock-in pharmacies according to State policy and business rules	N	N	N	D-232	Y

Requirement #	Requirement Description	A	B	C	D	E
40.6.1.83	Provides capability to electronically store and maintain the Prescription Advantage List (PAL) tiers	N	N	N	D-232	Y
40.6.1.84	Provides capability to maintain and use list of Medicare Part D drugs for dual-eligible recipients according to State policy and business rules	Y			D-232	Y
40.6.1.85	Provides capability to search inquiry, entry, and updates for step care data	N	N	N	D-232	Y
40.6.1.86	Provides capability for inquiry, entry, and updates to a list of preferred agents for a specific step care plan	N	N	N	D-232	Y
40.6.1.87	Provides capability to ensure that all prior approval requirements and associated edits and audits are linked	Y			D-232	Y
40.6.1.88	Provides an online separate file in the Prior Approval business area that includes all services that require prior approval with a minimum of code, definition, initial date the prior approval was required, and end date when prior approval is no longer required			Y	D-232	Y
40.6.1.89	Provides capability to create Fee Schedule reports detailed in the bullets below: ▪ Adult Care Home Personal Care ▪ Ambulance ▪ Ambulatory Surgical Centers/Birthing Centers ▪ Behavioral Health (separate schedules) ▪ Certified Clinical Supervisor and Addictions Specialist ▪ Children's Developmental Service Agencies ▪ Licensed Clinical Social Worker and Licensed Professional Counselor and Licensed Marriage and Family Therapist ▪ Licensed Psychological Associate ▪ Mental Health Enhanced Services			Y	D-232	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Mental Health (LME) ▪ Mental Health Non-Licensed Clinical Fee Schedule ▪ Nurse Practitioner ▪ Nurse Specialist ▪ Prospective Rates ▪ Psychologist ▪ Residential Treatment Level III and IV ▪ Community Alternatives Program (CAP) Rates (separate rates) ▪ CAP/AIDS ▪ CAP/Children ▪ CAP/DA ▪ CAP/Mentally Retarded-Development Disability (MR-DD) ▪ DRG Weight Table ▪ Dental Services ▪ Durable Medical Equipment ▪ Federally Qualified Health Center ▪ Home Health Agency Services ▪ Home Infusion Therapy ▪ Hospice ▪ Local Education Agency Practitioners ▪ Local Health Department ▪ Multi-specialty Independent Practitioner ▪ Nursing Facility Rates					

Requirement #	Requirement Description	A	B	C	D	E
	▪ Occupational Therapy ▪ Orthotics and Prosthetics ▪ Physical Therapy ▪ Physician Drug Program ▪ Respiratory Therapy ▪ Rural Health Center ▪ Speech and Audiology Services					
40.6.1.90	Provides capability to create fee schedules and related rate reports for State users and division Web site, including: ▪ Dialysis Centers ▪ Nurse Midwife ▪ Portable X-ray ▪ Optical and Visual Aids ▪ Private Duty Nursing ▪ Targeted Case Management	N	N	N	D-234	Y
40.6.1.91	Provides capability to create rate reports for internal State use only, including: ▪ Lower Level NF Rates ▪ Outpatient Hospital Pricing, Ratio-Cost-to-Charge ▪ Nursing Facility Rates			Y	D-234	Y
40.6.1.92	Provides capability to electronically store a daily file of county DSS mailing addresses			Y	D-234	Y
New Requirement 40.6.1.93	Provides capability to calculate selected physician fee schedule records based on periodic Resource-Based Relative Value Scale (RBRVS) updates	N	N	N	D-234	Y

40.6.2 Reference Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.6.2.1	Fiscal Agent shall log receipt date of each Reference File maintenance request, file maintenance initiation completion date, operator completing request, and supervisor validation date.	N	N	N	D-630	Y
40.6.2.2	Fiscal Agent shall notify the State in writing when a file maintenance request has not been made in accordance with the State Memo and/or as applicable to the contractual performance criteria.				D-630	Y
40.6.2.3	Fiscal Agent shall maintain procedure code updates and applicable editing data as directed by the State or upon receipt of all pertinent information requested from the State; produce before and after images; and return them to the originator of the State request.	N	N	N	D-630	Y
40.6.2.4	Fiscal Agent shall retain MMIS Reference data change requests received from the State in the format received for control, balance, and audit purposes for the life of the Fiscal Agent Contract.				D-630	Y
40.6.2.5	Fiscal Agent shall verify the accuracy of all file maintenance activities; produce weekly reports that summarize, by operator, file maintenance activities, including timeliness of updates and operator accuracy; reports shall be made available to the Contract Monitoring Unit by 7:00 A.M. Eastern Time each Monday following the update activity.	N	N	N	D-631	Y
40.6.2.6	Fiscal Agent shall perform research and analysis for adjudication and policy issues.				D-631	Y
40.6.2.7	Fiscal Agent shall analyze the appropriateness of the cross-reference of new CPT codes and ICD-9/ICD-10 codes to MMIS edits and audits and make recommendations to the State for incorporation of the codes into the established edit criteria or for additional edits/audits as appropriate.				D-631	Y
40.6.2.8	Fiscal Agent shall update edit criteria and all applicable documentation and notify the State when updates occur.	N	N	N	D-631	Y
40.6.2.9	Fiscal Agent shall provide PAL tiers information for provider inquiries.	N	N	N	D-631	Y

Requirement #	Requirement Description	A	B	C	D	E
40.6.2.10	Fiscal Agent shall notify providers of DESI drug denials of payment through the Pharmacy Newsletter or other State-approved medium for communication.				D-631	Y

40.6.3 Reference Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.6.3.1	Fiscal Agent shall initiate all Reference File maintenance requests within one (1) State business day of receipt of a request and complete such maintenance according to State-defined timeframe: ▪ Online updates within two (2) State business days of receipt ▪ Mass adjustments within two (2) claims cycles ▪ Other within timeframe, as directed by the State.	N	N	N	D-633	Y
40.6.3.2	Fiscal Agent shall apply Reference File updates (mass updates and subscription service updates) to the Replacement MMIS according to State-defined schedule.	N	N	N	D-633	Y
40.6.3.3	Fiscal Agent shall notify the State in writing when a file maintenance request has not been completed, as directed by the State.				D-633	Y
40.6.3.4	Fiscal Agent shall produce before and after images and return them to the originator of the State Memo the same day the change is made.	N	N	N	D-634	Y
40.6.3.5	Fiscal Agent shall verify the accuracy of all file maintenance activities, producing weekly reports for the Contract Monitoring Unit by 7:00 A.M. Eastern Time each State business Monday.	N	N	N	D-634	Y

40.7 Prior Approval Requirements

40.7.1 Prior Approval System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.7.1.1	Provides capability to receive and adjudicate prior approval requests and adjustments	N	N	N	D-248	Y
40.7.1.2	Provides capability to integrate prior approval functionality for all applicable claims and benefit plans (services and drugs)	N	N	N	D-248	Y
40.7.1.3	Provides capability for secure electronic submissions of adjudicated Prior Approval data from State-contracted Prior Approval vendors		Y		D-249	Y
40.7.1.4	Provides capability for receipt and response of prior approval and referral requests and adjustments via a secure electronic transmission medium, such as AVRS/IVR, Web, ASC X12 278 transactions, and/or NCPDP		Y		D-249	Y
40.7.1.5	Provides capability to receive and manage prior approval, override, and referral requests via telephone, mail, and fax		Y		D-249	Y
40.7.1.6	Provides capability to create and maintain electronic copies of all prior approval, override, and referral requests and all supporting documentation, including medical photographs		Y		D-249	Y
40.7.1.7	Provides capability to electronically link supporting documentation to prior approval, override, and referral request for on-demand online retrieval by staff		Y		D-249	Y
40.7.1.8	Provides capability for real-time, online prior approval and referral adjudication and notification of response via secure electronic transmission medium, such as AVRS/IVR, Web, ASC X12 278 transactions, and/or NCPDP		Y		D-249	Y
40.7.1.9	Provides capability to review online claims and stored electronic health information	N	N	N	D-249	Y
40.7.1.10	Provides capability for automated screening of drug claims to ensure that evidenced-based, drug-specific criteria are met for pharmacy claims, medical claims data (ICD-9/ICD-10, revenue, and CPT codes), laboratory data, and eligibility data		Y		D-249	Y

Requirement #	Requirement Description	A	B	C	D	E
40.7.1.11	Provides capability for entry, inquiry, updates, and reporting for prior approvals, overrides, and referrals		Y		D-250	Y
40.7.1.12**	Provides capability to manage and adjudicate prior approval requests for individuals who are not currently on the Recipient File		Y		D-250	Y
40.7.1.13	Provides capability for entry and adjudication of prior approval request by LOB	N	N	N	D-250	Y
40.7.1.14	Provides capability for online, real-time update and adjudication of prior approval requests by State and State Prior Approval contractors	N	N	N	D-250	Y
40.7.1.15	Provides capability for interface with State-contracted Prior Approval vendors to accept adjudicated prior approvals		Y		D-250	Y
40.7.1.16	Provides capability for interface with the contracted Pre-Admission, Screening, and Annual Resident Review (PASARR) Vendor and retain PASARR number and associated start/end dates		Y		D-250	Y
40.7.1.17	Provides capability to retain the relationship of recipient-based hospice information (recipient, diagnosis, provider, and coverage dates)		Y		D-250	Y
40.7.1.18	Provides capability for a secure online entry of overrides and referrals	N	N	N	D-251	Y
40.7.1.19	Provides capability to enter comments (free-form text) within a prior approval, referral, or override	N	N	N	D-251	Y
40.7.1.20	Provides capability for online inquiry, data entry, and update access for prior approval, referral, and override requests 6:00 A.M. until 11:00 P.M. Eastern Time Monday through Friday and 7:00 A.M. to 7:00 P.M. on Saturday and Sunday	N	N	N	D-251	Y
40.7.1.21	Provides capability for tracking prior approval date of receipt, date of decision, denial/reduction in service reason, and decision notification date	N	N	N	D-251	Y
40.7.1.22	Provides capability for tracking override date and time of receipt and date decision was	N	N	N	D-251	Y

Requirement #	Requirement Description	A	B	C	D	E
	rendered					
40.7.1.23	Provides capability to generate Prior Approval statistical processing report detailing contracted Prior Approval vendors' submissions that indicates the date and time file received, date and time processed, number of transactions received, number of transactions processed, number of transactions updated, and number of transaction errors, listing each error transaction and error reason		Y		D-251	Y
40.7.1.24	Provides capability to ensure each keyed prior approval, referral, and override by Fiscal Agent, State agency, or vendor has complete audit trail	N	N	N	D-251	Y
40.7.1.25	Provides capability to enter prior approval, referral, and override services and limitations		Y		D-251	Y
40.7.1.26	Provides capability to retain prior approvals for each State program's recipients for five (5) years from last occurrence online and an additional five (5) years near-line; provides capability to maintain all usage by recipient for those benefits that are considered to be periodical or lifetime	N	N	N	D-251	Y
40.7.1.27	Provides capability to retain overrides and referrals for each recipient for five (5) years from last occurrence online and an additional five (5) years near-line	N	N	N	D-252	Y
40.7.1.28	Provides capability to assign system-generated unique prior approval, referral, and override numbers to approved, pended, and denied requests	N	N	N	D-252	Y
40.7.1.29**	Provides capability to encumber funds associated with approved prior approval/authorizations		Y		D-252	Y
40.7.1.30**	Provides capability to establish variable recipient co-pay percentages on a prior approval		Y		D-252	Y
40.7.1.31	Provides capability for incrementing approved units, Prior Approval pricing amounts, and frequencies of authorizations resulting from adjusted claims and voided claims or fully refunded claims back to the Prior Approval data	N	N	N	D-252	Y
40.7.1.32	Provides capability for decrementing approved units, Prior Approval pricing amounts, and frequencies of authorizations of services reimbursed from paid claims, adjusted claims,	N	N	N	D-252	Y

Requirement #	Requirement Description	A	B	C	D	E
	and fully refunded claims to Prior Approval data until all services are used up or zero units remaining within approved timeframe in which time closure of prior approval should occur					
40.7.1.33	Provides capability to generate letters of notification for approved, denied, reduced, or pended prior approval requests	N	N	N	D-252	Y
40.7.1.34	Provides capability for automated denial of prior approval and referral requests for providers who are determined to be on suspension or under review		Y		D-252	Y
40.7.1.35	Provides capability to request prior approval recipient profiles by name, recipient ID number, specific or range of time from five-year (5-year) Prior Approval history online; near-line five (5) years and lifetime procedures in State-approved format		Y		D-253	Y
40.7.1.36	Provides capability to apply Prior Approval logic by LOB, benefit, and recipient eligibility category	N	N	N	D-253	Y
40.7.1.37	Provides capability for online, updateable letter templates to all prior approval letters with the ability to add free-form text specific to a provider or recipient	N	N	N	D-253	Y
	Prior Approval Customer Service Center					
40.7.1.38	Provides capability to support inquiries regarding prior approval, referrals and overrides from physicians, pharmacists, recipients, and other health care professionals	N	N	N	D-253	Y
40.7.1.39	Provides capability to generate a prior approval to limit drug claims for a specific NDC, GCN, GCN-Sequence, GC3 therapeutic class, American Hospital Formulary Service (AHFS) therapeutic class, or any other State-determined FDB-selected data element		Y		D-253	Y
40.7.1.40	Provides capability to change services authorized and to extend or limit the effective dates of the authorization while maintaining the original and the change data on the prior approval, referral, or override	N	N	N	D-254	Y
40.7.1.41	Provides capability to search prior approval and overrides by service type, name of		Y		D-254	Y

Requirement #	Requirement Description	A	B	C	D	E
	provider (issuing and authorized), provider number, name of recipient, recipient number, prior approval and override number, category of service, clerk identification, effective dates, prior approval type, diagnosis, HCPCS, or revenue code and any combinations thereof					
40.7.1.42	Provides capability to search referrals by recipient ID, referring provider ID, referred provider ID, and referral number		Y		D-254	Y
40.7.1.43	Provides capability to validate the need for prior approvals based upon NDC, GCN, GCN-Sequence, GC3 therapeutic class, AHFS therapeutic class, or any other State-determined FDB-selected data element		Y		D-254	Y
40.7.1.44	Provides capability to dispense a seventy-two-hour (72-hour) supply of drugs without prior approval in emergency situations	N	N	N	D-254	Y
40.7.1.45	Provides capability to tie in the date of delivery to the Prior Approval logic for Medicaid for Pregnant Women (MPW) (actually requiring prior approval for anything but postpartum care after the date of delivery)		Y		D-254	Y
40.7.1.46	Provides capability for inquiry and update of prior approval, overrides, and referrals reason/exception codes and descriptions	N	N	N	D-254	Y
40.7.1.47	Provides capability to edit DME prior approvals online to include: ▪ Valid provider identification and eligibility, including other payers and place of residence ▪ Valid recipient age for service ▪ Duplicate approval check for previously authorized or previously adjudicated services, including the same service over the same timeframe by different providers		Y		D-254	Y
40.7.1.48	Provides capability to maintain multiple referral types		Y		D-254	Y
40.7.1.49	Provides capability for data validation and duplicate prior approval, referral, and override		Y		D-255	Y

Requirement #	Requirement Description	A	B	C	D	E
	editing					
40.71.50	Provides capability for authorized users to search for a provider number for purposes of authorizing a referral	N	N	N	D-255	Y
40.7.1.51	Provides capability to make available to a provider, his/her last twenty-five (25) unique referred-to provider IDs and provider names used during the submission of referrals via Web entry		Y		D-255	Y
40.7.1.52	Provides capability to return to the provider, upon successful submission of a referral, a confirmation page in a readable PDF format		Y		D-255	Y
40.7.1.53	Provides capability to allow the referring provider and the referred-to provider to inquire on referrals		Y		D-255	Y
40.7.1.54	Provides capability to produce a report that lists all open referrals not used within a specified period of time		Y		D-255	Y
40.7.1.55	Provides capability for a monthly report that lists the total number of referrals processed within a given month, broken out by referral media type and referral type		Y		D-255	Y
40.7.1.56	Provides capability for workflow imaging application, to enable automated processing and work queue functionality for prior approvals and overrides		Y		D-255	Y
	Searching and Tracking of Therapeutic Leave					
40.7.1.57	Provides capability for online searchable tracking of therapeutic leave in child care facilities, nursing facilities, and intermediate care facilities for the mentally retarded (ICF-MR) by patient identification number and number of days used per calendar year to State staff		**Y**		D-256	Y
	Pharmacy Benefits Management					
40.7.1.58	Provides capability for workflow imaging and work queue functionality to ensure that prior approval requests are listed in each work queue based on first in, first out		Y		D-256	Y

Requirement #	Requirement Description	A	B	C	D	E
40.7.1.59	Provides capability to generate adjudicated prior approval appeal letters to recipients and providers when prior approval was denied or reduced	N	N	N	D-256	Y
40.7.1.60	Provides capability to identify and capture recipient drug information where aberrant drug patterns have been identified		Y		D-256	Y
40.7.1.61	Provides capability for providers to link to the DHHS Web site to obtain the current Prescription Advantage List (PAL) and other pharmacy-related information		Y		D-256	Y
40.7.1.62	Provides capability to ensure verification of recipient eligibility, provider program participation, and third party coverage during adjudication of prior approvals		Y		D-256	Y
40.7.1.63	Provides a prior approval Web site (prior approval-enhanced pharmacy program Web site to include: Home page/Welcome page, What's New section, prior approval list/criteria, prior approval forms, authorization via e-mail, provider information, FAQs, Contact Us page, link to NC Medicaid Home page), and PAL, including upgrades to drug list, updates to criteria, EBM prescriber updates to clinical pearls, and updates to information for providers and recipients		Y		D-257	Y
40.7.1.64	Provides for search capability of covered drugs by: • Effective, termination, or a range of dates • NDC. Generic name, brand name • HICL, HICL-Sequence, HICL code, GCN, GCN-Sequence, GNN, label name manufacturer, UPC, GC3, TxCL, AHF		Y		D-257	Y

40.7.2 Prior Approval Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.7.2.1	Fiscal Agent shall record telephone pharmacy prior approval requests in the same format	N	N	N	D-639	Y

Requirement #	Requirement Description	A	B	C	D	E
	as the pharmacy paper/facsimile hard copy version.					
40.7.2.2	Fiscal Agent shall enter each prior approval request online to include the following: receipt date of each prior approval request made to the Fiscal Agent, denial code, decision date, and mailing date of decision.	N	N	N	D-640	Y
40.7.2.3	Fiscal Agent shall adjudicate prior approvals and mail system-generated disposition letters.	N	N	N	D-640	Y
40.7.2.4	Fiscal Agent shall receive and determine resolution (e.g. approval, denial, or pending) of prior approval and override requests, including retroactive requests based on State-approved medical criteria and medical judgment.	N	N	N	D-640	Y
40.7.2.5	Fiscal Agent shall notify the State via a quarterly report of the number of prior approval requests received, number entered into the system within one (1) State business day, and the number entered into the system after more than one (1) State business day.	N	N	N	D-640	Y
40.7.2.6	Fiscal Agent shall provide a weekly batch processing report that indicates the date and time the file was received, date and time processed, number of transactions received, number of transactions processed, number of transactions updated, and number of transactions errored, listing each error transaction and error reason.	N	N	N	D-640	Y
40.7.2.7	Fiscal Agent shall notify the State monthly when it takes more than one (1) business day from receipt to process and render a decision on a non-emergency prior approval and override request that does not require additional research or additional information.	N	N	N	D-640	Y
40.7.2.8	Fiscal Agent shall notify the State monthly when it takes more than one (1) business day from receipt of all required information to process and render a decision on a non-emergency prior approval and override request that required additional information or research.	N	N	N	D-641	Y
40.7.2.9	Fiscal Agent shall notify the State when it takes more than five (5) business days to process, render a decision, and mail a status report on a prior approval request for retrospective and therapeutic days.	N	N	N	D-641	Y

Requirement #	Requirement Description	A	B	C	D	E
40.7.2.10	Fiscal Agent shall provide the capability for authorized services to be flagged for pre-payment review.	N	N	N	D-641	Y
40.7.2.11	Fiscal Agent shall represent the State throughout the hearing/appeals process for all prior approval decisions made by the Fiscal Agent. Fiscal Agent shall attend Office of Administrative Hearings Representation and must include the Fiscal Agent staff that rendered the final decision of denial.				D-641	Y
40.7.2.12	Fiscal Agent shall perform long-term care facility on-site visits with or without State staff as requested for specific provider problems.				D-641	Y
40.7.2.13	Fiscal Agent shall evaluate and determine prior approval adjudication for: ▪ Eye exams or refraction ▪ Visual aids ▪ Hearing aids, accessories, ear molds, FM systems, repairs ▪ Dental and orthodontics ▪ Hyperbaric oxygenation therapy ▪ Blepharoplasty/blepharoptosis eyelid repair ▪ Panniculectomy ▪ Breast surgery ▪ Clinical severe obesity surgery ▪ Lingual frenulum surgery ▪ Stereotactic pallidotomy ▪ Electrical osteogenic stimulators ▪ Keloids ▪ Craniofacial/facial surgeries ▪ Out-of-state ambulance	N	N	N	D-641	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Rhinoplasty ▪ Chiropractic and podiatry ▪ Durable medical equipment ▪ Orthotics and prosthetics ▪ Pharmacy ▪ All services for DPH payment programs					
40.7.2.14	Fiscal Agent shall present prior approval, referral, and override information and provide education at provider workshops.				D-642	Y
40.7.2.15	Fiscal Agent shall respond to and resolve all phone inquiries/questions from recipients, providers, Office of Citizen Services, and manufacturers pertaining to pharmacy drug-related issues and concerns.	N	N	N	D-642	**Y**
40.7.2.16	Fiscal Agent shall ensure that the Pharmacy Prior Approval Customer Service Center is available from 7:00 A.M. until 11:00 P.M. Eastern Time on State business days Monday through Friday, and from 7:00 A.M. until 6:00 P.M. Eastern Time on Saturday and Sunday.	N	N	N	D-642	**Y**
40.7.2.17	Fiscal Agent shall ensure that the non-pharmacy Customer Service Center is available for prior approval, referral and override requests from 7:00 A.M. until 7:00 P.M. Eastern Time Monday through Friday and from 8:00 A.M. until 5:00 P.M. Eastern Time on Saturday				D-642	Y
40.7.2.18	Fiscal Agent shall ensure that adequate prior approval staff, including a clinical pharmacist, is on-site during all hours of call center operation (including evenings and weekends).				D-642	Y
40.7.2.19	Fiscal Agent shall locate a Prior Approval Customer Service Center within the State-approved Fiscal Agent's local facility unless otherwise approved by the State.				D-642	Y
40.7.2.20	Fiscal Agent shall provide capability to receive prior approval requests for stem cell and bone marrow transplants. If all clinical information is included in the request, then the				D-643	Y

Requirement #	Requirement Description	A	B	C	D	E
	Fiscal Agent forwards the request to the DMA Hospital Consultant for review. If all clinical information is not included in the request, the Fiscal Agent must contact the requesting provider for additional clinical information before forwarding the request to the DMA Hospital Consultant for review.					
40.7.2.21	Fiscal Agent shall provide training for Prior Approval Vendors and State staff.				D-643	Y
40.7.2.22	Fiscal Agent shall ensure verification of recipient eligibility, provider program participation, and third party coverage during adjudication of prior approvals.	N	N	N	D-643	Y
40.7.2.23	Fiscal Agent shall ensure automated prior approval adjudication is not available when TPL coverage exists for recipient. Manual review and verification of coverage must be conducted to determine prior approval authorization.			Y	D-643	Y
40.7.2.24	Fiscal Agent shall provide for toll-free telephone and fax number access for providers to request prior approvals, referrals, and overrides				D-643	Y
	Pharmacy Benefits Management					
40.7.2.25	Fiscal Agent shall prepare the CMS Annual Report that includes all information, charts, and statistics relating/pertaining to the Prospective and Retrospective DUR Programs in the format and media as directed by the State.	N	N	N	D-644	Y
40.7.2.26	Fiscal Agent shall coordinate with the DUR Contractor to assure functionality of the Pharmacy Point-of-Sale Business Area, including adding edits, PRO-DUR informational alerts and intervention, conflict, and outcome codes (NCPDP 5.1 standards) and shall assist DUR Vendor with the Retrospective DUR Program.				D-644	Y
40.7.2.27	Fiscal Agent shall provide for updating clinical data, dosing limits to DUR alerts, changes in GCN, GCN-Sequence, weekly DUR file updates, and State-selected FDB data elements.	N	N	N	D-645	Y
40.7.2.28	Fiscal Agent shall prepare monthly Pharmacy Newsletter for State approval and distribute as directed by the State.				D-645	Y

Requirement #	Requirement Description	A	B	C	D	E
40.7.2.29	Fiscal Agent shall ensure daily supervisor signoffs of each Pharmacy Prior Approval Service Representative work queue transferring any prior approvals to the next shift's work queue to ensure performance standards are met.				D-645	Y
40.7.2.30	Fiscal Agent shall coordinate with the State's Drug Utilization Review Vendor or the State to ensure appropriate Pharmacy POS alerts for potential drug therapy problems are identified; shall meet each month; and shall prepare meeting minutes.	N	N	N	D-645	Y
40.7.2.31	Fiscal Agent shall post on the Web site the EBM updates to PAL clinical pearls.	N	N	N	D-645	Y
40.7.2.32	Fiscal Agent shall maintain the Prior Approval Web site that will contain the State Maximum Allowable Cost (SMAC) list and linkage to the Drug Effective Review Process (DERP) reports.				D-645	Y
40.7.2.33	Fiscal Agent shall notify DMA weekly of new drugs with recommended criteria/protocol that become available in the marketplace that are in the same classes as those drugs included in the Prior Approval drug list and PAL.				D-645	Y
40.7.2.34	Fiscal Agent shall develop criteria-driven recommendations for each new drug within an existing Prior Approval therapeutic class category.				D-646	Y
40.7.2.35	Fiscal Agent shall coordinate with the State's Retrospective DUR Vendor or the State to capture claim data specific to aberrant drug patterns; shall meet each month; and shall prepare meeting minutes.	N	N	N	D-646	Y
40.7.2.36	Fiscal Agent shall coordinate with the State's Community Care Program to prevent duplication or fragmentation of effort related to pharmacy benefit coverage; shall meet each month; and shall prepare meeting minutes.				D-646	Y
40.7.2.37	Fiscal Agent shall adjudicate provider appeals.	N	N	N	D-646	Y
40.7.2.38	Fiscal Agent shall prepare monthly Pharmacy Bulletin/Newsletter information for State approval in format, content, and media as directed by the State, including the production, updating of preferred drug lists, prior approvals and lists, and other informational				D-646	Y

Requirement #	Requirement Description	A	B	C	D	E
	materials for prescribers.					
40.7.2.39	Fiscal Agent shall provide for dispensing and reimbursement of a seventy-two-hour (72-hour) supply of prior approval drug in emergency situations.	N	N	N	D-646	Y
40.7.2.40	Fiscal Agent shall identify pharmacy provider training issues related to prior approvals and shall address at workshops	N	N	N	D-646	Y
40.7.2.41	Fiscal Agent shall make recommendations to the State on drugs for a preferred drug list and drugs for which prior approval and/or step therapy protocols would be appropriate. The list shall be based on utilization patterns and shall take into consideration clinical value, recipient and provider disruption, and cost savings.				D-646	Y
40.7.2.42	Fiscal Agent shall add the new drug(s) to their respective therapeutic Prior Approval categories and to add new Prior Approval categories after final approval and notification from DMA; updates must be included on Web site within forty-eight (48) hours of notification.	N	N	N	D-646	Y

40.7.3 Prior Approval Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.7.3.1	Fiscal Agent shall update the Prior Approval business area with all prior approval results received from other entities within twenty-four (24) hours of receipt from each entity, except Fridays, when the updates shall be available by 7:00 A.M. Eastern Time on the following Monday.	N	N	N	D-647	Y
40.7.3.2	Fiscal Agent shall render a decision for non-pharmacy prior approval within one (1) State business days of the receipt of all of the required information or research for non-emergency prior approval requests.	N	N	N	D-647	Y
40.7.3.3	Fiscal Agent shall generate and mail prior approval decisions to appropriate designees within two (2) State business days of rendering a decision.	N	N	N	D-648	Y

Requirement #	Requirement Description	A	B	C	D	E
40.7.3.4	Fiscal Agent shall apply the State Prior Approval Policy with ninety-nine and nine-tenths (99.9) percent accuracy rate based on the information available when rendering a prior approval decision.	N	N	N	D-648	Y
40.7.3.5	Fiscal Agent shall provide online inquiry and data entry to the Prior Approval data to providers, Fiscal Agent staff, and State-designated staff from 6:00 A.M. until 11:00 P.M. Eastern Time Monday through Friday and 7:00 A.M. to 7:00 P.M. on Saturday and Sunday ninety-nine and nine-tenths (99.9) percent of the time.	N	N	N	D-648	Y
40.7.3.6**	Fiscal Agent shall provide online inquiry and data entry to the Prior Approval data to AP/LME staff and State-designated staff from 7:00 A.M. until 7:00 P.M. Eastern Time Monday through Friday ninety-nine and nine-tenths (99.9) percent of the time.	N	N	N	D-648	Y
40.7.3.7	Fiscal Agent shall provide online Prior Approval for Pharmacy Prior Approval from 7:00 A.M. to 11:00 P.M. Eastern Time Monday through Friday and 7:00 A.M. to 6:00 P.M. Eastern Time Saturday and Sunday ninety-nine and nine-tenths (99.9) percent of the time.	N	N	N	D-648	Y
40.7.3.8	Fiscal Agent shall produce system-generated letters to recipients and providers of the status of prior approval requests within twenty-four (24) hours from the time of receipt.	N	N	N	D-648	Y
40.7.3.9	Fiscal Agent shall produce weekly Pharmacy Alerts.	N	N	N	D-648	Y
40.7.3.10	Fiscal Agent shall adjudicate each complete pharmacy prior approval request within one (1) State business day of receipt.	N	N	N	D-648	Y
40.7.3.11	Fiscal Agent shall meet monthly with DUR, the State and/or Retrospective DUR vendors and Community Care Program and include minutes in bi-weekly Project Status Report.	N	N	N	D-648	Y
40.7.3.12	Fiscal Agent shall adjudicate provider pharmacy prior approval request appeals within one (1) State business days of receipt.	N	N	N	D-649	Y
40.7.3.13	Fiscal Agent shall respond to a requesting provider within one (1) hour for a telephone request for an emergency override.	N	N	N	D-649	Y

40.8 Claims Processing Requirements

40.8.1 Claims Processing System Requirements

Requirement #	Requirement Description	A	B	C	D	E
	Mailroom					
40.8.1.1	Provides capability for mechanized date stamping of all mail				D-287	Y
40.8.1.2	Provides capability to access system for logging receipt of packages and envelopes received from couriers				D-287	Y
40.8.1.3	Provides capability to access system log for entering checks received	N	N	N	D-287	Y
40.8.1.4	Provides capability for system-generated logging of regular mail costs		Y		D-287	**Y**
40.8.1.5	Provides capability for automated Return to Provider (RTP) letter		Y		D-287	**Y**
40.8.1.6	Provides capability for automated system log/accounting for mailroom		Y		D-287	**Y**
	Claim Acquisition					
40.8.1.7	Provides capability to assign a unique number for each claim, adjustment, and financial transaction that contains date of receipt, batch number, and sequence of document within the batch, upon receipt of each claim and adjustment	N	N	N	D-288	Y
40.8.1.8	Provides capability for tracking of all claims, adjustments, and financial transactions from receipt to final disposition	N	N	N	D-288	Y
40.8.1.9	Provides capability for mechanized images of all claims, attachments, adjustment requests, and other claims-related documents and ability to link these documents to the unique claim number they are associated with	N	N	N	D-288	Y
40.8.1.10	Provides capability to maintain batch and online entry controls for all claims, batch audit trails, and all other transactions entered into the system	N	N	N	D-288	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.11	Provides capability to identify any activated claim batches that fail to balance to control counts	N	N	N	D-288	Y
40.8.1.12	Provides capability for editing to prevent duplicate entry of electronic media claims	N	N	N	D-288	Y
40.8.1.13	Provides capability to perform CLIA editing based on the provider CLIA number and the CLIA number for the service	N	N	N	D-288	Y
40.8.1.14	Provides capability to perform diagnosis editing by line item	N	N	N	D-289	Y
40.8.1.15	Provides capability to adjudicate a claim to the fullest extent possible in order to report all errors	N	N	N	D-289	Y
40.8.1.16	Provides capability to adjudicate claims for Medicare Part D dual-eligible recipients according to State business rules and policies	Y			D-289	Y
40.8.1.17	Provides capability for key re-verification of critical fields, data entry software editing, and supervisor audit verification of keyed claims	N	N	N	D-289	Y
40.8.1.18	Provides capability to maintain extract tables that contain key elements to verify the validity of entered claim information	Y			D-289	Y
40.8.1.19	Provides capability to perform presence and format editing on all entered claims	N	N	N	D-289	Y
40.8.1.20	Provides capability to perform validity editing on all entered claims using current information on Provider, Recipient, Claims History, Prior Approval, and Reference Files or business area/interfaces	N	N	N	D-289	Y
40.8.1.21	Provides capability to support the Medicare Correct Coding Initiative (CCI)	Y			D-289	Y
40.8.1.22	Provides capability for front-end claim, adjustment, or crossover denials when required attachments are not present	N	N	N	D-289	Y
40.8.1.23	Provides capability to generate RTP letters with entry available to denote front-end claim				D-290	Y

Requirement #	Requirement Description	A	B	C	D	E
	error conditions					
40.8.1.24	Provides capability for individual paper and electronic claim overrides on edits such as presumptive eligibility, Medicare A, B, and C, HMO coverage, TPL, and timely filing limit	N	N	N	D-290	Y
40.8.1.25	Provides capability to override service limitations for Early Periodic Screening, Diagnosis, and Treatment (EPSDT) -eligible recipients	N	N	N	D-290	Y
40.8.1.26	Provides capability to identify and allow online correction to claims suspended as a result of data entry errors	N	N	N	D-290	Y
40.8.1.27	Provides capability to return to submitters an acknowledgement of all electronic submissions and claim status within twenty-four (24) hours of original receipt	N	N	N	D-290	Y
40.8.1.28	Provides capability to pre-screen batch electronic media claims to identify global error conditions and prevent entry of such claims into the system	Y			D-290	Y
40.8.1.29	Provides capability to reject electronic claims at the claim level	Y			D-290	Y
40.8.1.30	Provides capability to process claims and financial transaction adjustments	N	N	N	D-290	Y
40.8.1.31	Provides capability to perform duplicate editing of drugs billed by physicians and pharmacy	Y			D-290	Y
40.8.1.32	Provides capability to use transfer of assets data on the Medicaid recipient record in claims processing			Y	D-291	Y
40.8.1.33	Provides capability to populate each claim detail with appropriate header level EOB	N	N	N	D-291	Y
40.8.1.34	Provides capability to use Medicaid/Medicare coverage data from EIS to adjudicate claims	Y			D-291	Y
40.8.1.35	Provides capability to update the Claims History tables with paid and denied claims from the previous audit run	N	N	N	D-291	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.36	Provides capability for inquiry on suspended claims, accessible for online inquiry	N	N	N	D-291	Y
40.8.1.37	Provides capability to accept the indicator denoting whether a third party was billed for TPL claims	N	N	N	D-291	Y
40.8.1.38	Provides capability to use EDB and BENDEX information to detect Medicare and Medicare HMO entitlement for use in claims processing	N	N	N	D-291	Y
40.8.1.39**	Provides capability to define parameters and create a file for the negative and positive eligibility quality control sampling for DMH			Y	D-291	Y
40.8.1.40**	Provides capability to produce reports regarding the results of the DMH negative and positive sampling			Y	D-291	Y
40.8.1.41**	Provides capability to accept an MEQC positive sample file from DMA via DIRM			Y	D-291	Y
40.8.1.42	Provides capability to produce claim history reports using the MEQC positive sample file from DMA via DIRM			Y	D-291	Y
40.8.1.43	Provides capability to reflect all premium payments and adjustments on the online paid Claims History files	N	N	N	D-292	Y
40.8.1.44	Provides capability to maintain a complete history of all claims: paid, adjusted, and denied	N	N	N	D-292	Y
40.8.1.45	Provides capability to accrue all appropriate EOBs messages for relevant claim adjudication for each detail line and report on RA	N	N	N	D-292	Y
40.8.1.46	Provides capability to maintain a minimum five-year (5-year) history of previously paid or denied claims to support duplicate checking and utilization review	N	N	N	D-292	Y
40.8.1.47	Provides capability to assign the status of claims in the system to determine course of each action to be taken in the claims adjudication process and completion of appropriate financial processing tasks	N	N	N	D-292	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.48	Provides capability to adjust paid claims history for State-specified TPL recoveries at the detail level to include duplicate check	Y			D-292	Y
40.8.1.49	Provides capability to allow DME claims to span across calendar months in order to be consistent with Medicare and thus allow appropriate claims payment for Medicaid-covered items	Y			D-292	Y
40.8.1.50	Provides capability for providers to bill ambulance services using multiple claim types	Y			D-292	Y
40.8.1.51**	Provides capability for an extract of DMH claims denied due to insufficient budget			Y	D-292	Y
	Pharmacy Point-of-Sale					
40.8.1.52	Provides capability for an interactive session that accepts submitted pharmacy claims and processes to identify and alert the provider of problems associated with inappropriate drug use prior to dispensing	Y			D-293	Y
40.8.1.53	Provides capability to allow for the submitting provider to respond to alerts by overriding alerts or reversing the claim submitted based on State-determined hierarchy	Y			D-293	Y
40.8.1.54	Provides capability to identify informational alerts for warning on claim denials			Y	D-293	Y
40.8.1.55	Provides capability for an audit trail of all inquiries (event logging), including who made the inquiry, information input, and response provided	N	N	N	D-293	Y
40.8.1.56	Provides capability for alerts for drugs requiring prior approval; provides capability to allow providers to immediately apply for prior approval; provides capability to receive approval if appropriate and complete claim adjudication online	Y			D-293	Y
40.8.1.57	Provides capability to price all pharmacy claims using lesser of logic incorporating all State-approved pricing methodologies	Y			D-293	Y
40.8.1.58	Provides capability for online prospective drug utilization review POS/PRO-DUR) for all pharmacy claims using 5.1 formats or newer, more recent NCPDP format updates	Y			D-293	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.59	Provides capability for submittal of decimal units on claims up to the maximum allowed by NCPDP standards and calculate payment based on the actual decimal versus rounding to a whole unit	N	N	N	D-294	Y
40.8.1.60	Provides capability to interface with Comprehensive Neuroscience (CNS) Program-Behavioral Pharmacy Management System (BPMS); provides capability to interface with BPMS quality indicator algorithms developed by an outside vendor (CNS)			Y	D-294	Y
40.8.1.61	Provides capability for PRO-DUR and Retroactive DUR	Y			D-294	Y
40.8.1.62	Provides capability to process all pharmacy claims in POS/PRO-DUR inclusive with edits/audits/overrides consistent with current State policy			Y	D-294	Y
40.8.1.63	Provides capability to allow for online pharmacy claim reversal/adjustment within one (1) year of date of service	N	N	N	D-294	Y
40.8.1.64	Provides capability to allow for duplicate editing across lines of business, claim types, including pharmacy against HCPCS (e.g., J codes) or NDC codes to ensure both are not billing for nursing home and inpatient stays or pharmacy claims against DME, physician, or Competitive Acquisition Program (CAP) B claims	Y			D-294	Y
40.8.1.65	Provides capability for an online audit trail of all POS/PRO-DUR transactions	Y			D-295	Y
40.8.1.66	Provides capability for submissions and responses for all Replacement MMIS POS/PRO DUR via the Web Portal	N	N	N	D-295	Y
40.8.1.67	Provides capability to accept multiple NDCs and associated prices to calculate total allowed for compound drugs to price and pay compound drugs that include multiple NDCs, rebateable legend drugs, and selected covered over-the-counter products	Y			D-295	Y
40.8.1.68	Provides capability for flexible State-determined dispensing fees	Y			D-295	Y
40.8.1.69	Provides capability to set edits that cannot be overridden when the potential drug conflict reaches certain State-approved severity or significance levels	Y			D-295	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.70	Provides capability to exempt a drug or a recipient from the State-specific prescription limit according to policy	Y			D-295	Y
40.8.1.71	Provides capability to maintain an online audit trail of all updates to Reference and POS/PRO-DUR data, identifying the source of the change, before and after, and change dates	N	N	N	D-295	Y
40.8.1.72	Provides capability to allow for the submitting provider to respond to alerts by overriding alerts or reversing the claim submitted	Y			D-295	Y
40.8.1.73	Provides capability to edit for and deny FDA DESI-identified drugs	Y			D-296	Y
40.8.1.74	Provides capability to pay or deny (but not suspend) all pharmacy claims entered through POS devices	N	N	N	D-296	Y
40.8.1.75	Provides capability to edit against lock-in/lock-out recipient data for pharmacy, primary care provider, and/or prescriber	Y			D-296	Y
40.8.1.76	Provides capability to process claims for pharmacist's professional services and to price according to the cognitive service provided	Y			D-296	Y
40.8.1.77	Provides capability for State-specified customized updates from a contracted drug update service and provides the State all clinical and editorial highlights, newsletter, product information, and modules	N	N	N	D-296	Y
40.8.1.78	Provides capability to edit all claims entered into the system to ensure claims for drugs mandated by Federal regulations, the Federal upper limit (FUL) drugs, and the SMAC drugs are processed correctly; provides capability to edit claims entered into the system to ensure claims are not paid for the drugs listed on the Federal DESI list	Y			D-296	Y
40.8.1.79	Provides capability to edit against all State-determined DUR alerts	Y			D-296	Y
40.8.1.80	Provides capability for e-prescribing services, e.g., Rx HUB , and access to formulary and benefit information to enrolled providers using NCPDP Version 1.0 (or more recent)			Y	D-297	Y

Requirement #	Requirement Description	A	B	C	D	E
	Formulary and benefit standard					
40.8.1.81	Provides capability to apply edits for coverage of non-legend drugs within compound drugs	Y			D-297	Y
40.8.1.82	Provides capability to ensure use of the appropriate package size in calculating the maximum allowable unit cost for reimbursement	N	N	N	D-297	Y
40.8.1.83	Provides capability to edit for Part D eligibility or suspect and deny appropriately	Y			D-297	Y
40.8.1.84	Provides capability to ensure drugs have not been previously issued within the Physician Drug Program and Pharmacy POS	N	N	N	D-297	Y
	Determination of Financial Payer and Population Group					
40.8.1.85	Provides capability to ensure that financial payer and population group determination is based on the recipient's program, enrollment, and related benefit packages, the enrollment of the provider, the inclusion of services in eligible benefit packages, and the dates services were rendered	Y			D-297	Y
40.8.1.86	Provides capability to determine the most appropriate LOB and benefit plan for each claim (by line detail)	Y			D-298	Y
40.8.1.87	Provides capability to perform Payer Determination process daily after input conversion process to accurately route the claim according to financial payer	Y			D-298	Y
40.8.1.88	Provides capability to re-perform Payer Determination process before the claims processing cycle to incorporate any data corrections made subsequent to the initial Payer Determination process	N	N	N	D-298	Y
40.8.1.89	Provides capability to determine financial payer hierarchy	Y			D-298	Y
40.8.1.90	Provides capability to determine population group hierarchy within a specified financial payer	Y			D-299	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.91	Provides capability to maintain, report, and view the original claim and associated actions that changed the original makeup of claim details			Y	D-299	Y
40.8.1.92	Provides capability to identify any claim details and track back to the original claim	N	N	N	D-299	Y
40.8.1.93	Provides capability to identify a claim detail line that has been processed independent of the original claim and tie it to the original claim	N	N	N	D-299	Y
40.8.1.94	Provides capability to apply appropriate Replacement MMIS edits to any claim detail that is processed independent of the original claim	N	N	N	D-299	Y
40.8.1.95	Provides capability to require prior approval for recipients covered in the Medicaid for Pregnant Women (MPW) program for services (other than postpartum care) that are provided after date of delivery	Y			D-299	Y
40.8.1.96	Provides capability to format key-entered POS, batch, and electronic claims submission/electronic data interchange (ECS/EDI) claims into common processing formats for each claim type	N	N	N	D-299	Y
40.8.1.97	Provides capability to perform claims processing based on recipient's enrollment and eligibility information	N	N	N	D-299	Y
40.8.1.98	Provides capability to edit claim detail identifying all error codes for claims that fail daily edit processing at initial processing of the claim to minimize the need for multiple re-submissions of claims	N	N	N	D-299	Y
40.8.1.99	Provides capability to identify the processing outcome of claims (suspend, deny, or pay and report) that fail edits, based on the edit disposition	N	N	N	D-300	Y
40.8.1.100	Provides capability for online claims correction and resolution of suspended claims	N	N	N	D-300	Y
40.8.1.101	Provides capability to receive paper/electronic claims for Medicare and Medicare HMO cost sharing	N	N	N	D-300	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.102	Provides capability for the identification of potential TPL (including Medicare) and suspend, deny, or pay and report the claim	N	N	N	D-300	Y
40.8.1.103	Provides capability to distinguish between a Medicare denial versus private insurance denials	N	N	N	D-300	Y
40.8.1.104	Provides capability for editing to assure that TPL has been satisfied or that a TPL denial attachment is present if required	Y			D-300	Y
40.8.1.105	Provides capability for editing and suspending of claims for pre-payment review based on provider, recipient, procedure code, diagnosis code, third party insurance, and authorized services	Y			D-300	Y
40.8.1.106	Provides capability for editing to assure that the services for which payment is requested are covered by the appropriate State Medical Assistance program	N	N	N	D-301	Y
40.8.1.107	Provides capability for editing to ensure that all required attachments are present	N	N	N	D-301	Y
40.8.1.108	Provides capability to edit for cost-sharing requirements on applicable claims	Y			D-301	Y
40.8.1.109	Provides capability to edit any suspended claims requiring provider or recipient prepayment review	Y			D-301	Y
40.8.1.110	Provides capability to process all claims against the edit criteria	N	N	N	D-301	Y
40.8.1.111	Provides capability for editing to assure that reported diagnosis, procedures, revenue codes, and denial codes are present on Medicare primary claims and all other appropriate claim types	Y			D-302	Y
40.8.1.112	Provides capability to edit for recipient eligibility on date(s) of service	N	N	N	D-302	Y
40.8.1.113	Provides capability to edit for valid recipient identification, using DOB and a minimum of the first two (2) characters of last name and the first character of first name	N	N	N	D-302	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.114	Provides capability to edit for special eligibility records, indicating recipient participation in special programs where program service limitations or restrictions may vary	Y			D-302	Y
40.8.1.115	Provides capability to edit for recipient living arrangement within the dates of service	Y			D-302	Y
40.8.1.116	Provides capability to edit for Provider program eligibility to perform procedure rendered on date of service	N	N	N	D-302	Y
40.8.1.117	Provides capability to edit for provider participation as a member of the billing group	N	N	N	D-302	Y
40.8.1.118	Provides capability to edit claims for recipients in nursing facilities against recipient approval data, level of care, patient liability, patient deductible, Medicare denial, reserve bed and leave days, and admit/discharge information			Y	D-302	Y
40.8.1.119	Provides capability to edit for prior approval and ensure an active prior approval number is on file	N	N	N	D-303	Y
40.8.1.120	Provides capability to edit for prior approval claims and cut back billed units or dollars	Y			D-303	Y
40.8.1.121	Provides capability to edit for step therapy criteria and protocol for selected drugs	Y			D-303	Y
40.8.1.122	Provides capability to override the thirty-four-day (34-day) supply limit edit for drugs	Y			D-303	Y
40.8.1.123	Provides capability to maintain edit disposition to deny claims for services that require prior approval if no prior approval is identified or active	N	N	N	D-303	Y
40.8.1.124	Provides capability to update the Prior Approval record(s) to reflect the services paid on the claim, including units, amount paid, and the number of services still remaining to be used	N	N	N	D-303	Y
40.8.1.125	Provides capability for automated cross-checks and relationship edits on all claims	N	N	N	D-303	Y
40.8.1.126	Provides capability for automated audit processing against history, suspended, and same cycle claims			Y	D-303	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.127	Provides capability to apply Medical Procedure Audit Policy (MPAP) to determine audits on a specific claim detail	Y			D-304	Y
40.8.1.128	Provides capability to ensure that auditing supports claim denials, automatic recoupments or cutbacks, suspended for review, or specific pricing	N	N	N	D-304	Y
40.8.1.129	Provides capability for automatic system recoupment and denial of hospital claim when prior approval for surgery was not granted	N	N	N	D-304	Y
40.8.1.130	Provides capability to apply clinical and pricing business rules in claims processing	Y			D-304	Y
40.8.1.131	Provides capability to identify paid and denied claims in Claims History	N	N	N	D-304	Y
40.8.1.132	Provides capability for editing an unlimited number of claim lines	N	N	N	D-304	Y
40.8.1.133	Provides capability to process multiple units of service for a span of dates of service	Y			D-304	Y
40.8.1.134	Provides capability to edit for potential duplicate claims based on a cross-reference of group and rendering provider, multiple provider locations, and across provider and claim types			Y	D-304	Y
40.8.1.135	Provides capability to identify potential and/or exact duplicate claims in the MMIS and POS within and across financial payers	N	N	N	D-304	Y
40.8.1.136	Provides capability to edit using duplicate audit and suspect-duplicate criteria to validate against history, suspended claims, and same-cycle claims	N	N	N	D-304	Y
40.8.1.137	Provides capability for audit trail of all claims that identify timing and suspense status, error codes, and occurrences per claim header and claim detail as processed to final adjudication status	N	N	N	D-305	Y
40.8.1.138	Provides capability for an unlimited number of edits per claim	N	N	N	D-305	Y
40.8.1.139	Provides capability to identify and track all edits and audits posted to the claim from	N	N	N	D-305	Y

Requirement #	Requirement Description	A	B	C	D	E
	suspense through adjudication					
40.8.1.140	Provides capability for each error code to have a resolution code, an override, force or deny indicator, and the date that the error was resolved, forced, or denied	N	N	N	D-305	Y
40.8.1.141	Provides capability for the acceptance of overrides of claim edits and audits	N	N	N	D-305	Y
40.8.1.142	Provides capability to turn off and on edits/audits for program types as specified by State Memo	N	N	N	D-305	Y
40.8.1.143	Provides capability to identify the claim deposition, based on the edit status or force code with the highest severity specific to each LOB	N	N	N	D-305	Y
40.8.1.144	Provides capability to maintain a record of service codes required for audit processing where the audit criteria covers a period longer than five (5) years (such as once-in-a-lifetime procedures)	N	N	N	D-305	Y
40.8.1.145	Provides capability to modify the disposition of edits by LOB to: ▪ Suspend for special handling ▪ Deny and print an explanatory message on the provider RA ▪ Suspend to a specific location unit ▪ Pay and report to a specific location/unit ▪ Pay	Y			D-305	Y
40.8.1.146	Provides capability to set claim edits to allow dispositions and exceptions to edits based on claim type submission media, provider type and specialty and subspecialty or taxonomy, recipient Medical Assistance program, or individual provider number	Y			D-306	Y
40.8.1.147	Provides capability to perform edits against claims for limits on dollars, units, and percentages			Y	D-306	Y
40.8.1.148	Provides capability to override the Prior Approval edit to allow for emergency seventy-two-hour (72-hour) supply of a drug and does not count toward service limitations for	Y			D-306	Y

Requirement #	Requirement Description	A	B	C	D	E
	prescriptions					
40.8.1.149	Provides capability for variable limitations of pharmacy prescription benefits, such as number of prescriptions, quantity of drugs, specific drugs, and upper limits			Y	D-306	Y
40.8.1.150	Provides capability to allow for exceptions to pharmacy lock-ins	N	N	N	D-306	Y
40.8.1.151	Provides capability to edit claims with billed amounts that vary by a specified degree above or below allowable amounts	Y			D-306	Y
40.8.1.152	Provides capability to validate provider IDs for billing, attending, referring, and prescribing providers	N	N	N	D-306	Y
40.8.1.153	Provides capability to edit for valid CLIA certification for laboratory procedures	N	N	N	D-306	Y
40.8.1.154	Provides capability to edit claim for tooth numbers for procedures requiring tooth number, surface, or quadrant	N	N	N	D-306	Y
40.8.1.155	Provides capability to edit for procedure to procedure on same date of service	N	N	N	D-306	Y
40.8.1.156	Provides capability to edit for service limitations	N	N	N	D-307	Y
40.8.1.157	Provides capability to edit for the identification of the quadrant based on tooth number for editing	Y			D-307	Y
40.8.1.158	Provides capability to track service limitations online	N	N	N	D-307	Y
40.8.1.159	Provides capability to edit and suspend with procedure codes set to manually price unless there is a prior approval for the procedure code for the recipient with the servicing provider	N	N	N	D-307	Y
40.8.1.160	Provides capability to edit for program and allow for services to ICF-MR adults for procedures limited to those individuals under twenty-one (21) years of age	Y			D-307	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.161	Provides capability to edit for timely filing	N	N	N	D-307	Y
40.8.1.162	Provides capability to cut back units on claims, retaining the original units billed and units paid	N	N	N	D-307	Y
40.8.1.163	Provides capability to process Medicare cost-sharing charges using the full claim input information and system edit capability	N	N	N	D-307	Y
40.8.1.164	Provides capability to edit across claim types, including the ability to process with a minimum of four (4) modifiers and edit for modifier appropriateness	N	N	N	D-307	Y
40.8.1.165	Provides capability to edit for disproportionate share hospitals	Y			D-307	Y
40.8.1.166	Provides capability for all edits as listed by the State	N	N	N	D-307	Y
40.8.1.167	Provides capability for encounter-specific editing and auditing	Y			D-308	Y
40.8.1.168	Provides capability to edit billed charges for high and low variances	Y			D-308	Y
	Suspended Claims					
40.8.1.169	Provides capability to suspend claims for review, as required by the State	N	N	N	D-308	Y
40.8.1.170	Provides capability for manual review of claims for specific services, such as hysterectomies, abortions, sterilizations, DME claims for external insulin pumps, equipment repairs, miscellaneous pediatric items, miscellaneous drugs, off-labeled drugs, and all PAC “1” codes	Y			D-308	Y
40.8.1.171	Provides capability to process Medicare cost-sharing charges	Y			D-308	Y
40.8.1.172	Provides capability to electronically store and report comparable codes used to price unlisted procedure codes			Y	D-308	Y
40.8.1.173	Provides capability to subject all pharmacy claims to the automated POS PRO-DUR	N	N	N	D-309	Y

Requirement #	Requirement Description	A	B	C	D	E
	consistently					
40.8.1.174	Provides capability to provide adjudication of the pharmacy POS claim as paid or denied when it passed all edits and audits, sending a response back to the provider via a VAN	N	N	N	D-309	Y
	General Claims Resolution					
40.8.1.175	Provides capability for online claims resolution, edit override capabilities for all claim types, and online adjudication	N	N	N	D-309	Y
40.8.1.176	Provides capability to ensure that all corrected claims are completely re-edited	N	N	N	D-309	Y
40.8.1.177	Provides capability for claims correction process that allows inquiry and update by transaction control number, provider ID, recipient ID, location code, adjustment initiator ID, clerk ID, claim type, date of service, ranges of dates, and prior approval number			Y	D-309	Y
40.8.1.178	Provides capability to sort suspended claims into applicable work queues	N	N	N	D-309	Y
40.8.1.179	Provides capability to forward suspended claims to multiple locations	N	N	N	D-310	Y
40.8.1.180	Provides capability to accept mass adjustments to suspended claims	N	N	N	D-310	Y
40.8.1.181	Provides capability to link free-form notes from all review outcomes and directions to the imaged claim	N	N	N	D-310	Y
40.8.1.182	Provides capability to maintain error codes and messages that clearly identify the reason(s) for the suspension	N	N	N	D-310	Y
40.8.1.183	Provides capability for the methodology to process the adjustment offset in the same payment cycle as the adjusting claim	N	N	N	D-310	Y
40.8.1.184	Provides capability to adjust Claims History only	N	N	N	D-310	Y
40.8.1.185	Provides capability to re-edit, re-price, and re-audit each adjustment, including checking	N	N	N	D-310	Y

Requirement #	Requirement Description	A	B	C	D	E
	for duplication against other regular and adjustment claims, in history, and in process					
40.8.1.186	Provides capability to allow online changes to the adjustment claim record to reflect corrections or changes to information during the claim correction (suspense resolution) process	N	N	N	D-311	Y
40.8.1.187	Provides capability to maintain primary and secondary adjustment reason codes that indicate who initiated the adjustment, the reason for the adjustment, and the disposition of the claim for use in reporting the adjustment	N	N	N	D-311	Y
40.8.1.188	Provides capability for the methodology to allow online changes to the adjustment claim record to reflect corrections or changes to information during the claim correction (suspense resolution) process	N	N	N	D-311	Y
Requirement Deleted 40.8.1.189	~~Provides capability to generate exception sheets online~~					
40.8.1.190	Provides capability to capture and maintain the medical reviewer ID and claims resolution worker ID by date and by error/edit for each suspended claim	N	N	N	D-311	Y
40.8.1.191	Provides capability to identify and access the status of any related limitations for which the recipient has had services	N	N	N	D-312	Y
40.8.1.192	Provides capability to enter multiple error codes for a claim to appear on the RA	N	N	N	D-312	Y
40.8.1.193	Provides capability to assign a unique status to corrected claims	N	N	N	D-312	Y
40.8.1.194	Provides capability of entering multiple error codes for a claim to appear on the RA	N	N	N	D-312	Y
40.8.1.195	Provides capability to maintain all claims on the suspense file until corrected, automatically recycled, or automatically denied	N	N	N	D-312	Y
40.8.1.196	Provides capability to adjudicate special batches of claims	N	N	N	D-312	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.197	Provides capability to force release of claims	N	N	N	D-312	Y
40.8.1.198	Provides capability to adjudicate and track non-covered service claims for EPSDT recipients	Y			D-312	Y
40.8.1.199	Provides capability to capture rebateable NDCs for all administered drugs in the Physician Drug Program, including drugs administered with HCPCS codes	N	N	N	D-313	Y
	Retrospective Drug Utilization Review					Y
40.8.1.200	Provides capability to generate a file of paid drug claims to the Retrospective DUR Vendor			Y	D-313	Y
40.8.1.201	Provides capability to generate a file of physician, clinic, hospital, and pharmacy Provider data to the Retrospective DUR Vendor			Y	D-313	Y
40.8.1.202	Provides capability to generate a file of the recipient data to the Retrospective DUR Vendor			Y	D-313	Y
40.8.1.203	Provides capability to produce the CMS Annual Drug Utilization Review Report			Y	D-313	Y
	Adjustment Processing					
40.8.1.204	Provides capability for online search inquiry for pharmacy claims via any available FDB data element/module, including, but not limited to: ▪ Recipient identifier ▪ Provider identifier ▪ Pharmacy number ▪ Internal control number (ICN) ▪ Prescription number ▪ Therapeutic class			Y	D-314	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Drug codes ▪ GCN ▪ GCN-Sequence ▪ NDC					
40.8.1.205	Provides capability to update provider payment history and recipient claims history with all appropriate financial records and reflect adjustments in subsequent reporting, including claim-specific and non-claim-specific recoveries	N	N	N	D-314	Y
40.8.1.206	Provides capability to link an original claim with all adjustment transactions	N	N	N	D-314	Y
40.8.1.207	Provides capability for an online mass-adjustment function to re-price claims, within the same adjudication cycle, for retroactive pricing changes	N	N	N	D-314	Y
40.8.1.208	Provides capability to correct the tooth surface on dental claims and process as an adjustment	N	N	N	D-314	Y
40.8.1.209	Provides capability to process unit dose credits			Y	D-314	Y
40.8.1.210	Provides capability to input transactions to Drug Rebate and TPL of all collected dollars	N	N	N	D-314	Y
40.8.1.211	Provides capability to capture pharmacy/drug rebates on professional and institutional claims	N	N	N	D-314	Y
40.8.1.212	Provides capability to capture and electronically store the clerk ID of the individual who initially entered the adjustment and the clerk ID who worked the suspended adjustment	N	N	N	D-315	Y
	General Payment Processing					
40.8.1.213	Provides capability to process all claims and adjustments in accordance with Replacement MMIS policy and procedure	Y			D-315	Y
40.8.1.214	Provides capability to assign the status of claims in the system to determine the course of	N	N	N	D-315	Y

Requirement #	Requirement Description	A	B	C	D	E
	each action to be taken in the claims adjudication process and completion of appropriate financial processing tasks					
40.8.1.215	Provides capability to apply payments to open accounts receivables when the provider has a positive balance, apply third party collections, create Adjudication Claims File for checkwrite period, and update Provider Earnings file	N	N	N	D-315	Y
40.8.1.216	Provides capability to generate Health Insurance Premium Payments (HIPP)	N	N	N	D-315	Y
40.8.1.217	Provides capability for claims exceptions to process automatically when prior authorized by the lock-in primary care provider or prescriber in accordance with State policy			Y	D-315	Y
	Financial and Related Processing					
40.8.1.218	Provides capability to maintain complete audit trails of adjustment processing activities	N	N	N	D-316	Y
40.8.1.219	Provides capability to assign the status of claims in the system to determine course of each action to be taken in the claims adjudication process and completion of appropriate financial processing tasks	N	N	N	D-316	Y
40.8.1.220	Provides capability to calculate claims payments by payer source, balancing payments due from adjudicated claims with any increase/decrease for adjustments or other financial transactions	N	N	N	D-316	Y
40.8.1.221	Provides capability to apply payments to open accounts receivables when the provider has a positive balance, apply third party collections, create Adjudication Claims File for checkwrite period, and update Provider Earnings file	N	N	N	D-316	Y
40.8.1.222	Provides capability to produce system-generated check registers, provider checks, and RAs and update control totals by LOB			Y	D-316	Y
40.8.1.223	Provides capability to print provider voucher statements and checks by LOB	N	N	N	D-316	Y
40.8.1.224	Provides capability to validate a provider's status prior to issuing payments or processing refund checks and voided checks	N	N	N	D-316	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.225	Provides capability to produce a monthly file of all adjudicated claims and other financial transactions by LOB			Y	D-316	Y
40.8.1.226	Provides capability to track the status of all financial transactions by payer source	N	N	N	D-316	Y
40.8.1.227	Provides capability to run separate payment cycles by each LOB	N	N	N	D-316	Y
40.8.1.228	Provides capability to override the system date used for the payment cycle through a system parameter	N	N	N	D-316	Y
40.8.1.229	Provide the capability to use the same system date for all outputs of a claims payment cycle	N	N	N	D-317	Y
40.8.1.230	Provides capability to create a single check or EFT per payment cycle for each provider by LOB	N	N	N	D-317	Y
40.8.1.231	Provides capability to generate beneficiary Recipient Explanation of Medicaid Benefits (REOMBs)	N	N	N	D-317	Y
40.8.1.232**	Provides capability to generate beneficiary Recipient Explanation of Benefits (REOBs) by LOB			Y	D-317	Y
40.8.1.233	Provides capability to produce and distribute paper RAs formatted separately for individual provider types	N	N	N	D-317	Y
40.8.1.234	Provides capability to produce ANSI 835 and 820 transactions	N	N	N	D-317	Y
40.8.1.235	Provides capability for EFT by LOB	N	N	N	D-317	Y
40.8.1.236	Provides capability to update historical files with information from RAs/835s and checks			Y	D-317	Y
40.8.1.237	Provides capability to ensure RAs contain State-approved EOB messages by LOB	N	N	N	D-317	Y
40.8.1.238	Provides capability for producing statistically valid sampling reports for use in provider	N	N	N	D-317	Y

Requirement #	Requirement Description	A	B	C	D	E
	audits by LOB					
40.8.1.239	Provides capability to rerun a payment cycle by LOB before the next regularly scheduled cycle and within eight (8) clock hours of State notification, when the original cycle is considered unacceptable	N	N	N	D-317	Y
40.8.1.240	Provides capability to produce EFT register and ANSI 835	N	N	N	D-317	Y
40.8.1.241	Provides capability for balancing process associated with financial month-end reporting	N	N	N	D-317	Y
40.8.1.242	Provides capability to modify payment cycle schedule	N	N	N	D-317	Y
40.8.1.243	Provides capabilities to provide independent and separate banking	N	N	N	D-317	Y
40.8.1.244	Provides capability to combine claims from MMIS and POS for payment processing	N	N	N	D-318	Y
40.8.1.245	Provides capability to withhold adjudicated claims from the payment cycle by payer source	N	N	N	D-318	Y
40.8.1.246	Provides capability to retrieve budget and available balance data from North Carolina Accounting System (NCAS)			Y	D-318	Y
40.8.1.247**	Provides capability to accept and process budget data from a DMH file			Y	D-318	Y
40.8.1.248	Provides capability to use approved budget data for expenditure allotment and control	N	N	N	D-318	Y
40.8.1.249**	Provides capability to process and pay claims, based on the applicable budget hierarchy, from the first eligible benefit plan where money is available and the service is covered, within the same payment cycle	N	N	N	D-318	Y
40.8.1.250**	Provides capability to deny claims for services for lack of available funds	N	N	N	D-318	Y
40.8.1.251	Provides capability to hold payment of a claim for a specified period of time	N	N	N	D-318	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.252	Provides capability to exclude “to be paid” claims for payment processing when the provider is in hold status	N	N	N	D-318	Y
40.8.1.253	Provides capability to accumulate by LOB the reimbursement amounts of all original claims, voids, adjustments, and financial transactions in a “to-be-paid” status to determine an initial net payment amount for a provider	N	N	N	D-318	Y
40.8.1.254	Provides capability to create a receipt for individual claims that were overpaid or paid in error and produce a void or adjustment claim showing the transaction	N	N	N	D-319	Y
40.8.1.255	Provides capability to create a financial transaction to correct overpayments, link to original transaction, and apply to offset future payments	N	N	N	D-319	Y
40.8.1.256	Provides capability to apply all or a portion of the provider’s initial payment amount, if it is positive, to recoup monies against any outstanding accounts receivable balances present for the provider	N	N	N	D-319	Y
40.8.1.257	Provides capability to use the Thursday following the processing date as the last payment cycle of the month	Y			D-319	Y
40.8.1.258	Provides capability to process adjustment claims and credit the appropriate budgets before processing any new day claims	N	N	N	D-319	Y
40.8.1.259	Provides capability to apply Patient Monthly Liability (PML) to specific types of claims and post liability amounts used	N	N	N	D-319	Y
40.8.1.260	Provides capability to apply recipient deductible balance to specified types of claims			Y	D-319	Y
40.8.1.261	Provides the capability for positive pay processing				D-319	Y
40.8.1.262	Provides the capability for provider payment data	N	N	N	D-319	Y
40.8.1.263	Provides capability to apply withholds to capitation payments			Y	D-319	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.264	Provides capability to release withholds to capitation payments			Y	D-319	Y
40.8.1.265	Provides capability to apply provider sanctions by rate or percentage	Y			D-320	Y
40.8.1.266	Provides capability to apply provider incentives to management fee claims	N	N	N	D-320	Y
40.8.1.267	Provides all payments, adjustments, and other financial transactions to enrolled providers for approved services	N	N	N	D-320	Y
40.8.1.268	Provides the capability to associate all drug rebates to the claim detail	N	N	N	D-320	Y
	Financial Management and Accounting Business Area					
40.8.1.269	Provides capability to establish accounts receivable in the format of withholds, liens, levy data, and advance payment/recovery of advance payment	N	N	N	D-320	**Y**
40.8.1.270	Provides capability for claims that have passed all edit and pricing processing or that have been denied to be documented on the RA by LOB	N	N	N	D-320	Y
40.8.1.271	Provides capability to create financial transactions	N	N	N	D-320	Y
40.8.1.272	Provides capability to create ~~r~~eceivables generated from other MMIS functions	N	N	N	D-320	Y
40.8.1.273	Provides capability to create provider, recipient, reference, and account receivable/payout data	N	N	N	D-321	Y
40.8.1.274	Provides capability to make retroactive changes to deductibles	N	N	N	D-321	Y
40.8.1.275	Provides capability to create ~~t~~ransactions for corrections to receivables entered into the Replacement MMIS	N	N	N	D-321	Y
40.8.1.276	Provides capability to create transactions for manual checks	N	N	N	D-321	Y
40.8.1.277	Provides capability to create transactions for paper checks	N	N	N	D-321	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.278	Provides capability to validate new and updated EFT provider information				D-321	Y
40.8.1.279	Provides capability to requests an override EFT and create paper checks for a date range and check pulls for void and replacement			Y	D-321	Y
40.8.1.280	Provides capability to create transactions of check voucher status from the State Controller's Office			Y	D-321	Y
40.8.1.281	Provides capability for notes tracking to accommodate tracking of calls	N	N	N	D-321	Y
40.8.1.282	Provides capability for online access to all recipient, provider, encounter (shadow claims), and reference data related to Financial Management and Accounting by LOB	N	N	N	D-321	Y
40.8.1.283	Provides capability for Financial Management and Accounting functions with system update capability	N	N	N	D-321	Y
40.8.1.284	Provides capability to maintain a consolidated accounting function, by program, type, and provider	N	N	N	D-321	Y
40.8.1.285	Provides capability to process capitation payments	N	N	N	D-321	Y
40.8.1.286	Provides capability to withhold a percentage of capitation payments			Y	D-321	Y
40.8.1.287	Provides capability to process Managed Care management fees	N	N	N	D-321	Y
40.8.1.288	Provides capability to process management fees for Health Check			Y	D-322	Y
40.8.1.289	Provides capability to process capitation and/or management fee adjustments	N	N	N	D-322	Y
40.8.1.290	Provides capability to process management fees for APs/LMEs	Y			D-322	Y
40.8.1.291	Provides capability to process encounter claims through the payment cycle, updating the final status of the claims to "paid" or "denied" but not producing an associated payment	N	N	N	D-322	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.292	Provides capability to produce an output extract of encounters (an Encounter RA)	Y			D-322	Y
40.8.1.293	Provides capability to produce an output extract of enhanced Pharmacist Professional fee (on a Pharmacy RA)			Y	D-322	Y
40.8.1.294	Provides capability for system-generated log and tracking of receipt date of request for changes			Y	D-322	Y
40.8.1.295	Provides capability to ensure that provider payments are generated by the processing of claims for eligible recipients and provides capability for adjustments	N	N	N	D-322	Y
40.8.1.296	Provides capability to carry the provider's selection of receiving checks or EFT form of payment	N	N	N	D-322	Y
40.8.1.297	Provides capability to carry the provider's selection of receiving hard copy, electronic RAs, or both	N	N	N	D-322	Y
40.8.1.298	Provides capability to accept pended and adjudicated claims against Provider Earnings file	N	N	N	D-322	Y
40.8.1.299	Provides capability to generate or reproduce provider RAs, to include: ▪ An itemization of submitted claims that were paid, denied, or adjusted, and any financial transactions that were processed for that provider, including subtotals and totals by LOB ▪ An itemization of suspended claims, including dates of receipt and suspense and dollar amount billed by LOB ▪ Adjusted claim information showing the original claim information and the adjusted information, with an explanation of the adjustment reason code and credits pending by LOB ▪ Reason for recoupment or adjustment by LOB ▪ Indication that a claim has been rejected due to TPL coverage on file for the recipient; include available relevant TPL data on the RA by LOB	N	N	N	D-322	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Tooth number and surface ▪ Explanatory messages relating to the claim payment cutback, denial, or suspension ▪ Summary section containing earnings information, by program, regarding the number of claims paid, denied, suspended, adjusted, in process, and financial transactions for the current payment period, month-to-date, and year-to-date ▪ Listing of all relevant error messages per claim header and claim detail that would cause a claim to be denied by LOB					
40.8.1.300	Provides capability to print global informational messages on RAs by LOB; provides capability to make multiple messages available on an online, updateable, user-maintainable message text table; provides capability for unlimited free-form text messages; provides capability for parameters such as provider category of service, provider type, provider specialty, program enrollment, claim type, individual provider number, or pay cycle to control the printing of RA messages	N	N	N	D-323	Y
40.8.1.301	Provides capability to suppress the generation of (both zero-pay and pay) check requests for any provider or provider type but generates associated RAs			Y	D-323	Y
40.8.1.302	Provides capability to update provider payment data	N	N	N	D-323	Y
40.8.1.303	Provides capability to maintain a process of fiscal pends	N	N	N	D-323	Y
40.8.1.304	Provides capability to not accumulate claims in a “to be paid” status that have been excluded from payment	N	N	N	D-323	Y
40.8.1.305	Provides capability to suppress the print of a RA when the only thing that is being printed is related to a credit balance			Y	D-324	Y
40.8.1.306	Provides capability to maintain all data items received on all incoming claims, including the tooth number and tooth surface(s)	N	N	N	D-324	Y
40.8.1.307	Provides capability to update Claims History and online financial files with the date of	N	N	N	D-324	Y

Requirement #	Requirement Description	A	B	C	D	E
	payment and amount paid					
40.8.1.308	Provides capability for summary-level provider accounts receivable and payable data and pending recoupment amounts that are automatically updated after each claims processing payment cycle	N	N	N	D-324	Y
40.8.1.309	Provides capability to adjust claim money fields to net out	N	N	N	D-324	Y
40.8.1.310	Provides capability to automatically establish new accounts receivables	N	N	N	D-324	Y
40.8.1.311	Provides identification of providers with credit balances and no claim activity, by program, during a State-specified number of months	N	N	N	D-324	Y
40.8.1.312	Provides capability for the issuance of provider checks and/or EFTs for all claims in the current checkwrite cycle	N	N	N	D-324	Y
40.8.1.313	Provides capability to ensure accurate balances for each checkwrite in accordance with State-approved policy and procedures	N	N	N	D-324	Y
40.8.1.314	Provides capability to process transactions for manually written checks generating a Claims History record	N	N	N	D-324	Y
40.8.1.315	Provides capability to process EFT provider information, updating provider records to reflect their status with EFT	N	N	N	D-324	Y
40.8.1.316	Provides capability to accept requests to override EFT payment to a provider	N	N	N	D-324	Y
40.8.1.317	Provides capability to process check voucher information from the State Controller's Office			Y	D-324	Y
40.8.1.318	Provides capability to update Claims History with RA number and RA issued date from the State Controller's Register file			Y	D-324	Y
40.8.1.319	Provides capability to ensure that the weekly budget reporting is consistent with the costs	N	N	N	D-324	Y

Requirement #	Requirement Description	A	B	C	D	E
	allocated during the checkwrite by LOB					
40.8.1.320	Provides capability to produce reports and RAs within the financial processing function of the checkwrite cycle by LOB			Y	D-325	Y
40.8.1.321	Provides capability to process and/or set up a recoupment against a provider without specifying a credit balance by LOB			Y	D-325	Y
40.8.1.322	Provides capability to use a hierarchy table when a provider has multiple recoupment accounts			Y	D-325	Y
40.8.1.323	Provides capability to identify and recoup payments from the provider made for services after a recipient's date of death	N	N	N	D-325	Y
40.8.1.324	Provides capability to apply claims payments recoupments to more than one (1) account receivable at a time	N	N	N	D-325	Y
40.8.1.325	Provides capability to support a methodology that allows the portion of payments made against each account receivable to be controlled by State staff	N	N	N	D-325	Y
40.8.1.326	Provides capability to validate provider tax identification numbers and associated tax names	N	N	N	D-325	Y
40.8.1.327	Provides capability to process any change transactions received for corrections to checks by LOB	N	N	N	D-325	Y
40.8.1.328	Provides capability to ensure that all financial reports can be tied into the basic financial activity recorded in Provider histories by LOB	Y			D-325	Y
40.8.1.329	Provides capability to generate weekly, monthly, quarterly, and annual financial reports after checkwrites	Y			D-325	Y
40.8.1.330	Provides capability for Advance Provider payments by LOB	N	N	N	D-325	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.331	Provides capability to receive online requests from authorized users to retrieve paid claims data to produce Recipient Profiles by LOB and return the data in a printable electronic format	Y			D-325	Y
40.8.1.332	Provides capability to include all buy-in premium payments and adjustments in the online paid Claims History files and in Recipient Profile Reports	Y			D-325	Y
40.8.1.333	Provides the capability to obtain approval from NC DHHS for the amount to be applied for payment prior to each checkwrite				D-326	Y
40.8.1.334	Provides the capability to check remaining balance as each payment amount is calculated to verify that the budgeted amount is not exceeded	N	N	N	D-326	Y
40.8.1.335	Provides capability to identify and calculate pricing amounts according to the fee schedules, per diems, rates, and business rules	N	N	N	D-326	Y
40.8.1.336	Provides capability to apply pricing and reimbursement methodologies to appropriately price claims according to NC DHHS pricing standards	Y			D-326	Y
40.8.1.337	Provides capability to price using any combination of procedure code, population group, billing provider, attending provider, and client	N	N	N	D-326	Y
40.8.1.338	Provides capability to establish fee schedules based on procedures, procedure/modifier, or procedure/type of service, including provider specific rates, DRGs, anesthesia base units, and global surgery days	Y			D-326	Y
40.8.1.339	Provides capability to apply percentages for dual-eligible recipients	Y			D-326	Y
40.8.1.340	Provides capability for pricing of pharmacy claims and reimbursement methodologies to appropriately price claims according to the appropriate financial payer or population group in accordance with State policy, including a dispensing fee and pricing actions	N	N	N	D-326	Y
40.8.1.341	Provides capability to determine calculations for the PAL tiers			Y	D-326	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.342	Provides capability to process and reimburse pharmacy-enhanced professional service fees as defined by State policy and business rules	Y			D-326	Y
40.8.1.343	Provides capability to price pharmacy claims using lesser of logic incorporating all State-approved pricing methodologies	Y			D-326	Y
40.8.1.344	Provides capability to price using State-specific services from the Prior Approval File			Y	D-326	Y
40.8.1.345	Provides capability to apply recipient liability and co-pay rules, including varying co-pay amounts	N	N	N	D-327	Y
40.8.1.346	Provides capability to identify and calculate payment amounts for Health Check procedures when higher rate applies	Y			D-327	Y
40.8.1.347	Provides capability to deduct either the provider reported or recipient database deductible amount	Y			D-327	Y
40.8.1.348	Provides capability to use non-Medicaid charges first and apply the remainder to allowed charges based on first bill received for processing for the deductible for recipients classed as medically needy			Y	D-327	Y
40.8.1.349	Provides capability to allow the deductible amount to be assigned to specific providers for recipients classed as medically needy	Y			D-327	Y
40.8.1.350	Provides capability to invoke State-approved “Medicare Suspect” procedures			Y	D-327	Y
40.8.1.351	Provides capability to deduct or otherwise apply TPL amounts when pricing claims	N	N	N	D-327	Y
40.8.1.352	Provides capability to price procedure codes, allowing for multiple modifiers that enable reimbursement by program at varying percentages of allowable amounts			Y	D-327	Y
40.8.1.353	Provides capability to price units for procedures based on the cutback units	N	N	N	D-327	Y
40.8.1.354	Provides capability to price encounter claims at equivalent fee for service payment less	Y			D-327	Y

Requirement #	Requirement Description	A	B	C	D	E
	deductions, such as TPL or co-payments					
40.8.1.355	Provides capability to maintain multiple date-specific prices for each applicable provider, procedure code, revenue code, and DRG	N	N	N	D-327	Y
40.8.1.356	Provides capability to maintain multiple date-specific rates for each procedure code, population group, billing provider, attending provider, and/or client specific combination	Y			D-327	Y
40.8.1.357	Provides capability to ensure that NC DHHS programs are payers of last resort with respect to private insurance	N	N	N	D-328	Y
40.8.1.358	Provides capability to ensure that claims with known TPL are reduced by the liability in accordance with NC DHHS standards	N	N	N	D-328	Y
40.8.1.359	Provides capability to support application of State-specific services for claims processing			Y	D-328	Y
40.8.1.360	Provides capability to pay only out-of-plan services for capitated program enrollees as fee-for-service and deny in-plan services	N	N	N	D-328	Y
40.8.1.361	Provides capability to automate the calculation for Ambulatory Surgical Centers			Y	D-328	Y
40.8.1.362	Provides capability to apply Graduate Medical Education (GME), both direct and indirect, to inpatient claims			Y	D-328	Y
40.8.1.363	Provides capability to price NDC codes	N	N	N	D-328	Y
40.8.1.364	Provides capability to price or deny claims with Medicare participation, including Medicare HMOs Part C, according to program pricing rules	Y			D-328	Y
40.8.1.365	Provides capability to calculate a DRG per diem for undocumented alien's claims	Y			D-328	Y
40.8.1.366	Provides capability to apply a percentage of an existing fee schedule rate for a different provider specialty	Y			D-328	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.367	Provides capability to apply variable recipient co-pay percentages to a claim from a prior approval			Y	D-328	Y
40.8.1.368	Provides capability to prorate monthly rate for days billed according to State business rules			Y	D-328	Y
40.8.1.369	Provides capability to calculate provider reimbursement according to business rules	N	N	N	D-328	Y
40.8.1.370	Provides capability to price pharmacy claims up to a maximum level allowed by current NCPDP and FDB	Y			D-328	Y
40.8.1.371	Provides capability to price a claim at the lower of the maximum applicable rate, the provider's billed amount, applicable manual pricing, or invoice pricing			Y	D-329	Y
40.8.1.372	Provides capability to accommodate and provide for claims sampling specific to Payment Error Rate Measurement (PERM) Program requirements mandated by CMS and/or their Federal contract agent within designated timeframes Refer to *2007 PERM Data Submission Instructions–Jan 2007[1].pdf* for current PERM data submission requirements.	N	N	N	D-329	Y
40.8.1.373	Provides capability to process HIPP payments	N	N	N	D-329	Y
40.8.1.374	Provides capability to produce and send correspondence related to recipient premiums in the recipient's preferred language, including invoices, notices of non-payment, cancellation notices, receipts, and refunds	N	N	N	D-329	Y
40.8.1.375	Provides capability to collect recipient premium payments	N	N	N	D-329	Y
40.8.1.376	Provides capability to produce refunds of recipient premiums	N	N	N	D-329	Y
40.8.1.377	Provides capability to process financial accounting records for premium payments and refunds	N	N	N	D-329	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.1.378	Provides capability to produce reports for recipient premium payment and cost-sharing (e.g., recipient co-insurance, deductibles, co-payments, etc.) processes			Y	D-329	Y
40.8.1.379	Provides capability to apply cost-sharing, e.g., recipient co-insurance, deductibles, co-payments	N	N	N	D-329	Y
40.8.1.380	Provides capability to ensure cost-sharing does not exceed threshold for the family group			Y	D-329	Y
40.8.1.381	Provides capability to produce and send recipient letters/notices and Explanations of Benefits (EOB) in the recipient's preferred language			Y	D-329	Y

40.8.2 Claims Processing Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
	General Responsibilities					
40.8.2.1	Fiscal Agent shall perform all claims processing operations functions to support Claims Processing Business Area requirements specified in the Replacement MMIS and user documentation and operating procedures, including, but not limited to: ▪ Pickup and delivery of mail ▪ Sorting and screening of documents ▪ Scanning and batching of documents ▪ Batch control ▪ Data entry ▪ Pharmacy Point-of-Sale ▪ Payer determination processing ▪ Edit processing	N	N	N	D-653	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Suspense resolution ▪ Medical review ▪ Claims pricing ▪ Adjudication processing ▪ Adjustment processing ▪ Payment processing ▪ Financial processing ▪ Encounter processing					
40.8.2.2	Fiscal Agent shall maintain and update the current State-approved Medical Procedure Audit Policy (MPAP).				D-654	Y
40.8.2.3	Fiscal Agent shall create test, process, and review claims in a duplicate region (test region) to assure that State-requested changes to the system adjudicate as anticipated and make changes or receive approval according to contractual agreements.	N	N	N	D-654	Y
	Mailroom					
40.8.2.4	Fiscal Agent shall prepare and process all incoming and outgoing mail.				D-654	Y
40.8.2.5	Fiscal Agent shall pick up and deliver mail to the State once in the morning, once in the afternoon of each State business day, and at the request of the State.				D-654	Y
40.8.2.6	Fiscal Agent shall control hand-delivered mail at the Fiscal Agent's main entrance for security and management of routing to appropriate personnel or functional unit.				D-655	Y
40.8.2.7	Fiscal Agent shall ensure no mail, claims, tapes, diskettes, cash, or checks are misplaced after receipt by the Fiscal Agent.				D-655	Y
40.8.2.8	Fiscal Agent shall ensure all mail is date-stamped with date of receipt and within one (1) business day of receipt.				D-655	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.2.9	Fiscal Agent shall maintain system logging for packages/envelopes mailed via USPS or any other mailing service.				D-655	Y
40.8.2.10	Fiscal Agent shall prepare RTP letters, REOMBs, notice of service approval or denial, and appeal rights TPL letters, drug recovery invoices, estate letters, COCC, and small packages for First Class Mail delivery.				D-655	Y
40.8.2.11	Fiscal Agent shall print and mail/deliver electronically Replacement MMIS State-approved forms.	N	N	N	D-655	Y
40.8.2.12	Fiscal Agent shall log postage costs daily and report to the State a reconciliation of all postage costs to types of articles mailed and distributed				D-656	Y
40.8.2.13	Fiscal Agent shall prepare RAs for mailing and/or transmitting, EFTs for transmitting, and checks for release and mailing.	N	N	N	D-656	Y
	Claims Acquisition					
40.8.2.14	Fiscal Agent shall scan hard copy claims and accompanying documentation.		Y		D-656	Y
40.8.2.15	Fiscal Agent shall pre-screen hard copy claims before entering claims into the system and return those not meeting certain criteria to providers under the RTP letter, indicating missing or incorrect information and log returned claims daily.		Y		D-656	Y
	Adjustments					
40.8.2.16	Fiscal Agent shall sort, log, and batch adjustment requests and supporting documentation.				D-657	Y
40.8.2.17	Fiscal Agent shall assign adjustment internal control numbers that can associate back with the original claim or previous adjustment.	N	N	N	D-657	Y
40.8.2.18	Fiscal Agent shall return adjustment requests with RTP letter to provider, indicating missing or other required information needs.		Y		D-657	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.2.19	Fiscal Agent shall scan adjustments and supporting documentation.		Y		D-657	Y
40.8.2.20	Fiscal Agent shall verify the quality and readability of scanned adjustment documents.				D-657	Y
40.8.2.21	Fiscal Agent shall reconcile all adjustments (hard copy) entered into the system to batch processing cycle input and output figures.	N	N	N	D-657	Y
	Claims Entry					
40.8.2.22	Fiscal Agent shall perform data entry of all hard copy claims.		Y		D-658	Y
40.8.2.23	Fiscal Agent shall determine if front-end denials are required (such as claims that do not have required sterilization forms or Medicare voucher attached for Medicaid Claims).		Y		D-658	Y
40.8.2.24	Fiscal Agent shall perform individual paper and electronic claim overrides on edits, such as presumptive eligibility, Medicare A, B, and C, HMO coverage, TPL, and timely filing limit	N	N	N	D-658	Y
	Specific to Adjustments					
40.8.2.25	Fiscal Agent shall perform data entry of adjustments.	N	N	N	D-658	Y
	Specific to Electronic Claims Submission/Electronic Data Interchange					
40.8.2.26	Fiscal Agent shall distribute provider claim submission software.	N	N	N	D-659	Y
40.8.2.27	Fiscal Agent shall develop and implement procedures to ensure the integrity of claims submitted by providers via ECS/EDI.	N	N	N	D-659	Y
40.8.2.28	Fiscal Agent shall ensure that all providers submitting via ECS/EDI have signed and returned State-approved ECS/EDI agreements prior to accepting any “production” claim data.		Y		D-659	Y
40.8.2.29	Fiscal Agent shall maintain the original imaged provider-signed ECS/EDI agreements		Y		D-659	Y

Requirement #	Requirement Description	A	B	C	D	E
	linked to the provider's file data.					
40.8.2.30	Fiscal Agent shall accept tape-to-tape billing from defined sources.				D-659	Y
40.8.2.31	Fiscal Agent shall staff ECS/EDI Help Desk to respond to provider support requirements from 8:00 A.M. to 5:00 P.M. Eastern Time on State business days.				D-660	Y
40.8.2.32	Fiscal Agent shall perform ECS/EDI Trading Partner acceptance testing and send memo to the State for signoff and approval of Trading Partner claims submission once testing is successful.	N	N	N	D-660	Y
40.8.2.33	Fiscal Agent shall perform provider ECS/EDI acceptance testing.	N	N	N	D-660	Y
40.8.2.34	Fiscal Agent shall assign provider ECS/EDI security identification number during testing and add to the production security file when provider is ECS/EDI-approved.	N	N	N	D-660	Y
40.8.2.35	Fiscal Agent shall log tapes and diskettes upon receipt and assigns batch number.				D-660	Y
40.8.2.36	Fiscal Agent shall perform acceptance testing of VANs for Pharmacy POS claim submission.				D-660	Y
40.8.2.37	Fiscal Agent shall obtain and maintain signed Pharmacy POS Trading Partner Agreements prior to accepting any "production" POS claim data.		Y		D-660	Y
40.8.2.38	Fiscal Agent shall perform pharmacy worksheet resolutions to resolve pending front-end edits for pharmacy claims and submits resolved worksheets to data entry for processing.	N	N	N	D-660	Y
	Drug Utilization Review					
40.8.2.39	Fiscal Agent shall produce information to support the State in completing the CMS Annual Drug Utilization Review Report.	N	N	N	D-661	Y
40.8.2.40	Fiscal Agent shall attend the DUR board meetings, supply copies of the annual DUR Report, and apply all board recommendations to POS once approved by the State.	N	N	N	D-661	Y

Requirement #	Requirement Description	A	B	C	D	E
	Retrospective Drug Utilization Review					
40.8.2.41	Fiscal Agent shall submit quarterly extract files to the DUR Vendor within five (5) State business days of the month following the quarter's end.			Y	D-661	Y
	Manual Review					
40.8.2.42	Fiscal Agent shall conduct manual reviews of claims for specific services.	N	N	N	D-662	Y
40.8.2.43	Fiscal Agent shall perform manual review on claims according to the manual review procedure manual that identifies claim error information and State-approval criteria.	N	N	N	D-662	Y
40.8.2.44	Fiscal Agent shall refer claims requiring policy decisions to the State.	N	N	N	D-662	Y
40.8.2.45	Fiscal Agent shall perform manual review when claim for EPSDT eligible recipient is denied for "non-covered" services.	N	N	N	D-662	Y
	Adjustments					
40.8.2.46	Fiscal Agent shall return adjustment requests not acceptable due to individual invalid information.		Y		D-662	Y
40.8.2.47	Fiscal Agent shall review adjustment requests.				D-663	Y
40.8.2.48	Fiscal Agent shall process claim-specific retroactive rate adjustments as specified by the State.	Y			D-663	Y
	State-Authorized Claim Overrides					
40.8.2.49	Fiscal Agent shall refer denied claims to the State for review when special circumstances require override designation.				D-663	Y
40.8.2.50	Fiscal Agent shall provide a method to process payments for any specific claim and maintain an audit trail.	Y			D-663	Y

Requirement #	Requirement Description	A	B	C	D	E
	General Claims Resolution					
40.8.2.51	Fiscal Agent shall add functionality to management fee payments to allow for enhanced/reduced fees for individual providers and shall provide interactive updates when entering the revisions into the system.	Y			D-664	Y
40.8.2.52	Fiscal Agent shall complete a report of identified claims with the potential for TPL, including Medicare, based on the previous mentioned elements.			Y	D-664	Y
40.8.2.53	Fiscal Agent shall use claims consultants to serve as technical supervisors to staff performing claims processing. These individuals shall: ▪ Research and analyze problem areas at the request of the State ▪ Provide consultation on complex cases and advise when to refer to the Fiscal Agent's medical consultant and/or the State ▪ Review, analyze, and recommend suggestions affecting State operations.				D-664	Y
40.8.2.54	Fiscal Agent shall obtain approval from NC DHHS for the amount to be applied for payment.	N	N	N	D-664	Y
40.8.2.55	Fiscal Agent shall check remaining balance as each payment amount is calculated to verify that the budgeted amount is not exceeded.	N	N	N	D-665	Y
40.8.2.56	Fiscal Agent shall manually price claims as designated by State policy.	Y			D-665	Y

40.8.3 Claims Processing Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.8.3.1	Fiscal Agent shall date-stamp all mail with actual date of receipt within one (1) business day of receipt at Fiscal Agent site.				D-666	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.3.2	Fiscal Agent shall print and mail Replacement MMIS State-approved forms to providers within two (2) business days of receipt of the provider request (at no cost to the provider).	N	N	N	D-666	Y
40.8.3.3	Fiscal Agent shall provide ECS/EDI Help Desk staff from 8:00 A.M. to 5:00 P.M. Eastern Time on State business days.				D-666	Y
40.8.3.4	Fiscal Agent shall electronically acknowledge back to the submitter, within twenty-four (24) hours of processing, a notice of all teleprocessed electronic claims files received as either accepted or rejected, along with the number of claims.	N	N	N	D-666	Y
40.8.3.5	Fiscal Agent shall assign an ICN to every claim, attachment, and adjustment within twenty-four (24) hours of receipt.				D-666	Y
40.8.3.6	Fiscal Agent shall maintain data entry-field accuracy rates above ninety-eight (98) percent.		Y		D-666	Y
40.8.3.7	Fiscal Agent shall scan every claim and attachment within one (1) State business day.				D-666	Y
40.8.3.8	Fiscal Agent shall return hard copy claims missing State-specified required data within two (2) State business days of receipt.		Y		D-666	Y
40.8.3.9	Fiscal Agent shall process all provider-initiated adjustments within forty-five (45) calendar days of receipt; however, if the claim requires a review by the State, the forty-five (45) calendar days shall suspend until the claim is returned to the Fiscal Agent.	N	N	N	D-666	Y
40.8.3.10	Fiscal Agent shall adjudicate: ▪ Ninety (90) percent of all clean claims for payment or denial within thirty (30) calendar days of receipt ▪ Ninety-nine (99) percent of all clean claims for payment or denial within ninety (90) calendar days of receipt ▪ All non-clean claims within thirty (30) calendar days of the date of correction of the condition that caused the claim to be unclean.	N	N	N	D-667	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.3.11	Fiscal Agent shall provide correct claims disposition and post to the appropriate account or when appropriate, request additional information within one (1) State business day of receipt.	N	N	N	D-667	Y
40.8.3.12	Fiscal Agent shall notify the State of any delays in the checkwrite process by 8:00 A.M. Eastern Time the next State business day following the checkwrite cycle.				D-667	Y
40.8.3.13	Fiscal Agent shall notify the State immediately upon discovery of any erroneous payments, irrespective of cause, and prior to initiating appropriate recovery action. Fiscal Agent shall use the change request process to notify the State of any system errors that result in a potential provider erroneous payment.	N	N	N	D-667	Y
40.8.3.14	Fiscal Agent shall provide financial month-end reporting to the State within three (3) days from the last checkwrite of each month.	N	N	N	D-667	Y
40.8.3.15	Fiscal Agent shall provide specified quarterly extract files to the DUR Vendor within five (5) State business days of the start of the month following the quarter's end.	N	N	N	D-667	Y
40.8.3.16**	Fiscal Agent shall adjudicate for payment all claims with date of service in previous fiscal year July through April claims by the last checkwrite in May for payment, and shall adjudicate all claims for May and June by the last checkwrite in October of the current fiscal year August for payment due to State fiscal year processing of the State monies.	N	N	N	D-667	Y
40.8.3.17	Fiscal Agent shall ensure that all payments, adjustments, and other financial transactions made through the Replacement MMIS shall be made on behalf of eligible clients to enrolled providers for approved services in accordance with the payment rules and other policies of the State.	N	N	N	D-668	Y
40.8.3.18	Fiscal Agent shall timely process all claims to assure that the average time from receipt to payment is within the schedule of allowable times. In addition, payments shall be made in compliance with Federal regulations, and the Fiscal Agent shall pay any penalties, interest, and/or court cost and attorney's fees arising from any claim made by a provider against the Fiscal Agent or the State where the Fiscal Agent's actions resulted in a claim payment that was late.	N	N	N	D-668	Y

Requirement #	Requirement Description	A	B	C	D	E
40.8.3.19	Fiscal Agent shall successfully complete each checkwrite by the date on the State-approved Checkwrite Schedule.	N	N	N	D-668	Y

40.9 Managed Care Requirements

40.9.1 Managed Care System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.9.1.1	Provides capability for notes tracking for managed care provider complaints	N	N	N	D-335	Y
40.9.1.2	Provides capability for online access to all recipient, provider, claims, and reference data related to Managed Care	N	N	N	D-335	Y
40.9.1.3	Provides capability to support multiple Managed Care programs, including those currently in existence: ▪ Primary Care Case Management (PCCM) ▪ Pre-Paid Inpatient Mental Health Plan (PIHP)	N	N	N	D-335	Y
40.9.1.4	Provides capability to maintain Managed Care capitation rates for specific groups of recipients	N	N	N	D-335	Y
40.9.1.5	Provides capability to apply edits/audits that prevent claims from being paid when Managed Care program recipients receive program-covered services from sources other than the capitated plans in which they are enrolled	Y			D-335	Y
40.9.1.6	Provides capability to apply edits/audits that prevent claims from being paid when a recipient has not received a referral or override approval when required by the Managed Care program or primary care provider with whom they are enrolled	Y			D-336	Y
40.9.1.7	Provides capability to track the utilization rates and costs for program enrollees and to	Y			D-336	Y

Requirement #	Requirement Description	A	B	C	D	E
	compare such utilization rates and costs to comparable groups of non-Managed Care recipients and across different Managed Care plans to assure sufficient savings are achieved					
40.9.1.8	Provides capability to auto-assign recipients into a Managed Care program(s) See Auto Assignment Business Rules in the Managed Care DSD Exhibits in the Procurement Library.	Y			D-336	Y
40.9.1.9	Provides capability to automatically and on demand produce notices and letters to recipients about their eligibility, enrollment/disenrollment, unavailability of chosen plan, and Managed Care program changes	N	N	N	D-336	Y
40.9.1.10	Provides capability to calculate member months per Managed Care program by age groups and/or by aid categories			Y	D-336	Y
40.9.1.11	Provides capability to maintain an online audit trail of all updates to Managed Care data	N	N	N	D-336	Y
40.9.1.12	Provides capability for online, updateable letter templates for Managed Care recipient and provider letters with the ability to add free-form text and allow for online template changes		Y		D-336	Y
40.9.1.13	Provides capability to apply primary care provider sanctions by entering a provider-specific dollar amount or percentage that results in withholding, or repaying, suppressing, and releasing of all or part of the provider's monthly management/coordination fee up to one hundred (100) percent and notify the State of completed transaction	Y			D-336	Y
40.9.1.14	Provides capability for online logging and tracking of changes to capitation fees or administrative entity provider numbers, file maintenance initiation date, receipt date, file maintenance completion date, operator completing respective changes, name of supervisor, validation, and date	Y			D-336	Y
40.9.1.15	Provides capability to support encounter processing data and costing for the following functions for generation of reports: ▪ State History File	N	N	N	D-337	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ Finalized Claim Activity File ▪ Storage of encounter fee for service equivalent cost					
40.9.1.16	Provides capability to produce monthly Managed Care enrollment reports	N	N	N	D-337	Y
40.9.1.17	Provides capability to produce a file to DIRM/EIS on a weekly basis to report auto-assignment results	Y			D-337	Y
40.9.1.18	Provides capability to produce county-specific Managed Care Provider Directory and transmit electronically to DIRM nightly			Y	D-337	Y
40.9.1.19	Provides capability to produce a county-specific Provider Availability Report and transmit electronically to DIRM nightly			Y	D-337	Y
40.9.1.20	Provides capability to create an extract file containing North Carolina Health Choice recipients linked with a provider/administrative entity and send to the North Carolina State Health Plan by the third business day of each month			Y	D-337	Y
40.9.1.21	Provides capability to generate management fees monthly	N	N	N	D-337	Y
40.9.1.22	Provides capability to generate capitation payments monthly and retroactively for one (1) year	Y			D-337	Y
40.9.1.23	Provides capability to generate prorated capitation payments for a partial month of eligibility	N	N	N	D-337	Y
40.9.1.24	Provides capability to access Managed Care data by recipient identification number, recipient name, provider identification number, provider name, procedure code, procedure description, prior approval number, clerk identification, and any combinations thereof		Y		D-337	Y
40.9.1.25	Provides capability to generate a monthly Federal report of auto-assigned Medicaid recipients			Y	D-338	Y

Requirement #	Requirement Description	A	B	C	D	E
40.9.1.26	Provides capability to produce PAL scorecard for Managed Care providers			Y	D-338	Y
40.9.1.27	Provides capability to adjust base management fees by percentage resulting in enhanced/reduced fees for all individual providers or administrative entities	Y			D-338	Y
40.9.1.28	Provides capability to create notification letters to the provider/administrative entity regarding the adjustment to management fee rates and the reason for the adjustment		Y		D-338	Y
40.9.1.29	Provides capability to produce a monthly report of all adjusted management fees	N	N	N	D-338	Y
40.9.1.30	Provides capability to produce quarterly utilization reports based on paid claims for all Community Care of North Carolina (CCNC) providers, comparing each provider's service rates and per member per month (PMPM) costs to other primary care provider types within their peer group(s) This will include the ability to automate these reports and to produce the report(s) with varying parameters, including, but not limited to, date spans, provider, provider specialties, provider network, service categories, diagnosis codes, CPT codes, and DRG diagnostic-related groupings. This report shall also include the average total enrollment, adult enrollment, and child enrollment for each CCNC provider.			Y	D-338	Y
40.9.1.31	Provides capability to calculate utilization outlier data for the purpose of provider education, utilization management, and quality improvement This data shall be produced in conjunction with the Utilization Review Report.	N	N	N	D-338	Y
40.9.1.32	Provides capability to revise the Quarterly Utilization Report format to allow for more flexibility to revise the report parameters and data and to include, but not be limited to, disease management and system of care groupings, drug utilization, and other group comparisons, as well as the current peer group comparisons	Y			D-339	Y
40.9.1.33	Provides capability to produce recipient letters based on age, sex, and/or clinical data/medical services based on claim data		Y		D-339	Y
40.9.1.34	Provides capability to generate a report of mailed letters		Y		D-339	Y

40.9.2 Managed Care Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.9.2.1	Fiscal Agent shall resolve all errors, discrepancies, and/or issues related to capitated payments or management fees.	N	N	N	D-669	Y
40.9.2.2	Fiscal Agent shall monitor encounter processing to ensure no payments are generated as a result of encounter processing.	N	N	N	D-669	Y
40.9.2.3	Fiscal Agent shall compile, update, and distribute the Data Submission Manual for encounter data processing.				D-669	Y
40.9.2.4	Fiscal Agent shall serve as first point of contact for questions regarding encounter-related issues.	N	N	N	D-669	Y
40.9.2.5	Fiscal Agent shall conduct training seminars with providers and State staff regarding the encounter claim submission process.				D-670	Y
40.9.2.6	Fiscal Agent shall serve as point of contact for Medicaid providers requesting Managed Care override approvals, make a determination regarding issuance of override, and enter the override approval into the system.	N	N	N	D-670	Y
40.9.2.7	Fiscal Agent shall support toll-free telephone access and be the point of contact for Managed Care providers between 8:00 A.M. and 5:00 P.M. Eastern Time each State business day.	N	N	N	D-670	Y
40.9.2.8	Fiscal Agent shall log receipt of Managed Care provider telephone messages, including brief description of reason for the call, date received, date and who responded to the call, action taken, and any necessary follow-up actions, and ensure follow-up actions are completed.	N	N	N	D-670	Y

40.9.3 Managed Care Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.9.3.1	Fiscal Agent shall provide the Withhold and Penalty Log within five (5) State business days of the end of the previous month.	N	N	N	D-671	Y
40.9.3.2	Fiscal Agent shall provide the file maintenance log for Managed Care-related transactions within five (5) State business days of the end of the previous month.	N	N	N	D-671	Y
40.9.3.3	Fiscal Agent shall complete requests for changes to capitation payments/management fees within two (2) State business days from date of request.	N	N	N	D-671	Y
40.9.3.4	Fiscal Agent shall enter all written override approval requests into the system within two (2) State business days from receipt of the request and provide a decision to the requesting providers within five (5) State business days from receipt of request.	N	N	N	D-671	Y
40.9.3.5	Fiscal Agent shall respond to a requesting provider within one (1) hour for a telephone request for an emergency override.	N	N	N	D-671	Y
40.9.3.6	Fiscal Agent shall compile, update, and distribute the Data Submission Manual for encounter data processing to providers within five (5) State business days from State date of approval of change.				D-671	Y
40.9.3.7	Fiscal Agent shall provide toll-free access and a point of contact for Managed Care providers between 8:00 A.M. and 5:00 P.M. Eastern Time each State business day.	N	N	N	D-671	Y
40.9.3.8	Fiscal Agent shall respond to Managed Care provider telephone messages within one (1) State business day of receipt of the message.	N	N	N	D-672	Y
40.9.3.9	Fiscal Agent shall produce Managed Care provider enrollment reports and make them available to providers no later than the first day of each month.	N	N	N	D-672	Y
40.9.3.10	Fiscal Agent shall conduct weekly searches for all “exempt” numbers that are linked to the mandatory program category for a system-generated letter advising the eligible of the potential of primary care provider selection from five (5) providers within a thirty-mile (30-	N	N	N	D-672	Y

Requirement #	Requirement Description	A	B	C	D	E
	mile) range.					
40.9.3.11	Fiscal Agent shall send the Health Choice file to the North Carolina State Health Plan by the third business day of each month.	N	N	N	D-672	Y

40.10 Health Check Requirements

40.10.1 Health Check System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.10.1.1	Provides capability to maintain the Health Check periodicity schedule	N	N	N	D-347	Y
40.10.1.2	Provides capability for online inquiry to all Health Check data with access by recipient ID and provider number			Y	D-347	Y
40.10.1.3	Provides capability to maintain each Health Check-eligible recipient, the current and historical screening results, referral, diagnosis and treatment, and immunizations, including the provider numbers and dates			Y	D-347	Y
40.10.1.4	Provides capability to identify paid and denied screening claims			Y	D-347	Y
40.10.1.5	Provides capability to identify abnormal conditions by screening date and whether the condition was treated or referred for treatment			Y	D-348	Y
40.10.1.6	Provides capability to update recipient Health Check data with screening results and dates and referral information			Y	D-348	Y
40.10.1.7	Provides capability for online, updateable letter templates for Health Check monthly notifications, standardized letters, and inserts		Y		D-348	Y
40.10.1.8	Provides capability for automatic generation of monthly notifications to case heads for next screenings, screenings missed, and abnormal conditions not treated based on State			Y	D-348	Y

Requirement #	Requirement Description	A	B	C	D	E
	criteria					
40.10.1.9	Provides capability to maintain all notices sent, identifying case and recipient and date the notice was sent			Y	D-348	Y
40.10.1.10	Provides capability to maintain an online audit trail of all updates to Health Check data	N	N	N	D-348	Y
40.10.1.11	Provides capability for Web-based Health Check functionality that allows for the creation, update, and management of: ▪ Health Check Information Notifications ▪ Monthly Accounting of Activities Report (MAAR) Information ▪ County Options Change Request (COCR) Information ▪ Full-Time Equivalency (FTE) Information ▪ Health Check Recipient Data			Y	D-348	Y
40.10.1.12	Provides capability for the following Web-based functionality: ▪ Search recipient data ▪ Enter comments ▪ Update notification suppression ▪ Send standardized notifications			Y	D-348	Y
40.10.1.13	Provides capability to calculate and system-generate Health Check Coordinator management fees			Y	D-349	Y
40.10.1.14	Provides capability to generate a monthly FTE report based on information received on the MAAR and COCR			Y	D-349	Y
40.10.1.15	Provides capability to capture and electronically store all Health Check county staff information			Y	D-349	Y
40.10.1.16	Provides Web-based access to current Health Check data to include new eligibles, new health check screenings, referral, etc.; provides access to each Health Check Coordinator (HCC) to their specific county information and provides ad hoc query			Y	D-349	Y

Requirement #	Requirement Description	A	B	C	D	E
	capability for extraction of data to the desktop					
40.10.1.17	Provides capability to produce the Health Check Activity Report	N	N	N	D-349	Y
40.10.1.18	Provides capability to convert HCC comments from legacy FoxPro Data Shell application into the Replacement MMIS			Y	D-349	Y
40.10.1.19	Provides capability to generate EPSDT report for primary care providers and administrative entities monthly no later than the fifth day of the month for the preceding month's data This information should be available on the Web for providers to download for their practice only.			Y	D-349	Y
40.10.1.20	Provides capability to produce monthly MAAR Summary reports			Y	D-349	Y
40.10.1.21	Provides capability to generate reports of recipients who have been in a particular practice for defined time periods, which includes the county and Statewide participation rates			Y	D-349	Y

40.10.2 Health Check Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.10.2.1	Fiscal Agent shall produce and update Health Check User Manual(s).				D-673	Y
40.10.2.2	Fiscal Agent shall provide telephone and on-site technical support and training for Health Check Coordinators.				D-673	Y
40.10.2.3	Fiscal Agent shall participate in Health Check Coordinator Training Sessions in Raleigh, NC.				D-673	Y
40.10.2.4	Fiscal Agent shall update Health Check Billing Guide.				D-674	Y

Requirement #	Requirement Description	A	B	C	D	E
40.10.2.5	Fiscal Agent shall conduct agenda planning meetings with State Health Check staff prior to Provider Training Workshops and conduct mock workshops for State approval.				D-674	Y
40.10.2.6	Fiscal Agent shall conduct annual regional Health Check workshops for participating providers in six (6) separate sites throughout the State.				D-674	Y
40.10.2.7	Fiscal Agent shall monitor the Denied Claims Report for Health Check denials and contact providers by telephone to educate and schedule provider visits if denial rate is above ten (10) percent.				D-674	Y
40.10.2.8	Fiscal Agent shall review the Health Check County Option File Master Report monthly to ensure that all participating counties received Automated Information Notification System (AINS) (or Fiscal Agent equivalent) data and all Health Check reports.				D-674	Y
40.10.2.9	Fiscal Agent shall review the Health Check Management Fee Option File Master Report monthly to ensure that Health Check management fee claims were generated correctly.				D-674	Y
40.10.2.10	Fiscal Agent shall submit the monthly FTE Report to the State for approval.				D-674	Y
40.10.2.11	Fiscal Agent shall respond to questions from Health Check County staff related to Health Check management fees and provides written responses to the State.				D-674	Y
40.10.2.12	Fiscal Agent shall provide telephone support and on-site provider visits to educate providers on the Health Check program, policies, and billing requirements.				D-674	Y
40.10.2.13	Fiscal Agent shall coordinate rewrite of the Health Check Billing Guide.				D-674	Y

40.10.3 Health Check Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.10.3.1	Fiscal Agent shall maintain and update Health Check User Manual(s) within thirty (30)				D-675	Y

Requirement #	Requirement Description	A	B	C	D	E
	days of a change in policy/procedures and shall notify HCCS within two (2) days after posting.					
40.10.3.2	Fiscal Agent shall produce CMS Statistical Database updates and required reports one (1) month prior to CMS deadline and shall make all appropriate corrections to reports within forty-eight (48) hours of notification of problem.				D-675	Y
40.10.3.3	Fiscal Agent shall produce a monthly FTE Report by the second Friday from the end of each month.				D-675	Y
40.10.3.4	Fiscal Agent shall provide training for use of the Health Check functionality to HCCS, in their respective counties, within three (3) weeks of notification by the State.				D-675	Y
40.10.3.5	Fiscal Agent shall review claim denials and contact providers with denial rate greater than ten (10) percent within fourteen (14) days of claim denial.	N	N	N	D-676	Y
40.10.3.6	Fiscal Agent shall respond to questions from Health Check county staff related to Health Check management fees within twenty-four (24) hours of receipt and shall notify State Health Check staff in writing of inquiry and resolution within forty-eight (48) hours of receipt.				D-676	Y
40.10.3.7	Fiscal Agent shall update addresses in the Health Check County Option File within twenty-four (24) hours of receipt.				D-676	Y
40.10.3.8	Fiscal Agent shall coordinate with the State for the annual revisions to the Health Check Billing Guide.				D-676	Y

40.11 Third Party Liability Requirements

40.11.1 TPL System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.11.1.1	Provides capability to search TPL database by recipient name, recipient number, policy number, policy holder name, policy holder ID number, SSN of the policy holder, by either the whole name or number or any part of the last name or number, or combination thereof	N	N	N	D-360	Y
40.11.1.2	Provides capability to ensure that claims for preventive pediatric services and prenatal care for pregnant women are paid to providers and not cost-avoided if TPL is available	Y			D-360	Y
40.11.1.3	Provides capability to ensure that claims for inpatient hospital stays for pregnant women are cost avoided	Y			D-360	Y
40.11.1.4	Provides capability for updating of insurance carrier information			Y	D-360	Y
40.11.1.5	Provides capability to retrieve/search third party resource information by the following: ▪ Name (by any part of last name), ID number (by any part of ID number), date of birth, SSN (by any part of number) of eligible recipient, and relationship of covered individual to policy holder, or combination thereof ▪ Insurance carrier ▪ Policy number (by any part of number), Medicare Health Insurance Claim (HIC) number (by any part of number), or railroad number ▪ Group name and number ▪ Source code indicating source of suspect TPL information ▪ Name, SSN, and/or ID number of policy holder (by any part of number) ▪ Prescription number, whole number, or any part of number ▪ Therapeutic code ▪ Therapeutic class			Y	D-361	Y

Requirement #	Requirement Description	A	B	C	D	E
	▪ User ID of individual entering or updating TPL record					
40.11.1.6	Provides capability to electronically store multiple, date-specific TPL resources for each recipient	N	N	N	D-361	Y
Requirement Deleted 40.11.1.7	~~Provides capability to electronically store multiple, date-specific TPL resources for each Medicare recipient~~					
40.11.1.8	Provides capability to electronically store all third party resource information by recipient	N	N	N	D-361	Y
40.11.1.9	Provides capability to electronically store third party carrier information	N	N	N	D-362	Y
40.11.1.10	Provides capability to identify all cost-avoided payments due to established TPL	Y			D-362	Y
40.11.1.11	Provides capability to bill carriers for “pay and chase” claims and automatically create a “case” once claims have accumulated to defined threshold amount			Y	D-362	Y
40.11.1.12	Provides capability to automatically identify previously paid claims for recovery when TPL resources are identified or verified retroactively and automatically creates a recovery “case” to initiate recovery within a period specified by the State			Y	D-362	Y
40.11.1.13	Provides capability to identify claims and support recovery actions on paid claims when Medicare coverage is identified or verified after claims have been paid.			Y	D-362	Y
40.11.1.14	Provides capability to track and post recoveries to individual claim histories			Y	D-362	Y
40.11.1.15	Provides capability for archival and retrieval of closed TPL recovery cases			Y	D-362	Y
40.11.1.16	Provides capability to identify accident/trauma claims and automatically generate questionnaire/reports	N	N	N	D-363	Y
40.11.1.17	Provides capability to approve or cancel trauma questionnaires			Y	D-363	Y

Requirement #	Requirement Description	A	B	C	D	E
40.11.1.18	Provides capability to retrieve paid claims from history to assist in TPL recovery	N	N	N	D-363	Y
40.11.1.19	Provides capability to maintain an online audit trail of all updates to TPL data	N	N	N	D-363	Y
40.11.1.20	Provides capability to generate carrier update transactions to the State			Y	D-363	Y
40.11.1.21	Provides capability to provide online inquiry, add, and update to TPL data	N	N	N	D-363	Y
40.11.1.22	Provides capability to enter or update recovery cases from recoveries received	N	N	N	D-363	Y
40.11.1.23	Provides capability to ensure that if the recipient has a pharmacy policy on the date of service that the pharmacy policy is billed or displayed at point of sale rather than any medical policy	N	N	N	D-363	Y
40.11.1.24	Provides capability to identify previously paid claims from the past three (3) years of claims history when TPL resources are identified or verified retroactively			Y	D-364	Y
40.11.1.25	Provides capability to identify previously paid claims from Claims History for the allowed Medicare time limit for filing when Medicare resources are identified or verified after Medicaid payment has occurred			Y	D-364	Y
40.11.1.26	Provides capability to produce and bill drug invoices for insurance carriers			Y	D-364	Y
40.11.1.27	Provides capability to produce accident inquiry letters for identified recipients	N	N	N	D-364	Y
40.11.1.28	Provides capability to maintain recipient health insurance data for TPL through updates from EIS and ACTS to assist in claims processing			Y	D-364	Y
40.11.1.29	Provides capability to capture and maintain Estate Recovery Data, including claims, invoice data, and recovery data on each individual that meets defined criteria	N	N	N	D-364	Y
40.11.1.30	Provides capability to flag and maintain Estate Recovery claims for a lifetime	N	N	N	D-364	Y
40.11.1.31	Provides capability to produce claims/invoices in order to bill for Estate Recovery	N	N	N	D-364	Y

Requirement #	Requirement Description	A	B	C	D	E
40.11.1.32	Provides capability to track and report on invoices	N	N	N	D-364	Y
40.11.1.33**	Provides capability to route specific DME claims to Medicaid after Children's Special Health Services (CSHS) has paid			Y	D-365	Y
40.11.1.34	Provides capability for online updating and reporting function for cases to track open cases, type of case, amount of liens, amount of recoveries	N	N	N	D-365	Y
40.11.1.35	Provides capability to view the invoices for prescription drugs generated by Fiscal Agent, by carrier, or by recipient	N	N	N	D-365	Y
40.11.1.36	Provides capability for online updating, payment, and reporting for the HIPP Program	N	N	N	D-365	Y
40.11.1.37	Provides capability to systematically build recovery cases, allowing users to inquire, add, and update recovery case records	N	N	N	D-365	Y
40.11.1.38	Provides capability to search recovery case records by unique recovery case identification number, case type, policy number, policy holder name, policy holder SSN, claim number, recipient name or number, carrier name, carrier number, provider name or number, attorney name, accident number, or a combination of these data elements			Y	D-365	Y
40.11.1.39	Provides capability to include attorney name, attention line, address, and telephone number in a recovery case record	N	N	N	D-365	Y
40.11.1.40	Provides capability to view all TPL receivables online in determining which claim details have not be completed and the total amount not posted	N	N	N	D-365	Y
40.11.1.41	Provides capability to add or delete claims that are included in any recovery case	N	N	N	D-366	Y
40.11.1.42	Provides capability to add and update the TPL threshold amount online	N	N	N	D-366	Y
40.11.1.43	Provides capability to enter free-form text in a recovery case	N	N	N	D-366	Y
40.11.1.44	Provides capability to maintain all open recovery cases online until closed by authorized	N	N	N	D-366	Y

Requirement #	Requirement Description	A	B	C	D	E
	user					
40.11.1.45	Provides capability to maintain and flag claims that are part of a TPL recovery/cost avoidance case online for three (3) years after the case is closed before archiving	N	N	N	D-366	Y
40.11.1.46	Provides capability to flag a recipient for which a TPL recovery case has been created			Y	D-366	Y
40.11.1.47	Provides capability to generate unique Case Identification Numbers	N	N	N	D-367	Y
40.11.1.48	Provides capability to close a case without full recovery	N	N	N	D-367	Y
40.11.1.49	Provides capability to reproduce a claim and send either by fax, mail or electronically	N	N	N	D-367	Y
40.11.1.50	Provides the capability to flag claims for recipients who have reached a defined threshold	N	N	N	D-367	Y
40.11.1.51	Provides capability for online access and update to TPL data by State-designated staff	N	N	N	D-367	Y
40.11.1.52	Provides capability for batch and/or online real-time access to TPL data between EIS, Mental Health Eligibility Inquiry, CSDW, Medicaid Quality Control, Online Verification, ACTS, and HIS and the Replacement MMIS using API and SOA concepts			Y	D-367	Y
40.11.1.53	Provides capability for daily (next business day) transmission logs showing successful transmission of TPL data to DIRM for CSDW, ACTS, and EIS			Y	D-367	Y
40.11.1.54	Provides capability to exclude third party insurance from claims processing on a per-person/per-policy basis, for a set period; provides capability to support multiple exclusions per person/per policy			Y	D-367	Y
40.11.1.55	Provides capability to process and pay claims when policy limits are exhausted for individuals related to a specific service either annual or lifetime benefits	N	N	N	D-367	Y
40.11.1.56	Provides capability to associate and track Non-Custodial Parent (NCP) policy holder information to covered individuals	N	N	N	D-367	Y

Requirement #	Requirement Description	A	B	C	D	E
40.11.1.57	Provides capability to pend updates to TPL resource data received from Child Support for Medicaid recipients	N	N	N	D-368	Y
40.11.1.58	Provides the capability to pend TPL updates for recipients who are covered by Breast and Cervical Cancer Medicaid (BCCM) or Health Choice programs and display a notification message that the recipient has BCCM or Health Choice			Y	D-368	Y
40.11.1.59	Provides capability to produce a report of TPL segments that have been updated more than once in thirty (30) days			Y	D-368	Y
40.11.1.60	Provides capability to produce a Health Choice Recipient Activity Report in addition to the reports listed in the Design documentation			Y	D-368	Y
40.11.1.61	Provides capability to provide TPL edit/error report(s) for ACTS for State staff access			Y	D-368	Y
40.11.1.62	Provides capability to extract and process TPL data transmitted by ACTS from the DIRM electronic File Cabinet			Y	D-368	Y
40.11.1.63	Provides capability to produce a daily extract of TPL carrier and recipient resource data for ACTS, CSDW, and EIS			Y	D-368	Y
40.11.1.64	Provides capability to produce an extract of updates to TPL recipient resource data for ACTS for Medicaid recipients referred to Child Support			Y	D-368	Y
40.11.1.65	Provides capability for batch access to TPL data using API and SOA concepts between EIS, ACTS, and the Replacement MMIS			Y	D-368	Y
New Requirement 40.11.1.66	Provides capability to produce system-generated letters to providers, recipients, and county offices		Y		D-368	Y

40.11.2 TPL Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
New Requirement 40.11.2.1	Fiscal Agent shall identify claims and support recovery actions when Medicare resources are identified or verified after claims have been paid.			Y	D-678	**Y**
New Requirement 40.11.2.2	Fiscal Agent shall process and track recoveries and collections	N	N	N	D-678	**Y**
New Requirement 40.11.2.3	Fiscal Agent shall track and post recoveries to individual claim histories.			Y	D-678	**Y**
New Requirement 40.11.2.4	Fiscal Agent shall enter or update recovery cases from recoveries received	N	N	N	D-679	**Y**
New Requirement 40.11.2.5	Fiscal Agent shall generate carrier update transactions to the State			Y	D-679	**Y**
New Requirement 40.11.2.6	Fiscal Agent shall extract and process TPL data transmitted by ACTS from the DIRM electronic File Cabinet			Y	D-679	Y
New Requirement 40.11.2.7	Fiscal Agent shall produce a daily extract of TPL carrier and recipient resource data for ACTS, CSDW, and EIS			Y	D-679	Y
New Requirement 40.11.2.8	Fiscal Agent shall produce an extract of updates to TPL recipient resource data for ACTS for Medicaid recipients referred to Child Support			Y	D-679	Y

40.11.3 TPL Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
Requirement Deleted 40.11.3.1	~~Fiscal Agent shall produce system-generated letters to providers, recipients, and county offices.~~					
40.11.3.2	Fiscal Agent shall adjust paid Claims History for State-specified TPL recoveries and provider/recipient collections within five (5) State business days from end of the previous month.	N	N	N	D-680	Y
40.11.3.3	Fiscal Agent shall disposition the recoveries/collections accurately and consistently ninety-nine and eight tenths (99.8) percent of the time.	N	N	N	D-680	**Y**
40.11.3.4	Fiscal Agent shall produce and bill drug invoices for insurance carriers within five (5) State business days of TPL entry.	N	N	N	D-680	**Y**
40.11.3.5	Fiscal Agent shall mail the accident inquiry letters to the identified recipients within five (5) State business days from end of the previous month.	N	N	N	D-680	**Y**
40.11.3.6	Fiscal Agent shall generate an Estate Recovery invoice within 2 business days after a recipient meets the defined criteria.	N	N	N	D-681	**Y**
40.11.3.7	Fiscal Agent shall provide TPL edit/error report(s) for ACTS for State staff access each State business day.	N	N	N	D-681	Y
40.11.3.8	Fiscal Agent shall provide daily (next business day) transmission logs showing successful transmission of TPL data to CSDW and to and from ACTS available for State staff access each State business day.	N	N	N	D-681	Y
40.11.3.9	The Fiscal Agent shall extract and process recipient TPL data transmitted by ACTS from the electronic DIRM File Cabinet by 7:00 A.M.	N	N	N	D-681	Y
40.11.3.10	The Fiscal Agent shall produce a daily extract of TPL carrier and recipient resource data to DIRM for ACTS, CSDW, and EIS	N	N	N	D-681	Y

Requirement #	Requirement Description	A	B	C	D	E
40.11.3.11	The Fiscal Agent shall produce a daily extract of updates to TPL recipient resource data to DIRM for ACTS for Medicaid recipients referred to Child Support.	N	N	N	D-681	Y

40.12 Drug Rebate Requirements

40.12.1 Drug Rebate System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.12.1.1	Provides capability to maintain and update data on manufacturers with whom rebate agreements exist, including: ▪ Manufacturer ID numbers and labeler codes ▪ Indication of collection media ▪ Indication of invoicing media ▪ Contact name, mailing and e-mail address, phone and fax numbers ▪ Manufacturer (labeler) enrollment, termination and reinstatement dates ▪ Manufacturer Unit Rebate Amount (URA) ▪ Manufacturer units of measure	N	N	N	D-375	Y
40.12.1.2	Provides capability to capture CMS drug unit rebate amount and units of measure and provides capability to capture T-bill rates for interest calculation	N	N	N	D-375	Y
40.12.1.3	Provides capability to validate units of measure from CMS file to Replacement MMIS drug file for consistency and reporting on exceptions	N	N	N	D-375	Y
40.12.1.4	Provides capability to calculate and generate rebate adjustments by program and/or labeler based on retroactively corrected CMS and North Carolina rebate data	N	N	N	D-375	Y

Requirement #	Requirement Description	A	B	C	D	E
40.12.1.5	Provides capability to determine the amount of rebates due by NDC and UPC, using paid claim data and eligible data from both the pharmacy program and NDCs from the physician drug program procedure codes	N	N	N	D-375	Y
40.12.1.6	Provides capability to generate invoices and regenerate invoices that separately identify rebate amounts and interest amounts by program, labeler, and rebate quarter	Y			D-375	Y
40.12.1.7	Provides capability to maintain identification of the original drug rebate quarter for the claim throughout any adjustments made to the claim	N	N	N	D-375	Y
40.12.1.8	Provides capability for system determination of the rebate amounts and adjustments overdue, calculates interest, and generates new invoices, separately identifying rebate amounts and interest by program, labeler, and rebate quarter	Y			D-376	Y
40.12.1.9	Provides capability for system generation of invoice details and post-payment details that are consistent with the State's reconciliation of invoices and prior quarter adjustment statement			Y	D-376	Y
40.12.1.10	Provides capability to generate invoice cover letters, collection letters, and follow-up collection letters	N	N	N	D-376	Y
40.12.1.11	Provides capability for online, updateable letter templates, including templates for invoice letters, collection letters, follow-up collection letters, allowing for a free-form comments section		Y		D-376	Y
40.12.1.12	Provides capability to maintain and retrieve history of letters sent to manufacturers	N	N	N	D-376	Y
40.12.1.13	Provides capability to update payment details and adjustments to the Replacement MMIS accounting system	N	N	N	D-376	Y
40.12.1.14	Provides capability to maintain and retrieve drug rebate invoice and payment data indefinitely, including CMS drug data, claim data, and operational comments	N	N	N	D-376	Y
40.12.1.15	Provides capability for system identification and exclusion of claims for drugs not eligible			Y	D-376	Y

Requirement #	Requirement Description	A	B	C	D	E
	for drug rebate program					
40.12.1.16	Provides capability for system identification and exclusion of claims from dispensing pharmacies that are not eligible for drug rebate program (340B providers)	N	N	N	D-376	Y
40.12.1.17	Provides capability for online access by the State to quarterly manufacturer drug rebate invoice detail and balances	N	N	N	D-377	Y
40.12.1.18	Provides capability for online access to five (5) years of historical drug rebate invoices, including supporting claims-level detail with selection criteria by labeler, quarter, NDC, or any combination of criteria	N	N	N	D-377	Y
40.12.1.19	Provides capability for online posting of accounts receivables labeler, NDC for each quarter, rebates receivable, and interest receivable	N	N	N	D-377	Y
40.12.1.20	Provides capability for unit conversion of units paid per claim to CMS units billed and CMS units billed to units paid per claim	N	N	N	D-377	Y
40.12.1.21	Provides capability to maintain units paid (as used to calculate claims pricing) and CMS units billed for drug rebate on Claims History	N	N	N	D-377	Y
40.12.1.22	Provides capability for online access to accounts receivable data, invoice history, payment history, adjustment history, and the audit trail at the labeler, quarter, and NDC level	Y	Y	Y	D-377	Y
40.12.1.23	Provides capability to adjust accounts receivable balances for: ▪ Rebates only at labeler/quarter level ▪ Interest only at labeler/quarter level ▪ Rebates and units at NDC level, which would also update labeler/quarter balances ▪ Adjustments and State approved write-offs ▪ Interest only at the drug detail level			Y	D-377	Y

Requirement #	Requirement Description	A	B	C	D	E
40.12.1.24	Provides capability for online maintenance of comprehensive dispute tracking, including an automated tickler file to flag, track, and/or report quarterly on responding and non-responding manufacturers and disputes			Y	D-377	Y
40.12.1.25	Provides capability for logging and tracking all telephone conversations, letters, inquiries, and other correspondence and actions taken by manufacturers, the State, and others related to drug rebate processing	N	N	N	D-378	Y
40.12.1.26	Provides capability for generation of manufacturer mailing labels on request			Y	D-378	Y
40.12.1.27	Provides capability for an online audit trail of all activities and updates to drug rebate data	N	N	N	D-378	Y
40.12.1.28	Provides capability for online update for Drug Rebate accounts receivable via the NDC with data such as labeler check number and check receipt date to monitor all Drug Rebate accounts receivable activity	N	N	N	D-378	Y
40.12.1.29	Provides capability to make available to the State the total Medicaid expenditures for multiple source drugs (annually) as well as other drugs (every three [3] years); provides capability to include mathematical or statistical computations, comparisons, and any other pertinent records to support pricing changes as they occur			Y	D-378	Y
40.12.1.30	Provides capability for adjustment and State-approved write-off records	N	N	N	D-378	Y
40.12.1.31	Provides capability for system interest calculation on outstanding Drug Rebate balances and applies results to DRS Accounts Receivable File	N	N	N	D-378	Y
40.12.1.32	Provides capability to perform end-of-month balancing process	N	N	N	D-378	Y
40.12.1.33	Provides capability to load all pharmacy claims to the Drug Rebate business area weekly, regardless of where they are paid			Y	D-378	Y
40.12.1.34	Provides capability to maintain the Drug Rebate Labeler Data, facilitating automatic updating with information from CMS and the State	N	N	N	D-379	Y

Requirement #	Requirement Description	A	B	C	D	E
40.12.1.35	Provides capability to maintain online Drug Rebate Claims Detail generated from the Drug Rebate History File of paid claims and adjustment activity that balances to each Labeler invoice by State entity	N	N	N	D-379	Y
40.12.1.36	Provides capability for audits that ensure consistency of data from detail level to summary level			Y	D-379	Y
40.12.1.37	Provides capability to ensure automated electronic transfer of invoice data and detail history to CMS and the State in their respectively approved formats	N	N	N	D-379	Y
40.12.1.38	Provides capability to freeze invoices so they can no longer be recalculated			Y	D-379	Y
40.12.1.39	Provides capability to create a report showing a list of all invoices for a specified rebate program and quarter; provides capability to allow users to view invoices before or after being frozen and allow user determination of whether to include under-threshold invoices			Y	D-379	Y
40.12.1.40	Provides capability to create a report showing quarterly changes to amounts due in the format required for inclusion in the CMS 64 Report			Y	D-379	Y
40.12.1.41	Provides capability to produce Payment Summary Report to display payments received during a specified date range and balances due by quarter within manufacturer	N	N	N	D-379	Y
40.12.1.42	Provides capability to produce Rebate Summary Report to display payments received, invoiced amounts, and disputed amounts by quarter or by year			Y	D-379	Y
40.12.1.43	Provides capability to produce Quarterly Payment Report to give summary of payments received versus the original and current invoiced amounts per manufacturer			Y	D-379	Y
40.12.1.44	Provides capability to produce the NDC Detail Report to give summary data by quarter for selected NDCs	N	N	N	D-379	Y
40.12.1.45	Provides capability to produce the NDC History Report to display all the activities that have occurred for a selected drug by quarter	N	N	N	D-379	Y

Requirement #	Requirement Description	A	B	C	D	E
40.12.1.46	Provides capability to produce the Manufacturer Summary Report to display information by quarter, including amounts invoiced, paid, and disputed	N	N	N	D-380	Y
40.12.1.47	Provides capability to produce the Reconciliation of State Invoice (ROSI)/Prior Quarter Adjustment Report to display the amounts allocated for a selected manufacturer or NDC	N	N	N	D-380	Y
40.12.1.48	Provides capability to produce the Unallocated Balance Report to display unallocated balances selected according to user-supplied criteria			Y	D-380	Y
40.12.1.49	Provides capability to produce the Adjusted Claims Report to display claims where the number of units considered for invoicing differed from those originally supplied by the claims processing system			Y	D-380	Y
40.12.1.50	Provides capability to produce a Drug Rebate Distribution Report, listing Drug Rebate Collections by county, with Federal, State, and county share specified			Y	D-380	Y
40.12.1.51	Provides capability to produce an Excluded Provider Report, listing those providers whose claims will not be included in Drug Rebate invoices	N	N	N	D-380	Y
40.12.1.52	Provides capability to produce Excluded Provider Listing, displaying the claims paid for providers not subject to rebate			Y	D-380	Y
40.12.1.53	Provides capability to produce a XIX-CMS Utilization Mismatch Report, showing drugs where the Unit Type from CMS does not match that on the Drug File			Y	D-380	Y
40.12.1.54	Provides capability to produce an Invoice Billing for Quarter Report, showing a summary of drug utilization billed to manufacturers for the quarter	N	N	N	D-380	Y
40.12.1.55	Provides capability to produce a Balance Due Report listing the top ten (10) credit balances at run time	N	N	N	D-380	Y
40.12.1.56	Provides capability to produce a Balance Due Report listing the top twenty (20) debit balances at run time	N	N	N	D-380	Y

Requirement #	Requirement Description	A	B	C	D	E
40.12.1.57	Provides capability to produce a Check/Deposit Comparison Report for reconciliation with deposit slips	N	N	N	D-380	Y
40.12.1.58	Provides capability to produce a Check/Voucher Comparison Report, comparing the Check Voucher Total and the Interest Voucher Total and the Interest Voucher Total with the Check Table Total			Y	D-380	Y
40.12.1.59	Provides capability to produce a Disputes Activity Report to display disputes by Unassigned, Assigned, and Resolved dispute types			Y	D-380	Y
40.12.1.60	Provides capability to produce an Interest Activity Report to display all interest overrides			Y	D-381	Y
40.12.1.61	Provides capability to produce an Interest Detail Report to display all interest for a labeler and quarter			Y	D-381	Y
40.12.1.62	Provides capability to produce a report of invoiced amounts greater than the sum of claim reimbursement amounts	N	N	N	D-381	Y
40.12.1.63	Provides capability to produce an Invoice not Paid Report, showing all invoices for which no payment has been received	N	N	N	D-381	Y
40.12.1.64	Provides capability to produce a report that will list all codes (HCPCS) from medical claims, including J codes, M codes, Q codes, and others that have been converted to NDCs			Y	D-381	Y
40.12.1.65	Provides capability to produce a Monthly Balance Report to summarize the balance due per labeler per quarter and across all labelers	N	N	N	D-381	Y
40.12.1.66	Provides capability to produce a report of payments received for drugs with CMS URA of zero	N	N	N	D-381	Y
40.12.1.67	Provides capability to produce a Recapitulation Report that notifies manufacturers of corrected balances after dispute resolution procedures have been completed for one (1) or more quarters.			Y	D-381	Y

Requirement #	Requirement Description	A	B	C	D	E
40.12.1.68	Provides capability to produce a Generic/Non-Generic Report that lists drug rebate amounts invoiced by brand, generic, and multi-source, further divided into brand and generic, plus total for a selected period, and percentages			Y	D-381	Y
40.12.1.69	Provides capability to produce ad hoc reports, including, but not limited to, ad hoc reporting on utilization detail by GCN, GC3 (therapeutic class), and GCN-Sequence	N	N	N	D-381	Y
40.12.1.70	Provides capability to access current and historical URA amounts for all rebateable drugs	N	N	N	D-381	Y

40.12.2 Drug Rebate Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.12.2.1	Fiscal Agent shall update online Drug Rebate accounts receivable via the NDC with data such as labeler check number and check receipt date to monitor all Drug Rebate accounts receivable activity.	N	N	N	D-688	Y
40.12.2.2	Fiscal Agent shall make available to the State the total Medicaid expenditures for multiple source drugs (annually) as well as other drugs (every three [3] years); the record keeping for this requirement should include data such as mathematical or statistical computations, comparisons, and any other pertinent records to support pricing changes as they occur.			Y	D-688	Y
40.12.2.3	Fiscal Agent shall receive and process rebate checks from labelers.	N	N	N	D-688	Y
40.12.2.4	Fiscal Agent shall deposit labeler checks.				D-688	Y
40.12.2.5	Fiscal Agent shall allow for adjustment and write-off records.	N	N	N	D-688	Y
40.12.2.6	Fiscal Agent shall perform interest calculation on outstanding Drug Rebate balances and apply results to Drug Rebate accounts receivable file.	N	N	N	D-689	Y
40.12.2.7	Fiscal Agent shall perform end-of-month balancing process.	N	N	N	D-689	Y

Requirement #	Requirement Description	A	B	C	D	E
40.12.2.8	Fiscal Agent shall maintain Drug Rebate history data with online accessibility by extracting claims data monthly from Claims History and moving the data to the Drug Rebate history on a quarterly basis.	N	N	N	D-689	Y
40.12.2.9	Fiscal Agent shall perform check and voucher entry for update to the accounts receivable records.	N	N	N	D-689	Y
40.12.2.10	Fiscal Agent shall receive, log, and process labeler disputes.	N	N	N	D-689	Y
40.12.2.11	Fiscal Agent shall maintain data for each quarter that a labeler disputes a particular NDC.	N	N	N	D-689	Y
40.12.2.12	Fiscal Agent shall research and resolve discrepancies, including calling providers about questionable claims.				D-689	Y
40.12.2.13	Fiscal Agent shall initiate any necessary adjustments to change units of NDC.	N	N	N	D-689	Y
40.12.2.14	Fiscal Agent shall produce a Recapitulation Report.	N	N	N	D-690	Y
40.12.2.15	Fiscal Agent shall send Recapitulation Report to NC DHHS Auditor(s) for review and approval.				D-690	Y
40.12.2.16	Fiscal Agent shall send Recapitulation Report to labeler with copy of current summary balance once report is approved.	N	N	N	D-690	Y
40.12.2.17	Fiscal Agent shall create and send quarterly invoices for each labeler that has a rebate agreement signed with CMS or the State as division-appropriate.	N	N	N	D-690	Y
40.12.2.18	Fiscal Agent shall update DRS Labeler Data with information from CMS and the State.	N	N	N	D-690	Y
40.12.2.19	Fiscal Agent shall ensure automated electronic transfer process to deliver invoice data and detail history to CMS and the State.	N	N	N	D-690	Y
40.12.2.20	Fiscal Agent shall attend CMS-sponsored Drug Rebate Labeler Dispute meetings as required by the State and based on relevance of agenda.				D-690	Y

40.12.3 Drug Rebate Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.12.3.1	Fiscal Agent shall maintain an outstanding rebate balance percentage (i.e., over forty-five [45] days) of less than ten (10) percent of total rebates due for each quarter excluding the outstanding balance of Manufacturers' Disputes Accounts Receivable.	N	N	N	D-691	Y
40.12.3.2	Fiscal Agent shall make available to the State the total Medicaid expenditure for multiple source drugs (annually) as well as other drugs (every three years) accurately and consistently ninety-nine and nine tenths (99.9) percent of the time.			Y	D-691	Y
40.12.3.3	Fiscal Agent shall log all labeler checks received by labeler, check number, amount, date received, date entered into DRS Accounts Receivable file, and date of deposit. Fiscal Agent shall forward the logs to the State within five (5) business days from the end of the previous month.	N	N	N	D-691	Y
40.12.3.4	Fiscal Agent shall update the Drug Rebate accounts receivable within two (2) State business days of receipt.	N	N	N	D-691	Y
40.12.3.5	Fiscal Agent shall deposit all labeler checks within one (1) State business day of receipt.				D-691	Y
40.12.3.6	Fiscal Agent shall perform interest calculation on outstanding Drug Rebate balances and apply results to Drug Rebate accounts receivable ninety-nine and nine tenths (99.9) percent of the time, as directed by the State.	N	N	N	D-691	Y
40.12.3.7	Fiscal Agent shall perform end-of-month Drug Rebate balancing processes and forward to the State for review within five (5) State business days of the end of the previous month.	N	N	N	D-692	Y
40.12.3.8	Fiscal Agent shall extract Drug Rebate history data monthly, moving it to the quarterly file within two (2) State business days from the end of the previous month.	N	N	N	D-692	Y
40.12.3.9	Fiscal Agent shall receive and log all labeler disputes on the date of receipt, including data such as labeler, date of call, caller name/telephone number, issue, processor of call, resolution, follow-up requirements, and a tickler to ensure any follow-up requirements are completed. Fiscal Agent shall forward the log to the State within five (5) business days	N	N	N	D-692	Y

Requirement #	Requirement Description	A	B	C	D	E
	from the end of the previous month.					
40.12.3.10	Fiscal Agent shall process all labeler disputes within ten (10) State business days from the date of receipt.	N	N	N	D-692	Y
40.12.3.11	Fiscal Agent shall produce a Recapitulation Report, which is a revised invoice, for the labeler one (1) State business day after the completion of the dispute resolution.	N	N	N	D-692	Y
40.12.3.12	Fiscal Agent shall send the Recapitulation Report to NC DHHS Auditor(s) for review and approval by close of business the same day the Recapitulation Report is produced.				D-692	Y
40.12.3.13	Fiscal Agent shall send the Recapitulation Report to the labeler with a copy of the current summary balance the same day the Fiscal Agent has received the NC DHHS Auditor's approval.				D-692	Y
40.12.3.14	Fiscal Agent shall create and forward quarterly invoices for each labeler that has a rebate agreement signed with CMS or the State, as division appropriate, within five (5) State business days from receipt of CMS tape.	N	N	N	D-693	Y
40.12.3.15	Fiscal Agent shall maintain an outstanding rebate balance percentage (i.e., forty-five [45] days or more) of less than ten (10) percent of total rebates due for each quarter excluding the Labeler Disputes Outstanding Accounts Receivable balance accurately and ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-693	Y
40.12.3.16	Fiscal Agent shall electronically transfer required data to CMS and the State as applicable to the Drug Rebate requirements within five (5) State business days from invoicing.	N	N	N	D-693	Y
40.12.3.17	Fiscal Agent shall attend CMS-sponsored Drug Rebate Labeler Dispute meetings, as directed by the State.				D-693	Y
40.12.3.18	Fiscal Agent shall provide online access to five (5) years of historical drug rebate invoices based on criteria provided by the State accurately and consistently ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-693	Y

40.13 Management Administrative and Reporting System Requirements

40.13.1 MARS Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.13.1.1	Provides capability to maintain source data from all other functions of the Replacement MMIS to create State and Federal reports at frequencies defined by the State	N	N	N	D-386	Y
40.13.1.2	Provides capability for compiling subtotals, totals, averages, variances, and percents of items and dollars on all reports, as appropriate	N	N	N	D-386	Y
40.13.1.3	Provides capability to generate user-identified reports on a State-specified schedule	N	N	N	D-387	Y
40.13.1.4	Provides capability to generate reports to include the results of all State-initiated financial transactions, by State-specified categories, whether claim-specific or non-claim-specific	N	N	N	D-387	Y
40.13.1.5	Provides capability to identify, separately or in combination as requested by the State, the various types of recoupments and collections	N	N	N	D-387	Y
Requirement Deleted 40.13.1.6	~~Provides capability to meet all enhanced requirements for the Replacement MMIS~~					
40.13.1.7	Provides capability for uniformity, comparability, and balancing of data through the MARS reports and between these and other functions' reports, including reconciliation of all financial reports with claims processing reports	N	N	N	D-387	Y
40.13.1.8	Provides capability for detailed and summary-level counts of services by service, program, and eligibility category, based on State-specified units (days, visits, prescriptions, or other); provides capability for counts of claims, counts of unduplicated paid participating and eligible recipients, and counts of providers by State-specified categories	N	N	N	D-388	Y
40.13.1.9	Provides capability for a statistically valid trend methodology approved by the State for generating MARS reports	N	N	N	D-388	Y

Requirement #	Requirement Description	A	B	C	D	E
40.13.1.10	Provides capability for charge, expenditure, program, recipient eligibility, and utilization data to support State and Federal budget forecasts, tracking, and modeling, to include: ▪ Participating and non-participating eligible recipient counts and trends by program and category of eligibility ▪ Utilization patterns by program, recipient medical coverage groups, provider type, and summary and detailed category of service ▪ Charges, expenditures, and trends by program and summary and detailed category of service ▪ Lag factors between date of service and date of payment to determine billing and cash flow trends ▪ Any combination of the above	N	N	N	D-388	Y
40.13.1.11	Provides capability to describe codes and values to be included on reports	N	N	N	D-389	Y
40.13.1.12	Provides capability for users to specify selection, summarization, and un-duplication criteria when requesting claim detail reports from Claims History	N	N	N	D-389	Y
40.13.1.13	Provides capability to capture and maintain online at least four (4) years of MARS reports and five (5) years of annual reports, with reports over four (4) years archived and available to NC DHHS within twenty-four (24) hours of the request	N	N	N	D-389	Y
40.13.1.14	Provides capability to generate all MARS reports that will be sent to CMS in the format specified by Federal requirements	N	N	N	D-389	Y
40.13.1.15	Provides capability for the maintenance of the integrity of data element sources used by the MARS reporting function and integrates the necessary data elements to produce MARS reports and analysis	N	N	N	D-390	Y
40.13.1.16	Provides capability for system checkpoints that ensure changes made to programs, category of service, etc. are accurately reflected in MARS reports	N	N	N	D-390	Y
40.13.1.17	Provides capability for consistent transaction processing cutoff points to ensure the	N	N	N	D-390	Y

Requirement #	Requirement Description	A	B	C	D	E
	consistency and comparability of all reports					
40.13.1.18	Provides capability to ensure all MARS report data supports accurate balancing, uniformity, and comparability of data to ensure internal validity and to non-MARS reports to ensure external validity (including reconciliation between comparable reports and all financial reports)	N	N	N	D-390	Y
40.13.1.19	Provides capability for an audit trail for balanced reporting	N	N	N	D-390	Y
40.13.1.20	Provides capability for a standard date of service/date of procedure cutoff for cost audit data with the capability to report prior year data separately from current year data, as well as summary data for all claims	N	N	N	D-391	Y
40.13.1.21	Provides capability for the MARS database to include the following types of data: ▪ Adjudicated claims data ▪ Adjustment/void data ▪ Financial transactions for the reporting period ▪ Reference data for the reporting period ▪ Provider data for the reporting period ▪ Recipient data (including LTC, EPSDT, cost of care, co-pays, benefits used, and insurance information) for the reporting period ▪ Budget data from the NCAS ▪ Financial data, for the reporting period ▪ Other, such as Medco and Health Check, inputs not available from or through the Replacement MMIS claims financial function			Y	D-391	Y
40.13.1.22	Provides capability to capture and maintain the necessary data to meet all Federal and State requirements for MARS, with the Vendor identifying and providing all Federal MARS reports required to meet and maintain CMS certification	N	N	N	D-391	Y

Requirement #	Requirement Description	A	B	C	D	E
40.13.1.23	Provides capability to generate reports at monthly, quarterly, semiannual, annual, and bi-annual intervals, as specified by the State and Federal requirements	N	N	N	D-391	Y
40.13.1.24	Provides capability to create all required MMA file and MMA State Response File reports	N	N	N	D-391	Y
40.13.1.25	Provides capability to produce MARS reports by program, plan, county, and population group; reports for other State programs in addition to the standard MARS reports will need to be developed			Y	D-392	Y

40.13.2 MARS Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.13.2.1	Fiscal Agent shall review the system audit trail for balanced reporting and deliver the balanced report to the State with each MARS production run.	N	N	N	D-695	Y
40.13.2.2	Fiscal Agent shall respond to State requests for information concerning the reports.	N	N	N	D-695	Y

40.13.3 MARS Operational Performance Standards

Not applicable

40.14 Financial Management and Accounting Requirements

40.14.1 Financial Management and Accounting System Requirements

Requirement #	Requirement Description	A	B	C	D	E
40.14.1.1	Provides capability to create and update Financial Participation Rate Tables	N	N	N	D-405	Y
40.14.1.2	Provides capability to create withholds, advance payments, and recovery of advance payments	N	N	N	D-405	Y
40.14.1.3	Provides capability to record liens and levy data	N	N	N	D-405	Y
40.14.1.4	Provides capability to process retroactive changes to deductible, TPL retroactive changes, and retroactive changes to program codes (from State-funded to Title XIX)	N	N	N	D-405	Y
40.14.1.5	Provides capability to process transactions containing total amount of dollars, per check, received by the State for TPL recoveries, drug rebates, medical refunds, Fraud and Abuse Detection System (FADS) recoveries, and any cash receipts that should be applied to the Replacement MMIS	N	N	N	D-405	Y
40.14.1.6	Provides capability to accept and process Fiscal Agent bank transactions of check and EFT statuses, such as paid, void, and stop payment transactions	N	N	N	D-405	Y
40.14.1.7	Provides capability for fully integrated financial operations, including general ledger, accounts receivable, claims payment/accounts payable, cash receiving, receipts dispositioning, and apportionment functions	N	N	N	D-405	Y
40.14.1.8	Provides capability to automatically compute financial participation (State, Federal, county, and other)	N	N	N	D-405	Y
40.14.1.9	Provides capability for the accounting of all program financial transactions in a manner that provides timely and accurate production of State and CMS reporting requirements	N	N	N	D-405	Y
40.14.1.10	Provides capability to deduct or add appropriate amounts and/or percentages from processed payments, regardless of origin of the transaction in accordance with GAAP via	N	N	N	D-406	Y

Requirement #	Requirement Description	A	B	C	D	E
	system financial management and accounting functions with online update and inquiry capability					
40.14.1.11	Provides capability for transactions that use existing State accounting and financial reason codes and descriptions (including division, LOB, benefit plan, NCAS Cost Accounting Code [CAC], Period code, Reason Code, Category of Service Code (COS) Code, County Code, type, and provider) that supports production of required financial reports without the need for maintenance of conversion tables		Y		D-406	Y
40.14.1.12	Provides capability to meet CMS requirement to reduce program expenditures for provider accounts receivable that are not collected within sixty (60) days of the date they are discovered	N	N	N	D-406	Y
40.14.1.13	Provides capability to produce NCAS interface file weekly to support checkwrite activity			Y	D-406	Y
40.14.1.14	Provides capability to apply special "timely filing" edits at the end of the State fiscal year	Y			D-406	Y
40.14.1.15	Provides capability for tracking calls regarding Fiscal Agent-related issues, claims, and complaints; provides capability for easy access to the call information by all users	N	N	N	D-406	Y
40.14.1.16	Provides capability to identify and update payment data with each payment cycle	N	N	N	D-406	Y
40.14.1.17	Provides capability to interface with NCAS for accounts receivable and accounts payable functions			Y	D-406	Y
40.14.1.18**	Provides capability for a Client Data Warehouse extract of DMH data			Y	D-406	Y
	MMIS Accounts Payable Processes					
40.14.1.19	Provides capability for accounts payable functionality for all programs	N	N	N	D-407	Y
40.14.1.20	Provides capability to identify providers with credit balances and no claim activity, by program, during a State-specified number of months	N	N	N	D-407	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.1.21	Provides capability to process transactions for checks from outside systems, generating a Claims History record	N	N	N	D-407	Y
40.14.1.22	Provides capability for online access to check voucher reconciliation information by provider number or check voucher number and/or issue date, displaying the following information: ▪ Provider number ▪ Issue date ▪ Check voucher number ▪ Amount ▪ Disposition ▪ Disposition date	N	N	N	D-407	Y
40.14.1.23	Provides capability for online inquiry access and update ability on selected individual fields	N	N	N	D-407	Y
40.14.1.24	Provides capability to generate a stop payment or cancel transaction	N	N	N	D-407	Y
40.14.1.25	Provides capability to process the check voucher returned file for failed EFTs	N	N	N	D-407	Y
40.14.1.26	Provides capability to update funding sources and criteria lists based on financial participation rate information received from the State	N	N	N	D-407	Y
40.14.1.27	Provides capability to ensure that weekly budget reporting is consistent with the costs allocated during the checkwrite	N	N	N	D-407	Y
40.14.1.28	Provides capability to produce a provider voucher account payable upon receipt of a State Payout Authorization Form signed by an authorized State Official; provides capability to schedule payment of the voucher by the system in a future checkwrite cycle	N	N	N	D-407	Y
40.14.1.29	Provides capability to support Cost Settlement transaction, which includes disburse payments upon request, recoup receivables, deposit receipts, set up and post the		Y		D-408	Y

Requirement #	Requirement Description	A	B	C	D	E
	associated accounts receivable/accounts payable transactions, and produce MMIS reports by provider that are required by the DMA Audit Section to support the cost settlement process					
Requirement Deleted 40.14.1.30	~~Provides capability to support an uncompensated services payment process and pay disproportionate-share hospitals for uncompensated services in four (4) quarterly payments, with payments made updated and available for online inquiry~~					
40.14.1.31	Provides capability to set up an accounts payable for non-provider-specific payments, issue payment, and adjust the financial reporting	N	N	N	D-408	Y
	MMIS Accounts Receivable Process					
40.14.1.32	Provides capability to ensure accurate collection and management of account receivables	N	N	N	D-408	Y
40.14.1.33	Provides capability for summary-level provider accounts receivable and payable data and pending recoupment amounts that are automatically updated after each claims processing payment cycle, with summary-level data consisting of calendar week-to-date, month-to-date, year-to-date, State, and Federal fiscal year-to-date totals		Y		D-408	Y
40.14.1.34	Provides capability to maintain an accounts receivable detail and summary section for each account	N	N	N	D-408	Y
40.14.1.35	Provides capability for automated and manual establishment of accounts receivable for a provider and to alert the other Financial Processing portion of this function if the net transaction of claims and financial transactions results in a negative amount (balance due)	N	N	N	D-409	**Y**
40.14.1.36	Provides capability to monitor the status of each account receivable and report weekly and monthly to the State in aggregate and/or individual accounts, on paper and online	N	N	N	D-409	Y
40.14.1.37	Provides capability to produce collection letters within the financial processing function of the checkwrite cycle	N	N	N	D-409	Y
40.14.1.38	Provides capability to establish systematic payment plans or recoupments for provider	N	N	N	D-409	Y

Requirement #	Requirement Description	A	B	C	D	E
	receivable balances, as directed by the State					
40.14.1.39	Provides capability to "write off" outstanding account receivables when approved by the State	N	N	N	D-409	Y
40.14.1.40	Provides capability to set up multiple open accounts receivable items for recoupment against provider claims payable in the financial system, subject to a hierarchy table; provides capability for the system to withhold the money from provider claims payable for all receivable items meeting recoupment criteria until the provider payable balance for all receivables have been fully recouped or the payable balance is equal zero		Y		D-409	Y
40.14.1.41	Provides capability to perform the cash control processing cycle, updating master files for bank reconciliation, cash receipts, and accounts receivables and producing applicable cash control reports, including the cash receipts and accounts receivable detail from the checkwrite cycle		Y		D-409	Y
40.14.1.42	Provides capability to accept claim-specific and gross recoveries, regardless of submitter (provider, carrier, recipient, drug manufacturer); provides capability to apply gross recoveries to providers and/or recipients as identifiable	N	N	N	D-409	Y
40.14.1.43	Provides capability to set up receivables and recoup payments to the provider for services after a recipient's date of death	N	N	N	D-410	Y
40.14.1.44	Provides capability for an online hierarchy table by fund code or recoupment type for the recovery of monies from claims payable to a provider, such as: ▪ Claims paid in error ▪ Cost settlements receivables ▪ Program integrity receivables ▪ Provider advances tax withholding ▪ Tax levies			Y	D-410	Y
40.14.1.45	Provides capability for an online accounts receivable process with the ability to request recoupments by the following portions of the receivable amount during one (1) payment	N	N	N	D-410	Y

Requirement #	Requirement Description	A	B	C	D	E
	cycle: ▪ Percent ▪ Dollar amount ▪ Total amount					
40.14.1.46	Provides capability to automatically recoup accounts receivables by either deductions from claims payments or through direct payment by the provider or combinations of both	N	N	N	D-410	Y
40.14.1.47	Provides capability to apply cash received and recoupments to the accounts receivable, including a history of the RA date, number, and amount and have related information available online	N	N	N	D-410	Y
40.14.1.48	Provides capability to apply claims payments recoupments to more than one (1) account receivable at a time	N	N	N	D-410	Y
40.14.1.49	Provides capability to allow the portion of payments made against each account receivable to be controlled by State staff	N	N	N	D-410	Y
40.14.1.50	Provides capability to remove accounts and produce reports on a monthly basis when a provider record has been inactive for one (1) year	N	N	N	D-410	Y
40.14.1.51	Provides capability to generate transactions to the system for each accounts receivable item created and invoiced, accounts receivable adjustments, payments received and, recouped and write-offs	N	N	N	D-411	Y
40.14.1.52	Provides capability for online daily receipts and recoupment information to the unit responsible for dispositioning the detail, for example TPL, drug rebate, medical refund, FADS recoveries, and any other cash receipts received by the State	N	N	N	D-411	Y
40.14.1.53	Provides capability to produce and send correspondence related to recipient premiums in the recipient's preferred language, including invoices, notices of non-payment, cancellation notices, receipts, and refunds		Y		D-411	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.1.54	Provides capability to collect recipient premium payments	N	N	N	D-411	Y
40.14.1.55	Provides capability to produce refunds of recipient premiums	N	N	N	D-411	Y
40.14.1.56	Provides capability to process financial accounting records for premium payments and refunds	N	N	N	D-411	Y
40.14.1.57	Provides capability to produce reports for recipient premium payment and cost-sharing (e.g., recipient co-insurance, deductibles, co-payments, etc.) processes		Y		D-411	Y
40.14.1.58	Provides capability to apply cost-sharing, e.g., recipient co-insurance, deductibles, co-payments		Y		D-411	Y
40.14.1.59	Provides capability to ensure cost-sharing does not exceed threshold for the family group		Y		D-411	Y
40.14.1.60	Provides capability to produce and send recipient letters/notices and Explanations of Benefits (EOB) in the recipient's preferred language	N	N	N	D-412	Y
	Financial Accounting and Reporting Processes					
40.14.1.61	Provides capability to perform financial cycles upon completion of each checkwrite and at month-end, summarize paid claims and financial transactions, update account balances and transaction files, and produce interface files and reports	N	N	N	D-412	Y
40.14.1.62	Provides capability to account for and report to the State all program funds paid out and recovered in accordance with State-accounting codes and report specifications	N	N	N	D-412	Y
40.14.1.63	Provides capability for a process to designate which Federal fiscal year claim adjustments and other financial transactions are to be reported	N	N	N	D-412	Y
40.14.1.64	Provides capability to prepare fiduciary statements in accordance with GAAP to account for all program funds received and disbursed under the Fiscal Agent contract			Y	D-412	Y
40.14.1.65	Provides capability to produce general ledger to correspond to the checkwrites over the	N	N	N	D-412	Y

Requirement #	Requirement Description	A	B	C	D	E
	State's fiscal year; adjusts the general ledger account balances on June 30th to reflect activity between the last June checkwrite and June 30th					
40.14.1.66	Provides capability to summarize checkwrite activity in the Financial Participation Report and general expenditure reports on a year-to-date basis and within ten (10) days of the State's fiscal year's end on June 30th; provides capability to generate these reports in accordance with State-approved format, media, distribution, and frequency		Y		D-412	Y
40.14.1.67	Provides capability to summarize financial data to meet reporting requirements on a State and Federal fiscal-year basis	N	N	N	D-413	Y
40.14.1.68	Provides capability to ensure all reporting cross-checks and balances to other reports using the same data	N	N	N	D-413	Y
40.14.1.69	Provides capability to produce reporting on providers required by the Federal False Claims Act			Y	D-413	Y
40.14.1.70	Provides capability to maintain all records and reports of administrative expenses permitting the State to verify that the Fiscal Agent bills are accurate and appropriate to enable the State to claim Federal financial participation (FFP) on the Fiscal Agent fees at the appropriate rate	N	N	N	D-413	Y
40.14.1.71	Provides capability to ensure that all financial reports can be tied into the basic financial activity recorded in Provider History	N	N	N	D-413	Y
40.14.1.72	Provides capability to generate weekly, monthly, quarterly, and annual Medicaid and other EOB financial reports after checkwrites in accordance with State approved specifications, basis of accounting, and reporting deadlines		Y		D-413	Y
40.14.1.73	Provides capability to balance details posted to each receivable transaction and update Claims History and Provider paid claims summary information	N	N	N	D-413	Y
40.14.1.74	Provides capability to incorporate data from State-approved automated systems to satisfy accounting and record keeping objectives		Y		D-413	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.1.75	Provides capability for system-generated letters to providers requesting updated W-9s or a special IRS form depending on whether they are a first or second B-Notice			Y	D-413	Y
40.14.1.76	Provides capability for system logging and tracking of receipt date of each withholding and penalty request and completion date of withholding or penalty	N	N	N	D-413	Y
40.14.1.77	Provides capability to provide the State with confirmation and validation for each completed date of withholding or penalty	N	N	N	D-414	Y
40.14.1.78	Provides capability to implement backup withholding from all providers who do not respond to the notices within the required timeframes	N	N	N	D-414	Y
40.14.1.79	Provides capability for mechanized copies of documentation to support compliance with IRS procedures and efforts to obtain information from providers in order to abate penalties assessed	N	N	N	D-414	Y
40.14.1.80	Provides capability to report year-to-date provider 1099 earnings	N	N	N	D-414	Y
40.14.1.81	Provides capability to create end-of-year 1099 for providers whose earnings exceed $600 on a calendar year basis and meet IRS criteria for issuance	N	N	N	D-414	Y
40.14.1.82	Provides capability to generate provider 1099 file and reports annually that indicate LOB, the total paid claims, plus or minus any appropriate adjustments and financial transactions	N	N	N	D-414	Y
40.14.1.83	Provides capability to issue corrected 1099s to providers prior to March 31st each year; provides capability to ensure that corrections are incorporated into the IRS file to report earnings for the prior year	N	N	N	D-414	Y
	Cash Control and Bank Accounts					
40.14.1.84	Provides capability to automate and apply NC DHHS Cash Management Plan business rules and procedures to receive all program receipts in a State Treasurer designated bank Refer to *DHHS Cash Management Plan* in the Procurement Library.	N	N	N	D-414	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.1.85	Provides capability for automated application of cash receipts and provide for online posting of the detail of receipts received to the system with simultaneous notice to for TPL recovery, Drug Rebates, FADS recoveries business areas	N	N	N	D-414	Y
40.14.1.86	Provides capability for indexed images of checks and all written correspondence from or to the provider for audit purposes throughout the life of the Contract		Y		D-415	Y
40.14.1.87	Provides capability to process and post transactions for all program cash receipts received in Fiscal Agent/bank managed lock-boxes	N	N	N	D-415	Y
40.14.1.88	Provides capability to assign and retain a unique transaction control number, the date of receipt, the remitter's name, the remitter's bank name, purpose or reason code, the check/money order number, the transaction amount, and the unit to which the receipt is directed for dispositioning when there is no matching account receivable	N	N	N	D-415	Y
40.14.1.89	Provides capability to account for disposition of all program cash receipts and adjustments within the month of receipt	N	N	N	D-415	Y
40.14.1.90	Provides capability for an audit trail of corrections to posted transactions	N	N	N	D-415	Y
	Budget Checking Prior To Payment of Claims					
40.14.1.91	Provides capability to link the detail financial transaction to the claim detail level activity	N	N	N	D-415	Y
40.14.1.92**	Provides capability to produce balancing reports available online at detail and summary levels on budget availability	N	N	N	D-415	Y
40.14.1.93	Provides capability to produce exception reports on un-reconciled balances or undefined chart of accounts shall be available online			Y	D-415	Y
	Accounting Processes					
40.14.1.94	Provides capability for integration of all Medicaid Accounting System (MAS) legacy system functionality, processes, data, reports and interfaces		Y		D-416	Y

Requirement #	Requirement Description	A	B	C	D	E
	Refer to *Approved MAS Requirements & Business Rules—Updated 12-06-06* and attachments in the Procurement Library.					
	General Account Receivable/Accounts Payable Requirements					
40.14.1.95	Provides capability for accounts receivable and accounts payable functionality that is integrated with case management and billing using the open item method to support collection of program overpayments from providers and amounts determined to be due from third parties Refer to *Approved AR-AP Requirements & Business Rules—Updated 12-19-06* in the Procurement Library.		Y		D-416	Y

40.14.2 Financial Management and Accounting Operational Requirements

Requirement #	Requirement Description	A	B	C	D	E
	General Financial Management and Accounting					
40.14.2.1	Fiscal Agent shall maintain the Replacement MMIS consolidated accounting function by program, type, and provider. Fiscal Agent shall deduct/add appropriate amounts from provider payments for past due receivables and other required withholding.	N	N	N	D-700	Y
40.14.2.2	Fiscal Agent shall provide the State with confirmation and validation for each completed file maintenance request (receipt date of file maintenance request, file maintenance initiation date, file maintenance completion date, and supervisor validation date) related to Financial Management and Accounting.	N	N	N	D-700	Y
40.14.2.3	Fiscal Agent shall ensure provider payments are generated by the processing of claims for eligible recipients, adjustments, or by State authorizations, such as payouts for court orders, open/shut cases, dropped eligibility, and policy changes.	N	N	N	D-700	Y
40.14.2.4**	Fiscal Agent shall provide nightly interface to NCAS to validate availability of funds for	N	N	N	D-700	Y

Requirement #	Requirement Description	A	B	C	D	E
	claim-specific reimbursement.					
40.14.2.5	Fiscal Agent shall establish systematic payment plans or recoupments for provider receivable balances, collect the payments, apply the payments, monitor the process, and report on the payment activity at a provider and summary level on a weekly basis. Once a provider becomes delinquent in the payment schedule, the recoupment process shall be implemented until the debt is resolved.	N	N	N	D-700	Y
40.14.2.6	Fiscal Agent shall ensure that correct Federal Medical Assistance Percentage (FMAP) is applied to receivables and payables within the monthly financial processing cycles. (Certain receivables and payables may be subject to prior period FMAP.)	N	N	N	D-700	Y
40.14.2.7	Fiscal Agent shall issue provider checks in the number of cycles required by the State each year on State-designated business days, dating the checks and reports for the checkwrite date except for the final checkwrite of the month, which is dated, as directed by the State.	Y			D-701	Y
40.14.2.8	Fiscal Agent shall balance each checkwrite in accordance with State-approved policy and procedures to ensure report accuracy and the completion of a final audit for that checkwrite.	N	N	N	D-701	Y
40.14.2.9	Fiscal Agent shall accept requests to override EFT payment to a provider and create the check voucher as a paper check request.	N	N	N	D-701	Y
40.14.2.10	Fiscal Agent shall accept and process all check voucher reconciliation.	N	N	N	D-701	Y
40.14.2.11	Fiscal Agent shall execute Positive Pay processing.				D-701	Y
40.14.2.12	Fiscal Agent shall ensure weekly budget reporting is consistent with the costs allocated during the checkwrite.	N	N	N	D-701	Y
40.14.2.13	Fiscal Agent shall submit a draft annual checkwrite schedule by the last State business day in September each year.				D-701	Y
40.14.2.14	Fiscal Agent shall perform checkwrites per the State-approved checkwrite schedules.	N	N	N	D-701	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.2.15	Fiscal Agent shall notify the State of the total checkwrite expenditure on the first day following the cycle.	N	N	N	D-701	Y
40.14.2.16	Fiscal Agent shall notify the State by close of business of notification from the State Controller's Office that funds are in place each day following any delays in check mailings and EFTs.				D-701	Y
40.14.2.17	Fiscal Agent shall notify the State the next State business day following the checkwrite cycle of any delays in the checkwrite process.				D-701	Y
40.14.2.18	Fiscal Agent shall respond to State Memos as appropriate for canceling or delaying checkwrites or release of system-generated checks or EFTs.				D-702	Y
40.14.2.19	Fiscal Agent shall balance each checkwrite in accordance with State-approved policy and procedures to ensure report accuracy and the completion of a final audit for that checkwrite.	N	N	N	D-702	Y
40.14.2.20	Fiscal Agent shall process check voucher information from the State Controller's Office, updating payment information.	N	N	N	D-702	Y
40.14.2.21	Fiscal Agent shall ensure that the weekly budget reporting is consistent with the costs allocated during the checkwrite.	N	N	N	D-702	Y
40.14.2.22	Fiscal Agent shall produce third party letters within the financial processing function of the checkwrite cycle.		Y		D-702	Y
Requirement Deleted 40.14.2.23	~~Fiscal Agent shall produce reports and State claims within the financial processing function of the checkwrite cycle.~~					
40.14.2.24	Fiscal Agent shall process State Payout Authorization Forms in accordance with State-approved guidelines to adjudicate claims that fail to process through the Replacement MMIS under normal circumstances.	N	N	N	D-702	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.2.25	Fiscal Agent shall execute, manage, maintain, and update financial operations, including claims payment, accounts receivable, accounts payable, cash management, transaction data entry, and financial participation calculations while maintaining detail accounting records in accordance with GAAP for all program financial transactions.	N	N	N	D-702	Y
40.14.2.26	Fiscal Agent shall enter and summarize all Replacement MMIS financial accounting transactions in accordance with GAAP prior to month-end closing deadlines specified by the NC DHHS Controller.	N	N	N	D-702	Y
40.14.2.27	Fiscal Agent shall maintain the MMIS Financial System operations in compliance with applicable State and Federal laws, regulations, reporting requirements, policies, business rules, and procedures as published and referenced in the Contract and the Procurement Library.	N	N	N	D-703	Y
40.14.2.28	Fiscal Agent shall implement and maintain effective internal controls over financial operations, accounting, physical access, system backup and recovery, and security for all Replacement MMIS financial operations, data, records, and assets.	N	N	N	D-703	Y
40.14.2.29	Fiscal Agent shall complete the Office of State Controller Internal Control Self Assessment upon request by the NC DHHS Controller and provide a signed original to the NC DHHS Controller.				D-703	Y
	MMIS Program Account Payable					
40.14.2.30	Fiscal Agent shall record provider claims payable less any overpayment recoupments and required withholding and produce all program cash disbursements in accordance with procedures and a schedule approved by the State for each checkwrite cycle, including State-authorized payments.	N	N	N	D-703	Y
40.14.2.31	Fiscal Agent shall determine daily cash requirements and draw program cash from a special State disbursing account as needed.			Y	D-703	Y
40.14.2.32	Fiscal Agent shall collect recipient premium payments.	N	N	N	D-703	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.2.33	Fiscal Agent shall produce refunds of recipient premiums.	N	N	N	D-704	Y
	Replacement MMIS Accounts Receivable Process					
40.14.2.34	Fiscal Agent shall monitor the status of each accounts receivable and reports weekly and monthly to the State in aggregate and/or individual accounts, both on paper and online.	N	N	N	D-704	Y
40.14.2.35	Fiscal Agent shall monitor compliance with written procedures to meet State and Federal guidelines for collecting outstanding provider and recipient account receivables in accordance with State-approved policy and procedures to ensure report accuracy and the completion of a final audit for that checkwrite.	N	N	N	D-704	Y
40.14.2.36	Fiscal Agent shall monitor compliance with written procedures to meet State and Federal guidelines for collecting outstanding provider accounts receivable.	N	N	N	D-704	Y
40.14.2.37	Fiscal Agent shall "write off" outstanding accounts receivable, when directed by the State.	N	N	N	D-704	Y
40.14.2.38	Fiscal Agent shall ensure accurate collection and management of accounts receivables.	N	N	N	D-704	Y
40.14.2.39	Fiscal Agent shall ensure that correct FMAP is applied to receivables and payables within the monthly financial processing cycles. (Certain receivables and payables may be subject to prior period FMAP.)	N	N	N	D-704	Y
40.14.2.40	Fiscal Agent shall maintain claim specific and gross level accounts receivable records for amounts due the program, recoup past due items based on a hierarchy table approved by the State, apply all payments, and produce and distribute invoices, collection letters and accounts receivable reports.	N	N	N	D-705	Y
	Financial Accounting and Reporting Process					
40.14.2.41	Fiscal Agent shall produce general ledger to correspond to the checkwrite over the State's fiscal year and adjust the general ledger account balances on June 30th to reflect activity between the last June checkwrite and June 30th.	N	N	N	D-705	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.2.42**	Fiscal Agent shall make details of the general ledger, including all entries and balances, available to authorized State staff.		Y		D-705	Y
40.14.2.43	Fiscal Agent shall summarize checkwrite activity in the Checkwrite Financial Summary, Financial Participation Report, and general expenditure reports on a year-to-date basis and within ten (10) days of the State's fiscal year end on June 30th and provide these reports in accordance with State-approved format, media, distribution, and frequency.		Y		D-705	Y
40.14.2.44	Fiscal Agent shall change financial participation rates in the Replacement MMIS to correspond with the Federal fiscal year.	N	N	N	D-705	Y
40.14.2.45	Fiscal Agent shall ensure cross-checks and balances to other reporting is using the same data and is categorized in such a manner as to facilitate informed program administration and supporting the State's receipt of maximum.	N	N	N	D-705	Y
40.14.2.46**	Fiscal Agent shall refer questions regarding rates and budgets to the State.				D-706	Y
40.14.2.47	Fiscal Agent shall ensure adherence to NC DHHS Cash Management Plan and Procedures.				D-706	Y
40.14.2.48	Fiscal Agent shall incorporate State-approved automated and manual systems to satisfy accounting and record-keeping objectives.	N	N	N	D-706	Y
40.14.2.49	Fiscal Agent shall notify the State immediately upon discovery of any erroneous payments, irrespective of cause, and prior to initiating appropriate recovery action.				D-706	Y
40.14.2.50**	Fiscal Agent shall produce an extract of DMH claims data for the Client Data Warehouse (CDW) with each checkwrite.	N	N	N	D-706	Y
	IRS Reporting and Compliance					
40.14.2.51	Fiscal Agent shall summarize each provider's NC DHHS earnings by LOB for the previous calendar year no later than January 15th of the succeeding year, providing the summary to the Internal Revenue Service and North Carolina Department of Revenue (NC DOR) by sending a file using File Transfer Protocol (FTP) media. Fiscal Agent shall	N	N	N	D-706	Y

Requirement #	Requirement Description	A	B	C	D	E
	provide this same information on each provider's last RA for the calendar year.					
40.14.2.52	Fiscal Agent shall send system-generated letters to providers requesting updated W-9s or a special IRS form depending on whether they are a first or second B-Notice.		Y		D-706	Y
40.14.2.53	Fiscal Agent shall record receipt date of each withholding and penalty request and completion date of withholding or penalty.	N	N	N	D-707	Y
40.14.2.54	Fiscal Agent shall provide the State with confirmation and validation for each completed date of withholding or penalty.				D-707	Y
40.14.2.55	Fiscal Agent shall comply with all IRS regulations.				D-707	Y
40.14.2.56	Fiscal Agent shall issue corrected 1099s to providers prior to March 31st each year and shall ensure that corrections are incorporated into the IRS file to report earnings for the prior year.	N	N	N	D-707	Y
40.14.2.57	Fiscal Agent shall ensure accuracy of tax identification numbers and tax names reported.	N	N	N	D-707	Y
	Cash Control and Bank Accounts					
40.14.2.58	Fiscal Agent shall ensure returned or refund receipts are received at the Fiscal Agent lock box for security and are accessed only by designated Fiscal Agent or bank personnel; receipts received are to be logged each State business day with disposition denoted, date, time, and individual processing the check.				D-707	Y
40.14.2.59	Fiscal Agent shall deposit program cash receipts into the State-designated State Treasurer's Account on a daily basis; checks received that are missing information are photocopied and deposited into the State's designated account daily regardless of whether they are missing information. Checks received that are missing information result in a system-generated form letter denoting the required corrective action. (Letters are to be maintained in an online report for follow-up actions.)		Y		D-707	Y
40.14.2.60	Fiscal Agent shall retain copies of checks and all written correspondence from or to the provider for audit purposes throughout the life of the Contract.		Y		D-708	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.2.61	Fiscal Agent shall process other non-provider checks received, such as TPL and Drug Rebate receipts, in accordance with State-approved policies and procedures; deposits these funds daily into the designated State Treasurer's Account.	N	N	N	D-708	Y
40.14.2.62	Fiscal Agent shall contract and maintain State-approved banking services for, remittance lock box operations, and Fiscal Agent Disbursing Accounts.				D-708	Y
40.14.2.63	Fiscal Agent shall perform daily transfer of funds out of the State's Disbursing Account as appropriate to cover "presentments" on the Fiscal Agent Disbursing Account.			Y	D-708	Y
40.14.2.64	Fiscal Agent shall provide the bank with instructions to transfer funds from the State Disbursing Account to the Fiscal Agent Disbursing Account to cover the "presentments."				D-708	Y
40.14.2.65	Fiscal Agent shall accept responsibility for and bear the cost of any overdraft penalties on Fiscal Agent-controlled checking accounts.				D-708	Y
40.14.2.66	Fiscal Agent shall monitor security of checks during matching, stuffing, and mailing process.				D-708	Y
40.14.2.67	Fiscal Agent shall perform monthly account reconciliation and submit State-approved reports within ten (10) business days of each calendar month, unless the Fiscal Agent notifies the State the reports have not been received from the banking institution in a timely manner.	N	N	N	D-708	Y
	MMIS Program Cash Receiving					
40.14.2.68	Fiscal Agent shall receive all program receipts in State-approved Fiscal Agent lock boxes established for each payer source, log each deposit item, scan or copy all deposit items and information received with the remittance, deposit all receipts daily, accurately record cash, and correctly apply receipts to the correct accounts in accounts receivable.	N	N	N	D-709	Y
40.14.2.69	Fiscal Agent shall report the daily deposit totals to the NC DHHS Controller by 1:30 P.M. for all program cash receipts, including TPL, Drug Rebates, FADS, audit recoveries, cost settlements, refunds, and any other program receipts in accounts receivable while maintaining complete, accurate and detailed accounting records for all program funds	N	N	N	D-709	Y

Requirement #	Requirement Description	A	B	C	D	E
	received.					
	Production and Distribution of Management and Financial Reports					
40.14.2.70	Fiscal Agent shall produce and distribute all financial reports and interface files accurately and in the media, format, basis of accounting, and according to a schedule approved by the State.	N	N	N	D-709	Y
40.14.2.71	Fiscal Agent shall ensure that all financial reports and files meet State cutoff dates and can be balanced with underlying transactions for the applicable accounting period.	N	N	N	D-709	Y

40.14.3 Financial Management and Accounting Operational Performance Standards

Requirement #	Requirement Description	A	B	C	D	E
40.14.3.1	Fiscal Agent shall provide the State with confirmation and validation of accurate file maintenance request transactions ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-711	Y
40.14.3.2	Fiscal Agent shall process accurate capitation and/or management fee adjustments ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-711	Y
40.14.3.3	Fiscal Agent shall provide deposit of returned monies the same State business day of receipt.	N	N	N	D-711	Y
40.14.3.4	Fiscal Agent shall provide for processing of accurate capitation payments and management fees in the month-end claims cycle and payment in the first checkwrite of the next month.	N	N	N	D-711	Y
40.14.3.5	Fiscal Agent shall accurately complete processing of all HMO withholds and penalties and primary care provider penalties in the next claim cycle after receipt of withholding and penalty requests ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-711	Y

Requirement #	Requirement Description	A	B	C	D	E
40.14.3.6	Fiscal Agent shall publish the planned annual checkwrite schedule sixty (60) days prior to the start of the next calendar year.	N	N	N	D-711	Y
40.14.3.7	Fiscal Agent shall notify the State by 9:30 A.M. Eastern Time on the first State business day following checkwrite of funds required.	N	N	N	D-711	Y
40.14.3.8	Fiscal Agent shall notify the State by close of the business day of notification from the Controller's Office that funds are in place each day following any delays in check mailings and EFTs.	N	N	N	D-712	Y
40.14.3.9	Fiscal Agent shall notify the State of any delays and reasons in the checkwrite process by 8:00 A.M. Eastern Time the next business day following the checkwrite cycle and estimated timeframe for completion.				D-712	Y
40.14.3.10	Fiscal Agent shall balance each checkwrite accurately ninety-nine and nine tenths (99.9) percent of the time. Any discrepancies shall be reported to the State immediately via Operations Incident Reporting procedures.	N	N	N	D-712	Y
40.14.3.11	Fiscal Agent shall process check voucher information from the State Controller's Office accurately ninety-nine and nine tenths (99.9) percent of the time and within one (1) State business day of receipt.				D-712	Y
40.14.3.12	Fiscal Agent shall ensure that weekly budget reporting is accurate and consistent ninety-nine and nine tenths (99.9) percent of the time with the costs allocated during the checkwrite.	N	N	N	D-712	Y
40.14.3.13	Fiscal Agent shall accurately complete processing of all HMO withholds and penalties and primary care provider penalties in the next claim cycle after receipt of withholding and penalty requests.	N	N	N	D-712	Y
40.14.3.14	Fiscal Agent shall perform cost settlement activities accurately and consistently ninety-nine and nine tenths (99.9) percent of the time, as directed by the State.	N	N	N	D-712	Y
40.14.3.15	Fiscal Agent shall ensure that correct FMAP is applied to receivables and payables accurately and consistently ninety-nine and nine tenths (99.9) percent of the time within	N	N	N	D-712	Y

Requirement #	Requirement Description	A	B	C	D	E
	the monthly financial processing cycles (certain receivables and payables may be subject to prior period FMAP).					
40.14.3.16	Fiscal Agent shall ensure accurate collection and management of accounts receivable/payable ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-713	Y
40.14.3.17	Fiscal Agent shall produce and mail out 1099/W9 earnings reports no later than January 31st each year and report to the IRS no later than March 1st.	N	N	N	D-713	Y
40.14.3.18	Fiscal Agent shall maintain the capability to remove accounts receivable on a monthly basis when a provider record has been terminated for one (1) year. Fiscal Agent shall generate a report of remove accounts receivables on a monthly basis.	N	N	N	D-713	Y
40.14.3.19	Fiscal Agent shall account for and report accurately and consistently ninety-nine and nine tenths (99.9) percent of the time to the State all program funds paid out and recovered in accordance with State-approved guidelines.	N	N	N	D-713	Y
40.14.3.20	Fiscal Agent shall summarize each provider's NC DHHS for the previous calendar year no later than January 15th of the succeeding year, providing the summary to the Internal Revenue Service and NC DOR by sending a file using FTP media. Fiscal Agent shall provide this same information on each provider's last RA for the calendar year accurately ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-713	Y
40.14.3.21	Fiscal Agent shall log receipt date of each withholding and penalty request and completion date of withholding or penalty within one (1) State business day of receipt accurately ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-713	Y
40.14.3.22	Fiscal Agent shall provide the State with confirmation and validation for each completed date of withholding or penalty on the State business day that the transaction is completed.	N	N	N	D-713	Y
40.14.3.23	Fiscal Agent shall comply with all IRS regulations ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-714	Y
40.14.3.24	Fiscal Agent shall issue corrected 1099s to providers prior to March 31st each year. Fiscal	N	N	N	D-714	Y

Requirement #	Requirement Description	A	B	C	D	E
	Agent shall ensure that corrections are incorporated into the IRS file to report earnings for the prior year accurately ninety-nine and nine tenths (99.9) percent of the time.					
40.14.3.25	Fiscal Agent shall ensure accuracy of tax identification numbers and tax names reported ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-714	Y
40.14.3.26	Fiscal Agent shall ensure that returned or refund checks are received at the Fiscal Agent lock box for security and are accessed only by designated Fiscal Agent personnel. Checks received shall be logged each State business day with disposition denoted, date, time, and individual processing the check accurately ninety-nine and nine tenths (99.9) percent of the time.				D-714	Y
40.14.3.27	Fiscal Agent shall deposit all program cash receipts received into the State-designated State Treasurer's Account each State business day by 1:00 P.M. and certify the amount deposited to the NC DHHS Controller by 1:30 P.M.				D-714	Y
40.14.3.28	Fiscal Agent shall process other non-provider checks received, such as TPL and Drug Rebate receipts, in accordance with State-approved policies and procedures. Fiscal Agent shall deposit these funds daily into the State-designated State Treasurer's Account ninety-nine and nine tenths (99.9) percent of the time.				D-714	Y
40.14.3.29	Fiscal Agent shall perform monthly bank account reconciliation and submit State-approved reports within ten (10) State business days of each calendar month unless the Fiscal Agent notifies the State the reports have not been received from the banking institution in a timely manner.	N	N	N	D-714	Y
40.14.3.30	Fiscal Agent shall receive NCAS account data weekly to support checkwrite activity accurately and consistently ninety-nine and nine tenths (99.9) percent of the time.	N	N	N	D-714	Y
40.14.3.31**	Fiscal Agent shall apply special "timely filing" edits at the end of the State fiscal year: ▪ AP/LMEs shall file all services rendered prior to May 1st no later than the cutoff for the last payment cycle in June. ▪ May and June services shall be presented to the Fiscal Agent by a date established by the State. Timely filing allows budgeted services to be allocated to	N	N	N	D-715	Y

Requirement #	Requirement Description	A	B	C	D	E
	the appropriate fiscal year accurately and consistently ninety-nine and nine tenths (99.9) percent of the time.					
Requirement Deleted 40.14.3.32	~~Fiscal Agent shall notify the State by close of business of the day of notification from the State Controller's Office that funds are in place for the checkwrite.~~					
40.14.3.33	Fiscal Agent shall summarize checkwrite activity in the Checkwrite Financial Summary, Financial Participation Report, and general expenditure reports on a year-to-date basis and within ten (10) days of the State's fiscal year end on June 30th	N	N	N	D-715	Y
40.14.3.34	Fiscal Agent shall assure that Checkwrite Financial Summary and FPR Reports are completed the day after each checkwrite.	N	N	N	D-715	Y

- 40.14.3 Financial Management and Accounting Operational Performance Standards

EDS' operational teams will use the technologies identified in the following table, Technologies and Business Processes, to perform exceptional service throughout

the contract term. These technologies will be implemented during the DDI Phase. The table identifies the most prominent processes and technologies EDS will bring to each branch of the operations.

Technologies and Business Processes

Operational Area	Business Process, High-Level	Technical Solution Requirements
Mail Room	Retrieve mail daily; mail paper checks and paper RAs when requested; mail provider and recipient notices; ship forms to providers; oversee mailing of plastic DPH cards	interChange; Documentum; DOC1 Letter Generator; Pitney Bowes; iTRACE
Imaging/Data Entry	Image, index, and perform OCR on claims adjustments and other provider documents	Kodak scanners; SunGard/FormWorks; Documentum; interChange; K2 Workflow; iTRACE
Claims/Encounter Suspense Resolution	Adjudicate suspended claims; review and resolve claims and encounters that failed an edit or audit	interChange; K2 Workflow; Documentum; CTMS; iTRACE
Adjustments	Review and resolve adjustments that failed an edit or audit; perform mass adjustments	interChange; Web portal; CTMS; adjustments imaging; Documentum; iTRACE
Drug Rebate	Receive and process drug rebate rates for the generation and issuance of invoices; receive and process drug rebate invoice payments; pursue collections of aged drug rebate receivables; perform drug rebate reporting as required	
Pharmacy and Non-Pharmacy PA & Appeals	Receive and process PA requests; support claims payment and medical appeals	SunGard/FormWorks, Workflow, Documentum, CTMS, interChange, iTRACE
Reference	Perform reference file updates; support State inquiries for research and history file changes	interChange; Documentum; CTMS; iTRACE
Call Center	Manage call center activities for providers, COCC-based recipient calls, and State users	AVAYA; AVRS; CTMS; interChange; Web portal; K2 Workflow; Documentum; Letter Generator; iTRACE
Provider Enrollment	Perform provider enrollment and provider updates	AVAYA; AVRS; CTMS; interChange; Web portal; K2 Workflow; Letter Generator; iTRACE
Training Team	Train the enterprise stakeholders; maintain CBT/LMS content	CBT; Web portal; Learning Management Software; PowerPoint; interChange; iTRACE
Provider Relations	Conduct provider training; perform provider outreach	AVAYA; interChange; iTRACE; CTMS; Web portal; publications software; provider survey software
EDI Help Desk	Operate electronic transaction help desk	Web portal; interChange; iTRACE; AVRS; CTMS
Financial, Buy-In, and TPL	Perform bank reconciliation for 1099s, TPL updates, cash disposition, CMS-64, and accounts receivable and payable	Documentum; interChange; Web portal; CTMS; iTRACE; banking software; AVRS

40.1.2 General Operational Requirements

The first priority of our Operations Management team is a smooth transition from the legacy processes and the DDI Phase to the new fiscal agent operations supported by the Replacement MMIS. We will build on our existing knowledge of policy, stakeholders, and procedures to create a transformed environment that uses new technologies to deliver efficient, effective, and high levels of service.

With these new technologies across the country, EDS has expanded and increased the services for Medicaid stakeholders, and North Carolina's quest for multi-payer will expand on those ideals. As the incumbent fiscal agent for the State, transition will occur smoothly and without interruption to existing services. We will work with the Division of Public Health (DPH) and the Office of Rural Health and Community Care (ORHCC) to enable a new operational environment with a comprehensive transition. Following the successful implementation of the Replacement MMIS, we will continue to provide a high level of fiscal agent services to the Division of Medical Assistance (DMA) and the Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH) programs, while expanding these services to DPH and ORHCC.

Our people are the distinguishing factor as we plan our future mode of operations. EDS brings three decades of North Carolina program knowledge to our support model. The EDS account staff members in Raleigh form an unmatched team, with hundreds of years of combined experience working with State programs, providers, and recipients. The following table, EDS' Proposed Management Team, lists our proposed team. With the EDS Operations team, led by Account Manager Melissa Robinson, we will provide the most experienced and knowledgeable staff for the State.

EDS' Proposed Management Team

Name	Position
Melissa Robinson	Account Manager
Tim Sullivan	Technical Director/Systems Manager
Tammy Wheeler	Claims and Operations Manager
Sharlene Bryant	Prior Approval Manager
Jamie Herubin	Finance Manager
Chris Ferrell	Provider and Recipient Services Manager
Dr. Margaret Martin	Medical Director
Sharon Greeson	Pharmacy Director
Dr. David Brooks	Dental Director

With our years of North Carolina knowledge of policies, procedures, and the provider and recipient communities, EDS is positioned to enable the future mode of operations for North Carolina using our teams, our expanded program management capabilities, and interChange features.

The following table, EDS Operations Teams Responsible for General Operational Requirements, illustrates the high-level operational teams directly responsible for interacting with the technology and following up on the required tasks. While in many of these instances the entire organization will be directly involved, we have attempted to outline the high-level team that manages or directs the activities.

EDS Operations Teams Responsible for General Operational Requirements

General Operations Section	EDS Operations Team(s) Responsible
Fiscal Agent Data Center and Offices Requirements	Administrative Team; LAN/WAN Management Team
Regulatory Compliance Requirement	Quality Monitoring and Control; Systems Group

System Modification Requirements	Modernization Team; Project Management Office
Data Integrity Requirements	Systems Maintenance

Response to General Operational Requirements

The following tables map the detailed solutions to the operational requirements of the functional areas. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

Fiscal Agent Data Center and Offices Requirements

The following table, EDS Response to Fiscal Agent Data Center and Offices Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Fiscal Agent Data Center and Offices Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.1	Fiscal Agent (DDI and Operations Phases) shall perform all Fiscal Agent functions at State-approved facilities and sites, including the Fiscal Agent's data center and any subcontractor locations unless otherwise contractually agreed on. These facilities and sites must comply with appropriate State and Federal privacy and physical safeguards.	Met by operational processes and procedures. Fiscal agent functions will be performed at the EDS facility located at 2610 Wycliff Road, Raleigh, N.C., which will be used for DDI and ongoing operations. This EDS secure facility is within 10 miles of the State office at the NC DHHS headquarters and complies with applicable federal privacy and physical safeguards, and will also serve as EDS' production data center location. DDI also will be supported at EDS secure facilities in the United States.
40.1.2.2	Fiscal Agent (Operations Phase) shall perform all operations, system maintenance, and modifications or other work under this Contract at prior-approved locations.	Met by operational processes and procedures. During the Operations Phase, operations, system maintenance, and modifications or other work under this contract will be performed at prior-approved locations.
40.1.2.3	Fiscal Agent (DDI and Operations Phases) shall locate its local facility within fifteen (15) miles of the State office at NC DHHS headquarters or as directed by the State.	Met by operational processes and procedures. The EDS facility located at 2610 Wycliff Road, Raleigh, N.C., which will be used for local DDI and ongoing operations, is within 10 miles of the State office at the NC DHHS headquarters.
40.1.2.4	Fiscal Agent (DDI and Operations Phases) shall locate key personnel, business units, and the mailroom at the local site.	Met by operational processes and procedures. Key personnel, business units, and the mail room will be at the EDS 2610 Wycliff Road, Raleigh, N.C., facility.
40.1.2.5	Fiscal Agent (DDI and Operations Phases) shall include	Met by operational processes and procedures. EDS will

RFP No.	RFP Requirement	EDS Response
	secure, private office space for three (3) State employees. Fiscal Agent shall also provide assistance and access to any operations, information, or data set elements necessary to support State staff responsibilities. The private office space should include, without limitation: • Lockable desks • Ergonomically correct chairs • IBM-compatible PCs, monitors, and printers with appropriate LAN/WAN connections, Internet access, and e-mail access, at a minimum meeting State standards • Lockable file cabinets • Telephones • Office supplies	provide three secure, private office spaces for three State employees. This secure office space can be a locked room within EDS' secure operations facility. We will provide this at the EDS 2610 Wycliff Road, Raleigh, N.C., facility, which will include the following: • Lockable desks • Ergonomically correct chairs • IBM-compatible PCs, monitors, and printers with appropriate local area network and wide area network (LAN/WAN) connections, Internet access, and e-mail access • Lockable file cabinets • Telephones • Office supplies
40.1.2.6	Fiscal Agent (DDI and Operations Phases) shall provide a common area with three (3) or more computers for Internet access for State employees.	Met by operational processes and procedures. EDS will provide State office space with three computers for Internet access for State employees at our EDS 2610 Wycliff Road, Raleigh, N.C., facility, as well as additional computer and Internet access for State employees, as needed. This space can be supplemented or augmented with the training room computing and network resources.
40.1.2.7	Fiscal Agent (DDI and Operations Phases) shall retain ownership of the equipment issued to the State and shall procure, manage, and bear the cost of repairs or replacement, if required, during the life of the Contract.	Met by operational processes and procedures. EDS will procure, manage, and bear the cost of repairs or replacement of equipment issued to the State, if required. EDS services are set up to do this through our consistent office environment and desktop services delivered worldwide.
40.1.2.8	Fiscal Agent (DDI and Operations Phases) shall upgrade and maintain the personal computers (PCs) and desktop software issued by the Fiscal Agent for State use commensurate with Fiscal Agent PC and software upgrades.	Met by operational processes and procedures. EDS will upgrade and maintain the PCs and desktop software issued to the State commensurate with EDS PC and software upgrades. EDS services are set up to do this through our consistent office environment and desktop services delivered worldwide, which are delivered to EDS team members and our clients.
40.1.2.9	Fiscal Agent (DDI and Operations Phases) shall provide access for the on-site State staff to use copier, scanner, and fax machines.	Met by operational processes and procedures. EDS will provide access to copiers, scanners, and fax machines for on-site State staff.
40.1.2.10	Fiscal Agent (Operations Phase) shall provide equipment for traveling Fiscal Agent representatives that include laptops and cellular telephones that comply with Fiscal Agent's security plan.	Met by operational processes and procedures. Laptops and cell telephones required for traveling fiscal agent representatives will be provided. This equipment will comply with the EDS security plan, which mandates encryption of the hard drives and that the equipment must

RFP No.	RFP Requirement	EDS Response
		be properly secured while outside the fiscal agent facility. Similar to office hardware, EDS provides these support services throughout the corporation and to our clients.
40.1.2.11	Fiscal Agent (DDI and Operations Phases) shall meet periodically as directed by the State to review programs, issues, and status with State operational area staff.	Met by operational processes and procedures. As a part of the DDI and Operations Phase communication plan, meetings with State and fiscal agent staff members will be scheduled to review programs, issues, and statuses. The operation status, open issues, and meeting minutes will be stored in iTRACE for unlimited access by authorized State and EDS users.

Regulatory Compliance Requirement

The following table, EDS Response to Regulatory Compliance Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Regulatory Compliance Requirement

RFP No.	RFP Requirement	EDS Response
40.1.2.12	Fiscal Agent (DDI and Operations Phases) shall ensure that the Replacement MMIS incorporates compliance with appropriate Federal and State regulations, statutes, and policies concerning the protection of personally identifiable information and/or financial information. Regulations, statutes, and policies include, without limitation: • 45 CFR Parts 160, 164 (Health Insurance Portability and Accountability Act) • 42 U.S.C. 1320(d) (Public Health, Approval of Special Projects) • 42 CFR Parts 2, 51, 431 (Confidentiality of Mental Health and Substance Abuse information) • 42 CFR Parts 430-502 (Applicable to Medicare/Medicaid) • 42 U.S.C. § 1396d(a) [1905(a) of the Social Security Act. • Title VI of the Civil Rights Act of 1964, 42 U.S.C. 2000d et. seq. • Title XIX, Section 1903 (42 U.S.C. 1396b) Social Security: Payment to States • Title XIX, Section 1927 (42 U.S.C. 1396r-8) Social Security: Payment for covered outpatient drugs • Federal MMIS certification standards	Met by interChange and operational processes and procedures. The Replacement MMIS incorporates compliance with appropriate federal and State regulations, statutes, and policies concerning the protection of personally identifiable information or financial information. Our design has taken in the appropriate federal and State regulations and statutes, and as a direct result, the interChange solution has always received CMS certification back to the first day of operations. EDS teams spend significant time reviewing legislation and designing solutions to comply with the specific intricacies of State policy. New legislation can often have an enterprisewide impact, and thorough understanding ahead of time enables quick impact assessments and implementations.

RFP No.	RFP Requirement	EDS Response
	• Financial Accounting Standards Board Generally Accepted Accounting Principles (GAAP) • Part 11 of the State Medicaid Manual • North Carolina State Plans for Medicaid, Mental Health, Developmental Disabilities, and Substance Abuse, and Public Health • US DHHS Title VI Language Access Policy • Recipient eligibility policies from the NC DHHS Eligibility Information System (EIS) and the Common Name Data Service (CNDS) • NC State Law S 1048 (Identity Theft Protection Act) • 10A NCAC Chapters 21 & 22, Medical Assistance • 10A NCAC 26B (Confidentiality Rules For Mental Health, Developmental Disabilities, and Substance Abuse Services) • 10A NCAC Chapter 45, DPH Payment Programs • NC DHHS OSP. 2005. DHHS Application Security Policy. • NC OSCIO. 2004. Application Security Policy with Guidelines, Statewide Information Technology Policy. • N.C.G.S. §126: State Personnel System • N.C.G.S. § 131D: Inspection and Licensing of Facilities • N.C.G.S. §131E: Health Care Facilities and Services • N.C.G.S. § 132: Public Records • The Privacy Act of 1974 5 U.S.C. § 552a • NCAC 10A Chapter 13 - NC Medical Care Commission • NCAC 10 A Chapter 14 - Division of Facility Services • NCAC 10A Chapter 26 - Mental Health, General • NCAC 10A Chapter 27 - Mental Health, Community Facility and Services • NCAC 10A Chapter 28 - Mental Health, State Operated Facilities • Government Auditing Standards (http://www.gao.gov/govaud/ yb2003.pdf) Information Systems Audit Standards (http://www.isaca.org/stand1 .htm). • NC DHHS Privacy and Security policies • Federal Section 508 (http://www.section508.gov)	

Data Transfer and Conversion Requirements

The following table, EDS Response to Data Transfer and Conversion Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Data Transfer and Conversion Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.13	Fiscal Agent (DDI and Operations Phases) shall lead the coordination with the State and the incumbent Fiscal Agent to perform all activities required for the successful transfer and conversion of legacy data for the DDI Phase and ongoing operations.	Met through customization of interChange. EDS will coordinate with the State to perform the activities required for the successful transfer and conversion of legacy data for the DDI Phase and ongoing operations. We will perform the data mapping and conversion during the legacy DDI Phase of the MMIS data to the Replacement MMIS for 10 years of historical data. For DPH and ORHCC, we will coordinate the conversion of the available historical claim, provider, and recipient electronic data that is directly related to the adjudication of claims.
40.1.2.14	Fiscal Agent (DDI and Operations Phases) shall provide the converted data to other State users and/or vendors as required for its processing needs identified by the State.	Met through customization of interChange and by operational processes and procedures. The data conversions for DMA, DMH, DPH, and ORHCC will include the electronic data required to process claims. Typically, claims, recipient, reference, provider, and financial electronic data will be converted. Additional electronic data will be considered based on the relation it has to processing and payment of claims for the four payers.
40.1.2.15	Fiscal Agent (DDI and Operations Phases) shall provide hardware, software, and data support for the State during all phases of conversion and testing during the DDI Phase and throughout the life of the Contract.	Met by operational processes and procedures. We will provide hardware, software, and electronic data support to the State during all phases of conversion and testing during DDI and throughout the life of the contract, including the required maintenance agreements with the software and hardware vendors.
40.1.2.16	Fiscal Agent (DDI and Operations Phases) shall provide capability for storing all conversion-related artifacts in an easily retrievable format for access by the State for the later of life of the Contract or the commencement of processing by a subsequent contractor.	Met by interChange. The detailed conversion design document will contain the related artifacts to the mappings from the source system to the interChange targets. Authorized users can retrieve the artifacts that are stored in iTRACE throughout the life of the contract.
40.1.2.17	Fiscal Agent (Operations Phase) shall convert all the claim TIFF images with claim numbers and all the associated claim electronic files and related index information from Legacy MMIS+ in an indexed and retrievable format.	Met through customization of interChange. We will convert the Legacy MMIS+ claims images as part of our Electronic Document Management System (EDMS) solution. The images will be indexed and retrievable.
40.1.2.18	Fiscal Agent (Operations Phase) shall transfer, or convert where appropriate, all existing Legacy MMIS+ reports and report-related data, including reports in Legacy MMIS+ and/or stored in Report2Web (R2W).	Met through customization of interChange. We will transfer the Legacy MMIS+ reports contained in Report2Web to the Replacement MMIS EDMS.

RFP No.	RFP Requirement	EDS Response
40.1.2.19	Fiscal Agent (Operations Phase) shall convert all legacy data from DMA, DMH, DPH, and the Migrant Health Program in the ORHCC.	Met through customization of interChange. The data conversions for the four payers will include electronic data required to process claims. Namely, claims, recipient, reference, provider, and financial electronic data will be converted. Additional electronic data will be considered for conversion based on the relation it has to processing and payment of claims for the in-scope payers.
40.1.2.20	Fiscal Agent (Operations Phase) shall convert all legacy data from DMA, DMH, DPH, and the Migrant Health Program in the ORHCC to maintain benefit plans and data relationships in a multi-payer aspect.	Met through configuration of interChange parameters and features. The benefit plan data relationships for each of the multi-payers will be configured and maintained in the interChange Benefit Plan Administration Rules Module. The conversion strategy for recipient data is based on a proven methodology that has been successful in previous projects, including conversions from the older Legacy MMIS+ to the interChange MMIS. For example, EDS was responsible for converting data for more than 762,000 recipients in Kansas. The data attributes were similar for Oklahoma, Kentucky, Tennessee, and Pennsylvania. Each project allows us to improve our overall conversion approach and methodology. EDS will develop a detailed conversion plan to document how the electronic data required by the interChange system will be populated.
40.1.2.21	Fiscal Agent (DDI Phase) shall convert and configure all business rules data into a rules engine.	Met through configuration of interChange parameters and features. The interChangeRules solution is comprised of the EDS Benefit Plan Administration (BPA) rules module, as well as the integration of the COTS rules engine InRule for supporting MMIS areas. The BPA module is for the configuration of State policy for claims administration, while the COTS rules engine will be integrated into the prior approval adjudication processing. Many rules can be modified and created by users through the interChange browser-based application. EDS will work with DMA, DMH, DPH, and ORHCC to identify, convert, and configure the necessary business rules data into the Replacement MMIS rules engine.

Interfaces Requirements

The following table, EDS Response to Interfaces Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Interfaces Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.22	Fiscal Agent (DDI and Operations Phases) shall coordinate with the Reporting and Analytics (R&A) Vendor for the activities required for interfacing with R&A system.	Met through configuration of interChange parameters and features. After the reporting and analytics (R&A) vendor is selected, we will work with the State and the vendor to define the scope of this requirement. Because the scope of this interface is unknown at this time, we have not fully scoped it in our solution.
40.1.2.23	Fiscal Agent (DDI and Operations Phases) shall develop and maintain a complete inventory of Replacement MMIS internal and external interfaces with all relevant information throughout the life of the Contract.	Met by operational processes and procedures. We will maintain an inventory of the interfaces during the life of the contract. The interface inventory, including file descriptions, will be maintained in iTRACE, our browser-based project information repository.
40.1.2.24	Fiscal Agent (DDI and Operations Phases) shall provide the specifications for interfaces that will be created and maintained throughout the life of the Contract.	Met by operational processes and procedures. During the Operation Phase, the EDS Systems team will maintain the specifications—such as record layouts, frequency of transfer, or transfer protocol—for established Replacement MMIS interfaces.
40.1.2.25	Fiscal Agent (DDI and Operations Phases) shall maintain data sharing capability, either manual or electronic as required, between the Replacement MMIS and DHSR.	Met by operational processes and procedures. The EDS System Maintenance Support team will establish the appropriate data sharing with the Division of Health Service Regulation (DHSR) regarding claim payment processing. During the Operation Phase, we will maintain the specifications—such as record layouts, frequency of transfer, and transfer protocol—for the DHSR interfaces.

Security Requirements

The following table, EDS Response to Security Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Security Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.26	Fiscal Agent (DDI and Operations Phases) shall be required to test backup and recovery plans annually through simulated disasters and lower-level infrastructure failures and provide awareness training on recovery plans to Fiscal Agent and State staff.	Met by operational processes and procedures. EDS will perform an annual review of the backup and recovery plan. We will include these tests in our operational processes and work with the State to coordinate the tests. This is standard operating procedure for many of EDS' current Medicaid clients.
40.1.2.27	Fiscal Agent (DDI Phase) shall assess and document the security threats and vulnerabilities for the proposed Replacement MMIS and shall implement the recommended controls and countermeasures to	Met by operational processes and procedures. EDS will assess and document security threats and vulnerabilities along with the recommended controls and countermeasures. This will be incorporated into the overall security plan. The

RFP No.	RFP Requirement	EDS Response
	eliminate or reduce the associated risks.	System Administration and Network team will work through the architecture to review potential areas of concern and implement the necessary fix. An annual penetration test will help identify these areas.
40.1.2.28	Fiscal Agent (DDI) shall develop, implement, and test an approach that will protect individually identifiable health information (IIHI) and protected health information (PHI) exchange during DDI Phase testing and conversion of legacy files, including acceptance and return or disposal of the data or media containing the data.	Met by operational processes and procedures. Security testing will be at the application, facility, and data level during DDI. EDS will develop, implement, and test an approach that will protect IIHI and PHI exchange during the DDI Phase testing and conversion of Legacy MMIS+ files, including acceptance and return or disposal of the data or media containing the data. Compliance with these regulations is inherent in our implementation processes. Throughout our interChange implementations, we have encountered the intricacies of maintaining clean data and following appropriate procedures.
40.1.2.29	Fiscal Agent (DDI Phase) shall develop, implement, and test a security incident response plan for responding to and reporting about service interruptions that do not lead to disaster recovery initiation, including a central means of collection and correlation of events for resolution and prevention of future problems.	Met by operational processes and procedures. This requirement will be met through our base security plan, and the EDS Implementation team will document and post these incidents in iTRACE for easy access for the State.
40.1.2.30	Fiscal Agent (DDI Phase) shall prepare for and comply with an internal security assessment/audit performed by NC DHHS representatives, based on documentation assembled during DDI Phase prior to the formal acceptance of Replacement MMIS.	Met by operational processes and procedures. We will work with the appropriate NC DHHS representatives throughout DDI to comply with the internal security assessment and audit. This will occur prior to the formal acceptance of the Replacement MMIS.

Data Protection Assurance Requirements

The following table, EDS Response to Data Protection Assurance Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Data Protection Assurance Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.31	Fiscal Agent (DDI and Operations Phases) shall use commercial best practices to safeguard and protect physical data and media, documents, files, tapes, disks, diskettes, and other materials received from the State or the agency from loss, destruction, or erasure during performance of any contractual obligation. Practices shall include encryption technologies where applicable.	Met by interChange. EDS' solution incorporates commercial best practices. The safeguards that will be used by EDS are as follows: • Physical – Building security, featuring picture card entry with password – Secure data center within a secure building, with picture card entry, restricted access based on business

RFP No.	RFP Requirement	EDS Response
		need and job junction • Procedures – Security and encryption of the network connections to and from the State and the EDS application, using hardware and software encryption such as Triple DES (3DES), HTTPS, and SFTP – Use of dedicated lines between EDS and the State, using a point-to-point approach – Any electronic format that is used to send data outside the secure data center between EDS and provider sites will be encrypted – Hard-copy data that is hand-delivered will require acknowledgement of receipt by signature, and hard-copy data double bagged and placed in locked carrying cases – 3DES—By adding various multiple-pass methods, 3DES increases security; for example, encrypting with one key, decrypting the results with a second key and encrypting it again with a third • Logical – EDS uses security levels based on job functions, business need to know, and business need for access
40.1.2.32	Fiscal Agent (DDI and Operations Phases) shall use commercial best practices to safeguard and protect all information transmitted internally (within the Fiscal Agent Offices and network) or externally (beyond the Fiscal Agent network perimeter), protecting from alteration, capture or destruction. Practices shall include encryption technologies where applicable.	Met by interChange. EDS' solution incorporates commercial best practices. The safeguards EDS will use are listed above and detailed fully in the Security subsection of proposal sections 50.2.4.1 Proposed System Solution and Solution for Design, Development, and Installation and 50.2.8 Section H—Security Approach.
40.1.2.33	Fiscal Agent shall provide all encryption or identification codes or authorizations that are necessary or proper for the operation of the licensed Software.	Met by operational processes and procedures. We will document the associated codes for the licensed software, and provide them to the appropriate State employees when requested.
40.1.2.34	Fiscal Agent (DDI and Operations Phases) shall provide audit evidence that all of its employees and third party contractors or subcontractors are subject to a non-disclosure and confidentiality agreement enforceable in North Carolina.	Met by operational processes and procedures. EDS will provide audit evidence regarding nondisclosure and confidentiality agreements. This pertains to DDI and Operational phases of the project and is a part of our security documentation procedures.

Enterprise Security Approach Requirements

The following table, EDS Response to Enterprise Security Approach Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Enterprise Security Approach Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.35	Fiscal Agent (DDI and Operations Phases) shall establish a technical management organizational structure to manage and protect the system and data for all environments (e.g. development, test, load, UAT, production).	Met by operational processes and procedures. The EDS Systems team, led by Tim Sullivan, will establish and provide a management organizational structure to protect the system and data in each required system environment, with the security and change management features of the Replacement MMIS.
40.1.2.36	Fiscal Agent (DDI and Operations Phases) shall demonstrate security awareness and provide training to Fiscal Agent and State staff in security policies and procedures.	Met by operational processes and procedures. EDS is well versed in providing a secure MMIS and physical environment. The EDS training staff will develop and provide training to EDS and State staff members in security policies and procedures. Because we understand the critical nature of making sure contract stakeholders understand the role of security, EDS staff members are required to take an annual HIPAA course in addition to the security training courses. EDS will provide training to the State staff members for security policies and procedures.
40.1.2.37	Fiscal Agent (Operations Phase) shall initiate, implement, test, and document on an annual basis a risk assessment policy and process to mitigate the overall enterprise security risk. This policy and plan shall include, without limitation, security process review, controls testing, mitigation procedures, personnel responsibility, and a process for State notification.	Met by operational processes and procedures. The EDS Operations team with the oversight of the EDS PM and EDS risk management specialists will create a risk assessment plan and policy to evaluate current security risks and forecast any potential future concerns. These risk assessments will address current security processes, potential vulnerabilities, access controls, migration procedures, and security roles and responsibilities. The process and its results will be readily available to the State through iTRACE.
40.1.2.38	Fiscal Agent (Operations Phase) shall develop the policy and plans for an annual Business Impact Analysis (BIA) and Business Criticality Analysis (BCA) that shall identify the impacts resulting from major disruptions and set or modify the appropriate Recovery Time Objectives (RTO) and Recovery Point Objectives (RPO). The RTOs and RPOs shall be established in consultation with and approved by the State.	Met by operational processes and procedures. Access to the Replacement MMIS and related systems is vital to enable the State to continue to provide services to North Carolina providers and recipients. EDS understands our key role in protecting and maintaining availability of the systems, data, and processes that comprise the Replacement MMIS solution. EDS has built our reputation on delivering quality solutions to our clients for more than 40 years, and on maintaining the availability of those solutions even under adverse conditions. The development of appropriate disaster recovery and backup capabilities is a key element in reducing risk and maximizing system availability. We will develop a disaster recovery and business continuity plan with the State, including Business Impact Analysis (BIA) and

RFP No.	RFP Requirement	EDS Response
		Business Criticality Analysis (BCA) plans, as specified, and will make sure these plans reflect the agreed-on RTOs and RPOs.
40.1.2.39	Fiscal Agent (DDI and Operations Phases) shall document policies to implement operational practices preventing any person(s) from establishing unauthorized control over the privacy, security, and processing of critical information. Operational procedures must conform to the NC DHHS Privacy and Security policies and procedures.	Met by operational processes and procedures. User/role-based security will be assigned according to standards as defined by NC DHHS Privacy and Security policies and procedures. User- and role-based security also will be assigned for specific applications and data, including access restrictions to protected and confidential information, in accordance with the privacy and security requirements of HIPAA and the State. Operational security and access practices preventing any person(s) from establishing control will be documented in the security plan and housed within iTRACE.
40.1.2.40	Fiscal Agent (DDI and Operations Phases) shall maintain preventive, detective, and corrective audit and control features of the Replacement MMIS for the duration of the Contract in conformance with NC DHHS Privacy and Security Policy.	Met by operational processes and procedures. EDS will use Microsoft Reporting Services to generate security audit reports from its SQL Server database for tracking users and associated security groups, roles, settings, passwords, and duplicated IDs. Reports also are available by user ID and can show their defined permissions, history of changes to the account, and which applications were accessed from the primary security landing page. EDS will work with the State to define the frequency and content of these security audit reports to meet State-specific security auditing needs. Additionally, as described previously, EDS will perform periodic risk assessments of security and privacy policies and review this information with the State to determine appropriate corrective actions. From the preventive perspective and with the local monitoring provided by the intrusion detection tools of the interChange system, the State will benefit from the global EDS enterprise commitment to security and privacy. The EDS Security and Privacy group sends timely vulnerability alert notification e-mails to systems administrators and privacy or security officers, listing known security issues in many common products. This notification lets security teams know about vulnerabilities of which they might not otherwise be aware, giving them a chance to address these issues before they can be exploited against the systems we protect. Additionally, special high-priority messages are sent to warn of new, high-profile, and serious vulnerabilities.
40.1.2.41	Fiscal Agent (Operations Phase) shall assist the State in the annual Replacement MMIS security audit in accordance with Government Auditing Standards and Information Systems Audit Standards.	Met by operational processes and procedures. EDS' Systems team will make the appropriate documents and resources available to support the annual security audit conducted in accordance with Government Auditing Standards and Information Systems Audit Standards.

RFP No.	RFP Requirement	EDS Response
40.1.2.42	Fiscal Agent (Operations Phase) shall be required to test backup and recovery plans annually through simulated disasters and lower-level failures and provide awareness training on recovery plans to Fiscal Agent and State staff. These tests must include, without limitation, joint participation by the Fiscal Agent and State staff.	Met by operational processes and procedures. EDS' Operations team will perform an annual review of the backup and recovery plan. We will conduct these backup and recovery tests in coordination with the State. EDS' Training team will provide awareness training on recovery plans to State and EDS staff members.
40.1.2.43	Fiscal Agent (DDI and Operations Phases) shall include, without limitation, audit evidence in system testing results (e.g., from system change management, upgrades, backups, etc.) cross-referenced to the expected test.	Met by interChange and operational processes and procedures. Test cases and results will be stored in Test Director software. A file will be created to feed iTRACE with test case and results information cross-referenced to the expected test. These results will be available to the State through iTRACE.

Facility Access Requirements

The following table, EDS Response to Facility Access Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Facility Access Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.44	Fiscal Agent (DDI and Operations Phases) shall implement controls to restrict access to data processing facilities and secured electronic or physical storage areas only to authorized individuals.	Met by operational processes and procedures. Entrance to EDS' facilities and secured electronic or physical storage is secured by EDS' physical security system—card reader-based—as appropriate, and access will be limited to individuals with a business reason to be in a specific area.
40.1.2.45	Fiscal Agent (DDI and Operations Phases) shall provide accountability control to record facility access.	Met by operational processes and procedures. Physical access will be logged to provide accountability control to EDS' facilities.
40.1.2.46	Fiscal Agent (DDI and Operations Phases) shall record and supervise visitor and unauthorized user access to the Fiscal Agent's local site as well as any other sites used by the Fiscal Agent for Replacement MMIS processing or related activities and shall control access by unauthorized persons in conformance with NC DHHS Security Policy.	Met by operational processes and procedures. Visitors and any unauthorized users to our EDS facilities will be required to sign in, wear a visitor's badge, be escorted while within the EDS location throughout the duration of their visit, and sign out and return the visitor's badge at the end of the visit to the local sites used during the DDI and Operations Phases. Our process will conform to applicable State security policy.
40.1.2.47	Fiscal Agent (DDI and Operations Phases) shall safeguard processor site(s) through provision of uninterruptible power supply, power conditioning, internal environmental controls, fire retardant capabilities, and smoke and electrical detectors and alarms monitored by security personnel.	Met by operational processes and procedures. EDS understands the State's concern with power failures and other electrical anomalies that could bring down the systems and effectively halt claims processing operations. At our Raleigh, N.C., and our Herndon, Va., backup facilities, we take precautions such as using uninterruptible power supplies (UPS) for the equipment supporting the State's

RFP No.	RFP Requirement	EDS Response
		critical business operation. Our Raleigh and Herndon data centers will be equipped with UPS, power conditioning, internal environmental controls, fire-retardant capabilities, and smoke and electrical detectors and alarms, monitored.
40.1.2.48	Fiscal Agent (DDI and Operations Phases) shall restrict access to the facility server area during regular operations and in disaster and emergency situations in accordance with NC DHHS Security Policy.	Met by operational processes and procedures. Access to the fiscal agent facility server areas will be restricted by a badge reader system with access granted to individuals with a business need during regular operations. During disasters or emergency situations, access will be limited to authorized personnel with a business need to access. The applicable security measures will be implemented in accordance with NC DHHS Security Policy.
40.1.2.49	Fiscal Agent (DDI and Operations Phases) shall document policies to implement operational practices preventing unauthorized access to data or systems and prevent fraudulent activities that may result from the use of this information. Operational procedures must conform to the NC DHHS Privacy and Security policies and procedures.	Met by operational processes and procedures. User/role-based security will be assigned according to standards as defined by NC DHHS Privacy and Security policies and procedures. User- and role-based security also will be assigned for specific applications and data, including access restrictions to protected and confidential information, in accordance with the privacy and security requirements of HIPAA and the State. Security and access practices preventing any person(s) from establishing control will be documented in the security plan and housed in iTRACE.

User Access Authentication and Authorization Requirements

The following table, EDS Response to User Access Authentication and Authorization Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to User Access Authentication and Authorization Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.50	Fiscal Agent (Operations Phase) shall provide all authorized users (employees, contractors, providers, citizens, other government workers) of the Replacement MMIS with access to appropriate business areas, databases, files, reports, archives, etc. through a common, consistent interface that restricts access based on authentication and authorization to appropriate data derived from role-based security.	Met by operational processes and procedures. User- and role-based security will be assigned according to applicable standards as defined by NC DHHS Privacy and Security policies and procedures. User- and role-based security also will be assigned for specific applications and data, including access restrictions to protected and confidential information, according to HIPAA and State privacy and security requirements. This process gives authorized users access to the Replacement MMIS as their business needs dictate.
40.1.2.51	Fiscal Agent (Operations Phase) shall implement a managed workflow process for user account provisioning	Met by operational processes and procedures. EDS will follow the required security checks and protocols to process

RFP No.	RFP Requirement	EDS Response
	to eliminate the use of paper documents, ensure timely response to requests, and retain profiles for each user containing identification, authorization, organizational demographics, group memberships, and functional permissions derived from role-based security.	logon requests from the approved manager of the new user so that the new State and EDS staff members and other stakeholders are provided with the appropriate access. After State authorization has been given for State personnel or other stakeholders, EDS will maintain the individual's access until notification and approval is given to terminate the access. The method for accomplishing this task will require an electronic form to be completed and reviewed at each stage of the process. This process will include notification to specified State security employees. The State approving authority can electronically view, approve, and forward the logon request to the contractor for completion. EDS will notify the user concerning the status of the request.

Application Systems Change Control Requirement

The following table, EDS Response to Application Systems Change Control Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Application Systems Change Control Requirement

RFP No.	RFP Requirement	EDS Response
40.1.2.52	Fiscal Agent (DDI and Operations Phases) shall perform security impact reviews of the change management process and share and collaborate on such reviews with State staff during the DDI Phase and throughout the life of the Contract.	Met by operational processes and procedures. The EDS Operations team will perform security impact reviews of the change management process. These reviews will be shared with the State staff members throughout the DDI and Operations Phases and will collaborate with the State. The review results will be posted and stored in iTRACE and made readily available online to the State.

System Software Controls Requirements

The following table, EDS Response to System Software Controls Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to System Software Controls Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.53	Fiscal Agent (DDI and Operations Phases) shall control and monitor global access to systems and files such that no single individual will be able to affect system operations in isolation.	Met by operational processes and procedures and through COTS integration. The EDS security and operational procedures will meet this requirement. Also, an audit trail is built into our configuration management and change management tools and processes.

RFP No.	RFP Requirement	EDS Response
40.1.2.54	Fiscal Agent (Operations Phase) shall monitor application platforms with industry standard technology and tools (hardware and software) and respond according to agreed-upon Service Level Agreements to developing problems.	Met by operational processes and procedures. EDS will use the Oracle Diagnostic Pack and the SiteScope package from Mercury Interactive (now Hewlett-Packard). EDS will meet the agreed-on service-level agreements for this area.
40.1.2.55	Fiscal Agent (DDI and Operations Phases) shall implement a comprehensive security monitoring solution to include, without limitation, industry standard technology and tools, including monitoring of wireless communication to monitor all aspects of the proposed solution (e.g., perimeter and internal network, server farms, operating systems, application software, and application data). Wireless communication at the Fiscal Agent site shall conform to the established NC DHHS Security Policy.	Met by operational processes and procedures and through COTS integration. EDS will use an intrusion detection system (IDS) as the security monitoring solution.
40.1.2.56	Fiscal Agent (Operations Phase) shall retain copies of all server operating system and configuration software, system utilities and tools, network device configuration settings, and software license agreements in a location remote from the production server location, updating the copies as the operating environment changes.	Met by operational processes and procedures. EDS will engage Iron Mountain Corp. to meet this requirement. We will store copies of this information off-site in our Iron Mountain storage facility.

Logging and Reporting Requirements

The following table, EDS Response to Logging and Reporting Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Logging and Reporting Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.57	Fiscal Agent (DDI and Operations Phases) shall identify and document all network activity events involved with the non-application operations of the Replacement MMIS.	Met by operational processes and procedures. Any network activity events outside the Replacement MMIS activity will be communicated to the State in advance.
40.1.2.58	Fiscal Agent (Operations Phase) shall produce an alert notification for the Operations Incident Management function for follow up and review to every event that precipitates a security incident.	Met by operational processes and procedures. We will produce an alert notification process for any operations incident as part of our standard procedures and document it within iTRACE.

Service Continuity Controls Requirements

The following table, EDS Response to Service Continuity Controls Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Service Continuity Controls Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.59	Fiscal Agent (Operations Phase) shall initiate and document an Operations Incident Management function and group to act as a single, central point of notification, review, and assessment of all incidents that affect the continuous operations of the production environment and access to the data and information.	Met by operational processes and procedures. A Response to Operational Problems (RTOP) process will be established. Any incidents that impacts operation of the production environment and access to data will be logged and tracked following this process. The account business and technical leaders will be on-point to plan for and manage any events. Escalation procedures, points of contact, and telephone numbers will be posted in iTRACE and in the business continuity plan.
40.1.2.60	Fiscal Agent (Operations Phase) shall respond to each network activity and personally observed incident with a mitigation plan that follows standard data collecting, evidence preservation practices, and organizational escalation procedures in accordance with guidelines established by the NC DHHS Privacy and Security Office	Met by operational processes and procedures. EDS' Network team provides support and will monitor the network. Nonstandard network activity and any personally observed incident will be logged. Steps will be taken to collect data to preserve evidence as appropriate in accordance with the guidelines established by the State Privacy and Security Office.

Data Backup and Recovery Requirements

The following table, EDS Response to Data Backup and Recovery Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Data Backup and Recovery Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.61	Fiscal Agent (Operations Phase) shall store backup system data and files separately from the production server storage at a remote location sufficiently distant from the production servers to prevent a simultaneous disastrous loss of both environments.	Met by operational processes and procedures. EDS will provide a remote, secure Iron Mountain storage location sufficiently distant from the Raleigh, N.C., data center production services to store backup system data and files.
40.1.2.62	The Fiscal Agent (Operations Phase) shall ensure that individual files, collections of files, data base instances and other production information can be recovered from the back-up storage to production servers upon inadvertent deletion or corruption of the production information.	Met by operational processes and procedures. EDS will provide a process to verify that archived and stored data can be recovered from backup storage to the production servers. The EDS LAN/WAN team will use Iron Mountain services for off-site secure, climate-controlled storage of tapes. The tapes will be stored, inventoried, and encrypted to protect PHI data on tapes. In addition to storage of backup tapes, EDS will replicate EDMS imaged data and detailed Replacement MMIS transactional data between the Raleigh, N.C., site and the Herndon, Va., disaster recovery site to provide another source of data if needed.

Records Retention Requirement

The following table, EDS Response to Records Retention Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Records Retention Requirement

RFP No.	RFP Requirement	EDS Response
40.1.2.63	Fiscal Agent (Operations Phase) shall archive information, including, without limitation, data files, images, transactions, master files, system and source program libraries, and other appropriate records and electronically store the information physically or logically separate from production information in compliance with State Record Retention Policy.	Met by operational processes and procedures. The EDS LAN/WAN team will use Iron Mountain services for off-site secure, climate-controlled storage of tapes at a remote location sufficiently distant from the production information to store archive information in compliance with the State Record Retention Policy.

User Interface and Navigation Requirements

The following table, EDS Response to User Interface and Navigation Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to User Interface and Navigation Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.64	Fiscal Agent (DDI and Operations Phases) shall employ industry standards and best practices for user interface design and navigation consistently throughout the Replacement MMIS throughout the life of the Contract.	Met by interChange. The interChange user interface meets this functional requirement. The interChange user interface uses industry standards and best practices for its design and navigation. interChange incorporates the Windows look and ease-of-use navigation features. The browser-based interface uses the latest technologies and interface capabilities. The key to this interface is a standardized behavior model and a consistent presentation format across the business functions that is robust and feature-rich. In keeping with our history of commitment to accessibility, EDS strongly supports the federal, state, and local governments' use of accessibility as a criterion in the procurement of electronic information technology (EIT). Our efforts to define and deliver a sensible and effective solution have evolved from our numerous prior implementations of interChange. To address the ADA guidelines for developing accessible Web sites, the interChange portal will provide text equivalent (typically a description) for all non-text elements, such as audio, video, graphics, animation, graphical buttons, and image maps. This allows those who are visually impaired to access the information with a screen reader that can read the

RFP No.	RFP Requirement	EDS Response
		description of a picture but cannot "read" the picture. The EDS interChange portal also meets the Rehabilitation Act Section 508 Subpart B Section 1194.21 Software and Operating System user interface technical standards. These are listed below: § 1194.21 Software applications and operating systems. (a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually. (b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer. (c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that assistive technology can track focus and focus changes. (d) Sufficient information about a user interface element, including the identity, operation, and state of the element, shall be available to assistive technology. When an image represents a program element, the information conveyed by the image must also be available in text. (e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance. (f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes. (g) Applications shall not override user selected contrast and color selections and other individual display attributes. (h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user. (i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a

RFP No.	RFP Requirement	EDS Response
		response, or distinguishing a visual element. (j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided. (k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz. (l) When electronic forms are used, the form shall allow people using assistive technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.
40.1.2.65	Fiscal Agent (DDI and Operations Phases) shall standardize all views, windows, and reports, including: • Format and content of all views • All headings and footers • Current date and time Zip codes shall display nine digits. All references to dates shall be displayed consistently throughout the system (MM/DD/YYYY). All data labels and definitions used shall be consistent throughout the system and clearly defined in user manuals and data element dictionaries. All Replacement MMIS-generated messages shall be clear, user-friendly, and sufficiently descriptive to provide enough information for problem correction. All Replacement MMIS views shall display the generating program identification name and/or number. The display shall be consistent from view to view.	Met by interChange. interChange standardizes the views of information through reports and Web pages, including headers, footers, date, time, field tags, and other data labels.

Workflow Management Requirements

The following table, EDS Response to Workflow Management Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Workflow Management Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.66	Fiscal Agent (Operations Phase) shall perform manual workload balancing.	Met by operational processes and procedures and through COTS integration. EDS operational leaders with the appropriate authority can perform manual workload balancing by redirecting tasks within the COTS K2 workflow engine and interChange when appropriate. The manual

RFP No.	RFP Requirement	EDS Response
		workload balancing is done as part of the operational task monitoring and management by the EDS leadership team.
40.1.2.67	Fiscal Agent (Operations Phase) shall perform work item reassignments.	Met by operational processes and procedures and through COTS integration. EDS' operational leaders with the appropriate authority can perform manual workload balancing by redirecting tasks within the COTS K2 workflow engine and interChange processes for optimal throughput.

Rules Engine Requirements

The following table, EDS Response to Rules Engine Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Rules Engine Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.68	Fiscal Agent (Operations Phase) shall configure and maintain all business rules in the rules engine throughout the life of the Contract.	Met through configuration of interChange. The interChangeRules solution is comprised of the EDS BPA rules module, as well as the integration of the COTS rules engine InRule for supporting Replacement MMIS areas. The BPA module is for the configuration of State policy for claims administration, while the COTS rules engine, InRule, will be integrated into the prior approval adjudication processing. Many rules can be modified and created by users through the GUI application. EDS' Operations team will work with the State to identify, convert, and configure the necessary business rules data into the Replacement MMIS.
40.1.2.69	Fiscal Agent (Operations Phase) shall maintain up-to-date business rule documentation.	Met by interChange and operational processes and procedures. We will maintain up-to-date business rule documentation in iTRACE. Additionally, interChange Rules catalog search provides the ability to search the rules and return the results in a print-friendly format.
40.1.2.70	Fiscal Agent (Operations Phase) shall perform business rule changes on a release basis.	Met by interChange and operational processes and procedures. Rule migration is slated for delivery in EDS' base version of interChange. This base version and its future releases, along with a rigorous process of change control and release management, will allow rules to be changed in the production environment on a release basis. EDS' Systems team will work with the State to define the business processes for scheduled business rules releases, which will include BPA rules updates.

Integrated Test Facility Requirements

The following table, EDS Response to Integrated Test Facility Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Integrated Test Facility Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.71	Fiscal Agent (DDI and Operations Phases) Fiscal Agent shall provide the State with access to the ITF as required for testing on site, from State office, and/or remotely throughout the life of the Contract.	Met by operational processes and procedures. We will coordinate and schedule the training room facility for on-site testing as needed. Remote testing, whether at a State facility or not, will be met through the connectivity we will establish for the State.
40.1.2.72	Fiscal Agent (DDI Phase) shall support a minimum of twenty-five (25) simultaneous State testers, either at the local Fiscal Agent site and/or remotely.	Met by operational processes and procedures. During the DDI Phase, EDS will provide for a minimum of 25 simultaneous users at the local fiscal agent site at our Wycliff Rd, Raleigh, N.C., location or remotely by a secure dedicated or virtual private network (VPN) connection.
40.1.2.73	Fiscal Agent (DDI and Operations Phases) shall coordinate with State agencies for online and batch testing and execute online and batch testing as required to support State applications throughout the life of the Contract.	Met by operational processes and procedures. Modifications to the system will be grouped as appropriate and then tested using manual and automated testing tools. EDS will coordinate the testing processed. System modifications will be released to production after involved parties received the sign-off. The user acceptance testing (UAT) environment will provide State agencies the opportunity to perform tests of the interChange online Web pages and batch processes.
40.1.2.74	Fiscal Agent (DDI and Operations Phases) shall execute online testing and batch test cycles and related activities to support State testing.	Met by operational processes and procedures. As a part of system enhancements and modifications, EDS testers will execute online tests and batch test cycles using manual and automated testing tools to support State testing.
40.1.2.75	Fiscal Agent (DDI and Operations Phases) shall support all ITF functions, files, and data elements necessary to meet the RFP requirements.	Met by operational processes and procedures. Each level of the Integrated Test Facility (ITF) will be maintained and kept current. Changes will be promoted into the environments, data model, and processes in the ITF to support system enhancements and modifications. EDS will follow established processes and procedures to maintain current reference data so that testing will closely reflect the outcome in the production environment.
40.1.2.76	Fiscal Agent (DDI and Operations Phases) shall coordinate with the State and DHSR IT system vendor to perform appropriate system tests during implementation of the DHSR IT system.	Met by operational processes and procedures. The integration of the Replacement MMIS with the new DHSR IT system will be identified as a series of tasks in the project plan. These tasks, which include system tests, will be assigned to the appropriate team members. We will be responsible for coordinating inter-system tests with DHSR.

Training Requirements

The following table, EDS Response to Training Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Training Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.77	Fiscal Agent (DDI and Operations Phases) shall develop training to incorporate policy, procedures, regulatory guidelines, business rules, and claim processes to ensure a comprehensive approach to meeting the training requirements of the State.	Met by operational processes and procedures. EDS' Operational Training team will incorporate policy, procedures, regulatory guidelines, business rules, and claim processes to provide a comprehensive approach to meeting the training requirements of the State. We provide significant detail regarding our process in proposal section 50.2.4.4 Training Approach.
40.1.2.78	Fiscal Agent (DDI and Operations Phases) shall develop State-approved training materials for all users and make them available online.	Met by operational processes and procedures. We use a time-tested methodology, Instructional Systems Life Cycle (ISLC), that the International Society for Performance Improvement recognizes as an outstanding methodology. ISLC provides the blueprint for EDS to develop performance-based training and training materials. By using ISLC, we make sure that training focuses on people and their job skills in the context of wider business demands. This helps users understand the new processes and technologies they need to perform their jobs. Computer-based training (CBT) courses and other training materials will be made available through download of CBT or direct access to training materials. EDS' training materials will be uploaded and posted to iTRACE after State approval.
40.1.2.79	Fiscal Agent (Operations Phase) shall submit the Training Plan to the State no less than ninety (90) days prior to the beginning of each Contract year.	Met by operational processes and procedures. EDS' Operations team, led by Chris Ferrell, will collaborate with the State to develop and provide a quality training plan to the State no less than 90 days before the beginning of each contract year. The training plan will include training items such as objectives for fiscal agent staff, State designated staff, and other appropriate authorized stakeholders who access, view, and use the Replacement MMIS.
40.1.2.80	Fiscal Agent (DDI and Operations Phases) shall conduct instructor-led classroom training for all users prior to Replacement MMIS implementation and throughout the life of the Contract.	Met by operational processes and procedures. EDS' Operations team will work with the State to identify the courses that meet the users' needs and facilitate an optimal learning outcome. Our Replacement MMIS training is designed to verify that personnel participating in specific training activities retain knowledge of the new functions and procedures, and that they have the tools needed before being expected to begin their operations activities. The instructor-led classroom training will be provided as needed and scheduled throughout the life of the contract.

RFP No.	RFP Requirement	EDS Response
40.1.2.81	Fiscal Agent (DDI and Operations Phases) shall provide and maintain a training classroom(s) and equipment within the Fiscal Agent's Raleigh, NC, facility, providing at least one (1) pre-scheduled classroom session per month for all users. Sessions shall accommodate up to fifty (50) attendees.	Met by operational processes and procedures. To deliver training that best enhances the ability of a learner to integrate, retain, and demonstrate the new skill sets learned in the presented information, EDS understands it is best to set up and maintain a well-equipped training facility. It is important to have an environment that allows optimal learning and allows the participant to concentrate on the training goals and objectives. EDS will provide a dedicated training room for use in training designated staff. We will provide a training room equipped with the necessary PCs and training-related equipment that will facilitate the most conducive setting for user training. A primary goal of training during the DDI Phase is to reduce risks associated with the transition to the Replacement MMIS by achieving a well-trained work force that extends throughout the Operations Phase.
40.1.2.82	Fiscal Agent (DDI and Operations Phases) shall monitor, track, and evaluate effectiveness of training using training industry standard methodologies.	Met by operational processes and procedures. EDS understands and has established processes for training and training material quality control. The EDS training staff members know how to validate training modules and training data. The training staff members seek out the technical staff members to validate accuracy and completeness of the concepts in the training module. Our training staff members are well versed in verifying the course content, making sure the level of detail is appropriate and accurate, confirming the course structure fits user job function, and validating that hands-on exercises are realistic to the job performed in production. EDS has been providing Medicaid training for more than 40 years, and we can share that background to make continuous program and curriculum improvements. It is important for EDS to receive feedback about the effectiveness of training sessions. With the State, EDS will develop a training questionnaire that will be distributed to evaluate training sessions. The questionnaire will gather quantitative and qualitative feedback that will be compiled. The training questionnaire will evaluate the training course, course materials, usefulness of any hands-on exercises used, trainer preparedness, and the trainers' subject-matter knowledge. The questionnaire also will provide an area for open text responses regarding value of the session, suggestions for improvement, and overall satisfaction with the training session experience.
40.1.2.83	Fiscal Agent (DDI and Operations Phases) shall provide blended, consistent training for State, local agency, and Fiscal Agent staff for all Replacement MMIS application	Met by operational processes and procedures. Maintaining consistency from one training course to another is critical in a training environment so that users receive the same

RFP No.	RFP Requirement	EDS Response
	systems.	information. Because of this, EDS will maintain version control of training courses and materials including the content in the CBT and Web-based training (WBT) applications and modules. Training courses, tutorials, and reinforcement training modules will be under change control to be sure they are updated only through a formal process of reviews and approval steps. EDS will work with the State to develop a process by which we will present training materials to DMA for feedback and final approval.
40.1.2.84	Fiscal Agent (Operations Phase) shall report to the State monthly on Fiscal Agent staff training and proficiencies.	Met by operational processes and procedures. We will report EDS staff training activities and resulting proficiencies to the State each month and provide this online view in iTRACE.
40.1.2.85	Fiscal Agent (DDI and Operations Phases) shall develop instructor-led classroom and CBT courses for provider education and training for all provider types.	Met by operational processes and procedures. EDS is a strong proponent of using appropriate and diverse methods and techniques that meet the unique learning needs of individuals. We can better apply new knowledge and skill sets into existing paradigms when we participate in learning activities that most closely parallel those in our daily environment. Realizing that our ultimate training goal is appropriate usage of new information, EDS integrates hands-on training cases into our instructor-led CBT and WBT courses.
40.1.2.86	Fiscal Agent (Operations Phase) shall conduct seventy (70) instructor-based training workshops annually on State-approved content in geographical areas across the State after Replacement MMIS implementation.	Met by operational processes and procedures. Education and training are the most consistently reliable approaches to meeting performance standards and satisfying the State's expectations for provider training. EDS will offer different training courses to meet the needs of the individual provider or of a the entire audience of North Carolina providers. Because we know the type of training needs of North Carolina providers and we have relationships built with many North Carolina providers and provider associations, we will use that experience and understanding to develop and deliver a State-approved, quality, provider-focused training program. We will schedule, develop, and deliver 70 instructor-based workshops annually.
40.1.2.87	Fiscal Agent (Operations Phase) shall participate in semi-annual Finance and Reimbursement Officers (FARO) conferences as requested by the State.	Met by operational processes and procedures. EDS' operational staff will participate in semiannual Finance and Reimbursement Officers conferences as requested by the State. These conferences will be incorporated into the annual training plan submitted to the State for approval.
40.1.2.88	Fiscal Agent (Operations Phase) shall plan, organize, and conduct the annual Medicaid Fair.	Met by operational processes and procedures. EDS' Provider Operations team, led by Chris Ferrell, will collaborate with the State to plan, organize, and conduct the annual Medicaid Fair.

RFP No.	RFP Requirement	EDS Response
40.1.2.89	Fiscal Agent (Operations Phase) shall conduct on-site training sessions based on claims processing performance criteria or requests from providers, billing groups, or State/county staff.	Met by operational processes and procedures. EDS will provide a team of 12 experienced field representatives such as Marianne Diana, Kari Smith, and Alvin Tinnin, whose sole responsibility is to actively work to help providers in their understanding of the billing and payment processes, the resources available to them, and otherwise support good customer relations, communications, and service. The 12 EDS field representatives will be divided into specific territories and will conduct on-site training sessions. During this type of on-site visit, we will review in-depth billing instruction and review resolution procedures for the denied or suspended claims with the provider office staff.

Call Center Services Requirements

The following table, EDS Response to Call Center Services Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Call Center Services Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.90	Fiscal Agent (Operations Phase) shall provide sufficient staff for all call centers and help desks so that ninety (90) percent of all phone calls are not on hold for more than sixty (60) seconds before a staff person, not an automated answering device, answers.	Met by operational processes and procedures. We are confident that our experience allows us to provide the State the level of customer service it expects. The call center is often the only direct contact providers have with North Carolina healthcare services. Callers can access assistance through the AVRS, the Provider Web Portal, or by selecting to speak to a call center or help desk representative. EDS studied North Carolina's current call volumes to determine how to size the system and determined telephone staffing requirements. EDS' Operations team will respond to help desk queries so that 90 percent of the routed calls for the call center are not on hold more than 60 seconds before an EDS representative answers.
40.1.2.91	Fiscal Agent (Operations Phase) shall provide sufficient staff and phone lines for all call centers and help desks so that less than one (1) percent of all phone calls are abandoned, dropped, or receive a busy signal.	Met by operational processes and procedures. We have carefully analyzed the lines, call volume, and call length, and the number of telephone lines and call center and help desk staff will meet the requirement of less than 1 percent of all telephone calls abandoned, dropped, or resulting in a busy signal. Our experience and commitment to provide outstanding customer service will be the basis for devising the appropriate configuration that prevents callers from receiving busy signals. Our system is flexible in its design, which allows us to expand lines or call center or help desk representatives if the long-term need exists.

RFP No.	RFP Requirement	EDS Response
40.1.2.92	Fiscal Agent (Operations Phase) shall provide technical Help Desk support during all hours of system availability.	Met by operational processes and procedures. EDS' Network Operations team will provide technical help desk and on-call support during the hours of Replacement MMIS availability.

LAN/WAN Management Operational Requirement

The following table, EDS Response to LAN/WAN Management Operational Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to LAN/WAN Management Operational Requirement

RFP No.	RFP Requirement	EDS Response
40.1.2.93	Fiscal Agent (Operations Phase) shall provide technical expertise for the management, performance, and configuration of the Replacement MMIS network, LAN/WAN management, and support.	Met by operational processes and procedures. Our Network team will provide the technical expertise necessary for management, performance, and configuration of the Replacement MMIS network. This team will support and manage the LAN/WAN Replacement MMIS environment and work with the State ITS and DIRM entities.

Audit Requirements

The following table, EDS Response to Audit Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Audit Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.94	Fiscal Agent (Operations Phase) shall provide assistance to the State, or any reviewing entity identified by the State, with resources, data, and reports in the audit of Fiscal Agent performance, compliance, and system reviews.	Met by operational processes and procedures. EDS will support the State, or the State's reviewing entity, as requested by the reviewing entity with the requested data and reports required to meet the audit.
40.1.2.95	Fiscal Agent (Operations Phase) shall contract with an independent qualified audit firm to perform a Statement on Auditing Standards (SAS) 70 audit of the Replacement MMIS and produce a SAS 70 Type 2 Report. The audit and report shall include the operations of the Fiscal Agent's local site as well as any other sites used by the Fiscal Agent for Replacement MMIS processing or related activities. Specific requirements of the SAS 70 Type 2 Report are identified in Appendix 40, Attachment D of this RFP.	Met by operational processes and procedures. EDS will contract with an independent, qualified audit firm to conduct and issue an annual SAS-70 Type 2 report for North Carolina interChange facilities. EDS' Operations team will be available and work with the auditing experts to support the annual SAS-70 report as needed.

System/Software Maintenance Requirements

The following table, EDS Response to System/Software Maintenance Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to System/Software Maintenance Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.96	Fiscal Agent (Operations Phase) shall be required to perform system maintenance to the Replacement MMIS based on State-approved CSR's.	Met by operational processes and procedures. EDS' Systems Maintenance team, led by Tim Sullivan, along with interChange experienced system staff and North Carolina knowledge, will provide and support the performance of the Replacement MMIS maintenance as directed through State-approved CSRs.
40.1.2.97	Fiscal Agent (Operations Phase) shall develop specifications, impact statements, cost analysis, and consideration as to the long-term value of performing the maintenance requirements for the State's evaluation.	Met by operational processes and procedures. Our SLC 3 methodology will be used for State-approved maintenance. This will include analysis, requirements definition, design, construction, testing, implementation, and post-implementation support. This documentation will include cost analysis and review of the long-term value of the requested modifications. The EDS Systems Maintenance team will incorporate these processes into the daily operations and execution of maintenance efforts.
40.1.2.98	Fiscal Agent (Operations Phase) shall perform timely updates to system and user documentation, desk procedures, provider manuals, and training materials prior to the release of changes into production.	Met by operational processes and procedures. EDS' Operations team will work collectively and cohesively to maintain all current documentation for each Replacement MMIS release. When operational processes require an update to the documentation listed, we will upload the new documentation to iTRACE.
40.1.2.99	Fiscal Agent (Operations Phase) shall perform maintenance to include, without limitation: • activities necessary for the system to meet the requirements described in the RFP; • activities related to file growth and partitioning; • support of updates to all files and databases; • software and hardware updates, as directed by the State; • RDBMS routine activities; • LAN/WAN administration and maintenance to ensure performance standards are met; • activities necessary to ensure that all data, files, programs, utilities, and system and user documentation are current and that errors found are corrected;	Met by operational processes and procedures. These activities will be completed by EDS' skilled operational business and technical staff members. Our staff experience and North Carolina knowledge includes reference and business analysts, testers, documentation specialists, information analysts, infrastructure analysts, and database administrators, as needed to meet the requirements of interChange operations in support of the State.

RFP No.	RFP Requirement	EDS Response
	• file maintenance, including manual table entry and programming, to support file maintenance changes, performance tuning, capacity planning, backup and recovery tasks, and archival tasks; • all ongoing tasks, such as CPT, Healthcare Common Procedure Coding System (HCPCS), and Diagnosis-Related Group (DRG) International Classification of Diseases (ICD)-9/ICD-10 updates, to ensure system tuning, performance, response time, capacity planning, database stability, and processing conforming to the minimum requirements of this Contract; • changes to tables for edit criteria; • activities in support of updates to all files and databases, including the rules engine; • add new values or changes to existing values found within internal program tables; • enact rate changes, individual or mass adjustments, purging of files, research, system recycling, minor modifications, and repetitive requests that are done on a set frequency that have not been incorporated into the system by the Fiscal Agent, e.g., Healthcare Coordinator monthly payments, 1099s, monthly, quarterly, year-end, and fiscal year-end reporting; • process improvements; • State-approved recoupments and adjustments not related to errors and omissions that are the responsibility of the Fiscal Agent requiring programming support Operations Incident Reporting; and • Rules engine configuration and maintenance.	

System Modification Requirements

The following table, EDS Response to System Modification Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to System Modification Requirements

RFP No.	RFP Requirement	EDS Response
40.1.2.100	Fiscal Agent (DDI and Operations Phases) shall perform system modifications when the State or the Fiscal Agent determines that an additional requirement must be met	Met by operational processes and procedures. Our EDS Systems Modification team in conjunction with business analysts and subject-matter experts will define, design,

RFP No.	RFP Requirement	EDS Response
	or that a modification to an existing file structure or current processing (outside of those discussed above as maintenance activities) is needed. Fiscal Agent billing for modification shall be in compliance with Section 30 of this RFP.	construct, test, and implement changes to the Replacement MMIS as approved by the State. These changes will be managed through the change control process.
40.1.2.101	Fiscal Agent (DDI and Operations Phases) shall develop specifications, impact statements, cost analysis, and consideration as to long-term value of performing the modification requirements for the State's evaluation.	Met by operational processes and procedures. One phase of the standard development methodology is to create a list of alternatives, the corresponding impacts and cost estimates, and a recommended solution. EDS' Systems Modification team will provide this information for consideration of the long-term value of implementing system changes.
40.1.2.102	Fiscal Agent (Operations Phase) shall perform timely updates to system and user documentation, desk procedures, provider manuals, and training materials prior to the release of the modification into production.	Met by operational processes and procedures. This requirement is met by operational processes required to update the documentation listed, and the ability to upload it to iTRACE. The EDS Operations team will keep documentation current for each Replacement MMIS release.
40.1.2.103	Fiscal Agent (Operations Phase) shall allocate system modification tasks against productive hours.	Met by operational processes and procedures. System modifications tasks will be tracked individually and will be logged against productive hours.
40.1.2.104	Fiscal Agent (DDI and Operations Phases) shall manage system modification activities using the change management process.	Met by operational processes and procedures. The SLC methodology that will be used will incorporate a change control or change management process. This verifies that stakeholders can review and approve changes before they are accepted as part of a system modification.
40.1.2.105	Fiscal Agent shall submit to the State for review and approval all modifications and other work estimate prior to beginning the work.	Met by operational processes and procedures. Estimates will be reviewed and approved by the State prior to the start of system modifications.
40.1.2.106	Fiscal Agent (Operations Phase) shall assess only productive work hours against the modification hour pools, and the hours shall directly contribute to the modification of the Replacement MMIS.	Met by operational processes and procedures. EDS' Systems team, led by Tim Sullivan, will enter and report all work hours as applicable to modification efforts. Tim and his supervisory staff will review the time tracking output and will only approve time directly contributing to the Replacement MMIS modification.
40.1.2.107	Fiscal Agent (Operations Phase) shall not allocate supervisory or other project work accomplished by key personnel towards the productive hours. The hours devoted to supervision or management by non-key personnel may be counted as productive hours, but they can make up no more than fifteen (15) percent of the total hours reported.	Met by operational processes and procedures. Supervisory or other project work completed by key personnel will be segregated in the time-tracking tool and not be allocated toward productive hours. Time logged for supervision and management for nonkey personnel will be tracked and counted as productive hours. EDS system management reviews will be implemented to make sure the amount of supervision by nonkey personnel does not comprise more than 15 percent of the total hours recorded.

Data Integrity Requirement

The following table, EDS Response to Data Integrity Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Data Integrity Requirement

RFP No.	RFP Requirement	EDS Response
40.1.2.108	Fiscal Agent (DDI and Operations Phases) shall maintain a copy of all documentation related to all versions of changed records and files that were saved and a mechanism to retrieve in their historical format	Met by interChange. This requirement will be met through interChange and iTRACE. iTRACE will enable the State and EDS to easily maintain accessible information on project activities.

40.1.3 Personnel Staffing

Our commitment to the State, the implementation, transition, and operations of the Replacement MMIS is shown in the experienced and knowledgeable team we are dedicating to the DDI Phase and Operations Phase of the Replacement MMIS. EDS' team members blend the best of our current staff with interChange experts. We have increased the key positions and also are proposing other important leadership resumes that meet the RFP's guidelines.

Response to Personnel Staffing Requirement

The following table, EDS Response to Personnel Staffing Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Personnel Staffing Requirement

RFP No.	RFP Requirement	EDS Response
40.1.3.1	The Fiscal Agent shall maintain documentation regarding current license and certification status for all personnel who are required to be licensed or certified throughout the life of the Contract. The Fiscal Agent shall provide such documentation to the State, when requested. Refer to Appendix 50, Attachment I.	Met by operational processes and procedures. Throughout the life of the contract, EDS' Operations team will maintain documentation of current license and certification status for personnel required to be licensed, such as nurses, dental hygienists, physical therapists, and the medical, pharmacy, and dental directors. We will provide the documentation to the State as requested.

40.2.2 Recipient Operational Requirements

EDS will support the recipient operational requirements through the provider/recipient integrated call center for provider and recipient Certifications of Credible Coverage (COCC) questions and the Recipient Maintenance Organization for returned recipient mail and the DPH enrollment process. Recipients also can use the Web portal and automated voice response system (AVRS), providing them critical medical information and updates 24 hours a day, 7 days a week. The team supporting these needs daily will be led by Provider/Recipient Services Manager Chris Ferrell, who has eight years of Medicaid experience, including experience managing key stakeholder relationships for the State. The team will comprise well trained customer service representatives, field/travel representatives, and research analysts to support the provider and recipient COCC needs.

One ultimate goal of the Replacement MMIS will be to provide a high level of customer service to the recipient population. Doing so will help the State accomplish its mission to "… enhance the quality of life of North Carolina individuals and families so that they have opportunities for healthier and safer lives resulting ultimately in the achievement of economic and personal independence." It is critical that our operational team provide recipients access to timely and accurate information through the interChange Web portal, automated voice response system (AVRS), and, for COCC questions, the call center or through written correspondence.

Integrating the management of both the provider and recipient supporting staff will allow processes and technologies to be shared across the enterprise. Technologies such as the contact tracking and management software within interChange, AVRS, and the Web portal will keep consistent, accurate, and pertinent information at the fingertips of the operational teams and, most importantly, the recipients themselves. The recipient staff will be well trained and able to handle the recipient COCC calls and assist as needed with DPH enrollment items and handling of returned recipient Replacement MMIS mailings.

This section addresses the requirements met by interChange and operational processes to expedite DPH recipient coverage entry, eligibility parameters, finances, communication, reports, and multiple verification processes. EDS will work with the State to coordinate Medicare enrollment data and information.

The EDS Training team, led by Chris Ferrell, will provide the specialized training for local managing entities (LMEs), as specified by the RFP within this section.

Response to Recipient Operational Requirements

The following table, EDS Response to Recipient Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where

appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements.

EDS Response to Recipient Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.2.2.1	Fiscal Agent shall reconcile specified CNDS data with the Replacement MMIS each State business day. This reconciliation process will verify that all records and segments received through the CNDS interface are processed or are listed on error reports.	Met through customization of interChange. The recipient data maintenance subsystem will meet this requirement, while interChange will be customized for the specific interface requirements of the Common Name Data Service (CNDS) system. The daily error report will list the errors that occurred during the update process for Replacement MMIS client transactions.
40.2.2.2	Fiscal Agent shall reconcile specified State-entity DMA eligibility data with EIS each State business day. This reconciliation process will verify that all records and segments received through the EIS interface are processed or are listed on error reports.	Met through customization of interChange. The recipient data maintenance subsystem will report on and meet this functional requirement after customization of the interface between interChange and the Eligibility Information System (EIS). The error report will list the errors that occurred during the daily update process for Replacement MMIS recipient transactions. This report can then be reviewed for potential research issues and correction of records that need to be updated.
40.2.2.3**	Fiscal Agent shall reconcile specified State-entity DMH eligibility data with ASC X12N 834 transactions each State business day. This reconciliation process will verify that all records and segments received via the 834 transaction are processed or are listed on error reports.	Met by interChange. The interChange application processes the 834 transaction files in both batch and real time. The recipient data maintenance subsystem reports on and meets this functional requirement. The error report will list the errors that occurred during the daily update process for Replacement MMIS client transactions.
40.2.2.4	Fiscal Agent shall coordinate with the applicable State entity to resolve Medicare enrollment problems.	Met by operational processes and procedures. EDS' Operations team will work with the State to develop communication and operational processes to assist the State with the resolution of Medicare enrollment problems. The EDS Provider/Recipient Operations team described above, along with the EDS Buy-in staff, will be prepared to handle these problems using the information available through interChange and eligibility data and reconciliation reports.
40.2.2.5	Fiscal Agent shall perform buy-in functions for the North Carolina Medicaid Program using automated and manual operating procedures.	Met by interChange. The buy-in functionality of interChange meets this requirement. Buy-in data can be updated automatically through interChange subsystem processes. interChange panels also allow for manual buy-in updates as defined in interChange.
40.2.2.6**	Fiscal Agent shall support training requirements for LMEs, local health departments, Developmental Evaluation Centers/Children's Developmental Services Agencies (DECs/CDSAs), DPH, and other State-approved local entities.	Met by operational processes and procedures. EDS' Training team, led by Chris Ferrell, will develop and deliver high-quality, learner-centric training programs to LMEs, local health departments, DECs/CDSAs, DPH, and other State-approved local entities. EDS' training approach is outlined in

RFP No.	RFP Requirement	EDS Response
		detail in proposal section 50.2.4.4 Training Approach.
40.2.2.7	Fiscal Agent shall communicate with recipients and employers regarding COCCs verbally and in written correspondence.	Met by interChange and operational processes and procedures. EDS will provide toll-free telephone lines routing calls from recipients and employers to the recipient call center for handling incoming Certificate of Creditable Coverage (COCC) inquiries. Our recipient call center will be well-versed in assisting the North Carolina recipients with these types of issues and can research or distribute the necessary letters and log them through the letter generator and the document management system. The interChange contact management system can facilitate the tracking of these inquiries and related work by recipient.
40.2.2.8**	Fiscal Agent shall identify and assign the applicant's CNDS ID and associate/link it to the financial eligibility application in accordance with CNDS Governance Rules.	Met through customization of interChange. interChange enrollment panels will be created, as required, to support CNDS and provide the associate/link, which will enable the staff to update the information after researching a subsystem.

40.2.3 Recipient Operational Performance Standards

interChange will provide EIS, CNDS, LMEs, and DPH with online access to the State recipient eligibility data. interChange has the capability to support far more than 1.6 million recipients and will provide required reporting and enrollment information and processes to support DPH as specified in the RFP's DPH enrollment section. EDS' Recipient team, managed by Chris Ferrell, will support the recipient community.

Response to Recipient Operational Performance Standards

The following table, Recipient Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Recipient Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.2.3.1	Fiscal Agent shall provide online access to State entities' eligibility edit/error reports by 7:00 A.M. Eastern Time each State business day.	Met by interChange. The reports functionality within the recipient data maintenance subsystem meets this functional requirement and will provide the State entities online access to eligibility edit/error reports by 7:00 a.m. Eastern Time each State business day.
40.2.3.2	Fiscal Agent shall update the Replacement MMIS with batch eligibility data from each State entity by 7:00 A.M. Eastern Time each State business day.	Met by interChange. interChange, upon receipt of batch eligibility data from the State entity, will process and apply updates to the Replacement MMIS eligibility data by 7:00 a.m. Eastern Time each State business day. EDS can track this information through interface management tools and procedures.
40.2.3.3	Fiscal Agent shall update each State entity's Eligibility Data from online processes for State EIS, CNDS, LMEs, and DPH in near-real time.	Met through customization of interChange. EDS will update each State entity's eligibility data through online processes for State EIS, CNDS, LMEs, and DPH in near real time.
40.2.3.4	Fiscal Agent shall generate COCC and log the mail date for each COCC mailed. Fiscal Agent shall provide a monthly report with the number of recipients/clients terminated from each health plan and the number of COCC mailed within one (1) month of the termination.	Met through customization of interChange. interChange will generate a COCC. The EDS mail room will log the mail date for COCC documents mailed. interChange will provide a monthly report with the number of recipients/clients terminated from each health plan and the number of COCCs mailed within one month of the termination.

40.3.2 EVS Operational Requirements

EDS has an extensive infrastructure in place today to communicate with VANs and clearinghouses, supporting providers in North Carolina. We will use our relationships with those VANs and clearinghouses to continue providing outstanding service to the State. EDS' experienced staff and current relationships will support a smooth transition for providers to the EVS process in the Replacement MMIS. The EVS technology will be supported by the Operations Technical Maintenance team reporting to the technical director.

Today, eligibility verification methods are independent systems and can sometimes produce different responses, causing frustration and confusion among the provider community. As outlined in proposal section 40.3.1 EVS System Requirements, interChange eliminates this confusion while providing multiple access methods such as Web and telephone. Consistent and accurate information delivered quickly will support an efficient claims processing function and facilitate the service goals of the State. The technology, supported by the Technical Operations team, will facilitate this delivery, and ongoing issues will be resolved through the help desk.

Providers, software vendors, value-added networks (VANs), and clearinghouses will continue to access the North Carolina Medicaid Companion Guides and X12 Implementation Guides for information on how to properly build their transactions. The electronic data interchange (EDI) help desk will assist these entities in testing their applications so they can quickly become State-approved trading partners. This help desk will continue to respond to concerns and questions and resolve issues related to the trading partners by using the same contact management and call center solution used by other operational teams.

Using the interChange EVS solution, which supports the ASC X12 standard 270/271 transaction in interactive and batch mode, we will meet the operational requirements listed in the RFP. The Replacement MMIS will provide the necessary network and Health Insurance Portability and Accountability Act (HIPAA)–translation capabilities to support the necessary interface to the providers using provider-developed software or submissions from VANs. Providers may submit batch eligibility requests to EVS or submit interactive eligibility transactions to the EVS through the interChange VAN connectivity.

Response to EVS Operational Requirements

The following table, EDS Response to EVS Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, or processes that meet the stated requirements.

EDS Response to EVS Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.3.2.1	Fiscal Agent shall obtain State approval and demonstrate acceptable test results to the State prior to implementing each VAN.	Met by operational processes and procedures. EDS' EDI staff, led by Alan Martin, will establish processes and procedures and document them in iTRACE, combined with interface testing results, to demonstrate the acceptable test results to the State prior to allowing VAN submission in the Replacement MMIS' production environment. Efficient and accurate testing up front eliminates frequent and unnecessary issues through the help desk in the future.
40.3.2.2	Fiscal Agent shall provide necessary file specifications and testing assistance to VANs on how to access EVS.	Met by operational processes and procedures. Test cases will be developed to exercise all facets of eligibility verification in the Replacement MMIS. As part of that process, the EDI team will provide necessary file specifications and testing assistance to VANs. We will use established processes and procedures for State-approved VAN implementation. EVS uses the standard HIPAA 270/271 transactions in conjunction with companion guides to provide EVS file specifications on the interChange Web portal.
40.3.2.3	Fiscal Agent shall provide the necessary instructions to State and VANs in how to use the EVS. *Note: The VANS are responsible for training the providers who contract with them.*	Met by operational processes and procedures. EDS will provide the EVS instructions to the State and VANS on how to use this interChange capability. EVS 270/271 transactions will be communicated to the providers through workshops and readily accessible on the Provider Web Portal, and readily accessible to the State through iTRACE.

40.3.3 EVS Operational Performance Standards

The EDS EDI team will provide optimal support to VANs for continuous access to the Replacement MMIS' EVS. Our EDS North Carolina Operations team understands that maximum availability to the EVS is critical to the efficiency of the providers' business.

Response to EVS Operational Performance Standards

The following table, EVS Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will

be readily available and accessible to the State for ease of information and reference.

EVS Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.3.3.1	Fiscal Agent shall provide for a response from the EVS in three (3) seconds or less ninety-eight (98) percent of the time, twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year.	Met by interChange. The EVS of the Replacement MMIS will meet these performance standards. Any required maintenance windows will be coordinated and scheduled with the State.
40.3.3.2	Fiscal Agent shall provide applicable documentation and successful test data for State approval within ten (10) State business days prior to VAN Replacement MMIS implementation.	Met by operational processes and procedures. The EDS EDI team will meet this requirement as part of our standard operational and testing processes for the State. Our testing process and iTRACE testing results source will maintain the one source data repository necessary to support the continued monitoring of progress in this area.
40.3.3.3	Fiscal Agent shall ensure the EVS is available ninety-nine and nine tenths (99.9) percent of the time, twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year, except for scheduled downtimes.	Met by interChange. EDS will make sure the EVS is available 99.9 percent of the time, 24 hours a day, 7 days a week, 365 days a year, except for scheduled downtime. We will work with the State during DDI to coordinate and schedule maintenance windows with the State.

40.4.2 AVRS Operational Requirements

EDS first implemented an AVRS for the State's Medicaid program in 1993 and later expanded it in 1999.We will use our experienced North Carolina–based staff's knowledge to continue to give providers timely, accurate information and to add robust informational services for recipients. During ongoing operations, the AVRS technology will be supported by the Operations Technical Maintenance team reporting to the technical director.

Providing accurate and timely information to providers and recipients is the foundation for efficient services to the stakeholder population, and it leads to a healthy community. Fortunately, much of this can be automated. Providing access to information through an automated voice response system (AVRS) allows providers and recipients to gain immediate access, 24 hours a day, 7 days a week, to the information they need.

Using our AVRS, callers can select the type of inquiry desired and will have the option of using the telephone keypad or speaking to provide their responses to the programmed questions asked by the AVRS. The system is fully integrated with interChange to receive and process the formatted query and properly format the electronic return data that the AVRS will use to vocalize its response to the caller. If necessary, callers can shift to a telephone queue to receive an EDS customer service representative. In doing so, some of the data already entered will be transferred to the representative's screen to facilitate a dialogue to diagnose and answer the questions quickly and accurately.

Our AVRS gives providers multiple inquiry choices to verify eligibility, check the status of a claim, and much more—24 hours a day, 7 days a week, except for agreed-on downtime for system maintenance. The data is stored in interChange. When using simple touch-tone prompts, a provider can submit an inquiry through the AVRS, and an interactive transaction is sent to interChange. When the response is returned, the caller is provided the inquiry results through speech text. The AVRS provides up-to-the-second information to the provider community and verifies they receive prompt and accurate information.

Our AVRS gives recipients multiple inquiry choices for information in areas such as eligibility, managed care enrollment, third-party liability, and Medicare coverage. They will have the same access as providers—24 hours a day, 7 days a week, except for agreed-on downtime for maintenance. Recipient data also is stored in interChange, and the AVRS responses are managed in the same manner as previously described for provider data and will maintain accurate and timely information.

As shown in the following sections, the AVRS solution proposed in the Replacement MMIS meets the RFP's operational requirements and performance standards.

Response to AVRS Operational Requirements

The following table, EDS Response to AVRS Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, or processes that meet the stated requirements.

EDS Response to AVRS Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.4.2.1	Fiscal Agent shall perform daily systems check to ensure that the AVRS electronic interface is working properly and report the findings monthly.	Met by interChange and operational processes and procedures. EDS' Operations team will make sure the AVRS is working as required daily. Our systems maintenance group will have access to an HTML presentation of the AVRS server status at any time, and an automated monitoring system will monitor the AVRS services and report programming issues to EDS system maintenance staff 24 hours a day, 7 days a week, 365 days a year. Any known deviation will be noted in the monthly AVRS operation log and posted and available to the State through iTRACE.
40.4.2.2	Fiscal Agent shall perform transaction analysis by hour of the day, indicate the number of transactions processed, and report the findings monthly.	Met by interChange and operational processes and procedures. A daily transaction log of every call type to the AVRS will be maintained on the AVRS server. The total number of active callers, history of calls completed every five minutes, and other vital statistics will be captured and reported. Automated monthly summary reporting will be provided, showing transaction analysis by hour of day and indicating the number of transactions processed. This report will be posted and available to the State through iTRACE.
40.4.2.3	Fiscal Agent shall perform telephone analysis by hour of the day, track the number of transactions, number of transactions with less than a ten-second (10-second) response time, and number of transactions with greater than a ten-second (10-second) response time, and report the findings monthly.	Met by interChange and operational processes and procedures. The AVRS meets this functional requirement. Our robust AVRS reporting solution will track the amount of time it takes the Replacement MMIS to respond to a request. It will track the number of transactions, the number with less than a 10-second response time, and the number with greater than a 10-second response time. These statistics will be reported monthly and posted and available to the State through iTRACE.
40.4.2.4	Fiscal Agent shall operate and maintain a Web site for providers and recipients, nurse aides, potential employers of nurse aides, etc. twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year, with the exception of State-approved scheduled maintenance.	Met by interChange and operational processes and procedures. interChange provides a secure Web portal to meet this functional requirement. The secure Web portal will be maintained by EDS to service the information needs of providers, recipients, nurse aides, and potential employers of nurse aides. It will be available 24 hours a day, seven days a week except for State-approved scheduled downtimes for maintenance.

40.4.3 AVRS Operational Performance Standards

Demand for AVRS service can vary dramatically throughout the course of each day. EDS maintains various real-time statistical information to help us know about service outages, response times, errors, and telephone line issues in order to size resources to handle the demand. Plugging in the equipment and letting it run is not the answer. Support and monitoring will not only keep the current technology effective, but also suggest enhancements for the future. Maintaining meaningful system metrics helps us quantify and maintain a high level of service.

Response to AVRS Operational Performance Standards

The following table, AVRS Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

AVRS Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.4.3.1	Fiscal Agent shall provide for a response from the AVRS in three (3) seconds or less ninety-eight (98) percent of the time, twenty-four (24) hours a day, seven (7) days a week, three hundred sixty-five (365) days a year, with the exception of State-approved scheduled system maintenance.	Met by interChange and operational processes and procedures. EDS will provide a response from the Replacement MMIS to the AVRS in three seconds or less 98 percent of the time, and the system will be available 24 hours a day, 7 days a week except during State-approved scheduled maintenance periods.
40.4.3.2	Fiscal Agent shall provide system checks to the AVRS daily and log the findings.	Met by interChange and operational processes and procedures. EDS' Operations team will verify the AVRS is working as required on a daily basis. Our systems maintenance group will have access to an HTML presentation of the AVRS server status at any time, and an automated monitoring system will monitor the AVRS services and report programming issues to EDS system maintenance staff 24 hours a day, 7 days a week, 365 days a year. Any known deviation will be noted in the monthly AVRS operation log and posted and available to the State through iTRACE.
40.4.3.3	Fiscal Agent shall provide monthly AVRS logs within five (5) State business days from the end of the previous	Met by interChange and operational processes and procedures. A daily transaction log of every call type to the

RFP No.	RFP Requirement	Metrics for Measurement
	month.	AVRS will be maintained on the AVRS server. The total number of active callers, history of calls completed every five minutes, and other vital statistics will be captured and reported. Automated monthly summary reporting will be provided, showing transaction analysis by hour of day and indicating the number of transactions processed. This report will be posted and available to the State through iTRACE.
40.4.3.4	Fiscal Agent shall ensure the Web inquiry functionality is available twenty-four (24) a day, seven (7) days a week, three hundred sixty-five (365) days a year, except during State-approved maintenance periods.	Met by interChange. interChange provides a secure Web portal to meet this functional requirement. The secure Web portal will be maintained by EDS to service the information needs of providers, recipients, nurse aides, and potential employers of nurse aides. It will be available 24 hours a day, 7 days a week, except for State-approved scheduled downtimes for maintenance.

40.5.2 Provider Operational Requirements

EDS will support provider operational requirements through the Provider/Recipient Services, Provider Enrollment, and Provider Relations units, led by Provider/Recipient Services Manager Chris Ferrell. Chris has eight years of Medicaid experience, including experience managing key stakeholder relationships for the State.

A major priority of operations is a smooth transition for providers from the Legacy MMIS+ to the Replacement MMIS. Our goal is to make the transition as smooth as possible for providers and make sure they are ready to use the new system on day one. Following the successful implementation of the Replacement MMIS, we will continue to provide the same high level of provider services to the DMA and DMH programs, while expanding this service to DHP and OHRCC.

The provider and recipient operational requirements will be carried out by the EDS Provider and Recipient Services Organization, led by Chris Ferrell. Chris and his team bring a high level of expertise and experience in provider services. Chris' experience extends to 1999, and he—along with experienced provider services supervisors such as Tomeka Evans and Agnes Beeks and provider field representatives Kari Smith, Alvis Tinnin, and Marianne Diana—will be there each day to support the State during the Operations Phase.

In the Operations Phase, we understand that the provider and recipient communication and training are critical elements in providing a smooth transition from the current environment to the Replacement MMIS environment. This transition is one that must be done effectively, promptly, and efficiently to provide the continuation of the providers' claims payments to support the DMA, DMH, DPH, and ORHCC recipient population. EDS has implemented interChange successfully in seven states and with those implementations, EDS provided the support to reach out and educate, train, and transition providers to their new system.

We will work with the DMA, DMH, DPH, ORHCC provider and recipient communities and provider associations and reach out through many communication vehicles, including provider and recipient Web portals for easy access to program information, Web-based tutorials, and hands-on provider training at the provider site and through the planned workshops. We will use these communication vehicles to effectively execute and transition the providers and recipients to the use and benefits of the Replacement MMIS and maintain these efforts throughout the Operations Phase.

This section will help detail how the new system will meet the needs of the provider community and assist the State and EDS in meeting those needs.

Response to Provider Operational Requirements

The following tables map the detailed solutions to the operational requirements of the provider functional area. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

General Provider Operational Requirements

The following table, EDS Response to General Provider Operational Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Provider Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.1	Fiscal Agent shall provide State-authorized access to the Provider database.	Met by interChange. Access to the Replacement MMIS, including the provider subsystem, will be controlled by a role-based solution integrated with interChange allowing authorized access based on State approval.
40.5.2.2	Fiscal Agent shall receive and process provider complaints and summarize this activity in the Status Report.	Met by interChange and operational processes and procedures. As complaints are received, information and notes will be placed in the contact tracking management system (CTMS) in the Replacement MMIS. Status reports on such activity will be provided as requested during operations.
40.5.2.3	Fiscal Agent shall respond to and report on activities and outcomes of all inquiries referred by the State.	Met by interChange and operational processes and procedures. CTMS Web panels will be used by the EDS Provider Services team for documenting, tracking, responding, and reporting on activities and outcomes of inquiries referred to EDS by the State.
40.5.2.4	Fiscal Agent shall perform imaging of all provider documents, contracts, agreements, attachments, training and publication material and forms, and on-site visitation documentation, linking them to the provider for viewing and retrieval by State and Fiscal Agent staff.	Met by interChange and operational processes and procedures. Required provider documents will be scanned, stored, and indexed to allow ease of retrieval through the EMC | Documentum solution. Information discussed during on-site visits will be recorded in the CTMS Web panels within interChange and will reference the documentation scanned and retained in Documentum.
40.5.2.5	Fiscal Agent shall provide the capability to link provider applications in PDF format for retrieval via a document management system.	Met through COTS integration. The COTS Documentum solution will include the creation, storage, and retrieval of provider applications in PDF.
40.5.2.6	Fiscal Agent shall initiate and complete re-credentialing procedures on all providers who have not been previously credentialed and on providers whose data	Met by interChange and operational processes and procedures. EDS' Provider Enrollment team will establish the required credentialing processes and procedures to meet

RFP No.	RFP Requirement	EDS Response
	indicates expiration of any license, accreditation, certification, or other authorizing agencies. All re-credentialing and credentialing should be completed within twelve (12) months of contract start up.	these credentialing requirements. The resulting output related to provider's credentialing status will be entered in interChange provider enrollment Web panels and maintained within interChange.
40.5.2.7	Fiscal Agent shall generate and distribute provider contract renewals to providers seventy-five (75) days before expiration.	Met by operational processes and procedures and through COTS integration. Using the DOC1 letter generation tool, reenrollment letters will be generated automatically for providers 75 days before they expire.
40.5.2.8**	Fiscal agent shall accept, process, and maintain DMH attending-only provider records entered by the LME	Met through configuration of interChange parameters and features. The Replacement MMIS will include the ability to accept, process, and maintain attending provider records. Authorized user access will be established, allowing LMEs to view, add, edit, and delete attending provider records through interChange Web panels.

Provider Enrollment, Credentialing, and Verification Requirements

The following table, EDS Response to Provider Enrollment, Credentialing, and Verification Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Provider Enrollment, Credentialing, and Verification Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.9	Fiscal Agent shall implement at the direction of the State suspension or termination action for providers whose licenses have been revoked or suspended by State licensing or accrediting bodies.	Met by interChange and operational processes and procedures. As directed by the State, EDS' Provider Enrollment team will update online the appropriate provider interChange Web panels for provider suspensions or termination notifications received from the State.
40.5.2.10	Fiscal Agent shall conduct activities to suspend, terminate, or withhold payments, percentages, and incentives from providers under investigation by State or Federal agencies at the sole discretion of the State.	Met by operational processes and procedures and through configuration of interChange parameters and features. As directed by the State, authorized EDS staff members will suspend, terminate, or withhold payments, percentages, and incentives from providers by updating or configuring interChange Web panels such as Provider Restricted Services panel, Lien panel, Accounts Receivable panel, and Provider Contract panel.
40.5.2.11	Fiscal Agent shall implement provider sanctions, as directed by the State.	Met by interChange and operational processes and procedures. EDS will implement provider sanctions using provider enrollment Web panels, as directed by the State.
40.5.2.12	Fiscal Agent shall initiate recoupment/collection of claims	Met by interChange and operational processes and

RFP No.	RFP Requirement	EDS Response
	and non-claims payments made subsequent to the effective date of an action or sanction, as directed by the State.	procedures. The authorized EDS Provider Enrollment users will initiate claim recoupments through the interChange mass adjustment Web panels and work with the EDS Financial team for collection of nonclaims payments, and follow up and collect the claim recoupments initiated through the mass adjustment process.
40.5.2.13	Fiscal Agent shall send enrollment information and instructions to a provider whose claims have denied for non-enrollment.	Met by operational processes and procedures. The EDS Provider Enrollment staff members will make contact with providers receiving claims denied for nonenrollment and provide the necessary information and instructions regarding provider enrollment.
40.5.2.14	Fiscal Agent shall retain all active and historical provider documents, contracts, participation agreements, and supporting documentation for control, balance, audit, and State retrieval.	Met by operational processes and procedures and through COTS integration. Required provider documents received during operations will be scanned, stored, and indexed to allow them to be retrieved as needed through the Documentum solution.
40.5.2.15	Fiscal Agent shall capture and maintain information on all billing agents, including information necessary to identify and contact billing agents and providers using each billing agent within a specified timeframe.	Met by interChange. EDS will capture and maintain information on billing agents through update and maintenance of the interChange functional area, Trading Partner Business. Specifically, the Trading Partners Base Information and Covered Providers will be maintained and updated as needed for contact of the appropriate billing agent within specified time frame.
40.5.2.16	Fiscal Agent shall test potential Trading Partners to be implemented into MMIS production and maintain signed and State-approved Trading Partner Agreements.	Met by interChange and operational processes and procedures. The EDS EDI team will test transactions with potential trading partners as part of the enrollment process. Trading partner agreements will be obtained, scanned and indexed, and retained in Documentum for reference.
40.5.2.17	Fiscal Agent shall obtain and maintain all executed EFT Agreements.	Met by interChange and operational processes and procedures. On receipt, the necessary data from the EFT agreement will be entered into the interChange Web panel. The EFT documents will be scanned, indexed, and retained in Documentum.
40.5.2.18	Fiscal Agent shall create and distribute to each independent enrolled provider or provider site a New Provider Participation Packet.	Met by operational processes and procedures. As part of the enrollment and credentialing process, the EDS Provider Enrollment team will create and distribute a New Provider Participation Packet to each independently enrolled provider or provider site.
40.5.2.19	Fiscal Agent shall respond to provider requests for participation in a NC DHHS program.	Met by operational processes and procedures. The EDS Provider Enrollment team will respond to provider requests for participation in a State program.
40.5.2.20	Fiscal Agent shall review applications and contracts for completeness, original signature, and required participation criteria.	Met by operational processes and procedures. The EDS Provider Enrollment team will review applications and contracts for completeness and original signature and

RFP No.	RFP Requirement	EDS Response
		validate that the participation criteria is provided as required.
40.5.2.21	Fiscal Agent shall update provider data based on information received during the credentialing, re-credentialing, and subsequent enrollment of the provider.	Met by interChange and operational processes and procedures. During the credentialing and recredentialing processes, required data will be entered or updated into interChange Web panels for enrollment reference and retention.
40.5.2.22	Fiscal Agent shall initiate communication to providers advising them of the potential for suspension of services.	Met by operational processes and procedures and through COTS integration. EDS will initiate communication to providers advising them of the potential for suspension of services. The providers will receive electronic or letter notifications. Letters will be generated using the integrated COTS DOC1 letter generation tool.
40.5.2.23	Fiscal Agent shall route any incomplete credentialing or re-credentialing requests to the State for final disposition as to the provider's initial or ongoing participation.	Met by operational processes and procedures and through COTS integration. As part of the provider enrollment credentialing COTS K2 workflow tool, incomplete credentialing and recredentialing requests will be routed to the State as required for final disposition as to the provider's initial or ongoing participation.

Urgent Reviews Requirements

The following table, EDS Response to Urgent Reviews Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Urgent Reviews Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.24	Fiscal Agent shall perform "Urgent Reviews" when the State or Fiscal Agent has become aware of negative provider information that may affect the provider's participation status.	Met by operational processes and procedures and through customization of interChange. EDS will perform urgent reviews when the State or fiscal agent has become aware of negative provider information that may affect the provider's participation status.
40.5.2.25	Fiscal Agent shall route imaged data regarding Urgent Review through Workflow to the Quality Review/Appeals Coordinator for assessment.	Met through customization of interChange. This will be accomplished by integrating the K2 COTS workflow engine as part of the overall provider enrollment workflow. EDS will route imaged data regarding urgent review through the provider enrollment workflow process to the quality review or appeals coordinator.
40.5.2.26	Fiscal Agent shall send a system-generated letter to the provider advising disposition of the case and appeal process procedures.	Met through COTS integration. The DOC1 letter generation tool will create and send a system-generated letter to the provider advising disposition of the case and appeal process procedures as required by the business process.

RFP No.	RFP Requirement	EDS Response
40.5.2.27	Fiscal Agent shall notify the State's Medical Board or other appropriate agencies of its intent to suspend/terminate a provider's participation.	Met through COTS integration. The DOC1 letter generation tool will produce and send system-generated letters to the appropriate agencies and the State's Medical board of the intent to suspend or terminate a provider's participation.

Appeals Requirements

The following table, EDS Response to Appeals Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Appeals Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.28	Fiscal Agent shall receive, image, and link provider appeals correspondence to the provider record.	Met by interChange and operational processes and procedures. EDS will receive, image, and index provider appeals correspondence to the provider record in Documentum.
40.5.2.29	Fiscal Agent shall system-generate appeal letters advising the provider of the date the appeal request is received and that a written response shall be sent within thirty (30) days.	Met through configuration of interChange parameters and features. interChange will generate and send a system-generated appeals letter advising the provider of the date the appeals request was received and informing them that an additional written response will be sent within 30 days from date of receipt. The written response will be generated either by free-form letter generation or standard system-generated letter advising of status or disposition of appeal.
40.5.2.30	Fiscal Agent shall ensure the Review/Appeals Coordinator obtains any additional information to provide to the State Review Committee to support an informed decision.	Met by operational processes and procedures. EDS' Provider Enrollment team will provide any available additional information to the State Review committee.
40.5.2.31	Fiscal Agent shall route appeals and all supporting documentation to the State Review Committee Work Queue for disposition.	Met by operational processes and procedures and through customization of interChange. EDS will route appeals and supporting documentation through the integrated K2 workflow engine within interChange. This integrated workflow process will provide the State Review Committee Work Queue with the appeals and available supporting documentation for appropriate disposition.
40.5.2.32	Fiscal Agent shall update Provider data with the completed dates and disposition of appeal information.	Met by interChange and operational processes and procedures. EDS will update provider data with the completed dates and disposition of appeal information on the interChange Web panels for provider data.

Provider Communications Requirements

The following table, EDS Response to Provider Communications Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Provider Communications Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.33	Fiscal Agent shall staff a separate Provider communications business function area to include toll-free telephone lines that are staffed from 8 A.M. to 5:00 P.M. Eastern Time Monday through Friday, except for State-approved holidays.	Met by interChange and operational processes and procedures. EDS will provide a provider communications business function area that will include toll-free telephone lines providing access to staff members from 8 a.m. to 5 p.m. Easter Time Monday through Friday, except for State-approved holidays. The staff members will use the features provided by the Replacement MMIS—interChange, Documentum, CTMS, AVRS—to provide support to the provider community.
40.5.2.34	Fiscal Agent shall respond to all verbal provider inquiries immediately. If an immediate response is not possible, then a written or verbal response shall be provided within two (2) business days.	Met by interChange and operational processes and procedures. EDS will respond to verbal provider inquiries immediately on receipt through the AVRS or Avaya system. If an immediate response is not possible, a written, e-mail, fax, or letter or verbal response will be provided within two business days.
40.5.2.35	Fiscal Agent shall track and report on all State-referred or provider-initiated calls and/or complaints.	Met through customization of interChange. Using the CTMS in interChange, EDS will track and report on State-referred or provider-initiated calls or complaints.
40.5.2.36	Fiscal Agent shall respond in writing to written provider inquiries within five (5) business days of the date of receipt.	Met by interChange and operational processes and procedures. EDS will respond in writing to written provider inquiries within five business days.
40.5.2.37	Fiscal Agent shall refer questions regarding eligibility and program benefits to the State.	Met by operational processes and procedures. EDS will refer questions regarding eligibility and program benefits to the State.
40.5.2.38	Fiscal Agent shall refer questions regarding rates and budgets to the State.	Met by operational processes and procedures. EDS will refer questions regarding rates and budgets to the State.
40.5.2.39	Fiscal Agent shall respond to all other provider inquiries as referred by the State.	Met by operational processes and procedures. The EDS Provider Services team will respond to other provider inquiries as referred by the State.
40.5.2.40	Fiscal Agent shall track and trend the number and nature of inquiries or complaints and status of resolution, referring clarification of policy issues to the State.	Met through customization of interChange. Using the CTMS in interChange, EDS will track and report the number and nature of inquiries or complaints and status of resolution, referring clarification of policy issues to the State on State-referred or provider-initiated calls or complaints.
40.5.2.41	Fiscal Agent shall coordinate and conduct all training for new and ongoing State and Fiscal Agent employees on	Met by operational processes and procedures. The EDS Training team will coordinate and conduct training for new

RFP No.	RFP Requirement	EDS Response
	Fiscal Agent MM IS procedures.	and ongoing State and fiscal agent employees on fiscal agent MMIS procedures.

Provider Publications Requirements

The following table, EDS Response to Provider Publications Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Provider Publications Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.42	Fiscal Agent shall prepare and post provider publications and instructions online.	Met by interChange and operational processes and procedures. EDS will prepare and post provider publications and instructions on the Replacement MMIS Provider Web Portal, allowing providers direct access through the Internet any time to this information.
40.5.2.43	Fiscal Agent shall publish approved bulletins via e-mail and Web.	Met by interChange and operational processes and procedures. EDS will publish approved bulletins to the Replacement MMIS Provider Web Portal and e-mail as needed.
40.5.2.44	Fiscal Agent shall provide the State with current update of MMIS-related forms to be accessible via the State's Web site.	Met by operational processes and procedures. EDS will provide the State with current updates of MMIS-related forms to be accessible through the State's Web site.
40.5.2.45	Fiscal Agent shall use the workflow management tools to publish drafts and receive approvals of all provider publications, e.g., bulletins, training materials, standard letters, etc.	Met through customization of interChange. EDS will use the workflow management tools to publish drafts and receive approvals of provider publications and make them available in electronic format on iTRACE and the Documentum solution.

Provider Training Requirements

The following table, EDS Response to Provider Training Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Provider Training Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.46	Fiscal Agent shall present mock training sessions to the State for approval prior to conducting provider training workshops.	Met by operational processes and procedures. Provider training workshops are key to the successful transition and continuation of the State's healthcare programs. The State and EDS will prepare and conduct mock training sessions—with State approval—before conducting the actual provider training workshops.

RFP No.	RFP Requirement	EDS Response
40.5.2.47	Fiscal Agent shall determine topics for workshops by assessing and targeting provider types with special need.	Met by operational processes and procedures. EDS' provider representative staff members will assess and provide feedback from on-site visits focused on particular providers and their special needs. Additionally, EDS' Training team will review provider inquiry information in CTMS to determine topics for workshops.
40.5.2.48	Fiscal Agent shall track and report on provider requested visits.	Met by interChange and operational processes and procedures. EDS provider representatives will be required to log and document visit information into CTMS.
40.5.2.49	Fiscal Agent shall implement annual marketing plans for electronic commerce options.	Met by interChange and operational processes and procedures. EDS EDI staff members will work with the State, the approved electronic commerce vendors, and the approved electronic commerce options to publish on the Replacement MMIS Web portal the electronic commerce options available to the provider community.
40.5.2.50	Fiscal Agent shall conduct provider workshops at State-approved locations.	Met by operational processes and procedures. EDS training staff members, provider representative staff members, and the workshop coordinator will work with the State agency's provider department staff members to conduct provider workshops at State-approved locations.
40.5.2.51	Fiscal Agent shall assist the State with annual meetings of billing providers.	Met by operational processes and procedures. EDS will provide provider representative staff assistance to the State with annual meetings of billing providers.
40.5.2.52	Fiscal Agent shall assist the State with quarterly training conferences.	Met by operational processes and procedures. EDS will provide provider representative staff and training staff assistance to the State with quarterly training conferences.
40.5.2.53	Fiscal Agent shall distribute on-site training evaluation questionnaires for providers to complete.	Met by operational processes and procedures. EDS provider representative staff members will distribute on-site training evaluation questionnaires for providers to evaluate the effectiveness of the on-site training.
40.5.2.54	Fiscal Agent shall analyze completed evaluation questionnaires and provide the State with a compiled summary report within five (5) business days from the training seminar date.	Met by operational processes and procedures. EDS provider representative staff members will analyze completed evaluation questionnaires and provide the State with a compiled summary report within five business days from the training seminar date.
40.5.2.55	Fiscal Agent shall maintain and submit to the State lists of provider training session participants.	Met by operational processes and procedures. EDS will maintain and submit to the State lists of provider training session participants.
40.5.2.56	Fiscal Agent shall prepare State-approved online provider enrollment and billing instructions, ensuring the inclusion of all revisions and policy-related communications, such as special bulletins and/or newsletters, in the format and number specified by the State.	Met by interChange and operational processes and procedures. EDS provider enrollment staff members will work with the State and prepare online provider enrollment and billing instructions, including revisions and policy-related communications, and obtain approval before posting

RFP No.	RFP Requirement	EDS Response
		to the Replacement MMIS Provider Web Portal.
40.5.2.57	Fiscal Agent shall ensure the accuracy and consistency of initial and ongoing updated State-approved tutorials.	Met by operational processes and procedures. The EDS Training team will be responsible for verifying the accuracy and consistency of initial and ongoing updated State-approved tutorials.
40.5.2.58	Fiscal Agent shall ensure that whenever changes are made that affect the information available on the tutorials that State-approved changes are made as a part of the CSR change documentation, provider publication/ALERT, or as directed by the State.	Met by operational processes and procedures. The EDS Training and Systems teams will work with the State to verify and incorporate required, State-approved changes to tutorials.
40.5.2.59	Fiscal Agent shall maintain State-approved instructional materials for viewing and retrieval.	Met by interChange and operational processes and procedures. EDS will maintain State-approved instructional materials for viewing and retrieval through the Replacement MMIS Provider Web Portal. State staff members also will have access to this information in iTRACE.
40.5.2.60	Fiscal Agent shall provide training workshop materials and evaluations imaged and electronically available with ninety-nine and nine tenths (99.9) percent accuracy.	Met by interChange and operational processes and procedures. EDS will provide training workshop materials to the providers through the Provider Web Portal. The State will have access to this information through iTRACE. Provider workshops evaluations will be imaged, indexed, and stored for electronic retrieval in Documentum with 99.9 percent accuracy.

Imaging Provider Communications Requirement

The following table, EDS Response to Imaging Provider Communications Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Imaging Provider Communications Requirement

RFP No.	RFP Requirement	EDS Response
40.5.2.61	Fiscal Agent shall image all provider written communications.	Met by interChange and operational processes and procedures. Required provider documents will be scanned, indexed, and stored for reference and retrieval as needed through the Documentum solution.

Imaging Provider On-Site Visit Materials and Evaluation Requirement

The following table, EDS Response to Imaging Provider On-Site Visit Materials and Evaluation Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Imaging Provider On-Site Visit Materials and Evaluation Requirement

RFP No.	RFP Requirement	EDS Response
40.5.2.62	Fiscal Agent shall perform imaging of all materials and the provider on-site evaluation applicable to a provider site visit, linking to the provider identification number for complete profile data retrieval.	Met by interChange and operational processes and procedures. Required provider documents will be scanned, stored, and indexed to allow ease of retrieval through the Documentum solution. Information discussed during on-site visits will be recorded in the CTMS panels within interChange and reference the documentation scanned and retained in Documentum.

Imaging Provider Training Workshop Materials and Provider Evaluation Forms Requirements

The following table, EDS Response to Imaging Provider Training Workshop Materials and Provider Evaluation Forms Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Imaging Provider Training Workshop Materials and Provider Evaluation Forms Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.63	Fiscal Agent shall perform imaging of all Provider Training Workshop materials and Provider Training Evaluations, linking to the provider identification number for complete profile data retrieval.	Met by interChange, through COTS integration, and through operational processes and procedures. The required provider documents will be scanned, stored, and indexed to allow ease of retrieval through the Documentum solution. Information discussed during on-site visits will be recorded in the CTMS Web panels within interChange and reference the documentation scanned and retained in Documentum.
40.5.2.64	Fiscal Agent shall provide training to State staff in the use of the Customer Call Center System, initially and on an ongoing basis.	Met by operational processes and procedures. The Replacement MMIS call center will be supported through the AVRS and CTMS. EDS will provide required training to State staff members initially and ongoing in the use of the CTMS and AVRS.
40.5.2.65	Fiscal Agent shall provide all Customer Service Call Center reports according to State specification.	Met through configuration of interChange parameters and features. EDS will provide customer service call center reports according to State specification.
40.5.2.66	Fiscal Agent shall maintain up-to-date complete system and user documentation.	Met by interChange and operational processes and procedures. EDS will maintain updated complete system and user documentation that will be available to the State through iTRACE.
40.5.2.67	Fiscal Agent shall develop workflow processes for customer service support activities.	Met by interChange and operational processes and procedures. EDS will develop required processes around the

RFP No.	RFP Requirement	EDS Response
		customer service support activities using required logging and documenting by the EDS provider and recipient call center staff members within the CTMS module.

E-Mail Communications Requirement

The following table, EDS Response to E-Mail Communications Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to E-Mail Communications Requirement

RFP No.	RFP Requirement	EDS Response
40.5.2.68	Fiscal Agent shall produce listserv lists that are updated as appropriate to new enrollments, disenrollments, and provider change requests for individual or mass communications based on State protocols and approval for types of communications.	Met by operational processes and procedures and through COTS integration. With the COTS L-Soft Listserv tool, EDS Provider Enrollment will initiate and maintain e-mail listservs based on provider enrollments, disenrollments, and change requests for individual or mass communications based on State protocols and approval for types of communications.

Recording/Tracking Provider/Recipient Verbal Communications Requirements

The following table, EDS Response to Recording/Tracking Provider/Recipient Verbal Communications Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Recording/Tracking Provider/Recipient Verbal Communications Requirements

RFP No.	RFP Requirement	EDS Response
40.5.2.69	Fiscal Agent shall ensure recording and tracking verbal communications with provider and recipients are available for use between the hours of 7:00 A.M. to 11:00 P.M. Eastern Time Monday through Friday and from 7:00 A.M. to 6:00 P.M. Saturday and Sunday.	Met by interChange and operational processes and procedures. AVRS and CTMS will be the primary systems used during the EDS call center operational hours of 7 a.m. to 11 p.m. Eastern Time Monday through Friday and from 7 a.m. to 6 p.m. Saturday and Sunday. AVRS will provide the ability to record calls, and the EDS call center supervisors, such as Tomeka Evans, will listen in and monitor quality of calls during operations. We will use CTMS for documenting call requests or inquiries and the responses provided by EDS call center staff members.
40.5.2.70	Fiscal Agent shall perform daily system checks to ensure that the recording/tracking business area is functioning	Met by interChange and operational processes and procedures. The EDS Provider and Recipient Management

RFP No.	RFP Requirement	EDS Response
	as designed and provides system logging of check date, time, operator, comments, and reporting as directed by the State.	team, manager Chris Ferrell, and supervisors such as Tomeka Evans will set up appropriate processes and procedures for call center staff members to follow. The EDS Provider and Recipient Management team, using CTMS reporting, will monitor, document, and report to the State on call center activities by staff person and for the department.
40.5.2.71	Fiscal Agent shall provide State-approved instructional materials and secure, browser-based, Web-enabled tutorial for use of the Recording/Tracking Provider/Recipient Communications function/query tool.	Met through customization of interChange and the Learning Management System (LMS). EDS' trainers and instructional design specialists will work with the State to develop and provide State-approved instructional materials and secure, browser-based, Web-enabled tutorials. These tutorials will be available to the providers through the Provider Web Portal.
40.5.2.72	Fiscal Agent shall provide appropriate staff to monitor and support the continuous availability of the recording/tracking query tool.	Met by operational processes and procedures. The EDS Systems team, led by Tim Sullivan, will monitor and maintain interChange and the supporting EDS provider and recipient call center systems—AVRS, CTMS, and Documentum—and verify the availability of these required tools during the required operational hours.

40.5.3 Provider Operational Performance Standards

This section notes the standards and points of delivery with training, approval times, log information, and areas of access for information delivery.

Response to Provider Operational Performance Standards

The following table, Provider Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Provider Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.5.3.1	Fiscal Agent shall log and image all hard copy provider applications received within one (1) State business day of	Met by interChange and operational processes and procedures. Required documents will be scanned, indexed, logged, and stored within one State business day of receipt

RFP No.	RFP Requirement	Metrics for Measurement
	receipt.	for review, reference, and retrieval as needed through the Documentum solution.
40.5.3.2	Fiscal Agent shall initiate credentialing and source verification to ensure participation guidelines are met on all completed applications within three (3) business days.	Met by interChange and operational processes and procedures. EDS Provider Enrollment staff members will initiate credentialing and source verification through the interChange provider enrollment workflow process on completed applications within three business days.
40.5.3.3	Fiscal Agent shall complete and approve all providers for participation who have no negative responses to credentialing requirements within two (2) State business days of receipt of all data necessary to adjudicate the application.	Met by interChange and operational processes and procedures. EDS Provider Enrollment staff members will complete enrollments through the interChange provider enrollment workflow process and update the provider enrollment Web panels with appropriate provider data reflecting approval for participation in State programs. This provider enrollment process will be completed within two State business days of receipt of needed data if no negative responses are received for that application.
40.5.3.4	Fiscal Agent shall send approval letters and other State-required information within one (1) State business day of provider participation approval.	Met by interChange and operational processes and procedures. EDS will send approval letters and other State-required information within one business day of application approval. The letter generator will automatically generate an enrollment approval letter on the activation of an enrollment.
40.5.3.5	Fiscal Agent shall send denial letters and other State-required information within one (1) State business day of provider participation denial.	Met by interChange and operational processes and procedures. EDS will send denial letters and other State-required information within one State business day of provider participation denial. The letter generator will automatically create an enrollment denial letter after the decision to deny an enrollment.
40.5.3.6	Fiscal Agent shall initiate Urgent Reviews within one (1) State business day of receipt of any adverse provider information.	Met by interChange and operational processes and procedures. EDS Provider Enrollment staff members will initiate urgent reviews through the interChange provider enrollment workflow process within one State business day of receipt of any adverse provider information.
40.5.3.7	Fiscal Agent shall acknowledge receipt of provider appeal requests within one (1) State business day of receipt.	Met by interChange and operational processes and procedures. The EDS Provider Enrollment team will acknowledge receipt of provider appeal requests within one State business day of receipt through e-mail, fax, or letter notification.
40.5.3.8	Fiscal Agent shall ensure that all appeals are adjudicated within thirty (30) calendar days of receipt unless permission for delay is received from the State.	Met by operational processes and procedures. The EDS Provider Enrollment team will track, monitor, and verify that appeals are adjudicated within 30 calendar days of receipt unless permission for delay is received from the State.
40.5.3.9	Fiscal Agent shall provide the State with an extract of the MMIS Provider tables each business night.	Met through customization of interChange. EDS will provide the State with an extract of the MMIS provider tables each

RFP No.	RFP Requirement	Metrics for Measurement
		business night.
40.5.3.10	Fiscal Agent shall support online real-time access between EIS, Mental Health Eligibility Inquiry, Medicaid Quality Control, Online Verification, ACTS, and HIS and the Replacement MMIS using API and SOA concepts, from 7:00 A.M. until 7:00 P.M. Eastern Time Monday through Friday, including non-State business days when EIS is available for online processing, and from 10:00 A.M. to 5:00 P.M. Eastern Time on weekends when EIS is available for online processing.	Met through customization of interChange. EDS will support online real-time access between EIS, Mental Health Eligibility Inquiry, Medicaid Quality Control, Online Verification, ACTS, and HIS and the Replacement MMIS. Our eligibility interChange Web panels will support this request and align with use of API and SOA concepts. Access will be provided from 7 a.m. until 7 p.m. Eastern Time Monday through Friday—including non-State business days when EIS is available for online processing—and from 10 a.m. to 5 p.m. Eastern Time on weekends when EIS is available for online processing.
40.5.3.11	Fiscal Agent shall provide online real-time access to provider data for State-designated staff using API and SOA concepts between EIS and the Replacement MMIS 7:00 A.M. until 8:00 p.m. Eastern Time Monday through Friday, including non-State business days when EIS is available for online processing, and from 10:00 A.M. to 5:00 P.M. Eastern Time on weekends and when EIS is available for online processing.	Met by interChange. EDS will provide online real-time access for State-designated staff using interChange provider Web panels that align with API and SOA concepts between EIS and the Replacement MMIS from 7 a.m. until 8 p.m. Eastern Time Monday through Friday—including non-State business days when EIS is available for online processing—and from 10 a.m. to 5 p.m. Eastern Time on weekends and when EIS is available for online processing.
40.5.3.12	Fiscal Agent shall provide batch access to provider data using API and SOA concepts between EIS and the Replacement MMIS from 5:30 P.M. Eastern Time Monday through Friday until batch processing is completed.	Met through customization of interChange. EDS will provide data integration batch access to provider data using API and SOA concepts between EIS and the Replacement MMIS from 5:30 p.m. Eastern Time Monday through Friday until batch processing is completed.
40.5.3.13	Fiscal Agent shall provide online real-time access to Provider data for State-designated staff using API and SOA concepts between EIS and the Replacement MMIS.	Met by interChange. EDS will provide online real-time access for State-designated staff using interChange provider Web panels that align with API and SOA concepts between EIS and the Replacement MMIS.
40.5.3.14	Fiscal Agent shall provide initial and ongoing updated e-mail listservs based on initial and ongoing provider enrollments, disenrollments, and change requests the same day the transaction occurs ninety-nine and nine tenths (99.9) percent of the time.	Met by operational processes and procedures and through COTS integration. With the COTS L-Soft Listserv tool, the EDS Provider Enrollment team will initiate and maintain e-mail listservs based on provider enrollments, disenrollments, and change requests the same day the transaction occurs 99.9 percent of the time.
40.5.3.15	Fiscal Agent shall provide initial and ongoing capability for recording and tracking communications with providers and recipients during State business days between the hours of 7:00 A.M. to 11:00 P.M. Eastern Time Monday through Friday and from 7:00 A.M. to 6:00 P.M. Saturday and Sunday ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. AVRS and CTMS will be the primary systems used during the EDS call center operational hours of 7 a.m. to 11 p.m. Eastern Time Monday through Friday and from 7 a.m. to 6 p.m. Saturday and Sunday. AVRS will record calls and the EDS Call Center supervisors, such as Tomeka Evans, will listen and monitor quality of calls during operations. CTMS will be used for documenting call requests or inquiries and the responses provided by EDS call center staff.

RFP No.	RFP Requirement	Metrics for Measurement
40.5.3.16	Fiscal Agent shall provide monthly system check logs in the content, frequency, format, and media as directed by the State.	Met by interChange. The interChange user interface provides online access to audit trails for updates applied to the provider data.
40.5.3.17	Fiscal Agent shall produce State-approved initial and ongoing updates to training materials and secure, browser-based, Web-enabled tutorials in the content, frequency, format, and all media as directed by the State.	Met through customization of interChange and the LMS. EDS' trainers and instructional design specialists will work with the State to develop and provide State-approved instructional materials and secure, browser-based, Web-enabled tutorials. These tutorials will be available to the providers through the Provider Web Portal.

40.6.2 Reference Operational Requirements

Reference operational requirements will be carried out by the Claims Operations Organization under the leadership of Tammy Wheeler. Tammy and her team bring a high level of expertise and experience in reference operations to the program. The team members have more than 25 years of relevant healthcare and Medicaid experience, which underscores their understanding of successful reference operations implementation.

Timely, comprehensive, and accurate maintenance of reference data is crucial to effective, efficient, and quality healthcare program management. To help the State achieve these objectives, our Replacement MMIS will accomplish the following:

- Offer a system that gives authorized users the ability to make changes to reference data—such as audit limitations, prior approval, or rate modifications—through online browser page updates rather than submitting change requests to a programmer or analyst
- Provide the flexibility to support more than 15 distinct methods of claims processing for multi-payer purposes
- Allow users to display and review the reference file maintenance history through the audit trail feature

While the Operations team is charged with maintaining efficiency and quality in making these updates, they are supported by the robust interChange technology in the benefit plan and edit/audit maintenance pages found within the application. We describe these features in proposal sections 40.6.1 Reference System Requirements and 40.8.1 Claims Processing System Requirements. With these capabilities, the team can focus on accuracy and effectiveness.

We will maintain accurate reference data, making sure that the correct information is used in claims adjudication by monitoring claims processing activities and providing the State with an analysis of the impact. We will research clinical policy-related issues using claims history, online reference and eligibility resources, policy documentation, and medical standards of practice.

The Replacement MMIS will provide update capabilities to reference data by using secure browser page access, which will facilitate a fast and flexible way for users to perform individual inquiries or modifications of reference file data. Authorized users can navigate the pages with quick and easy point-and-click access and open multiple browser sessions to view several pages simultaneously.

We will perform online and mass updates to the reference files as specified by the State. To efficiently apply updates to the data sets used in the reference function, the Replacement MMIS will accept online and electronic or tape file updates to each code set record, with the capability to make changes to

individual records or mass changes to groups or classes of records. Specific Web pages will be used to specify the attributes of a benefit plan, including program codes, claim type editing, dependent programs, and mutually exclusive benefit plan criteria. The Replacement MMIS will maintain ICD-10-CM and PCS codes when implemented.

We will provide the required reports and reference file listings to the State. The Replacement MMIS reference data maintenance function will produce numerous reports to assist in the analysis effort and in overall management of program operations. The system will offer flexible, on-demand desktop inquiry and reporting through easy-to-use parameters and browser pages. Inquiry results will be presented immediately in formatted display browser pages, where the user can print or view reference data.

This approach will greatly reduce delays in receiving updated reports. Additionally, the electronic format of the reports will allow users to search for critical information, print the data, and export the data to a spreadsheet application for review. Reports that can be produced to assist State staff members in analyzing and implementing automated batch reference updates include the following:

- **Annual HCPCS Update—Added Modifier Codes for Century/Year (CCYY)—**Displays modifiers to be added beginning in the upcoming year according to the information received on the CMS annual HCPCS update
- **Annual HCPCS Update—Added Procedure Codes for CCYY—**Displays procedure codes to be added beginning in the upcoming year according to the information received on the CMS annual HCPCS update
- **HCPCS Update Annual HCPCS Update—Deleted Procedure Codes for CCYY—**Displays procedure codes to be deleted beginning in the upcoming year according to the information received on the CMS annual HCPCS update
- **Annual HCPCS Update—Error Report for CCYY—**Lists errors generated during the annual HCPCS update process
- **Annual HCPCS Update—Summary Report for CCYY—**Summarizes changes applied during the annual HCPCS update process
- **Annual ICD-9 Diagnosis and Procedure Code Updates—**Lists ICD-9-CM diagnosis and procedure codes added and description changes from the annual update of the ICD-9-CM file
- **Procedure to Audit Cross-Reference Report—**Contains a listing of the procedure codes linked to audits, and for each procedure code on the report, includes the audits that use the procedure code
- **Revenue Code to Audit Cross-Reference Report—**Contains a listing of the revenue codes linked to audits by revenue code

- **Weekly Drug Update Error Listing—**Lists the error transactions identified during the weekly drug update process
- **Weekly Drug Update Summary—**Shows totals for errors, records read, added, updated, and changed during the weekly automated update or during manual updates

The Operations team can use the document management system and iTRACE for many of the tracking and process flow document requirements necessary to maintain accurate and timely operations for activities that occur or are audited outside the interChange browser pages.

Response to Reference Operational Requirements

The following table, EDS Response to Reference Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, or processes that meet the stated requirements.

EDS Response to Reference Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.6.2.1	Fiscal Agent shall log receipt date of each Reference File maintenance request, file maintenance initiation completion date, operator completing request, and supervisor validation date.	Met by interChange and operational processes and procedures. We will maintain a record of the receipt date of each reference file maintenance request, file maintenance initiation completion date, staff member completing the request, and the supervisor validation date. File maintenance requests will be stored in the document management system for search and retrieval. The document management system can play a key role in maintaining a communication trail of these requests and their stage in the process.
40.6.2.2	Fiscal Agent shall notify the State in writing when a file maintenance request has not been made in accordance with the State Memo and/or as applicable to the contractual performance criteria.	Met by operational processes and procedures. EDS reference procedures will provide for notifying the State in writing when a file maintenance request has not been made in accordance with the State Memo and/or as applicable to the contractual performance criteria.
40.6.2.3	Fiscal Agent shall maintain procedure code updates and applicable editing data as directed by the State or upon receipt of all pertinent information requested from the State; produce before and after images; and return them to the originator of the State request.	Met by interChange and operational processes and procedures. EDS will maintain procedure code updates and applicable editing data as directed by the State or upon receipt of all pertinent information requested from the State. Additionally, we will produce before and after images of procedure code updates and return them to the originator of the State request. The information also will be available through an online report.
40.6.2.4	Fiscal Agent shall retain MMIS Reference data change	Met by operational processes and procedures. We will retain

RFP No.	RFP Requirement	EDS Response
	requests received from the State in the format received for control, balance, and audit purposes for the life of the Fiscal Agent Contract.	MMIS reference data change request in the same format received from the State for the life of the contract.
40.6.2.5	Fiscal Agent shall verify the accuracy of all file maintenance activities; produce weekly reports that summarize, by operator, file maintenance activities, including timeliness of updates and operator accuracy; reports shall be made available to the Contract Monitoring Unit by 7:00 A.M. Eastern Time each Monday following the update activity.	Met by interChange and operational processes and procedures. EDS understands the importance of accurate reference data for claims processing and reporting. We will implement procedures to verify the accuracy of all file maintenance activities and produce weekly reports to the Contract Monitoring Unit by 7:00 a.m. Eastern each Monday following the update activity.
40.6.2.6	Fiscal Agent shall perform research and analysis for adjudication and policy issues.	Met by operational processes and procedures. EDS will research and analyze adjudication and policy issues and report findings and corrective actions to the State. The necessary and skilled staff resides in the Claims Operations unit and can be supported with our Medical Policy Review team and reference analysts.
40.6.2.7	Fiscal Agent shall analyze the appropriateness of the cross-reference of new CPT codes and ICD-9/ICD-10 codes to MMIS edits and audits and make recommendations to the State for incorporation of the codes into the established edit criteria or for additional edits/audits as appropriate.	Met by operational processes and procedures. EDS clinical staff is familiar and experienced in cross-referencing new CPT codes and ICD-9/ICD-10 codes to MMIS edits and audits. We will continue to provide experienced staff members who will perform this function and make recommendations to the State for incorporation of the codes into the established edit criteria or for additional edits/audits as appropriate.
40.6.2.8	Fiscal Agent shall update edit criteria and all applicable documentation and notify the State when updates occur.	Met by interChange and operational processes and procedures. EDS will update edit criteria and all applicable documentation and notify the State when updates occur.
40.6.2.9	Fiscal Agent shall provide PAL tiers information for provider inquiries.	Met by interChange and operational processes and procedures. The PAL indicator will be listed on the drug file or on a file where the PAL tier can be retrieved easily for provider inquiries.
40.6.2.10	Fiscal Agent shall notify providers of DESI drug denials of payment through the Pharmacy Newsletter or other State-approved medium for communication.	Met by operational processes and procedures. EDS will notify providers of DESI drug denial of payment through the Pharmacy Newsletter or other State-approved medium of communication.

40.6.3 Reference Operational Performance Standards

We recognize the unique challenges in implementing a Replacement MMIS and understand the State's expectations for timely, accurate reference data maintenance.

Our team will apply updates to the reference files promptly after the update processing for batch submissions, and real-time for online submissions. We will work with State staff members to determine which data elements will be updated. After the data elements have been identified, authorized users will perform the updates. Each time an authorized user makes an update to the reference data, a record will be inserted into the audit trail showing the user ID of the person who made the change, the date and time of the change, and the result of the change. The audit trail will maintain an accurate record of entries into the reference function. Reference file changes will be documented. Our comprehensive documentation will record changes and any quality checks performed on the updated record.

The Replacement MMIS will accept online and batch updates to reference files. Authorized users with the appropriate security profile will perform updates in a real-time environment using browser pages. Online updates and manually entered updates to individual reference data will be achieved by using the online update and add menus of the appropriate maintenance page. To preserve the data integrity, online deletions of the reference files will not be allowed. Procedure and diagnosis codes, pricing data, and other date-sensitive data will be end-dated, not deleted. End dating allows the data history to remain in the database indefinitely for claims processing and can be viewable online for research.

Batch updates are appropriate when significant amounts of data must be updated. To accomplish batch updates, our technical staff members will obtain the data to be loaded, and subject-matter experts (SMEs) will develop update processes that input the new data to the appropriate tables. Our SMEs for the data affected by the batch update will assist technical staff members in performing the batch updates. The ability to maintain the reference files through batch or online updates is essential to the accurate application of State policy to claims processing.

Outside the quarterly or yearly update process, the State may approve manual updates for any reference file, including procedure, drug, diagnosis-related group (DRG), diagnosis, provider, pricing, claim exception criteria, utilization review medical criteria, third-party criteria, and edit disposition files. The State will provide us with written direction when additions or changes are needed to the reference files. This documentation will be reviewed to determine needed clarifications related to system features, program understanding, provider or client impact, and any potential impact on claims processing. Clarifications will be obtained by contact with the appropriate State staff member, as well as functional units that may be impacted by the change.

When we are confident that questions have been resolved, the Replacement MMIS will be updated in accordance with the direction from the State. If the clarifications resulted in a change to the criteria noted in the written document, a new document will be received from the State or the modifications will be noted on the original document for historical purposes.

Quality will be a constant theme. Simple changes, such as procedure codes or rate updates, will be sight-verified when entered through the browser page. A second person will verify these changes against audit trail reports. More extensive changes, such as claim exceptions or creating a new provider type, will be thoroughly tested. The test results will be reviewed with the State and approval obtained before implementation of the change. After implementation of the change, the changes are sight-verified by the analyst who entered the change. Additionally, the data is verified against the audit trail reports by a second person. The policy is not considered to be completely implemented until the system, user, and provider documentation have been completed and verified. When complete, the State will be notified in writing and new versions of the appropriate manuals will be provided. Our State staff members and other functional units also will be notified of the change, with appropriate instructions given for resolution of claims processing issues.

Response to Reference Operational Performance Standards

The following table, Reference Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Reference Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.6.3.1	Fiscal Agent shall initiate all Reference File maintenance requests within one (1) State business day of receipt of a request and complete such maintenance according to State-defined timeframe: • Online updates within two (2) State business days of receipt • Mass adjustments within two (2) claims cycles • Other within timeframe, as directed by the State.	Met by interChange and operational processes and procedures. We will initiate maintenance requests within one State business day of receipt and complete the requested maintenance according to the State-defined time frames, namely the following: • Online updates within two State business days of receipt • Mass adjustments within two claims cycles • Other within time frame, as directed by the State
40.6.3.2	Fiscal Agent shall apply Reference File updates (mass updates and subscription service updates) to the Replacement MMIS according to State-defined schedule.	Met by interChange and operational processes and procedures. We will work with the State to define the time frame for production releases of mass adjustments and updates.
40.6.3.3	Fiscal Agent shall notify the State in writing when a file maintenance request has not been completed, as directed by the State.	Met by operational processes and procedures. The File Maintenance team will design processes and procedures that will facilitate the completion of file maintenance

RFP No.	RFP Requirement	Metrics for Measurement
		requests as directed by the State. EDS will notify the State in writing when a file maintenance request has not been completed as directed by the State.
40.6.3.4	Fiscal Agent shall produce before and after images and return them to the originator of the State Memo the same day the change is made.	Met by interChange and operational processes and procedures. We will print before and after images and return them to the originator of the State Memo the same day the change is made. Additionally, these images will be available through online reporting.
40.6.3.5	Fiscal Agent shall verify the accuracy of all file maintenance activities, producing weekly reports for the Contract Monitoring Unit by 7:00 A.M. Eastern Time each State business Monday.	Met by interChange and operational processes and procedures. The File Maintenance team will develop processes and procedures to verify the accuracy of all file maintenance activities and produce weekly reports and submit them to the Contract Monitoring Unit by 7:00 a.m. Eastern each State business Monday.

40.7.2 Prior Approval Operational Requirements

Our work in this area falls under the Prior Approval Operations organization, led by Prior Approval Manager Sharlene Bryant. Sharlene has successfully led PA operations for the State since 2006. Her experience also includes 10 years of North Carolina Medicaid work, five years with DMH, and eight years working for Federal Health Care.

Making sure North Carolina recipients receive timely authorizations for services while allowing the State to control expenditures are the hallmarks of a successful prior approval (PA) process. Timely, accurate adjudications of PAs require the following:

- Clinical expertise
- Strong understanding of State policy
- Technical infrastructure to support the adjudication process

Through our 30 years of experience with the North Carolina Medicaid Program, we have a broad insight and a strong understanding of State policies. The clinical expertise and our technical infrastructure solution enable our team to focus on the decision, not the paperwork. We are committed to providing enhancements in the technical infrastructure to reduce paper, eliminate unnecessary manual intervention, and decrease current adjudication times.

Our Replacement MMIS will provide the following capabilities in support of PA:

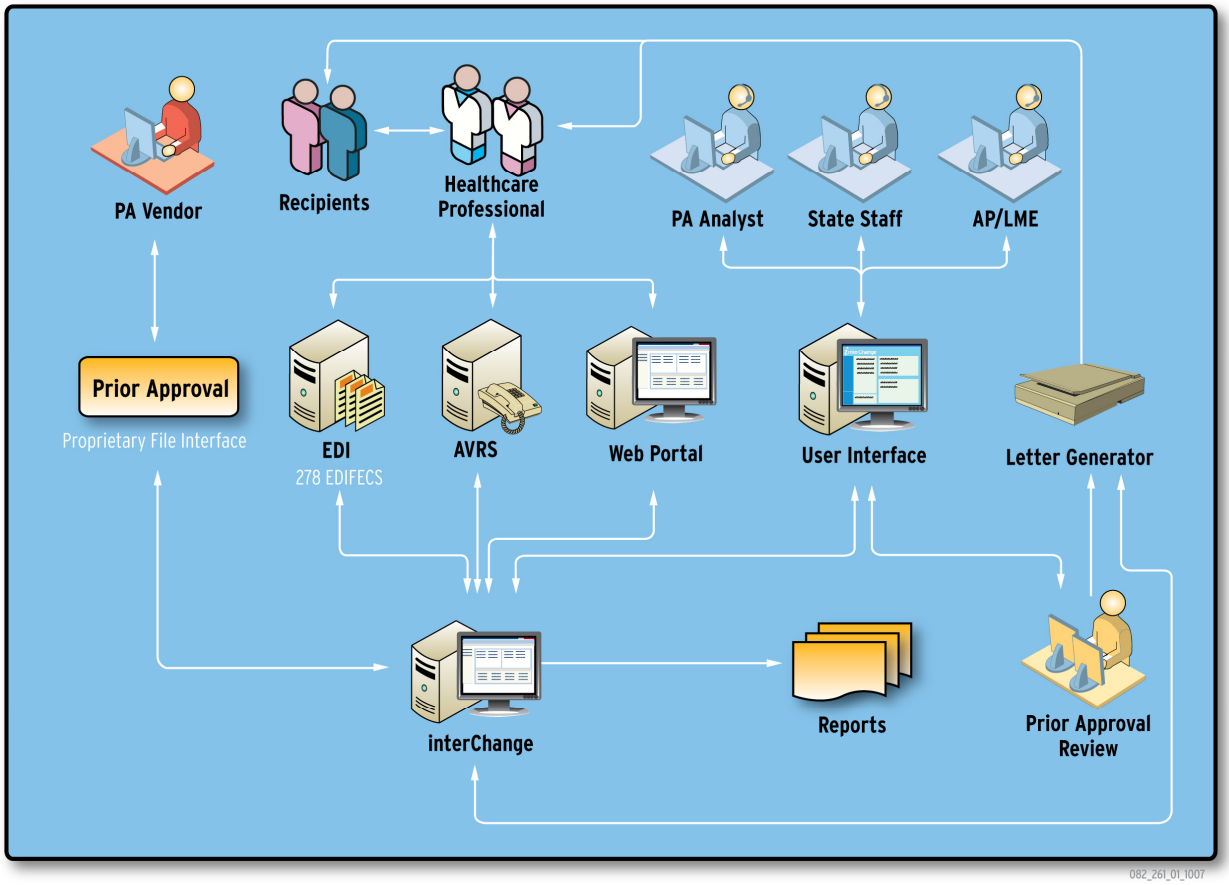
- Validated recipient eligibility, provider eligibility, and service coverage to process the PA request based on predefined rules
- System-generated PA records for pharmacy-related claims that meet customized rules related to the recipient; claims history, including pharmacy, medical, and institutional data; and even prescribing provider taxonomy information
- Web-based access for providers to initiate and inquire on PA request decision status, as well as the authorized and remaining units or dollar amounts
- Role-based security access that gives authorized users the appropriate security levels for their job functions, ranging from basic inquiry to complete service authorization entry, update, and approval capabilities
- Online information necessary to analyze, review, and make determinations on PA requests, as well as easy maintenance of the services requiring PA
- System-generated provider and recipient notification letters that users can initiate using point-and-click technology on the Prior Approval page

- Multiple sources for entering transactions for PA processing, including paper, fax, Web portal, automated voice response system (AVRS), and standard HIPAA-compliant transactions

The Replacement MMIS will enable users to initiate and inquire on PAs through many authorized sources, including EDI, Web Portal, local PA analysts, external PA vendors, telephone, fax, and mail.

The following exhibit, Prior Approval Flow, shows the number of ways a PA request can be received and how they are processed.

Prior Approval Flow



PA requests are subject to the same business rules, no matter how they are received.

We recognize the importance of having qualified, trained professionals available to assist in resolving PA issues as quickly and efficiently as possible. Therefore, the PA help desk will be staffed with highly trained personnel to respond to the PA requests and inquiries. Pharmacy technicians will be available to assist with pharmacy PAs and inquiries. These individuals will have immediate access to a pharmacist if they need to escalate an issue.

Nurses will be available to respond to out-of-state, surgery, or durable medical equipment PAs and inquiries. If medical consultation is needed, the medical

director will be available for consultation. Additionally, optical technicians will be available to respond to optical/vision PAs and inquiries. To handle dental and orthodontic PAs and inquiries, we will work with dental hygienists and orthodontists to verify that the appropriate services are authorized and inquiries from provider and recipients are handled quickly and accurately. A dental director is available for consultation when necessary.

The following table, PA Key Professionals and Responsibilities, highlights some of our staff's areas of work.

PA Key Professionals and Responsibilities

Professional	Responsibilities
Medical director	• Using State policy guidelines, assesses claims for approval or denial of PA requests for covered surgical procedures • Educates North Carolina provider community on how to best serve the needs of their patients
Dental director	• Using State policy guidelines, assesses Medicaid claims for approval or denial of PA requests for dental and orthodontic surgeries and procedures • Completes consultation review sheet on orthodontic cases to provide feedback to the North Carolina provider community regarding the oral health of their patients
Physical therapist	• Using State policy guidelines, assesses claims for approval or denial of PA requests by evaluating diagnosis, prognosis, and planned intervention for children who are experiencing functional limitations or disability due to trauma, a disorder, or disease process for pediatric mobility equipment
Nurse staff	• Reviews Certificate of Medical Necessity (CMN) forms along with State policy guidelines to determine the medical necessity for durable medical equipment (DME) • Reviews and prices equipment repairs that are required for recipients
Dental hygienists	• Using State policy guidelines, assesses claims for approval or denial of PA requests for dental procedures • Reviews the current request to compare its procedure codes and tooth numbers with other dental PA segments on file
Optical/hearing aid analysts	• Using State policy guidelines, assesses claims for approval or denial of PA requests for visual and hearing aids • Submits visual aid orders to contractor (Nash Optical)

Within the Replacement MMIS, each payer group will maintain its unique approach to PA. In some programs, PA is relied on heavily as a means to control costs. Other programs rely on back-end auditing to validate program compliance and subject few services to PA. The Replacement MMIS will allow users to denote by specific payer group which services require PA for a given plan.

After a payer group has established its specific PA requirements, the Replacement MMIS will recognize this limitation during processing and will not pay claims without the presence of an approved PA for the service.

PA determinations will be made case by case, using one of the following outcomes:

- **Approved—**Used when the service is approved exactly as requested
- **Modified—**Used when the number of units, dollars, or time frame requested is authorized at a decreased level
- **Denied—**Used when all of a requested service is denied
- **Pended—**Used when information is insufficient for making a determination or when another request appears in the system for the same service

Affect on Claims Processing

The Replacement MMIS will allow authorized staff to determine the conditions under which a service must have a PA before it will pay. These services can be defined either through the use of benefit program administration (BPA) rules for individual services or through the use of audits for program limits, step therapy, or service contra-indication. Through the use of PA, providers can bypass the specific edits or audits that would otherwise prevent payment for services provided. The provider does not need to supply the PA number on the claim during submission. The Replacement MMIS will use appropriate matching logic based on provider, recipient, service date, and services authorized to determine if there is a valid PA on file. Assuming there is a match, the system will bypass that edit or audit.

If the claim remains in a payable condition, the PA will be associated with that specific claim and the number of allowed units or dollars will be compared to the billed units or dollars. If the remaining PA units or dollars are less than the billed amount, the system will either cut back the units or dollars with an appropriate explanation of benefits (EOB) or deny the service. This choice is configured by selecting a check box at the individual edit or audit level.

DUR+

The Replacement MMIS PA system will provide support to automatically generate pharmacy-related PAs in situations that meet State-defined criteria. The need for physician- or pharmacist-initiated pharmacy-related PA requests will be vastly reduced through the use of the EDS DUR+ PA capability, which automatically reviews the recipient, existing PA history, medical and pharmaceutical history, and State-configurable business rules to determine if a PA can be automatically generated from a pharmacy claim in process based on State rules.

The Replacement MMIS will provide the framework to support these objectives through efficient operation and maintenance of a secure system that provides current status, service limit, and PA information to the State and the recipient and provider communities.

Retro-DUR

Through our collaboration with the industry-leading subcontractor Health Information Designs (HID), we will provide Retro-DUR reporting to meet the needs of the State and support safe and effective selection and use of prescription drug products for recipients. HID's flexible reporting tool, RxExplorer, provides ad hoc reporting capabilities with a comprehensive and integrated view of the State healthcare programs. These reports will enable the State to analyze clinical components and costs and utilization of pharmacy benefits.

The Replacement MMIS' Retro-DUR function integrates smoothly and efficiently with the DUR+ function. Information from the Retro-DUR function also contributes direct resources to the DUR categories and issues that have potential to yield the greatest therapeutic and economic benefit to the State.

The Replacement MMIS' Retro-DUR processing cycle will regularly produce extractable ad hoc, standard DUR, and user-defined detail and summary-level pharmacy reports. These Retro-DUR reports will be available through convenient browser-based pages, requiring minimal user intervention to get the information specified by input parameters.

Response to Prior Approval Operational Requirements

The following tables map the detailed solutions to the operational requirements of the prior approval functional area. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

General Prior Approval Operational Requirements

The following table, EDS Response to General Prior Approval Operational Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Prior Approval Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.7.2.1	Fiscal Agent shall record telephone pharmacy prior approval requests in the same format as the pharmacy paper/facsimile hard copy version.	Met by interChange and operational processes and procedures. Our customer service center staff will manually record telephone pharmacy calls in the Contact Tracking Management System (CTMS). If necessary, the pharmacy PA

RFP No.	RFP Requirement	EDS Response
		staff will enter the PA request into the PA panels for the review and decision process. Online audit trails capture changes made to PA data records by user ID, date, and time stamp for future research and reference.
40.7.2.2	Fiscal Agent shall enter each prior approval request online to include the following: receipt date of each prior approval request made to the Fiscal Agent, denial code, decision date, and mailing date of decision.	Met by interChange and operational processes and procedures. The PA panels support entry of receipt date, the date keyed, the review date, the date mailed, the date an update was received, and the date the update was reviewed, as well as any decisions, reasons, and status.
40.7.2.3	Fiscal Agent shall adjudicate prior approvals and mail system-generated disposition letters.	Met by interChange and operational processes and procedures. We will review PA requests and make determinations using State criteria. The DOC1 letter generator tool triggers PA notices to be produced based on a number of conditions, including approved, denied, reduced, or pended PA requests. These letters include standard and free-form text and incorporate variables, such as provider, recipient, or referring provider information, directly from the PA request. These letters are stored in the document management system for future review as necessary.
40.7.2.4	Fiscal Agent shall receive and determine resolution (e.g. approval, denial, or pending) of prior approval and override requests, including retroactive requests based on State-approved medical criteria and medical judgment.	Met by interChange and operational processes and procedures. Our PA staff will receive PA requests and make the appropriate determination. We will review retroactive requests and enter the decision based on State-approved medical criteria and medical judgment.
40.7.2.5	Fiscal Agent shall notify the State via a quarterly report of the number of prior approval requests received, number entered into the system within one (1) State business day, and the number entered into the system after more than one (1) State business day.	Met by interChange and operational processes and procedures. We will develop a standard report that can be run quarterly to identify the number of PA requests received, the number entered into the system within one State business day, and the number entered into the system after more than one State business day.
40.7.2.6	Fiscal Agent shall provide a weekly batch processing report that indicates the date and time the file was received, date and time processed, number of transactions received, number of transactions processed, number of transactions updated, and number of transactions errored, listing each error transaction and error reason.	Met by interChange. EDS will create this report through the EDI process and the use of EDIFECS software reporting. Reported information will include the date and time the file was received, date and time processed, number of transactions received, number of transactions processed, and number of transactions updated, listing each error transaction and error reason.
40.7.2.7	Fiscal Agent shall notify the State monthly when it takes more than one (1) business day from receipt to process and render a decision on a non-emergency prior approval and override request that does not require additional research or additional information.	Met by interChange and operational processes and procedures. interChange supports real-time PA adjudication and notification. The COTS InRule rules engine and K2 workflow engine provide the necessary tools to receive and render a decision on non-emergency PAs and override requests in a timely fashion.

RFP No.	RFP Requirement	EDS Response
40.7.2.8	Fiscal Agent shall notify the State monthly when it takes more than one (1) business day from receipt of all required information to process and render a decision on a non-emergency prior approval and override request that required additional information or research.	Met by interChange and operational processes and procedures. The system supports real-time PA adjudication and notification. The COTS InRule rules engine and K2 workflow engine provide the necessary tools to receive and render a decision on non-emergency PAs and override requests in a timely fashion.
40.7.2.9	Fiscal Agent shall notify the State when it takes more than five (5) business days to process, render a decision, and mail a status report on a prior approval request for retrospective and therapeutic days.	Met by interChange and operational processes and procedures. interChange supports real-time PA adjudication and notification. The COTS InRule rules engine and K2 workflow engine provide the necessary tools to receive and render a decision on retrospective and therapeutic leave days in a timely fashion.
40.7.2.10	Fiscal Agent shall provide the capability for authorized services to be flagged for pre-payment review.	Met by interChange and operational processes and procedures. We will flag and suspend State-authorized service claims for prepayment review process flow.
40.7.2.11	Fiscal Agent shall represent the State throughout the hearing/appeals process for all prior approval decisions made by the Fiscal Agent. Fiscal Agent shall attend Office of Administrative Hearings Representation and must include the Fiscal Agent staff that rendered the final decision of denial.	Met by operational processes and procedures. EDS will provide the appropriate personnel, such as the medical director, to represent the State throughout the hearing/appeals process for the PA decisions made by the EDS staff. The EDS staff who rendered the final decision of denial will participate in the Office of Administrative Hearings Representation.
40.7.2.12	Fiscal Agent shall perform long-term care facility on-site visits with or without State staff as requested for specific provider problems.	Met by operational processes and procedures. A provider services representative will perform on-site visits when requested or deemed necessary.
40.7.2.13	Fiscal Agent shall evaluate and determine prior approval adjudication for: • Eye exams or refraction • Visual aids • Hearing aids, accessories, ear molds, FM systems, repairs • Dental and orthodontics • Hyperbaric oxygenation therapy • Blepharoplasty/blepharoptosis eyelid repair • Panniculectomy • Breast surgery • Clinical severe obesity surgery • Lingual frenulum surgery • Stereotactic pallidotomy • Electrical osteogenic stimulators	Met by interChange and operational processes and procedures. EDS professional staff members are responsible for assessing Medicaid claims for approval or denial of services using State policy guidelines. The EDS professional staff includes the following: • Medical director • Dental director • Physical therapist • Nurses • Dental hygienists • Optical/hearing aid analysts

RFP No.	RFP Requirement	EDS Response
	• Keloids • Craniofacial/facial surgeries • Out-of-state ambulance • Rhinoplasty • Chiropractic and podiatry • Durable medical equipment • Orthotics and prosthetics • Pharmacy • All services for DPH payment programs	
40.7.2.14	Fiscal Agent shall present prior approval, referral, and override information and provide education at provider workshops.	Met by operational processes and procedures. Our PA staff members will work with our Provider Services staff to prepare provider education material related to PA, and the Provider Services staff member will conduct provider education and workshops. As appropriate, PA staff will accompany Provider Services staff to provider workshops.
40.7.2.15	Fiscal Agent shall respond to and resolve all phone inquiries/questions from recipients, providers, Office of Citizen Services, and manufacturers pertaining to pharmacy drug-related issues and concerns.	Met by interChange and operational processes and procedures. Pharmacy drug-related telephone inquiries will be received by the call center and routed to the Pharmacy team as appropriate. Our pharmacy tech staff will respond to inquiries requiring a greater level of pharmacy knowledge. If necessary, they will elevate to our pharmacist for final resolution.
40.7.2.16	Fiscal Agent shall ensure that the Pharmacy Prior Approval Customer Service Center is available from 7:00 A.M. until 11:00 P.M. Eastern Time on State business days Monday through Friday, and from 7:00 A.M. until 6:00 P.M. Eastern Time on Saturday and Sunday.	Met by interChange and operational processes and procedures. We will staff the Pharmacy PA Customer Service Call Center as required in the RFP. Calls will initially be received by the call center and routed to the designated service representative for PA, referral, and override requests.
40.7.2.17	Fiscal Agent shall ensure that the non-pharmacy Customer Service Center is available for prior approval, referral and override requests from 7:00 A.M. until 7:00 P.M. Eastern Time Monday through Friday and from 8:00 A.M. until 5:00 P.M. Eastern Time on Saturday	Met by operational processes and procedures. We will staff the non-pharmacy PA Customer Service Call Center to meet the State's specified hours of operation. Calls will initially be received by the call center and routed to the designated service representative for PA, referral, and override requests.
40.7.2.18	Fiscal Agent shall ensure that adequate prior approval staff, including a clinical pharmacist, is on-site during all hours of call center operation (including evenings and weekends).	Met by operational processes and procedures. Our PA staff, including a clinical pharmacist, will be on-site during call center operation hours. Calls will initially be received by the Customer Service Call Center and routed to the designated service representative.
40.7.2.19	Fiscal Agent shall locate a Prior Approval Customer Service Center within the State-approved Fiscal Agent's	Met by operational processes and procedures. EDS will continue to staff a PA customer service center at our local

RFP No.	RFP Requirement	EDS Response
	local facility unless otherwise approved by the State.	facility.
40.7.2.20	Fiscal Agent shall provide capability to receive prior approval requests for stem cell and bone marrow transplants. If all clinical information is included in the request, then the Fiscal Agent forwards the request to the DMA Hospital Consultant for review. If all clinical information is not included in the request, the Fiscal Agent must contact the requesting provider for additional clinical information before forwarding the request to the DMA Hospital Consultant for review.	Met by operational processes and procedures. On receipt of a stem cell or bone marrow transplant request, our staff will review the documentation to verify complete content. If complete State-determined clinical information is included in the request, we will forward the request to the DMA Hospital Consultant for review. If all clinical information is not included in the request, we will contact the requesting provider for additional clinical information before forwarding the request to the DMA Hospital Consultant for review.
40.7.2.21	Fiscal Agent shall provide training for Prior Approval Vendors and State staff.	Met by operational processes and procedures. Our Provider Services staff will provide PA training to PA vendors and State staff identified during the DDI Phase of the contract.
40.7.2.22	Fiscal Agent shall ensure verification of recipient eligibility, provider program participation, and third party coverage during adjudication of prior approvals.	Met by interChange and operational processes and procedures. We will use automated tools such as InRule to verify business rules and compliance checks needed for authorization and adjudication of PA requests.
40.7.2.23	Fiscal Agent shall ensure automated prior approval adjudication is not available when TPL coverage exists for recipient. Manual review and verification of coverage must be conducted to determine prior approval authorization.	Met through customization of interChange. Automated PA processes are extended to review TPL coverage for the recipient in question. Based on the existence of TPL coverage, the PA request will not auto-adjudicate but will be forced into a manual review.
40.7.2.24	Fiscal Agent shall provide for toll-free telephone and fax number access for providers to request prior approvals, referrals, and overrides	Met by operational processes and procedures. Our Customer Service Call Center will provide toll-free telephone and fax number access for providers to request PAs, referrals, and overrides.

Pharmacy Benefits Management Requirements

Pharmacy Director Sharon Greeson will oversee all pharmacy benefit operations, including the pharmacist, pharmacy technicians, drug rebate staff, and PA call center. Sharon has successfully performed this role for the State since 1997 and has more than 23 years of experience in pharmacy, with the last 11 years specifically involved in Medicaid with oversight of POS and batch claims processing, drug rebate, the PAL list, and the pharmacy staff. She has been instrumental in successfully implementing many pharmacy changes and improvements, such as rebate collections on single source J codes, Medicare part B and D cost avoidance, Family Planning Waiver, and third-party cost avoidance, just to name a few.

The following table, Pharmacy Benefits Key Professionals and Responsibilities, highlights some of our staff's areas of work.

Pharmacy Benefits Key Professionals and Responsibilities

Professional	Responsibilities
Pharmacy Director	• Oversees all pharmacy and drug rebate staff • Makes sure staff has a sufficient level of training to meet and exceed the State's expectations • Oversees POS system, drug file vendor and Retro-DUR vendor • Attends meetings as required by the State to discuss POS edits, audits, and functionality • Attends meetings with the State's Community Care Program to prevent duplication of effort • Assists drug rebate staff in resolution efforts
Pharmacist Consultant	• Makes sure the Pro-DUR and Retro-DUR programs are operating effectively and efficiently • Attends monthly meetings to review Pro-DUR alerts and discuss aberrant drug patterns • Prepares DUR annual report • Represents EDS for the PA appeals process • Reviews and notifies DMA weekly of new drugs with recommendations for PA, PDL, step therapy, and the PAL • Reviews and maintains Medicare Part D—excluded drug list
Pharmacy technician	• Responds to telephone inquiries from recipients, providers, and the Office of Citizen Services when they need more specific assistance than the regular call center can handle • Responds to calls and inquiries from pharmaceutical manufacturers • Reviews all manual pharmacy and compound claims • Oversees monthly pharmacy newsletter • Makes sure the Web site is kept current with the State maximum allowable cost (SMAC) list, DERP reports, PAL tiers, and DESI drugs • Attends meetings and prepares minutes

The following table, EDS Response to Pharmacy Benefits Management Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Pharmacy Benefits Management Requirements

RFP No.	RFP Requirement	EDS Response
40.7.2.25	Fiscal Agent shall prepare the CMS Annual Report that includes all information, charts, and statistics relating/pertaining to the Prospective and Retrospective DUR Programs in the format and media as directed by the State.	Met by interChange and operational processes and procedures. We will prepare the DUR program—related CMS annual report in the format and media directed by the State.
40.7.2.26	Fiscal Agent shall coordinate with the DUR Contractor to assure functionality of the Pharmacy Point-of-Sale	Met by operational processes and procedures. The Pharmacy team will meet with the DUR contractor monthly to discuss

RFP No.	RFP Requirement	EDS Response
	Business Area, including adding edits, PRO-DUR informational alerts and intervention, conflict, and outcome codes (NCPDP 5.1 standards) and shall assist DUR Vendor with the Retrospective DUR Program.	Pro-DUR activity, intervention, conflict, and outcome codes and new edits that may be needed in the POS system. The Retro-DUR program also will be discussed for potential ideas or assistance.
40.7.2.27	Fiscal Agent shall provide for updating clinical data, dosing limits to DUR alerts, changes in GCN, GCN-Sequence, weekly DUR file updates, and State-selected FDB data elements.	Met by interChange and operational processes and procedures. The EDS pharmacy staff will update or coordinate the updates with the selected drug file vendor. Updates by the EDS staff will be done through the Replacement MMIS panels by authorized users and reviewed for accuracy as necessary. Updates completed by the vendor will be directly fed to the Replacement MMIS through the weekly drug file process/upload. The DUR updates will be done only as directed by the State.
40.7.2.28	Fiscal Agent shall prepare monthly Pharmacy Newsletter for State approval and distribute as directed by the State.	Met by operational processes and procedures. The Pharmacy team will write and collect relevant articles for the pharmacy newsletter. These articles will include information regarding system changes, changes in policy, changes in drug rebate labelers, and relevant articles addressed to providers. The pharmacy newsletter will be produced monthly and distribute as directed.
40.7.2.29	Fiscal Agent shall ensure daily supervisor signoffs of each Pharmacy Prior Approval Service Representative work queue transferring any prior approvals to the next shift's work queue to ensure performance standards are met.	Met by operational processes and procedures. Our operational procedures will require supervisor signoff for pharmacy work queue during shift transfer to make sure performance standards are met.
40.7.2.30	Fiscal Agent shall coordinate with the State's Drug Utilization Review Vendor or the State to ensure appropriate Pharmacy POS alerts for potential drug therapy problems are identified; shall meet each month; and shall prepare meeting minutes.	Met by operational processes and procedures. The Pharmacy team will meet with the DUR vendor monthly to discuss POS Pro-DUR alerts and discuss potential drug therapy problems identified due to these alerts, intervention, conflict, and outcome codes and new edits that may be needed in the POS system. Monthly meetings will be held to discuss these patterns, and meeting minutes will be provided.
40.7.2.31	Fiscal Agent shall post on the IC Web site the EBM updates to PAL clinical pearls.	Met by interChange and operational processes and procedures. The Pharmacy team will post the evidence-based medicine (EBM) updates to Prescription Advantage List (PAL) clinical pearls to the pharmacy Web site as approved by the State.
40.7.2.32	Fiscal Agent shall maintain the Prior Approval IC Web site that will contain the State Maximum Allowable Cost (SMAC) list and linkage to the Drug Effective Review Process (DERP) reports.	Met by interChange and operational processes and procedures. We will update the SMAC list on the Web site on receipt from the vendor. The link to the DERP reports will be maintained.
40.7.2.33	Fiscal Agent shall notify DMA weekly of new drugs with recommended criteria/protocol that become available in the marketplace that are in the same classes as those	Met by operational processes and procedures. A clinical pharmacist will review new drugs as they become available in the marketplace and will make recommendations for the

RFP No.	RFP Requirement	EDS Response
	drugs included in the Prior Approval drug list and PAL.	PA drug list and PAL.
40.7.2.34	Fiscal Agent shall develop criteria-driven recommendations for each new drug within an existing Prior Approval therapeutic class category.	Met by operational processes and procedures. The Clinical team will evaluate new drugs within an existing PA class and will develop criteria-driven recommendations.
40.7.2.35	Fiscal Agent shall coordinate with the State's Retrospective DUR Vendor or the State to capture claim data specific to aberrant drug patterns; shall meet each month; and shall prepare meeting minutes.	Met by interChange and operational processes and procedures. We will work with HID or the State to capture claim data specific to aberrant drug patterns. Monthly meetings will be held to discuss these patterns, and meeting minutes will be provided.
40.7.2.36	Fiscal Agent shall coordinate with the State's Community Care Program to prevent duplication or fragmentation of effort related to pharmacy benefit coverage; shall meet each month; and shall prepare meeting minutes.	Met by operational processes and procedures. We will document efforts involving changes to the pharmacy benefit. Monthly meetings will be held to discuss these efforts to confirm that duplication or fragmentation of effort is not occurring. Meeting minutes will be provided.
40.7.2.37	Fiscal Agent shall adjudicate provider appeals.	Met by interChange and operational processes and procedures. We will use the PA Administrative Review panel, which maintains the administrative review date received and date mailed. The Appeal panel holds the date received, appeal date, mail date, and dismiss date.
40.7.2.38	Fiscal Agent shall prepare monthly Pharmacy Bulletin/Newsletter information for State approval in format, content, and media as directed by the State, including the production, updating of preferred drug lists, prior approvals and lists, and other informational materials for prescribers.	Met by operational processes and procedures. Bulletin articles regarding policy changes, updates of preferred drug lists, PAs updates, and other related pharmacy benefit information will be consolidated into a monthly pharmacy bulletin or newsletter in a State-approved format.
40.7.2.39	Fiscal Agent shall provide for dispensing and reimbursement of a seventy-two-hour (72-hour) supply of prior approval drug in emergency situations.	Met by interChange and operational processes and procedures. The interChange PA system provides for handling this emergency situation.
40.7.2.40	Fiscal Agent shall identify pharmacy provider training issues related to prior approvals and shall address at workshops	Met by interChange and operational processes and procedures. The Pharmacy team will log issues related to questions received on the PA complaints and issues related to potential training issues to assist in the process. We will communicate these to the team that conducts the provider training workshops.
40.7.2.41	Fiscal Agent shall make recommendations to the State on drugs for a preferred drug list and drugs for which prior approval and/or step therapy protocols would be appropriate. The list shall be based on utilization patterns and shall take into consideration clinical value, recipient and provider disruption, and cost savings.	Met by operational processes and procedures. Our Pharmacy team will review the State's preferred drug list (PDL) for potential additions. We also will recommend step therapy in situations that may warrant a first line drug before an expensive second line is used.
40.7.2.42	Fiscal Agent shall add the new drug(s) to their respective therapeutic Prior Approval categories and to add new Prior Approval categories after final approval and	Met by interChange and operational processes and procedures. After a new drug class is added to the PA list or a drug is added to an existing category, the Pharmacy team

RFP No.	RFP Requirement	EDS Response
	notification from DMA; updates must be included on IC Web site within forty-eight (48) hours of notification.	will update the Pharmacy PA Web site within 48 hours of DMA notification.

40.7.3 Prior Approval Operational Performance Standards

We have established our PA quality plan to set performance standards that are in sync with quality measures, put checkpoints in place to monitor compliance, and implement corrective measures when required.

We will perform quality checks to verify that the process, activities, standards, procedures, and the outcomes are giving the best level of service to the State, the provider and recipient communities, and our business partners. We accomplish this by examining output and work products of employees, monitoring telephone and written correspondence, and reviewing processes and results to maintain timely, complete, meaningful, and accurate information.

Response to Prior Approval Operational Performance Standards

The following table, EDS Response to Prior Approval Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Prior Approval Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.7.3.1	Fiscal Agent shall update the Prior Approval business area with all prior approval results received from other entities within twenty-four (24) hours of receipt from each entity, except Fridays, when the updates shall be available by 7:00 A.M. Eastern Time on the following Monday.	Met by interChange and operational processes and procedures. We will configure the BizTalk 2006 data integration server and software to incorporate specific required business rules to support timely updates to PA business areas in accordance with the State's requirements.
40.7.3.2	Fiscal Agent shall render a decision for non-pharmacy prior approval within one (1) State business days of the receipt of all of the required information or research for non-emergency prior approval requests.	Met by interChange and operational processes and procedures. The real-time PA adjudication of interChange supports punctual decision-making after receipt of required information or research.

RFP No.	RFP Requirement	Metrics for Measurement
40.7.3.3	Fiscal Agent shall generate and mail prior approval decisions to appropriate designees within two (2) State business days of rendering a decision.	Met by interChange and operational processes and procedures. The letter generator triggers PA notices to appropriate designees. Letters are mailed within one business day of rendering a decision.
40.7.3.4	Fiscal Agent shall apply the State Prior Approval Policy with ninety-nine and nine-tenths (99.9) percent accuracy rate based on the information available when rendering a prior approval decision.	Met by interChange and operational processes and procedures. We will apply State Prior Approval Policy to the system logic and manual quality control reviews to meet the State-required 99.9 percent accuracy rate.
40.7.3.5	Fiscal Agent shall provide online inquiry and data entry to the Prior Approval data to providers, Fiscal Agent staff, and State-designated staff from 6:00 A.M. until 11:00 P.M. Eastern Time Monday through Friday and 7:00 A.M. to 7:00 P.M. on Saturday and Sunday ninety-nine and nine-tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. The interChange Web-based system for inquiry and data entry to the PA data will be available to providers, fiscal agent staff, and State-designated staff from 6:00 a.m to 11:00 p.m. Eastern Monday through Friday and 7:00 a.m. to 7:00 p.m. on Saturday and Sunday 99.9 percent of the time, except during scheduled system downtime.
40.7.3.6**	Fiscal Agent shall provide online inquiry and data entry to the Prior Approval data to AP/LME staff and State-designated staff from 7:00 A.M. until 7:00 P.M. Eastern Time Monday through Friday ninety-nine and nine-tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. The interChange Web-based system for inquiry and data entry to PA data will be available to AP/LME staff and State-designated staff from 7:00 a.m. to 7:00 p.m. Eastern Monday through Friday 99.9 percent of the time, except during scheduled system downtime.
40.7.3.7	Fiscal Agent shall provide online Prior Approval for Pharmacy Prior Approval from 7:00 A.M. to 11:00 P.M. Eastern Time Monday through Friday and 7:00 A.M. to 6:00 P.M. Eastern Time Saturday and Sunday ninety-nine and nine-tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. The interChange Web-based system for pharmacy PA will be available from 7:00 a.m. to 11:00 p.m. Eastern Monday through Friday and 7:00 a.m. to 6:00 p.m. Eastern Saturday and Sunday 99.9 percent of the time, except during scheduled system downtime.
40.7.3.8	Fiscal Agent shall produce system-generated letters to recipients and providers of the status of prior approval requests within twenty-four (24) hours from the time of receipt.	Met by interChange and operational processes and procedures. The letter generator triggers PA status letters to recipients and providers. Letters will be mailed within one business day of rendering a decision.
40.7.3.9	Fiscal Agent shall produce weekly Pharmacy Alerts.	Met by interChange and operational processes and procedures. EDS will produce weekly pharmacy alerts as required to the pharmacy providers identified as such within interChange. These alerts will be distributed by listserv or e-mail and posted to the interChange Web portal for easy online reference by the pharmacy providers.
40.7.3.10	Fiscal Agent shall adjudicate each complete pharmacy prior approval request within one (1) State business day of receipt.	Met by interChange and operational processes and procedures. The real-time PA adjudication of interChange supports punctual decision-making and processing within one business day of receipt.
40.7.3.11	Fiscal Agent shall meet monthly with DUR, the State and/or Retrospective DUR vendors and Community Care Program and include minutes in bi-weekly Project Status	Met by operational processes and procedures. We will meet monthly with DUR, the State, and/or Retro-DUR vendors and Community Care Program and include minutes in the

RFP No.	RFP Requirement	Metrics for Measurement
	Report.	biweekly Project Status Report as directed by the State.
40.7.3.12	Fiscal Agent shall adjudicate provider pharmacy prior approval request appeals within one (1) State business days of receipt.	Met by interChange and operational processes and procedures. The real-time PA adjudication of interChange supports punctual decision-making and processing within one business day of receipt.
40.7.3.13	Fiscal Agent shall respond to a requesting provider within one (1) hour for a telephone request for an emergency override.	Met by interChange and operational processes and procedures. Our Customer Service Center will respond to provider telephone requests for an emergency override within one hour.

40.8.2 Claims Processing Operational Requirements

Claims operational requirements will be carried out by the Claims Operations Organization under the leadership of Tammy Wheeler. Tammy and her team of nurses, analysts, and clerks bring a high level of expertise and experience in claims operations to the program with experienced mail room, electronic claims, and claims and adjustment staff. Tammy has more than 25 years of relevant healthcare and Medicaid experience, which underscores her understanding of successful claims implementation and operations.

We understand the importance of executing an efficient claims and encounters business process function in accordance with the policies, procedures, and benefit and budget limitations established by the State. Our Replacement MMIS claims processing business solution, in conjunction with our operational team and processes, will provide for the capture, control, editing, and auditing of multi-payer claims and encounters from the time of initial receipt through final disposition.

The objectives of the Replacement MMIS claims processing operational functions include the following:

- Mail preparation and postage handling
- Electronic, paper, and adjustment claim acquisition and control
- Accurate and timely claims, encounters, and adjustments processing through final adjudication

Our team, led by Tammy Wheeler, will work efficiently and collaboratively with the State to meet the objectives of the claims business process function.

Mail Preparation and Postage Handling

Our mail room will be responsible for handling incoming and outgoing mail. The EDS courier will pick up and deliver mail to and from the United States Post Office each State business day. The courier also will pick up and deliver mail to the State offices twice each business day and on request. The mail will be handled following HIPAA requirements to comply with protected health information (PHI) and security requirements. Mail delivered to the EDS facility will be processed by the mail room for proper distribution.

The control of incoming mail is handled by experienced, well-trained mail room staff to make sure documents are controlled and routed appropriately. Electronic media, such as CDs, are routed to the EDS Electronic Data Interchange (EDI) team for appropriate handling and processing. Paper claims and adjustments, along with corresponding attachments, are sorted, prescreened, and batched for processing as described in the following Claims Acquisition and Control subsection. Additionally, nonclaim documents such as prior approval requests, provider enrollment requests, and provider written correspondence, will be

controlled, sorted, prescreened, scanned, and indexed before the distribution, handling, and processing of these types of documents.

EDS' mail room staff members also control the outgoing mail processing. Correspondence to providers or recipients, such as Return to Provider (RTP) letters, Recipient Explanations of Medicaid Benefits (REOMBs), Certificates of Creditable Coverage (COCCs), and others, will be processed for postage and delivery according to State requirements.

Claims Acquisition and Control

The Replacement MMIS will accept claims through a variety of media, including Web submission, HIPAA-compliant electronic transactions, and entry of paper claims. Our business solution encompasses the capture and control of claims, encounters, and supporting attachments. A unique transaction control number will be assigned to each claim and encounter, enabling tracking from receipt to final disposition.

We have selected SunGard FormWorks software for image and data capture of paper claims. FormWorks offers state-of-the-art technology that uses a high-volume capture, workflow, and hard disk storage and retrieval system. This solution allows us to capture the data fields necessary to process a claim and provide a high degree of data entry accuracy. The imaged claim, adjustment, and encounter documents will be retained in the Electronic Data Management System (EDMS) and will be readily available to EDS and State staff as required.

FormWorks will minimize the need for manual data entry through the use of optical character recognition (OCR) software, which will automatically read, identify, understand, and process the claim data contained on the forms. Claim data from the OCR software will be uploaded multiple times throughout each business day into the Replacement MMIS for processing. Claims that cannot be processed through the OCR mechanism will be keyed from image by experienced staff to provide for accurate capturing of the required data. Adjustments will be manually keyed from the image to capture into the Replacement MMIS for processing.

The Replacement MMIS will use proven processes that provide positive control of incoming claims, adjustments, and encounters. To efficiently process claims, encounters, and adjustment and monitor and track them through final adjudication, the system will assign each claim, encounter, and adjustment a unique internal control number (ICN) that includes the year and Julian date of receipt, batch number, and sequence of the claim, encounter, or adjustment, within the batch. The ICN will remain constant for the life of the claim. It will be assigned within one business workday of receipt on paper claims. On electronic claims, the ICN will be assigned the same day of receipt.

The Replacement MMIS will maintain a claim control and inventory system using a variety of tools, including operational processes and procedures,

electronic security authorizations, and detailed claims, adjustments, and encounters reports produced through the FormWorks OCR solution and interChange, allowing for strict control, balancing, and security of the Replacement MMIS. The EDS team will use the OCR solution and interChange report data to account for each claim, adjustment, and encounter batch and will balance and account for all claims, adjustments, and encounters from the start of processing through adjudication, including the update to the adjudicated claims history files.

If the claim, adjustment, or encounter fails any edit or audit, it will be routed to a specific system location for online review through interChange panels. Online reports also will be provided to reflect the tracking of the claim, adjustment, and encounter location as it moves through the system, indicating the date it entered a location and the date it exited that location. This online and reporting process within interChange establishes a complete audit trail for each claim, adjustment, and encounter.

The moment a claim, adjustment, or encounter transaction enters interChange, it can be tracked through each phase of processing. The status of each transaction may be viewed on claim pages, such as the Claim Inquiry page. This browser-based page will allow the user to view one claim or multiple claims through various selection options. Users also can access the online Transaction Register report, which will identify every claim processed in a daily adjudication cycle. The Transaction Register report will list each claim by the following:

- ICN
- Recipient ID number
- Provider ID number
- Provider category of service
- Transaction code
- Dates of service
- Payment amount

Resolution of Suspended Claims and Adjustments

Claims and adjustments failing edits and audits that are not set to systematically deny will suspend and route to the appropriate interChange claim or adjustment suspension locations. The EDS Claims Resolution team will manually review suspended claims and adjustments online through interChange panels and determine the most appropriate resolution action based on the applicable State policy. The Replacement MMIS will track this action, indicating the date the claim or adjustment entered the location, the edit or audit it failed, and the date it exited that suspension location. The system also will record the identification of the EDS claims resolution staff member who processed the claim or adjustment at each suspension location.

Claims and adjustment resolution in the Replacement MMIS will be a paperless process performed by browser access in real time. The EDS claims resolution staff members will have online access to the claims or adjustments data that was entered into the claims processing system and an image of the claim that was submitted for processing through the EDMS. The EDS analysts and nurses will have access with point-and-click navigation to various interChange pages, such as the recipient and provider pages, that may be needed to verify data on the claim and determine appropriate resolution.

The Replacement MMIS suspense scheduling function will allow authorized users to define how claims are routed for resolution. The system will maintain a complete audit trail of every claim and adjustment that is easily accessible by authorized users through the claims and adjustment browser-based pages.

Response to Claims Processing Operational Requirements

The following tables map the detailed solutions to the operational requirements of the claims processing functional area. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

General Responsibilities Requirements

The following table, EDS Response to General Responsibilities Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Responsibilities Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.1	Fiscal Agent shall perform all claims processing operations functions to support Claims Processing Business Area requirements specified in the Replacement MMIS and user documentation and operating procedures, including, but not limited to: • Pickup and delivery of mail • Sorting and screening of documents • Scanning and batching of documents • Batch control • Data entry • Pharmacy Point-of-Sale • Payer determination processing • Edit processing	Met by interChange and operational processes and procedures. The EDS Claims Operation team, led by Tammy Wheeler, will perform claims processing operations functions to support the claims processing business area requirements. Further details are included throughout this section.

RFP No.	RFP Requirement	EDS Response
	• Suspense resolution • Medical review • Claims pricing • Adjudication processing • Adjustment processing • Payment processing • Financial processing • Encounter processing	
40.8.2.2	Fiscal Agent shall maintain and update the current State-approved Medical Procedure Audit Policy (MPAP).	Met by operational processes and procedures. We will update the State-approved MPAP documentation as defined by the State throughout the life of the contract. iTRACE will provide online access to the resolution pages the EDS team of analysts and nurses will follow to adjudicate suspended claims. The resolution pages contain the criteria for posting the edit or audit written in nontechnical language, the associated service groups, the associated policies, the detailed step-by-step-instructions for manual review, a consolidated view of the associated disposition rows, and links to the associated RFP requirements, test cases, and associated change orders.
40.8.2.3	Fiscal Agent shall create test, process, and review claims in a duplicate region (test region) to assure that State-requested changes to the system adjudicate as anticipated and make changes or receive approval according to contractual agreements.	Met by interChange and operational processes and procedures. Prior to production implementation, the EDS Systems team, led by Tim Sullivan, will develop, test, and review claims to be processed in a test environment/region to confirm that State-requested changes meet State approval.

Mailroom Requirements

The following table, EDS Response to Mailroom Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Mailroom Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.4	Fiscal Agent shall prepare and process all incoming and outgoing mail.	Met by operational processes and procedures. EDS' experienced mail room staff will receive and prepare incoming mail to facilitate image capture and distribution as needed. We will prepare and handle outgoing mail as required and in accordance with U.S. postal guidelines.
40.8.2.5	Fiscal Agent shall pick up and deliver mail to the State	Met by operational processes and procedures. EDS staffing

RFP No.	RFP Requirement	EDS Response
	once in the morning, once in the afternoon of each State business day, and at the request of the State.	will include a courier for mail delivery and pickup twice each business day. Additional courier runs will be provided at the request of the State.
40.8.2.6	Fiscal Agent shall control hand-delivered mail at the Fiscal Agent's main entrance for security and management of routing to appropriate personnel or functional unit.	Met by operational processes and procedures. EDS staff will control hand-delivered mail received at our main entrance and will properly secure and distribute/route it to the appropriate personnel or EDS functional unit.
40.8.2.7	Fiscal Agent shall ensure no mail, claims, tapes, diskettes, cash, or checks are misplaced after receipt by the Fiscal Agent.	Met by operational processes and procedures. Mail is either picked up by EDS courier or hand-delivered to the EDS site. It is received in individual post office boxes to allow distribution to the appropriate unit with minimal handling. Checks and cash will be directed to a bank lock box to eliminate the receipt and handling of these items. The bank will provide a daily report and transfer of funds to the State. Any checks and cash received directly at the EDS facility will be immediately redirected to the EDS lock box for proper handling and accounting of monies. Copies of checks and the supporting documentation will be provided by the bank for scanning and retention of financial data as needed. Claims will be kept intact and prepared for scanning, where they will receive an ICN for tracking purposes. If any tapes and diskettes are received directly by EDS, we will establish a log and tracking process to secure the data through to submission in interChange.
40.8.2.8	Fiscal Agent shall ensure all mail is date-stamped with date of receipt and within one (1) business day of receipt.	Met by operational processes and procedures. Within one business day of receipt, EDS mail room staff will capture through the scanning/imaging process all mail and assign an internal control number (ICN). The ICN includes a Julian date, which will denote the process was completed within one business day of receipt.
40.8.2.9	Fiscal Agent shall maintain system logging for packages/envelopes mailed via USPS or any other mailing service.	Met by operational processes and procedures. Envelopes and packages mailed via USPS or any other mailing service will be logged through the mailing equipment accounting system, and the State will have available a daily report noting the total number of packages mailed daily.
40.8.2.10	Fiscal Agent shall prepare RTP letters, REOMBs, notice of service approval or denial, and appeal rights TPL letters, drug recovery invoices, estate letters, COCC, and small packages for First Class Mail delivery.	Met by operational processes and procedures. EDS will continue to prepare outgoing RTP letters, REOMBs, notice of service approval or denial, and appeal rights TPL letters, drug recovery invoices, estate letters, COCCs, and small packages for first-class mail delivery. EDS will use Pitney Bowes' presort capabilities to provide first-class mailing cost savings for mass mailing.
40.8.2.11	Fiscal Agent shall print and mail/deliver electronically Replacement MM IS State-approved forms.	Met by interChange and operational processes and procedures. EDS will make these forms readily available through the interChange Web portal. On request, EDS will

RFP No.	RFP Requirement	EDS Response
		print and mail State-approved paper forms.
40.8.2.12	Fiscal Agent shall log postage costs daily and report to the State a reconciliation of all postage costs to types of articles mailed and distributed	Met by operational processes and procedures. EDS mail room staff will generate a postage cost daily report to the State, which will reconcile all daily postage costs to the types of articles mailed and distributed.
40.8.2.13	Fiscal Agent shall prepare RAs for mailing and/or transmitting, EFTs for transmitting, and checks for release and mailing.	Met by interChange and operational processes and procedures. interChange will generate the RAs, EFTs, and checks for transmission or mailing as required. RAs will be provided electronically to the providers through the interChange Web portal and will only be accessible through a secure mailbox by authorized users.

Claims Acquisition Requirements

The following table, EDS Response to Claims Acquisition Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Claims Acquisition Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.14	Fiscal Agent shall scan hard copy claims and accompanying documentation.	Met by operational processes and procedures and through COTS integration. EDS mail room staff will facilitate the sorting, scanning, and indexing of hard-copy claims and accompanying documents. The documents will be scanned through the use of Kodak scanners and the SunGard FormWorks EDMS software.
40.8.2.15	Fiscal Agent shall pre-screen hard copy claims before entering claims into the system and return those not meeting certain criteria to providers under the RTP letter, indicating missing or incorrect information and log returned claims daily.	Met by operational processes and procedures and through COTS integration. Claims data is captured using SunGard FormWorks optical character recognition (OCR) technology. Claims missing or submitted with invalid data will be rejected through the OCR process. These claims will be returned to the provider by the EDS mail room with an RTP letter generated through the use of the DOC1 tool. EDS staff will generate a daily report listing claims returned to the provider.

Adjustments Requirements

The following table, EDS Response to Adjustments Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Adjustments Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.16	Fiscal Agent shall sort, log, and batch adjustment requests and supporting documentation.	Met by operational processes and procedures. EDS mail room staff will facilitate sorting, prepping, and logging through the batching process of hard-copy adjustments and accompanying documents.
40.8.2.17	Fiscal Agent shall assign adjustment internal control numbers that can associate back with the original claim or previous adjustment.	Met by interChange. Unique ICNs are assigned during the adjustment scanning process. The ICN identifies the Julian date of receipt, and the adjustment through reference claim data on the adjustments will be used in processing to link the submitted adjustment to a previously processed claim or adjustment.
40.8.2.18	Fiscal Agent shall return adjustment requests with RTP letter to provider, indicating missing or other required information needs.	Met by operational processes and procedures and through COTS integration. Adjustments identified during the entry process as missing and/or submitted with invalid data will be rejected from processing. These adjustments will be returned to the provider by the EDS mail room with a RTP letter generated through the use of the DOC1 letter generation tool.
40.8.2.19	Fiscal Agent shall scan adjustments and supporting documentation.	Met by operational processes and procedures and through COTS integration. EDS mail room staff will facilitate scanning and indexing of hard-copy adjustments and accompanying documents. The adjustment documents will be scanned through the use of Kodak scanners and the SunGard FormWorks EDMS software.
40.8.2.20	Fiscal Agent shall verify the quality and readability of scanned adjustment documents.	Met by operational processes and procedures. Adjustment documents are monitored and quality checked during the scanning process by the EDS mail room staff. Adjustments that do not meet scanning quality requirements will be returned to the provider for resubmission and/or rescanned if required.
40.8.2.21	Fiscal Agent shall reconcile all adjustments (hard copy) entered into the system to batch processing cycle input and output figures.	Met by interChange and operational processes and procedures. Inventory reporting tracks incoming and adjudicated adjustments. The EDS adjustment analyst will monitor the reports to confirm that input/output figures balance for each processing cycle.

Claims Entry Requirements

The following table, EDS Response to Claims Entry Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Claims Entry Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.22	Fiscal Agent shall perform data entry of all hard copy claims.	Met by operational processes and procedures and through COTS integration. We will facilitate the data entry of hard-copy claims using SunGard FormWorks OCR technology. The use of OCR technology will minimize the need for manual data entry by automatically reading, identifying, understanding, and processing the information contained on the claims forms. The OCR process also helps reduce the number of data entry errors and quickens the submission of the hard-copy claim data into the Replacement MMIS for processing.
40.8.2.23	Fiscal Agent shall determine if front-end denials are required (such as claims that do not have required sterilization forms or Medicare voucher attached for Medicaid Claims).	Met by operational processes and procedures and through COTS integration. The EDS Claims team will work with the FormWorks OCR technology to establish the required business rules for the claim data entry requirements. These OCR business rules will include the ability to identify front-end claim denials to be applied for claims that do not have required forms/vouchers during the claims capture process.
40.8.2.24	Fiscal Agent shall perform individual paper and electronic claim overrides on edits, such as presumptive eligibility, Medicare A, B, and C, HMO coverage, TPL, and timely filing limit	Met by interChange and operational processes and procedures. These paper or electronic claims reflecting override data elements will be suspended by the interChange business rules engine. The EDS Claims Resolution team will manually review and, as appropriate per the State edit resolution policy, apply the override to the edit and permit the claim to continue through the adjudication process.

Specific to Adjustments Requirement

The following table, EDS Response to Specific to Adjustments Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Specific to Adjustments Requirement

RFP No.	RFP Requirement	EDS Response
40.8.2.25	Fiscal Agent shall perform data entry of adjustments.	Met by interChange and operational processes and procedures. interChange has adjustment panels for data entry of adjustment requests. The EDS clerical staff will use the scanned documents and enter the required data elements to begin the adjudication process of provider paper adjustment requests.

Specific to Electronic Claims Submission/EDI Requirements

The following table, EDS Response to Specific to Electronic Claims Submission/EDI Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Specific to Electronic Claims Submission/EDI Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.26	Fiscal Agent shall distribute provider claim submission software.	Met by interChange. interChange provides the direct data entry of claims to providers through an easy-to-use Web portal. This interactive process will enable providers to see immediate results related to claim adjudication. Providers can also use the 837 transaction submission process to submit claims electronically to the Replacement MMIS.
40.8.2.27	Fiscal Agent shall develop and implement procedures to ensure the integrity of claims submitted by providers via ECS/EDI.	Met by interChange and operational processes and procedures. The EDS EDI team will establish processes and procedures to confirm the integrity of claims through secure access and ECS/EDI data backup. The translation software used to convert HIPAA transactions to proprietary formats validates required HIPAA compliancy standards and will reject any transactions not meeting standards.
40.8.2.28	Fiscal Agent shall ensure that all providers submitting via ECS/EDI have signed and returned State-approved ECS/EDI agreements prior to accepting any "production" claim data.	Met by operational processes and procedures and through COTS integration of the EMC | Documentum tool. The EDS EDI team will verify that the provider has executed a signed ECS/EDI agreement prior to the provider's claims being accepted into Replacement MMIS production processing. After the agreement is completed, provider interChange panels will be updated to reflect that the agreement is on file. This data will be used during claim processing for additional validation that the ECS/EDI agreement is on file.
40.8.2.29	Fiscal Agent shall maintain the original imaged provider-signed ECS/EDI agreements linked to the provider's file data.	Met through COTS integration. On receipt of ECS/EDI provider-signed agreements, the EDS mail room staff will sort, scan, index, and image them within Documentum for retention and reference as needed by EDS and State staff.
40.8.2.30	Fiscal Agent shall accept tape-to-tape billing from defined sources.	Met by operational processes and procedures. Standard industry practices have eliminated tape-to-tape billing. Because this claim submission type is outdated and obsolete within the industry, interChange does not support the requirement. However, the EDS Network and EDI team members will maintain a secure process for handling the tapes received in order to return them to the submitting entity. We will work with the submitting entity to use existing, current claim submission mechanisms such as 837 transactions and the Provider Web Portal.

RFP No.	RFP Requirement	EDS Response
40.8.2.31	Fiscal Agent shall staff ECS/EDI Help Desk to respond to provider support requirements from 8:00 A.M. to 5:00 P.M. Eastern Time on State business days.	Met by operational processes and procedures. EDS' EDI team, led by Alan Martin, will transition to the Replacement MMIS operations and continue to support EDI provider inquiries from 8:00 a.m. to 5:00 p.m. Eastern Time on State business days.
40.8.2.32	Fiscal Agent shall perform ECS/EDI Trading Partner acceptance testing and send memo to the State for signoff and approval of Trading Partner claims submission once testing is successful.	Met by interChange and operational processes and procedures. The experienced EDS EDI team will perform EDI trading partner acceptance testing and verify that test results meet interChange and State claims submission requirements. On successful testing, the EDS EDI team will send a memo to the State for signoff and approval of claims submission into production.
40.8.2.33	Fiscal Agent shall perform provider ECS/EDI acceptance testing.	Met by interChange and operational processes and procedures. The EDS EDI team will perform provider acceptance testing for EDI transmission prior to allowing provider submission of claims data into production.
40.8.2.34	Fiscal Agent shall assign provider ECS/EDI security identification number during testing and add to the production security file when provider is ECS/EDI-approved.	Met by interChange and operational processes and procedures. EDS' EDI staff will assign a security identification number during EDI testing, maintaining the process we have in place today. After successful testing, this identification number is moved to production.
40.8.2.35	Fiscal Agent shall log tapes and diskettes upon receipt and assigns batch number.	Met by operational processes and procedures. The ECS/EDI unit no longer receives tapes and diskette claims submission; however, we will maintain a secure process of internal handling and batch number assignment if received. Please see our response to requirement 40.8.2.30.
40.8.2.36	Fiscal Agent shall perform acceptance testing of VANs for Pharmacy POS claim submission.	Met by operational processes and procedures. The experienced EDI staff will perform acceptance testing of VANs for pharmacy POS claims submission. VANs will not be allowed to submit claims into the Replacement MMIS production environment until State and interChange requirements are met.
40.8.2.37	Fiscal Agent shall obtain and maintain signed Pharmacy POS Trading Partner Agreements prior to accepting any "production" POS claim data.	Met by operational processes and procedures and through COTS integration. EDS' EDI staff currently obtains and maintains the paper pharmacy POS trading partner agreements. Agreements received during Replacement MMIS operations will be scanned, imaged, and indexed by the EDS mail room staff for retention and future reference within Documentum.
40.8.2.38	Fiscal Agent shall perform pharmacy worksheet resolutions to resolve pending front-end edits for pharmacy claims and submits resolved worksheets to data entry for processing.	Met by interChange and operational processes and procedures. Our EDS claims resolution staff will review and process suspended claims according to State approved resolution criteria. Pharmacy claims failing for any of the edits and audits not set to systematically deny will be

RFP No.	RFP Requirement	EDS Response
		resolved through use of the interChange claims corrections panels.

Drug Utilization Review Requirements

The following table, EDS Response to Drug Utilization Review Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Drug Utilization Review Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.39	Fiscal Agent shall produce information to support the State in completing the CMS Annual Drug Utilization Review Report.	Met by interChange and operational processes and procedures. We will produce the Pro-DUR Alert Summary report for the reported fiscal year. In conjunction with the Retro-DUR vendor, HID, supporting documentation, the State will be equipped to complete the CMS Annual Drug Utilization Review report.
40.8.2.40	Fiscal Agent shall attend the DUR board meetings, supply copies of the annual DUR Report, and apply all board recommendations to POS once approved by the State.	Met by interChange and operational processes and procedures. The EDS Pharmacy staff, led by Sharon Greeson, will attend the quarterly DUR board meetings and supply copies of the annual DUR report. After the DUR board meeting, the POS recommended changes will be discussed with State staff for clarification and approval.

Retrospective Drug Utilization Review Requirement

The following table, EDS Response to Retrospective Drug Utilization Review Requirement, describes how we will meet the requirement set forth in the RFP.

EDS Response to Retrospective Drug Utilization Review Requirement

RFP No.	RFP Requirement	EDS Response
40.8.2.41	Fiscal Agent shall submit quarterly extract files to the DUR Vendor within five (5) State business days of the month following the quarter's end.	Met by operational processes and procedures and through customization of interChange. EDS will create a program for the Replacement MMIS to provide an extract of required information to the Retro-DUR vendor, HID, within the specified time frame.

Manual Review Requirements

The following table, EDS Response to Manual Review Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Manual Review Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.42	Fiscal Agent shall conduct manual reviews of claims for specific services.	Met by interChange and operational processes and procedures. EDS' Claims Operations team will continue to efficiently and accurately manually review and process suspended claims. We will accomplish this through interChange panels and automated processes for suspended claims that fail any of the edits and audits that are not set to systematically deny.
40.8.2.43	Fiscal Agent shall perform manual review on claims according to the manual review procedure manual that identifies claim error information and State-approval criteria.	Met by interChange and operational processes and procedures. Our experienced claims resolution staff, led by Tammy Wheeler, will apply the State-approved audit/edit resolution criteria when manually reviewing suspended claims.
40.8.2.44	Fiscal Agent shall refer claims requiring policy decisions to the State.	Met by interChange and operational processes and procedures. Claims failing for audits and edits that specify that State intervention is required will be referred to the State for policy decision based on the audit/edit resolution criteria. Claims will be available to the State through interChange panels that facilitate the process, control, and timely resolution of the suspended claim.
40.8.2.45	Fiscal Agent shall perform manual review when claim for EPSDT eligible recipient is denied for "non-covered" services.	Met by interChange and operational processes and procedures. We will develop a process, in conjunction with the State, to establish claim audit and edit criteria during cycle process to suspend such potential EDPSDT claims prior to denial. EDS will work with the State to establish the criteria to determine appropriate resolution of such claims. If necessary, EDS will engage the State staff for policy input, and we will do so according to our response to requirement 40.8.2.44.

Adjustments Requirements

The following table, EDS Response to Adjustments Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Adjustments Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.46	Fiscal Agent shall return adjustment requests not acceptable due to individual invalid information.	Met by operational processes and procedures and through COTS integration. EDS will notify a provider of invalid adjustment information through an RTP letter generated by the DOC1 tool or through the provider's remittance advice, whichever is appropriate.

RFP No.	RFP Requirement	EDS Response
40.8.2.47	Fiscal Agent shall review adjustment requests.	Met by operational processes and procedures. EDS' experienced Knowledge Adjustment team will manually review adjustment requests through interChange panels to determine appropriate action required for processing. Resolution will be according to State-approved criteria.
40.8.2.48	Fiscal Agent shall process claim-specific retroactive rate adjustments as specified by the State.	Met through configuration of interChange parameters and features. interChange supports automated retroactive rate mass adjustments on large volumes of adjudicated claims. We will initiate the mass adjustments through the Mass Adjustment Entry interChange panel. Authorized users can adjust claims for State-requested retroactive rate changes by region, claim type, program, provider ID, type and specialty, service code (procedure, revenue, NDC, DRG, diagnosis), error code, aid category, recipient, and recipient age or sex.

State-Authorized Claim Overrides Requirements

The following table, EDS Response to State-Authorized Claim Overrides Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to State-Authorized Claim Overrides Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.49	Fiscal Agent shall refer denied claims to the State for review when special circumstances require override designation.	Met by operational processes and procedures. Denied claims are referred to the State for review when EDS' review determines that circumstances outside the defined scope of work effort, such as outside system parameters or resolution criteria, are involved. The State will have access to denied claims online to review the claim and provide instructions to EDS designating the appropriate override for the claims.
40.8.2.50	Fiscal Agent shall provide a method to process payments for any specific claim and maintain an audit trail.	Met through operational processes and procedures and through configuration of interChange parameters and features. interChange provides a history of claim location, tracking the claim from intake to adjudication. Additionally, claims requiring manual processing outside the usual parameters will have an audit trail maintained by interChange identifying the user, action, and time of claim work.

General Claims Resolution Requirements

The following table, EDS Response to General Claims Resolution Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Claims Resolution Requirements

RFP No.	RFP Requirement	EDS Response
40.8.2.51	Fiscal Agent shall add functionality to management fee payments to allow for enhanced/reduced fees for individual providers and shall provide interactive updates when entering the revisions into the system.	Met through configuration of interChange parameters and features. interChange provides for managed care payments based on program-specific negotiated capitation payment rates. As is the case in claims pricing, online, real-time user-updateable tables with effective begin and end dates drive the managed care capitation payment process. The capitation payments are based on criteria that may include the county or ZIP code of the recipient or provider, recipient age or gender, aid category, rate region, TPL resource code, program status code, Medicare status, or other risk factors.
40.8.2.52	Fiscal Agent shall complete a report of identified claims with the potential for TPL, including Medicare, based on the previous mentioned elements.	Met through customization of interChange. The Replacement MMIS will maintain insurance coverage information at the recipient-specific level. The relational database architecture will make this information available for automatic interface with claims processing to fully support cost-avoidance editing. The State will be able to define restrictions for adding third-party coverage by recipient or by specific categories of recipients. The report specifications will be determined during the DDI Phase.
40.8.2.53	Fiscal Agent shall use claims consultants to serve as technical supervisors to staff performing claims processing. These individuals shall: • Research and analyze problem areas at the request of the State • Provide consultation on complex cases and advise when to refer to the Fiscal Agent's medical consultant and/or the State • Review, analyze, and recommend suggestions affecting State operations.	Met by operational processes and procedures. EDS will provide claims oversight by supervisory staff and consultants, as needed, to assist with research and analysis of complex claims processing issues. Our Claims Operations team will work closely with our directors, Dr. Margaret Martin (medical), Dr. James Brooks (dental), and Sharon Greeson (pharmacy), and the State's experienced clinical policy staff and directors for review, analysis, research, and consultation on complex clinical claim issues.
40.8.2.54	Fiscal Agent shall obtain approval from NC DHHS for the amount to be applied for payment.	Met by interChange and operational processes and procedures. The Replacement MMIS will generate the Payment Estimation Report (FIN-1332) each week for State review. From this report, the State can determine the authorized payment amount.

RFP No.	RFP Requirement	EDS Response
40.8.2.55	Fiscal Agent shall check remaining balance as each payment amount is calculated to verify that the budgeted amount is not exceeded.	Met by interChange and operational processes and procedures. The Replacement MMIS will interface with the North Carolina Accounting System (NCAS) as required before the checkwrite cycle to load the budget files received from the State. After the files are loaded and the NCAS Budget Load Report has been generated, the State will be notified and asked to verify that the dollar amounts are accurate and to make sure claims can be paid.
40.8.2.56	Fiscal Agent shall manually price claims as designated by State policy.	Met through configuration of interChange parameters and features. Claim details billed with a manual pricing payment indicator suspend for review. EDS' claims resolution staff will work and price these claims as specified by the approved State criteria.

40.8.3 Claims Processing Operational Performance Standards

Our interChange claims processing business solution, in conjunction with our operational processes, provides for the capture, control, editing, and auditing of multi-payer claims and encounters from the time of initial receipt through final disposition. The expertise and understanding we have gained in our working relationship with the State over the past 30 years drives us to meet the performance standards outlined in this RFP. We appreciate the State's position of making sure appropriate healthcare is delivered to North Carolina's neediest citizens, and we understand our role in correctly and promptly reimbursing the providers delivering this care.

Response to Claims Processing Operational Performance Standards

The following table, Claims Processing Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Claims Processing Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.8.3.1	Fiscal Agent shall date-stamp all mail with actual date of receipt within one (1) business day of receipt at Fiscal Agent site.	Met by operational processes and procedures. EDS' mail room will apply a date stamp or ICN, which includes the Julian date corresponding to the date of receipt, within one business day of receipt.
40.8.3.2	Fiscal Agent shall print and mail Replacement MMIS State-approved forms to providers within two (2) business days of receipt of the provider request (at no cost to the provider).	Met by interChange and operational processes and procedures. Providers will be able to obtain forms 24 hours a day, 7 days a week, through the interChange Web portal. As requested by providers, EDS' mail room will provide and mail to the providers requested forms within two business days.
40.8.3.3	Fiscal Agent shall provide ECS/EDI Help Desk staff from 8:00 A.M. to 5:00 P.M. Eastern Time on State business days.	Met by operational processes and procedures. Our experienced EDI Help Desk team, led by Alan Martin, will continue to provide coverage from 8:00 a.m. to 5:00 p.m. Eastern Time on State business days.
40.8.3.4	Fiscal Agent shall electronically acknowledge back to the submitter, within twenty-four (24) hours of processing, a notice of all teleprocessed electronic claims files received as either accepted or rejected, along with the number of claims.	Met by interChange. EDS' EDI team will provide electronic acknowledgement within 24 hours of processing. The acknowledgement will indicate to the transmitting entity if the electronic claims submission are accepted or rejected, along with the number of claims.
40.8.3.5	Fiscal Agent shall assign an ICN to every claim, attachment, and adjustment within twenty-four (24) hours of receipt.	Met by operational processes and procedures. Mail room staff will prepare incoming mail for data capture and assignment of an ICN within one business day of receipt.
40.8.3.6	Fiscal Agent shall maintain data entry-field accuracy rates above ninety-eight (98) percent.	Met by operational processes and procedures and through COTS integration. FormWorks OCR technology will incorporate quality checking and reporting at various data entry stages. EDS' claims operations manager will monitor, track, validate, and report manual accuracy to support compliance of the 98 percent accuracy rate.
40.8.3.7	Fiscal Agent shall scan every claim and attachment within one (1) State business day.	Met by operational processes and procedures. EDS' mail room staff will receive, prepare, sort, and batch claims and attachments for scanning and will scan within one State business day from receipt.
40.8.3.8	Fiscal Agent shall return hard copy claims missing State-specified required data within two (2) State business days of receipt.	Met by operational processes and procedures and through COTS integration. We will return claims with missing data to the provider for correction and resubmission using the RTP letters generated through DOC1 letter generator and send within two State business days.
40.8.3.9	Fiscal Agent shall process all provider-initiated adjustments within forty-five (45) calendar days of receipt; however, if the claim requires a review by the State, the forty-five (45) calendar days shall suspend	Met by interChange and operational processes and procedures. Our claims operations staff will monitor adjustments through inventory control reports to maintain compliance with the 45 calendar day processing

RFP No.	RFP Requirement	Metrics for Measurement
	until the claim is returned to the Fiscal Agent.	requirement.
40.8.3.10	Fiscal Agent shall adjudicate: • Ninety (90) percent of all clean claims for payment or denial within thirty (30) calendar days of receipt • Ninety-nine (99) percent of all clean claims for payment or denial within ninety (90) calendar days of receipt • All non-clean claims within thirty (30) calendar days of the date of correction of the condition that caused the claim to be unclean.	Met by interChange and operational processes and procedures. EDS' claims operations staff, led by Tammy Wheeler, will monitor claims adjudication to maintain compliance with State processing time frames through inventory control reports.
40.8.3.11	Fiscal Agent shall provide correct claims disposition and post to the appropriate account or when appropriate, request additional information within one (1) State business day of receipt.	Met by interChange and operational processes and procedures. The Replacement MMIS claims engine will determine the appropriate funding code based on financial criteria established during claim processing. If the appropriate account code is not identifiable, EDS will work with the State to obtain additional information within one State business day of receipt/processing.
40.8.3.12	Fiscal Agent shall notify the State of any delays in the checkwrite process by 8:00 A.M. Eastern Time the next State business day following the checkwrite cycle.	Met by operational processes and procedures. Our EDS Systems and Financial team will monitor the checkwrite cycle for completion. Any delays will be reported to the State by 8:00 a.m. Eastern Time the next State business day following the checkwrite cycle.
40.8.3.13	Fiscal Agent shall notify the State immediately upon discovery of any erroneous payments, irrespective of cause, and prior to initiating appropriate recovery action. Fiscal Agent shall use the change request process to notify the State of any system errors that result in a potential provider erroneous payment.	Met by interChange and operational processes and procedures. On discovery of erroneous payment, EDS' Operations team will notify the State of the finding and the anticipated resolution and time frame.
40.8.3.14	Fiscal Agent shall provide financial month-end reporting to the State within three (3) days from the last checkwrite of each month.	Met by interChange and operational processes and procedures. interChange contains numerous financial reports necessary for claims processing that will be created and forwarded to the State within three days from the last checkwrite of each month.
40.8.3.15	Fiscal Agent shall provide specified quarterly extract files to the DUR Vendor within five (5) State business days of the start of the month following the quarter's end.	Met by interChange and operational processes and procedures. We will create a program for the Replacement MMIS to provide an extract of required information to the Retro-DUR vendor, HID, within the contracted time frame.
40.8.3.16**	Fiscal Agent shall adjudicate for payment all claims with date of service in previous fiscal year July through April claims by the last checkwrite in May for payment, and shall adjudicate all claims for May and June by the last checkwrite in October of the current fiscal year August for payment due to State fiscal year processing of the	Met by interChange and operational processes and procedures. Claims submitted will be adjudicated in a timely manner, promoting completion in the appropriate fiscal year.

RFP No.	RFP Requirement	Metrics for Measurement
	State monies.	
40.8.3.17	Fiscal Agent shall ensure that all payments, adjustments, and other financial transactions made through the Replacement MMIS shall be made on behalf of eligible clients to enrolled providers for approved services in accordance with the payment rules and other policies of the State.	Met by interChange. We will configure the rules and edits in interChange to meet State payment rules and policies. The Replacement MMIS will then process recipient and provider eligibility edits to determine the correct segment for the claim date of service. Additionally, the interChange claims engine will determine the appropriate fund code based on financial criteria established during claim processing.
40.8.3.18	Fiscal Agent shall timely process all claims to assure that the average time from receipt to payment is within the schedule of allowable times. In addition, payments shall be made in compliance with Federal regulations, and the Fiscal Agent shall pay any penalties, interest, and/or court cost and attorney's fees arising from any claim made by a provider against the Fiscal Agent or the State where the Fiscal Agent's actions resulted in a claim payment that was late.	Met by interChange and operational processes and procedures. The EDS Operations team, led by Melissa Robinson, acknowledge and understand the importance of adjudicating claims in an accurate and timely manner, and our team will support the State healthcare programs to meet this goal.
40.8.3.19	Fiscal Agent shall successfully complete each checkwrite by the date on the State-approved Checkwrite Schedule.	Met by interChange and operational processes and procedures. Per the State-approved checkwrite schedules, EDS will execute and complete all scheduled checkwrites.

40.9.2 Managed Care Operational Requirements

The responsibility for providing a successful implementation of managed care operational requirements falls under our Provider and Recipient Services organization. This group, led by Chris Ferrell, manages call center functions, education, training, and communication with the providers and recipients. Chris has eight years of Medicaid experience, including successfully providing services to key Medicaid program stakeholders for the State.

This section addresses the requirements met by interChange to integrate the recipient, provider, claim, and reference information into a single repository, expediting managed care operational processes. Our operational performance, in conjunction with the Replacement MMIS, will facilitate efficient and effective management of the managed care program for the State.

Response to Managed Care Operational Requirements

The following table, EDS Response to Managed Care Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements.

EDS Response to Managed Care Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.9.2.1	Fiscal Agent shall resolve all errors, discrepancies, and/or issues related to capitated payments or management fees.	Met by interChange and operational processes and procedures. We will design specific operational procedures to meet requirements related to resolution of errors, discrepancies, or issues related to capitated payments or management fees. We will use the Web access into the Replacement MMIS managed care system to investigate and resolve open issues.
40.9.2.2	Fiscal Agent shall monitor encounter processing to ensure no payments are generated as a result of encounter processing.	Met by interChange and operational processes and procedures. Safeguards are established systematically in the claims system and reference system rules to prevent payments from being generated as a result of encounter processing.
40.9.2.3	Fiscal Agent shall compile, update, and distribute the Data Submission Manual for encounter data processing.	Met by operational processes and procedures. The updated Data Submission Manual for encounter data processing will include changes related to the Replacement MMIS Web-based access and functionality.
40.9.2.4	Fiscal Agent shall serve as first point of contact for questions regarding encounter-related issues.	Met by interChange and operational processes and procedures. We will support toll-free telephone access for managed care providers, and calls will be directed through

RFP No.	RFP Requirement	EDS Response
		call flow options to call center staff specific to the type of provider calling. The call center staff will have access to encounter-related information found in the recipient, claims, and reference systems.
40.9.2.5	Fiscal Agent shall conduct training seminars with providers and State staff regarding the encounter claim submission process.	Met by operational processes and procedures. We will provide training seminars with State staff and providers on the encounter claim submission process and incorporate operational process improvements as a result of the Replacement MMIS.
40.9.2.6	Fiscal Agent shall serve as point of contact for Medicaid providers requesting Managed Care override approvals, make a determination regarding issuance of override, and enter the override approval into the system.	Met by interChange and operational processes and procedures. We will continue to serve as the point of contact for managed care override requests. We will follow guidelines established by the State to make a determination on the request and then enter the override determination decision in the Replacement MMIS managed care system.
40.9.2.7	Fiscal Agent shall support toll-free telephone access and be the point of contact for Managed Care providers between 8:00 A.M. and 5:00 P.M. Eastern Time each State business day.	Met by interChange and operational processes and procedures. We will support toll-free telephone access for managed care providers, and calls will be directed through call flow options to call center staff specific to the type of provider calling. Telephone lines will be open between 8:00 a.m. and 5:00 p.m. Eastern each State business day.
40.9.2.8	Fiscal Agent shall log receipt of Managed Care provider telephone messages, including brief description of reason for the call, date received, date and who responded to the call, action taken, and any necessary follow-up actions, and ensure follow-up actions are completed.	Met by interChange and operational processes and procedures. We will log managed care provider telephone calls relating to a question or concern in the Contact Tracking Management System (CTMS). The Notes panel in the CTMS allows users to enter and modify notes for a particular contact question within the tracking system. Telephone calls regarding managed care override requests will be tracked through a separate mechanism, in which data will be accessed in claims processing.

40.9.3 Managed Care Operational Performance Standards

The Replacement MMIS and our experience with the State's managed care program give us the advantage in meeting the performance standards for this operational area.

Response to Managed Care Operational Performance Standards

The following table, Managed Care Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth

in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Managed Care Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.9.3.1	Fiscal Agent shall provide the Withhold and Penalty Log within five (5) State business days of the end of the previous month.	Met by interChange and operational processes and procedures. We will design the Withhold and Penalty log notification process to meet the State's performance standards.
40.9.3.2	Fiscal Agent shall provide the file maintenance log for Managed Care-related transactions within five (5) State business days of the end of the previous month.	Met by interChange and operational processes and procedures. The Managed Care panels, audit trails, and automated file processing logs provide details on who performed an update and when. We will design the file maintenance logs for managed care–related transactions and notification processes to meet performance standards.
40.9.3.3	Fiscal Agent shall complete requests for changes to capitation payments/management fees within two (2) State business days from date of request.	Met by interChange and operational processes and procedures. Using the Capitation Rate Override panel in the managed care system, we will design the process for capitation payment/management fee changes to meet the standard of two State business days from date of request.
40.9.3.4	Fiscal Agent shall enter all written override approval requests into the system within two (2) State business days from receipt of the request and provide a decision to the requesting providers within five (5) State business days from receipt of request.	Met by interChange and operational processes and procedures. We will follow guidelines established by the State to make a determination on the request, and then enter the override determination decision in the Replacement MMIS managed care system. The written override approval request procedures will meet the defined performance standards.
40.9.3.5	Fiscal Agent shall respond to a requesting provider within one (1) hour for a telephone request for an emergency override.	Met by interChange and operational processes and procedures. We will follow guidelines established by the State to make a determination on the request, and then enter the override determination decision in the Replacement MMIS managed care system. Telephone override request procedures will be designed to meet the one-hour performance standard.
40.9.3.6	Fiscal Agent shall compile, update, and distribute the Data Submission Manual for encounter data processing to providers within five (5) State business days from State date of approval of change.	Met by operational processes and procedures. The updated Data Submission Manual for encounter data processing will be distributed to providers within five State business days from the date of the State's approval of the change.
40.9.3.7	Fiscal Agent shall provide toll-free access and a point of contact for Managed Care providers between 8:00 A.M.	Met by interChange and operational processes and procedures. We will continue to support toll-free telephone

RFP No.	RFP Requirement	Metrics for Measurement
	and 5:00 P.M. Eastern Time each State business day.	access for managed care providers. Calls will be directed through the call flow options to a call center staff specific to the type of provider calling. Telephone lines will be open between 8:00 a.m. and 5:00 p.m. Eastern each State business day.
40.9.3.8	Fiscal Agent shall respond to Managed Care provider telephone messages within one (1) State business day of receipt of the message.	Met by interChange and operational processes and procedures. We will use the CTMS capability to track managed care provider telephone messages to enable response within one State business day of receipt of the message.
40.9.3.9	Fiscal Agent shall produce Managed Care provider enrollment reports and make them available to providers no later than the first day of each month.	Met by interChange and operational processes and procedures. Managed care provider enrollment reports will be produced using the 834 transaction or through reports. For example, the monthly PMP Enrollment Roster Report lists PMP information by recipient.
40.9.3.10	Fiscal Agent shall conduct weekly searches for all "exempt" numbers that are linked to the mandatory program category for a system-generated letter advising the eligible of the potential of primary care provider selection from five (5) providers within a thirty-mile (30-mile) range.	Met by interChange and operational processes and procedures. We will work with the State to verify the appropriate exclusions for a recipient from managed care. We will conduct weekly reviews of the recipients tagged as exempt and confirm that the exclusion is correct per State requirements.
40.9.3.11	Fiscal Agent shall send the Health Choice file to the North Carolina State Health Plan by the third business day of each month.	Met by interChange and operational processes and procedures. The Health Choice file will be sent to the State Health Plan using the 834 transaction by the third business day of each month.

40.10.2 Health Check Operational Requirements

The Health Check operational requirements will be carried out by the Provider/Recipient Relations organization, led by Provider/Recipient Services Manager Chris Ferrell. This group will work with the State to instruct Health Check coordinators and providers about the Replacement MMIS' processes and associated operational improvements. Our training will include Health Check data access through the Replacement MMIS Web pages, schedule updates through the Automated Information Notification System (AINS), and Health Check management fee generation.

This section addresses requirements met by the Replacement MMIS incorporating enhancements that will reduce the current paper processes and manual responses. EDS' operational performance, in conjunction with the Replacement MMIS, will help facilitate efficient and effective management of the Health Check program for the State.

Within the Replacement MMIS, Health Check processes will be accommodated within the early and periodic screening, diagnosis, and treatment (EPSDT) functional area. The primary objectives of the automated EPSDT function of the Replacement MMIS are to accomplish the following:

- Maintain identification of individuals eligible for EPSDT services
- Provide paid claim records data to the State for EPSDT paid services
- Provide reports for tracking and monitoring purposes and to meet federal and state reporting requirements (HCFA 416)

Response to Health Check Operational Requirements
