The following table, EDS Response to Health Check Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements.

EDS Response to Health Check Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.10.2.1	Fiscal Agent shall produce and update Health Check User Manual(s).	Met by operational processes and procedures. We will produce and incorporate system and process enhancements into the Health Check User Manuals.
40.10.2.2	Fiscal Agent shall provide telephone and on-site technical support and training for Health Check Coordinators.	Met by operational processes and procedures. Our telephone and on-site training will include the new system feature of Health Check Coordinator management fee calculation and the associated operational procedure.
40.10.2.3	Fiscal Agent shall participate in Health Check Coordinator	Met by operational processes and procedures. We will

RFP No.	RFP Requirement	EDS Response
	Training Sessions in Raleigh, NC.	participate in Health Check Coordinator Training sessions and incorporate them into the training plan.
40.10.2.4	Fiscal Agent shall update Health Check Billing Guide.	Met by operational processes and procedures. The Health Check Billing Guide will include changes related to the Replacement MMIS' Web-based access and functionality.
40.10.2.5	Fiscal Agent shall conduct agenda planning meetings with State Health Check staff prior to Provider Training Workshops and conduct mock workshops for State approval.	Met by operational processes and procedures. To gain State approval of Health Check Provider Training Workshops, EDS will conduct agenda-planning sessions and mock workshops with the State.
40.10.2.6	Fiscal Agent shall conduct annual regional Health Check workshops for participating providers in six (6) separate sites throughout the State.	Met by operational processes and procedures. The training plan will incorporate the annual regional Health Check workshops at six separate sites.
40.10.2.7	Fiscal Agent shall monitor the Denied Claims Report for Health Check denials and contact providers by telephone to educate and schedule provider visits if denial rate is above ten (10) percent.	Met by operational processes and procedures. We will use the EPSDT Screen Search panel to identify claims meeting the prescribed denial rate for the provider. The field representatives will contact the providers by telephone or on-site visits to educate the provider staff.
40.10.2.8	Fiscal Agent shall review the Health Check County Option File Master Report monthly to ensure that all participating counties received Automated Information Notification System (AINS) (or Fiscal Agent equivalent) data and all Health Check reports.	Met by operational processes and procedures. The Health Check County Option File Master Report is currently created monthly by the EDS Provider Services staff. They will bring their experience to the Replacement MMIS program and continue to review and update the file as required. They will review the report monthly to make sure the participating counties receive the State-specified data and reports.
40.10.2.9	Fiscal Agent shall review the Health Check Management Fee Option File Master Report monthly to ensure that Health Check management fee claims were generated correctly.	Met by operational processes and procedures. We will establish a process to validate the calculation and generation of the Health Check management fees by the Replacement MMIS.
40.10.2.10	Fiscal Agent shall submit the monthly FTE Report to the State for approval.	Met by operational processes and procedures. We will use the new Web pages to create the monthly FTE report for submission to the State.
40.10.2.11	Fiscal Agent shall respond to questions from Health Check County staff related to Health Check management fees and provides written responses to the State.	Met by operational processes and procedures. EDS will respond to county staff inquiries about the calculation and generation of the Health Check management fees by the Replacement MMIS and provide written responses to the State.
40.10.2.12	Fiscal Agent shall provide telephone support and on-site provider visits to educate providers on the Health Check program, policies, and billing requirements.	Met by operational processes and procedures. We will provide both telephone and on-site education on the enhanced Health Check functions such as the periodicity schedule correspondence and recipient Health Check data search through Web page inquiry.
40.10.2.13	Fiscal Agent shall coordinate rewrite of the Health Check	Met by operational processes and procedures. The billing guide will include changes related to new system's Web-

RFP No.	RFP Requirement	EDS Response
	Billing Guide.	based access and functionality.

40.10.3 Health Check Operational Performance Standards

The operational performance standards for Health Check include training and varied team support. Areas of response support Health Check with updated Web, telephone, report, and training support.

Response to Health Check Operational Performance Standards

The following table, Health Check Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Health Check Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.10.3.1	Fiscal Agent shall maintain and update Health Check User Manual(s) within thirty (30) days of a change in policy/procedures and shall notify HCCS within two (2) days after posting.	Met by operational processes and procedures. We will incorporate the Health Check User Manual modifications related to policy and procedure changes within 30 business days of change notification and alert the Health Check county staff within two business days of posting.
40.10.3.2	Fiscal Agent shall produce CMS Statistical Database updates and required reports one (1) month prior to CMS deadline and shall make all appropriate corrections to reports within forty-eight (48) hours of notification of problem.	Met by operational processes and procedures. We will continue to update and produce the CMS Statistical Database one month prior to the CMS deadline. We will correct issues related to the report within 48 hours of notification. If we determine, by the nature of the identified problem, that the correction will require more than 48 hours, we will notify the State and expedite the appropriate solution.
40.10.3.3	Fiscal Agent shall produce a monthly FTE Report by the second Friday from the end of each month.	Met by operational processes and procedures. We will use the new Web pages to create and manage the monthly FTE report for submission to the State by the second Friday from the end of each month.
40.10.3.4	Fiscal Agent shall provide training for use of the Health Check functionality to HCCS, in their respective counties,	Met by operational processes and procedures. EDS will provide training of the Health Check functionality to HCCS, in

RFP No.	RFP Requirement	Metrics for Measurement
	within three (3) weeks of notification by the State.	their respective counties, within three weeks of State notification. Training will incorporate operational process improvements as a result of easier access to Health Check information through Web pages.
40.10.3.5	Fiscal Agent shall review claim denials and contact providers with denial rate greater than ten (10) percent within fourteen (14) days of claim denial.	Met by interChange and operational processes and procedures. We will establish a process, using the EPSDT Screen Search panel, to identify claims meeting the denial rate and contact the provider within 14 days of claim denial.
40.10.3.6	Fiscal Agent shall respond to questions from Health Check county staff related to Health Check management fees within twenty-four (24) hours of receipt and shall notify State Health Check staff in writing of inquiry and resolution within forty-eight (48) hours of receipt.	Met by operational processes and procedures. EDS will respond to county staff inquiries about the calculation and generation of the Health Check management fees by the Replacement MMIS within 24 hours of receipt and will forward the inquiry with our resolution to the State staff within 48 hours of receipt.
40.10.3.7	Fiscal Agent shall update addresses in the Health Check County Option File within twenty-four (24) hours of receipt.	Met by operational processes and procedures. EDS will use the Web page access to the Health Check county information to update department and coordinator addresses within the required time from receipt.
40.10.3.8	Fiscal Agent shall coordinate with the State for the annual revisions to the Health Check Billing Guide.	Met by operational processes and procedures. The Health Check Billing Guide will include ongoing modifications related to the Replacement MMIS' Web-based access and functionality.

40.11.2 TPL Operational Requirements

TPL operational requirements will be carried out by the Financial Services Organization under the leadership of Jamie Herubin. Jamie and his team bring a high level of expertise and experience in state healthcare programs. The team has more than 23 years of relevant healthcare and Medicaid experience, which will be a foundation toward providing successful TPL operations in support of the State.

Third-party resources have a legal obligation to pay part or all of the claims for an individual's Medicaid-covered services. Information may be obtained from commercial insurance companies or managed care organizations (MCOs), pharmacy benefits managers (PBMs), county and tribal certifying agencies, providers, recipients, and employers.

Rapid third-party resource identification is critical to cost avoidance. If a provider bills Medicaid without indicating a transaction from a primary insurance source, the Replacement MMIS will deny the claim and request that the provider bill Medicaid as the payer of last resort. When retroactive post-payment billings are necessary due to the existence of private coverage, the Replacement MMIS can produce billings in many formats and media.

Third-party resource identification and verification functions are critical to the following business processes:

- Eligibility updating to identify third-party liable resources
- Claims processing and cost avoidance
- Eligibility determinations
- State and federal fiscal reporting

EDS understands that the State is requesting TPL operational services in support of DMA, DMH, DPH, and ORHCC. We also acknowledge that TPL operational support is limited to tasks in support of non-Medicaid entities, such as DPH, while DMA will continue to use other vendors for TPL operational recovery activities. Therefore, EDS will provide the necessary data to the State-approved entities, as required by the RFP.

EDS is ready to provide these services to the State and will continue to offer innovative ideas as technology further evolves. We will perform the following operations management activities:

- **Claims processing—**EDS will work with the State to develop extracts or imports that facilitate appropriate cost avoidance and third-party recoveries.
- **Recipients—**The Replacement MMIS will provide online browser pages for inquiry and maintenance of recipient data, including TPL.

- **Providers—**For data export, EDS will establish a vendor output interface with the Medicaid TPL recoveries vendor to supply information on providers to assist the vendor with determining resource data. This interface to the Medicaid TPL recoveries vendor is performed monthly for TPL recoveries, collections, and identification. In North Carolina, the interface will only provide for identification, and EDS will perform recoveries and collections.
- **Care management—**The Third-Party Payment Analysis Replacement MMIS page displays claim counts, dollar amounts, related percentages, and rankings of the information by provider type and specialty for paid claims with third-party payment considerations.

In addition to what has been described above, EDS will provide coordination of benefits (COB) efforts in support of the State in the following areas:

- Carrier invoice issuance
- Letters/collections
- Disposition of funds
- Tracking and reporting

EDS will support the State with TPL efforts to handle recoveries and collections, including receipt and disposition of funds. Receipt and disposition of funds will be against State TPL recovery cases at the claim level, and entry and viewing of this information will be completed through the use of interChange panels.

Response to TPL Operational Requirements

The following table, EDS Response to TPL Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, or processes that meet the stated requirements.

EDS Response to TPL Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.11.2.1	Fiscal Agent shall identify claims and support recovery actions when Medicare resources are identified or verified after claims have been paid.	Met by operational processes and procedures and through customization of interChange. We will send the TPL recoveries vendor the Medicaid paid claims, and the interChange TPL post paid billing process will handle the non-Medicaid recoveries.
40.11.2.2**	Fiscal Agent shall process and track recoveries and collections	Met by interChange and operational processes and procedures. Recoveries and collections are processed and tracked by interChange.
40.11.2.3**	Fiscal Agent shall track and post recoveries to individual claim histories.	Met by operational processes and procedures and through customization of interChange. We will send the State-approved TPL recovery vendors the Medicaid-paid claims,

RFP No.	RFP Requirement	EDS Response
		and the interChange TPL post paid billing process will handle the non-Medicaid recoveries.
40.11.2.4**	Fiscal Agent shall enter or update recovery cases from recoveries received	Met by interChange and operational processes and procedures. This basic feature is integral to interChange. The Case Tracking Base Web panel records fundamental information about a specific case. We will send the State-approved TPL recovery vendors the Medicaid-paid claims, and the interChange TPL recovery update process will handle the non-Medicaid recoveries.
40.11.2.5	Fiscal Agent shall generate carrier update transactions to the State	Met by operational processes and procedures and through customization of interChange. EDS will create a new interface to generate carrier update transactions for the State.
40.11.2.6	Fiscal Agent shall extract and process TPL data transmitted by ACTS from the DIRM electronic File Cabinet	Met through customization of interChange. This requirement will be met as part of the change for the ACTS and DIRM interfaces.
40.11.2.7	Fiscal Agent shall produce a daily extract of TPL carrier and recipient resource data for ACTS, CSDW, and EIS	Met through customization of interChange. Extract files required by external entities for processing will be created and transmitted as specified.
40.11.2.8	Fiscal Agent shall produce an extract of updates to TPL recipient resource data for ACTS for Medicaid recipients referred to Child Support	Met through customization of interChange. EDS will create an extract file with updates to TPL recipient resource data for ACTS for Medicaid recipients referred to Child Support.

40.11.3 TPL Operational Performance Standards

EDS will meet the operational performance standards identified in this section of the RFP. To prevent unintentional loss of eligibility, the system will identify the recipients as eligible for programs with real-time, online edits. These third-party edits will be applied to the update sources and suspend the third-party coverage transaction to confirm the validity of the coverage before allowing the system to accept the update. This includes checks to not remove program eligibility for an enrolled recipient.

The Replacement MMIS will provide a flexible process for documents to be sent to any entity within the MMIS files. To support the operational business processes of verification of coverage, we will use this function to perform the following:

- Contact employers and carriers when employers notify the State of existing insurance coverage that has not been previously identified

- Send and receive confirmation forms to and from providers when insurance information they submit differs from the MMIS records
- Generate confirmation forms to obtain the detailed plan information to verify third-party coverage prior to its use in cost avoidance and post-payment billing or to support eligibility determination decisions
- Contact the provider and carrier when Medicaid claims indicate commercial insurance payment amounts and no coverage exists on the Replacement MMIS for the recipient or a new potential insurance carrier is identified through a claim billing

Response to TPL Operational Performance Standards

The following table, TPL Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

TPL Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.11.3.1	~~Fiscal Agent shall produce system-generated letters to providers, recipients, and county offices.~~	Cancelled. This requirement was deleted by RFP 30-DHHS-1228-08-R.
40.11.3.2	Fiscal Agent shall adjust paid Claims History for State-specified TPL recoveries and provider/recipient collections within five (5) State business days from end of the previous month.	Met by interChange. This requirement will be met by the normal claims processing inherent to the Replacement MMIS. Adjustments are created and then submitted to the claims engine for processing.
40.11.3.3**	Fiscal Agent shall disposition the recoveries/collections accurately and consistently ninety-nine and eight tenths (99.8) percent of the time.	Met by interChange and operational processes and procedures. TPL panels in the Replacement MMIS will be used to perform the dispositioning function. We will make sure the disposition of recoveries and collections is accurate and consistent 99.8 percent of the time.
40.11.3.4	Fiscal Agent shall produce and bill drug invoices for insurance carriers within five (5) State business days of TPL entry.	Met by interChange and operational processes and procedures. TPL panels in the Replacement MMIS will be used to perform the dispositioning function. The Replacement MMIS will produce and bill drug invoices for insurance carriers, and this will be done within five State business days of TPL entry.
40.11.3.5	Fiscal Agent shall mail the accident inquiry letters to the identified recipients within five (5) State business days	Met by interChange and operational processes and procedures. The Replacement MMIS will generate accident inquiry letters, and we will mail them to identified

RFP No.	RFP Requirement	Metrics for Measurement
	from end of the previous month.	recipients within five State business days from end of the previous month.
40.11.3.6	Fiscal Agent shall generate an Estate Recovery invoice within two (2) business days after a recipient meets the defined criteria.	Met by interChange and operational processes and procedures. Operational and system procedures will be established to meet this requirement.
40.11.3.7	Fiscal Agent shall provide TPL edit/error report(s) for ACTS for State staff access each State business day.	Met by interChange. Error reports for TPL processing will be provided by the Replacement MMIS and available for viewing through the browser.
40.11.3.8	Fiscal Agent shall provide daily (next business day) transmission logs showing successful transmission of TPL data to CSDW and to and from ACTS available for State staff access each State business day.	Met by interChange. Transaction logs will be maintained and provided the next business day to CSDW and to and from ACTS as part of transaction and interface file processing.
40.11.3.9	The Fiscal Agent shall extract and process recipient TPL data transmitted by ACTS from the electronic DIRM File Cabinet by 7:00 A.M.	Met by interChange. Recipient TPL data from ACTS will be extracted, processed, and transmitted by ACTS from the electronic DIRM File Cabinet by 7:00 a.m.
40.11.3.10	The Fiscal Agent shall produce a daily extract of TPL carrier and recipient resource data to DIRM for ACTS, CSDW, and EIS	Met by interChange. Extract files required by external entities for daily processing will be created and transmitted as required by the RFP.
40.11.3.11	The Fiscal Agent shall produce a daily extract of updates to TPL recipient resource data to DIRM for ACTS for Medicaid recipients referred to Child Support.	Met by interChange. Extract files required by external entities for daily processing will be created and transmitted as required by the RFP.

40.12.2 Drug Rebate Operational Requirements

Our drug rebate experience places us ahead of our competitors because we have a nationally recognized system and staff members—such as our pharmacy director, Sharon Greeson—with the knowledge to successfully support the State's drug rebate program. The current Drug Rebate team will use their experience in North Carolina to facilitate a smooth transition to the Replacement MMIS and to expand drug rebate to meet DPH and ORHCC requirements.

EDS is a leader in the area of providing Medicaid drug rebate services. We have been providing Medicaid rebate administration services for state agencies since the program began in 1991. EDS has successfully managed North Carolina's drug rebate program since 1991. During these 16 years, we invoiced $2.86 billion for the State, collecting all but 0.25 percent. From 2004 to 2006, we collected $1.15 billion for the State.

Our rebate efforts comply with OBRA 1990 requirements and the subsequent mandated changes. We administer CMS drug rebate programs for our Medicaid clients in Alabama, Connecticut, Delaware, Arkansas, Rhode Island, Idaho, Kansas, and Oklahoma.

In the following subsections, we offer an overview of our drug rebate operational processes.

Verification of 340b or Public Health Services(PHS) Providers

One of the first steps in invoicing is reviewing the Health Resources and Services Administration (HRSA) Web site for updates to the 340b list of providers. An accurate and thorough review must be completed to verify that claims from these providers are not included in the drug rebate invoice process. The interChange PHS Provider Maintenance browser-based panel is used to inquire about, add, or maintain the PHS entities that are excluded from the drug rebate invoice process. The Web page displays the Medicaid provider number, provider name, and entity type. The PHS Provider Date Maintenance browser-based Web panel is used to view, add, and maintain the PHS provider exclusion date entries, along with the applicable start date and the end date segment. Other drugs can be excluded based on State-defined criteria.

Invoicing

The interChange drug rebate system automatically generates quarterly invoices and cover letters in electronic media and Web-enabled electronic format based on the manufacturer's request, as well as paper, if requested.

The process of invoicing begins with the receipt of the quarterly CMS files. In addition to the Unit Rebate Amount (URA), there is additional information that is

extracted and updates legal, financial, and technical addresses, contacts and telephone numbers, and participation effective and termination dates for each manufacturer in the Replacement MMIS. The actual production of invoices requires inputs from the CMS quarterly rate file, drug rebate labeler file, and drug rebate claims file, which are combined with drug reference data from the Replacement MMIS. Claim usage data is merged with the CMS rebate per unit and manufacturer files to calculate and automatically generate quarterly invoices at the NDC level.

The experienced EDS Drug Rebate team will use the Drug Rebate CMS Unit Discrepancy report to identify NDCs on the quarterly rate tape with a unit of measure that disagrees with the unit of measure on the drug database.

Our knowledgeable Drug Rebate team will validate invoices to verify the accuracy of information and reduce disputes. For a percentage of NDCs, we view claim-level data to verify that invoices are consistent with the invoice total units reimbursed, number of prescriptions, and reimbursement amount to providers. interChange supports this verification by providing online access to information and the ability to generate invoice, collection, and dispute reports.

NDC-level invoicing provides the manufacturer with drug rebate data at the level necessary to expeditiously process and pay invoices. The interChange subsystem performs an edit check on the CMS data to check for NDC termination dates and DESI flags. If this information does not match the pricing information on the drug record, the differences will be reported. interChange also checks the CMS data for rebates per unit (RPUs), nonparticipating manufacturers, and billing units against the drug file extract received from the Replacement MMIS to determine if changes must be made to the drug file.

EDS will generate and transmit a quarterly file of the State's required drug rebate invoice information including prior period adjustment to CMS and the State electronically as part of each quarterly invoice generation process. Along with the usage file, the EDS Drug Rebate team sends a confirmation letter to CMS.

The interChange drug rebate system can handle the complexities of the multiple rebate programs and separately identify drug rebate amounts by program. The Replacement MMIS will be configured to generate separate invoices for DMA, DMH, DPH, and ORHCC.

The State will benefit by selecting our drug rebate solution, which includes offering staff members experienced in the interaction among CMS, the State, drug manufacturers, and pharmacy providers.

Check Receipt and Drug Rebate Accounting

Drug rebate accounting is an essential element to collecting maximum rebate dollars. Building on our previous experience, the interChange drug rebate system follows general accounting principals designed to minimize redundant

input and improve productivity while posting drug rebate payments, dispute resolutions, and prior period adjustments—at a summary and NDC level.

EDS will accept the CMS Reconciliation of State Invoice (ROSI) and Prior Quarter Adjustment Statement (PQAS) from manufacturers. A lock box will be maintained to receive the physical checks and attached documentation from the manufacturers, such as remittances. The lock box vendor images the front of the checks. After depositing the payment in the State's account, the lock box vendor forwards the documentation to EDS, which includes copies of the deposited checks for rebate amounts from manufacturers, a copy of the deposit slip, original supporting documents, and the original envelope with the postmark date. A cover sheet is included with the package that lists the checks in the package, deposit date, check numbers, dollar amount of each check, total number of listed checks, and a unique receipt number for each check. EDS' Drug Rebate team will enter the information from the checks and documentation into the interChange drug rebate system.

Checks received are first posted and tracked with basic information—such as deposit date, issuer, postmark date, amount, and check number. The interChange drug rebate system provides a drug rebate accounts receivable program that allows the EDS Drug Rebate team to use drop-down menus for fast, accurate dispositioning of the payment. The team can post payments to the NDC level of the invoice. An audit check is in place whereby the daily deposit must balance to the checks posted or interChange will not allow the authorized user to continue. The interChange drug rebate system allows for allocations of funds at multiple levels to verify that payments are attributed to the correct invoice records. EDS' Drug Rebate team reconciles every ROSI at the NDC, year, and quarter rebate record on receipt. interChange performs a trial allocation of the actual receipt to identify differences between invoiced amounts and payments received. Afterward, these differences are reviewed and recorded as disputes by unit at the NDC level with interChange.

Drug rebate accounts receivables are created by interChange automatically equating to the produced drug manufacturer invoices. interChange can apply payments received from drug manufacturers electronically by the process of electronic funds transfer (EFT). EDS' Drug Rebate team can process NDC-level corrections to rebate information received from the manufacturer online. Drug rebate NDC-level updates are automatically processed on receipt of the CMS quarterly file.

End-of-Month Process and Interest Assessment

To verify that drug rebate receipts are properly posted, EDS has developed operational processes and procedures to verify that the checks and EFT data are entered into the system and that the corresponding entries balance and reconcile to all funds received and posted to the drug rebate lock box. These procedures include using secured browser-based Web panels, implementing automated

audits, issuing a Cash Control Number (CCN) for each check, dispositioning from the CCN, and keeping the account receivable open until the check is dispositioned fully. EDS' Drug Rebate team reconciles and reports that all payments are applied in the interChange drug rebate system and applied to the corresponding labeler account receivable accounts.

Deposits are accounted for and reported daily to the State. Drug rebate accounts receivable balancing reports are generated monthly. Daily and monthly operational procedures confirm that every payment is posted and accounted for and reported to the State and CMS, as required.

The interChange drug rebate system will provide the capability to compute drug rebate interest charges beginning on the 39th day from the original postmark date of the invoice, which is in compliance with CMS reporting requirements. interChange allows the user to update and maintain the weekly Treasury bill (T-bill) rate information on the T-Bill Rate browser-based Web panel. This information is vital for the appropriate assessment of interest on rebate amounts.

EDS' authorized drug rebate user accesses the Drug Rebate Interest Calculator browser-based Web panel, which calculates interest on an outstanding invoice balance. Interest received will be reviewed for accuracy and reasonableness. Interest is maintained separately from invoice balances, which allows the user to research invoices for outstanding balances and interest discrepancies. Interest less than the State-defined threshold will be deducted from the manufacturer's outstanding balance with State approval.

When the end of month is verified and interest is calculated, a summary of the monthly drug rebate activity will be forwarded to the State for review.

Drug Rebate Dispute Resolution

EDS' experienced Drug Rebate team, led by Sharon Greeson, will carry forward our proven dispute resolution functions that are part of the drug rebate programs including research and resolution of discrepancies and process and procedures between the State and participating manufacturers' records. The dispute resolution efforts fully comply with the Omnibus Budget Reconciliation Act (OBRA) and the *Best Practices Guide for Dispute Resolution Under the Medicaid Drug Rebate Program*. The dispute resolution process is highly organized and enables EDS to quickly resolve disputes and collect payment for the State. As necessary, data exchanges with manufactures during the dispute process will adhere to HIPAA privacy and security requirements. The following are ways we increase cash flow for our clients:

- Attention to detail, providing effective, efficient dispute resolution results
- Aggressive time lines regarding manufacturer disputes

- Providing a drug rebate system for processing and tracking the rebate resolution process by manufacturer (by labeler code) that has an outstanding account balance
- Processing and providing electronic manufacturer provider-level reports according to HIPAA requirements
- Ongoing effective communication documented in interChange with the manufacturers' contact personnel as needed
- Ongoing review of potential Replacement MMIS claims processing edits to add from up-front prevention of disputes
- Conversion of claims billing units to drug rebate unit before the generation of drug rebate invoices

The interChange drug rebate system reports payment discrepancies, disputes, and online information necessary to support dispute resolution when a manufacturer disagrees with the invoiced rebate amount. The system allows users to inquire or add dispute information from various panels, eliminating the need to enter data multiple times.

On receipt of a manufacturer's dispute information, the EDS Drug Rebate team will enter dispute information on the Dispute Detail Resolution browser-based Web panel. This Web panel allows the team to select from a list of CMS-defined and required reason codes that drug manufacturers must use when disputing invoiced products. Communication with the drug manufacturers is tracked in the interChange system in comment fields, which can be entered at the invoice or NDC level. This allows the user to record the date of contact with a drug manufacturer, the type of contact, and the resolution. The system automatically stamps the record each time it is updated so there is an audit trail of who made changes.

interChange will generate a monthly dispute status report, Drug Rebate Dispute Summary by Invoice Period, that provides an account of dispute information for each invoice period. This report is used to provide the State with statistics on dispute resolution through a monthly memorandum.

Reviewing Claim-Level Detail

The interChange drug rebate system provides accurate claim-level detail and a clear audit trail of any claim-level adjustments or corrections. The retention of accurate claim-level detail is required to justify rebate calculations. EDS' Drug Rebate team requests claim-level detail online, where the detail can be reviewed or downloaded to an Excel spreadsheet to allow for easy sorting based on review criteria. Authorized State users also can request the claim detail report to review the claims. The claim detail report lists the claims associated with a specific NDC for a specific invoice period. The EDS Drug Rebate team and the manufacturers

use claim detail reports to analyze pharmacy claim data during the dispute resolution process.

Our Drug Rebate team reviews the claim-level data and initiates adjustments if the billing pharmacy identifies an error in the claim data billed by the provider. These Replacement MMIS adjustments are carried back through the claim adjudication process, and interChange makes the necessary adjustments to the providers' healthcare program payment.

These claim adjustments and recoupments are reported back to the State and brought into the interChange drug rebate system after automatic recalculation of the invoice amount corresponding to the disputed NDC. The Replacement MMIS drug rebate system will produce a Recapitulation Report that summarizes the dispute resolution changes made to the original drug rebate invoice. This report will be posted and provided to the State for review and approval through iTRACE.

Tracking Disputes and Nonresponsive Manufacturers

interChange maintains an automated drug rebate tracking process, including nonresponsive manufacturers and documentation on the dispute resolution process. A Web panel displays labeler dispute data and the status of the dispute. EDS' Drug Rebate team uses this information to manage and prioritize dispute inventory. Online and system-generated reports also are key to managing rebate collections and dispute resolution. Online access to invoices, collection, and dispute trends supports quality initiatives that focus on trends and strategies to improve the success of the State drug rebate program.

The interChange drug rebate system will automatically generate delinquent letters to manufacturers that have not paid the invoice within 38 days. The authorized user can inquire on late payment letters by using the interChange notice tracking panels, which will identify the date a late payment letter was sent to the labeler, the invoice age, and the balance due. This process will benefit the State by providing a way to easily review and monitor correspondence being sent to the manufacturer.

Proactive Dispute Resolutions

EDS' experienced and knowledgeable Drug Rebate team will proactively work with manufacturers to resolve disputed NDCs to expedite payment. This proactive approach helps the manufacturer address the issue while avoiding a dispute of payment when possible. EDS' Pharmacy Director Sharon Greeson will continue to attend the CMS-sponsored national dispute resolution meetings. EDS takes advantage of these opportunities to meet face-to-face with the manufacturers and resolve difficult disputes. Sharon's drug rebate staff members have met with manufacturers including GlaxoSmithKline, Aventis, Schering-Plough, Bristol

Myers Squibb, and Merck that have participated in these CMS dispute resolution meetings. We have developed good working relationships with members of the CMS Dispute Resolution team, such as Diane Dunstan and Tami Bruce, and other members in the regional and central office. Measures such as these have helped EDS reduce the number of disputes in states where we support drug rebate processing.

Response to Drug Rebate Operational Requirements

The following table, EDS Response to Drug Rebate Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements.

EDS Response to Drug Rebate Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.12.2.1	Fiscal Agent shall update online Drug Rebate accounts receivable via the NDC with data such as labeler check number and check receipt date to monitor all Drug Rebate accounts receivable activity.	Met by interChange and operational processes and procedures. The checks will be entered in Web panels at the NDC level with the appropriate identification such as labeler check number and receipt date. A process will be developed to clearly identify the different programs and will apply manufacturer payments to the current drug rebate accounts receivable. Payments and accounts receivable activity will be tracked, monitored, and reported to the State.
40.12.2.2	Fiscal Agent shall make available to the State the total Medicaid expenditures for multiple source drugs (annually) as well as other drugs (every three [3] years); the record keeping for this requirement should include data such as mathematical or statistical computations, comparisons, and any other pertinent records to support pricing changes as they occur.	Met through customization of interChange. EDS will provide this data for reports that include total Medicaid expenditures for multiple source drugs annually and other drugs every three years. Data such as mathematical or statistical computations, comparisons, and any other pertinent records to support pricing changes as they occur will be available for querying and report generation.
40.12.2.3	Fiscal Agent shall receive and process rebate checks from labelers.	Met by interChange and operational processes and procedures. The checks will be entered at the NDC level with the appropriate identification such as labeler check number and receipt date and apply to the appropriate State drug rebate accounts receivable.
40.12.2.4	Fiscal Agent shall deposit labeler checks.	Met by operational processes and procedures. The labelers will be instructed to send payments to a lock box, where the funds are deposited and verified daily. Upon the EDS Drug Rebate team's daily verification, the funds will be transferred daily to the State's account.
40.12.2.5	Fiscal Agent shall allow for adjustment and write-off records.	Met by interChange and operational processes and procedures. Our Drug Rebate team will enter adjustment records to the claim detail if errors are found. The adjusted

RFP No.	RFP Requirement	EDS Response
		claim will be sent to the Replacement MMIS for final processing. The adjusted units will be denoted in the quarter that they were originally invoiced. interChange will accept State-approved write-offs against outstanding manufacturer balances.
40.12.2.6	Fiscal Agent shall perform interest calculation on outstanding Drug Rebate balances and apply results to Drug Rebate accounts receivable file.	Met by interChange and operational processes and procedures. The System and Operational process will automatically apply interest to outstanding balances when the end-of-month drug rebate process is executed. CMS guidelines for interest assessment will be adhered to.
40.12.2.7	Fiscal Agent shall perform end-of-month balancing process.	Met by interChange and operational processes and procedures. EDS' drug rebate accountant will run end-of-month reports to verify that the incoming checks or vouchers as entered into interChange balances to the account receivable's lock box data.
40.12.2.8	Fiscal Agent shall maintain Drug Rebate history data with online accessibility by extracting claims data monthly from Claims History and moving the data to the Drug Rebate history on a quarterly basis.	Met by interChange and operational processes and procedures. The claims data will be extracted monthly from the Replacement MMIS claims history file. The extract will be accumulated and applied to the interChange drug rebate system quarterly.
40.12.2.9	Fiscal Agent shall perform check and voucher entry for update to the accounts receivable records.	Met by interChange and operational processes and procedures. EDS' drug rebate accountant will enter the checks and vouchers to the appropriate manufacturer drug rebate accounts receivable quarterly as directed by the manufacturer ROSI or PQA.
40.12.2.10	Fiscal Agent shall receive, log, and process labeler disputes.	Met by interChange and operational processes and procedures. Our drug rebate accountant will log disputes in the interChange drug rebate system as identified by the ROSI or other labeler communication. The disputes will be processed and resolved by the experienced EDS Drug Rebate team.
40.12.2.11	Fiscal Agent shall maintain data for each quarter that a labeler disputes a particular NDC.	Met by interChange and operational processes and procedures. The dispute data will be retained so that different queries can be pulled, such as a labeler consistently disputing the same NDC each quarter.
40.12.2.12	Fiscal Agent shall research and resolve discrepancies, including calling providers about questionable claims.	Met by operational processes and procedures. EDS' drug rebate dispute team will determine the reason for the dispute and contact the provider when necessary. Any claims found with errors during this research will be adjusted or recouped as required.
40.12.2.13	Fiscal Agent shall initiate any necessary adjustments to change units of NDC.	Met by interChange and operational processes and procedures. Our Drug Rebate team will adjust claims as periodic claims submission errors are identified. Adjusted claims data will be transferred to the Replacement MMIS for

RFP No.	RFP Requirement	EDS Response
		processing and collection from the provider.
40.12.2.14	Fiscal Agent shall produce a Recapitulation Report.	Met by interChange and operational processes and procedures. After the dispute is resolved and required adjustments are entered, a recapitulation report will be produced and will be sent to the manufacturer as a revised invoice for the collection.
40.12.2.15	Fiscal Agent shall send Recapitulation Report to NC DHHS Auditor(s) for review and approval.	Met by operational processes and procedures. The EDS Drug Rebate team will send the recapitulation report to the NC DHHS auditor for review and approval.
40.12.2.16	Fiscal Agent shall send Recapitulation Report to labeler with copy of current summary balance once report is approved.	Met by interChange and operational processes and procedures. When approved by the NC DHHS auditor, the drug rebate staff will forward a copy of the approved recapitulation report and the current summary balance report to the labeler or manufacturer.
40.12.2.17	Fiscal Agent shall create and send quarterly invoices for each labeler that has a rebate agreement signed with CMS or the State as division-appropriate.	Met by interChange and operational processes and procedures. EDS' Drug Rebate team will initiate the drug rebate invoicing process after the CMS tape arrives from each approved State program. The invoices will be sent out quarterly for labelers or manufacturers with agreements on file with CMS or the State.
40.12.2.18	Fiscal Agent shall update DRS Labeler Data with information from CMS and the State.	Met by interChange and operational processes and procedures. DRS Labeler Data will be entered automatically into interChange for CMS query and as needed by the State.
40.12.2.19	Fiscal Agent shall ensure automated electronic transfer process to deliver invoice data and detail history to CMS and the State.	Met by interChange and operational processes and procedures. An automated electronic transfer process will enable delivery of invoices with data and detail history for CMS and the State, as required.
40.12.2.20	Fiscal Agent shall attend CMS-sponsored Drug Rebate Labeler Dispute meetings as required by the State and based on relevance of agenda.	Met by operational processes and procedures. Pharmacy Director Sharon Greeson will attend the CMS-sponsored Drug Rebate Labeler Dispute meetings as required by the State and based on relevance of the agenda.

40.12.3 Drug Rebate Operational Performance Standards

Experienced staff with Sharon's leadership will continue to support the State as we do today. Since 1991, we have been recognized by CMS through their audit of our drug rebate system's operational efforts.

Response to Drug Rebate Operational Performance Standards

The following table, Drug Rebate Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Drug Rebate Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	EDS Response
40.12.3.1	Fiscal Agent shall maintain an outstanding rebate balance percentage (i.e., overmore than/during/across forty-five [45] days) of less than ten (10) percent of total rebates due for each quarter excluding the outstanding balance of Manufacturers' Disputes Accounts Receivable.	Met by interChange and operational processes and procedures. The Drug Rebate team will use drug rebate accounts receivable reports to contact delinquent manufacturers for collection of overdue, aged balances.
40.12.3.2	Fiscal Agent shall make available to the State the total Medicaid expenditure for multiple source drugs (annually) as well as other drugs (every three years) accurately and consistently ninety-nine and nine tenths (99.9) percent of the time.	Met through customization of interChange. The checks will be entered in Web panels at the NDC level with the appropriate identification such as labeler check number and receipt date. A process will be developed to clearly identify the different programs and will apply manufacturer payments to the current drug rebate accounts receivable. Payments and accounts receivable activity will be tracked, monitored, and reported to the State.
40.12.3.3	Fiscal Agent shall log all labeler checks received by labeler, check number, amount, date received, date entered into DRS Accounts Receivable file, and date of deposit. Fiscal Agent shall forward the logs to the State within five (5) business days from the end of the previous month.	Met by interChange and operational processes and procedures. Our drug rebate accountant will log the labeler checks with the required information—such as labeler, check number, and amount—and the log will be forwarded to the State within five business days from the end of the previous month.
40.12.3.4	Fiscal Agent shall update the Drug Rebate accounts receivable within two (2) State business days of receipt.	Met by interChange and operational processes and procedures. EDS' drug rebate accountant will update the drug rebate accounts receivable within two State business days of receipt.
40.12.3.5	Fiscal Agent shall deposit all labeler checks within one (1) State business day of receipt.	Met by operational processes and procedures. The labelers will be instructed to send checks to a bank lock box where the funds are received and deposited daily. On verification, the funds will be transferred to the State's account within one State business day of receipt.
40.12.3.6	Fiscal Agent shall perform interest calculation on outstanding Drug Rebate balances and apply results to	Met by interChange and operational processes and procedures. The interChange drug rebate system will

RFP No.	RFP Requirement	EDS Response
	Drug Rebate accounts receivable ninety-nine and nine tenths (99.9) percent of the time, as directed by the State.	automatically calculate and apply interest to outstanding labeler balances monthly following CMS guidelines for interest assessment. The interest assessment will be applied to outstanding receivables 99.9 percent of the time.
40.12.3.7	Fiscal Agent shall perform end-of-month Drug Rebate balancing processes and forward to the State for review within five (5) State business days of the end of the previous month.	Met by interChange and operational processes and procedures. EDS' drug rebate accountant will run end-of-month reports to verify that incoming checks or vouchers were entered into the system and that the end-of-month balances. This will be forwarded to the State within five business days from the end of the previous month.
40.12.3.8	Fiscal Agent shall extract Drug Rebate history data monthly, moving it to the quarterly file within two (2) State business days from the end of the previous month.	Met by interChange and operational processes and procedures. The claims data will be extracted monthly from the Replacement MMIS claims history file. The extract will be accumulated and applied to the interChange drug rebate system quarterly. This extract process will be completed within two State business days from the end of the previous month.
40.12.3.9	Fiscal Agent shall receive and log all labeler disputes on the date of receipt, including data such as labeler, date of call, caller name/telephone number, issue, processor of call, resolution, follow-up requirements, and a tickler to ensure any follow-up requirements are completed. Fiscal Agent shall forward the log to the State within five (5) business days from the end of the previous month.	Met by interChange and operational processes and procedures. Our drug rebate accountant will log the labeler checks with the required information—such as labeler, check number, and amount—and the log will be forwarded to the State within five business days from the end of the previous month.
40.12.3.10	Fiscal Agent shall process all labeler disputes within ten (10) State business days from the date of receipt.	Met by interChange and operational processes and procedures. The drug rebate specialist will determine the reason for the dispute and contact providers as needed. Our experienced drug rebate resolution team will resolve disputes within 10 State business days from date of receipt.
40.12.3.11	Fiscal Agent shall produce a Recapitulation Report, which is a revised invoice, for the labeler one (1) State business day after the completion of the dispute resolution.	Met by interChange and operational processes and procedures. When the dispute is processed and adjustments entered, a recapitulation report will be produced. Our drug rebate staff will produce this within one State business day after the resolution of the dispute.
40.12.3.12	Fiscal Agent shall send the Recapitulation Report to NC DHHS Auditor(s) for review and approval by close of business the same day the Recapitulation Report is produced.	Met by operational processes and procedures. The drug rebate specialist will send the recapitulation report to the NC DHHS Auditor for review and approval by close of business the same day the Recapitulation Report is produced.
40.12.3.13	Fiscal Agent shall send the Recapitulation Report to the labeler with a copy of the current summary balance the same day the Fiscal Agent has received the NC DHHS Auditor's approval.	Met by operational processes and procedures. On approval, the EDS Drug Rebate team will forward a copy of the approved recapitulation report and the current summary balance report to the labeler within the same State business day.

RFP No.	RFP Requirement	EDS Response
40.12.3.14	Fiscal Agent shall create and forward quarterly invoices for each labeler that has a rebate agreement signed with CMS or the State, as division-appropriate, within five (5) State business days from receipt of CMS tape.	Met by interChange and operational processes and procedures. EDS' Drug Rebate team will initiate the drug rebate invoicing process after the CMS tape arrives from each approved State program. The invoices will be sent out quarterly for labelers or manufacturers with agreements on file with CMS or the State. Invoices will be issued after quarter-end receipt of the CMS tapes within five State business days.
40.12.3.15	Fiscal Agent shall maintain an outstanding rebate balance percentage (i.e., forty-five [45] days or more) of less than ten (10) percent of total rebates due for each quarter excluding the Labeler Disputes Outstanding Accounts Receivable balance accurately and ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. The Drug Rebate team will use drug rebate accounts receivable reports to contact delinquent manufacturers for collection of overdue, aged balances. EDS' Drug Rebate team will maintain accurate accounts receivable balance 99.9 percent of the time.
40.12.3.16	Fiscal Agent shall electronically transfer required data to CMS and the State as applicable to the Drug Rebate requirements within five (5) State business days from invoicing.	Met by interChange and operational processes and procedures. After the invoices are created, the invoice detail will be sent to CMS and the State within five State business days from invoicing.
40.12.3.17	Fiscal Agent shall attend CMS-sponsored Drug Rebate Labeler Dispute meetings, as directed by the State.	Met by operational processes and procedures. Pharmacy Director Sharon Greeson will attend the CMS-sponsored Drug Rebate Labeler Dispute meetings as required by the State and based on relevance of the agenda.
40.12.3.18	Fiscal Agent shall provide online access to five (5) years of historical drug rebate invoices based on criteria provided by the State accurately and consistently ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange. The interChange drug rebate system will provide online access to five years of historical drug rebate invoices using Web-based interChange panels. The data retained and reflected will meet State needs and provide an accurate and consistent view 99.9 percent of the time.

40.13.2 MARS Operational Requirements

EDS will provide a financial business analyst and a systems business analyst to support the MAR operational requirements. EDS Senior State Business Liaison Anthony Perkins also will be available to assist the State with MAR reports and related balancing outputs. These individuals will provide knowledge and expertise in interChange, State program policy, and the MAR solution and reporting, which will be invaluable to the State.

The Replacement MMIS management and administrative reporting (MAR) function will support the State's health and human services and federal requirements necessary for management reporting to provide a fully certified MAR solution.

EDS will provide two business analysts, one with a financial background and one with a systems background, to support the MAR operational requirements. The two business analysts will use the online MAR panels and will have direct access to BusinessObjects query and reporting functions, which will allow them to perform research against the detailed Replacement MMIS data. The State also will be provided this access for performance of queries and research of MAR data. Additionally, the EDS senior state business liaison, Anthony Perkins, will be available to support and assist the State with questions and inquiries relative to the MAR reports and related balancing outputs.

Our MAR solution will achieve the following:

- Extract data monthly from other functions of the MMIS and create extract files used to produce the monthly, quarterly, and annual MAR reports
- Summarize and maintain information from other functions for reporting data for current and historical time periods
- Run batch report jobs to create State and CMS reports
- Verify the accuracy of MAR reports through balancing processes
- Offer flexible desktop inquiry and reporting through parameter-driven Web pages

MAR reports will include summary information for executive management and detailed information for operations management, including cumulative data such as year-to-date information for comparative analysis.

EDS' financial and system business analysts will perform balancing of each monthly, quarterly, and annual report as required. We will balance the MAR data with comparable data from other MAR reports to support internal validity and provide an audit trail of the balancing process. EDS' senior State business liaison, along with the financial and system business analysts, will assist the State and address any questions about these reports, as well as assist with additional ad hoc MAR requests.

Response to MARS Operational Requirements

The following table, EDS Response to MARS Operational Requirements, describes how we will meet the requirements set forth in the RFP. Where appropriate, we have listed the existing interChange user interface panels, reports, or processes that meet the stated requirements.

EDS Response to MARS Operational Requirements

RFP No.	RFP Requirement	EDS Response
40.13.2.1	Fiscal Agent shall review the system audit trail for balanced reporting and deliver the balanced report to the State with each MARS production run.	Met by interChange and operational processes and procedures. EDS' financial and system business analysts will review the following MAR balancing reports and deliver balanced MAR reports after each MAR production run: • Balancing by COS • Balancing by Aid Category • MAR Reconciliation These reports balance parts of MAR to each other and operational balancing procedures executed by the EDS business analysts will verify that the production MAR data reconciles to the Replacement MMIS financial data.
40.13.2.2	Fiscal Agent shall respond to State requests for information concerning the reports.	Met by interChange and operational processes and procedures. The EDS system and financial business analysts, along with the EDS senior state business liaison, Anthony Perkins, will be available to answer questions and assist the State as needed concerning the MAR reports. Both EDS' analyst staff and the State will have access to interChange MAR panels and the BusinessObjects query and reporting function for ease of research and assistance with questions and ad hoc reporting.

40.13.3 MARS Operational Performance Standards

EDS acknowledges that there are no applicable MARS operational performance standards for the Replacement MMIS.

40.14.2 Financial Management and Accounting Operational Requirements

Financial operational requirements will be carried out by the Financial Management and Accounting organization under the leadership of Jamie Herubin. Jamie and his team bring a high level of expertise and experience to the program, which extends back to 1999 with Financial Management and Accounting operations for DMH. The team collectively has more than 23 years of relevant healthcare, DMA, and DMH experience contributing to their understanding of successful financial management and accounting operations.

The financial management and accounting operation carries the responsibility for processing and reconciling the financials for the State's healthcare programs. As such, the State seeks a financial management and accounting operation that enables accurate and timely processing of financial transactions.

The Replacement MMIS financial management and accounting operation, in conjunction with interChange, will delineate funding sources and apply or issue payments according to the State's budget. At the same time, it will provide a centralized system for managing the financial operations of the multiple divisions represented. For the past 30 years, EDS' Financial team has provided support for financial accounting, reporting, and balancing of funds for DMA, and we have provided this same level of support for DMH for the last seven years. Processing claims and issuing payments are important to effective and efficient financial management and accounting operation as well as providing refunds and managing accounts receivable in support of the State's needs.

In addition to internal balancing and tracking processes, the Replacement MMIS will provide users with critical financial information related to the reasons for financial transactions and the status of the transactions.

The following subsections discuss operational activities and how each plays a part in the overall Replacement MMIS.

State Program Funding

The Replacement MMIS will interface with the North Carolina Accounting System (NCAS) weekly before each checkwrite cycle to load the budget files received from the State. After the files are loaded and the NCAS Budget Load Report has been generated, the NC DHHS Controller's Office will be notified and asked to verify that the loaded funding amounts are accurate and to give approval for moving forward with the checkwrite cycle processes.

Claims adjudications and financial transactions will process during each checkwrite cycle based on the multi-payer design of interChange. Transactions for services for which no State funds are available will be denied unless the recipient has more than one population group to cover the service. If a recipient

has more than one population group, the claim will be immediately processed under the next population group to seek available funds.

The State will have the flexibility to set the criteria and hierarchy for claims payment to a particular budget/account, decide when to open and close budgets, and adjust budget dollars by cost center. The budget files will be updated during the checkwrite cycle with financial activity as transactions are processed against the open budgets. After the checkwrite is complete, the updated budget files will be transmitted to the State using the NCAS interface. Financial transactions and reporting will be accounted for and maintained in interChange. State, federal, and county shares will be computed for transactions such as recoupments, recoveries, paid claims, disproportionate share hospital (DSH)/cost settlement and payments, and State-authorized payouts.

Payment Estimation Reporting

Inherent within interChange, the Payment Estimation report (FIN-1332) is available each week. The transactional nature of interChange allows this report to accumulate claims paid since the last checkwrite and summarize by benefit plan and budget code the total number of transactions and estimated paid amounts before the checkwrite is executed.

Based on the payment estimate report, the State will have the data to make a decision whether sufficient funds exist to authorize a checkwrite. This information also will provide the State with a mechanism to estimate how many dollars must be moved from investments and draw dollars from CMS to fund the checkwrite. This function improves cash flow by allowing the State to better estimate cash needs and leave unencumbered State funds in interest-bearing accounts.

Accounts Receivable

Accounts receivable (A/R) records are established either systematically or manually within interChange. Manual requests to initiate an A/R come from various sources within the State and are entered through interChange Web panels. The Replacement MMIS Accounts Receivable Selection Web panel will allow the State to search for any outstanding amounts owed by the provider, dollars collected against an A/R, and any bad-debt or correction write-offs that have taken place.

A/R collection notification letters are created through the COTS DOC1 letter generator tool and sent to the provider to notify them of monies owed to the State and to request a refund because of insufficient claims activity by the provider. A/R reporting for tracking and reporting of current balance will be available to the State.

Returned Checks and Provider Refunds

When a financial transaction such as a returned check or provider refund is processed, the associated claims are voided and the corresponding budget account is credited with the returned amount. Providers will return payments, and after a check is received by EDS, the same procedure is followed as with a returned check.

Provider refunds and returned checks can be viewed through the Cash Receipt Search Web panel. Searches can be performed by provider name, cash control number, check amount, check date, and check number using this panel, which is readily accessible to State and EDS users.

Internal Revenue Service (IRS) Reporting

interChange will accumulate and retain provider earnings in the provider file. These calendar-year dollars are reported by the IRS' deadline of January 31 as medical and healthcare payments on the IRS 1099-MISC form. Provider earnings are reported electronically to the IRS by the established deadline. Corrections to 1099s can be requested by providers per IRS guidelines for the three most recent years of reported provider earnings. Authorized State and EDS users can access the details of annual 1099 reporting through the 1099 display panel in interChange. A CP2100 file is received from the IRS containing tax name and tax identification number mismatches, and B-Notices are issued and tracked to make sure appropriate withholdings and corrections occur, as required.

Financial Controls

The Replacement MMIS maintains financial activity according to the generally accepted accounting principles (GAAP) and contains more than sufficient controls to track each financial transaction, balance each batch, and maintain the appropriate audit trials on the claims history and consolidated A/R system. Where appropriate, the financial subsystem balancing functions in interChange are performed when required. The financial balancing processes compare expenditures, EFTs transmitted, manual warrants issued or reissued, State transfers, and system checks issued to notify the State of checkwrite funding requirements.

The provider earnings file is compared year-to-date (YTD) to the expenditure file and the payment transactions file to verify that the three are equal. Financial transactions and activities are balanced across subsystems. Financial counts and costs are compared on claim and non-claim transactions between files to confirm accuracy and that all transactions are accounted for. Additionally, EDS is well aware that the EDS Financial team must have tasks segregated to provide required financial controls.

Banking Interfaces

EDS will maintain required bank accounts for the State. A depository account is established for provider refund dollars. A disbursing account is established to receive the checkwrite funding and process EFTs and checks. The NC DHHS Controller's Office wires the total checkwrite dollars directly to the disbursing account bank. EDS' Financial team will be responsible for transferring the funds that remain after check presentments are satisfied to the State treasury account for investment. The State Treasurer Office will invest in financial instruments that meet State cash flow policy requirements and maximize interest. The State Treasurer and EDS will coordinate and provide funds to the disbursing office daily to cover the amount of check presentments.

Details supporting provider payments and check activity can be accessed through the interChange Payment Search Web panel. This Web panel allows users to view payment history for each provider. The history records indicate the date a payment was issued and the status of the payment with the bank, whether it has cleared or is still outstanding. This banking checkwrite funding, transfer, EFT, and check payment process is similar to current practices, and the EDS Financial team will continue to provide accurate, timely financial banking data in support of maximizing State dollars while issuing timely payments to providers.

Reconciliation

As we have described, the entire interChange financial functional area is predicated on linking each transaction to the supporting detail and accumulating this data at a summary level while maintaining and accounting for all dollars. The Replacement MMIS provides online access to financial transactions generated, and the EDS team will use these reports in conjunction with bank data to provide, monitor, and reconcile banking as well as generate the required financial statements and outputs necessary to support the State.

Response to Financial Management and Accounting Operational Requirements

The following tables map the detailed solutions to the operational requirements of the financial and accounting functional area. Where appropriate, we have listed the existing interChange user interface panels, reports, and processes that meet the stated requirements. We also have identified when an integrated COTS piece of software is used to meet the requirements.

General Financial Management and Accounting Requirements

The following table, EDS Response to General Financial Management and Accounting Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to General Financial Management and Accounting Requirements

RFP No.	RFP Requirement	EDS Response
40.14.2.1	Fiscal Agent shall maintain the Replacement MMIS consolidated accounting function by program, type, and provider. Fiscal Agent shall deduct/add appropriate amounts from provider payments for past due receivables and other required withholding.	Met by interChange and operational processes and procedures. We will maintain the consolidated accounting function by program, type, and provider. In addition, we will make deductions/adds in appropriate amounts from provider payments for past due receivables and other required withholding.
40.14.2.2	Fiscal Agent shall provide the State with confirmation and validation for each completed file maintenance request (receipt date of file maintenance request, file maintenance initiation date, file maintenance completion date, and supervisor validation date) related to Financial Management and Accounting.	Met by interChange and operational processes and procedures. File maintenance requests will follow a similar process as they do today. After discussion of the intended change with the State and an analysis of the impact, the tables in interChange will be updated through the Reference subsystem panels or through automated processes for bulk data, such as ICDJ code updates.
40.14.2.3	Fiscal Agent shall ensure provider payments are generated by the processing of claims for eligible recipients, adjustments, or by State authorizations, such as payouts for court orders, open/shut cases, dropped eligibility, and policy changes.	Met by interChange and operational processes and procedures. Automated data feeds and manual updates as required combined with reviews of claims payment will make sure claims are processing and provider payments are generated according to desired policy and procedures.
40.14.2.4**	Fiscal Agent shall provide nightly interface to NCAS to validate availability of funds for claim-specific reimbursement.	Met by interChange. Programs will run nightly to update interChange with transmitted NCAS data and likewise create any extract files to be sent to NCAS for processing.
40.14.2.5	Fiscal Agent shall establish systematic payment plans or recoupments for provider receivable balances, collect the payments, apply the payments, monitor the process, and report on the payment activity at a provider and summary level on a weekly basis. Once a provider becomes delinquent in the payment schedule, the recoupment process shall be implemented until the debt is resolved.	Met by interChange and operational processes and procedures. The Weekly Accounts Receivable Summary report meets this requirement. EDS' experienced Financial team will continue to monitor, track, report, and follow up on A/Rs.
40.14.2.6	Fiscal Agent shall ensure that correct Federal Medical Assistance Percentage (FMAP) is applied to receivables and payables within the monthly financial processing cycles. (Certain receivables and payables may be subject to prior period FMAP.)	Met by interChange. interChange is designed with optimization of the federal contribution in mind. Proper setting of the financial parameters will enable the appropriate FMAP to accounts receivable and accounts payable within the monthly financial processing cycles.

RFP No.	RFP Requirement	EDS Response
40.14.2.7	Fiscal Agent shall issue provider checks in the number of cycles required by the State each year on State-designated business days, dating the checks and reports for the checkwrite date except for the final checkwrite of the month, which is dated, as directed by the State.	Met through configuration of interChange parameters and features. interChange is flexible in the creation of financial cycle settings and processing dates to meet the State's checkwrite schedule.
40.14.2.8	Fiscal Agent shall balance each checkwrite in accordance with State-approved policy and procedures to ensure report accuracy and the completion of a final audit for that checkwrite.	Met by interChange and operational processes and procedures. interChange will not allow a cycle to complete unbalanced and provides checks and balances in its programming to enable a proper final result. Reporting will be reviewed as part of the regular process for financial accuracy.
40.14.2.9	Fiscal Agent shall accept requests to override EFT payment to a provider and create the check voucher as a paper check request.	Met by interChange and operational processes and procedures. interChange provides the function to accept requests to override EFT payment to a provider and create the check voucher as a paper check request in the base system and can be used as needed.
40.14.2.10	Fiscal Agent shall accept and process all check voucher reconciliation.	Met by interChange and operational processes and procedures. EDS' Financial team will accept and process all check voucher reconciliations.
40.14.2.11	Fiscal Agent shall execute Positive Pay processing.	Met by operational processes and procedures. Our Financial team with bank services, Positive Pay, will verify check presentment issues and resolve as appropriate using the Positive Pay process.
40.14.2.12	Fiscal Agent shall ensure weekly budget reporting is consistent with the costs allocated during the checkwrite.	Met by interChange. The Financial Budget Information panel meets this requirement.
40.14.2.13	Fiscal Agent shall submit a draft annual checkwrite schedule by the last State business day in September each year.	Met by operational processes and procedures. EDS' Financial team will create and submit an annual checkwrite schedule in the State's specified time frame for State approval.
40.14.2.14	Fiscal Agent shall perform checkwrites per the State-approved checkwrite schedules.	Met by interChange and operational processes and procedures. Per the State-approved checkwrite schedules, EDS will execute and complete all scheduled checkwrites.
40.14.2.15	Fiscal Agent shall notify the State of the total checkwrite expenditure on the first day following the cycle.	Met by interChange and operational processes and procedures. We will notify the State of the total checkwrite expenditure the first day following the cycle.
40.14.2.16	Fiscal Agent shall notify the State by close of business of notification from the State Controller's Office that funds are in place each day following any delays in check mailings and EFTs.	Met by operational processes and procedures. EDS' manager, Jamie Herubin, will notify the State that funds are in place each day following any delays in check mailings and EFTs by close of business notification from the State Controller's Office.
40.14.2.17	Fiscal Agent shall notify the State the next State business day following the checkwrite cycle of any delays in the checkwrite process.	Met by operational processes and procedures. EDS' manager, Jamie Herubin, will notify the State of any delays in the checkwrite process on the State's specified schedule.

RFP No.	RFP Requirement	EDS Response
40.14.2.18	Fiscal Agent shall respond to State Memos as appropriate for canceling or delaying checkwrites or release of system-generated checks or EFTs.	Met by operational processes and procedures. On receipt of State Memos for canceling or delaying checkwrites or release of system-generated checks or EFTs, the EDS Financial team will process the memo requests appropriately.
40.14.2.19	Fiscal Agent shall balance each checkwrite in accordance with State-approved policy and procedures to ensure report accuracy and the completion of a final audit for that checkwrite.	Met by interChange and operational processes and procedures. interChange will not allow a cycle to complete unbalanced and provides checks and balances in its programming to verify an accurate, balanced final result. These system balance checkpoints will align to the State-approved policy.
40.14.2.20	Fiscal Agent shall process check voucher information from the State Controller's Office, updating payment information.	Met by interChange and operational processes and procedures. We will process check voucher information from the State Controller's Office with updated payment information.
40.14.2.21	Fiscal Agent shall ensure that the weekly budget reporting is consistent with the costs allocated during the checkwrite.	Met by interChange. The Financial Budget Information panel meets this requirement and will provide budget report data that reconciles and reflects all costs for checkwrite.
40.14.2.22	Fiscal Agent shall produce third party letters within the financial processing function of the checkwrite cycle.	Met by interChange and through COTS integration. The COTS DOC1 letter generator component of interChange meets this requirement and can generate third-party letters, as required, within the financial processing function for the checkwrite cycle.
40.14.2.23	~~Fiscal Agent shall produce reports and State claims within the financial processing function of the checkwrite cycle.~~	Cancelled. This requirement was deleted by RFP 30-DHHS-1228-08-R.
40.14.2.24	Fiscal Agent shall process State Payout Authorization Forms in accordance with State-approved guidelines to adjudicate claims that fail to process through the Replacement MMIS under normal circumstances.	Met by interChange and operational processes and procedures. When claims fail to process through the Replacement MMIS under normal circumstances, we will process State Payout Authorization Forms in accordance with State-approved guidelines.
40.14.2.25	Fiscal Agent shall execute, manage, maintain, and update financial operations, including claims payment, accounts receivable, accounts payable, cash management, transaction data entry, and financial participation calculations while maintaining detail accounting records in accordance with GAAP for all program financial transactions.	Met by interChange and operational processes and procedures. interChange financial processing is designed to meet and support the GAAP requirements for tracking and reporting program financial transactions.
40.14.2.26	Fiscal Agent shall enter and summarize all Replacement MMIS financial accounting transactions in accordance with GAAP prior to month-end closing deadlines specified by the NC DHHS Controller.	Met by interChange and operational processes and procedures. interChange financial processing is designed to meet and support the GAAP requirements for tracking and reporting financial transactions. We will adhere to month-end closing deadlines specified by the NC DHHS Controller.

RFP No.	RFP Requirement	EDS Response
40.14.2.27	Fiscal Agent shall maintain the MMIS Financial System operations in compliance with applicable State and Federal laws, regulations, reporting requirements, policies, business rules, and procedures as published and referenced in the Contract and the Procurement Library.	Met by interChange and operational processes and procedures. As interChange is implemented, the design process and testing results will verify that the system is adjudicating and paying within the guidelines listed. Operational Quality Control staff will also be tasked adhering to all applicable laws, rules, policies, and regulations.
40.14.2.28	Fiscal Agent shall implement and maintain effective internal controls over financial operations, accounting, physical access, system backup and recovery, and security for all Replacement MMIS financial operations, data, records, and assets.	Met by interChange and operational processes and procedures. Access to the financial data and processes is controlled by role-based security to verify that only those authorized have access to these features in the system. This same role-based security is applied to each part of the system. Access to banking information will be restricted to only those EDS team members responsible for performing or managing banking functions. Separation of duties will be implemented to the fullest extent possible.
40.14.2.29	Fiscal Agent shall complete the Office of State Controller Internal Control Self Assessment upon request by the NC DHHS Controller and provide a signed original to the NC DHHS Controller.	Met by operational processes and procedures. The EDS team will complete the Office of State Controller Internal Control Self Assessment as requested by the NC DHHS Controller.

MMIS Program Accounts Payable Requirements

The following table, EDS Response to MMIS Program Accounts Payable Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to MMIS Program Accounts Payable Requirements

RFP No.	RFP Requirement	EDS Response
40.14.2.30	Fiscal Agent shall record provider claims payable less any overpayment recoupments and required withholding and produce all program cash disbursements in accordance with procedures and a schedule approved by the State for each checkwrite cycle, including State-authorized payments.	Met by interChange and operational processes and procedures. Pricing and payment processing rules will be established by the experienced and knowledgeable EDS Financial team to properly disburse the correct payment to the provider according to State schedules and checkwrite cycles.
40.14.2.31	Fiscal Agent shall determine daily cash requirements and draw program cash from a special State disbursing account as needed.	Met by operational processes and procedures and through customization of interChange. The Financial Budget Information panel and process will be customized to calculate a daily draw, and the EDS Financial team will coordinate with the State disbursing account, as needed.
40.14.2.32	Fiscal Agent shall collect recipient premium payments.	Met by interChange and operational processes and procedures. The Financial Cash Receipt Information panel meets this requirement with interChange. The EDS team will

RFP No.	RFP Requirement	EDS Response
		collect and apply recipient premium using this panel.
40.14.2.33	Fiscal Agent shall produce refunds of recipient premiums.	Met by interChange and operational processes and procedures. The Financial Expenditure Information panel meets this requirement, and the EDS Financial team will use this panel to record and issue refunds of recipient premiums, as required.

Replacement MMIS Accounts Receivable Process Requirements

The following table, EDS Response to Replacement MMIS Accounts Receivable Process Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Replacement MMIS Accounts Receivable Process Requirements

RFP No.	RFP Requirement	EDS Response
40.14.2.34	Fiscal Agent shall monitor the status of each accounts receivable and reports weekly and monthly to the State in aggregate and/or individual accounts, both on paper and online.	Met by interChange and operational processes and procedures. The Weekly Accounts Receivable Summary report meets this requirement.
40.14.2.35	Fiscal Agent shall monitor compliance with written procedures to meet State and Federal guidelines for collecting outstanding provider and recipient account receivables in accordance with State-approved policy and procedures to ensure report accuracy and the completion of a final audit for that checkwrite.	Met by interChange and operational processes and procedures. The experienced EDS Financial team will monitor compliance with written procedures to meet State and Federal guidelines for monitoring, tracking, reporting, and collecting outstanding provider and recipient accounts receivable.
40.14.2.36	Fiscal Agent shall monitor compliance with written procedures to meet State and Federal guidelines for collecting outstanding provider accounts receivable.	Met by interChange and operational processes and procedures. The experienced EDS Financial team will monitor compliance with written procedures to meet State and Federal guidelines for monitoring, tracking, reporting, and collecting outstanding provider and recipient accounts receivable.
40.14.2.37	Fiscal Agent shall "write off" outstanding accounts receivable, when directed by the State.	Met by interChange and operational processes and procedures. As directed by the State, EDS' Financial team will "write off" outstanding accounts receivable.
40.14.2.38	Fiscal Agent shall ensure accurate collection and management of accounts receivables.	Met by interChange and operational processes and procedures. EDS' experienced staff has supported the Medicaid and mental health A/R process for years, and we will continue this support.
40.14.2.39	Fiscal Agent shall ensure that correct FMAP is applied to	Met by interChange. interChange is designed with

RFP No.	RFP Requirement	EDS Response
	receivables and payables within the monthly financial processing cycles. (Certain receivables and payables may be subject to prior period FMAP.)	optimization of the federal contribution in mind. Proper setting of the financial parameters will enable the appropriate FMAP to accounts receivable and accounts payable.
40.14.2.40	Fiscal Agent shall maintain claim specific and gross level accounts receivable records for amounts due the program, recoup past due items based on a hierarchy table approved by the State, apply all payments, and produce and distribute invoices, collection letters and accounts receivable reports.	Met by interChange and operational processes and procedures. Financial systems processes will be provided and supported by interChange. This financial system functionality will be used by EDS' Financial team and is readily available to the State.

Financial Accounting and Reporting Process Requirements

The following table, EDS Response to Financial Accounting and Reporting Process Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Financial Accounting and Reporting Process Requirements

RFP No.	RFP Requirement	EDS Response
40.14.2.41	Fiscal Agent shall produce general ledger to correspond to the checkwrite over the State's fiscal year and adjust the general ledger account balances on June 30th to reflect activity between the last June checkwrite and June 30th.	Met by interChange and operational processes and procedures. The general ledger will correspond to the checkwrite over the State's fiscal year and be adjusted to account balances within the State's specified time frame, such as the State fiscal year.
40.14.2.42**	Fiscal Agent shall make details of the general ledger, including all entries and balances, available to authorized State staff.	Met by operational processes and procedures and through COTS integration. All interChange financial reports will be readily accessible using the EMC | Documentum tool.
40.14.2.43	Fiscal Agent shall summarize checkwrite activity in the Checkwrite Financial Summary, Financial Participation Report, and general expenditure reports on a year-to-date basis and within ten (10) days of the State's fiscal year end on June 30th and provide these reports in accordance with State-approved format, media, distribution, and frequency.	Met by operational process and procedures and through COTS integration. Checkwrite activity will be summarized in reports produced by interChange within the State's specified time frames and approved media format with immediate availability using the COTS Documentum tool.
40.14.2.44	Fiscal Agent shall change financial participation rates in the Replacement MMIS to correspond with the Federal fiscal year.	Met by interChange and operational processes and procedures. EDS' Financial team will update the financial participation rates as directed by the State each State fiscal year.
40.14.2.45	Fiscal Agent shall ensure cross-checks and balances to other reporting is using the same data and is categorized in such a manner as to facilitate informed	Met by interChange and operational processes and procedures. interChange is designed with optimization of the federal contribution in mind. Proper setting of the

RFP No.	RFP Requirement	EDS Response
	program administration and supporting the State's receipt of maximum.	policy parameters will verify maximum federal participation.
40.14.2.46**	Fiscal Agent shall refer questions regarding rates and budgets to the State.	Met by operational processes and procedures. We will work with the State on each aspect of the Replacement MMIS including financial and pricing and we will refer rate- and budget-related questions to the State for answers.
40.14.2.47	Fiscal Agent shall ensure adherence to NC DHHS Cash Management Plan and Procedures.	Met by operational processes and procedures. Cash flow management is a crucial aspect of the State executing its programs, and the experienced EDS Financial team, led by Jamie Herubin, has knowledge of these policies and procedures and will continue support and compliance with the NC DHHS Cash Management Plan.
40.14.2.48	Fiscal Agent shall incorporate State-approved automated and manual systems to satisfy accounting and record-keeping objectives.	Met by interChange and operational processes and procedures.
40.14.2.49	Fiscal Agent shall notify the State immediately upon discovery of any erroneous payments, irrespective of cause, and prior to initiating appropriate recovery action.	Met by operational processes and procedures. EDS' Financial team will notify the State immediately whenever erroneous payments are identified and prior to initiating recovery actions.
40.14.2.50**	Fiscal Agent shall produce an extract of DMH claims data for the Client Data Warehouse (CDW) with each checkwrite.	Met by interChange and operational processes and procedures. The Replacement MMIS will produce an extract of DMH claims data for the CDW with each checkwrite.

IRS Reporting and Compliance Requirements

The following table, EDS Response to IRS Reporting and Compliance Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to IRS Reporting and Compliance Requirements

RFP No.	RFP Requirement	EDS Response
40.14.2.51	Fiscal Agent shall summarize each provider's NC DHHS earnings by LOB for the previous calendar year no later than January 15th of the succeeding year, providing the summary to the Internal Revenue Service and North Carolina Department of Revenue (NC DOR) by sending a file using File Transfer Protocol (FTP) media. Fiscal Agent shall provide this same information on each provider's last RA for the calendar year.	Met by interChange and operational processes and procedures. Providers' NC DHHS earnings by LOB will be summarized annually within the State-specified timeframe by interChange processing. interChange uses FTP to send providers' earnings files to the IRS and NC DOR.
40.14.2.52	Fiscal Agent shall send system-generated letters to providers requesting updated W-9s or a special IRS form depending on whether they are a first or second B-Notice.	Met by operational processes and procedures and through COTS integration. The DOC1 tool will system-generate letters to providers requesting updated W-9s for IRS first or second B notices.

RFP No.	RFP Requirement	EDS Response
40.14.2.53	Fiscal Agent shall record receipt date of each withholding and penalty request and completion date of withholding or penalty.	Met by interChange and operational processes and procedures. The interChange financial panels will support tracking and recording of withholding or penalty activities.
40.14.2.54	Fiscal Agent shall provide the State with confirmation and validation for each completed date of withholding or penalty.	Met by operational processes and procedures. The EDS team will provide the State with confirmation and validation for each completed date of withholding or penalty. Additionally, the State will have immediate online access to this information in interChange.
40.14.2.55	Fiscal Agent shall comply with all IRS regulations.	Met by operational processes and procedures. The EDS Financial team has extensive experience with IRS regulations and will maintain compliance through rigorous processes and oversight.
40.14.2.56	Fiscal Agent shall issue corrected 1099s to providers prior to March 31st each year and shall ensure that corrections are incorporated into the IRS file to report earnings for the prior year.	Met by interChange and operational processes and procedures. The paper 1099 print report will provide the required IRS data and report this information electronically to the IRS by the required deadline.
40.14.2.57	Fiscal Agent shall ensure accuracy of tax identification numbers and tax names reported.	Met by interChange and operational processes and procedures.

Cash Control and Bank Accounts Requirements

The following table, EDS Response to Cash Control and Bank Accounts Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Cash Control and Bank Accounts Requirements

RFP No.	RFP Requirement	EDS Response
40.14.2.58	Fiscal Agent shall ensure returned or refund receipts are received at the Fiscal Agent lock box for security and are accessed only by designated Fiscal Agent or bank personnel; receipts received are to be logged each State business day with disposition denoted, date, time, and individual processing the check.	Met by operational processes and procedures. The EDS Financial team will make sure returned or refund receipts are handled with security precautions and only by designated personnel.
40.14.2.59	Fiscal Agent shall deposit program cash receipts into the State-designated State Treasurer's Account on a daily basis; checks received that are missing information are photocopied and deposited into the State's designated account daily regardless of whether they are missing information. Checks received that are missing information result in a system-generated form letter denoting the required corrective action. (Letters are to be maintained in an online report for follow-up actions.)	Met by operational processes and procedures and through COTS integration. Our EDS Financial team will make sure cash receipts are deposited following State-specified guidelines in the State-designated account. The DOC1 letter generator tool will produce a form letter denoting required corrective actions for checks that are missing information.

RFP No.	RFP Requirement	EDS Response
40.14.2.60	Fiscal Agent shall retain copies of checks and all written correspondence from or to the provider for audit purposes throughout the life of the Contract.	Met by operational processes and procedures and through COTS integration. Required documents will be scanned, stored, and indexed to allow them to be retrieved as needed through our COTS Documentum solution.
40.14.2.61	Fiscal Agent shall process other non-provider checks received, such as TPL and Drug Rebate receipts, in accordance with State-approved policies and procedures; deposits these funds daily into the designated State Treasurer's Account.	Met by interChange and operational processes and procedures. Our EDS team will process other non-provider checks received within State-approved policies and procedures and time frames and deposit daily to the State's treasurer account.
40.14.2.62	Fiscal Agent shall contract and maintain State-approved banking services for, remittance lock box operations, and Fiscal Agent Disbursing Accounts.	Met by operational processes and procedures. EDS' Financial team maintains today and will continue to maintain State-approved banking services.
40.14.2.63	Fiscal Agent shall perform daily transfer of funds out of the State's Disbursing Account as appropriate to cover "presentments" on the Fiscal Agent Disbursing Account.	Met by operational processes and procedures and through customization of interChange. The Financial Budget Information panel and process will be customized to calculate a daily draw, and the EDS Financial team will coordinate with the State's Disbursing Account, as needed.
40.14.2.64	Fiscal Agent shall provide the bank with instructions to transfer funds from the State Disbursing Account to the Fiscal Agent Disbursing Account to cover the "presentments."	Met by operational processes and procedures. To cover the "presentments," EDS will provide the bank with funds transfer instructions each State business day to provide adequate funding of check presentments.
40.14.2.65	Fiscal Agent shall accept responsibility for and bear the cost of any overdraft penalties on Fiscal Agent-controlled checking accounts.	Met by operational processes and procedures. EDS accepts responsibility and will bear the cost of any overdraft penalties on fiscal agent—controlled accounts due to EDS' error.
40.14.2.66	Fiscal Agent shall monitor security of checks during matching, stuffing, and mailing process.	Met by operational processes and procedures. Quality assurance checks will be implemented by the EDS Financial team to provide security for checks during the mailing process.
40.14.2.67	Fiscal Agent shall perform monthly account reconciliation and submit State-approved reports within ten (10) business days of each calendar month, unless the Fiscal Agent notifies the State the reports have not been received from the banking institution in a timely manner.	Met by interChange and operational processes and procedures. EDS' experienced and knowledgeable staff has supported this effort of bank reconciliation and reporting and will continue to support the Replacement MMIS operations with the same accurate, timely reporting.

MMIS Program Cash Receiving Requirements

The following table, EDS Response to MMIS Program Cash Receiving Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to MMIS Program Cash Receiving Requirements

RFP No.	RFP Requirement	EDS Response
40.14.2.68	Fiscal Agent shall receive all program receipts in State-approved Fiscal Agent lock boxes established for each payer source, log each deposit item, scan or copy all deposit items and information received with the remittance, deposit all receipts daily, accurately record cash, and correctly apply receipts to the correct accounts in accounts receivable.	Met by interChange and operational processes and procedures. Our EDS Financial team will maintain accurate and documented processing of program receipts through the deposit process. Quality assurance checks in conjunction with automated interChange functionality will be implemented to verify accurate processing and records.
40.14.2.69	Fiscal Agent shall report the daily deposit totals to the NC DHHS Controller by 1:30 P.M. for all program cash receipts, including TPL, Drug Rebates, FADS, audit recoveries, cost settlements, refunds, and any other program receipts in accounts receivable while maintaining complete, accurate and detailed accounting records for all program funds received.	Met by interChange and operational processes and procedures. EDS' Financial team will report the daily deposit totals to the NC DHHS Controller by 1:30 p.m. for all funds EDS handles on behalf of the State. EDS, with interChange panels and reports, will provide complete, accurate, detailed activity records for all program funds.

Production and Distribution of Management Financial Reports Requirements

The following table, EDS Response to Production and Distribution of Management Financial Reports Requirements, describes how we will meet the requirements set forth in the RFP.

EDS Response to Production and Distribution of Management Financial Reports Requirements

RFP No.	RFP Requirement	EDS Response
40.14.2.70	Fiscal Agent shall produce and distribute all financial reports and interface files accurately and in the media, format, basis of accounting, and according to a schedule approved by the State.	Met by interChange and operational processes and procedures. interChange will produce the required reports in the format necessary as established by RFP requirements. interChange also can produce and distribute interface files accurately and on a State-approved schedule.
40.14.2.71	Fiscal Agent shall ensure that all financial reports and files meet State cutoff dates and can be balanced with underlying transactions for the applicable accounting period.	Met by interChange and operational processes and procedures. interChange, combined with our experienced Financial team, will verify that financial reports and files are generated by the State's cutoff dates and provide balancing data for the summary level to the underlying/detail transactions for the applicable accounting period.

40.14.3 Financial Management and Accounting Operational Performance Standards

EDS' commitment to performance excellence requires consistent application of quality principles and tools. We systematically monitor, analyze, and improve our operational practices with the goal of increasing efficiency and customer satisfaction. We also use industry-accepted quality principles and tools to design and implement our processes effectively.

EDS' management team, led by Jamie Herubin, reviews the operational performance reports to assess effectiveness of the entire organization. In accordance with contractual requirements and best practices, managers and supervisors promote their teams' continual awareness of the performance standards that EDS is required to meet by sharing the operational performance reports with their teams, posting targeted performance goals with actual results, and maintaining an environment that fosters continual improvement.

We continually evaluate our performance based on tangible measurements, and we develop corrective action plans to restore quality to optimal threshold levels as soon as we are aware of any drop. If quality has deteriorated, we document alternatives and recommendations for improvement and deliver them to the appropriate manager or supervisor for review and comment. For issues within EDS' control, we will plan and agree on an approach to implement the improvements and report these activities to the State as they occur. For issues beyond EDS' control, we provide the State with documentation of the issues, alternatives, the reported performance results, and our recommendations for improvement.

Response to Financial Management and Accounting Operational Performance Standards

The following table, Financial Management and Accounting Operational Performance Standards and Metrics for Measurement, describes how we will meet the requirements set forth in the RFP. The Metrics for Measurement column identifies EDS' approach for meeting, measuring, and reporting the standard. Metrics data will be captured, reported, and presented to the State online through a performance dashboard, which will be readily available and accessible to the State for ease of information and reference.

Financial Management and Accounting Operational Performance Standards and Metrics for Measurement

RFP No.	RFP Requirement	Metrics for Measurement
40.14.3.1	Fiscal Agent shall provide the State with confirmation and validation of accurate file maintenance request transactions ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. The interChange Financial Management and Accounting System utilizes internal balance protocols based on GAAP to verify that financial transactions are accurate at or above the level required by the State. File maintenance request status will be communicated to the State quickly, and sufficient quality checks will be incorporated into associated business processes to meet the State's accuracy requirements 99.9 percent of the time.
40.14.3.2	Fiscal Agent shall process accurate capitation and/or management fee adjustments ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. Automated capitation adjustment processes not only verify that the managed care assignments have capitation payments generated correctly but also that accurate rates are applied at the time they are generated. Quality checks also will be incorporated into the capitation and management fee adjustment processes to meet the State's accuracy requirements 99.9 percent of the time.
40.14.3.3	Fiscal Agent shall provide deposit of returned monies the same State business day of receipt.	Met by interChange and operational processes and procedures. The real-time architecture of the Replacement MMIS will enable returned monies to be deposited with accuracy and on the same State business day of receipt.
40.14.3.4	Fiscal Agent shall provide for processing of accurate capitation payments and management fees in the month-end claims cycle and payment in the first checkwrite of the next month.	Met by interChange and operational processes and procedures. In conjunction with managed care monthly assignments, capitation payments are generated simultaneously and are automatically available for the next financial cycle.
40.14.3.5	Fiscal Agent shall accurately complete processing of all HMO withholds and penalties and primary care provider penalties in the next claim cycle after receipt of withholding and penalty requests ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. From the interChange Payment Deduction and Managed Care Capitation panels, HMO withholds and penalties can be processed in accordance with State rules and direction. Quality checks will be incorporated into HMO withholds and penalties and PCP penalties business processes to meet the State's accuracy requirements.
40.14.3.6	Fiscal Agent shall publish the planned annual checkwrite schedule sixty (60) days prior to the start of the next calendar year.	Met by interChange and operational processes and procedures. The Replacement MMIS will enable EDS' Financial team to provide notifications and schedules that meet State-approved time lines. The annual checkwrite schedule will be created and delivered to the State 60 days before the start of the next calendar year.
40.14.3.7	Fiscal Agent shall notify the State by 9:30 A.M. Eastern Time on the first State business day following checkwrite	Met by interChange and operational processes and procedures. The Replacement MMIS will enable EDS' Financial team to provide notifications and schedules that

RFP No.	RFP Requirement	Metrics for Measurement
	of funds required.	meet State-approved time lines. This process will be carried out by our experienced finance accountant analysts.
40.14.3.8	Fiscal Agent shall notify the State by close of the business day of notification from the Controller's Office that funds are in place each day following any delays in check mailings and EFTs.	Met by interChange and operational processes and procedures. The Replacement MMIS will enable EDS' Financial team to provide notifications and schedules that meet State-approved time lines. EDS' accountant analysts will be responsible for coordinating check mailings and EFT communications with the State.
40.14.3.9	Fiscal Agent shall notify the State of any delays and reasons in the checkwrite process by 8:00 A.M. Eastern Time the next business day following the checkwrite cycle and estimated timeframe for completion.	Met by operational processes and procedures. EDS will notify the State by 8:00 a.m. Eastern Time the next business day of any checkwrite delays, the reasons for those delays, and an estimated time frame for checkwrite completion.
40.14.3.10	Fiscal Agent shall balance each checkwrite accurately ninety-nine and nine tenths (99.9) percent of the time. Any discrepancies shall be reported to the State immediately via Operations Incident Reporting procedures.	Met by interChange and operational processes and procedures. Systematic balancing will occur during checkwrite processing. Additionally, EDS' Financial team will meet the State's checkwrite balancing accuracy requirements. Discrepancies will be reported immediately through operations incident reporting procedures.
40.14.3.11	Fiscal Agent shall process check voucher information from the State Controller's Office accurately ninety-nine and nine tenths (99.9) percent of the time and within one (1) State business day of receipt.	Met by operational processes and procedures. Financial operations staff will receive and key check vouchers. Quality checks will be incorporated into check voucher processes to meet accuracy requirements. Staff levels and workload will be managed by Jamie Herubin to enable processing within one State business day of receipt.
40.14.3.12	Fiscal Agent shall ensure that weekly budget reporting is accurate and consistent ninety-nine and nine tenths (99.9) percent of the time with the costs allocated during the checkwrite.	Met by interChange. The interChange financial subsystem cycle will enable accurate budget reporting and consistency of data to meet the State's accuracy requirements.
40.14.3.13	Fiscal Agent shall accurately complete processing of all HMO withholds and penalties and primary care provider penalties in the next claim cycle after receipt of withholding and penalty requests.	Met by interChange and operational processes and procedures. The Replacement MMIS will allow EDS' financial staff to process HMO withholds and penalties as well as primary care provider penalties accurately in the next claim cycle after receipt of the request.
40.14.3.14	Fiscal Agent shall perform cost settlement activities accurately and consistently ninety-nine and nine tenths (99.9) percent of the time, as directed by the State.	Met by interChange and operational processes and procedures. The Replacement MMIS will allow our financial staff to perform cost settlement activities accurately and consistently by providing timely and current information to users assisting in cost settlement activities. Sufficient quality checks will be incorporated into cost settlement activities to meet the State's accuracy requirements.
40.14.3.15	Fiscal Agent shall ensure that correct FMAP is applied to receivables and payables accurately and consistently ninety-nine and nine tenths (99.9) percent of the time within the monthly financial processing cycles (certain	Met by interChange and operational processes and procedures. The interChange financial processing cycles are predicated on GAAP and, as such, the FMAP application will be accurate and comply with State defined requirements.

RFP No.	RFP Requirement	Metrics for Measurement
	receivables and payables may be subject to prior period FMAP).	
40.14.3.16	Fiscal Agent shall ensure accurate collection and management of accounts receivable/payable ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. The real-time processing of accounts receivable information enables interChange to provide EDS' financial staff the information needed to accurately collect and manage accounts receivable. Additionally, operational processes include quality checks for accurate collection, payment, and reporting of accounts receivable/payable in accordance with the State's requirements.
40.14.3.17	Fiscal Agent shall produce and mail out 1099/W9 earnings reports no later than January 31st each year and report to the IRS no later than March 1st.	Met by interChange and operational processes and procedures. Manual work processes and system processing will be created to enable on-time mailing of 1099/W9 earnings reports and on-time transmission of IRS reporting.
40.14.3.18	Fiscal Agent shall maintain the capability to remove accounts receivable on a monthly basis when a provider record has been terminated for one (1) year. Fiscal Agent shall generate a report of remove accounts receivables on a monthly basis.	Met by interChange and operational processes and procedures. The system will flag and remove accounts receivable that meet these criteria and generate appropriate reporting data to the State.
40.14.3.19	Fiscal Agent shall account for and report accurately and consistently ninety-nine and nine tenths (99.9) percent of the time to the State all program funds paid out and recovered in accordance with State-approved guidelines.	Met by interChange. The Replacement MMIS will track and account for program funds paid out and recovered, maintaining accurate and consistent reporting in accordance with the State's requirements. Reports will be provided through the interChange online reporting panels.
40.14.3.20	Fiscal Agent shall summarize each provider's NC DHHS for the previous calendar year no later than January 15th of the succeeding year, providing the summary to the Internal Revenue Service and NC DOR by sending a file using FTP media. Fiscal Agent shall provide this same information on each provider's last RA for the calendar year accurately ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange. interChange's 1099 generation function will handle the summarization and reporting of this information within the State's specified time frame and accuracy level to the IRS, NC DOR, and to the providers through the remittance and status report.
40.14.3.21	Fiscal Agent shall log receipt date of each withholding and penalty request and completion date of withholding or penalty within one (1) State business day of receipt accurately ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. The online, real-time architecture of the Replacement MMIS will allow fiscal agent staff to track, log, and process withholding and penalty requests in accordance with the State's time frame and accuracy level.
40.14.3.22	Fiscal Agent shall provide the State with confirmation and validation for each completed date of withholding or penalty on the State business day that the transaction is completed.	Met by interChange and operational processes and procedures. The interChange real-time architecture allows users to see the status of and provide validation for transactions, including withholding or penalties, on the day they are received and processed. EDS Financial Management and Accounting staff will notify the State upon successful completion of withholding and penalty entries into the

RFP No.	RFP Requirement	Metrics for Measurement
		system.
40.14.3.23	Fiscal Agent shall comply with all IRS regulations ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. EDS' understanding of IRS regulations combined with the application of GAAP will enable the Replacement MMIS to comply with all IRS regulations within the State-specified accuracy level.
40.14.3.24	Fiscal Agent shall issue corrected 1099s to providers prior to March 31st each year. Fiscal Agent shall ensure that corrections are incorporated into the IRS file to report earnings for the prior year accurately ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. Sufficient quality checks will be incorporated into processes for any manually corrected 1099s to meet accuracy requirements and enable issuance to the IRS prior to March 31 of each year. interChange and operational processes will enable accurate incorporation of corrections into the IRS file.
40.14.3.25	Fiscal Agent shall ensure accuracy of tax identification numbers and tax names reported ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange and operational processes and procedures. Sufficient quality checks will be incorporated into tax identification number and tax name entry processes to enable data entries to match the information received from providers to meet the State's accuracy requirements.
40.14.3.26	Fiscal Agent shall ensure that returned or refund checks are received at the Fiscal Agent lock box for security and are accessed only by designated Fiscal Agent personnel. Checks received shall be logged each State business day with disposition denoted, date, time, and individual processing the check accurately ninety-nine and nine tenths (99.9) percent of the time.	Met by operational processes and procedures. Processes will be managed to make sure lock box procedures are followed and that only designated EDS personnel have access to the lock box. interChange and operational processes will be designed to enable accurate recording of lock box receipts and meet the State's accuracy requirements.
40.14.3.27	Fiscal Agent shall deposit all program cash receipts received into the State-designated State Treasurer's Account each State business day by 1:00 P.M. and certify the amount deposited to the NC DHHS Controller by 1:30 P.M.	Met by operational processes and procedures. EDS' Financial team will continue to administer operational protocols that make sure cash receipts are received in the State Treasurer's Account each business day and certify the amount is deposited to the NC DHHS Controller by 1:30 p.m.
40.14.3.28	Fiscal Agent shall process other non-provider checks received, such as TPL and Drug Rebate receipts, in accordance with State-approved policies and procedures. Fiscal Agent shall deposit these funds daily into the State-designated State Treasurer's Account ninety-nine and nine tenths (99.9) percent of the time.	Met by operational processes and procedures. EDS' experienced financial staff will handle recipients, third-party liability (TPL), and drug rebate processes, which will be designed to meet daily deadlines and accuracy requirements.
40.14.3.29	Fiscal Agent shall perform monthly bank account reconciliation and submit State-approved reports within ten (10) State business days of each calendar month unless the Fiscal Agent notifies the State the reports have not been received from the banking institution in a timely manner.	Met by interChange and operational processes and procedures. EDS' experienced and knowledgeable staff has supported this effort of bank reconciliation and reporting and will continue to support the Replacement MMIS operations with the same accurate, timely reporting.
40.14.3.30	Fiscal Agent shall receive NCAS account data weekly to support checkwrite activity accurately and consistently	Met by interChange. NCAS account data will be received through an established interface, and confirmation of

RFP No.	RFP Requirement	Metrics for Measurement
	ninety-nine and nine tenths (99.9) percent of the time.	successful receipt will be delivered to the State in accordance with the State's accuracy requirements.
40.14.3.31**	Fiscal Agent shall apply special "timely filing" edits at the end of the State fiscal year: • AP/LMEs shall file all services rendered prior to May 1st no later than the cutoff for the last payment cycle in June. • May and June services shall be presented to the Fiscal Agent by a date established by the State. Timely filing allows budgeted services to be allocated to the appropriate fiscal year accurately and consistently ninety-nine and nine tenths (99.9) percent of the time.	Met by interChange. The flexible design of the interChange system allows for fiscal agent staff to apply edits and audits at any time, based on State-defined requirements. Timely filing edits will be applied based on rules established by the State.
40.14.3.32	~~Fiscal Agent shall notify the State by close of business of the day of notification from the State Controller's Office that funds are in place for the checkwrite.~~	Cancelled. This requirement was deleted by RFP 30-DHHS-1228-08-R.
40.14.3.33	Fiscal Agent shall summarize checkwrite activity in the Checkwrite Financial Summary, Financial Participation Report, and general expenditure reports on a year-to-date basis and within ten (10) days of the State's fiscal year end on June 30th	Met by interChange and operational processes and procedures. The Replacement MMIS will enable EDS' financial staff to provide notifications and reports such as Checkwrite Financial Summary, Financial Participation Report, and general expenditure reports on a year-to-date basis to the State in time to meet State-approved schedules.
40.14.3.34	Fiscal Agent shall assure that Checkwrite Financial Summary and FPR Reports are completed the day after each checkwrite.	Met by interChange and operational processes and procedures. Processes will verify that system-generated reports are produced the day after each checkwrite.
40.14.3.35	Fiscal Agent shall ensure month-end processing and financial reports are completed, balanced and distributed no later than the fifth business day of the following month.	Met by interChange and operational processes and procedures. The EDS Financial team will work with the State to design and implement procedures to complete the month-end processing and financial reports on time, balanced at summary and detail levels, and distributed in accordance with the State's schedule.
40.14.3.36	Fiscal Agent shall produce and maintain accounts receivable reports.	Met by interChange and operational processes and procedures. The Weekly Accounts Receivable Summary report meets this requirement.
40.14.3.37	Fiscal Agent shall produce and maintain MMIS Medicaid Accounting System Reporting.	Met by interChange and operational processes and procedures. The Replacement MMIS will produce and maintain MMIS Medicaid Accounting System Reporting.
40.14.3.38	Fiscal Agent shall produce and maintain Maximum Allowable Cost (MAC) Transactions and Reporting.	Met by interChange and operational processes and procedures. The Replacement MMIS will produce and maintain MAC Transaction and Reporting.
40.14.3.39	Fiscal Agent shall produce and maintain Medicaid Adjustments Register Reporting.	Met by interChange. The Medicaid Adjustments Register Reporting will be included as part of the system functions.

RFP No.	RFP Requirement	Metrics for Measurement
40.14.3.40	Fiscal Agent shall produce and maintain listing of paid claims for Indians on reservations.	Met through customization of interChange. During DDI, a new report will be developed to meet this requirement.
40.14.3.41	Fiscal Agent shall produce and maintain the listing of buy-in premiums paid for Indians on reservations.	Met through customization of interChange. During DDI a new report will be developed to meet this requirement.
40.14.3.42	Fiscal Agent shall produce and maintain the listing and file containing Indian financial adjustment transactions.	Met through customization of interChange. During DDI a new report will be developed to meet this requirement.
40.14.3.43	Fiscal Agent shall produce and maintain the Medicaid Cost Calculation Reporting.	Met by interChange. The Medicaid Cost Calculation Reporting will be included in the system functionality.
40.14.3.44	Fiscal Agent shall produce and maintain NCAS Program Cost Interface.	Met by interChange. NCAS Program Cost Interface functions will be included and maintained throughout operations.
40.14.3.45	Fiscal Agent shall produce and maintain the Monthly County Bank Draft File.	Met through customization of interChange. During DDI a new report will be developed to meet this requirement.
40.14.3.46	Fiscal Agent shall produce and maintain MMIS Summary of Paid Claims.	Met by interChange. This MMIS Summary of Paid Claims Report will be included in the Replacement MMIS.
40.14.3.47	Fiscal Agent shall provide system logging for all program cash receipts received each State business day in Fiscal Agent/bank-managed lock boxes designated by the State with disposition denoted, date, time, and individual processing the receipt.	Met by interChange and operational processes and procedures. Our EDS Financial team in conjunction with the State, will develop and maintain a system for logging, dispositioning, and processing all program cash receipts received each State business day.
40.14.3.48	Fiscal Agent shall index images of checks and all written correspondence from or to the provider for audit purposes throughout the life of the Contract.	Met through COTS integration. On receipt of checks and provider-written correspondence, EDS will scan, index, and store them in the EDMS.
40.14.3.49	Fiscal Agent shall provide verification of daily deposit total to receipt logs by an employee who is independent of the lock box remittance and bank deposit process.	Met by operational processes and procedures. Processes will be designed to make sure verification procedures are performed by EDS staff members who are independent of the lockbox remittance and bank deposit process.
40.14.3.50	Fiscal Agent shall process and post transactions for all program cash receipts received in Fiscal Agent/bank-managed lock boxes designated by the State.	Met by interChange and operational processes and procedures. EDS' Financial team will continue entering and posting all program cash receipts as directed by the State.
40.14.3.51	Fiscal Agent shall disposition all program cash receipts and adjustments within the month of receipt to the applicable program division, benefit plan, NCAS CAC code and period code, reason code, service, and county code.	Met by interChange and operational processes and procedures. EDS' Financial team and the State have processes to disposition program cash receipts and adjustments within the State-approved time parameters.
40.14.3.52	The Fiscal Agent shall produce an extract of DMH claims data for CDW with each checkwrite.	Met by interChange and operational processes and procedures. The Replacement MMIS will produce an extract of DMH claims data for the CDW with each checkwrite.
40.14.3.53	Fiscal Agent shall successfully complete each checkwrite by the date on the State-approved Checkwrite Schedule.	Met by interChange and operational processes and procedures. Per the State-approved checkwrite schedules, EDS will execute and complete all scheduled checkwrites.

50.2.4.3 Statement of Work

RFP Reference: 50.2.4.3 Statement of Work, Pages 276-277

The following statement of work (SOW) lists the work necessary to deliver the requirements identified in the RFP. The deliverables and/or performance standards are identified for each work item. For easy cross-reference, the SOW number corresponds to the work breakdown structure (WBS) number contained in the project schedule in proposal section 50.2.5.2 Integrated Master Schedule, with the exception of the Operations Section and the Turnover Section, which are not reflected in the DDI project schedule. In order to not repeat information in this SOW, we reference other sections of this proposal containing the details.

STATEMENT OF WORK FORMAT

DDI Section			
SOW Number	**Work Statement Description**	**Performance Standard**	**RFP References**
1.3	**Project Startup Activities.** The start-up phase confirms a mutual understanding of scope, establishes internal procedures, and organizes the team that will complete the planning activities. The start-up phase activities are described in detail in section 50.2.5.1 Integrated Master Plan. The tasks are as follows: • Establish initial project team and internal financial procedures • Review staffing requirements • Set up facilities • Review and debrief final contract • Conduct kickoff meeting • Conduct initial project team orientation • Procure hardware and software • Install interChange hardware and software • Set up iTRACE • Establish initial project environments **Planning.** In this phase, the EDS project management team will develop the project components discussed in section 50.2.5 Section E—Project Management	Performance of these work activities can be measured by State approval of the following deliverables: • Stakeholder analysis • Staffing management plan • Software development and systems engineering methodology • Deployment/rollout plan • EVMS reports • Project schedule • Test and quality management plan • Communication plan • Risk management plan • Change control/configuration management plan • Problem management plan • Security plan • Data accession list • Browser-based project information repository (iTRACE)	50.2.5 Section E—Project Management Plan

	Plan. The planning activities are described in detail in section 50.2.5.1 Integrated Master Plan. The detailed project plan will include the project schedule, quality assurance plan, configuration management plan, communication plan, risk management plan, change control plan, and problem management plan. These plans will be developed in the following activities: • Project deliverables content and format review • Develop stakeholder analysis • Develop staffing management plan • Review cost and budget estimates • Review software development and systems engineering methodology • Develop deployment/rollout plan • Review Earned Value Management System(EVMS) reports • Create project management plan		
1.4	**Ongoing Project Management.** We provide comprehensive project management throughout the life of the project. As described in section 50.2.5 Section E—Project Management Plan the project plan and components are living documents constantly being updated to reflect the current status of the project.	Performance of these work activities can be measured by State approval of updates to the following deliverables: • Project schedule • Test and quality management plan • Communication plan	50.2.5 Section E—Project Management Plan

		• Risk management plan • Change control/configuration management plan • Problem management plan • Security plan • Data accession list This phase also will include State approval of the following deliverables: • Operations management plan • Turnover plan • Business continuity and disaster recovery plan	
1.7.1	**Requirements Verification (RV).** The requirements are validated with the State. Documentation is updated in iTRACE.	Performance of these work activities can be measured by State approval of the following deliverable: • Requirements verification updates in iTRACE	50.2.4 Section D—Proposed Solution Details 50.2.7 Section G—Contract Data Requirements List 50.2.5.3 Master Test Process and Quality Assurance Approach
1.7.8	**Conversion - Analysis, Mapping, Design, Testing and Preliminary Conversion.** EDS will begin data conversion activities early in the project. This will include planning and	EDS will provide the State the following deliverables for approval in this phase: • Data conversion and migration	50.2.4.1.3 Data Conversion and Migration Approach

	requirements gathering. The State will be able to review preliminary data conversion plans.	plans for each subject area • Data conversion requirements analysis and mapping • Preliminary data conversion results	
1.7.5	**Detail System Design Documentation.** The design process will create a technical level design document. In this phase the technical design documentation is created in iTRACE.	Performance of these work activities can be measured by State approval of the following technical design documents: • Recipient management • Provider management • Claims/POS • Third-party liability (TPL) • Prior approval • Automated voice response system (AVRS) • Drug rebate • Managed care • Management and Administrative Report (MAR) • Eligibility Verification System (EVS) • Reference • Benefit administration • Financial • Home health—Early Periodic Screening, Diagnosis, Treatment (EPSDT) • Drug Utilization Review (DUR)	50.2.4 Section D—Proposed Solution Details

		Pro-DUR/Retro-DUR • Computer-based training (CBT) • Desktop publishing • Single sign-on	
1.7.6	**Construction and Unit Testing.** interChange will be modified and enhanced. Application components will be unit tested to verify that a function or set of functions tested meet North Carolina requirements.	This phase contains several EDS checkpoints. There are no North Carolina milestones or deliverables in this phase. Performance can be measured by entry into system testing.	50.2.4 Section D—Proposed Solution Details
1.8	**Testing.** In this phase the following testing activities will occur: • **System Testing—**This testing verifies that the system functions as required based on approved business requirements. • **Inter-System Testing (IST)—**IST verifies that the interfaces between interChange and external systems function according to requirements. This requires coordination between entities for data test cases and scheduling. • **Parallel Testing—**This testing will run converted claims through the new system and compare those processing results to the legacy system to see if the claims priced the same and flagged the same errors.	Performance of these work activities can be measured by State approval of the following deliverables: • System testing results • Inter-system testing (IST) results • Parallel testing results • Regression testing results • Volume/stress testing results • UAT results • User operational readiness test results	50.2.4.1.2 Software Development and Systems Engineering Methodology

	Any discrepancies will be investigated to determine which system was correct. • **Volume/Stress Capacity and Performance Testing—**This testing verifies system performance and capacity scalability under full operations. • **Regression Testing—**Regression testing confirms that changes and upgrades to the software product have not resulted in introduction of new defects. • **User Acceptance Test (UAT)—**UAT tests interChange components, processes, conditions, and cycles, including conversion and interface software for the complete application with system users.		
1.9.2	**DHHS and Provider Training Sessions**. Training plans will be developed for relevant stakeholder groups (target audiences). EDS will develop DHHS and provider training materials. EDS will manage logistics for training delivery. EDS will deliver classroom and CBT training.	Performance of these work activities can be measured by State approval of the following deliverables: • Training plan • Training material and manuals • Completion of training classes	50.2.4.4 Training Approach
1.11.1	**System Implementation.** Implementation will involve delivery and modification of Replacement MMIS code	Performance of these work activities can be measured by State approval of the following	50.2.4.1.4 Deployment/Rollout

	to the State and the final data conversion. Final conversion results will be reviewed with the State.	deliverables: • Status, progress, and variance reports • Final data conversion results • Notification of readiness to assume fiscal agent functions	Approach

Operations Section			
SOW Number	**Work Statement Description**	**Performance Standard**	**RFP References**
2.1	**Mail room.** EDS will prepare and process incoming and outgoing mail. Mail is date-stamped with date of receipt. EDS will print and mail or electronically deliver Replacement MMIS State-approved forms. EDS will prepare RAs for mailing or transmitting, electronic funds transfers (EFTs) for transmitting, and checks for release and mailing.	The performance standard is met when: • Mail date-stamped with actual date of receipt within one business day of receipt • Print and mail Replacement MMIS State-approved forms to providers within two business days of receipt of the provider request (at no cost to the provider).	10.10 Life-Cycle Support Objectives 10.12.1 Operations Management CDRL - Operations Management Plan (OMP) 50.2.4.2 Operations 50.2.6 Section F - Operations Management Approach These references apply to all parts of the

			operations section.
2.2	**Data entry/imaging.** EDS will perform data entry of hard-copy claims. EDS will scan hard-copy claims and accompanying documentation. EDS will pre-screen hard-copy claims before entering claims into the system and return those not meeting certain criteria to providers under the Return to Provider (RTP) letter, indicating missing or incorrect information and log returned claims daily.	The performance standard is met when: • Entry-field accuracy rates are greater than 98 percent. • Every claim and attachment is scanned within one State business day. • Images of checks and written correspondence from or to the provider are indexed for audit purposes throughout the life of the contract.	See SOW Number 2.1 for RFP references for this line.
2.3	**Recipient.** EDS will maintain recipient data and provide access using any combination of recipient ID number or Social Security number (SSN,) name or partial name, date of birth (DOB), gender, Medicare Health Insurance Claim Number (HICN), or county. EDS also will provide capability for name and partial-name search through use of a proven phonetic/mnemonic algorithm, such as Soundex or a State-approved solution. Alternatively, recipients can be classified into multiple concurrent eligibility groups by health benefit program and benefit plan.	The performance standard is met when: • Specified Common Name Data Service (CNDS) data is reconciled with the Replacement MMIS each State business day. • Specified State-entity DMA eligibility data is reconciled with Eligibility Information System (EIS) each State business day. • Specified State-entity DMH eligibility data is reconciled with ASC X12N 834 transactions each State business day. • Online access to State entities'	See SOW Number 2.1 for RFP references for this line.

		eligibility edit/error reports are provided by 7 a.m. Eastern each State business day. • The Replacement MMIS is updated with batch eligibility data from each State entity by 7 a.m. Eastern each State business day. • Each State entity's eligibility data is updated from online processes for State EIS, CNDS, local managing entities (LMEs), and DPH in near real time. • Certificates of Creditable Coverage (COCCs) are generated and the mail date for each COCC mailed is logged. Fiscal agent provides a monthly report with the number of recipients terminated from each health plan and the number of COCC mailed within one month of the termination.	
2.4	**Claims Processing.** EDS will provide online claims resolution, edit override capabilities for each claim type, and online claims adjudication. EDS will provide the capability to sort suspended claims into applicable work queues using	The performance standard is met when: • An internal control number (ICN) is assigned to every claim, attachment, and adjustment within 24 hours of	See SOW Number 2.1 for RFP references for this line.

	K2 workflows.	receipt. • Within 24 hours of processing, a notice of teleprocessed electronic claims files received as either accepted or rejected, along with the number of claims, is sent to the submitter. • Ninety percent of clean claims are adjudicated for payment or denial within 30 calendar days of receipt. • Ninety-nine percent of clean claims are adjudicated for payment or denial within 90 calendar days of receipt. • Nonclean claims are adjudicated within 30 calendar days of the date of correction of the condition that caused the claim to be unclean. • Correct claims are provided disposition and posted to the appropriate account or, when appropriate, additional information is requested within one State business day of receipt. • Hard-copy claims missing State-specified required data are returned within two State business days of receipt.	

		• The State is notified of any delays in the checkwrite process by 8 a.m. Eastern the next State business day following the checkwrite cycle. • The State is notified immediately upon discovery of any erroneous payments, irrespective of cause, and before initiating appropriate recovery action. • Financial month-end reporting to the State is provided within three days from the last checkwrite of each month. • Specified quarterly extract files are provided to the DUR vendor within five State business days of the start of the month following the quarter's end. • Payment claims are adjudicated with the date of service in previous fiscal year July through April claims by the last checkwrite in May for payment, and claims for May and June are adjudicated by the last checkwrite in October of the current fiscal year August for payment because of State	

		fiscal year processing of the State monies.	
2.5	**Pharmacy Point of Sale.** EDS will provide an interactive system that accepts NCPCP-compliant pharmacy claims and processes these claims according to policy including the notification to the provider of potential Pro-DUR alerts. EDS will price pharmacy claims incorporating State-approved pricing methodologies, including using the lesser of logic among the available rate types. EDS will then return the appropriate NCPDP response.	The performance standard is met when: • A response is provided in five seconds or less 98 percent of the time, 24 hours a day, 7 days a week, 365 days a year. • POS is available 99.9 percent of the time, 24 hours a day, 7 days a week, 365 days a year, except for scheduled downtimes. • Applicable documentation and successful test data are provided for State approval within 10 State business days before value-added network (VAN) Replacement MMIS implementation.	See SOW Number 2.1 for RFP references for this line.
2.6	**Adjustments.** EDS will receive, scan, and perform optical character recognition (OCR) adjustments and then process them through the system for adjudication. EDS will direct workload through the K2 workflow engine process.	The performance standard is met when: • Provider-initiated adjustments are processed within 45 calendar days of receipt.	See SOW Number 2.1 for RFP references for this line.
2.7	**Retrospective Drug Utilization Review.** EDS will provide a file of paid drug claims to the Retro-DUR vendor. EDS also will	The performance standard is met when:	See SOW Number 2.1 for RFP references for

	provide a file of recipient, physician, clinic, hospital, and pharmacy provider data to the Retrospective DUR vendor.	• Specified quarterly extract files are provided to the DUR vendor within five State business days of the start of the month following the quarter's end.	this line.
2.8	**Drug Rebate.** EDS will handle required drug rebate activities, such as issuance of invoices, receipts, entry, handling of disputes and update data on manufacturers with whom rebate agreements exist.	The performance standard is met when: • An outstanding rebate balance percentage (that is, more than 45 days) of less than 10 percent of total rebates due for each quarter is maintained, excluding the outstanding balance of Manufacturers' Disputes Accounts Receivable. • Total Medicaid expenditure is provided for multiple source drugs (annually), as well as other drugs (every three years) accurately and consistently 99.9 percent of the time. • Labeler checks received by labeler, check number, amount, date received, date entered into DRS Accounts Receivable file, and date of deposit are logged. The fiscal agent forwards the logs to the State within five business days from the end of	See SOW Number 2.1 for RFP references for this line.

		the previous month. • The drug rebate accounts receivable is updated within two State business days of receipt. • Labeler checks are deposited within one State business day of receipt. • Interest calculation is performed on outstanding drug rebate balances and results are applied to drug rebate accounts receivable 99.9 percent of the time, as directed by the State. • End-of-month drug rebate balancing processes are performed and forwarded to the State for review within five State business days of the end of the previous month. • Drug rebate history data is extracted monthly and moved to the quarterly file within two State business days from the end of the previous month. • Labeler disputes are logged on the date of receipt and forwarded to the State within five business days from the end of the previous month. • Labeler disputes are processed	

		within 10 State business days from the date of receipt. • A Recapitulation Report, which is a revised invoice, is produced for the labeler one State business day after the completion of the dispute resolution. • The Recapitulation Report is sent to State auditor(s) for review and approval by close of business the same day the Recapitulation Report is produced. • The Recapitulation Report is sent to the labeler with a copy of the current summary balance the same day the State auditor's approval is received. • Quarterly invoices for each labeler that has a rebate agreement signed with CMS or the State, as division appropriate, are created and forwarded within five State business days from receipt of CMS tape. Fiscal agent electronically transfers required data to CMS and the State as applicable to the drug rebate requirements within five State	

		business days from invoicing. • Online access to five years of historical drug rebate invoices is provided based on criteria provided by the State accurately and consistently 99.9 percent of the time. • The fiscal agent attends CMS-sponsored Drug Rebate Labeler Dispute meetings, as directed by the State.	
2.9	**Eligibility Verification System.** EDS will provide the capability to receive and process eligibility inquiry and response transactions in real-time and batch transactions.	The performance standard is met when: • A response from the EVS is provided in three seconds or less 98 percent of the time, 24 hours a day, 7 days a week, 365 days a year. • EVS is available 99.9 percent of the time, 24 hours a day, 7 days a week, 365 days a year, except for scheduled downtimes. • Applicable documentation and successful test data are provided to the State for approval within 10 State business days before VAN Replacement MMIS implementation.	See SOW Number 2.1 for RFP references for this line.

2.10	**Automated Voice Response System.** EDS will provide toll-free telephone access for providers and Medicaid recipients to access relevant claims, payment, recipient eligibility, and prior approval information from the Replacement MMIS.	The performance standard is met when: • The daily systems check is performed to verify that the AVRS electronic interface is working properly and the findings are reported monthly. • Transaction analysis occurs by hour of the day, indicating the number of transactions processed, and reports are created monthly. • A response from the AVRS is provided within three seconds or less 98 percent of the time, 24 hours a day, 7 days a week, 365 days a year, except for State-approved scheduled system maintenance. • System checks to the AVRS are executed daily, and the findings are logged. • Monthly AVRS logs are provided within five State business days from the end of the previous month. • A Web site for providers and recipients, nurse aides, potential employers of nurse aides, and so on is operated	See SOW Number 2.1 for RFP references for this line.

		and maintained 24 hours a day, 7 days a week, 365 days a year, except for State-approved scheduled maintenance.	
2.11	**Provider Enrollment.** EDS will enroll eligible providers in a multi-payer environment using a single enrollment strategy. EDS will conduct provider credentialing and source verification of provider participation criteria and requirements and notify providers as needed electronically or by mailing. EDS will provide secure log-on that allows providers to retrieve and update incomplete application or check status of a submitted application. Any paper copies of provider enrollment or required paper copies for retained forms will be scanned and retained in our EDMS solution for easy retrieval and reference.	The performance standard is met when: • Hard-copy provider applications are logged and imaged within one State business day of receipt. • Credentialing and source verification are completed to make sure participation guidelines are met on completed applications within three business days. • Providers who have no negative responses to credentialing requirements are approved within two State business days of receipt of data necessary. • Approval letters and other State-required information are sent within one State business day of provider participation approval. • Denial letters and other State-required information are sent within one State business day	See SOW Number 2.1 for RFP references for this line.

		of provider participation denial. • Urgent reviews are initiated within one State business day of receipt of any adverse provider information. • Receipt of provider appeal requests is acknowledged within one State business day of receipt. • Appeals are adjudicated within 30 calendar days of receipt unless permission for delay is received from the State. • The State is provided with an extract of the MMIS provider tables each business night. • Online real-time access is provided between EIS, Mental Health Eligibility Inquiry, Medicaid Quality Control, Online Verification, Automated Collection and Tracking System (ACTS), and Health Information System (HIS) and the Replacement MMIS from 7 a.m. until 7 p.m. Eastern, Monday through Friday, including non-State business days when EIS is available for online processing, and from 10 a.m. to 5 p.m. Eastern on	

		weekends when EIS is available for batch processing. • Batch access to provider data is provided between EIS and the Replacement MMIS from 5:30 p.m. Eastern Monday through Friday until batch processing is completed. • Initial and ongoing updated e-mail listservs are provided based on initial and ongoing provider enrollments, disenrollments, and change requests on the same day the transaction occurs 99.9 percent of the time. • Monthly system check logs are provided.	
2.12	**Call center.** EDS will operate a Customer Service Call Center. Services will include an automatic telephone attendant that provides a hierarchical, menu-driven capability for directing calls to appropriate Replacement MMIS EDS call center staff. A toll-free telephone number shall be provided for receipt of calls.	The performance standard is met when: • The help desk staff is available from 8 a.m. to 5 p.m. Eastern Time on State business days • At least 90 percent of telephone calls are not on hold for more than 60 seconds before a staff person, not an automated answering device, answers. • Less than 1 percent of	See SOW Number 2.1 for RFP references for this line.

		telephone calls are abandoned, dropped, or receive a busy signal. • Initial and ongoing capability is provided for recording and tracking communications with providers and recipients during State business days between the hours of 7 a.m. to 11 p.m. Eastern Monday through Friday and from 7 a.m. to 6 p.m. Saturday and Sunday 99.9 percent of the time.	
2.13	**Reference.** EDS will provide online access to authorized users for reference and pricing data. We will initiate reference updates and complete as required and process mass adjustments as required. Correspondence will be scanned, indexed and retained for reference.	The performance standard is met when: • Online updates occur within two State business days of receipt. • Mass adjustments are completed within two claims cycles. • Before and after images are returned to the originator of the State Memo the same day the change is made. • Weekly reports for the Contract Monitoring Unit are produced by 7 a.m. Eastern each State business Monday. • The accuracy of file	See SOW Number 2.1 for RFP references for this line.

		maintenance activities is verified and weekly reports are produced for the Contract Monitoring Unit by 7 a.m. Eastern each Monday following the update activity.	
2.14	**Prior Approvals.** EDS will provide capability to receive and adjudicate prior approval requests and adjustments. The Prior Approval Customer Service Center will support inquiries regarding prior approval, referrals and overrides from physicians, pharmacists, recipients, and other healthcare professionals.	The performance standard is met when: • The prior approval business area is updated with prior approval results received from other entities within 24 hours of receipt from each entity, except Fridays, when the updates will be available by 7 a.m. Eastern on the following Monday. • A decision for non-pharmacy prior approval is rendered within one State business day of the receipt of the required information or research for non-emergency prior approval requests. • Prior approval decisions are generated and mailed to appropriate designees within two State business days of rendering a decision. • The State Prior Approval Policy is applied with a 99.9 percent	See SOW Number 2.1 for RFP references for this line.

		accuracy rate based on the information available when rendering a prior approval decision. • Online inquiry and data entry to the Prior Approval data to providers, Fiscal Agent staff, and State-designated staff is available from 6 a.m. until 11 p.m. Eastern Monday through Friday and 7 a.m. to 7 p.m. on Saturday and Sunday 99.9 percent of the time. • For Non-Medicaid only, online inquiry and data entry to the Prior Approval data to AP/LME staff and State-designated staff is available from 7 a.m. until 7 p.m. Eastern Monday through Friday 99.9 percent of the time. • The Pharmacy Prior Approval Customer Service Center is available from 7 a.m. until 11 p.m. Eastern on State business days Monday through Friday, and from 7 a.m. until 6 p.m. Eastern Saturday and Sunday. • System-generated letters to recipients and providers of the status of prior approval requests are produced within	

		24 hours of receipt. • Weekly Pharmacy Alerts are produced. • Each complete pharmacy prior approval request is adjudicated within one State business day of receipt. • A response is sent to a requesting provider within one hour for a telephone request for an emergency override. • A quarterly report of the number of prior approval requests received is created. • A weekly batch processing report is created. • A monthly meeting is held with DUR, the State, and Retro-DUR vendors and Community Care Program and minutes from the meeting are included in the biweekly Project Status Report.	
2.15	**Managed Care.** EDS will provide online access to recipient, provider, claims, and reference data related to Managed Care. EDS will provide a call center for call-in inquiries. We will maintain and process Managed Care capitation rates overrides and withholds as required.	The performance standard is met when: • Requests for changes to capitation payments and management fees are completed within two State business days from date of	See SOW Number 2.1 for RFP references for this line.

		request. • Written override approval requests are entered into the system within two State business days from receipt of the request and a decision is provided to the requesting providers within five State business days from receipt of request. • A requesting provider is sent a response within one hour for a telephone request for an emergency override. • The Data Submission Manual for encounter information processing is compiled, updated, and distributed to providers within five State business days from State date of approval of change. • Toll-free access and a point of contact for Managed Care providers is available between 8 a.m. and 5 p.m. Eastern each State business day. • Managed Care provider telephone messages are responded to within one State business day of receipt of the message.	

		• The Withhold and Penalty Log is provided within five State business days of the end of the previous month. • The file maintenance log for Managed Care-related transactions is provided within five State business days of the end of the previous month. • Managed Care provider enrollment reports are created and available to providers no later than the first day of each month. • Weekly searches are conducted for "exempt" numbers that are linked to the mandatory program category for a system-generated letter advising the eligible of the potential of primary care provider selection from five providers within a 30-mile range. • The Health Choice file is sent to the North Carolina State Health Plan by the third business day of each month.	
2.16	**Health Check.** EDS will maintain the Health Check periodicity schedule. EDS will maintain each Health Check-eligible	The performance standard is met when:	See SOW Number 2.1 for RFP references for

	recipient, the current and historical screening results, referral, diagnosis and treatment, and immunizations, including the provider numbers and dates. EDS will provide this data to the counties as needed and provide support and training as required.	• The Denied Claims Report for Health Check denials is reviewed and providers are contacted by telephone to educate and schedule provider visits if denial rate is greater than 10 percent. • The Health Check County Option File Master Report is reviewed monthly to make certain that participating counties received Automated Information Notification System (AINS) (or Fiscal Agent equivalent) data and Health Check reports. • The Health Check Management Fee Option File Master Report is reviewed monthly to verify that Health Check management fee claims were generated correctly. • The monthly FTE Report is submitted to the State. • The Health Check Billing Guide is updated. • Telephone and on-site technical support and training for Health Check Coordinators are provided. • Annual regional Health Check	this line.

		workshops are conducted for participating providers in six separate sites throughout the State.	
2.17	**Third-Party Liability.** EDS will make certain that claims are cost avoided based on available TPL data supplied through eligibility data. This TPL cost avoidance process will not be applied to preventive pediatric services and prenatal care for pregnant women regardless of other available coverage. Necessary drug invoices for Medicaid, and claims data will be provided to DMA vendors. We will handle DPH and ORRCC TPL recovery processes as required in RFP.	The performance standard is met when: • System-generated letters to providers, recipients, and county offices are produced. • Paid Claims History for State-specified TPL recoveries and provider/recipient collections are adjusted within five State business days from end of the previous month. • Recoveries or collections are dispositioned accurately and consistently 99.8 percent of the time. • Drug invoices for insurance carriers are produced and billed within five State business days of TPL entry. • Accident inquiry letters are mailed to the identified recipients within five State business days from end of the previous month. • Within two State business days of report notification of death,	See SOW Number 2.1 for RFP references for this line.

		three copies of an invoice are generated and sent to the ERE representative at the county Department of Social Services, local health departments, Developmental Evaluation Centers/Children's Developmental Services Agencies (DECs/CDSAs), Purchase of Medical Care Services (POMCS), or other local entities. • TPL edit/error report(s) for ACTS (Automated Collection and Tracking System) are provided for State staff access each State business day. • Daily (next business day) transmission logs are created, showing successful transmission of TPL data to Client Services Data Warehouse (CSDW) and to and from ACTS available for State staff access each State business day. • Recipient TPL data transmitted by ACTS is extracted, processed, and transmitted from the electronic Division of Information Resource	

		Management (DIRM) File Cabinet by 7 a.m. • A daily extract of TPL carrier and recipient resource data is produced and sent to DIRM for ACTS, CSDW, and EIS. • A daily extract of updates to TPL recipient resource data is produced and sent to DIRM for ACTS for Medicaid recipients referred to Child Support.	
2.18	**Financial Management and Accounting.** EDS will maintain a full range of financial management and accounting functions and provided the required financial support for the required financial activities/tasks, such as receipt and disposition of cash refunds and timely deposit of funds received through lockbox mechanisms.	The performance standard is met when: • The State is provided with confirmation and validation of accurate file maintenance request transactions 99.9 percent of the time. • Capitation and management fee adjustments are produced 99.9 percent of the time. • Returned monies are deposited the same State business day of receipt. • Capitation payments and management fees are processed accurately in the month-end claims cycle and payment in the first checkwrite of the next month.	See SOW Number 2.1 for RFP references for this line.

		• HMO withholds and penalties and primary care provider penalties are processed accurately in the next claim cycle after receipt of withholding and penalty requests 99.9 percent of the time. • The planned annual checkwrite schedule is published 60 days before the start of the next calendar year. • The State is notified by 9:30 a.m. Eastern Time on the first State business day following checkwrite of funds required. • The State is notified by close of the State business day of notification from the Controller's Office that funds are in place each day following any delays in check mailings and EFTs. • The State is notified of any delays and reasons in the checkwrite process by 8 a.m. Eastern Time the next State business day following the checkwrite cycle and estimated time frame for completion. • Each checkwrite is balanced accurately 99.9 percent of the	

		time, and any discrepancies are reported to the State immediately. • Check voucher information from the State Controller's Office is accurately processed 99.9 percent of the time and within one State business day of receipt. • Weekly budget reporting is accurate and consistent 99.9 percent of the time. • HMO withholds and penalties and primary care provider penalties are accurately processed in the next claim cycle after receipt of withholding and penalty requests. • Cost settlement activities are performed accurately and consistently 99.9 percent of the time, as directed by the State. • Correct Federal Medical Assistance Percentage (FMAP) is applied to receivables and payables accurately and consistently 99.9 percent of the time within the monthly financial processing cycles. Certain receivables and	

		payables may be subject to prior period FMAP. • Collection and management of accounts receivable/payable occur accurately 99.9 percent of the time. • 1099/W9 earnings reports are produced and mailed no later than January 31 each year and reported to the IRS no later than March 1. • Accounts receivable are removed monthly when a provider record has been terminated for one year. The fiscal agent generates a monthly report of removed accounts receivables. • Program funds paid out and recovered in accordance with State-approved guidelines are accounted for and reported accurately and consistently to the State 99.9 percent of the time. • Each provider's receipts are summarized accurately 99.9 percent of the time for the previous calendar year no later than January 15 of the succeeding year. The summary	

		is provided to the Internal Revenue Service and North Carolina Department of Revenue (NC DOR) by sending a file using file transfer protocol (FTP). • The receipt date of each withholding and penalty request and completion date of withholding or penalty is logged accurately within one State business day of receipt 99.9 percent of the time. • The State is provided a confirmation and validation for each completed date of withholding or penalty on the State business day that the transaction is completed. • IRS regulations are complied with 99.9 percent of the time. • 1099 corrections are issued to providers before March 31 each year. The fiscal agent verifies that corrections are incorporated into the IRS file to report earnings for the prior year accurately 99.9 percent of the time. • Tax identification numbers and tax names are reported	

		accurately 99.9 percent of the time. • Checks received are logged each State business day with disposition denoted, date, time, and individual processing the check accurately 99.9 percent of the time. • Program cash receipts received are deposited into the State-designated State Treasurer's Account each State business day by 1 p.m. and the amount deposited to the NC DHHS Controller is certified by 1:30 p.m. • Other nonprovider checks are processed in accordance with State-approved policies and procedures—such as TPL and drug rebate receipts. The fiscal agent deposits these funds daily into the State-designated State Treasurer's Account 99.9 percent of the time. • Monthly bank account reconciliation is performed and reports are submitted for State approval within 10 State business days of each calendar month.	

		• North Carolina Accounting System (NCAS) account data is received weekly to support checkwrite activity accurately and consistently 99.9 percent of the time. • For Non-Medicaid only, special "timely filing" edits are applied at the end of the State fiscal year for services rendered before May 1 no later than the cutoff for the last payment cycle in June consistently 99.9 percent of the time. • Checkwrite Financial Summary and FPR Reports are completed the day after each checkwrite. • Month-end processing and financial reports are completed, balanced and distributed no later than the fifth business day of the following month. • The system and business reports are produced and maintained as required by the RFP. • Program cash receipts received are logged each State business day in Fiscal Agent/bank-managed lockboxes designated	

		by the State with disposition denoted, date, time, and individual who processed the receipt. • Verification of daily deposit total to receipt logs by an employee who is independent of the lockbox remittance and bank deposit process are provided. • Transactions for program cash receipts received in Fiscal Agent or bank-managed lock boxes designated by the State are processed and posted. • Program cash receipts and adjustments are dispositioned within the month of receipt to the applicable program division, benefit plan, NCAS CAC code and period code, reason code, service, and county code. • An extract of DMH claims data for CDW is produced with each checkwrite.	
2.19	**System Availability.** EDS will provide a system to be consistently and persistently accessible to authorized users.	The performance standard is met when: • The system is available for 99.9 percent of the time annually during production hours of operation, excluding planned	See SOW Number 2.1 for RFP references for this line.

		system downtime. • 90 percent of transactions occur in four seconds or less. • 95 percent of transactions occur in five seconds or less. • 97 percent of transactions occur in six seconds or less. • 99 percent of transactions occur in seven seconds or less.	

Turnover Section

1.5.4	**Requirements Verification (RV).** The early implementation enhancements to be developed are: • Provider Enrollment • Performance Dashboard • Electronic Document Management System (EDMS) • Cost Containment Unit The requirements are analyzed and	Performance of these work activities can be measured by State approval of the following deliverable: • Requirements Verification Document in iTRACE	10.7 Early Implementation Objectives

	requirements documentation is created and reviewed with the State.		
1.5.6	**Detail System Design Documentation (TDD).** The design process will create a technical-level design document. In this phase the technical design document is created.	Performance of these work activities can be measured by State approval of the following technical design documents: • Provider Enrollment Technical Requirement Technical Design • Performance Dashboard Technical Requirement Technical Design • EDMS Technical Requirement Technical Design	10.7 Early Implementation Objectives
1.5.8	**Construction and Unit Testing.** We will configure the performance dashboard and EDMS to meet the needs of North Carolina. For the EDMS, we will lay the foundation for full features that will be deployed as part of DDI.	This phase contains several EDS checkpoints. There are no North Carolina milestones or deliverables in this phase. Performance can be measured by entry into system testing.	10.7 Early Implementation Objectives
1.5.11	**System Testing.** EDS will system test the processes established by these early implementation items.	Performance of these work activities can be measured by State approval of the following deliverable: • Testing Results	10.7 Early Implementation Objectives
1.5.10	**Document Conversion.** EDS will identify Document Files to Convert. The conversion steps will be defined.	Performance of these work activities can be measured by State approval of the following	10.7 Early Implementation Objectives

	Programs will be developed and tested.	deliverable: • Successful Document Conversion	
1.5.13	**Implementation.** EDS will develop an implementation checklist.	Performance of these work activities can be measured by State approval of the following deliverables: • Successful operation of Provider Enrollment • Successful operation of the Performance Dashboard • Successful operation of the EDMS	10.7 Early Implementation Objectives

50.2.4.4 Training Approach

RFP Reference: 50.2.4.4 Training Approach, Page 277; 10.10 Life-Cycle Support Objectives, Paragraph 3, Pages 11-12

EDS will develop and deliver high-quality, learner-centric training programs that address the needs of the State's users and stakeholders. Our approach to training and our experience in North Carolina give us the foundation for a low-risk transition and continued operational rollouts.

State of North Carolina

We know the success of an organization depends on the success of its employees and program stakeholders, and we understand the State places a high priority on training. Our training approach will offer on-time training that will save valuable work time and deliver productive results.

EDS has implemented interChange in five states, giving us extensive experience in providing a broad spectrum of comprehensive training programs and training delivery. Our experience with other Medicaid state implementations and with North Carolina Medicaid makes us a highly knowledgeable and responsive ally for the State.

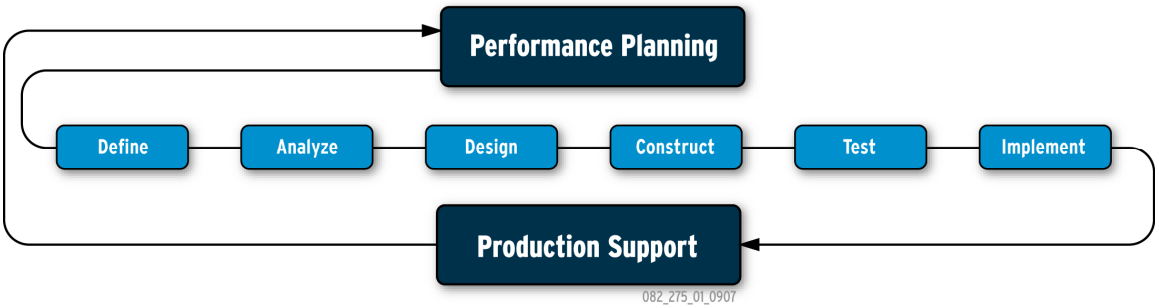
We will work with the State's four divisions and the provider community to fulfill that priority. EDS will develop and deliver high-quality, learner-centric training programs that address the needs of the State's users and stakeholders. Our approach to training and experience with North Carolina Medicaid gives us the foundation for a low-risk transition and continued rollouts.

The approach described in this section is reflective of the training plan, which will be submitted during the DDI Phase. The proposed first submission date for the training plan is November 16, 2009.

Approach to Training

We will use a time-tested methodology, Instructional Systems Life Cycle (ISLC), which is recognized by the International Society for Performance Improvement as the standard for professional training. ISLC will provide the blueprint for EDS to develop performance-based training and focus on people and their roles within the healthcare community in the context of wider business demands. The ISLC methodology includes eight phases, and each phase fulfills specific tasks needed to develop and implement training plans and define the workshop cycle, as depicted in the following exhibit, Instructional Systems Life Cycle.

Instructional Systems Life Cycle



From performance planning to production support, EDS' training ISLC methodology covers the various stages of performance-based training.

The following table, Major Phases of ISLC Methodology, describes how we approach the eight ISLC phases.

Major Phases of ISLC Methodology

Phase	Description
Performance Planning	Define business objectives, determine performance outcomes, and link processes to roles
Define	Identify and analyze the scope, impact, and gap of the resulting role or job performance needs, determine the training strategy to meet those needs, select the delivery media, and develop the training plan
Analyze	Identify the job tasks and audiences affected by the role or job performance needs and document the required behaviors, conditions, and consequences for each job task to determine the course objectives
Design	Indicate which topics and information to include in the training solution, write instructional objectives for each topic, and identify existing training content and business process documentation available
Construct	Create the training solution materials designed in the previous phase, prepare the delivery infrastructure, review pilot, and prepare training materials
Test	Test training solutions to verify that they cover the necessary information clearly and concisely and fulfill stated instructional objectives
Implement	Develop schedules, enroll participants, deliver training and learning, perform post-training follow-up, and measure quality of delivery
Production Support	Measure the effectiveness of the training against the business goals and participants' needs, identify changes and recommend alternatives to meet the changing business goals and participants' needs, and channel new requirements back into the ISLC

A critical part of ISLC is choosing the right media for the training delivery. EDS is well versed in recommending and providing flexible training delivery using alternate media, such as computer-based training (CBT), Web-based training (WBT), and the traditional instructor-led approach. For example, in Pennsylvania we provided 2,636 multimedia training sessions to Commonwealth users.

Additionally, more than 28,000 provider-based WBT courses and Internet demonstrations were accessed in 2006.

In Pennsylvania we provided 2,636 multimedia training sessions to Commonwealth users. Additionally, more than 28,000 provider-based WBT courses and Internet demonstrations were accessed in 2006.

By identifying and understanding the various training delivery options, we can select the most effective media choices and methods for our training courses to the four divisions that will be delivered through the Learning Management System (LMS). Use of the LMS provides the tools for the creation of WBTs and enrolling State staff in CBT and standard reporting on test results, course progress, and verification on completion.

We understand that a significant concern in any training curriculum is the appropriateness of the content and that the delivery media is predicated and dependent on that content. Our training opportunities use various learning modalities—including auditory, visual, and kinesthetic (hands-on)—to promote learner success and skill set integration.

EDS' options for delivery of training include the following:

- **Instructor-led—**The pace of the training can be adapted to the class. Immediate feedback is possible. Instructor-led classes can be combined with hands-on training using the computer.
- **CBT—**This self-paced training is presented through the personal computer (PC) workstation, either online or by CD-ROM.
- **WBT—**Training reaches the widest possible audience through the Web. EDS uses standardized materials that include the most current versions available. This delivery approach also allows material to be used for cross-training.

As appropriate, EDS uses these various approaches in training. For the Replacement MMIS implementation, these three approaches will be applied and supported. Having implemented interChange for other state Medicaid programs and through our years of service to the healthcare industry, we have developed an extensive inventory of training materials. Courses will be developed in the format that best fits the content and audience. EDS will assist the State with the evaluation of learner needs as a part of the planning process.

Training Classroom

For the State's staff and business ally users, EDS will provide a designated classroom to conduct monthly or quarterly training for as many as 50 attendees. EDS will provide a training room equipped with PCs and training-related equipment that will facilitate the most conducive setting for user training.

It is important to have an environment that is conducive to optimal learning and allows the participant to concentrate on the training goals and objectives. EDS will work with the State to determine the geographical areas and specific facilities across the State to conduct training.

EDS will create an ongoing list of training venues that offer an optimal training environment at a reasonable cost.

Training Materials

Our talented and dedicated training staff members know how to develop, deliver, and validate training modules and seek out technical and business experts to validate accuracy and completeness of the training modules. EDS will work with the State to identify the specialized training materials that must be addressed for targeting specific entities. Because EDS has significant experience in the Medicaid industry, we understand there may be a need to integrate training materials to address specific entities. For example, a program integrity unit may need slightly different training materials to understand how their job function relates to the overall Medicaid process.

Each session will provide the opportunity for attendees' review, feedback, comment, and approval. Each of these steps will be developed from a detailed training plan to make sure we meet the deliverables associated with the training time lines, content, delivery, review, and approval process.

Our training staff is well versed in verifying the course content, making sure the level of detail is appropriate and accurate, confirming the course structure fits user job functions, and validating that hands-on exercises are realistic to the job performed in production. EDS has been providing Medicaid training for more than 40 years, and we will use our experience to make continuous program and curriculum improvements.

After a training module is developed and approved by the State but before training delivery, we will use training walkthroughs to evaluate the effectiveness of the course. Training walkthroughs prepare the instructor to deliver the session and make sure the training is of professional quality with appropriate content and flow. A training walkthrough gives the trainer an opportunity to organize the presentation and practice delivering the materials in a safe environment.

Walkthroughs are performed internally and externally. External walkthroughs are classified as "formal" and the appropriate staff will be invited to the session to see the training content and materials. The purpose of the formal walkthrough is to provide the trainer with additional practice and allow stakeholders to see the entire presentation of the session. The intent of the walkthrough is to provide constructive feedback to the trainer regarding the training materials before an actual session and incorporate feedback as appropriate.

Training and Learning Evaluation

Training and learning outcomes will be evaluated in the following ways:

- **Quality of training delivery—**The trainers will use evaluation tools to enhance their training delivery from information gained through the evaluation process.
- **Training coverage—**EDS will work with the State's four divisions to evaluate participation and access to training compared with training objectives and targeted profiles.

State Staff Training

We will train the State's staff members and other stakeholders in the interChange system, the use of its components, and the associated business processes.

EDS trainers will work with the State to assess, recommend, develop, and provide a cohesive training plan that addresses the requirements of the training process. We will establish a training schedule that meets the training needs of State users and provides ample opportunity for participants to learn through an appropriate training delivery format—CBT, WBT, or facilitated training.

We understand training initiatives are most successful in a collaborative environment. To support this collaboration we will work with the State to identify the courses that meet the needs of the four divisions using interChange.

Provider Training

Using our experience in state Medicaid MMIS implementations and our ongoing experience in North Carolina, we will develop and deliver training for the State's provider community. We will work with the State to develop the provider training plan and materials.

Completing overview and fundamentals courses will allow users to develop a baseline level in their understanding of the interChange system. Classroom inquiry and update training courses will be developed that will meet user needs based on their security levels and job responsibilities.

Course Presentation and Publication

Throughout planning, development, and delivery of training, we will use the presentation tools and interactive training that most appropriately augment and support the course content. Because Microsoft PowerPoint is a powerful tool for producing training materials and the materials can easily be converted into a self-paced learning environment, we frequently integrate PowerPoint into our training materials and courses. For example, our PowerPoint information may include key concept descriptions, diagrams, and flowcharts that offer an

overview; interChange page and panel shots that help the learner see what is used in production; and page and Web panel shots that describe specific system features.

We will maintain version control of training materials for consistency throughout the courses, regardless of the trainer assigned to teach the course.

Maintenance of Training Materials

Solid, user-friendly training materials are important for a training session to provide the highest value to participants. The materials must accurately reflect the latest version of interChange that users will see when returning to their workstations.

As EDS worked with the five states operating interChange, we captured the information for training materials reflecting changes as updates and improvements were made to interChange. We also have developed a culture of strong relationships between the interChange technical and training staff members that will support the success of our training plan, programs, and curriculum. We will be vigilant in our maintenance of training materials that reflect version changes to interChange and update the training materials with significant program and system changes.

The EDS instructional design specialist (IDS) will be responsible for updating the training materials inventory. The IDS will work with appropriate EDS technical staff members and EDS training specialists to update information into the materials. The IDS will maintain version control for training courses so that materials are consistent and reliable.

Each training session will include a participant evaluation that gathers data regarding the training materials. The trainer will share those results with the IDS, thereby verifying that the materials reflect the latest version of interChange.

Appropriate Hardware, Software, and Telecommunications

EDS will furnish and maintain the appropriate hardware, software, and telecommunications to support the development, maintenance, and presentation of training programs, as discussed in the following subsections.

Development and Maintenance

Our 40 years of service to the Medicaid industry give us the unique ability to finely tune the most appropriate ways to create and present learner-centric courses using various types of media that concentrate on effective and efficient use of interChange. In Pennsylvania alone, tens of thousands of providers and users have taken our online training courses and continue to use them every day.

EDS will use various software for training development, including Microsoft Word and PowerPoint. Additional software may be used for development and maintenance of CBT and WBT courses. This software will be furnished and maintained for use by the training staff.

We will use an LMS product for the creation and presentation of online training courses. The LMS also functions to track enrollment of individuals in WBT classes, offer standard reporting on user or provider proficiency results, give course progress, and offer course completion information. The LMS will offer a flexible platform that streamlines administration of training, regardless of the delivery method. It will support a smooth facilitation between online and classroom-based learning opportunities and comprises physical classroom and resource management, course catalog management supporting bulk and self-enrollment, curriculum and completion certification support, wait lists and notifications using e-mail, standard out-of-the-box reports, maintenance of content and delivery of content to users, and tracking of student progress.

EDS will create CBT events and proficiency tests and import third-party courseware content as needed. After the CBT course has been finalized for publishing, the EDS training staff can quickly and easily post CBT courses to the interChange portal and iTRACE.

Presentation

Our training staff will use several training tools including PowerPoint software during classroom training sessions. The software that is needed to access the training environment is Internet Explorer version 6.0 or higher for access directly through the interChange Web portal for providers and through iTRACE for State users.

The training environment can support concurrent application training classes. The environment will be an integrated part of the interChange solution and allow for independent training data refreshes as controlled by the trainers and training schedules with State approval.

Detailed Training Plan and Curriculum

We will work with the State to develop and establish an educationally sound training plan that meets the learning needs of Replacement MMIS users and providers. We are a proven provider of innovative and flexible solutions that support current and future healthcare reform initiatives.

EDS will train stakeholders and business partners in the use of the Replacement MMIS components and the associated business processes—such as overall system functions, operability, technology, processes, and operations—that will be addressed in the appropriate training activities. We will create a Training team to plan, develop, facilitate, schedule, and deliver MMIS training to the user

staff. This team will work with the State to assess, recommend, develop, and provide a cohesive training plan that addresses the requirements of the training process. A training schedule will be established that meets the training needs of State users and provides ample opportunity for participants to learn through an appropriate training delivery format (CBT, WBT, or facilitated training).

Our training goal is to make sure users understand and can successfully navigate through the system to perform their job responsibilities.

Because we understand that training initiatives are most successful in a collaborative environment, we will work with the State to identify the courses that meet the needs of users and facilitate an optimal learning outcome. Our training is designed to verify that personnel participating in specific training activities retain knowledge of the new functions and procedures, and that they have the tools needed before being expected to begin their operations activities. The courses are developed to correlate the course goals, objectives, and measurable outcomes with proficiency testing to help users understand the main concepts of the course. This approach significantly reduces any risk associated with implementing a new system and increases the users' comfort in their ability to master new work patterns.

CMS certified EDS' interChange MMIS in Pennsylvania back to the first day of operations with no adverse findings. This milestone was achieved, in part, because of the rollout implementation training effort in the classroom and through CBT/WBT courses. More than 1,527 Pennsylvania Medical Assistance program staff and EDS staff received classroom training, and an additional 1,109 users used the CBT/WBT courses interChange Overview and interChange Fundamentals.

The EDS and Pennsylvania training staff saw users with two security level needs, including users with inquiry-only needs and users with system update and maintenance needs. EDS understood that users could not successfully take and acquire new skills in the classroom inquiry and update courses without having an overview and basic understanding of the interChange system.

Because of this understanding and to meet the individualized needs of users supporting the interChange MMIS, an Overview and a Fundamentals course became prerequisites for users. The Overview course was developed as a WBT, thereby allowing users to access the course from a secure environment any time the learner needed it. The Fundamentals course was developed and delivered in a WBT and facilitated face-to-face format. Users could access the WBT version of the Fundamentals course from a secure environment 24 hours a day, 7 days a week.

Use of the Overview and Fundamentals courses allowed users to come up to a baseline level in their understanding of the MMIS. EDS training staff members also integrated content on the MMIS help features, such as iTRACE and online point-and-click definitions. Classroom inquiry and updated training courses

were developed and delivered to meet the needs of users based on their security levels and job responsibilities.

The following table, User Implementation Training for Pennsylvania interChange, demonstrates the courses, delivery media type, and attendance information for user training during MMIS implementation for the Pennsylvania Medical Assistance program. EDS training staff members met the individual needs of users by offering a robust course schedule and WBT courses. Some of the courses in this table are for a non–fiscal agent contract. As the Replacement MMIS implementation is for a fiscal agent services, there will be differences in the courses.

User Implementation Training for Pennsylvania interChange

Course	Delivery Media Type	Attendance/ Accessed

Training is the most consistently reliable approach that empowers user staff with the knowledge to successfully and confidently use the Replacement MMIS. The information throughout the subsections of this response will further elaborate on how we will fulfill the requirements for individualized training.

Detailed Training Plan

Our approach to developing a training plan recognizes that learning is part of the overall management of change within an organization. We are prepared to provide a quality training experience for interChange stakeholders.

We will analyze the State user survey to assess and finalize the training plan. We will structure the finalized training plan, agendas, and materials to meet the needs of the State's user and provider communities. Key areas to our finalized training plan will include the following topics:

- Identifying the framework and methodology EDS uses to develop training
- Defining EDS and State roles and responsibilities
- Defining the strategic approach used to develop the training work pattern and use of the survey results
- Identifying the number of users to be trained by type of training
- Listing the standard training courses and course duration
- Describing the training delivery methods and the strategy for delivery, including the format and content of training materials
- Defining the evaluation of the training development process
- Establishing the training schedule
- Defining the quality assurance process and the integration of training session evaluations into future training

To execute the finalized training plan, we will develop a detailed work plan that includes the milestones and deliverables presented in a State-approved format using EDS' project management methodology. We will integrate this work plan into the overall MMIS implementation program plan to verify that interrelated and dependent tasks remain linked and that training is delivered as intended.

The State and EDS will use the detailed work plan to manage and evaluate progress on the Replacement MMIS training activity and monitor progress based on milestones and key dates. The detailed training work plan will include key dates, deliverable dates, and the related tasks and subtasks to complete a detailed plan.

Training schedules for State staff members will be posted on iTRACE. We envision that schedules will be published monthly and that State staff members will receive notice of courses for which they have been registered and are expected to attend.

Curriculum

Our training plan will include curriculum and learning objectives designed at three levels of detail for trainer-led classroom training:

- **Overview—**This level of training will be provided to users and providers who need to have a high-level overview of the system and its capabilities. This session is intended to familiarize participants with system features and navigation tools. In previous implementations, EDS has integrated a CBT/WBT overview course and a required fundamentals CBT/WBT or facilitated course for users. Similarly we have integrated a Medicaid overview for providers. Our training plan will include these overview courses for interChange learners.
- **Detailed—**The detailed level of training will include the following:
  - **User training—**This level of training will be provided to appropriate State staff and include hands-on instruction about the system, including a detailed review of the topic-specific subsystem, such as Recipient or Reference. This training will be designed to enable State system users to become familiar with the functional area pages and Web panels associated with the topic-specific subsystem. Participants will experience hands-on activities with the subsystem in the context of the business process they need to perform. At the end of the training, participants can relate the topics discussed and practiced in the session to the real-life situations experienced in production.
  - **Provider training—**The EDS field representatives also will conduct 70 provider training session per year for the four divisions as defined by the yearly plan. Other training includes workshops based on the denial report, on-site classes as requested by providers, newly enrolled training classes, training for annual meetings or billing groups, health check providers, and claim encounter workshops for providers.
- **Specialized—**Realizing that some individuals will require a deeper, more concentrated focus in a particular area of interChange, EDS will work with the State to evaluate the need for specialized training.

EDS has started with a core curriculum and learning objectives in the training plans that have been successful in numerous interChange implementations. The State and EDS will work to analyze the core curriculum and any need for changes. Collectively, the user courses may cover Replacement MMIS functions in the following areas as reflected in the following table, Sample User Training Curriculum.

Sample User Training Curriculum

Course Title	General Description	Primary Topics
Replacement MMIS Overview (CBT/WBT)	Designed for State user staff to provide an overview of the system	• Introduction to interChange and its subsystems • High-level review of changes for providers
Replacement MMIS Fundamentals (CBT/WBT and classroom)	Designed for State user staff to access the various functional areas within the system	• Basic navigation • Orientation to selected interChange functional areas • Help-related tools
Claims and Encounters Inquiry	Designed for State user staff who need to access claim inquiry pages and panels	• Claim inquiry–related panels • The information available and accessed through the claim inquiry panels • Looking up claim information on paid, suspended, and denied claims and encounters • Distinguishing between the various claim inquiry panels
Financial	Designed for State user staff to understand how to access financial-related information in interChange	• Financial functional area–related panels • Accounts receivables • Liens and payment withholds • RA banner messages • SAP and fund codes
Recipient	Designed for State user staff to understand how to access recipient-related information	• Recipient-related pages and panels • Lock-in • Eligibility • TPL resources • Plan of care • Eligibility verification system (EVS) information
Prior Approval	Designed for State user staff to understand how to access PA information	• PA-related panels • The information available and accessed through the PA inquiry panels
Provider	Designed for State user staff to understand how to access provider-related information in interChange	• Provider-related panels • Address • Service locations • Provider eligibility • Tax • Certifications and licenses • Rates

Course Title	General Description	Primary Topics
Reference	Designed for State user staff to understand how to access the reference pages and panels in interChange	• Reference-related panels • Diagnosis-related information • Health Care Financing Administration (HCFA) Common Procedure Coding System (HCPCS) information • Drug-related information • Edits and audits
Third-Party Liability	Designed for State user staff to understand how to access the TPL-related pages and panels	• TPL-related pages and panels • Health Insurance Premium Payment (HIPP) maintenance and processes • Postpay billing • Case tracking • TPL Reports

EDS understands that a primary goal the State has for the implementation of its Replacement MMIS is that the provider and recipient communities make a smooth transition from the old to the new. EDS shares this goal and wants to make sure the provider and recipient communities are fully prepared for the MMIS transition.

The provider and recipient courses will include those listed in the following table, Sample Provider and Recipient Training Curriculum.

Sample Provider and Recipient Training Curriculum

Course Title	General Description	Primary Topics
Medicaid Overview (CBT/WBT)	Designed to give providers and recipients an overview of the Web portal	• Introduction to the Web portal and claims overview • Claim and PA forms and different resources for completion of claims and PAs • Points of contact
Provider Web Portal (CBT/WBT)	Designed to give providers an overview of the MMIS	• Basic navigation and overview • Submission of claims and encounters, PAs, and referrals using the Web portal • Help-related tools
Provider Workshops	Designed for multiple providers to learn about general information	• Claims and encounters processing • PAs and referrals • Provider billing • State business rules

Course Title	General Description	Primary Topics
		• Web portal and AVRS • Other specialized targeted areas identified by the State and EDS
Provider Workshops (Targeted)	Designed for providers to learn about a program each month, with information specific to each program and identified by policy changes or changing business model	• Web portal and AVRS • Submission of claims and encounters—paper and electronic • Claim adjustments • The use of RAs • Requesting PAs and referrals • Verifying recipient eligibility and benefits

Training walkthroughs will be done to make sure the training materials used in a course are appropriate. The walkthrough also prepares the trainer to deliver the session and be sure the session delivery is of a professional quality. EDS prefers to give trainers an opportunity to organize their presentations and practice delivering their materials in a safe environment.

In the user and provider training courses, the general content of the training materials will be established with the State. EDS' training staff will verify that the training materials reflect the current version. Reviewers will evaluate the technical accuracy and completeness of the concepts and practices in the training material to verify that the course objectives are met. We will conduct training walkthroughs to make sure the training materials used in the courses are appropriate.

Ongoing and New Staff Training

EDS defines ongoing training as training that occurs after implementation. We understand that State and EDS staff members may need ongoing training. We also understand that newly hired State staff members will need an opportunity to participate in appropriate training.

Because interChange is not a static system, some change is to be expected. When there is a need for significant changes to the system, EDS will provide training to the agreed-on State staff members and providers before the implementation of a modification change.

Ongoing training support will be available for users and providers when there are significant updates that affect business processes made to interChange. Training will vary based on the extent of the update and the number of users affected. A simple change—for example, a field name change—may be more appropriately relayed through a banner message or Web portal alert to providers and an e-mail to the State and EDS users affected by the change. Use of an

existing State staff e-mail distribution list may be ideal as the tool used to communicate with State users. A more complex change, such as a new interface, may require changes to the curriculum and a training session.

Before the implementation of a modification, the State and EDS will work to determine the most appropriate training tool and venue for update training. Modifications to the training schedule will be made and placed in iTRACE. EDS and the State will work together to create a communication strategy for State users without Web portal access. We want stakeholders affected by any significant changes to receive the needed training.

Training Staff

EDS has a holistic approach to training because we know working in an integrated manner is the best way to achieve training success. EDS will recruit a User Training team and Provider Relations Training team that will create a quality training program to include development, delivery, assessment, and built-in quality improvement strategies. The Training team will play an equally important role in setting the training strategy so that a quality program is implemented. Responsibilities of the Training team will include working with the State to confirm requirements, defining, generating, and producing training requirements, reviewing and evaluating the post-session user evaluations, and working with key stakeholders with daily operational issues.

We will provide professional trainers who understand interChange functions and Medicaid business processes and procedures. The interChange training teams will comprise IDSs, training specialists, and provider field representatives

IDSs

The IDS will play a critical role in the training activities for EDS and the State. The two EDS IDS staff members will be responsible for the following:

- Developing and deploying training solutions that are aligned with EDS and State training needs, including training material solutions
- Determining the optimum mix of training media, including trainer-led, CBT, and WBT
- Developing the project management approach to training solutions for the enterprise and setting the framework for future training activities, including scheduling training sessions
- Facilitating training to the State, EDS, and the provider community
- Preparing the annual training plan and training reports

Training Specialists

Training specialists will play a key role in preparing the State and the EDS account in the transition to interChange. The training specialists will be responsible for the design, development, delivery, and evaluation of training and support personnel based on direction set by the State and the IDS. The training specialist will be responsible for the following:

- Reviewing appropriate training and provider information to learn training session content
- Delivering effective training to State and EDS users, as well as the provider community when needed
- Verifying that training products are technically accurate and matched appropriately to the audience
- Testing and implementing training products, such as materials and CBTs
- Possibly providing tutoring and supplemental training to the State, EDS, and provider community participants based on need and request

Provider Field Representatives

Provider field representatives will be ambassadors for the State, conducting on-site provider training, presenting workshops and training sessions, and attending various provider conferences and advisory meetings. Provider field representatives also will handle the more complicated provider inquiry issues. The provider field representatives will support the following responsibilities:

- Scheduling and holding on-site visits with providers and researching provider claims in preparation for each visit
- Documenting the topics discussed during visits, following up on any open issues, and monitoring provider claims and encounters to provide resolution to issues discussed
- Providing software and billing training and periodic training seminars for mass training
- Serving as liaison between the State and the provider community
- Developing and maintaining relationships with key association groups to facilitate open communication through various methods

This EDS Training team and EDS Provider Services team will work directly with the organizational training function within the State. We will use our experience with Medicaid and our familiarity with North Carolina Medicaid to develop and deliver consistent training initiatives for the user and provider communities.

CBT and WBT Applications

EDS has significant experience in using various CBT and WBT applications for interChange training. Our CBT and WBT solutions function as a training application, tutorial, or as reinforcement training. Because of our experience in Medicaid implementations, we already have developed several CBT and WBT courses for users.

An excellent example of how EDS developed and implemented a successful WBT application is in Pennsylvania's interChange MMIS implementation. After initial implementation training, several provider WBT courses were developed and implemented—including Provider Awareness, CMS 1500, UB-92 LTC, CMS 1500 Waivers, and UB 92-Outpatient. Additionally, WBT and CBT courses were developed for users, including interChange Overview.

Another good example of our WBT application is found in the Provider Awareness course we built for Wisconsin. The following exhibit, Sample WBT Provider Awareness Course Web Page, shows the successful WBT application that was part of Wisconsin's MMIS implementation.

Sample WBT Provider Awareness Course Web Page

Users employ simulations as training tools.

EDS develops CBT and WBT solutions that allow participants to see and use interChange by allowing them to interact with actual replicated pages and panels in the system. For example, if the interChange panel requires users to enter data in a field or click on a button, this activity is simulated as the user enters data in a field or clicks on a button.

Training materials developed in Microsoft PowerPoint for a lecture-style course can be transferred into a WBT and CBT module for individual use. Therefore, this solution can demonstrate a task as an interactive session in which the learner can practice a task, or as an interactive session with training prompts to function as a tutorial or reinforcement training for the learner.

The user WBT courses developed in Pennsylvania, for example, reside on the EDS Web site, from which users are launched to the client's Web site. The provider WBT courses reside on the EDS Web site. The State and EDS will work to evaluate the best way to launch into a WBT course for the Replacement MMIS.

Incorporation of Training Cases

Adults learn best through using the three learning modalities—visual, auditory, and kinesthetic (hands-on) experiences. We can better apply new knowledge and skill sets into existing paradigms when we participate in learning activities that most closely parallel those in our daily environment. Realizing that our ultimate training goal is appropriate use of new information, EDS integrates hands-on training cases into our facilitated, CBT, and WBT courses.

For example, in the interChange Fundamentals facilitated course and in the CBT and WBT courses, we take users through actual interChange pages and panels when we are explaining key concepts. Users will log on to a secure training area that is a scrubbed replica of the interChange production environment during a "live" training session. When in the system, users navigate through the areas the trainer is talking about. Similarly, our CBT and WBT courses capture and input scrubbed replica pages and panels as users navigate through the key concepts covered in the course.

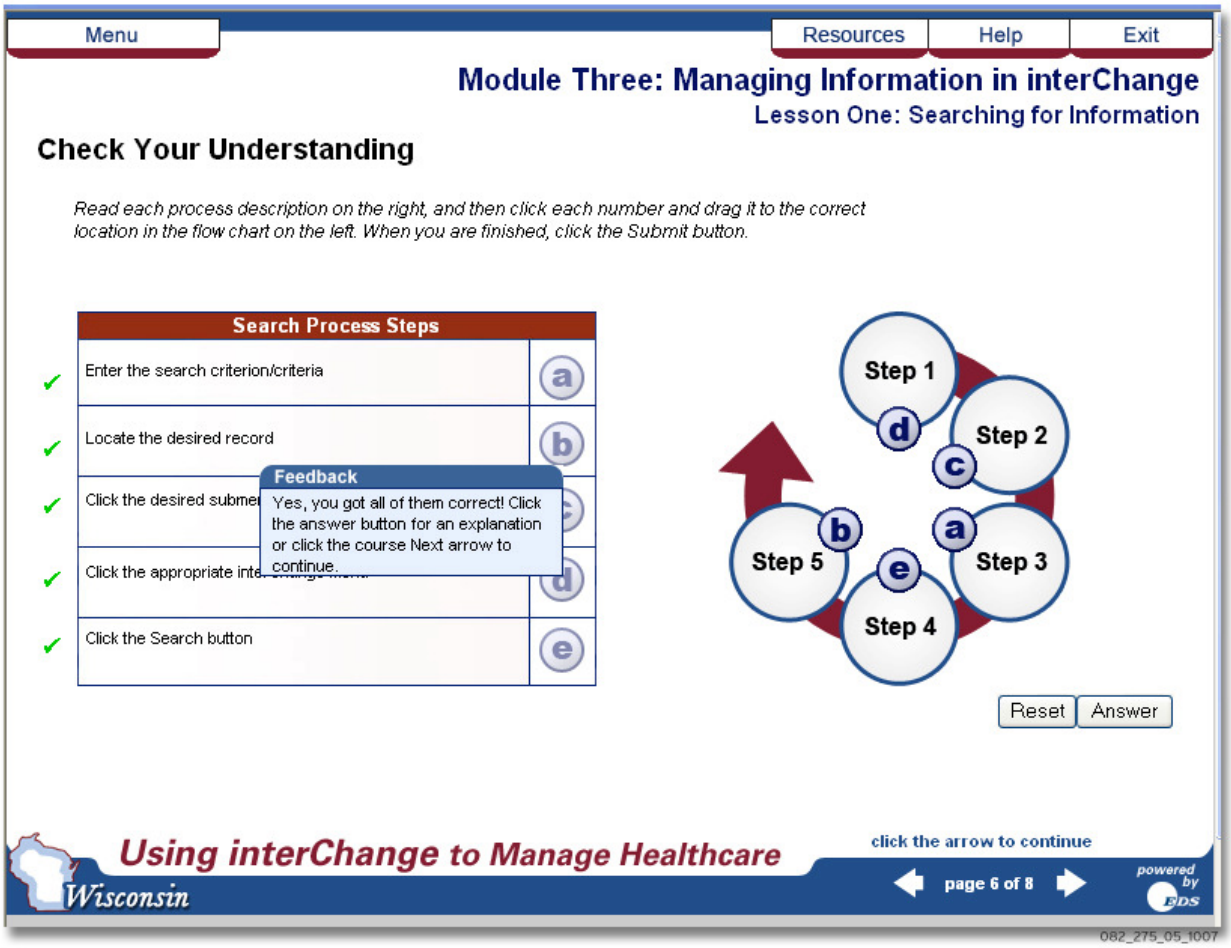
We can capitalize on our knowledge gained during numerous interChange implementations and by developing and delivering courses that use known best practices in adult education and training.

Proficiency Testing for CBT and WBT

EDS provides training that gives participants tools and knowledge that can be applied easily to their job responsibilities. We develop our CBT and WBT solutions with an integrated electronic proficiency test that requires each user to answer the questions correctly before recording a "course complete" status. After the course has been successfully completed, the LMS is updated with current information, and the student is given credit for completing the course.

The following exhibit, Sample Electronic Proficiency Test Feedback, demonstrates how we integrate proficiency testing into the Wisconsin MMIS Provider Awareness course.

Sample Electronic Proficiency Test Feedback



An integrated electronic proficiency test requires each user to answer questions correctly before recording a course complete status.

It is important to offer participants the opportunity to learn the key concepts within each course. Our goal is to make sure learning has occurred. Therefore, for incorrect answers in the proficiency test, we provide the correct answer with the appropriate narrative that explains the key concept and any further information that can provide additional reinforcement. EDS wants users to walk away from training opportunities feeling confident in their ability to perform job responsibilities and know where to find additional information about the Replacement MMIS.

State Review and Approval

EDS wants to make sure time lines are met for the State's requirements. It is in everyone's best interest to plan and prepare for training systematically. Organization and opportunities for open communication with concerned State and EDS stakeholders better enable successful training initiatives with optimal learning outcomes. Therefore, we will put into the detailed work plan key dates, deliverables, review, feedback, and comment time lines; review and comment integration; and dates for approved training plans and materials.

As with other interChange implementations, EDS will use Microsoft Project as a project management tool to develop the detailed work plan. The State and EDS will use the detailed work plan to manage and evaluate progress on Replacement MMIS training activities. The work plan will include milestones for training plans and training materials to go through State review, feedback, comments, and approval at least one month before delivery of a training session.

Training Creates a Strong Foundation

interChange will revolutionize the work processes for everyone who touches the system—State personnel in the four divisions, providers across the State, and EDS' fiscal agent staff members. These individuals have become accustomed to and comfortable with the Legacy MMIS+ established processes. EDS' training strategy, approach, and plan will help us make a successful transition from the current environment to the new Replacement MMIS environment.

This strategy will combine tools already proven to work for interChange implementations in other states with the established relations with North Carolina providers that have been in place for many years. A training plan that incorporates the differing needs of the four divisions and providers across the State with highly effective tools and strategies will provide a strong foundation for success.

To demonstrate our successful approach to training, we provide the Kentucky MMIS Commonwealth Training Plan following this page. As stated in RFP section 50.2 Technical Proposal Requirements, this sample does not count toward any page limit.

1 Executive Summary

The New KY MMIS Commonwealth of Kentucky Training Plan, herein after referred to as the Commonwealth Training Plan, describes how EDS plans to train Commonwealth staff and/or its designees, as mutually agreed upon by EDS and the Commonwealth, at all levels, in the proper use of the New KY MMIS procedures and processes. The training shall focus on processes, how the end user performs his or her job function utilizing the various panels, forms, letters and reports associated with each subsystem.

1.1 Commonwealth Training Scope

The Commonwealth Training Plan provides an approach based upon the currently known scope of the New KY MMIS project. The plan evolves over the course of the Design phase and through the completion of the Implementation phase. The intent of this document is to establish the direction for subsequent training planning, development, and delivery activities. The Commonwealth Training Plan draft shall be considered final after the Commonwealth and EDS agree upon the following key elements highlighted in this plan:

- Targeted End Users;
- Training Courses and Methods;
- Training Schedule;
- Remedial and Ongoing Training; and,
- Training Support Staff.

This plan follows the training approach as outlined in the Training Plan Approach Template for the KY MMIS Project.

1.2 Commonwealth Training Plan Objectives and Assumptions

1.2.1 Objectives

The Commonwealth Training Plan educates Commonwealth staff and/or its designees, such as Contractors, to:

- Understand changes in how they perform their roles (where applicable), and the business drivers for changing responsibilities;
- Obtain the knowledge of the New KY MMIS necessary to perform their job function successfully;
- Have a general understanding of changes to processes related to their job function; and,
- Have a detailed and/or specialized understanding of how to follow processes specific to their job functions.

1.2.2 Assumptions

The Commonwealth Training Plan has the following assumption.

- Commonwealth training participants should have experience with PCs, use of the Internet, and using the Windows environment prior to this training.

2 Targeted End Users

Targeted end users, as referred to throughout the Commonwealth Training Plan, include 1) those end users who may require process and/or job function training for the New KY MMIS and 2) those end users outside of the New KY MMIS effort, who currently use New KY MMIS systems and whose functionality is replaced by the New KY MMIS. The level of training for end users varies based on their skill level and job function.

2.1 Commonwealth End Users

Targeted end users include the personnel within the Commonwealth agencies listed below.

- Cabinet for Health and Family Services
  - Department for Medicaid Services (DMS)
  - Department for Mental Health & Mental Retardation (DMHMR)
  - Department for Community Based Services (DCBS)
  - Office of Information Technology (OIT)
  - Office of Inspector General (OIG)
  - Office of the Ombudsman
  - Department for Public Health
- Office of the Attorney General
- Kentucky Transportation Cabinet

Targeted end users also include contactors within the organizations listed below.

- KMAA (First Health)
- Passport (Managed Care)
- Myers and Stauffer
- Public Consulting Group (PCG)
- EDS

The following sections discuss the specific organizational areas targeted for training. Please note: The number of staff listed in Section 2 is based on Transition training registration information and organization charts as of December, 2005. These numbers shall be validated over the course of training development and delivery.

2.1.1 Cabinet for Health and Family Services

The majority of targeted end users for training are in the Cabinet for Health and Family Services.

2.1.1.1 Department for Medicaid Services

Division	Branch	Overall Responsibilities	# of Staff	Staff Location
Division of Administration and Financial Management	Administrative Services	• Develop and maintain the Title XIX (Medicaid) State Plan, which defines what benefits are available, to whom (all members or a subset of members), from what source (providers), and how reimbursed (detailed methodology). The State Plan is continually updated with what are called State Plan Amendments (SPA's) which amend the provisions of the plan. The State Plan itself and any amendments to it must be submitted to and approved by the Centers for Medicare and Medicaid Services (CMS). Most changes in the Medicaid Program require that a SPA be written and approved by the Centers for Medicare & Medicaid Services (CMS) before any implementation may take place. The approval process can be a very lengthy one entailing a continual dialogue with and numerous follow-up submittals to CMS • Develop and maintain Kentucky Administrative Regulations (KAR's) specific to the Medicaid program. Typically when the Department for Medicaid Services changes a policy is must amend the corresponding administrative regulation or regulations. Additionally, administrative regulations are amended in response to changes in state and federal legislation as well as federal regulations. This is a continual process that involves public as well as legislative input/review • Process all open records requests, acts as Department liaison for legislative requests, researches and reviews appropriate information sources and media to identify federal or state policy changes and program actions, refers certain issues to appropriate program divisions for subject matter expertise or follow-up • Operate and oversee Medicaid's managed care organization (MCO) waiver program. DMS contracts with Passport Health Plan, an MCO that serves individuals in a 17-county region. The program is subject to federal scrutiny and must comply with federal requirements. The branch continually monitors PHP to ensure it complies with all requirements and submits detailed reports and other information to CMS to ensure compliance • Oversee the non-emergency transportation waiver program. This program is subject to federal scrutiny and must comply with federal requirements. DMS contracts with the Transportation Cabinet to operate the program. DMS establishes the policy and actively monitors the program as well as renders continual decisions regarding prior authorization requests and related	6	Frankfort

Division	Branch	Overall Responsibilities	# of Staff	Staff Location
		• Coordinate all Medicaid appeals; serving as liaison to recipients, providers and appellate officials • Coordinate all Medicaid contracts • Serve as a communications clearinghouse for DMS and additionally is involved in monitoring pharmacy program policy and developments		
	Eligibility Policy	• Is responsible for eligibility policy monitoring systems • Coordinate and maintain policy analysis, program research, program development regarding eligibility, and establishes Medicaid third party liability policy as related to eligibility processes • Ensure that internet resources related to eligibility are updated as needed	3	Frankfort
	Financial Management	• Oversee the Department's administrative and benefit budgets, as well as all financial transactions of the Department • Coordinate contract development and negotiations • Prepare and submit all Federal budget and statistical reports • Ensure in conjunction with the Division of Claims Management, that the Department's automated systems are appropriately updated to provide accurate and timely finance-related information • Is primarily responsible for audit coordination, rate coordination/IGT coordination, and expenditure analysis and forecasting • Perform long and short term revenue and expenditure forecasting for the Department, performs financial impact analysis for newly proposed programs, proposed legislation, service or eligibility revisions for expansion, and conducts or sponsors actuarial studies of Medicaid of MCE service and demographic experience • Evaluate Managed Care Entities' rate proposals in light of actuarial information, and maintains expertise necessary to provide technical assistance to program staff in support of their rate modeling and development responsibilities • Develop contract compliance programs that continuously monitor the PHP, MHS and the Office of Transportation Delivery's compliance with contract terms.	11	Frankfort
Commissioner's Office	NA	• Provide direction and guidance to the Department in all areas including financial, policy, projects, etc. • Provide input into Cabinet level decisions in all areas pertinent to Medicaid	3	Frankfort

Division	Branch	Overall Responsibilities	# of Staff	Staff Location
Division of Hospitals and Provider Operations	Physicians and Specialty Services	• Is primarily responsible for services in Inpatient Hospitals, Outpatient Hospitals, Acute Care Monitoring, Renal Dialysis Centers, Ambulatory Surgical Centers, Rehab Hospitals/Facilities, Comprehensive Outpatient Rehab Facilities, Critical Access Hospitals, Psychiatric Hospitals, Psychiatric Residential Treatment Centers, DSH Policy, and Transplants. Additional areas of provider responsibility include: Physician/Osteopath, Rural Health, Primary Care, Advanced Registered Nurse Practitioner, Physician Assistant, Birthing Centers, Dentists, Vision Services, Hearing Services, Podiatrists, Chiropractors, Family Planning, Durable Medical Equipment (DME), Emergency Transportation and Ambulance Service, Independent Lab, Other Lab, X-Ray, Optometrists • Assure that participating (Medicaid) providers and managed care entities are monitored for compliance with state and federal laws and regulations, contract requirements, and their achievement of service access and quality targets and goals • Develop and monitor necessary contracts with assigned providers, managed care entities and department agent contracts • Provide necessary program assistance and training to departmental staff and participating providers • Ensure that automated provider payment and reporting systems are appropriately updated and revised to enforce and support program policies	12	Frankfort
	Hospitals and Provider Operations		7	Frankfort
Division of Long	Long Term Care	• Promote quality care and enhanced delivery of services for Medicaid members	7	Frankfort

Division	Branch	Overall Responsibilities	# of Staff	Staff Location
	Community Alternatives		13	Frankfort

Division	Branch	Overall Responsibilities	# of Staff	Staff Location
Division of Children's Health Insurance (KCHIP)	NA	• Promote responsible partnerships between families and community agencies to establish and maintain access to health insurance for Kentucky's children • Is responsible for the program development and reimbursement functions of the Title XXI Kentucky Children's Health Insurance Program (KCHIP) • Serve as the liaison between the public, professionals, and Department staff on relevant issues • Is responsible for policy recommendations, program development, and provider communications for the SCHIP program T • Is responsible for monitoring member enrollment and service expenditures to ensure the program stays within budget • Is responsible for monitoring participating providers for compliance with state and federal regulations and their achievement of service access and quality targets and goals, and providing necessary program technical assistance and training to participating providers • Hold quarterly meetings with the KCHIP Advisory Council to obtain input that assists the Division with decisions pertaining to future program development	5	Frankfort
Division of Medical Management and Quality Assurance	Quality Assurance	• Promote efforts to optimize the quality and value of care delivered in all health settings and to be accountable for continuous quality improvement and healthcare	4	Frankfort

Division	Branch	Overall Responsibilities	# of Staff	Staff Location
	Medical Management		6	

Division	Branch	Overall Responsibilities	# of Staff	Staff Location
Division of Claims Management	Member Claims Assistance	• Maintain a general Medicaid information help desk to field inquiries from the public and assist Medicaid recipients • Assist recipients with complaints and inquiries, resolves recipient eligibility concerns, and does research when necessary • Develop policy regarding eligibility • Is Responsible for Utilization Review and program integrity issues • Follow-up on requests sent by the Medicaid Ombudsman Office, LRC, Cabinet Secretary's Office, Governor's office and individual legislators related to Medicaid recipient issues • Respond to recipient correspondence related to HIPAA • Review Medicaid recipient materials for readability • Review and approve Passport recipient materials • Maintain the Medicaid Member Guide • Provide administrative support to the Consumer TAC • Other duties related to Medicaid recipients	17	Frankfort
	Claims Assistance	• Develop, coordinate the procurement, maintain and monitor the MMIS contract • Serves as the Department liaison and monitors the performance of all external "feeder" Information Systems (KAMES, SDX, PA62, etc.) • Prepare and verify accuracy and completeness of all routine and special management information reports • Serves as the department liaison to outside information management agencies • Provide technical assistance to the Department in all areas of Information System development and management • Assist program staff in the interpretation of data	13	Frankfort

2.1.1.2 Department for Mental Health and Mental Retardation Services

Division	Branch	Function Description	# of Staff	Staff Location

Division of Mental Health and Substance Abuse Services	Program Support	• Provide support, monitoring, and oversight of a variety of functions within the Division of Mental Retardation (DMR)
		• Provide staff support, technical assistance, and monitoring of 14 Regional Community Mental Health/Mental Retardation Centers (CMHCs)
		  • Adult Targeted Case Management
		  • Children's System of Care
			3	Frankfort
				
				14 Regional CMHCs

	Brain Injury Services	• Administer the Acquired Brain Injury Medicaid Waiver program, overseeing the administration of the Traumatic Brain Injury Trust Fund program • Provide support to the Board of Directors of the Traumatic Brain Injury Trust Fund • Refine and develop services for people with brain injuries throughout the Commonwealth		Frankfort
	Provider Services	• Administer Kentucky IMPACT program		Frankfort
	Program Development	• Provide leadership for creating and planning program infrastructure based on assessment of need, best practices, and stakeholder participation • Administer IMPACT program (e.g. targeted case management for children)		Frankfort
Division of Mental Retardation	SCL Waiver	• Provide staff support and oversight of the Supports for Community Living waiver program	30	Frankfort
	Systems Support	• Provide support, monitoring, and oversight of a variety of functions within the Division of Mental Retardation (DMR) • Provide staff support, technical assistance and monitor of 14 Regional Community Mental Health/Mental Retardation Centers (CMHCs)		Frankfort 14 Regional CMHCs

2.1.1.3 Department for Community Based Services

Division	Branch	Function Description	# of Staff	Staff Location

Division of Family Support	Medical Support and Benefits	• MSBB Medicaid Policy Section
		  • Develop procedural instructions for the Medicaid Program
		  • Review state and federal regulations regarding Medicaid
		  • Serve as a clearinghouse for policy clarifications to DCBS field staff
		  • Provide technical assistance as requested by DCBS field staff
		• MSBB Case Processing Section
		  • Maintain working caseload of adult guardianship cases
		  • Determine retro medical assistance for SSI members
		  • Issue emergency medical cards for SSI members
		  • Distribute material and correspondence to DCBS field staff
		• MSBB Technical Section
		  • Issue replacement medical cards
		  • Issue letters confirming Medicaid eligibility
		  • Make KenPAC provider reassignments
			10	Frankfort

2.1.1.4 Office of Information Technology

Division	Branch	Function Description	# of Staff	Staff Location
Division for Health Services Systems Management	Medicaid Systems Management	• Ensure that Cabinet for Health and Family Services' (CHFS) business units use technology to efficiently and effectively deliver comprehensive health and family services to Kentuckians • Develop easy to use data mining and business intelligence tools for CHFS departments • Provide input/support during implementation of projects involving systems technology and other technical support as requested	10	Frankfort

2.1.1.5 Office of Inspector General

Division	Branch	Function Description	# of Staff	Staff Location
Division of Fraud, Waste, and Abuse/Identification and Prevention	NA	• License all health care facilities, day cares, long-term facilities, and child adoption/child placement agencies • Direct the prevention, detection, and investigation of fraud, waste, mismanagement, and misconduct by the cabinet's clients, employees, medical providers, vendors, contractors, and subcontractors	17	Frankfort
Division of Audits & Detection	NA		23	
Division of Special Investigations	NA		22	

2.1.1.6 Other CHFS Organizational Areas

Organizational Area	Function Description	# of Staff	Staff Location
Office of the Ombudsman	• Provide independent avenue for resolution of citizen complaints and requests for information • Answer questions about CHFS programs, investigates client complaints, and works with CHFS Management to resolve them	2	Frankfort
Department for Public Health	• Develop and operate all public health programs and activities for the citizens of Kentucky. These activities include health service programs for the prevention, detection, care, and treatment of physical disability, illness and disease.	6	Frankfort

2.1.2 Office of Attorney General

Division	Branch	Function Description	# of Staff	Staff Location
Medicaid Fraud and Abuse Division	NA	• Investigate, and when appropriate, prosecute Instances of abuse • Ensure the financial integrity of the Kentucky Medical Assistance Program through the investigation and prosecution of healthcare providers who fraudulently bill or abuse the Medicaid system	19	Frankfort
Kentucky Bureau of Investigation	Medicaid Fraud and Abuse Unit			Frankfort

2.1.3 Kentucky Transportation Cabinet

Department	Branch	Function Description	# of Staff	Staff Location
Department of Human Services	NA	• Coordinate non-emergency, non-ambulance medical transportation services to eligible Medicaid, Vocational, Rehabilitation, and Department of the Blind recipients.	6	Frankfort

2.2 Contractors

Contractor	# of Staff	Staff Location	Training Approach Comments
First Health (KMAA)	TBD	Frankfort, KY Louisville, KY	Train-the-trainer approach (e.g., EDS trains KMAA training staff, KMAA trains their end users)
Passport	133	Louisville, KY and Philadelphia PA	Train-the-trainer approach
Myers and Stauffer	5	TBD	
PCG	10	TBD	
EDS	126	Frankfort, KY	Training organized by operational area (e.g., Call Center, Mailroom, etc.)
University of Kentucky	1	Lexington, KY	Only 1 user – Jeff Talbert

2.3 End User Level of Training

The level of training depends on the end user's job function and how the person utilizes the system to perform his or her job. Training focuses on the process, how the end user utilizes the system to perform key tasks and activities.

1. Overview - An overview course provides a high level description of the KY MMIS subsystems, functions, and its capabilities. This training level is provided to all staff members to familiarize them with system features and navigation tools.

2. Detailed - A detailed level course focuses on how the end users utilize the subsystems and associated applications to perform their job functions. The goal is for staff members to understand how to use the system features and navigation tools in context how they perform their jobs. This includes using panels to gather information, running and printing reports, and the ability to interpret data from the system.

3. Specialized - This training level is provided to staff members who work on the system or process on a daily basis and need to have the ability to troubleshoot and fix the system. This level requires a deep, concentrated focus and knowledge in a particular area, including knowledge of all system inputs, outputs, and interactions.

3 Training Courses and Methods

The KY MMIS training focuses on the subsystems and functions that end users utilize in their daily work. Since application training is not stand-alone, the New KY MMIS functionality is addressed within the context of each job. Training focuses on process, how the user utilizes the system to perform his or her job. To achieve that end, EDS shall develop and provide instructor-led training by organizational area.

EDS shall provide training in three formats:

- Computer Based Training (CBT) – self-paced instruction delivered via diskettes or the web;
- Instructor Led Sessions – classroom sessions conducted by the EDS Trainer at the EDS training facility; and,
- Self-Study Materials – self-paced instruction delivered via presentations, job aids, and other related training materials

EDS shall provide instructor-led training customized for each organizational area as shown below.

Area	Cabinet/ Office	Department	Division	Branch	# By Area	# By Department
Commonwealth	**CHFS**	**Department for Medicaid Services**	Administration and Financial Management	Administrative Services	6	24

Totals					565	565

*# of end users based on Transition training statistics and organizational charts as of December, 2005; these numbers will be validated and updated during training design and development.

A general course shall provide an overview of the KY MMIS subsystems and functions, explain how providers will utilize and benefit from the new KY MMIS, and include information on how to navigate through the system. This course will be offered via computer based, instructor led, and self-study training.

The training materials shall include the subject areas focusing on the following content:

- System Changes - Providing targeted end users with information on how to use the New KY MMIS to perform their current job function;
- Process Changes - Providing targeted end users with an understanding of changes to their current job; and,
- Job Changes - Providing appropriate end users with an understanding of their new or changing job responsibilities.

3.1 Content Development Approach

To determine the training needs for each organization area, the EDS team plans to follow a three-step process:

1. Assess how staff currently utilizes the Legacy KY MMIS subsystems and functions. The EDS team is creating an analysis of what subsystems and functions are being utilized across organizational areas based on current KY Legacy MMIS usage (samples found in Appendix A)
2. Meet with the organizational leads (e.g., Directors, Branch Managers, etc.) to conduct an "as-is" assessment on how the staff currently utilize the Legacy KY MMIS to perform their job.
3. Work with EDS technical staff to develop the "to-be" assessment, how staff will utilize the New KY MMIS to perform their job processes.

3.2 New KY MMIS Content Areas

The following table lists the following information:

- Content Areas
- Content Objective(s)

- Training Methods detailing the anticipated level of training required.
  - O – Overview
  - D – Detailed
  - S – Specialized

The courses, course objectives, and level of training shall be customized by organizational area and developed during the "as-is" and "to-be" assessment.

Level of Training Key **O – Overview** **D – Detailed** **S – Specialized**		**Methods**		
Content Areas	**Objectives**	Self-Study Presentation	Self-Study CBT	Instructor Led
New KY MMIS Introduction	• Know the key subsystems of the New KY MMIS • Learn the major processes supported by the key subsystems • Understand the overall structure New KY MMIS, know how to access data, navigate through the various interChange windows, and update data and help screens • Understand how the MMIS interacts with the KMAA		O	O, D
New KY MMIS User Manual Orientation	• Understand the organization and structure of the interChange user manual • Know where to find information • Know how to search, download, and print information	O	O	O, D
Medicaid 101 – What is Medicaid?	• Familiarize EDS and Commonwealth staff with the origins of government-funded health care • Foster a better understanding of the differences between Medicaid and Medicare • Clarify the federal government involvement Medicaid.	O	O	O
Medicaid 102 – Medicaid from the Member's Perspective	• Familiarize new EDS and Commonwealth staff with policies and procedures encountered by members upon applying for benefits and receiving services from providers.	O	O	O
Medicaid 201 – Medicaid Billing from the Provider's Perspective	• Familiarize new EDS and Commonwealth staff with provider billing forms and the overall billing process	O	O	O
Medicaid 202 – The Lifecycle of a Claim	• Familiarize EDS and Commonwealth staff on claims processing, from submission to adjudication	O	O	O
Medicaid 301 – Claims Research (GUI)	• Learn how to research denied claims using the following subsystems: Claims Inquiry, Recipient, Provider, Exception Control, Procedure, and Drug and Diagnosis	D		D

Level of Training Key **O – Overview** **D – Detailed** **S – Specialized**		**Methods**		
Content Areas	**Objectives**	Self-Study Presentation	Self-Study CBT	Instructor Led
Medicaid 302 – Financial Research	• Learn how to research Accounts/Receivable transactions, checks sent by providers, claim credits and adjustments	D		D
Medicaid 303 – Third Party Liability	• Learn how to access information regarding a member's other coverage and to research post-payment recovery information.	D		D
Member Management	• Learn the Member Management function and support contained within the system • Learn Member Management processes • Learn how to use the KY New MMIS to support the Member Management processes • Learn how Lock-in works in Member Management • Understand Medicare Buy-in program and how it works with Kentucky Medicaid • Learn how to use system panels, forms, letters, and reports • Learn how KMAA interacts with the MMIS	O		O, D
Benefits Administration	• Understand the Kentucky Medicaid benefit plan and coverage • Learn the Benefit Administration process • Learn how the MMIS supports the Benefit Administration process	O		O, D
Provider Management	• Learn the major process flows for the Provider functions of the MMIS • Learn how to use system panels, forms, letters, and reports • Learn how KMAA interacts with the MMIS	O		O, D
Reference Data	• Learn the Reference Data functions • Understand the logical data groupings • Learn the external system interfaces • Understand how to maintain reference data • Learn how to use system panels, forms, letters, and reports • Learn how KMAA interacts with the MMIS	O		O, D
Claims Operations Claim Types	• Learn the different types of claims and how each type processes through the system ○ Encounter ○ EPSDT ○ Institutional ○ Professional ○ Dental ○ Long Term Care			

Level of Training Key **O – Overview** **D – Detailed** **S – Specialized**		**Methods**		
Content Areas	**Objectives**	Self-Study Presentation	Self-Study CBT	Instructor Led
Cash and Financial Third Party Liability (TPL) Pricing & Reimbursement Methodology Claims Transactions Adjustments	• Understand how to work the claims cash and financial process • Learn how the claims involving TPL are processed through the MMIS system • Understand the reimbursement methodology that drives pricing • Know how all claim types price in the system • Understand the claims submission process from submission to payment • Understand the types of claim transactions • Learn the processes for mass adjustments	O,D	O,D	O, D
Claims Resolution Mailroom Remittance Advice (RA)	• Understand how claims adjudicate • Learn the difference between an edit and an audit • Learn how to resolve audits and edits • Learn how to use the enhanced claims editing function • Learn how to research claims • Learn the flow of the mailroom and all aspects of the processes • Understand the process to generate and send RAs to the providers • Learn how to read RAs			

New KY MMIS Reporting	• Understand the reports produced by the two subsystems
	  ○ Management and Administrative Reporting (MAR)
	  ○ Surveillance and Utilization Reporting (SUR)
	• Understand how to utilize these systems to access and generate reports
		O		O, D

Managed Care	• Understand how the managed care program works under Kentucky Medicaid • Understand how the MMIS supports Managed Care • Be knowledgeable about the Kentucky Medicaid Managed Care provider, Passport (e.g., how many members it covers, areas of Kentucky they reside in, etc.)	O	O	O, D
DSS Training	• Learn how to develop and run queries using Business Objects • Understand where to find and access canned reports • Learn how to produce ad hoc reports using Business Objects • Know the data marts available to query	O		O, D S

Level of Training Key **O – Overview** **D – Detailed** **S – Specialized**		**Methods**		
Content Areas	**Objectives**	Self-Study Presentation	Self-Study CBT	Instructor Led
Provider Functionality Overview	• Learn about the systems utilized by providers: the Automated Voice Response System (AVRS), External Data Interface (EDI), and KY Health Net • Learn about the eligibility and claims processing Internet functionality utilized by the providers • Understand how to utilize this functionality to support provider inquiries • Learn how electronic claims are transmitted and how they flow through the claims processing system	O	O	O
Third Party Liability	• Post payment recovery			D,S
OnBase*	• Learn how to run and print reports	O	O	
Encounter Processing	• Learn how encounter records are transmitted, received and processed	O		O, D
Quality Assurance and Audits	• Learn how to administer QA and audit functions and the Data Warehouse toolset			D
EPSDT	• Learn how to utilize the EPSDT application	O		
Case Management	• Learn how to perform the KY MMIS Case Management functions	O		

*OnBase reports training occurs in the first quarter of 2006.

3.3 Content Areas Targeted for Commonwealth Organizations

The following content areas targeted for the following Commonwealth areas based on their organizational function. Below is a draft assessment of the content areas to cover for each organizational area. This assessment shall be validated during the training assessment.

	Department for Medicaid Services											**CHFS Office of Information Technology - Medicaid Branch**	**Office of Inspector General**	**Other CHFS (e.g. Office of the Ombudsman, Public Health, etc.)**	**Department for Mental Health and Mental Retardation Services**						**Department for Community Based Services**	**Attorney General**	**Passport**	**KMAA**
	Division of Administration and Financial Management			Division of Hospitals an Provider Operations		Division of Long Term Care and Community Alternatives		Division of KCHIP	Division of Medical Management & QA	Division of Claims Management					Division of Mental Health and Substance Abuse Services			Division of Mental Retardation						
Content Areas	Administrative Services	Eligibility Policy	Financial Management	Physician & Specialty Services	Hospital and Provider Operations	Long Term Care	Community Alternatives			Member Claims Assistance	Claims Assistance				Program Support	Brain Injury Services	Provider Services	Program Development	SCL Waiver	System Support	Div of Family Support – Medical Support & Benefits			
Reference Data			X	X	X	X	X		X	X	X	X												
Claims Operations			X	X	X	X	X		X	X	X	X												
New KY MMIS Reporting	X	X	X	X	X	X	X		X	X	X	X			X			X		X		X		
Managed Care		X	X						X	X	X	X												
DSS Training	X	X	X	X	X	X	X	X	X	X	X				X			X		X		X		

Content Area	Department for Medicaid Services											CHFS Office of Information Technology - Medicaid Branch	Office of Inspector General	Other CHFS (e.g. Office of the Ombudsman, Public Health, etc.)	Department for Mental Health and Mental Retardation Services						Department for Community Based Services	Attorney General	Passport	KMAA
	Administrative Services	Division of Administration and Financial Management		Division of Hospitals an Provider Operations		Division of Long Term Care and Community Alternatives		KCHIP	Division of Medical Management & QA	Division of Claims Management					Division of Mental Health and Substance Abuse Services			Division of Mental Retardation			Div of Family Support – Medical Support & Benefits

Case Management			X	X	X	X	X		X	X	X	X											

4 Training Schedule

The Commonwealth training schedule is based on a "just in time" approach. "Go-Live" training for the New KY MMIS begins two to three months prior to system go-live in November 2006. Prior to "go-live", training materials are drafted for and tested during the UAT which occurs in late May/early June. Materials are updated and finalized based on feedback from the UAT.

In general, end users start with the New KY MMIS Overview/Introduction CBT scheduled to be available around June. This allows users to become familiar with the KY MMIS before they attend their organizational area training, scheduled to begin in September. The "just in time" approach for training ensures that training is relevant and retention of material is maximized.

Factors that influence the schedule are the availability of staff, the number of trainees, the number of sessions, and the length of the sessions. Locations, specific sessions, dates and times shall be determined during subsequent training design and development activities and finalized by August 2006.

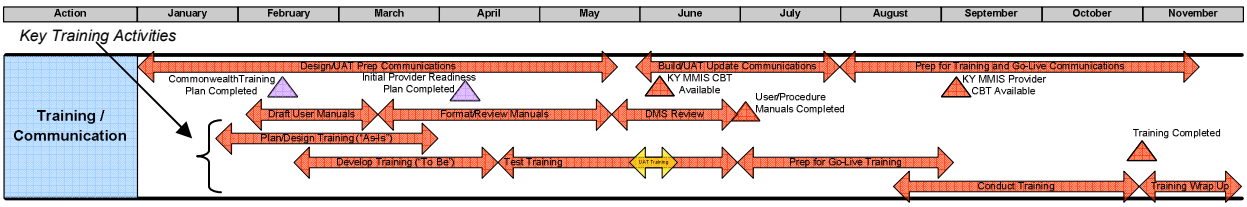
After the "go-live" training is complete, ongoing training shall incorporate any New KY MMIS system changes resulting from use during implementation.

4.1 Training Locations

The majority of training occurs at the 656 Chamberlin location. Some training may occur in the Commonwealth regional offices. Training locations shall be confirmed during subsequent training design and development activities and finalized by August 2006.

4.2 Training Timeline

The timeline below highlights the key Training and Communication activities for 2006



Plan/Design Training – End of January through March 2006

- Develop Legacy KY MMIS user analysis
- Meet with Commonwealth leads to create "as-is" assessment
- Draft initial go-live training schedule
- Plan, design and develop OnBase Reports training

Develop Training – Mid-February through Mid April

- Develop "to be" analysis
- Develop course outlines that specify the objectives of the course and the key topic areas
- Draft materials for UAT
- Prepare for UAT Training (e.g. environment, classrooms, etc.)

Test Training – End of April through June

- Register UAT participants
- Conduct UAT training
- Test training materials during UAT
- Evaluate UAT training (e.g., summarize evaluations, user proficiency, feedback on materials)
- Create UAT training binder with summary of UAT Training along with all key documentation

Prepare for Go-Live Training – July through August

- Revise training materials
- Confirm training schedule and sessions
- Register participants

Conduct Go-Live Training – mid August through October

- Conduct sessions
- Manage registration and training schedule

Wrap Up Training – November

- Evaluate course evaluations and user proficiency tests
- Evaluate training materials and feedback
- Create UAT training binder with summary of UAT Training along with all key documentation
- Develop ongoing training plan

5 Refresher and Ongoing Training

Refresher and ongoing training shall be scheduled as mutually agreed upon by EDS and the Commonwealth. There will be a training refresh in November 2006.

The tailoring of training materials by organizational area shall facilitate refresher and ongoing training efforts. Each organizational area shall have training materials customized to their operations. For example, if a new staff member is hired, he or she can access KY MMIS training materials that specifically address how he or she utilizes the system to perform his or her job.

End users access ongoing and remedial training throughout the New KY MMIS project through:

- Tailored training material (e.g., job aid, training presentation, etc.) placed on a common area, such as Project Workbook (PWB);
- CBT; and,
- Online New KY MMIS user manuals.

6 Training Support Staff

EDS training staff work with selected Commonwealth staff to plan, design, develop, deliver, and manage Commonwealth training.

6.1 EDS Staff

The table below lists the EDS staff involved with planning, designing, developing, and delivering KY MMIS training during and post-implementation. Other staff, such as Business Analysts, may also provide assistance with training development and delivery

Staff Name	Title	Training Responsibilities
Ricky Pope	Account Manager	• Provide oversight and guidance
Mark Noble	New KY MMIS Operations Project Manager	• Provide oversight and guidance
Bernice Shelton	Systems Liaison Manager	• Oversee all training activities • Help plan and manage training assessment, planning, design, validation, and development • Guide assessment, design and development of training courses • Identify and manage EDS training resources
Clare Wefelmeyer	Communications and Training Manager	• Plan and manage overall training effort – assessment, planning, design, validation, and development • Develop templates and processes
Patricia George	KY MMIS Trainer	• Manage training development and delivery • Develop content • Deliver training
Paula Conway	Training Coordinator	• Coordinate training logistics • Track and report on courses evaluations and user proficiency results

6.2 Commonwealth Staff

The Commonwealth review and approve the Commonwealth Training activities and deliverables. Below is a list of the Commonwealth staff that works with the EDS team to plan, design, develop, and deliver training.

Staff Name	Title	Training Responsibilities
Jan Howell	Deputy Commissioner	• Provide input and guidance as requested or needed • Approve final training plan
Jan Thornton **Judy Bullock** **Randy Kitchen**		• Work with EDS staff to plan, design, and delivery of training • Work with Commonwealth leads to help develop and provide feedback on content

Staff Name	Title	Training Responsibilities
Karen Sayles **John Hoffman**	Resource Management Analyst or Medicaid Specialist	• Help validate course content, material, and lengths • Provide input into training courses, and assist with content development • Work with Commonwealth leads to help develop and provide feedback on content
Commonwealth/ Contractor Leads	Directors, Assistant Directors, Branch Managers	• Meet and work with EDS training team to develop “as-is” and “to be” training assessment • Review training course outlines and content for their specific organizational area • Work with EDS training team to schedule training for staff

Appendix A - Sample User Analysis Reports

The following provides examples of the Legacy KY MMIS user analysis reports (see sample reports at https://pwb.kyxix.eds-mscs.com/KYXIXDDI/ProjMgmt/TrainingMgmt/DDI/DDI_Training_User_Analysis/)

Overall Summary Analysis, By Subsystem

New KY MMIS Go Live Status Report

Kentucky MMIS Project

Cabinet for Health and Family Services
Department for Medicaid Services

Status Week of May 14 - May 18, 2007

SAMPLE

Cabinet for Health and Family Services Department for Medicaid Services		
Role:	Name:	
Author	Scott Norman	
Reviewer	EDS Implementation leads, PMO	
EDS Management	Ricky Pope	
Client	Commissioner Glenn Jennings Deputy Commissioner Carrie Banahan Claims Division Director Rhonda Poston Executive Director/CIO Lorna S. Jones Chief Technical Officer Sandeep Kapoor	
DELIVERABLE TITLE: 2007-05-23 New KY MMIS Go Live Status Report	DATE SUBMITTED: 05/23/07	
FILE NAME: 2007-05-23_New_KY_MMIS_Go_Live_Status_Report_Final.pdf		AUTHORING TOOL: Microsoft Word 2003

Table of Contents

Executive Summary

Accomplishments

- Executed 100% of the system test cases for 32 of the 32 functional areas
- Passed or Completed 100% of the system test cases for 21 of 32 functional areas
- Converted 708 files for claims history covering the period of January 2000 through April 2007. Of the 708 files converted, the overall failure rate is approximately 1% (approximated based on the last balancing report)
- Added 5,279,687,529 rows, approximately 77.6 million rows an hour, to the KYMISP1 and KYHISP1 database for claims history since Wednesday morning
- Finalized data loads with 2,491 failed records. These records will be reconciled and resolved as appropriate
- EDS (Ricky Pope, Kristy Taylor-Standifer, and EDS lobbyist Patrick Jennings) began meeting with state legislators Tuesday, May 8, to discuss the implementation of the New KY MMIS system. Those legislators included:
  - Rep. Jimmie Lee
  - Rep. Danny Ford
  - Sen. Dick Roeding
  - Sen. Joey Pendleton
  - Sen. Gary Tapp
  - Sen. Julie Denton
  - Sen. Dan Seum
  - Sen. Tom Buford

  EDS will continue to meet with legislators over the next two weeks, targeting members of the Medicaid Oversight Committee and Health & Welfare Committee. EDS is scheduled to meet with Rep. Bob Damron, Rep. Ruth Ann Palumbo, and Rep. Tom Burch in the coming weeks. EDS has drafted a letter to be mailed to all 138 legislators that includes information about the implementation and contact information should they or their constituents have any questions
- Completed change to the Long Term Care (LTC) Roster report to print the entire contents of the report and display in PDF format
- Completed Managed Care Adjustment programs and initiated testing cycles
- Converted and loaded 5 billion plus claims history records to the production database with less than a one percent error rate
- Completed all claims conversion processes ahead of schedule
- Provided documentation for Single Adjustments process needed by the operational team
- Installed Claimcheck customization in production database
- Received approval of the User Acceptance Test (UAT) Resolution Document Template
- Submitted the UAT Resolution Document

Looking Ahead

- Setup Production Server Setup for Captiva
- Continue working on Defects and testing for Model Office (MO) and UAT
- Begin Final Conversion Reporting
- Continue Implementation planning and execution
- Complete re-execution of system test cases
- Complete re-execution of System Integration Testing (SIT) test cases

Description of Dashboard Elements

Overall Project Schedule Status

The New KY MMIS Go Live remains on track for June 4, 2007. The final Legacy cycle will run on May 25, 2007. The Legacy system will remain operational during the conversion of the most recent month's claims data. Any claims received after the May 18, 2007 cut off will be processed in the New KY MMIS. The first financial cycle in New KY MMIS will run on June 9, 2007.

Risks

- There are no significant risks to report at this time

Issues

- There are no significant issues to report at this time

Accomplishments, Current Activities, and Looking Ahead

Accomplishments

- Executed 100% of the system test cases for 32 of the 32 functional areas
- Passed or Completed 100% of the system test cases for 21 of 32 functional areas
- 288 of 704 conversion processes have completed and are being validated. Error rates are very low
- Converted 708 files for claims history covering the period of January 2000 through April 2007. Of the 708 files converted, the overall failure rate is approximately 1% (approximated based on the last balancing report)
- Added 5,279,687,529 rows, approximately 77.6 million rows an hour, to the KYMISP1 and KYHISP1 database for claims history since Wednesday morning
- Finalized data loads with 2,491 failed records. These records will be reconciled and resolved as appropriate
- EDS (Ricky Pope, Kristy Taylor-Standifer, and EDS lobbyist Patrick Jennings) began meeting with state legislators Tuesday, May 8, to discuss the implementation of the New KY MMIS system. Those legislators included:
  - Rep. Jimmie Lee
  - Rep. Danny Ford
  - Sen. Dick Roeding
  - Sen. Joey Pendleton
  - Sen. Gary Tapp
  - Sen. Julie Denton
  - Sen. Dan Seum
  - Sen. Tom Buford

  EDS will continue to meet with legislators over the next two weeks, targeting members of the Medicaid Oversight Committee and Health & Welfare Committee. EDS is scheduled to meet with Rep. Bob Damron, Rep. Ruth Ann Palumbo, and Rep. Tom Burch in the coming weeks. EDS has drafted a letter to be mailed to all 138 legislators that includes information about the implementation and contact information should they or their constituents have any questions

Construction

- Completed change to the Long Term Care (LTC) Roster report to print the entire contents of the report and display in PDF format
- Assisted local users with Contract Tracking Management System (CTMS) login issues after changing to production Medicaid Enterprise User Provisioning System (MEUPS)
- Coordinated Transmission of SHPS files for CTMS Conversion to our Test directory to prepare for conversion
- Coordinated and completed a successful Transport Level Security Testing with First Health
- Added File Transfer Service (FTS) application to MEUPS security
- Completed Managed Care Adjustment programs and initiated testing cycles
- Completed CTI server and Automated Voice Response (AVR) server configurations for CTI solution

Conversion

- Met with PA-SHPS team to plan conversion/implementation calendar activities
- Converted and loaded 5 billion plus claims history records to the production database with less than a one percent error rate

- Completed all claims conversion processes ahead of schedule
- Continued final conversion and processed the capitation history and claim history through April 2007. The team will now transition into the validation and error reconciliation phase

Documentation

- Responded to questions on the Claims User manual and updated the PWB when necessary
- Provided documentation for Single Adjustments process needed by the operational team

Go Live Prep

- Installed Claimcheck customization in production database

Testing

- Reviewed and updated several Procedure and Diagnosis groups for the Management and Administrative Reporting (MAR) team to assist in their testing/reporting requirements
- Received approval of the UAT Resolution Document Template
- Submitted the UAT Resolution Document

Current Activities

Construction

- Prioritizing and working outstanding Change/Problem Logs

Conversion

- Executing Final Conversion

Documentation

- Working on documentation for running Reference batch jobs that require user intervention or outside files
- Updating documentation when discrepancies are discovered

Testing

- Re-executing system test cases for Financial, Managed Care, Claims, Encounter, TPL, Electronic Data Interchange (EDI), MAR, Surveillance and Utilization Review (SUR), OnBase, Quality Assurance and Audits (QAA), and Benefit Administration Functional Areas
- Assisting in UAT testing
- Updating Edit/Audit disposition information for the business team
- Working with policy team to review Procedure Drug Diagnosis (PDD) rules conversion
- Executing SIT test cases

Looking Ahead

Construction

- Setup Production Server Setup for Captiva
- Continue working on Defects and testing for MO and UAT

Conversion

- Begin Final Conversion Reporting

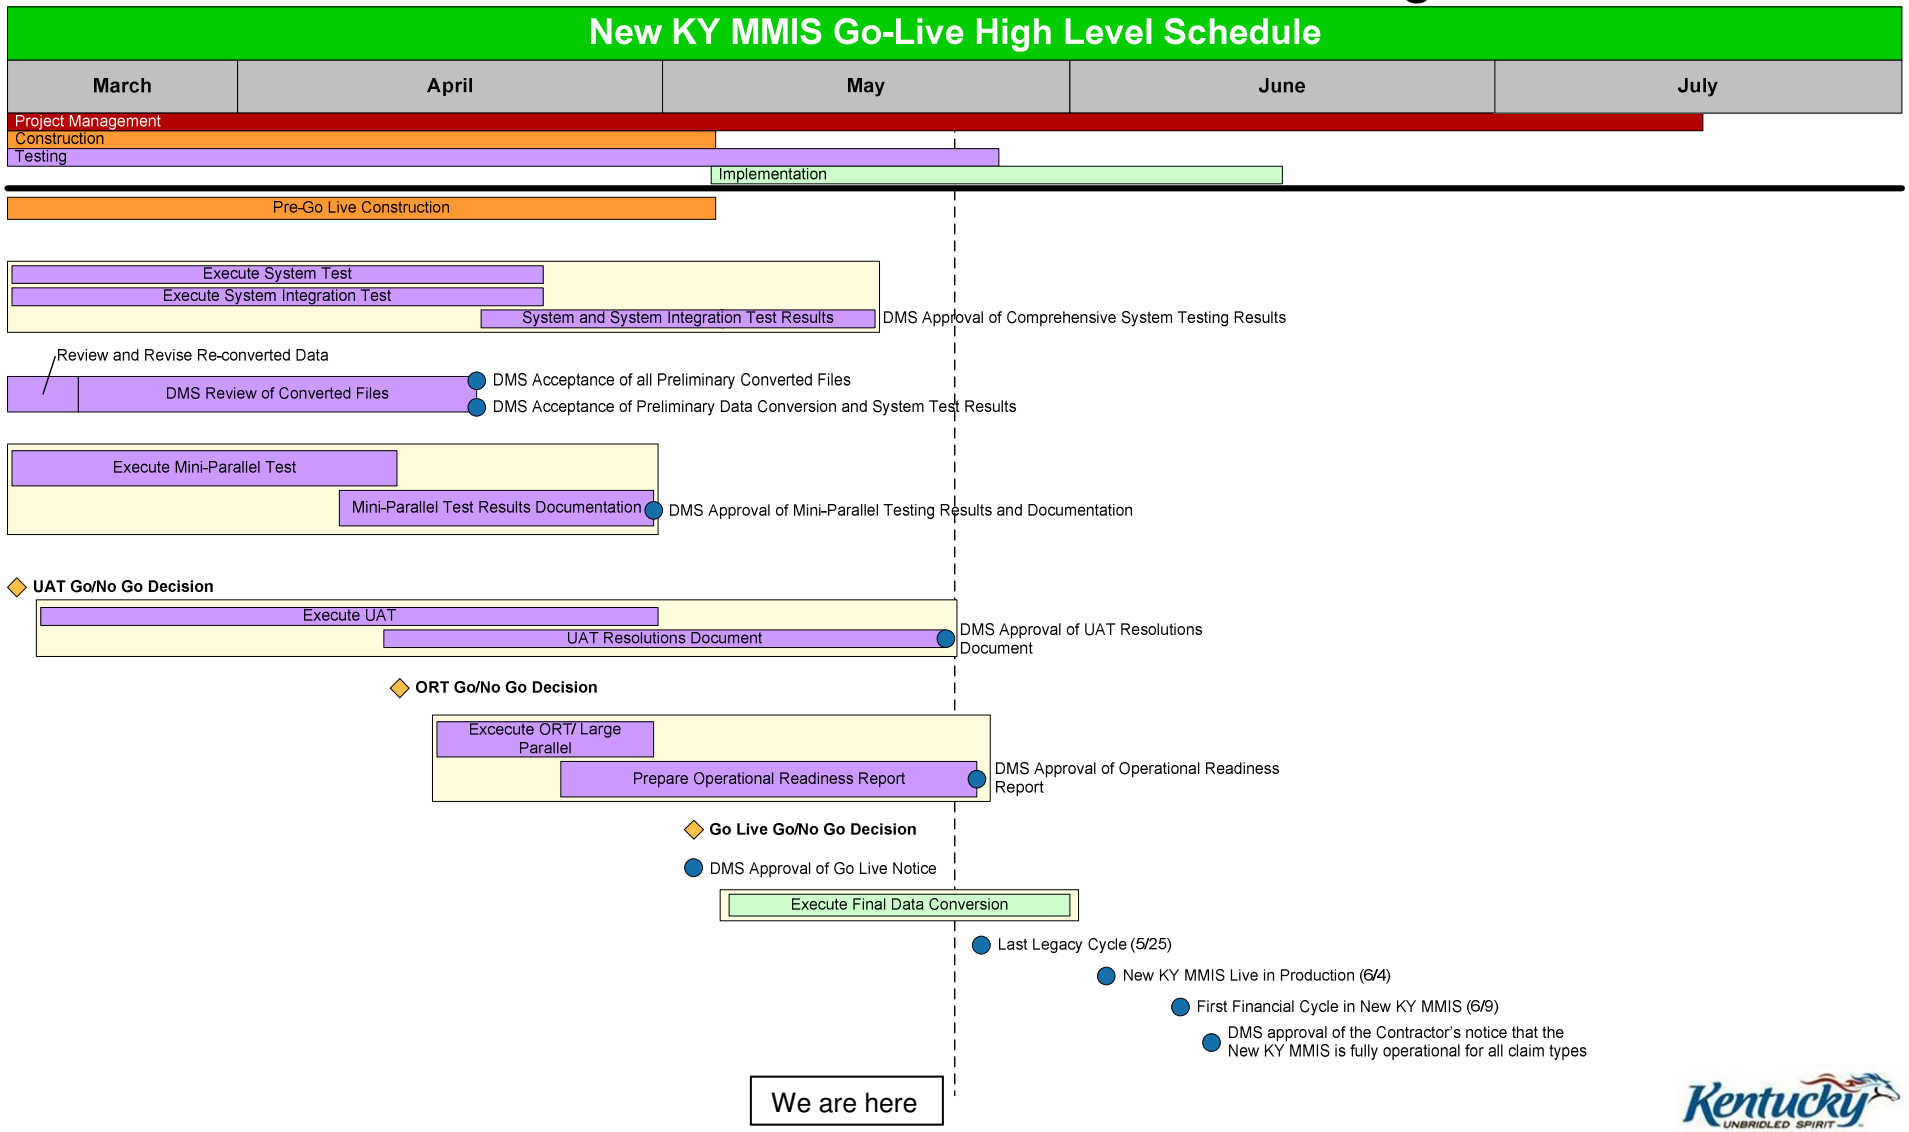
Implementation

- Continue Implementation planning and execution

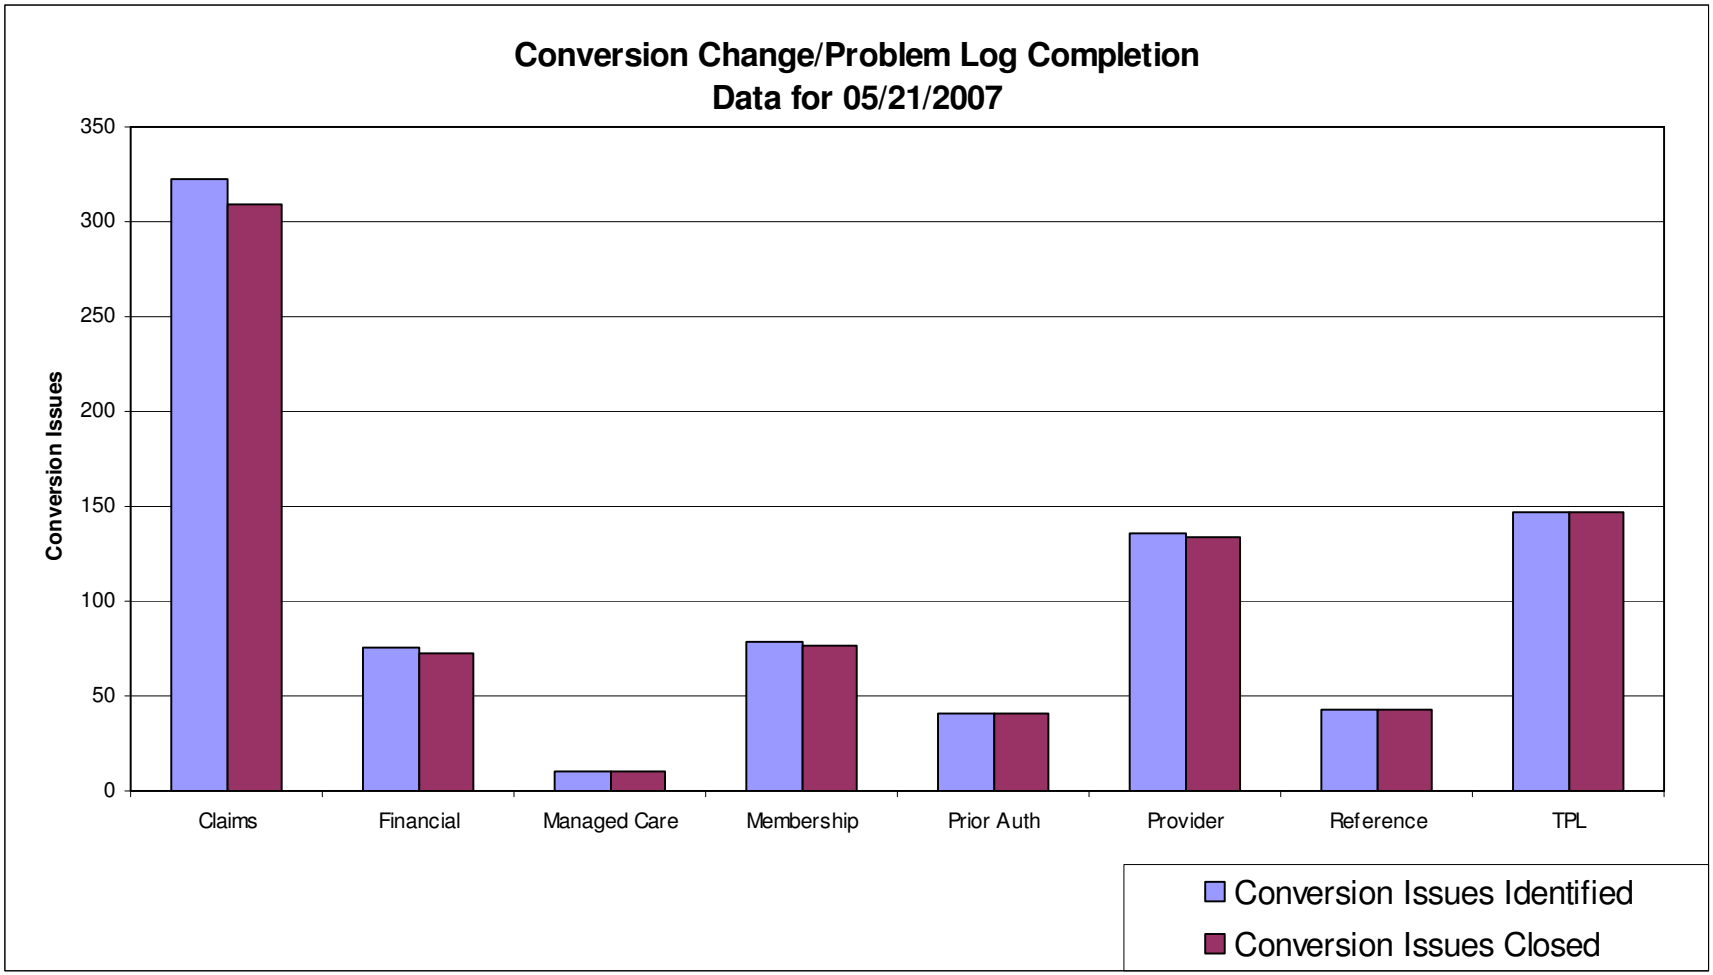
Testing

- Complete re-execution of system test cases
- Complete re-execution of SIT test cases

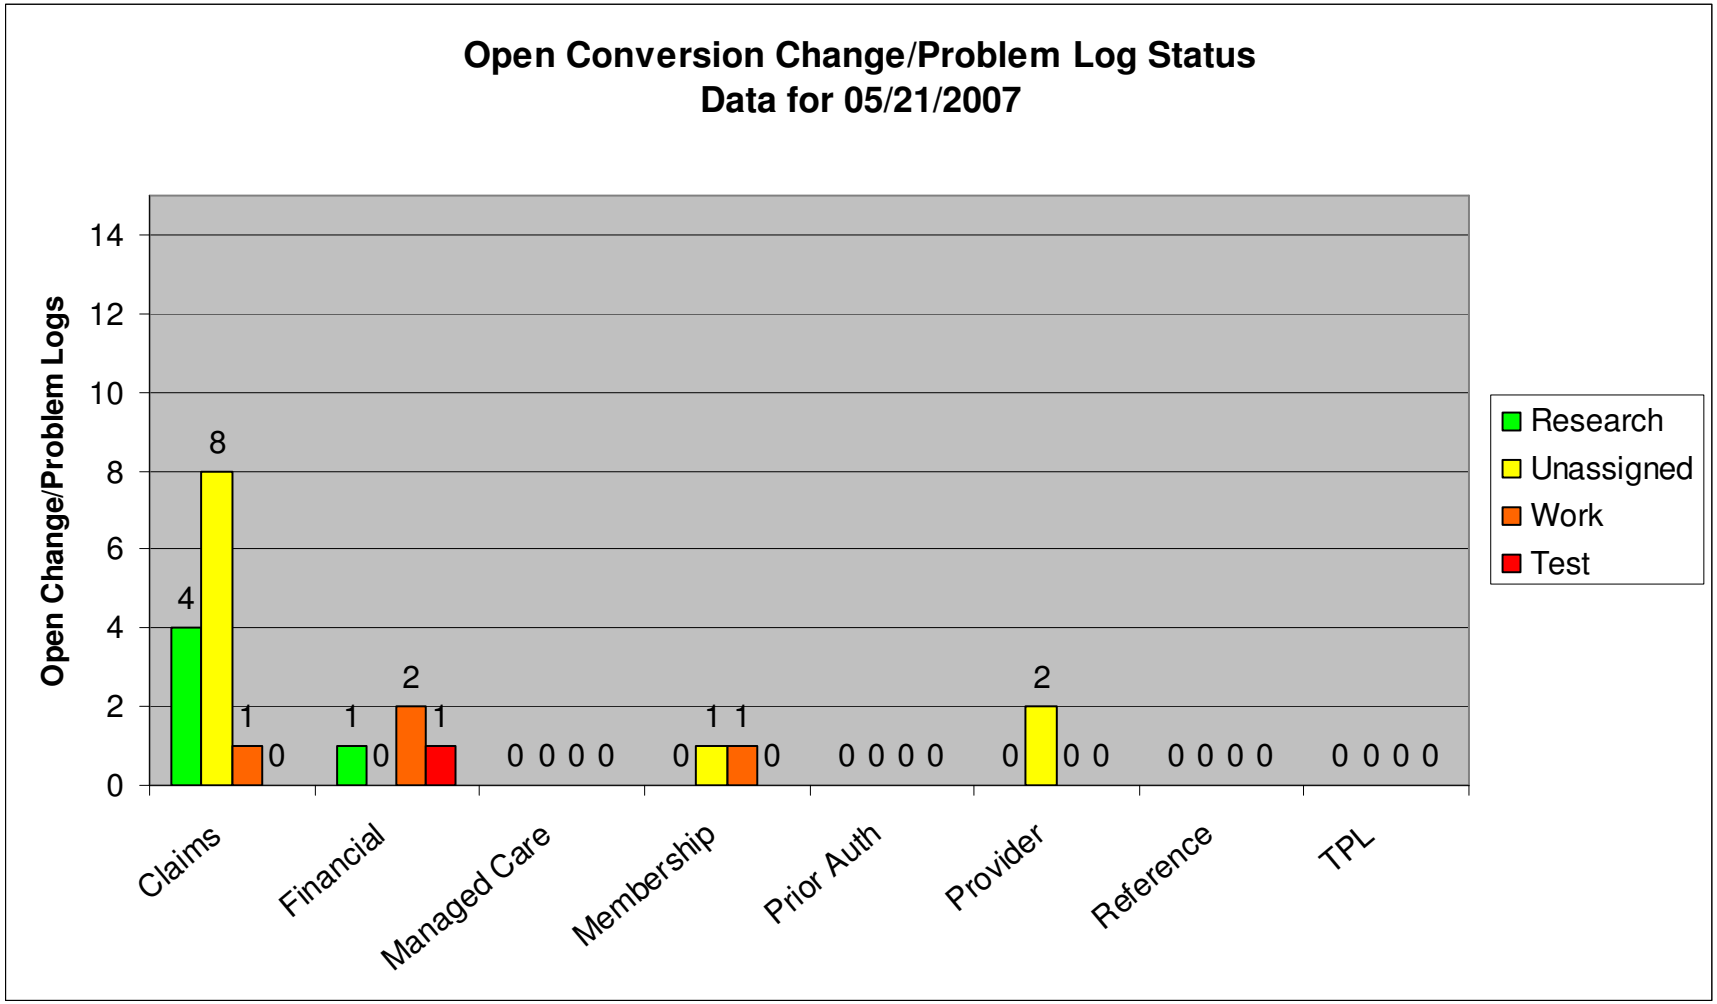
High Level Timeline



Conversion Statistics*



* Detailed statistics for this chart are available on the Project Workbook



Color	Criteria
Research	• Change/Problem log is not fully defined and additional information is necessary before the item is ready for assignment to a conversion team member
Unassigned	• Change/Problem log is fully defined and ready for assignment to a conversion team member for completion
Work	• Change/Problem log has been assigned to a conversion team member and is actively being worked
Test	• Change/Problem log construction has been completed on the item and a conversion team member is testing those changes

The following table contains the criteria used to determine Interface testing status. Status is calculated for all interfaces in both External System Testing and End-to-End Testing. Use the matrix below as a quick reference for overall Interface Testing status.

Color	Criteria
Yellow	• Default Status- Will Remain in this status unless one of the criteria below is met
Blue	• Both External System Test and End-to-End System Test are 100% Complete
Green	• Both External System Test and End-to-End System Test are greater than 80% Complete, but at least one is less than 100%
Red	• It has been determined that there is an issue in the External System Test and/or the End-to-End System Test

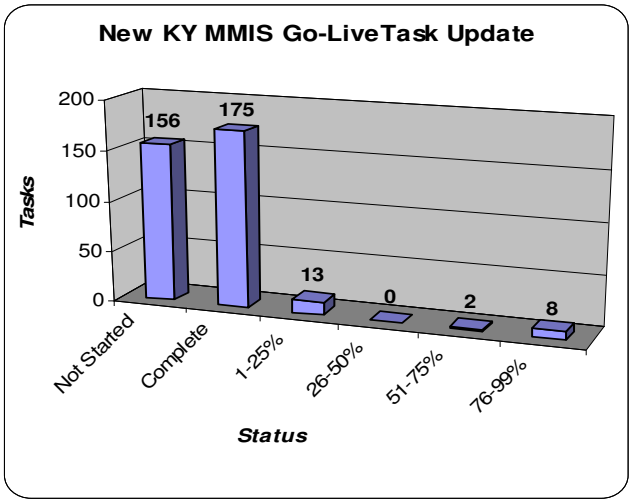
The end to end interface testing for certain areas remain in yellow status for the following reasons:

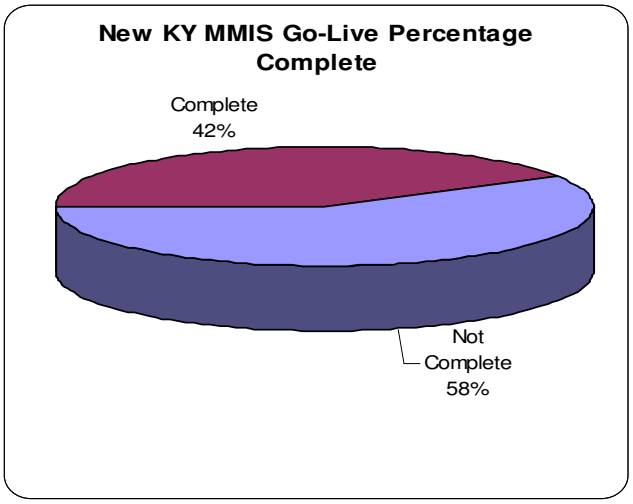
- CMS – remains yellow because it will not test MSIS tapes
- eKASPER – a defect in the files sent to eKASPER prevents the testing of the response files
- eMARS - some eMARS files have not passed UAT test cases
- ICS – remains yellow because EDS is unable to test interChange Captiva until ICS scan stations and desktops have been implemented
- NEMT - KYTC is not yet successful in transmitting encounter files

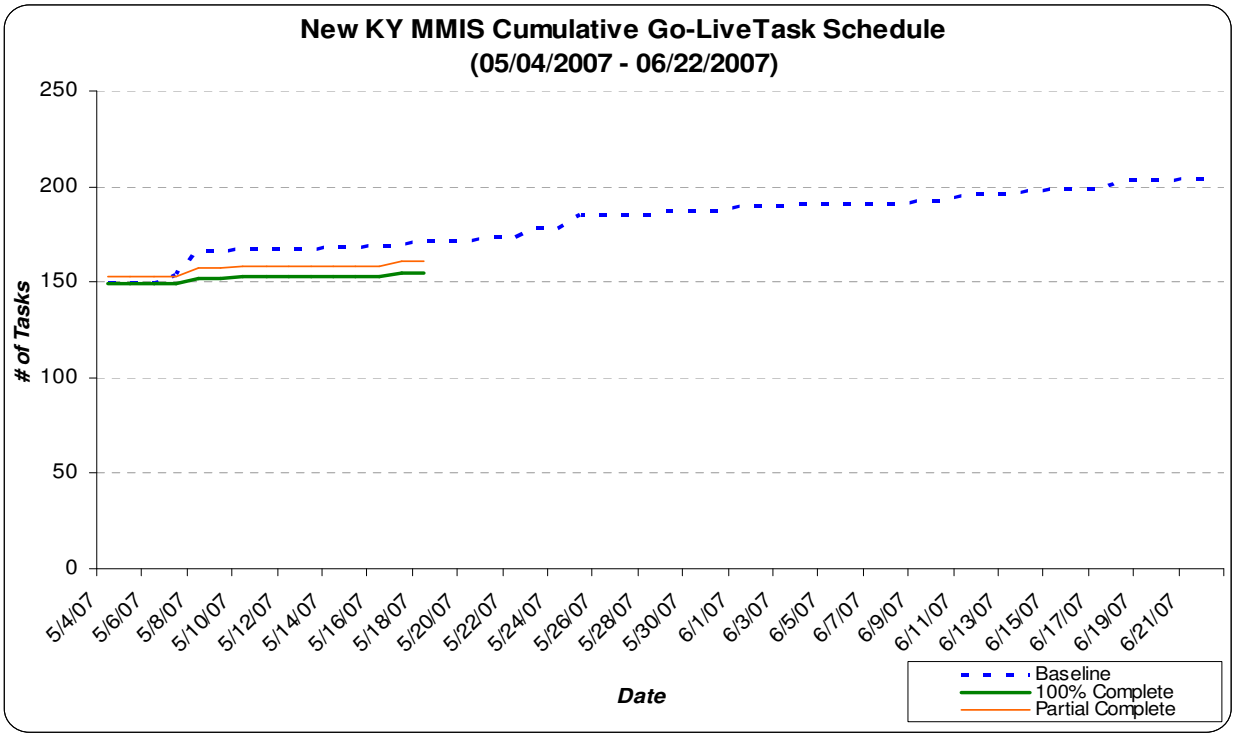
New KY MMIS Snapshots

The following graphics show various views of project work completed. The Percentage Complete graphic shows the overall percentage of work complete based on the Microsoft Project work plan calculation. The Cumulative Task Schedule graphic consists of three lines; a cumulative count of how many tasks were planned to be completed by a specified date, a line depicting the actual count of tasks currently complete, and a third line showing the average percentage completion of all late tasks in the current baselined work plan.

Note: The Go Live Task Update graphic has been changed to show tasks mapped against their completion percentages, rather than the number of project work hours mapped to those percentages.







New KY MMIS Project Detail

Milestones/Deliverables/Checkpoints/Tasks

The following table represents a rolling month and a half window of project tasks. It lists tasks that were due in the past two weeks, as well as those due in the coming month. The data in this table is accurate as of May 18, 2007.

Highlighted tasks indicate those that are due within two weeks of Friday May 18, 2007.

*	Description
X	This task is currently late, based on the Baseline Due Date.
C	This task is currently late, based on the Baseline Due Date, and is part of the Critical Path.
+	This task was completed during this status week.

Dashboard Explanation/Key

Overall Project Schedule and Detail Areas Schedule

Formula: $\frac{-1*(l-p-a)}{d}$

Where:
l = number of late tasks according to baseline dates
p = sum of the average percent complete of all late tasks
a = number of tasks ahead of schedule
d = total number of tasks due according to the baseline due dates

Color	Criteria	Arrow	Criteria
Blue	• More than 10% of tasks are ahead of schedule	⬆	• Positive trend
Light Blue	• From 5% to 10% of tasks are ahead of schedule		
Green	• Zero to two critical path tasks are behind schedule • No more than 5% of non-critical path tasks are behind schedule	⬌	• No change in trend
Yellow	• Three to four critical path tasks are behind schedule • From 5% to 10% of non-critical path tasks are behind schedule	⬇	• Negative trend
Red	• Five or more critical path tasks are behind schedule • More than 10% of non-critical path tasks are behind schedule		

Performance Factors

*Acceptance/Quality		**Risk Mitigation	
% On-Time Submittal: #D submitted on time / #D Due	Green: 100-80% Yellow: 79-50% Red: Below 50%	% Risks with Mitigation Plan: # of open risks w/ Mitigation Plan / # of open risks	Green: 100-95% Yellow: 95-90% Red: Below 90%
% 1st-Time Acceptance: #D accepted or conditionally accepted / #D submitted	Green: 100-80% Yellow: 79-50% Red: Below 50%	% On-Time Mitigation Steps	Green: 100-95% Yellow: 95-90% Red: Below 90%

Issue Resolution			
# of Open High Issues:	Green: 0-5 Yellow: 6-10 Red: Greater than 10	# of Open Medium Issues:	Green: 0-10 Yellow: 11-20 Red: Greater than 20
Alert Level:		A conservative approach is used to determine the overall alert level. Meaning that if, for instance, the alert level of high issues is green but medium issues is yellow, then the overall alert level will be yellow. Please see the matrix to the left for a quick reference to all possible color combinations.	

Scope Control		
# of Queued Scope Changes	Green: 0-10 Yellow: 11-30 Red: Greater than 30	This represents the number of scope control items that are that are currently open and awaiting approval.

* in formulas, “D” represents contractual deliverables
** only Red and Yellow risks require a Mitigation Plan

50.2.5.1 Integrated Master Plan

50.2.5.2 Integrated Master Schedule

RFP Reference: 50.2.5.2 Integrated Master Schedule, Page 277; 10.8 DDI Project Management Objectives, Bullet 2, Page 7

The project schedule is our "road map to success," and it includes design and development activities for successful project planning and execution of a solid project schedule, to be approved by the State before design and development work begins. We will use and maintain this schedule as the baseline for project progress.

In this section, we provide our proposed project schedule. Based on decades of project management experience, our design and development activities will include successful project planning and execution of a solid project schedule, with the State's formal approval before design and development work begins. This schedule will be used and maintained as the baseline for project progress.

EDS will have a dedicated work planner who will make weekly schedule updates to the Replacement MMIS implementation schedule. The planner will submit revisions as needed to the State for approval. Following approval, the planner will baseline and maintain the revised schedule. Additionally, we will work with the State to maintain the master plan.

For the DDI Phase, the project schedule includes items detailed at the individual task level, as follows:

- **Key milestone dates—**These dates include the completion of the project planning phases, business and technical design phases, comprehensive testing plans, development of the new system, and user acceptance testing.
- **Initiation and start-up activities—**These are tasks needed to set up and establish the facility, infrastructure, project team, and the project kickoff.
- **Project planning—**Activities conducted during project planning include a risk management plan, communication management plan, project schedule, personnel management plan, and quality management plan.
- **Project execution—**This phase contains development, documentation, and milestone approval tasks for requirements verification; business and technical designs; training plans; testing plans; scenarios; unit, volume, and performance testing; system notification of completion; system documentation; user and provider training and manuals; and acceptance testing.

- **Project control—**These include tasks and activities that are integrated in all project management activities related to the project.
- **Project closedown—**This phase includes tasks for our project closedown, such as lessons learned.

As EDS begins the implementation, project managers will develop detailed work plans that break down tasks by the unit of work or change order (CO). As we start the implementation shortly after completing the requirements verification sessions, we will know the true effort that is required for each individual change to be implemented. At this stage, the project managers will develop detailed work plans that break down these tasks by the unit of work.

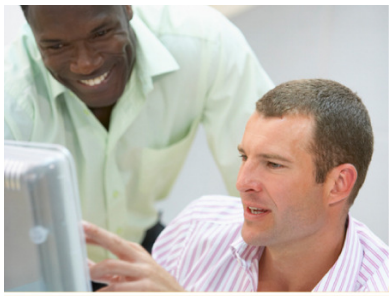
The implementation of a new MMIS is a complex project, and EDS has a proven process and experienced staff members engaged to complete this work for the State. The project schedule we have developed is based on similar schedules used to implement interChange for other state clients, with lessons learned from those implementations applied.

Capitalizing on experience with a proven product and proven people, we will work with the State to execute the plan successfully.

In accordance with the November 20, 2008, letter titled "RFP 30-DHHS-1228-08 NC Replacement Medicaid Management Information System Confidential and Proprietary Information," we have redacted our Integrated Master Schedule (IMS). This page and the page that follows represent the redacted IMS in its entirety.

[redacted]

50.2.5.3 Master Test Process and Quality Assurance Approach



We are fully committed to continuing to provide superior quality. We will set the standard for a low-risk implementation by executing a proven testing methodology and quality assurance measures that will detect variations from the State's defined processes and policies. This approach will allow us to continually focus on identifying improvement and cost savings opportunities.

State of North Carolina

RFP Reference: 50.2.5.3 Master Test Process and Quality Assurance Approach, Pages 277-278

EDS defines quality as the process of delivering products and services that fulfill our clients' requirements and that meet or exceed their expectations. We have continually demonstrated our commitment to delivering quality products that meet the State's needs within the current Legacy MMIS+, and we are fully committed to continuing to provide this superior quality with the Replacement MMIS. With 30 years of experience working with the State, EDS is uniquely positioned to deliver a system that will continue to support and expand on the policies and needs of the State and their providers. We are committed to a continued, valued relationship with the State.

We will set the standard for a low-risk implementation by executing a proven testing methodology followed by quality assurance (QA) measures that will detect variations from the State's defined processes and policies. This approach also will provide the means to continually focus on identifying improvement and cost savings opportunities.

Our solution begins with a proven interChange system that has been vigorously tested on various levels, including system, volume, stress, and regression, and has the common federal Medicaid requirements already in place. The majority of the testing during DDI will focus on adhering to the State's unique policies, guidelines, and requirements.

Testing Philosophy

Our testing philosophy involves existing knowledge, an innovative testing approach, a test deck of predefined test cases and data supporting the core interChange solution, and sophisticated high-volume testing tools. Through various levels of structured testing, every aspect and variable of a case can be tested to verify expected and consistent results. Test cases can be re-executed through each testing level to make sure the expected result is not compromised by the introduction of additional cases, logic, or other potentially influencing factors.

Global Testing Organization

EDS has established the Global Testing Organization (GTO), an independent testing delivery organization within EDS Applications Delivery. The organization is headquartered in Troy, Mich., supporting multiple EDS clients globally. EDS GTO has more than 1,700 dedicated testing professionals within our Application Service Delivery Centers, with Testing Centers of Expertise around the globe.

At the corporate level, the EDS Enterprise Testing Community, with a membership of 4,000 testing professionals, leverages EDS' testing expertise worldwide to advance the quality and delivery excellence of EDS' testing. This community offers hundreds of helpful links and downloads through its Web site, including links to industry best practices, the corporate testing methodology, templates, and extensive information on training and tools. Testing community members actively participate in work groups designed to shape tools, training, and testing methods on an ongoing basis.

EDS' GTO Services include the following:

- **Test management and consulting services—**These services help clients in the development, creation, management, and assessment of testing activities. Services include test consulting, test management, test strategy and planning, risk analysis, test metrics planning, collection and reporting, quality assurance, testing assessments, and rapid response and triage.
- **Functional testing services—**These services perform in-depth, thorough, and accurate testing to make sure clients meet or exceed their design goals. Testing services include requirements-based testing techniques; system, regression, integration, interoperability, data integrity, security, fail-over, and operational readiness testing; and test automation.
- **Performance testing and simulation model—**These services enable clients to proactively address system and application performance issues. Services include stress, load, and endurance testing, performance analysis and tuning, simulation modeling, and complexity analysis.

The critical elements of our testing capability include the following:

- Separate and independent testing capabilities
- Best-in-class testing tools and processes
- Strategic alliances with testing industry leaders
- Highly trained and qualified testing experts
- Global agility

The EDS GTO organization will begin creating the test strategy and test plan for the Replacement MMIS project at project start-up. It will be involved in the

requirements verification (RV) sessions to document test scenarios and build requirements traceability matrices early in the project. It will use software and processes from Right From the Start to validate requirements and designs early in the process and automate testing where possible. By combining proven, industry-leading processes, COTS tools, and seasoned testing professionals, GTO will help make sure a fully tested Replacement MMIS is ready for production.

Unit Testing

EDS will be solely responsible for conducting unit testing of the system components to make sure the requirements of each component are met, based on the design specifications approved in the design documents and Section 40 of the RFP.

EDS will conduct this testing in the development and unit test environment. After construction work is complete on an application system program, the systems engineer will execute the program's unit test plan and verify the test results. The systems engineer will apply changes to the application as necessary to achieve the desired test results. These test plans will cover edits, audits, pages, and reports and any batch programs needed to meet the requirements of the RFP. Throughout this testing process, additional test cases may be developed and added to the program's unit test plan as necessary to make sure each program's functional area has been tested. Test cases verifying unique State policy also will be developed. If any test case fails to meet the expected results, we will make the necessary changes and retest the test case until the appropriate result is achieved. These results will be stored in iTRACE.

System Testing

EDS has extensive understanding of the current North Carolina DMA and DMH policies. The EDS GTO team will conduct system testing with EDS account staff participation. Each input, page, edit, audit, process, job, output, report, and interface identified within the RFP will be tested to confirm that the State's requirements are met and the system functions as designed.

They will participate in RV sessions, giving them a unique understanding of the State-specific functions that will be targeted in testing. Testing scripts and scenarios and requirements traceability matrices will be created, which will aid the State, EDS testers, and developers in providing a common understanding of requirements and expectations.

Before executing system testing, we will create test scenarios that will include the anticipated outcome for each test case. Many system test cases will be automated using the Right From the Start testing tool. System testing will occur in the integrated testing facility's (ITF's) model office environment.

We will report, correct, and retest defects. We will prepare system test results and submit them to the State for review, approval, and sign-off before the start of user acceptance testing (UAT). Test case results will be stored in iTRACE, which will be available for the State to view.

Inter-System Testing

Inter-system testing is a process of testing the integrated and configuration-managed system for integration with other major components and interfacing systems, such as host systems and third-party systems, to make sure they operate to specifications and that appropriate interfaces execute as designed. We will perform inter-system testing after system testing.

The goal of inter-system testing is to expose any possible faults in the external system interfaces to make sure the subsystems and systems work together as a whole and do not adversely affect other components. Test cases in this phase will cover interfaces with supplemental systems, including reporting and analytics (R&A) and the North Carolina Accounting System (NCAS). This testing requires extensive coordination with all applicable entities to make sure schedules, environment, and data are aligned for successful testing. The interface coordinator will be responsible for the communication among the State, EDS, and the other external testing organizations. Results will be available through iTRACE to review the project's progress.

Data Conversion Testing

The Data Conversion team will perform the necessary processes to transform the data from each of the four payers' existing systems to the Replacement MMIS structure and specific field definition. This data may be populated to many environments to validate the effectiveness of the system for volume, stress, and performance testing.

Volume, Stress, and Performance Testing

EDS is differentiated from other vendors by our commitment to volume and performance testing before operational readiness testing, thereby reducing the risk of going live with performance issues. We will aggressively test for production based on estimates of transaction volume supplied by the State. We will use volume-simulating tools from HP LoadRunner and proven volume-testing methods.

Output from the claims volume and performance testing will be made available to the back-end processes, such as monthly and quarterly reporting, management reporting, and interface testing. We will run a high volume of claims (a sampling of approximately 1 million claims) against the converted data. We will generate the input claims from converted claims history files. The

sampling will span a variety of claim types and will include all payers in the Replacement MMIS.

We also will use an automated tool, LoadRunner, to execute each relevant application's business functions within the targeted system's firewall. These consistent and repeatable tests will identify any issues in resource utilization, transaction response times, and overall system performance.

We will plan and execute a stress test to demonstrate that the system provides the required response times and throughput when fully loaded with production data and transactions. Stress testing will occur in the parallel testing environment. Endurance testing will subject the system to an average load over a long time span, such as 6 to 12 hours, to verify the stability of the system.

User Acceptance Testing

UAT will occur after system testing. This phase will allow the State to design and execute user-defined test cases. It is expected that the State will be the primary testing team during this phase. State participation is of great value in making sure the business policies and influences are considered, and we look forward to the State thoroughly testing the application to make sure it meets the requirements.

EDS will support the State by running batch cycles and allowing State testers to choose any test case from the EDS system test repository. The testing life cycle and iTRACE lend themselves to test case reusability in test cases by supporting multiple testing notebooks and test case statuses. Additionally, the testing metrics within iTRACE support the multi-phase approach to UAT.

During UAT planning, EDS will provide experienced staff members to train the State's UAT team. Training topics will include preparing input data using the Replacement MMIS Web pages, understanding the Replacement MMIS' processes, and reviewing outputs.

Parallel Testing

The purpose of parallel testing is to verify that the claims run in the current system, whether the Legacy MMIS+ or the DPH or ORHCC systems, will adjudicate in the same or a similar way to claims run in the Replacement MMIS. This will help to quickly track down problems in the conversion of reference, provider, recipient, and other data that is required to accurately process the claim. Additionally, this testing can track down issues or policy differences regarding edits, audits, and pricing algorithms and configurations before implementation.

The results of this testing should conclude that the Replacement MMIS correctly adjudicated the claims according to policy and data in this environment.

Data conversion can influence how the claim is adjudicated and should be validated in this process.

Regression Testing

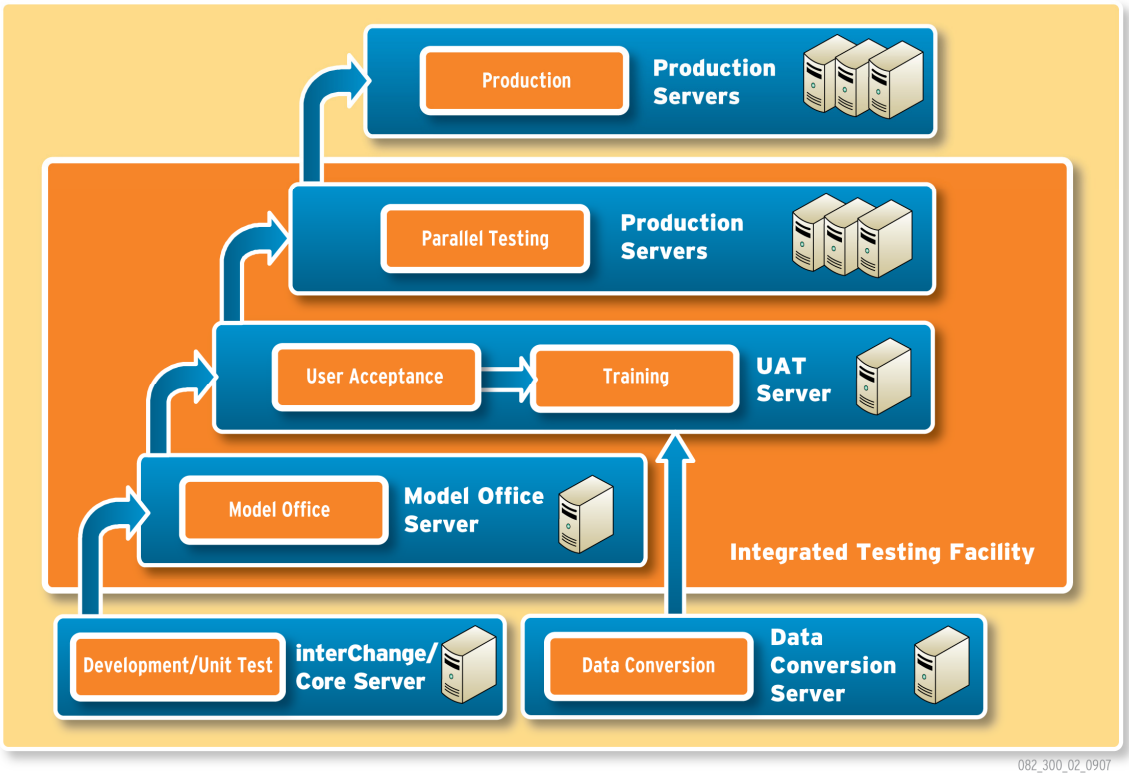
EDS will conduct regression testing during most testing phases. Using standard regression testing procedures, we will initiate specified test scripts. We will report the results of these tests to the State if any issues occur. Regression testing will include a test bed of cases that simulate a variety of claim types and business policies. Regression testing will be automated. Regression testing on component units will be performed to make sure no unintended changes occurred to previously working functions. We will confirm that the system as a whole was not also affected by any component changes.

Testing Environments

EDS understands that testing plays an important role in not only meeting an expected result, but also in making sure the system is cost-effective, consistently assumes a low level of risk, and can support future policy updates or changes. We will provide isolated test environments designed to make sure applications are thoroughly tested. Our solution includes a UAT environment that will allow the State to perform system functions to validate that the system meets the requirements and expectations of the user community. Operational policies also can be verified within these environments.

Multiple environments will be set up to thoroughly test and implement each component of the Replacement MMIS, as shown in the following exhibit, Testing Environment Structure. These environments are necessary for executing multiple testing disciplines concurrently.

Testing Environment Structure



We will provide isolated test environments to make sure applications are developed and thoroughly tested.

These physical and logical testing environments are described as follows:

- **Development/unit test environment—**This environment will be used by developers and architects to develop, debug, and unit test code and software components. It is used to assess system component compliance with requirements.
- **Data conversion environment—**This environment will be used to convert payer-specific files and other reference data to the Replacement MMIS file and database structure.
- **Model office environment—**This environment is used for system and inter-system testing. All system components are tested together, and data validation occurs. During inter-system testing, interfaces are tested with external systems, making sure interfaces meet their specifications and external systems can process that data.
- **User acceptance environment—**The State will be able to conduct its own test cases and analysis through this environment, verifying that the application meets the stated requirements. Testing will be conducted in a controlled, stable, isolated environment where components, as well as component integration, must pass extensive testing before being deemed

production-ready. The EDS team will support this environment by running cycles or helping to create test data that can be used by the State to perform tests. Application components will be moved to this environment after they have successfully passed system and inter-system testing.

- **Training environment—**This environment will be used to train staff and develop operational and system documentation.
- **Parallel testing environment—**This environment will focus on validating the accuracy of claim payment. The multi-payer system logic will price the claim according to specific rates and policies. Edits and audits also will be executed according to each specific payer's own policy.
- **Production environment—**This environment is used by the operational system and applications. It houses the daily operations of the State's applications in production.

The configuration of the testing environments will reflect production data as a subset of all claim types. The user acceptance, training, and parallel testing environments will be loaded with one year of converted claim history data. The reference files will be copies of production.

Integrated Testing Facility (ITF)

The ITF will consist of three different environments to enable multiple testing phases to be conducted concurrently. This facility will operate independently from the production environment but will mirror the same business policies and structures as production. If data parameters are changed on reference files in the production environment, corresponding changes will occur in the ITF to make sure expected results remain consistent.

The ITF's three environments are as follows:

- Model office environment
- User acceptance environment
- Parallel testing environment

During DDI, this solution will support 25 users at the EDS local site to simultaneously test the functions of the Replacement MMIS. The UAT environment also will be accessible remotely and will be protected through agreed-on security measures.

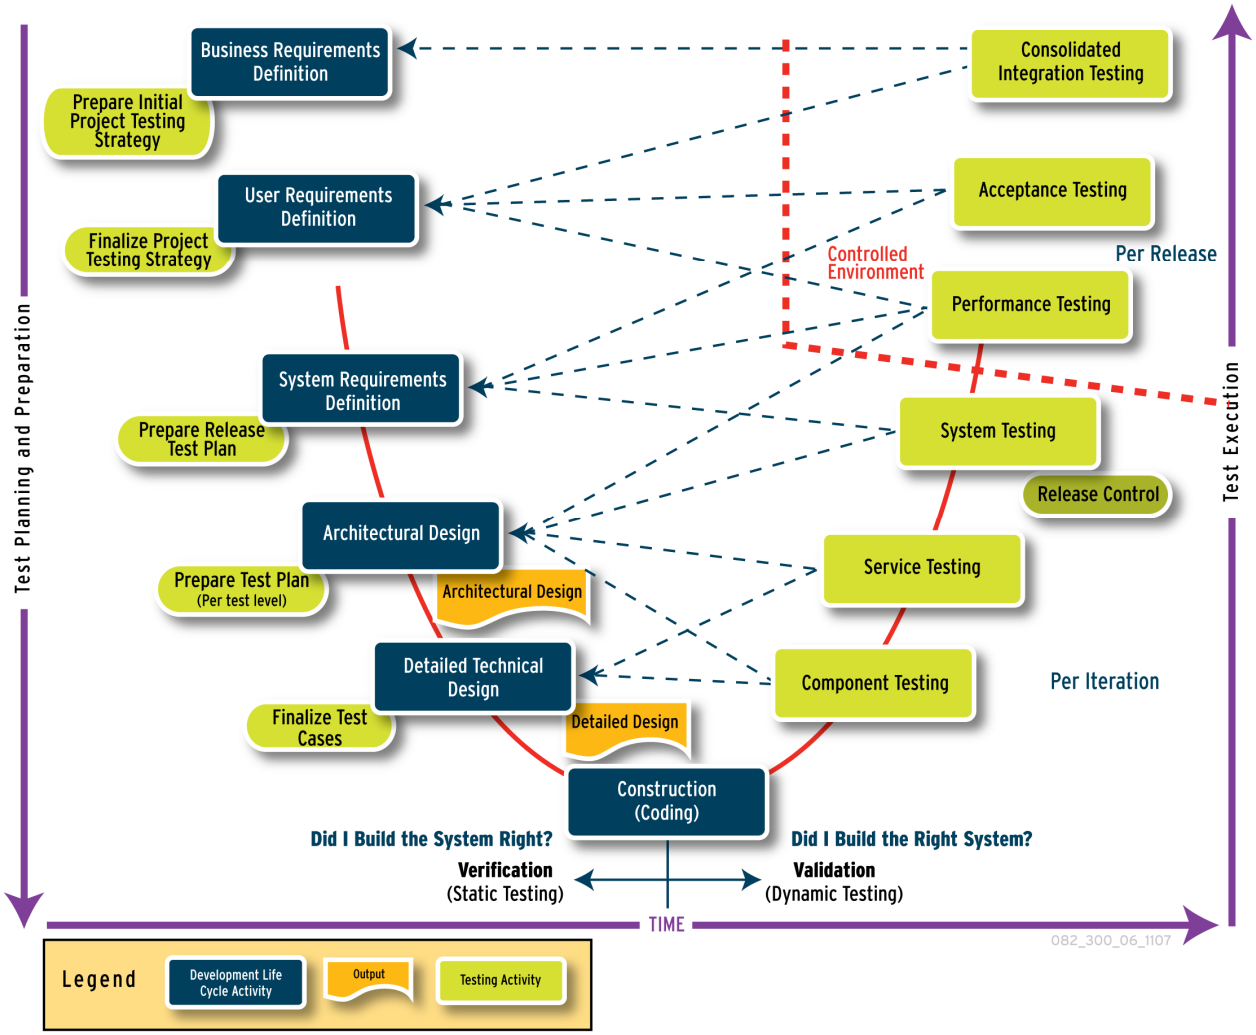
Application Testing Methodology

The Testing V Model is a well-known industry model for testing. It provides a visual example of the interrelationships between project activities and test planning, preparation, and execution. Most significantly, it illustrates the role

that testing can play in verifying compliance with the development process and validating the quality of application requirements, design, and code.

The following exhibit, Application Testing V Model, illustrates the model and specifies the input to and output from each test level. With the exception of formal performance testing, acceptance testing, and consolidated integration testing, which are executed during the final iteration for a project, all other test levels prescribed for the application under test are executed for the functionality delivered by each iteration.

Application Testing V Model



The Testing V Model provides a visual example of the interrelationships between project activities and test planning, preparation, and execution.

Step 1: Ambiguity Analysis

The first step in the risk-based testing process involves completing a systematic ambiguity analysis of the requirements that will drive application design,

development, and testing. Ideally, the project team completes an ambiguity analysis through a formal inspection of the draft requirements during the RV phase of a project. The goal of the ambiguity analysis is to eliminate any ambiguities or inconsistencies and to make the requirements as clear as possible.

A successful ambiguity analysis encourages a common understanding of the requirements among all project stakeholders, including project managers, developers, testers, and, most importantly, the users. Without a common understanding, users could have expectations that will not be met, or the project team could work to a plan that is misguided or incomplete. It is therefore essential to complete an ambiguity analysis of requirements that involves all project stakeholders before proceeding with the remaining steps in the risk-based testing process.

Step 2: Risk Analysis

After a successful ambiguity analysis, the risk-based testing process focuses on a risk analysis designed to reduce the risk of misdirected or incomplete test coverage. This risk analysis systematically determines testing priorities that provide the basis for the testing strategy for the project.

Step 3: Systematic Test Design

After the risk analysis is complete, testing teams apply systematic test design techniques to select just the right tests and deliver just enough testing. It is neither possible nor advisable to test any application or system exhaustively. Systematic test design that is specifically focused on managing and mitigating risk can and should be used as the basis for planning and developing the most effective and efficient tests.

Specifically, systematic test design is used to accomplish the following:

- Determine and focus the testing effort, with particular attention to high-priority, high-risk requirements
- Select what to test
- Allocate the right number and type of testing resources

Step 4: Requirements Traceability

After initial test design is complete, the testing team is ready to update the requirements traceability matrix that was developed during the RV sessions. This update maps each test case and any automated test scripts to corresponding requirements. The resulting matrix can reveal any gaps the testing team needs to fill and any redundant tests they need to merge and consolidate. More significantly, each test case inherits priority from its requirement.

Throughout test development and execution, the requirements traceability matrix also provides a comprehensive picture of test coverage and helps the testing team stay focused on high-risk, high-priority requirements.

Finally, the requirements traceability matrix helps the testing team to analyze the impact on testing of any proposed changes to requirements.

Step 5: Testing Metrics Collection and Reporting

After requirements traceability is established, the risk-based testing process focuses on the following two activities:

- Monitoring the progress of test preparation and execution and the status of defects
- Collecting and reporting testing metrics.

These metrics provide vital information to all project stakeholders. The testing reports offer the following:

- Ongoing insight into testing progress, test coverage, and defect resolution
- Timely opportunities for corrective action that can mitigate risk before it causes irreversible harm

Step 6: Testing Closedown

The final step in the risk-based testing process includes the activities associated with testing closedown.

Quality Assurance Strategy

We will work with the State to verify that the deliverables are correct and meet the requirements of the project. We will conduct formal internal reviews of the deliverables before delivery to the State for review.

Using our QA process, we will perform the following functions:

- Establish project quality standards and procedures and align them appropriately to the State's project objectives
- Define, collect, and evaluate metrics to verify that the project is progressing as expected and that the QA processes are being used as designed and with the intended quality results
- Review and approve the project quality plan
- Create and maintain a project quality plan that identifies the following items:

- Types of process audits and planned dates for these audits
- Project testing approach
- Work products that will be subject to walkthroughs
- Templates or processes that validate conformance by work product type

With each SLC 3 phase, the QA process will include a set of exit criteria that requires State approval and formally concludes that phase of the project. This final QA measure will be supported by incremental processes used throughout the phase and during the phased walkthroughs of project deliverables.

We will provide further information on our QA processes for reviewing deliverables and tasks in the Master Test Quality Assurance Plan (MTQAP) CDRL.

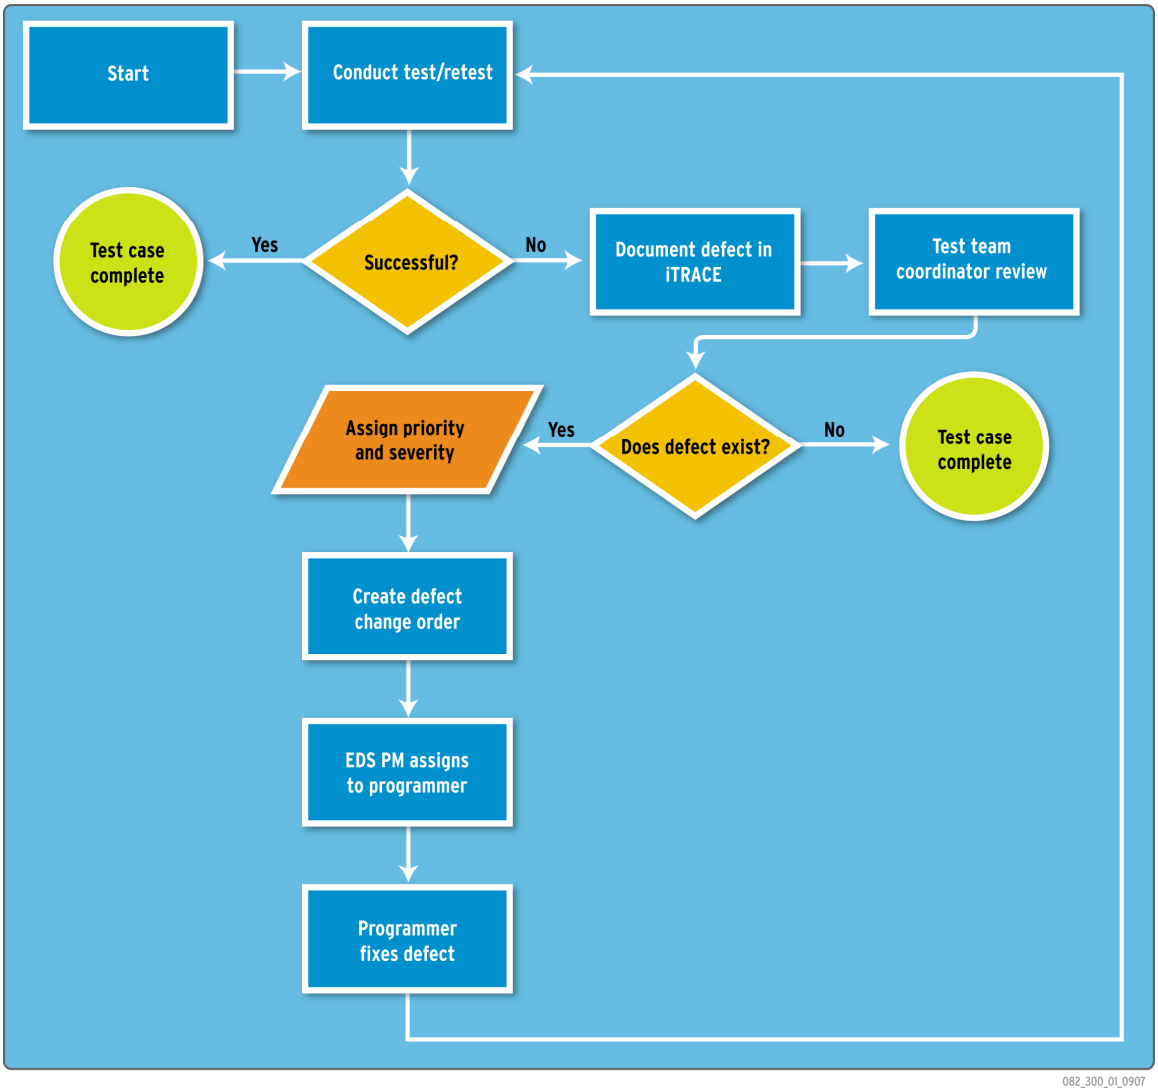
Walkthrough and Joint Reviews

The project work plan will detail our approach to providing walkthroughs and joint reviews of the deliverables, our communication process, and change management. Deliverable walkthroughs will occur in addition to the regularly scheduled status meetings with the appropriate project team members. These walkthrough sessions will help promote the State's active involvement at the proper management levels and focus attention on this vital activity. These activities will be an integral part of our quality approach during DDI.

Defect Resolution

The following exhibit, Defect Resolution Process, illustrates how we address defects during DDI testing and retesting.

Defect Resolution Process



We have a proven process to identify and resolve defects in the Replacement MMIS.

Throughout the process, the defect's status and disposition will be updated in TestDirector and iTRACE. Using the tool suite available in iTRACE, State and EDS staff members can quickly determine the status of a particular defect, system change, or test case.

If a test case is not successful, the defect will be documented and the test team coordinator will review the expected results and the actual results to determine if a defect does exist. When a defect is found, it will be assigned a severity and priority status, and a defect change order will be created in iTRACE. The project manager will assign the defect to a systems engineer who will resolve the defect. The test case will start at the beginning of the process, where it will be retested.

iTRACE will allow authorized users to run various queries to check the progress of defects. For example, a query may be submitted to display the number of defects for a project component, summarized by defect status. This information can be used to verify that defects are being addressed and allocate resources on an ongoing basis.

The following metrics will be generated in iTRACE:

- Total defects found weekly during the system and integration phases
- List of outstanding defects
- Current outstanding defects ranked by severity and priority
- List of defects classified by error type
- Total defects found per business analyst
- Number of defects found per testing notebook
- Number of outstanding defects assigned to business analysts and programmers
- Defects opened, resolved, and closed during time period
- Defects resolved by resolution type
- Number of days a defect remains in each status
- Summary reports of testing effort

One of the most useful features of iTRACE is the users' ability to import the data into Microsoft Excel, where they can present the data in various formats. We will work with the State to create processes and reports to supplement our work patterns that fit the project's needs.

QA and Testing Tools

To perform testing during DDI, we will use an industry-standard suite of tools from HP, the world leader in performance testing tools. This suite consists of three tools: LoadRunner, WinRunner, and TestDirector for Quality Center. In addition to the Mercury suite of tools, we also will use the Critical Logic Right From The Start (RFTS)/TMX tools. These tools and processes will improve quality by providing consistency and linkages to Quality Center. The use of the HP suite and RFTS also will save time based on past testing experiences.

LoadRunner

We will use LoadRunner to assist with volume and performance development testing of the online system. LoadRunner is the industry-standard performance testing product for predicting system behavior and performance. It can emulate hundreds or thousands of concurrent users to put the application through the

rigors of real-life user loads. This will allow the testers to stress an application from end-to-end and measure the response times of key business processes.

We will collect system and component-level performance information through a comprehensive array of system monitors and diagnostics modules. These metrics will be combined into a sophisticated analysis module that will allow us to isolate bottlenecks within the system. The test scripts and scenarios created by LoadRunner, along with the test results, will be stored in Test Director for Quality Center.

WinRunner

WinRunner provides the industry's best solution for functional test and regression test automation, addressing every major software application and environment. This next-generation automated testing solution deploys the concept of keyword-driven testing to radically simplify test creation and maintenance. Unique to WinRunner keyword-driven approach, test automation experts have full access to the underlying test and object properties, using an integrated scripting and debugging environment that is round-trip synchronized with the keyword view.

With WinRunner, we will achieve the following:

- Simplify creation of sophisticated test suites
- Verify correct functional capability across environments, data sets, and business processes
- Document and replicate defects for developers, allowing them to fix defects faster and meet project deadlines
- Allow regression testing of ever-changing applications and environments
- Collaborate as a tester work group by sharing automated testing assets, functions, and object repositories
- Become a key player in enabling the organization to deliver quality products and services and improve revenues and profitability

TestDirector for Quality Center

Quality Center is the central console for test activity management, execution, and reporting, as it supports everything from pure manual test approaches to various automated paradigms, including unit testing, system testing, regression testing, and performance testing. Quality Center can be accessed by every member of a project team, enabling the high visibility of test coverage information, defect trends, and application readiness.

TestDirector for Quality Center is another important component of the EDS testing solution during development. Using TestDirector, multiple groups and

individuals throughout the project team will contribute to the quality process in the following ways:

- Business analysts will define application requirements and testing objectives.
- Testers and project leads will design test plans and develop test cases.
- Testers will create automated scripts and store them in the repository.
- Testers will run manual and automated tests, report execution results, and enter defects.
- Developers will review and repair defects logged into the database.
- The project manager will export test and resource data in various reports or in native Microsoft Excel for analysis.
- The test manager will auto-generate test asset documentation in Microsoft Excel.

We have built an interface between TestDirector and iTRACE so that the results stored in TestDirector are accessible to the State and other authorized users in iTRACE. With this interface, we are getting the best from both products and maintaining the standard of open, current status of the testing initiatives.

Right From The Start (RFTS/TMX)

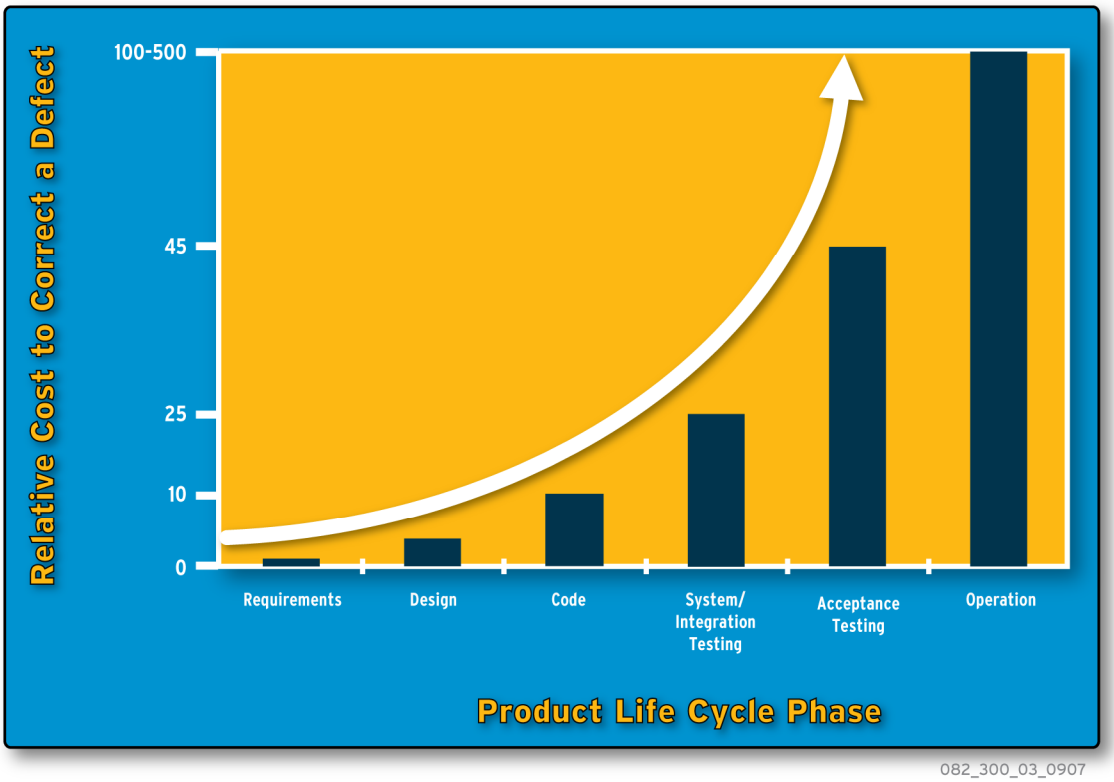
The RFTS test processes and technology will allow EDS to reduce the total test costs associated with the project while achieving the highest possible quality with the fewest defects. RFTS provides the EDS GTO testing team with a rigorous model framework to analyze functional specifications and quickly identify and resolve ambiguities and errors in functional logic before these problems are incorporated into the code.

The RFTS technology will automatically design and document the test cases and enable full functional coverage. RFTS also will accelerate automated test execution by generating test scripts directly from the test models. These scripts will be imported into the WinRunner tool for execution.

Based on multiple projects inside and outside EDS, we can expect a high percentage of potential functional defects to be found and resolved before coding. This will reduce the total test time by up to one-third, along with the rework costs associated with fixing defects. We also expect that development time will be reduced because requirements will be validated at a detailed level before coding, again eliminating miscommunication between the State and the developers.

The following exhibit, Escalation of Defect-Correction Costs, shows how the cost to correct a defect increases along the product life cycle time line, further emphasizing the value of identifying potential defects early.

Escalation of Defect-Correction Costs



With RFTS, we expect 95 percent or more of potential functional defects to be found and resolved before coding.

Additionally, this model-based test approach means that when changes occur to requirements, test cases will be automatically updated from changes to the model rather than manual test case maintenance. Test requirements, traceability, and other deliverables from the RFTS process fit into the EDS test documentation and management standards and support tools. TMX, the keyword automated testing solution, will interface with WinRunner to deliver rapid automation of test cases. TMX will allow our team to build test scripts directly from requirements, in parallel with code development.

RFTS/TMX will allow us to achieve the following:

- Exercise a high degree of control over the quality of requirements
- Detect and remove requirement defects early
- Eliminate most, if not all, rework costs caused by incomplete or inaccurate requirements
- Reduce the initial rate of test failure resulting from defects

iTRACE

EDS' project team will use iTRACE to manage and serve as the testing documentation repository for the testing phases of the project, including the recording of test cases, their current status, and test results. Initially, RFP requirements will dictate the design of test cases. As new requirements emerge and old ones change, new test cases may be added, some may be changed, and others deleted. Every test case will identify the corresponding requirements.

The testing effort will be enhanced with the testing tools and processes built into iTRACE, such as the baseline tool. The baseline tool is a utility accessed through iTRACE that allows users to create baseline test data. The baseline data will contain a mixture of test data created by the testers, the conversion team data, and baseline data created from other environments. This utility will allow testers to identify data they would like to use and automatically populate it in the baseline set of data. The testers can incorporate data from any other environment, including conversion. The robust utility tools used to bring in data from different environments will allow testers to set up and simulate realistic data and processes.

The system will produce reports by subsystem and standard reports that summarize test case metrics used to evaluate progress and the current status of each subsystem. Test case tracking, as provided by iTRACE, will be used for each phase of testing. We will meet with the State to review the test cases and make modifications as necessary. Test cases will include the following key activities:

- Testing manual functions
- Testing automated functions
- Testing internal and external interfaces
- Communicating test results
- Tracking and correcting issues

Within iTRACE, we will maintain detailed project testing status information by subsystem or business area. From this Web page, users can find any information they need about the implementation status of that business area or subsystem.

Metric Reporting Suite

The Metric Reporting Suite is a standardized metric reporting system in interChange that provides project management with a dashboard view during the life of a testing cycle. The interChange Product Testing team and the GTO have worked together to implement a metrics package that provides a dashboard view into the ongoing testing cycles for interChange releases. This dashboard view of metrics can be provided to the key stakeholders using a Microsoft PowerPoint presentation including metrics charts and data tables. Various views of the statuses of the development of test cases will be provided to give an

accurate representation of the progress being made and if any bottleneck issues are evident.

The project manager can react promptly and set up the necessary corrective actions. Reporting can be selective and received on a consistent interval. The project manager also can review measures that were forecasted for the project against the actual development progress.

QA reviews will be included in the test case development process to make sure the requirements are being met and validate the expected results and system functionality. This function of the Replacement MMIS will give a proactive measure to successful execution during system testing and will reduce the number of identified defects or unexpected results.

During system testing, certain metrics will summarize the types and severity of defects. This measure will help the project manager manage resources in a more productive manner. These QA and testing tools will allow EDS to accurately share with the State the progress of the project throughout DDI, which will minimize risk.

Interface Coordination

The EDS management team will verify that effective and efficient communication protocols and lines of communication are established and maintained with the appropriate entities, including vendor interfaces. We recognize that successful projects require strong, open communication. The account will have an interface coordinator to make sure issues are clearly understood and effective cooperative resolutions are reached. Interface testing will occur during the inter-system testing stage. This will require coordination between and among the external testing teams to make sure a comprehensive test occurs, even for interfaces that are not changing.

Rigorous Testing Means Quality Assurance

The approach described in this section has been proven with the successful implementation of interChange in Kentucky, Kansas, Oklahoma, Tennessee, and Pennsylvania. Through this process, every element of the Replacement MMIS' operation will be tested and verified to work and perform according to the final requirements and design agreed to by the State and EDS. We invite the State to become active participants in the testing process to make sure this complex implementation of a multi-payer MMIS meets the needs of the stakeholders.

To demonstrate our successful approach to testing, we provide a sample system test plan, the Kentucky MMIS System Test Plan, and sample regression testing guidelines, Kentucky MMIS Regression Test Guidelines, following this page. As

stated in RFP section 50.2 Technical Proposal Requirements, these samples do not count toward any page limit.

New KY MMIS System Test Plan

Kentucky MMIS Project

Cabinet for Health and Family Services
Kentucky Medicaid Office

1 Executive Summary

1.1 Purpose

This document is intended to present an overall approach to system testing the New KY Medicaid Management Information System (MMIS).

The purpose of this test plan is to:

- Describe the roles of the test team, as well as other members of the implementation team outside the testing unit but key to the success of testing;
- Define the various types of testing to be utilized in testing the New KY MMIS;
- Define the process to be used in the generation and execution of test cases; and,
- Define the overall communication process as related to System Testing.

1.2 Scope

The scope of this document is to define the methodologies, processes and tools implemented to insure the New KY MMIS is thoroughly tested in an efficient and timely manner.

The System Test Plan is a comprehensive "living" document that defines EDS' approach to system testing, and the methodology used in the system testing effort as directed by the Commonwealth of Kentucky. The following sections represent a thorough understanding of the business requirements and the business processes needed to ensure that the New KY MMIS is properly tested prior to implementation:

- System Test Team;
- EDS Plan for System Testing Task
- Test Cases
- Test Environments
- Defect Resolution
- System Test Schedule
- Reviewing Test Results
- Documentation
- Management of the System Testing Effort

1.3 System Testing Overview

The System Test Plan presents EDS' plan for testing the New KY MMIS. The testing process ensures that the MMIS meets the design specifications as approved by the Commonwealth of Kentucky in the Comprehensive Detailed System Design.

System testing performs two primary functions:

- The System Test Plan is a baseline of requirements directed by the Commonwealth of Kentucky; and, directs the execution of all testing of the New KY MMIS and all interface components. This test plan identifies the approach to system testing and integration of all functional modules, interfaces, and system components. Test results are tracked and the identified defects recorded.

- The plan provides focus and structure for the testing process and information about the relationships, roles, approach, techniques, test scenarios, data generation, and execution processes required to ensure that the MMIS system is adequately tested prior to Implementation. The primary goal of this plan is to provide a roadmap for effective testing of a compliant and reliable New KY MMIS.

Testing deliverables, procedures, schedules, and tools maintained for delivery to the Commonwealth of Kentucky are posted in the Project Workbook.

1.3.1 Objectives/Purpose of System Testing Plan

This test plan was written to achieve the following objectives to:

- Provide the focus and structure for the testing process;

- Provide detailed information about the roles of the testers, as well as other members of the implementation team outside the testing unit;

- Define the testing approaches and techniques;

- Define the various types of testing to be utilized in testing the New KY MMIS;

- Define the process to be used in the generation and execution of test cases; and,

- Define the processes to be followed to ensure that the New KY MMIS is adequately tested.

The subsequent sections of this plan address each of the above objectives to provide a clear understanding of the processes that will be employed to test the New KY MMIS.

1.3.2 Approach to System Testing

The primary objective of system testing is to detect errors in the software and eventually, to ensure the software's compatibility with the hardware and the ability of both software and hardware to perform together to meet design specifications, based on defined requirements. Initially, the original RFP requirements are the driving forces behind the design of the test notebooks, test scenarios and test cases. As new requirements emerge and old ones are changed, new test cases are added and others may be changed or deleted.

Functionalities that already exist in the base system that are not required by the RFP are tested to ensure that they function as designed and do not impede or prevent the performance of the RFP required functions. These functionalities are brought into the New KY MMIS "as-is" for future development. Therefore, the testing executed against these functionalities is only to validate that the presence of the programs, code and other system components does not impede Commonwealth-defined processes.

1.3.3 Tracking and Reporting

Project Workbook is the electronic repository for the collection of disciplined work products and reference information, that is used or created when planning or managing test scenarios/cases, test results, test data, and test status. The purpose of Project Workbook is:

- To organize project-related documentation;
- To increase communication among team members;
- To provide an audit trail of project work products, events, documents, and communication;
- To track conformance to the Commonwealth of Kentucky's requirements; and,
- To reflect the most recently approved direction for the project.

Access to Project Workbook is granted to all project team members and all Commonwealth staff as requested, and serves as the complete and standard reference for all aspects of testing. The workbook is large and divided into logical volumes and folders that organize work performed.

Using Project Workbook provides the following benefits to team members:

- Tracks conformance to the Commonwealth's requirements;
- Aids in the development of the project;
- Organizes documentation;
- Increases communication among project team members;
- Helps to estimate future projects;
- Provides an audit trail;
- Establishes a reference library; and,
- Reflects the most recent approved direction.

Benefits to the Commonwealth are:

- An audit trail to satisfy requirements and protect the Commonwealth's interests; and,
- An accessible resource to distribute information to the Commonwealth. The Commonwealth accesses only the appropriate or applicable sections such as plans, outputs, reviews, and standards.

EDS implemented the workbook during the start of the project with a testing tab to house specific test-related information. Test cases are organized into a series of notebooks. Each notebook contains test cases which focus on a particular MMIS subsystem. For example, a notebook focuses on the normal operation of the Provider subsystem. Within the notebooks, business functions are created to further organize the test cases. As an example, a set of cases may be written to ensure each provider type can be successfully enrolled into the system.

1.3.4 Testing Types

This section provides brief descriptions of the different testing types performed during system testing. These phases are defined in greater detail in a subsequent section of this document.

- **Unit**
  EDS Functional Area Developers (FADs) perform unit testing during the change order process. Change orders are assigned to FADs for further design, development and testing, and are targeted for a particular model office release. Unit testing serves to prove the accuracy and completion of the objects per the detailed design specification.

- **System Module/Subsystem/Function Testing**
  System Module/Subsystem/Function Tests are a systematic approach for ensuring that each functional area or subsystem in the new system meets all of the requirements as defined in the Comprehensive Detailed System Design (DSD) and Request for Proposal (RFP). The EDS Functional Area Business Analysts (FABAs) prepare test cases/test data which are reviewed and approved by the Commonwealth prior to execution.

- **Integration Testing**
  Integration testing includes testing multiple functions within one subsystem, as well as across multiple subsystems and business areas, as appropriate. The EDS Test Team, with input from Commonwealth staff, verifies that the system performs according to specification during Integration Testing.

- **Parallel**
  EDS FABAs and DMS Customer Analysts review the outputs of parallel testing to verify the accuracy and consistency of outcomes between the Legacy KY MMIS and the New KY MMIS. Parallel Testing is used to verify the New KY MMIS' ability to adhere to the defined Kentucky claims processing policies and procedures in comparison with the Legacy KY MMIS.

- **Regression**
  Regression testing discovers if the program is regressing to a less stable state. Any change to either enhance functionality or fix a defect can create new defects or reveal old defects for the first time, sometimes in unrelated areas of the software. The goal of regression testing is to demonstrate that nothing has been broken in the application during the process of modification.

- **Performance/Load**
  The performance/load test phase encompasses system response and volume/stress testing. The system response test verifies that the system response time satisfies the targeted performance criteria established for screens and functions. The volume/stress test addresses the handling of large amounts of data, and, a large concurrent audience using the New KY MMIS applications.

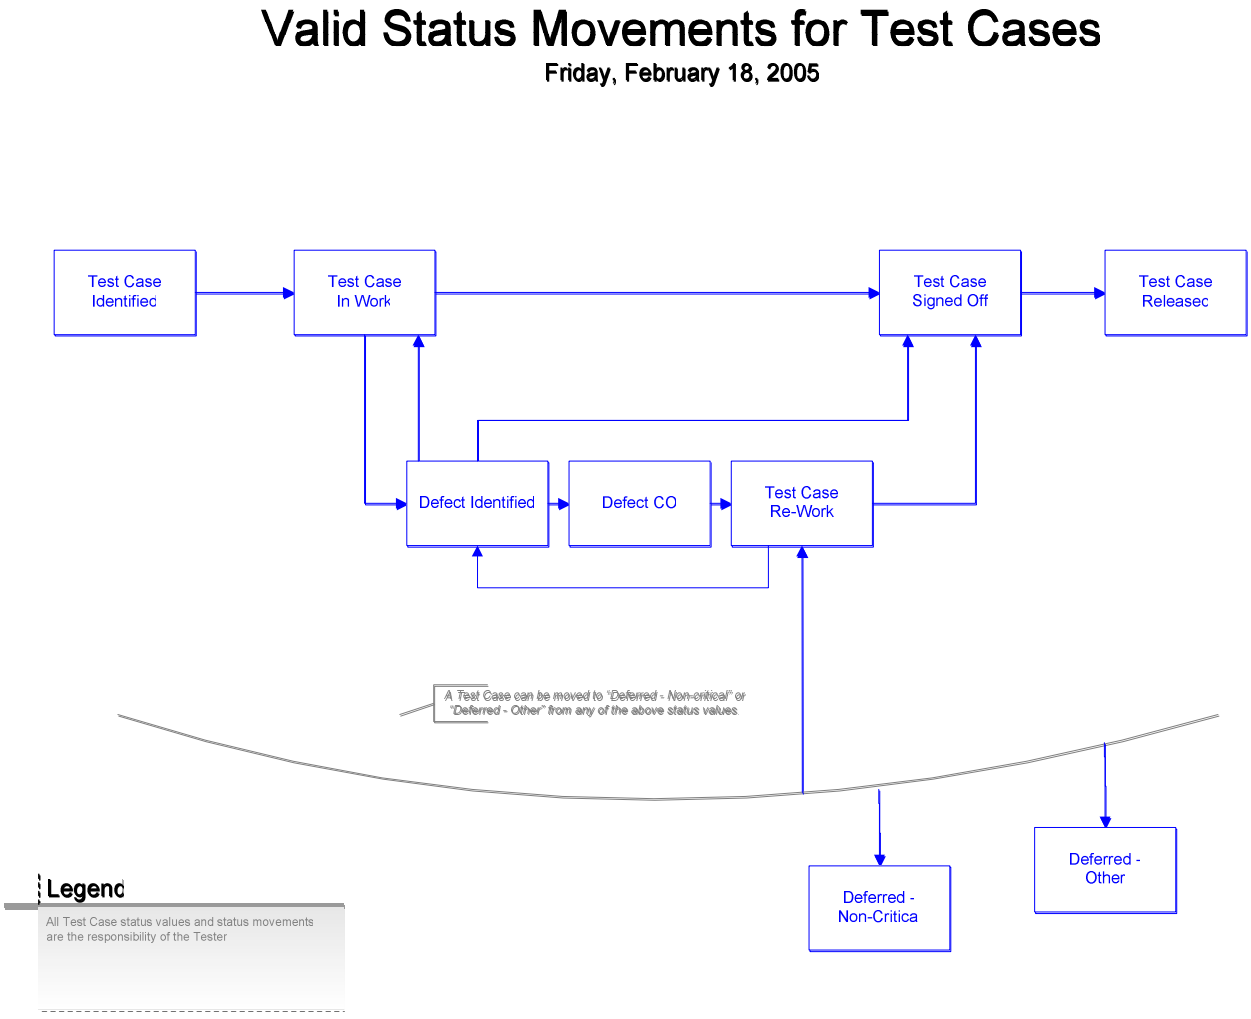
- **User Acceptance**
  User Acceptance testing is performed by Commonwealth personnel with the assistance of the EDS system testing and technical teams. This process allows the Commonwealth to execute their own test cases and/or execute test cases developed by EDS and review the results.

1.3.5 System Testing Process

- System testing ensures that the whole system performs according to the business rules specified by the Commonwealth in the project requirements documentation. During system testing, tests are defined to ensure that the system does not perform incorrectly when unusual or incorrect data is encountered. As all parts of the system are available, interactions between the various subsystems are tested by entering data through normal interfaces. External interfaces are also tested as they become available.
- The New KY MMIS testing work pattern provides the general steps and information for developing test scenarios, test cases, and test data and is located on the testing page of the Project Workbook located at pwb.kyxix.eds-mscs.com/kyxixddi/Testing.

1.3.5.1 Perform System Testing

The following process flow diagram chronicles the movement of test cases.



- **Executing test cases**
  Executing test cases is the process of finding defects by exercising or evaluating a system or system component by manual or automated means to identify differences between expected and actual results or to verify that it satisfies specified requirements.

  Testing performs and validates all test cases and meets the objectives of the system test plan. The results are documented for review. Any discrepancies found between the expected test case results and the actual results are documented, analyzed, and resolved. Changes to specifications, to the test data, or to the test case are tracked and, if necessary, part or all of the test scenario is re-executed. The following steps are used to execute test cases:

- **Test Execution** – Testers use the test cases along with the change order specifications, testing all processing paths using the test data as previously defined in the test cases.

- **Results Comparison** – After the test has been executed, the actual results are compared against previously defined expected results

- **Validation Criteria Satisfaction** – The test is evaluated to determine that it has passed or failed the defined validation criteria in the test case. During this process a tester will ask: Are all of the logical paths within the test notebooks and all expected results for each processing path identified? Are all abnormal situations identified and correctly handled? Are all expected results shown in the test case execution actual results? Are all test results for each logical path documented and retained?

1.3.5.2 Approve System Testing

EDS and the Commonwealth of Kentucky collectively reviews and approves system testing by participating in a series of system test result reviews. The system test results are analyzed for accuracy and adequacy. Discrepancies are documented and resolved, and posted in Project Workbook. An additional walkthrough may be conducted, depending on the extent of any corrections to the system test results. The EDS tester is responsible for re-evaluating the corrections in the test scenarios.

EDS and the Commonwealth of Kentucky collectively identify the key measures of success for system testing prior to test completion. An example would be to outline the number of each claim type to run through the system along with the number that will suspend, the number that will deny and the number that will pay. When all measures of success have been met, the New KY MMIS Project is ready to move to production.

When the Commonwealth review period is complete and the system test results are deemed acceptable, the Commonwealth will return the sign-off sheet to indicate acceptance. When the sign-off sheet is received, EDS will post a scanned copy of the completed sign-off sheet to the Project Workbook.

2 System Test Team

This section provides details on the team responsible for conducting system testing.

2.1 Approach to Staffing

EDS' approach to staffing for system testing begins with developing a strategic plan to analyze the resource needs of the New KY MMIS. Our overall goal is to provide a superior testing environment that ensures the success of this project. Therefore, EDS' selects individuals with core competencies in support of the testing effort.

We accomplish this task through careful resource planning. We look to qualified individuals who have made significant contributions in the technical arena, and, in client facing situations. First, we look to employees that have been with EDS for many years, possess the technical skill set required for testing, and who have made significant contributions to past project management activities that resulted in increased operating performance and improved quality.

The New KY MMIS project resources are determined and maintained by the New KY MMIS Project Management Team. An organization chart is posted on the Administrative page of Project Workbook at pwb.kyxix.eds-mscs.com/kyxixddi/Administrative.

2.2 Test Team Organization

Participants in system testing are involved in several activities, including:

- Developing procedures for system testing including standards of testing, development of routines for consistency of testing, establishing scenario result terminology for ease of reporting;
- Creating original test scenario specifications and, as testing continues, creating additional scenarios as needed;
- Selecting or generating test data using a combination of new data and base system data and converted files and converted claim history;
- Executing test scenarios for their functional area and coordinating tests and results with all affected functional areas impacted by a single test;
- Testing security;
- Providing feedback to appropriate teams responsible for modifying processes and procedures as testing progresses to ensure the accuracy of the documented operational business procedures; and,
- Verifying that test results are complete, accurate and documented in the PWB via the DocoTool.

2.3 Roles and Responsibilities

When the system testing process begins, the Commonwealth of Kentucky and EDS staff have specific roles and responsibilities as follows:

2.3.1 EDS Project Manager (PM)

The EDS Testing PM plans, directs, and coordinates the test team's activities through all types of testing for the New KY MMIS. They demonstrate ownership of the system testing effort by:

- Creating a communication plan that ensures appropriate information is exchanged among key project stakeholders;
- Advising senior management on project capability and risk – and work to mitigate risk;
- Controlling project requirements, scope, and change management issues;
- Coaching and advising team members to accomplish project goals and schedule and providing project status reporting and work plan updates to the Program Management Office;
- Working with management and Test Team Leads (TTLs) to allocate and level resources and develop formal project corrective actions required to achieve satisfactory delivery;
- Assisting in the resolution of issues and escalating them according to organizational and project standards;
- Performing project management and monitoring the project's progress based on comparing time estimated to complete testing tasks with time actually spent on testing tasks;
- Ensuring time reporting is accurate and completed by all team members; and,
- Communicating with other Business Area PMs to ensure a consistent approach for managing functional areas.

2.3.2 EDS Test Team Lead (TTL)

- The EDS TTL is the most knowledgeable business resource for their assigned subsystems. They accomplish successful testing for their assigned subsystems by:
- Communicating directly with the EDS teams and the Commonwealth, acting as the primary point of contact for assigned subsystems;
- Supporting planning, scheduling, and monitoring of subsystem testing tasks assigned to the subsystem team;
- Providing project plan/schedule updates according to methods and schedule set by the Testing PM and escalate scope and other issues, as appropriate, to the Testing PM and Business Area Project Managers;
- Adhering to the change management process and, depending on size of their area of responsibility, creating business impact documentation for the detailed specifications for Functional Area Developers;
- Serving as the primary mentor of Functional Area Business Analysts (FABAs) and lending requisite interChange expertise in assigned subsystems;
- Work in partnership with their respective Technical Functional Area Leads (TFALs), working with the Commonwealth to verify and/or clarify requirements and ensuring that individual subsystem issues are documented and tracked to closure;

- Participating in and ensuring client walkthroughs are scheduled and completed and ensuring business process documentation is updated and included in the walk-through packet as appropriate;
- Reviewing deliverables for correctness and completeness and reviewing and approving test case scenarios and test case results developed by the FABAs for submission to the Commonwealth;
- Coordinating work on assigned tasks with other members of the subsystem team;
- Compiling and providing testing estimates for the subsystem; and,
- Working with test team, infrastructure team, conversion team, and operations team to insure that all aspects of the subsystem are ready for implementation.

2.3.3 EDS Functional Area Business Analyst (FABA)

The EDS FABA serves as the primary resource for actual testing of the New KY MMIS. Their responsibilities include:

- Developing test cases from RFP requirements and leveraging proven test cases from the base system;
- Developing test cases to validate change order functionality;
- Creating or modifying test data to meet test case criteria;
- Executing test cases;
- Verifying and documenting test case results;
- Maintaining accurate statuses for test cases, change orders, and defects;
- Identifying, documenting and retesting defects;
- Regression testing as necessary with code promotions/releases;
- Providing input to create or modify business documentation as necessary;
- Participating in walkthrough documentation creation and attending Commonwealth walkthroughs as necessary;
- Accepting ultimate responsibility for the accuracy and completeness of the test cases developed for assigned subsystems;
- Becoming intimately familiar with the RFP requirements and proposal response associated with assigned business functions;
- Identifying business design changes and documenting change orders as needed;
- Interacting with the Technical Functional Area Lead and Functional Area Developers while researching and analyzing change orders and defects;
- Supporting FADs in solving technical problems by providing business knowledge;

- Providing testing status updates to TTL assigned to subsystem;
- Providing testing estimates to TTL; and,
- Performing backup role for TTL.

2.3.4 EDS Technical Functional Area Lead (TFAL)

The EDS TFAL is the most knowledgeable technical resource for their assigned subsystem. The demonstrate ownership and primary responsibility for the successful implementation of their assigned subsystem within the New KY MMIS by:

- Communicating directly with EDS Account team and Commonwealth customer regarding their specific subsystem;
- Attending requirements validation/analysis sessions for their specific subsystem to fully understand their subsystem's requirements and documenting all Change Orders and their subsystem DSD documents resulting from requirements validation/analysis sessions;
- Works in partnership with their respective TTLs, functioning as the technical expert during project presentations to the customer;
- Coordinating on-time submission of project deliverables as assigned for their subsystem (for example: RSD, GSD, DSD);
- Inspecting deliverables for correctness and completeness and ensuring that system documentation is updated;
- Controlling scope within their assigned subsystem;
- Adhering to the change management process;
- Identifying technical design changes for their subsystem and documenting change requests as needed (and depending on the size of their area of responsibility, creating detailed specifications for FADs);
- Reviewing technical design changes for their subsystem through participation in design walkthroughs with Functional Area Architect (FAA), FADs and TTLs;
- Reviewing application code changes for their subsystem through participation in construction walkthroughs with FADs and accepting ultimate responsibility for the accuracy and completeness of the technical solution for assigned subsystem;
- Participating in work product reviews and enforcing adherence to standards and processes;
- Accepting primary responsibility for troubleshooting errors in system programs and responding to defects with explanation or code corrections;
- Providing all cycle support as necessary for testing and ensuring that the databases are maintained to meet testing needs;
- Supporting the review of testing results to ensure accurate testing is occurring; and,

- Supporting creation of the implementation plan for their subsystem and reviewing with the FAA, FADs and TTLs.

2.3.5 EDS Functional Area Developer (FAD)

The EDS FAD plays a key role in the construction phase of the project. They demonstrate ownership and responsibility for success in their assigned functional area in the New KY MMIS by:

- Assisting with the entry and maintenance of requirements and Change Orders in the Project Workbook;
- Maintaining accurate statuses for their change orders and defects;
- Adhering to standards and processes and participating in work product reviews;
- Reviewing business/technical design changes, as identified through change orders, with TTL/TFAL;
- Performing application code changes for the change orders for their subsystem(s);
- Reviewing application code changes with TFAL for assigned functional area;
- Performing unit testing of changes made;
- Documenting defects throughout all testing phases;
- Perform backup role for TFAL as needed; and,
- Preventing defects wherever possible and eliminating defects when identified during design, construction or testing.

2.3.6 Commonwealth Leadership

The Commonwealth Leadership team is responsible for oversight of the System Test Plan. They play a key role in the overall success of the project by:

- Serving as the contact for problem resolution requiring a higher level of approval authority;
- Receiving and analyzing status reports on progress during testing; and,
- Working with EDS leadership to resolve any concerns or issues with the project.

2.3.7 Commonwealth Analysts

The Commonwealth Analysts are responsible for reviewing and approving test scenarios. They support the system testing effort by:

- Reviewing and approving test results including documentation updates;
- Serving as the point of contact for test data validation and continuity;

- Working closely with the TTLs and test team members to develop test scenarios that accurately reflect current state policy and processing; and,
- Developing and executing User Acceptance Test scenarios.

2.3.8 Commonwealth Users

The Commonwealth Users perform a similar role to that being performed by EDS FABAs. The primary difference between the roles is that the Commonwealth Users are not primarily responsible for the defect resolution or FAD interaction.

An organization chart that graphically represents the EDS Test Team by organization and role is included on the Administrative page of the Project Workbook located at https://pwb.kyxix.eds-mscs.com/kyxixddi/Administrative/.

3 EDS Plan for the System Testing Task

To ensure effective system testing of the New KY MMIS, it is imperative that the levels of testing are well defined and the relationships between the testing levels are documented. This section describes the levels of system testing and outlines the role each plays in the overall MMIS testing process.

3.1 Unit Testing

During this phase of design and development of Change Orders, an assigned FAD retrieves the affected system objects using the appropriate configuration management tools and develops the technical designs.

At the same time that the final technical designs are being developed, the specific test cases needed to unit test the New KY MMIS are developed and linked to the business process / system object combination in the Project Workbook. These links are added to any test cases already associated with that object and included in Unit and system testing to ensure compliance to requirements. A peer review or walkthrough is conducted to review the design and testing plan before actual development begins.

An EDS FAD codes and unit tests the New KY MMIS and prepares the Change Order for its scheduled release. The FAD then executes the Unit Test Plan, updates and verifies the test results. Throughout this process, additional test cases are developed and added to the test case table. The requirements and system object documentation are updated and enhanced. When testing and development are complete and documented, the results are presented and approved in a walkthrough. The walkthrough serves as the final verification step prior to release to the Model Office environment.

After the Unit Test step is complete, the applications, test data, and conversion data associated with the Change Order serves as a model for future releases.

3.2 System Module/Subsystem/Function Testing

System Module/Subsystem/Function Testing of the New KY MMIS is defined as the testing of the individual business functions or subsystems of the New KY MMIS to verify their ability to perform their designed business functions in a stable, consistent manner. It is performed after a business function or subsystem has been successfully unit tested and promoted into model office by the technical team. Successful System Module/Subsystem/Function Testing validates the unit testing of a business function and provides a performance baseline for integrated testing.

During system testing, the components of the New KY MMIS are tested individually. The testing concentrates on the ability of the area being tested to perform the functions it was designed to perform without having to interact with the other components of the New KY MMIS. For example, the claims entry function must be able to capture defined claims data from a claim form. When necessary, it must be able to perform the editing functions that it was designed to do, to distinguish between valid versus invalid data and accept only valid data. The service authorization function must be able to accept, retain and display service authorizations.

System Module/Subsystem/Function Testing overlaps the early stages of the System Integration Testing. This allows for the reduction of the overall testing time. This testing phase uses application executables generated by the development team.

3.3 System Integration Testing

System Integration Testing is an integral part of system testing and it verifies the ability of the different functions to successfully interact with each other and perform the necessary updates to and from each other. It also verifies that all connected modules meet the technical design requirements documented in the Comprehensive Detailed System Design (DSD). System integration testing is designed to document and test the flow of data between systems and subsystems across the entire MMIS, takeover systems, interfaces and other associated systems and components. It uses interfaces, hardware, and software to verify that the entire system performs correctly end-to-end.

System Integration Testing is discussed in greater detail in the "System Integration Test Plan" document, located on the Testing Page of the Project Workbook located at pwb.kyxix.eds-mscs.com/kyxixddi/Testing.

3.4 Parallel Testing

Parallel Testing is conducted as an integral part of system testing. EDS has had significant success generating input transactions from claim history to support parallel testing against the current MMIS. Claims are input through the new KY MMIS and compared against the results obtained in the existing MMIS using a specialized reporting capability. If variations are detected, they are analyzed and reported. Defects can also be recorded to ensure that corrective action is taken if required. The process of parallel testing against claim history files allows EDS to verify that many of the major components of the MMIS are functioning properly. It has the ability to verify program logic as well as the data converted for reference, provider, recipient, and other subsystems that provide input to the claims adjudication process. Success of parallel testing is dependent on the successful entry of benefit plan information.

3.5 Regression Testing

Regression testing occurs throughout system testing. Whenever a new release begins, the environment is systematically restored to a baseline configuration. This includes restoring the database, file systems, and baseline data to a known point. A standard set of beneficiaries, providers, reference data, and other data input sources determined by the testers are loaded into the database to begin the process. The restoration process allows a standard set of test cases to be regression tested on every release. This ensures that previously working applications are not affected by new changes being released. In addition, this step provides for the ability to enhance the baseline test cases over time, thereby improving our capability to detect errors in the system as the development/maintenance cycle proceeds.

- Regression testing is discussed in depth in a separate deliverable titled "New KY MMIS Regression Test Guidelines", located on the testing page of the Project Workbook located at pwb.kyxix.eds-mscs.com/kyxixddi/Testing.

3.6 Performance/Load Testing

Performance/Load tests are executed using emulators instead of actual external systems. The emulators ensure that the application is isolated from slow responses from the external systems that affect the results of the tests, per the defined performance specifications.

EDS will utilize the Microsoft Web Application Stress Testing tool for testing the performance of the web applications. The tool simulates screen entry sequences which are recorded up front.

3.7 User Acceptance Testing

User Acceptance Testing is formal testing conducted to allow the Commonwealth or other authorized entity to determine whether a system satisfies its acceptance criteria and whether to accept a system or component of a system. This testing will be performed after the successful completion of System Integration Testing. User Acceptance Testing is performed by representatives or employees of the Commonwealth. This level of testing will give Commonwealth testers the chance to validate the test cases that were submitted by the EDS testers or submit additional, new test cases.

User Acceptance Testing builds upon the testing performed in Integrated System Testing to ensure that all subsystems function as specified in the DSDs. This type of testing is similar in nature to System Module/Subsystem/Function Testing and Integrated System Testing. The difference is that it is performed by Commonwealth Analysts or by FABAs at the request of the Commonwealth.

The User Acceptance Testing environment will be populated converted Kentucky MMIS production data from the legacy MMIS system.

User Acceptance testing is discussed in more detail in the User Acceptance Test Plan on the Project Workbook at pwb.kyxix.eds-mscs.com/kyxixddi/Testing.

4 Test Cases

The development of test notebooks, test scenarios and test cases use a similar approach in each of the testing phases (Unit, System Module/Subsystem/Function, System Integration, Parallel, Regression, Performance/Load, and User Acceptance). All documentation for each testing phase is maintained in Project Workbook.

The Comprehensive Detailed System Design documents contain the subsystem description, data model, and the system flow. These documents also contain system requirements and design material such as Change Orders, Letters, Reports, Web Pages and Internal and External interfaces. This information is then used to create test notebooks.

These test notebooks are expanded on by the testers using information appropriate to the particular phase. Test scenarios are then developed to cover specific criteria.

4.1 Identification of Test Cases

Thousands of test cases have been created and executed to test the functionality of the base interChange application. Test cases applicable to system testing the New KY MMIS will be identified by the TTLs and FABAs for their subsystems and entered into a testing spreadsheet. Examples of the testing spreadsheets are on the Project Workbook at pwb.kyxix.eds-mscs.com/kyxixddi/Testing. Upon the successful review and approval by the Commonwealth, the test cases identified in the testing spreadsheets are loaded automatically into the New KY MMIS DocoTool.

4.2 Development of Test Cases

Test cases are constructed for the processes for each subsystem. Test cases are designed to test both the positive and negative side of an activity. For example, it is just as critical for the tester to ensure that valid data can be processed as it is to prove invalid data is prevented. The tester also tests to verify consistency and continuity across subsystems during System Integration Testing.

This section lists general testing characteristics. Depending on the actual item or function being tested, the general testing characteristics could include one or more of the following:

- Field Edits;
- Dates;
- Balancing and Controls;
- External Interfaces;
- Internal Interfaces;
- General Output Testing;
- Headers and Footers;
- Totals/Subtotals; and,
- Field lengths;

- Field data type validation; and,
- General Processing Logic.

The core of system testing is an ever-expanding set of test cases designed to detect errors in MMIS software. The primary sets of test cases are written to detect errors in the normal operation of the MMIS. For example, when a provider correctly submits an Enrollment Application, then the system must enroll the provider correctly. Or when a provider submits a claim correctly then the system must pay the claim correctly. By focusing first on the mainline processes, system testing will ensure that the majority of work performed by staff is at peak efficiency.

The secondary sets of test cases are written to detect errors in the exception processing of the MMIS software. For example, if the claim is submitted with invalid information like a duplicate claim, then the system should detect the error and handle it appropriately. By focusing on these test case types second, testers are assured that their cases will not be stopped in other parts of the system.

4.3 Structuring Test Cases in Project Workbook

The hierarchy for organizing test cases is Testing Notebooks, Business Functions, and Test Cases as seen in Figure 1.

- Testing Notebook – A grouping of business functions which address a major subject area within the system;
- Business Function – A group of test cases which address a major function of the subject area within the system; and,
- Test Case - At least one test case is developed for each business function.

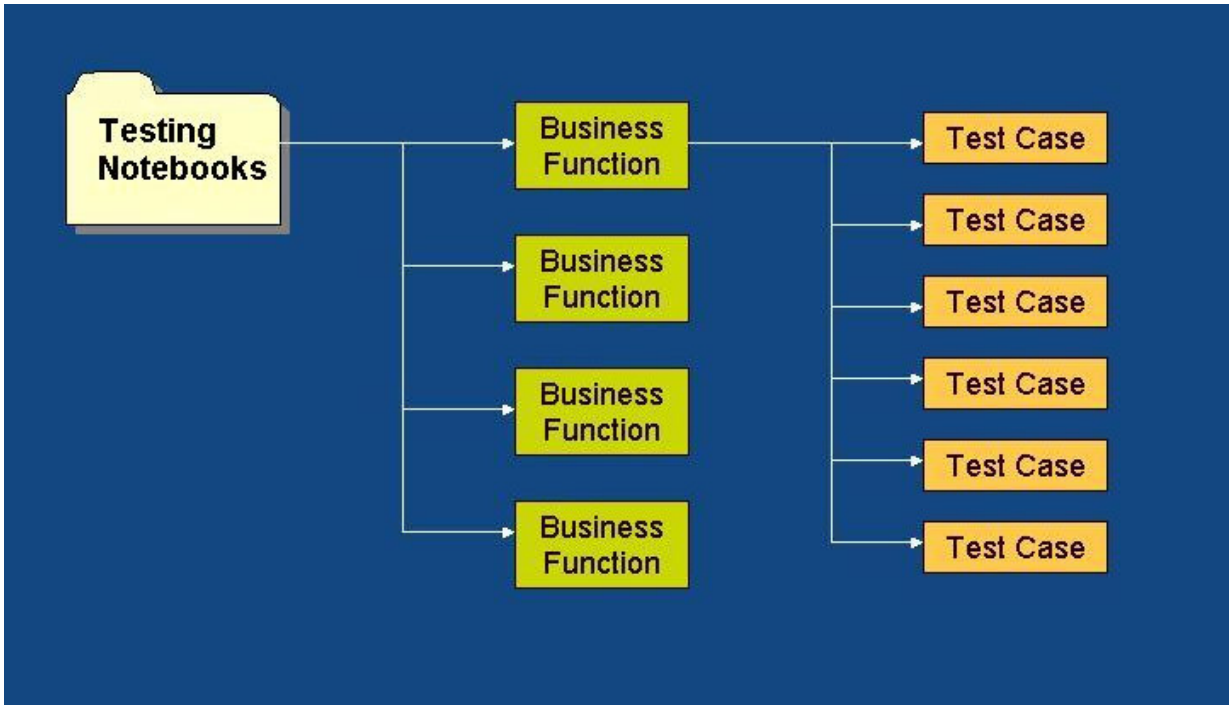


Figure 1

As seen above, test cases are organized into a series of notebooks. Each notebook contains test cases that focus on a particular business function. For example, a notebook may focus on the normal operation of the provider enrollment process. Within the notebook, business functions are identified to further organize the cases. As an example, a set of cases may be written to ensure that each provider type can be successfully enrolled into the system as shown in Figure 2.

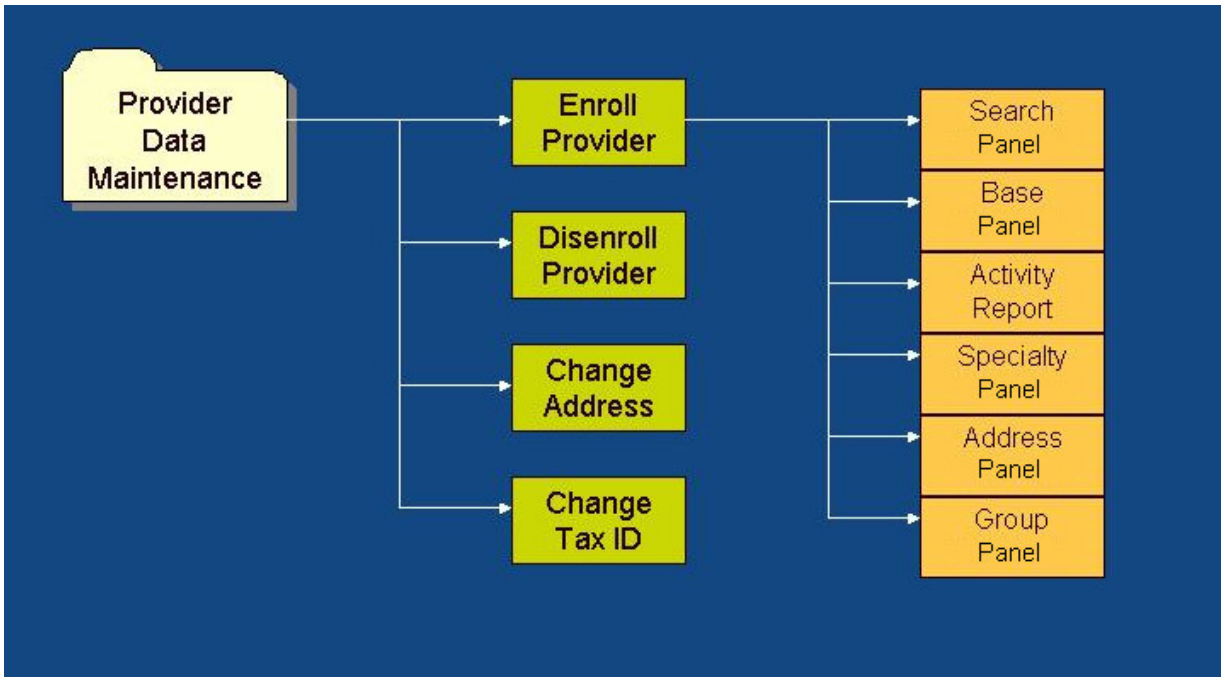

Figure 2

Testing from a business view performs two functions:

- Validates that the system objects function correctly and independently
- Validates that the system objects function correctly as an integrated unit to perform an identified business function

Throughout the testing effort, new situations may be identified, existing ones may be modified, and due to design changes, some may be removed. The disposition of each case, whether it passes, fails, is added, changed, or canceled is documented.

Test strategies vary slightly based on the type of system object being tested. MMIS panels/windows are tested through manual user input and validation of panel/window function and performance. Batch process, transaction, and report testing can be automated using data from EDS' benchmark input database. The intent of automation is to provide consistent output that can be examined on a regular basis to ensure that database or application changes did not influence testing accuracy. Automation also reduces the level of effort to verify the system is functioning correctly. The EDS and DMS Test Team decides which test cases and test inputs are candidates for automation.

A standard set of test criteria for reports and panels/windows can be found on the Testing Page of the Project Workbook at https://pwb.kyxix.eds-mscs.com/kyxixddi/Testing/.

4.4 Test Case Execution

When test cases have been constructed or compiled and the test data prepared, the tester actually executes the test. The test data is entered into the applicable environment, which simulates the New KY MMIS. Data is entered, using the newest version of the panels/windows, all processes are run and reports and letters are produced. The tester compares the expected result to the actual result to validate the test case.

A test case will proceed through multiple statuses during its development and execution. The typical statuses a test case will proceed through are: "Test Case Identified", "Test Case Written", "Test Case Released to Model", "Test Case In Work", "Test Case Passed in Model", and " Test Case Signed Off". A complete list of statuses can be found on the Project Workbook at pwb.kyxix.eds-mscs.com/kyxixddi/Testing.

If the test case has the expected result, the status of the test case is changed to "Test Case Passed in Model" and is considered complete. If the test case does not have the expected result, the tester will review the test to confirm the appropriateness of the data. If the test data is the problem, the data is changed as needed, and the test case retested. If the unexpected result is caused by a design or logic discrepancy, a change order is written against the test case. The change order has a type of "Defect Identified" to differentiate the change order from a RFP requirement, enhancement, or other change order type. By monitoring the status and defects, an accurate measure of the system testing progress can be determined.

5 Test Environments

The environment in which the testing is performed is as important as the testing itself. The test environment provides the necessary background within which the test cases are executed. Ideally, a test environment should simulate the production environment, albeit on a smaller scale. It should contain the same information, and present the same conditions and restrictions. Following are the different environments used in system testing the New KY MMIS.

- **Development** – the Functional Area Developers perform unit testing in the development environment. This environment is very limited and consists of Oracle databases and a file system and is used by the FADs solely to perform unit testing of new or modified code. This environment is accessible only to the technical team during the testing phase of the implementation. After the FADs are satisfied with the results of their unit testing in this environment, the code is promoted, through established change management procedures, to model office for more extensive testing by the Functional Area Business Analysts. This environment is configured and maintained by the EDS technical team.

- **Model Office** – this environment is a replicated version of the New KY MMIS production environment and is used for System Module/Subsystem/Function, System Integration and Performance/Load Testing by the Functional Area Business Analysts. An ideal model office environment will contain all the tables, databases, and architectural features of the production environment. The model office environment has only truncated versions of the databases contained in the production environment, although such databases contain the same variations, percentages and features contained in production. The testers also generate test data in this environment that will be used for system testing. Some of the existing data will be modified to meet testing criteria. This environment will be retained for testing of enhancements or modifications after the implementation period. It will be configured and maintained by the EDS technical team.

- **User Acceptance Test** – this environment is used for User Acceptance Testing. Prior to going live, Commonwealth testers execute their test cases in this environment which contains all the functional areas that have been successfully system tested. Defect Change Orders created during User Acceptance Testing are first tested in Model Office prior to going to Production.

- The User Acceptance Test environment is configured and maintained by the EDS technical team. The EDS Conversion Team will populate the environment with converted Kentucky MMIS production data from the legacy MMIS system prior to the start of User Acceptance Testing.

- **Production** – the end product of the implementation. This environment is initially configured to support the capacity and system performance testing and parallel testing. Large volumes of claims, recipient and reference file transactions are put through this environment to evaluate the performance and tune the environment accordingly. The production environment contains the system that will be used to process “live” data after the system becomes fully operational. Functions that are successfully tested in model

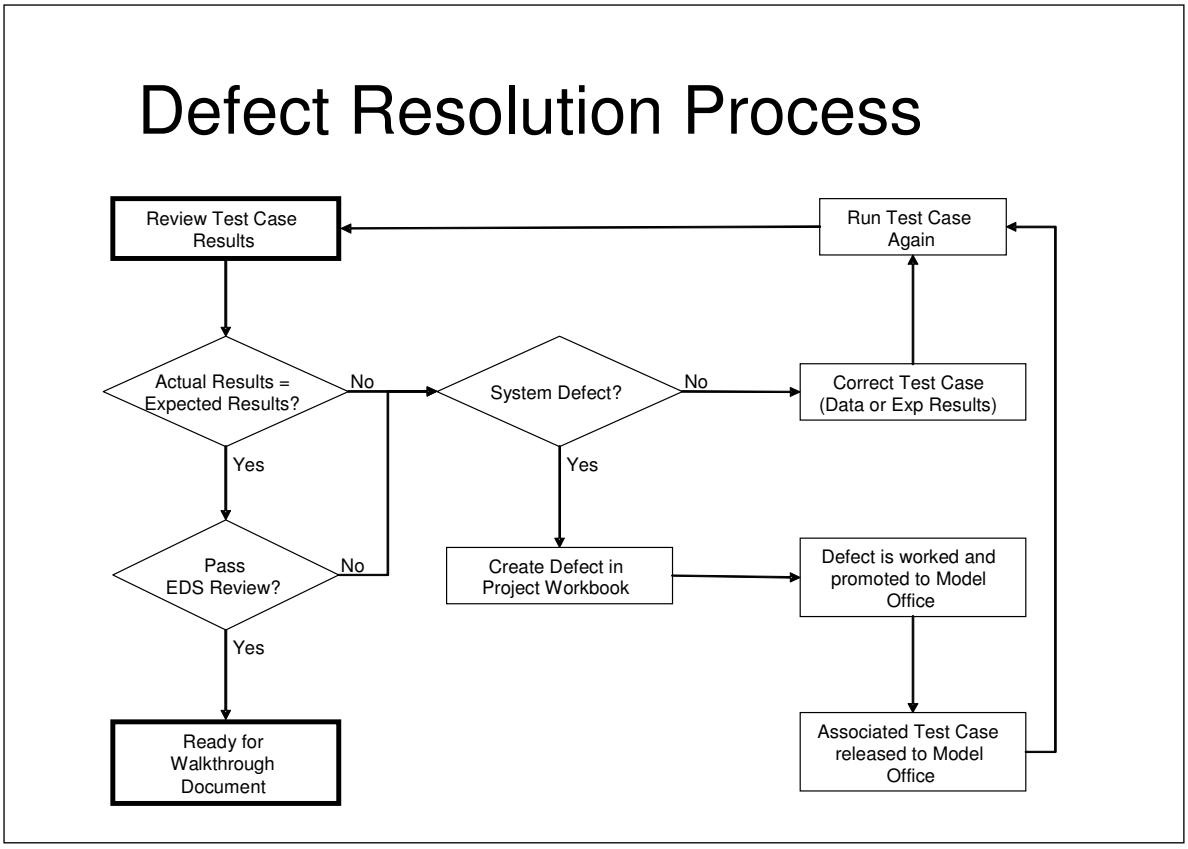
office are promoted to this environment in preparation for full production processing. During the operational phase of the contract, defects that may have to be resolved or enhancements that may be implemented are developed and unit tested in the development environment, and tested in the model office environment before they become part of the production environment. The maintenance of this environment is the responsibility of the EDS technical team.

6 Defect Resolution

Defect resolution is the identification, tracking and correction of deficiencies discovered during the testing phase of implementation. This could happen anytime during the testing phase, although the majority of defect resolution is performed during System Module/Subsystem/Functional testing and System Integration testing.

6.1 Defect Resolution Process

When a tester does not obtain the expected results from a test scenario, the tester reviews the test cases to confirm the appropriateness of the data. The tester also reviews the functions related to the test cases to make sure they are set properly. An example would be to access and view the settings of a particular edit or audit to ensure that the data within the tables are accurate and appropriate. If the data and the related settings are correct, the tester creates a defect in the Project Workbook. The following drawing depicts the actions taken when a defect is discovered:

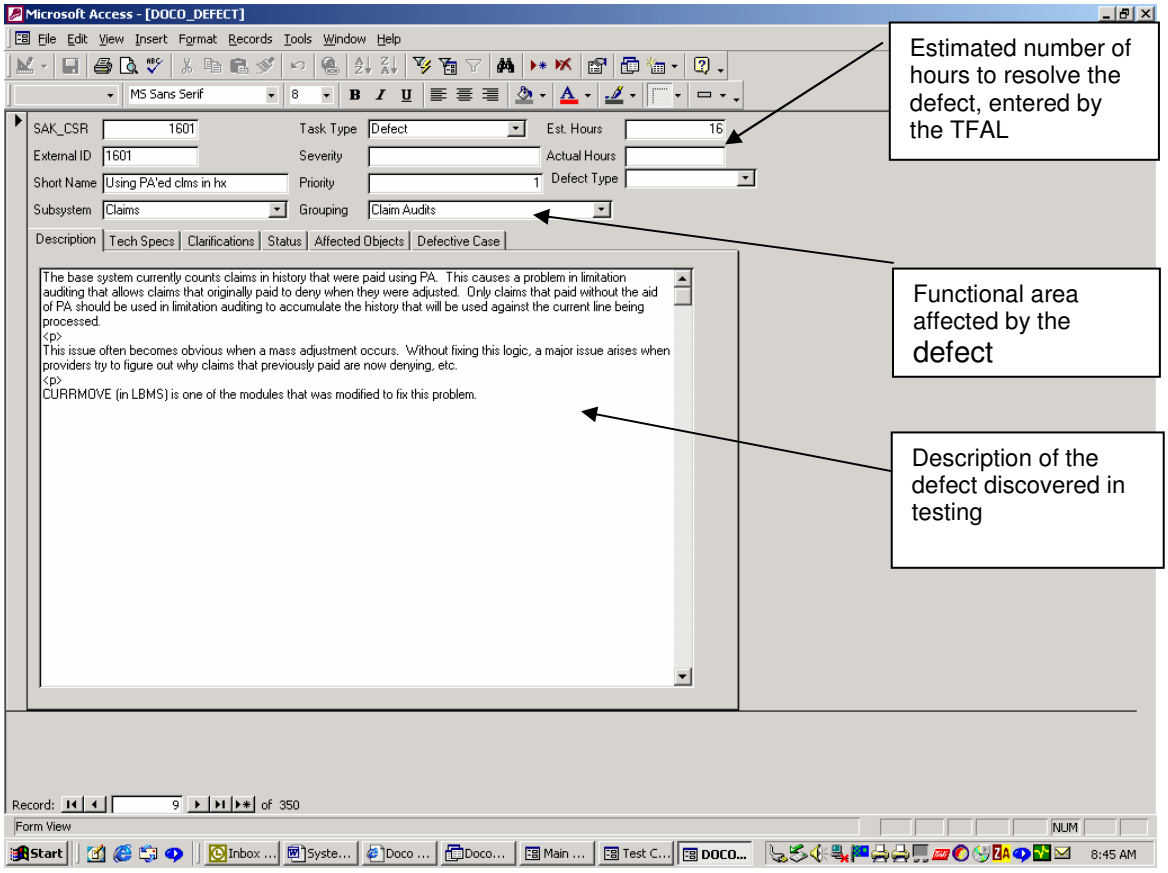


6.2 Defect Tracking Tool

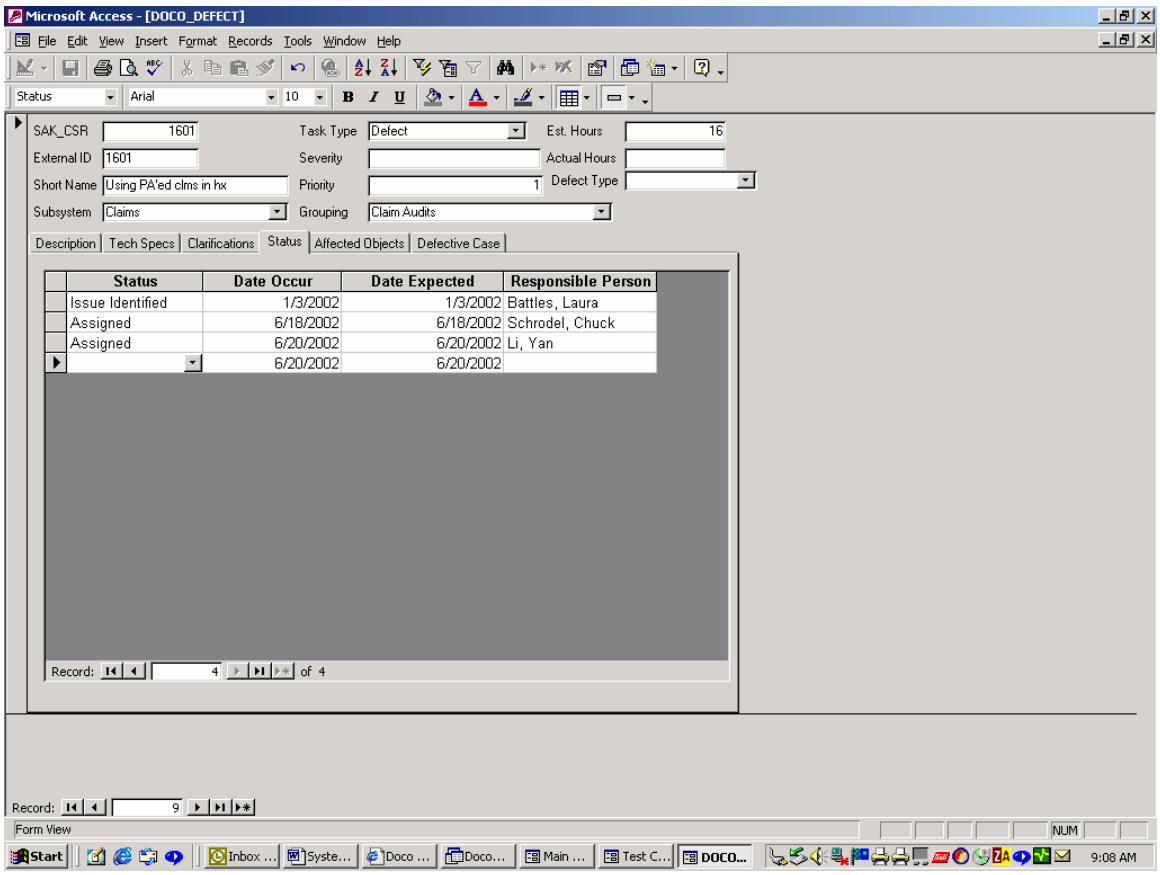
EDS recognizes the need for standard testing tools for the delivery of quality software systems. Historical system development has allowed for the evolution of Project Workbook and the DocoTool as a defect tracking tool. Identified defects are documented in and tracked through Project Workbook.

Below is a sample defect that was entered in the DocoTool in Project Workbook. This is a page out of the Oklahoma Project Workbook since we have not yet identified any defects in the New KY MMIS.

The defect is in the claims processing area which involves auditing related to prior authorization. The TFAL estimated that it will take 16 man hours to resolve the defect based on his knowledge of the affected functional area and what it will take to code and unit test the correction to the defect.



Defect window showing the description of the defect



Defect window showing the assignment of the defect to a FAD

The screen print above shows the defect as being identified by Laura Battles and assigned to a Technical Functional Area Lead (Chuck Schrodel), who in turn assigned it to a FAD (YAN Li). After the FAD corrects the defect and successfully pass unit testing, then she will make the tester the “Responsible Person” and change the status to retest.

Identified defects are contained and tracked through Project Workbook.

ESCALATION PROCESSES

The following steps are taken when a defect is discovered in testing:

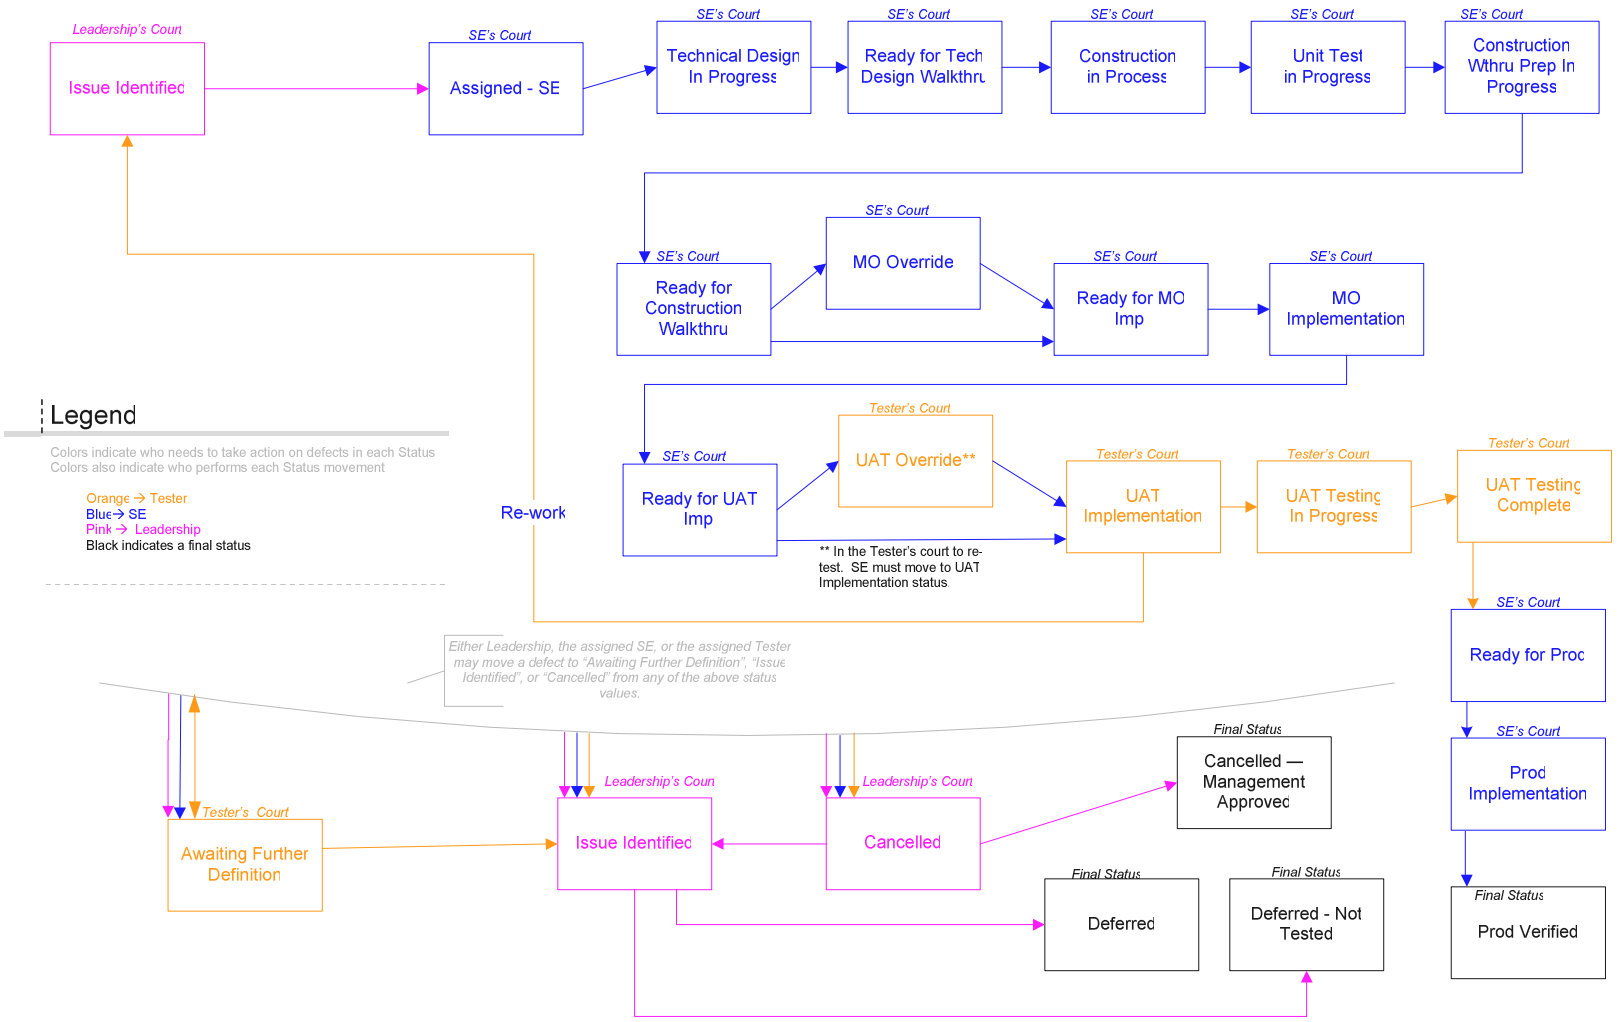
1. The problem is discovered in system testing.
2. The tester documents the test results in Project Workbook. The status of the test case is “Defect Identified”.
3. The tester enters the defect in DocoTool.
4. The tester assigns the defect to the Technical Functional Area Lead (TFAL) by making the TFAL the “Responsible” person and setting the status of the defect to “Assign”.
5. The TFAL reviews the defect and assigns it to a FAD by making the FAD the “Responsible” person. The status remains “Assign”. The TFAL also assigns work hours for the task for the FAD that can be tracked through EDS’ internal time tracking tool.

6. The FAD resolves the defect and unit tests the correction. If the unit test is successful, then the FAD takes step # 7. Otherwise, the FAD analyzes the results of the unit test, corrects it and repeats unit testing.
7. The FAD enters the resolution in DocoTool, including the date/time/cycle or build release that the defect can be retested by the system testers, allowing for the appropriate amount of time needed to migrate the corrected code to model office. The FAD sets the status of the defect to “Retest” and changes the “Responsible” person to the original tester.
8. The tester retests the test case and if the retest is successful, the tester sets the status of the defect to “Closed” and enters a “Complete” date.
9. If the retest is unsuccessful, the tester updates the description of the defect with the outcome of the test. The tester then changes the “Responsible” person back to the FAD, and resets the status back to “Assign”.

The diagram on the following page shows valid defect status movement.

Valid Status Movements for Defects

Wednesday, March 09, 2005



6.3 Roles and Responsibilities

When resolving defects during system testing, the Commonwealth of Kentucky and EDS staff have specific roles and responsibilities, and are as follows:

- **EDS Project Manager** – The PM maintains oversight for the progress of System Testing. They act as the mediator to resolve problems. They are responsible for assigning resources to each defect and participate in assigning priority and severity to each defect.
- **EDS Functional Area Business Analyst** – The FABA team initiates any defect correction that results from failed test scenarios. They serve as the liaison between the Customer Analysts and Users and EDS FADs. If defects are identified by the Customer Analysts, then the FABA creates the defect in the DocoTool and takes ownership of the resolution of that defect.
- **EDS Functional Area Developer** – The FAD Team is responsible for troubleshooting errors in system programs and responding to defects with explanation or code corrections. The FAD Team supports the review of testing results to ensure all defects are resolved.
- **Commonwealth Leadership** – The Commonwealth Leadership team is responsible for oversight of the Defect Resolution Process. They serve as the contact for problem resolution requiring a higher level of approval authority. They participate with the EDS PMs in assigning priority and severity to each defect.
- .**Commonwealth Analysts/Commonwealth Users** – The Commonwealth Analysts and Commonwealth Users may identify defects. They provide documentation to the FABA of any identified defects; however, they are not responsible for defect resolution.

7 System Test Schedule

Testing is scheduled and conducted according to the New KY MMIS Work Plan. The project plan below shows the start and finish date for each of the major types of system testing to be performed.

SYSTEM MODULE/SUBSYSTEM/FUNCTION TESTING		
Prepare KY interChange System Module/Subsystem/Function Test Case/Test Data Sets	**9/19/2005**	**4/4/2006**
Prepare Test Case/Test Data Sets for Member Management	9/26/2005	3/10/2006
Prepare Test Case/Test Data Sets for Managed Care	2/7/2006	3/23/2006
Prepare Test Case/Test Data Sets for Benefits Administration	10/4/2005	3/14/2006
Prepare Test Case/Test Data Sets for Provider	11/1/2005	2/28/2006
Prepare Test Case/Test Data Sets for Third Party Liability (TPL)	9/26/2005	2/27/2006
Prepare Test Case/Test Data Sets for Service Authorization and Prepayment Review	10/3/2005	3/2/2006
Prepare Test Case/Test Data Sets for Reference	10/20/2005	3/7/2006
Prepare Test Case/Test Data Sets for Claims	11/8/2005	3/13/2006
Prepare Test Case/Test Data Sets for Buy-In	11/8/2005	3/7/2006
Prepare Test Case/Test Data Sets for Encounter (Claims)	11/8/2005	3/13/2006
Prepare Test Case/Test Data Sets for Financial	10/7/2005	3/10/2006
Prepare Test Case/Test Data Sets for Quality Assurance and Audits	2/20/2006	4/4/2006
Prepare Test Case/Test Data Sets for Early Periodic Screening, Diagnosis, Treatment (EPSDT)	9/19/2005	3/6/2006
Prepare Test Case/Test Data Sets for Management and Administrative Reporting (MAR)	2/20/2006	4/4/2006
Prepare Test Case/Test Data Sets for Surveillance and Utilization Review (SUR)	2/17/2006	4/3/2006
Prepare Test Case/Test Data Sets for Decision Support System/Data Warehouse (DSS/DW)	2/17/2006	4/3/2006
Prepare Test Case/Test Data Sets for External Data Sharing and Exchange	10/24/2005	3/14/2006
Execute System Module/Subsystem/Function Tests	**4/12/2006**	**7/24/2006**
Member Management - System Test	4/14/2006	6/13/2006
Managed Care - System Test	4/19/2006	6/19/2006
Benefits Administration - System Test	4/4/2006	6/15/2006
Provider - System Test	3/30/2006	6/5/2006
Third Party Liability (TPL) - System Test	4/4/2006	5/31/2006
Service Authorization and Prepayment Review - System Test	4/7/2006	6/5/2006
Reference - System Test	4/13/2006	6/8/2006
Claims - System Test	4/6/2006	6/14/2006
Buy-In - System Test	4/6/2006	6/7/2006
Financial - System Test	4/12/2006	6/13/2006

Quality Assurance and Audits - System Test	5/5/2006	7/6/2006
Early Periodic Screening, Diagnosis, Treatment (EPSDT) - System Test	4/6/2006	6/7/2006
Management and Administrative Reporting (MAR) - System Test	5/2/2006	7/3/2006
Surveillance and Utilization Review (SUR) - System Test	5/4/2006	7/5/2006
Decision Support System/Data Warehouse (DSS/DW) - System Test	5/4/2006	7/24/2006
External Data Sharing and Exchange - System Test	4/14/2006	7/24/2006
Assemble Comprehensive System Testing Results	**8/22/2006**	**9/13/2006**
MILESTONE: DMS Approval of Comprehensive System Testing Results	**10/11/2006**	**10/11/2006**
PARALLEL TESTING		
Parallel Testing	**6/15/2006**	**8/11/2006**
Parallel Testing Environment	6/15/2006	6/30/2006
Parallel System Test - Session 1	7/3/2006	7/11/2006
Parallel System Test - Session 2	8/4/2006	8/11/2006
INTEGRATED SYSTEMS TESTING		
Integrated Systems Testing	**9/26/2005**	**8/25/2006**
Integration Test Plan, Plan Template and Results Template	9/26/2005	4/11/2006
Prepare Test Case/Test Data Sets for Integrated Systems Tests	3/10/2006	3/15/2006
Integrated System Test	**5/12/2006**	**8/25/2006**
Execute Integrated System Test - Session 1	5/12/2006	5/31/2006
Execute Integrated System Test - Session 2	5/31/2006	6/16/2006
Integrated - System Test Results	**4/20/2006**	**8/25/2006**
Technical System Testing, Support & Rework for Integrated Testing - Session 1	4/20/2006	5/8/2006
Technical System Testing, Support & Rework for Integrated Testing - Session 2	5/8/2006	5/24/2006
Technical System Testing, Support & Rework for Integrated Testing - Session 3	5/24/2006	6/12/2006
Technical System Testing, Support & Rework for Integrated Testing - Session 4	6/12/2006	6/28/2006
Integrated - System Test Results	5/19/2006	8/11/2006
Integrated - System Test Results DMS Review	8/11/2006	8/25/2006
CHECKPOINT: All Testing (System, Interface, Parallel and Integrated) Complete	**10/11/2006**	**10/11/2006**
USER ACCEPTANCE TESTING		
KY interChange - User Acceptance Testing (UAT)	**1/17/2006**	**11/9/2006**
User Acceptance Test Plan and Template	1/17/2006	4/11/2006

Prepare Test Case/Test Data Sets for User Acceptance Test	4/12/2006	6/8/2006
Load User Acceptance Test Environment with Converted Data/Files & Data Warehouse	5/24/2006	6/8/2006
Test Tracking and Reporting System (TTRS)	2/23/2006	3/29/2006
Execute User Acceptance Test	**6/8/2006**	**7/7/2006**
Execute Structured Data Test Cycles - UAT	6/8/2006	7/7/2006
UAT Execute Support	6/8/2006	7/7/2006
Prepare User Acceptance Test Resolutions Document	**7/7/2006**	**8/4/2006**
Compile Final User Acceptance Test Resolutions Document	7/7/2006	7/14/2006
Conduct Walkthrough with DMS - User Acceptance Test Resolutions Document	7/14/2006	7/18/2006
Revise Final User Acceptance Test Resolutions Document based on Walkthrough	7/18/2006	7/21/2006
DMS Review - User Acceptance Test Resolutions Document	7/21/2006	8/4/2006
MILESTONE: DMS Approval of User Acceptance Test Resolutions Document	**8/4/2006**	**8/4/2006**
CHECKPOINT: All Testing (System, Interface, Parallel and Integrated) Complete	**10/11/2006**	**10/11/2006**

A Microsoft Project Gantt Chart located on the Project Management page of the Project Workbook at https://pwb.kyxix.eds-mscs.com/kyxixddi/ProjectPlan/ demonstrates the timeline for the various phases of system testing. The chart includes the following scheduling components:

- Tasks for each type of testing accomplished during the System Testing task – Unit, System Module/Subsystem/Function, System Integration, Parallel, and User Acceptance;
- Tasks that must be performed prior to beginning the actual testing such as writing test cases, creating test data to support testing, test case execution, etc.;
- Tasks to reflect the approval of test results;
- The dependencies between system testing tasks, to show the progression of the system testing effort;
- Scheduled start and end dates for each task;
- Duration of each task; and,
- Staff assigned to each task.

8 Reviewing Test Results

EDS provides testing notebooks, test cases, and test results from System Module/ Subsystem/Function and System Integration testing to the Commonwealth for acceptance before the User Acceptance testing phase.

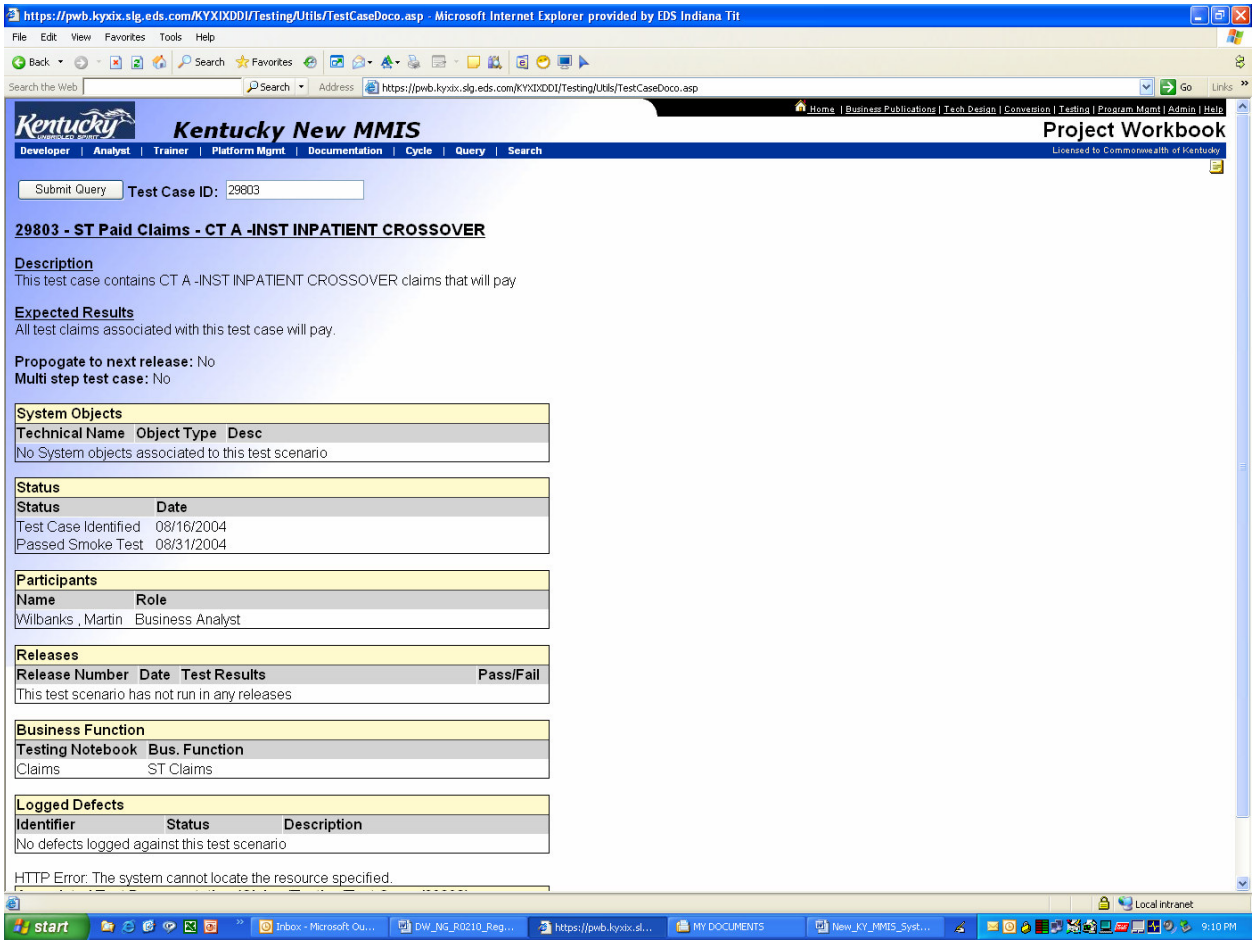
Walkthroughs and joint reviews of System Module/Subsystem/Function and System Integration test results are an integral part of our quality approach during design and development. Walkthroughs of the System Module/ Subsystem/Function and System Integration Test results serve the Commonwealth of Kentucky by:

- Facilitating understanding, answering questions, and expediting the deliverable approval process
- Determining the Commonwealth's satisfaction or concern with the output

The New KY MMIS work plan details our approach to providing walkthroughs of the deliverables. The work plan also details our communication with the Commonwealth of Kentucky for the review of system test deliverables. Deliverable walkthroughs occur in addition to the regularly scheduled status meetings with the Commonwealth. Separate walkthrough sessions help promote active involvement at the proper management levels and focus attention on this vital activity.

To receive Commonwealth sign-off, EDS provides the deliverable in hard copy and electronic form with a cover memo attached for signature. Our work plan provides for a one-day detailed walkthrough of deliverables (by subsystem when applicable), a 10-day review period of the completed deliverable, followed by a five-day final approval period. We assume that no review will take longer than 10 days because it would unnecessarily delay the project and jeopardize the on-time delivery. When the deliverable is satisfactorily revised and signed off, we record this successful milestone in the project plan. This standard approach helps promote an organized process for deliverable and milestone sign-off.

All individual test case results and their corresponding documentation may be viewed in Project Workbook. Below is an example test case result that can be viewed by DMS for approval:



This pictorial represents the test case result for Test Case ID 29803 posted to Project Workbook.

9 Acceptance Criteria

System test results and deliverables are organized and presented by the EDS Test Team throughout the system testing phases. The presentation of deliverables follows the standards documented on the Deliverables Management page of the Project Workbook at pwb.kyxix.eds-mscs.com/kyxixddi/projmgmt/DeliverableMgmt.

Commonwealth acceptance of system testing for the New KY MMIS begins with the review and approval of the System Test Plan template through final approval of the User Acceptance Test Resolutions document. The EDS Testing PM will work with the Commonwealth to determine the format of test results documentation for each phase.

System testing documentation deliverables include:

- System Test Plan – Defines EDS' approach to all phases of system testing the New KY MMIS.
- User Acceptance Test Plan – Defines approach to performing User Acceptance Testing of the New KY MMIS.
- Comprehensive System Testing Results – EDS will provide for Commonwealth review and approval testing results at the conclusion of all System Module/Subsystem/Function Testing.
- User Acceptance Test Resolutions Document – EDS will provide for Commonwealth review and approval testing resolution documentation at the conclusion of User Acceptance Testing.

System testing documentation checkpoints include:

- Regression Test Guidelines – Outlines EDS' approach to Regression Testing in greater detail than what is covered in the System Test Plan Deliverable.
- System Integration Test Plan – Outlines EDS' approach to System Integration Testing in greater detail than what is covered in the System Test Plan.
- System Test Case/Test Data – EDS will provide spreadsheets by subsystem which contain test case/test data information for each subsystem within the New KY MMIS.
- System Test Case/Test Data Results – EDS will provide for Commonwealth review and approval subsystem test results. The organization and presentation of test results is by notebook so that it is clear which sections of the application are completely tested and approved. Only passed test cases will be presented in the walkthroughs.
- Parallel Testing Results - Session 1 and 2 – EDS will provide for Commonwealth review and approval results of each parallel test of the New KY MMIS.
- System Integration Test Results – EDS will provide for Commonwealth approval of the comprehensive document detailing the outcome of System Integration Testing.

10 Documentation

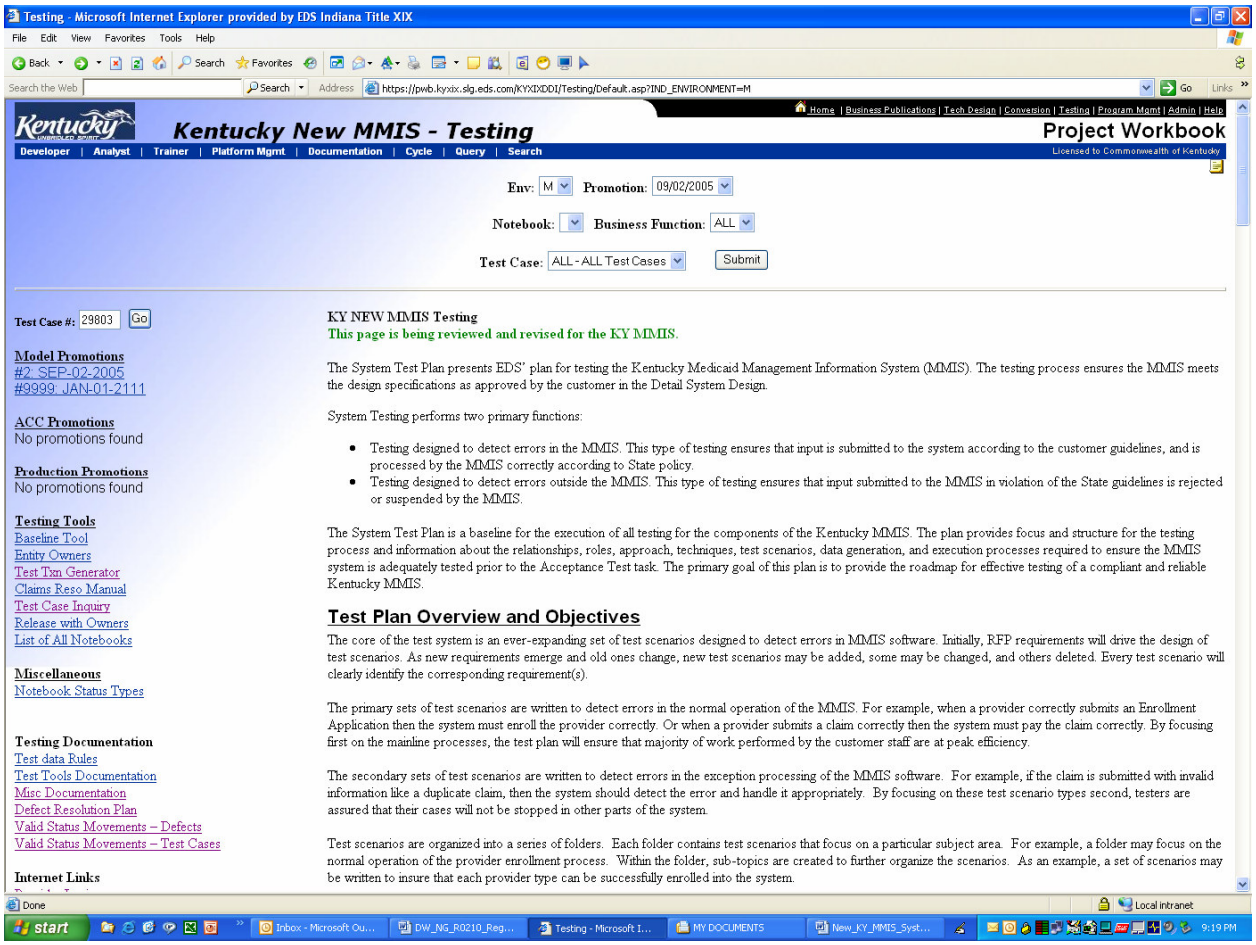
EDS produces and maintains system and operations documentation that is up to date after changes are identified from actual test results. A high-level flow diagram for each subsystem graphically shows the flow for programs, input and output files.

Job streams, including programs, inputs and outputs, controls, job stream flow, operating procedures, and error and recovery procedures are documented within the system documentation. Inputs are named, described, and illustrated in the inputs section of each subsystem DSD.

Outputs are documented and illustrated in the outputs section of each subsystem DSD. Each field of each output is clearly defined in the outputs section of each subsystem DSD. All files and records, including intermediate and work files, are documented in detail in the Job Scripts and Programs sections of each subsystem DSD.

Project Workbook is used to capture documentation. The following Web page shows a sample of the testing documentation and tools available through Project Workbook.

Sample Testing Documentation and Tools



The left column provides authorized users with access to documentation and tools related to testing and the test cases. Included is a series of Web pages to illustrate the ease with which a user or tester can create test scenarios.

11 Management of the System Testing Effort

11.1 Communication

Effective Communication involves determining the information and communication needs of the project: who needs what information, when they will need it, determining how the information is to be disseminated, tools and techniques for communication, and distribution. By determining these needs early on, and preparing for unexpected requests for information, EDS has identified a key factor to ensuring the success of the New KY MMIS system testing.

A formal Communication Plan has been developed to communicate with project stakeholders, and is located on the Program Management page of the PWB at https://pwb.kyxix.eds-mscs.com/kyxixddi/ProjectPlan/. This comprehensive plan is reviewed periodically throughout the project and revised as needed to ensure continued applicability to the testing organization structure. An important goal of the Communication Plan is to keep the Commonwealth of Kentucky abreast of system testing activities, including notifying the Commonwealth of problems encountered during testing, testing progress and adherence to the test schedule.

The following types of communication are used for system testing:

- **Project Workbook** – Project Workbook is used to facilitate the testing effort, and serves as the repository for all system testing information, including test scenarios/cases, test results, test data and testing status. Test scenarios are organized into a series of notebooks that are viewable via the workbook. Each notebook addresses a major subject area within the system. These subsystems are aligned around the Commonwealth's organization to facilitate knowledge input into the definition of business processes and test scenarios.
- **Notebook tabs** – For each subsystem, a further breakdown of the topic is created, referred to as notebook tabs. Each of these tabs has the various subsystem objects that support that area of the business associated with it. These objects are the focus of test scenarios written for that folder tab. EDS and the Commonwealth of Kentucky use Project Workbook extensively throughout the system testing effort to capture and monitor the test scenarios/cases, results, data, and status.
- **Test Team Status Meetings** – Test Team Status Meetings brings the team together to assess progress, identify issues and develop a plan of action to address the issues. It is not a time to solve problems or a substitution for one on one interaction between the system test project manager and team members. The status meeting will serve to inform the team of:
    - Overall system testing effort and status;
    - Testing developments influenced by external sources;
    - Team progress on assignments;
    - Schedule Progress;
    - Test Plan Changes;
    - Issues and Risks; and,

    - Issue Resolution.

- **Status Reports** – Status and Performance Reporting involves the documentation of the program's performance against the work plan and addresses audiences both internal and external to the program. Status and Performance Reporting is necessary to ensure that progress is being made against the work plan, significant issues and risks are identified as early as possible (so mitigation steps can be planned/enacted), and to track key program milestones. In the case of the New KY MMIS project, Status and Performance Reporting takes the form of a weekly status reports, CMS Quarterly reports, and ad-hoc reports.

    - The weekly status report is posted to Project Workbook each Wednesday at 5PM and is current as of the previous Friday. The report is broken down into three main sections which correspond to the three key areas of the overall KY MMIS project: Transition, New KY MMIS, and Interim Decision Support System (DSS). Each section contains a dashboard showing the overall status of each of these key areas, a list of any significant issues or risks, a list of tasks that were due within the past two weeks and which are due in the coming month, and various charts showing different perspectives on the area's progress.

    - There is a Status Report Review meeting each Thursday where EDS and the Commonwealth review the latest report. The meeting is currently being held in the EDS temporary facility at 106 Diagnostic Drive. Hard copies of the report are provided at the meeting for all attendees.

- **Phone and/or Email** – The Project Workbook is used to post contact phone and e-mail addresses. The contact list is updated periodically and reveals the stakeholders name, location, position, phone number and an email address. The contact list is located on the Home page of the Project Workbook at https://pwb.kyxix.eds-mscs.com/kyxixddi/Default.asp.

11.2 Quality Assurance

EDS' quality assurance methodology relative to system testing provides a quality structure for delivering quality products and services through thorough system testing and defect reporting utilizing Project Workbook. This includes rigorous standards and processes and periodic assessments to validate the effectiveness of the System Test process.

The framework consists of:

- **Identify** – determining the objective to be accomplished during system testing;
- **Initiate** – determining the scope of testing and the resource roles;
- **Diagnose** – gap analyze the current state vs. the desired state, and bridging the gap to obtain the desired testing objectives;
- **Establish** – work the testing phases to the project plan to achieve outlined objectives;
- **Act** – work with cross-functional groups to execute the system test plan; and,
- **Learn** – from test results by analyzing and refining processes in the work plan and identify areas for improvement and repeating the cycle for further improvement.

Project Workbook stores all system testing documentation, in the appropriate sequence and project folder. It outlines and documents systems testing from initiation to conclusion identifying project resources expended, technical design, and documentation. Requirements for system test cases are documented and traced in system test traceability matrices, which map to the Project Work Plan.

Defect statistics are collected and analyzed to determine actual results against target ranges. Variances and thresholds are reviewed and data scrutinized against pre-defined values. When test results exceed allowable variances, root cause analysis is performed to determine areas for improvement. If necessary, adjustments are made to processes, standards, or procedures, to maximize testing effectiveness.

11.3 General Oversight

The EDS leadership team monitors the progress of system testing on a continual basis. Each test notebook, test scenario and test case has a status associated with it. If a defect is detected a change order is written against the test scenario. The change order has a change order type of "defect" to differentiate the change order from a RFP requirement, enhancement, or other change order type. By monitoring the status and defects, an accurate measure of the system testing progress is determined.

General oversight is provided by the Testing Project Manager, who closely tracks and monitors testing tasks against the System Test plan, identifies deviations and manages corrective action until System Test closure. This includes gathering the required project management elements for tracking, performance monitoring, and control. EDS uses various metrics to monitor open and closed defects for trend analysis to confirm that quality is inherent in the delivery of the New KY MMIS.

The system testing effort is further strengthened by:

- Monitoring testing progress relative to the project plan;
- Coordinating the overall system testing effort with the work plan;
- Monitoring defects and resolutions;
- Providing a strategy for testing delays and mitigation from other states;
- Developing a strategy for handling a high volume of defects;
- Providing back-ups in the event of high employee turnover; and,
- Utilizing Project Workbook to support the oversight of the system testing effort.

Providing a dedicated team for system testing and implementing stringent standards provide a framework and controls for managing the entire system testing process. Long term benefits are derived by providing a proactive approach to managing the testing effort. This is accomplished by institutionalizing standards, establishing repeatable processes, providing auditable evidence, and delivering concise testing metrics.

New KY MMIS Regression Test Guidelines

Kentucky MMIS Project

Cabinet for Health and Family Services
Kentucky Medicaid Office

February 28, 2006

3.0	27-Feb-06	Tina Taylor	Modified based on DMS Review
4.0	28-Feb-06	Tina Taylor	Modified based on PMO Review

Table of Contents

1 Purpose

The New KY MMIS Regression Test Guidelines outline the process of analyzing the New KY MMIS to detect the differences between existing and required conditions and reviewing and recording Regression Testing results.

1.1 Overview and Purpose of Objectives

The Regression Test Guidelines are used to verify that existing system functionality remains intact, with the exception of release changes. This includes systematic execution of system components and procedures, with the intent of finding defects and/or workflow flaws within the New KY MMIS. This Regression Test Guidelines document is a living document and is updated as necessary through the life of the project. Changes are identified in the Document Change Log at the beginning of this document, and re-distributed to the appropriate parties for review and acceptance.

Regression Testing will not occur for EDI systems such as Biz Talk and backend systems such as DSS. The EDI and interface systems are “regression” tested by default with the formal System and Regression Testing that occurs in the New KY MMIS. Additionally data used for Regression Testing the New KY MMIS will be available for comparison in the backend systems.

The objectives the New KY MMIS Regression Test Guidelines are to:

- Document the processes used during New KY MMIS Regression Testing;
- Define what IS or IS NOT to be tested;
- Define how Regression Testing is performed;
- Define who performs Regression Testing;
- Define the testing schedule;
- Define the testing management processes;
- Define the entrance and exit criteria for Regression Testing;
- Define the data needed to perform Regression Testing, and,
- Define the environment and infrastructure support needed to prepare for and execute Regression Testing.

1.2 Roles and Responsibilities

The EDS Test Team with the support of the EDS Technical Functional Area Lead (TFAL), Functional Area Development (FAD) Team and Configuration Management Team are responsible for Regression Testing the New KY MMIS. Commonwealth staff will work with the EDS Test Team to review and approve the processes and procedures outlined for Regression Testing. Specific team roles and responsibilities are further defined later in this document.

1.3 Communication

Effective communication involves determining the information and communication needs of the project: who needs what information, when they will need it, determining how the information is to be disseminated, tools and techniques for communication, and distribution. By determining these needs early on, and preparing for unexpected requests for information, EDS has identified a key factor to ensuring the success of the New KY MMIS system testing.

A formal Communication Plan has been developed to communicate with project stakeholders, and is located on the Program Management page of the PWB at https://pwb.kyxix.eds-mscs.com/KYXIXDDI/ProjMgmt/CommMgmt/Communication_Approach_and_Plan. This comprehensive plan is reviewed periodically throughout the project and revised as needed to ensure continued applicability to the testing organization structure. An important goal of the Communication Plan is to keep the Commonwealth of Kentucky abreast of system testing activities, including notifying the Commonwealth of problems encountered during testing, testing progress and adherence to the test schedule.

The following types of communication are used for all types of system testing including Regression Testing:

- **Project Workbook** – Project Workbook is used to facilitate the Regression Testing effort, and serves as the repository for all Regression Testing information, including test scenarios/cases, test results, test data and testing status. Test scenarios are organized into a series of notebooks that are viewable via the workbook. Each notebook addresses a major subject area within the system. These subsystems are aligned around the Commonwealth's organization to facilitate knowledge input into the definition of business processes and test scenarios.

- **Notebook tabs** – For each subsystem, a further breakdown of the topic is created, referred to as notebook tabs. Each of these tabs has the various subsystem objects that support that area of the business associated with it. These objects are the focus of test scenarios written for that folder tab. EDS and the Commonwealth of Kentucky use Project Workbook extensively throughout the Regression Testing effort to capture and monitor the test scenarios/cases, results, data, and status.

- **Test Team Status Meetings** – Test Team Status Meetings bring the team together to assess progress, identify issues and develop a plan of action to address the issues. It is not a time to solve problems or a substitution for one on one interaction between the Testing Project Manager and team members. The status meeting will serve to inform the team of:

    - Overall system testing effort and status including Regression Testing;
    - Testing developments influenced by external sources;
    - Team progress on assignments;
    - Schedule Progress;
    - Regression Test Guidelines Changes;
    - Issues and Risks; and,
    - Issue Resolution.

- **Status Reports** – Status and Performance Reporting involves the documentation of the program's performance against the work plan and addresses audiences both internal and external to the program. Status and Performance Reporting is necessary to ensure that progress is being made against the work plan, significant issues and risks are identified as early as possible (so mitigation steps can be planned/enacted), and to track key program milestones. In the case of the New KY MMIS project, Status and Performance Reporting takes the form of a weekly status reports, CMS Quarterly reports, and ad-hoc reports.

    - The weekly status report is posted to Project Workbook each Wednesday at 5PM and is current as of the previous Friday. The report is broken down into three main sections which correspond to the three key areas of the overall KY MMIS project: Transition, New KY MMIS, and Interim Decision Support System (DSS). Each section contains a dashboard showing the overall status of each of these key areas, a list of any significant issues or risks, a list of tasks that were due within the past two weeks and which are due in the coming month, and various charts showing different perspectives on the area's progress.

There is a Status Report Review meeting each Thursday where EDS and the Commonwealth review the latest report. The meeting is currently being held in the EDS facility at 656 Chamberlin Avenue. Hard copies of the report are provided at the meeting for all attendees.

Phone and/or Email – The Project Workbook is used to post contact phone and e-mail addresses. The contact list is updated periodically and reveals the stakeholders name, location, position, phone number and an email address. The contact list is located on the Home page of the Project Workbook at https://pwb.kyxix.eds-mscs.com/kyxixddi/Default.asp.

2 Scope

The New Kentucky MMIS Regression Test Guidelines define the scope of Regression Testing, responsibilities, and administration for the New Kentucky MMIS Project. The New Kentucky MMIS Regression Test Guidelines define the following testing components:

- General Regression Test Approach;
- Regression Test Case Development Strategy;
- Resources;
- Escalation Processes;
- Schedule; and,
- Documentation.

Additionally, Regression Testing is not a volume test, but rather a subset of claims data to verify the claims processing functionality allows claims to process through finalization.

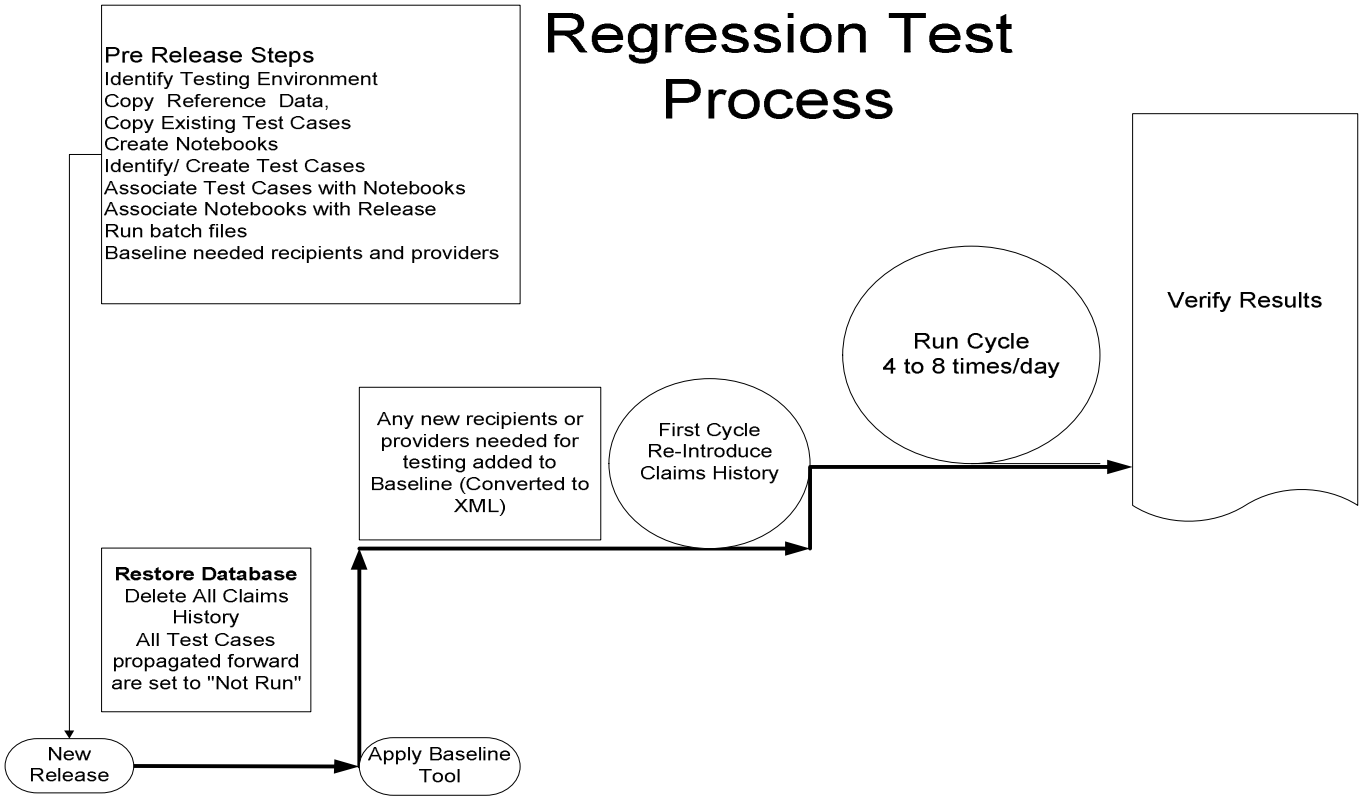
Defects and issues are identified according to the guidelines contained within this document, and procedures identified for the documentation and resolution of these defects and issues will be followed.

3 General Regression Testing Approach

3.1 Regression Test Approach Summary

This section provides a summary of the overall approach to completing Regression Testing and the specifics of the testing phase.

Testing of the New Kentucky MMIS Project, using the Regression Test Guidelines, verifies the existing system functionality remains intact, with the exception of release changes. This includes systematic execution of the MMIS application, its components and procedures, with the intent of finding defects and/or workflow flaws.



3.2 Testing Tools

Automated testing tools are used during Regression Testing. All testing tools are tested prior to their use in any testing phase.

- **Test Transaction Generator (TTG)** – testing tool used to submit manufactured test data. The TTG also works in conjunction with the claims database to extract claims and bring them into the claims propagation cycle.
- **Doco Tool** – assigns test case, defect, and Change Order (CO) numbers. Updates to test cases, COs, and defects will be displayed in the Project Workbook. The tool is used to enter and track test cases, defects, and Change Orders. This testing tool works in

conjunction with the TTG to extract designated claims and bring them into the claims propagation cycle.

- **Baseline Tool** – baselines information to protect it from being changed by other users or to keep it from being refreshed. The baseline tool allows a user to search by Provider, Member and other unique information. Once the data have been baselined, the data will be re-used for each release and cannot be modified by other users.

3.3 Testing Methodology

The Regression Testing methodology defines the Entrance and Exit Criteria and Testing Suspension/Resumption Thresholds specific for this phase.

3.3.1 Testing Entrance and Exit Criteria

Entrance Criteria to be followed:

- Regression Test Cases to be updated with applicable requirements;
- Unit Testing is complete for Change Orders identified for release in current regression test cycle;
- Any defects still outstanding at the start of Regression Testing must have affected requirements identified so corresponding Regression Test Cases are updated and reviewed;
- Ensure all necessary test case status settings are correct;
- Confirm with the Configuration Management Team that the Model Office environment is loaded with the latest code and required data;
- Verify the proper Login IDs and Passwords are functional;
- Verify that all required interfaces and supporting tools are functional;
- Perform any necessary pre-testing setup activities such as updating e-mail addresses or any other minor adjustments prior to the start of test case execution;
- Ensure communication and defect escalation processes are in place to support Regression Testing activities;
- Ensure all necessary Regression Testing assignments have been made and distributed to the Test Team;
- Ensure all relative criteria have been satisfied to begin Regression Testing;
- Exit criteria have been identified;
- Measures of success have been identified; and,
- System is restored to the baseline with each Regression Test release.

Exit Criteria to be followed:

- All Entrance criteria have been completed;

- All defects found in Regression Testing have been recorded, resolved, and escalated using the Defect Resolution process;
- Compile list of any outstanding Defects from Regression Testing;
- All Severity 1 and/or Severity 2 Defects are closed; and,
- Distribute status, results, and outstanding defects list to the necessary parties.

3.3.2 Testing Suspension/Resumption Thresholds Criteria

If during execution of Regression Testing a test case fails, based on the severity of the failure, criteria will be determined to resume the appropriate test phase.

3.4 Types of Tests to be Executed

Regression Testing is comprised of automated and manual tests. Automated tests apply to claims while the manual tests apply to non-claim created tests. Regression test cases are generic tests which validate the environment is working as intended and can be leveraged for every release.

The Regression Test cases are executed and validated against the New KY MMIS before any releases occur. The test cases identified cover the basic Business Functions of the New KY MMIS. This initial set of test cases includes approximately 200 predefined, existing tests executed in a claim batch cycle. Additional test cases are added as needed. Regression test cases that are executed to satisfy Regression Testing objectives are referenced in the Project Workbook at https://pwb.kyxix.eds-mscs.com/kyxixddi/Testing/.

The test results will be verified as follows:

- Compare previous report results;
- Execute Positive and Negative automated test cases to ensure the appropriate error code is received;
- Use Doco Tool on the Project Workbook, an automated process, to track test cases (the number of, the execution of, failed, and passed statuses);
- Use manual inspections of some test results – required due to the complexity or specificity of a given test case; and,
- Use automated inspections of test results - executing predefined queries to validate the data before, during, and after each release.

3.5 Regression Testing Phase Approval

Completion of Regression Testing will coincide with the completion of System Module/Subsystem/Function Testing. Regression Test Cases will be included with the review of each subsystem or as a separate review with each release. Approval represents the agreement that all necessary testing for Regression Test has been completed successfully within the Exit Criteria defined in this document.

3.6 QA Process

The Quality Assurance processes for testing the New KY MMIS are outlined in the New KY MMIS System Test Plan.

3.7 Regression Testing Procedures

Regression Test procedures are performed throughout the Regression Test life cycle. These procedures are in place to meet Entrance and Exit criteria. These procedures include, but are not limited to, defect tracking, status reporting, and escalation procedures.

The following Regression Test Procedures must be followed:

- All identified Test Cases are assigned to Test Team members;
- Execution and completion status of the Test Cases are tracked through the Doco Tool by the specified Test Team member;
- All Test Case results are detailed on the copy of the Test Case being executed;
- Testing results and defects are discussed in daily meetings which include the Test Team, Functional Area Development Team and Configuration Management Team;
- Defects encountered during Regression Testing are recorded in Project Workbook;
- All identified defects are escalated, reviewed, and resolved by the appropriate assigned team;
- Questions or assistance needed during Test Case execution are escalated to the appropriate team members per the specified escalation procedures;
- Regression Test defects are identified, resolved, implemented, and retested; and,
- Updates to Regression Test Cases are performed as appropriate for the release.

3.8 Regression Testing Libraries

All Regression Test documentation is stored on the Testing page of the Project Workbook located at https://pwb.kyxix.eds-mscs.com/kyxixddi/Testing/.

3.9 Backup Recovery

Full weekly backups provide for complete backup and recovery of the system after Regression Testing to secure that version of the system as it stands.

4 Regression Test Case Development Strategy

This section describes the establishment of test cases, including:

- Creating detailed inputs to execute logic, verify output, and meet Regression Testing objectives;
- Developing Regression Test cases with special characteristics;
- Using existing Regression Test cases and customizing them for the New KY MMIS;
- Providing the level of detail by which Regression Test cases are developed; and,
- Structuring and formatting Regression Test cases in Project Workbook.

4.1 Review Requirements

The New KY MMIS requirements drive the creation, execution, and validation of the Regression Test Cases. These Regression Test Cases verify the existing system functionality remains intact, with the exception of the release changes. This includes systematic execution of the application, its components, and procedures, with the intent of finding defect and/or workflow flaws.

4.2 Validate Each Requirement

The EDS Test Team and Functional Area Development Teams validate requirements against the Regression Test cases to assure that Regression Test cases are a true representation of the requirements.

4.3 Regression Test Data Development

The Test Team uses existing data from the core system. Any necessary adjustments are made to insure the test cases meet the requirements of the New KY MMIS. Data will also be added as additional test cases are created to meet new Regressing Testing requirements.

When a new release begins, the environment is restored to a baseline configuration. This includes restoring the database, file systems, etc. to a known point. A standard set of members, providers, reference data, and other data input sources are loaded into the database to begin the process. The baseline process allows a standard set of test scenarios to be replayed on every release. This ensures that previously working applications are not affected by data changes from prior Regression Test cycles. In addition, this step provides the ability to enhance the baseline test scenarios over time, thereby improving our capability to detect errors in the system as the development/maintenance cycle proceeds.

The standard test scenarios have an associated set of expected results. These results are defined as part of the test scenario in a structured manner. This allows an automated process to be employed that evaluates the results of the test scenarios.

Another class of test scenarios is run after the core components of the system have been verified. These scenarios include those that cannot be automated and those that are eventually added to the standard test suite. After completion of these scenarios, their results are documented in the test scenario folder and made available in Project Workbook.

Preparation for the next release involves updating the standard test scenarios with new scenarios, resolving defects found in the standard test scenarios, and adding new members, providers, etc. into the baseline database.

5 Resources

The New KY MMIS Project Resources are determined and maintained by the New KY MMIS Project Management Team. Information regarding specific Human, Software, and Hardware Resources are maintained in Project Workbook.

The table below identifies the number of resources required for testing, the skill set required, and the timeframe to fulfill Regression Testing Requirements.

5.1 Human Resources

The following table describes the roles and responsibilities of the various teams which support and/or execute Regression Testing.

Team	Role/Responsibility
EDS Test Team	Execute and/or oversee the testing activities for Regression Testing; provide business requirement and process support during Regression Testing.
EDS Functional Area Development Team	Perform Regression Testing cycle support and defect investigation and resolution as needed throughout Regression Testing.
Configuration Management Team	Provide environment support and tracking throughout Regression Testing. This team includes the System Architect, project Database Administrator and System Administrator.

5.2 Software/Environment Resources

Regression Testing occurs in the Model Office environment of the New KY MMIS. The Model Office environment in Orlando resides on a Sun V490 Server in the DSKY sun0ap zone. The Model Office environment contains a representative sample of data sufficient for performing testing activities.

6 Escalation Processes

The escalation process insures questions and defects are routed to the appropriate individuals so that resolution may be achieved in a timely manner. When questions or defects are identified, testers provide a detailed description of what the problem appears to be, complete with steps to reproduce. Any logs, error messages, screen shots, unloads, or other information that assists the FAD team in replicating and resolving the problem are included.

6.1 Test Team Escalation Procedures

EDS Test Team escalation procedures facilitate the escalation of a test case defect or question. The process applies to all Test Team and Functional Area Development Team members.

1. Questions generated by the Test Team while executing test cases will be funneled through the respective Test Team Lead (TTL). For example, a tester is executing a test case and is not receiving the expected results. The request for clarification or information will be directed to the claims TTL who will direct the question to the claims TFAL. This structured process allows both team leads to:

    - Better control the priorities and workload of the test and development teams;
    - Identify duplicate issues/questions; and,
    - Identify trends or potential gaps in knowledge that may need to be addressed.

2. Due to the short testing timeframe, quick turnaround on research items and questions is essential. If an answer to a functionality-related question cannot be obtained within 1-2 hours of reaching the Functional Area Development Team, a defect will be opened. This step assumes that the question posed to the development team pertains to a mismatch between actual and expected test results. This process is not meant to replace every communication between the development and test teams.

3. When a defect is written, the developer and tester assigned to the defect will communicate directly with each other.

If a question or issues arises on a previously fixed defect, the developer and tester will communicate directly with each other. This occurs because we are able to identify the involved and knowledgeable parties. For example, defect 7045 is identified, fixed and successfully retested. Several weeks later, we discover the same issue documented in defect 7045 is reoccurring. The developer and tester assigned to 7045 will discuss the potential defect and, if necessary, reopen the defect.

6.2 Defect Escalation Procedures

The Defect Resolution process defined in the New KY MMIS System Test Plan is to be followed during Regression Testing. The following basic steps are taken when a defect is discovered during Regression Testing:

1. The problem is discovered during Regression Testing.

2. The tester documents the test results in Project Workbook. The status of the test case is “Defect Identified”.

3. The tester enters the defect in Doco Tool.
4. The tester assigns the defect to the TFAL by making the TFAL the “Responsible” person and setting the status of the defect to “Assign”.
5. The TFAL reviews the defect and assigns it to a FAD by making the FAD the “Responsible” person. The status remains “Assign”. The TFAL also assigns work hours for the task for the FAD that can be tracked through EDS’ time tracking tool.
6. The FAD resolves the defect and unit tests the correction. If the unit test is successful, then the FAD takes step # 7. Otherwise, the FAD analyzes the results of the unit test, corrects it and repeats unit testing.
7. The FAD enters the resolution in Doco Tool, including the date/time/cycle or build release that the defect can be retested by the system testers, allowing for the appropriate amount of time needed to migrate the corrected code to model office. The FAD sets the status of the defect to “Retest” and changes the “Responsible” person to the original tester.
8. The tester retests the test case and if the retest is successful, the tester sets the status of the defect to “Closed” and enters a “Complete” date.

If the retest is unsuccessful, the tester updates the description of the defect with the outcome of the test. The tester then changes the “Responsible” person back to the FAD, and resets the status back to “Assign”.

7 Schedule

Testing is scheduled and conducted according to the release plan documented in Project Workbook. A release occurs in Model Office every week. Regression Test Cases are executed every two weeks.

7.1 Testing Schedule

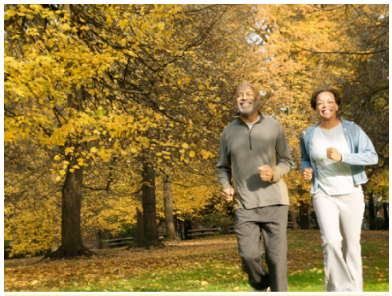
The master release schedule is located on the Testing Page of the Project Workbook located at https://pwb.kyxix.eds-mscs.com/kyxixddi/Testing/Default.asp?IND_ENVIRONMENT=M.

8 Documentation

EDS produces and maintains system and operations documentation that is up to date after changes are identified from actual test results. Project Workbook captures and maintains system documentation updates. The complete process for keeping documentation updated is outlined in the New KY MMIS System Test Plan.

50.2.5.4 Staffing Approach

RFP Reference: 50.2.5.4 Staffing Approach, Page 278



North Carolina will be served by a knowledgeable and experienced EDS team led by Account Manager Melissa Robinson and Implementation Manager Dean Taunton. Their experience and familiarity with the North Carolina Medicaid program are backed by our team of seasoned professionals with extensive experience in Medicaid and our interChange MMIS solution.

State of North Carolina

In the preceding sections of this proposal, we discussed EDS' methodologies and approaches and the many spectacular features of interChange. However, any successful implementation that moves smoothly into operations can only happen if the efforts are supported by technically skilled, functionally knowledgeable professionals who are focused on a successful outcome. We assign experienced, expert leaders and staff to each of these projects, and they develop and maintain a productive, open, positive relationship with client personnel.

As with our other recent successful implementations, implementing the Replacement MMIS will require a team of highly skilled people with a combination of North Carolina–specific program experience and interChange implementation experience. We have them, and they are ready to make the Replacement MMIS implementation our next success story.

Our team's 30 years of experience as your fiscal agent have allowed us to develop an understanding of North Carolina's unique issues and needs. We have collaborated with you on many successful, large-scale implementations, such as the Health Insurance Portability and Accountability Act (HIPAA) remediation, the Integrated Payment and Reporting System (IPRS) modifications to the Legacy MMIS+ to support mental health claims processing, and the National Provider Identification enhancement.

While these successes relied heavily on technical expertise, our team's determination to deliver on time and our dedication to quality also played significant roles. As long-standing North Carolina citizens, our local staff members see every day how important the State's programs are to recipients, providers, and other stakeholders. Knowing this, we approach every implementation acutely aware that service disruptions can have a widespread, negative impact on stakeholders and the State.

For the DDI and Operations phases, we have supplemented our North Carolina team with experienced interChange experts. Our professionals have experience

in successfully implementing interChange in other states such as Kentucky and Tennessee.

Any contractor can provide a team of technical experts; however, it is the combination of technical skills, program expertise, and an underlying determination and commitment that make our team the best option.

In the remainder of this section, we present our approach to staffing the DDI and Operations phases of the Replacement MMIS project.

50.2.5.4.1 Staffing Approach—DDI

RFP Reference: 50.2.5.4.1 Staffing Approach—DDI, Page 278

This section contains the following information on our approach to staffing the DDI Phase of the Replacement MMIS project:

- Proposed DDI Personnel
  - Resumes for Key and Other DDI Personnel
- DDI Organizational Chart
- Description of DDI Organization
- Staffing Approach for DDI
  - EDS' Recruiting Process
  - Getting Ready for First Day of Operations
- Job Descriptions for Key and Other DDI Personnel

Proposed DDI Personnel

EDS team personnel, with interChange knowledge and North Carolina policy and business process expertise, give the State a clear advantage—resident experts in the State's business processes who also can clearly articulate how business processes will function with the Replacement MMIS.

By retaining EDS, the State will be working with a DDI staff that includes professionals already familiar with your environment, such as Melissa Robinson and Tammy Wheeler, and professionals experienced in delivering our interChange solution, such as Dean Taunton and Scott Lowry). This high level of familiarity stands in contrast to the risk that would come with a different fiscal agent starting with a staff unfamiliar with the State's environment and going through such difficult processes as knowledge transfer and claims conversion.

In developing our approach to staffing the DDI Phase, we carefully evaluated the effort required to successfully install the Replacement MMIS in North Carolina. In selecting our team, we applied the criteria described in the following table, EDS Replacement MMIS DDI Staffing Skill Sets. **These criteria allow us to offer a team with a complementary mix of technical, leadership, and North Carolina policy and business process experience.**

EDS Replacement MMIS DDI Staffing Skill Sets

Skill Set	Description
Strong technical skills	• **interChange experts—**Technicians experienced with the installation and modification of the baseline interChange application • **Legacy MMIS+ experts—**Technicians, programmers, and analysts who understand the present system who, combined with interChange experts, simplify the extensive mapping and conversion effort • **Technology experts—**Experts in technologies such as Web applications, automated workflow, and imaging to streamline the integration of those technologies into interChange
Strong leadership skills	• **Track record of success—**Leaders with strong project leadership skills who have effectively managed the complexities of a major project and led a team to a successful, on-time implementation • **Project management skills—**Leaders who have outwardly demonstrated superior planning, controlling, and execution skills on large-scale projects to simplify the State's project oversight role • **Determination and commitment—**Leaders who have outwardly demonstrated their determination and personal commitment to succeed, inspire, motivate, and instill a positive can-do attitude
Strong policy and business process knowledge	• **Medicaid subject-matter experts (SMEs)—**People who understand North Carolina Medicaid policies, benefits, and business processes who, by working with interChange and MMIS technical experts, simplify the implementation effort • **Other State program SMEs—**People who understand the policies, benefits, and business processes for the State's non-Medicaid programs, such as the Mental Health program, to eliminate the learning curve in understanding these programs and how to integrate them into the State's multi-payer environment • **interChange knowledge—**interChange SMEs who will work with local staff with State-specific policy knowledge, allowing us to accelerate the start-up

This section identifies EDS employees who will assume the key DDI personnel positions that have been defined in the RFP. Additionally, EDS has identified two other positions—account manager and implementation manager—that we consider key to executing a successful DDI Phase. We are adding account manager and implementation manager to the list of key positions because of their level of responsibility defined in our processes, influence over our service delivery, familiarity with the State's environment, and familiarity with the interChange solution.

EDS is proposing the following key DDI Phase staff members:

- Account Manager Melissa Robinson
- Implementation Manager Dean Taunton
- Operations and Claims Processing Manager Tammy Wheeler

Besides key personnel, EDS is proposing additional leadership personnel whose participation will help guide the DDI to a successful conclusion. These personnel include the following North Carolina veterans and interChange specialists:

- Senior Systems Architect Scott Lowry
- Senior Technical Analyst and SME for HIPAA Stacey Barber
- Database Administrator (DBA) Terry Hensley
- Senior State Business Liaison Anthony Perkins
- Financial Services Manager Jamie Herubin

Resumes for Key and Other DDI Personnel

The following table, DDI Personnel Experience Summaries, describes at a high level the experienced personnel EDS proposes to use during the DDI Phase. Detailed resumes of these EDS employees follow.

DDI Personnel Experience Summaries

Name and Role	Summary of Experience
Melissa Robinson Account Manager	• Has more than 14 years of experience in service delivery to North Carolina Medicaid • Has 16 years of experience in supervisory or management roles, including six years managing account sites • Managed many critical system and program enhancements, including the following: — Accounts Receivable/Interest and Penalties MMIS Changes implementation project — 1099/Other Related Required MMIS Tax System Changes implementation project — POS Pharmacy/Retro-DUR implementation project — ITME Multi-Payer implementation (the financial MMIS components portion) • Demonstrated ongoing commitment to improve services in North Carolina, first as the financial supervisor and then as manager for financial, pharmacy, drug rebate, managed care, Health Check, and buy-in and currently as deputy overseeing all operational units: Provider Services, Prior Approval, Finance, Pharmacy and Drug Rebate, Electronic Claims Submission and Mailroom, and Medical Policy (inclusive of adjustments and file maintenance)
Dean Taunton Implementation Manager	• Is Project Management Professional (PMP)—certified • Has systems leadership experience that helped implement a reliable technical solution for North Carolina Medicaid • Has five years of North Carolina MMIS experience • Has four years of interChange design, development, and implementation experience • Has more than 25 years of leadership and project management expertise • Consistently provides service excellence throughout the DDI of system improvements—improvements that have translated to economic savings, enhanced user functions, and performance optimization

Name and Role	Summary of Experience
Tammy Wheeler Operations and Claims Processing Manager	• Has more than 25 years of experience with North Carolina Medicaid Program • Has 28 years of large-scale claims processing experience, most with North Carolina • Has 11 years of progressively responsible supervisory and management experience • Is experienced with or has knowledge of all aspects of claims processing for North Carolina Medicaid
Scott Lowry Senior Systems Architect	• Has leadership, project management, and systems experience with interChange implementations that will help deliver a responsive MMIS • Has five years of MMIS subsystem experience in Kentucky and Kansas • Has more than 20 years of experience working with software development teams to build architectures that efficiently deliver technology solutions • Implemented interChange in Kentucky with 13 standard MMIS subsystems
Stacey Barber Senior Technical Analyst/SME for HIPAA	• Has in-depth HIPAA and North Carolina Medicaid experience that will help the State get more policy out of its technology • Has 12 years of experience designing complex MMIS solutions, including nearly 10 years of in-depth knowledge of HIPAA Administrative Simplification • Provides HIPAA expert-level advice, planning, and recommendations about the effects of HIPAA changes as federal changes are initiated. • Provides detailed input to the State and EDS about the effect of HIPAA initiatives on current and future general system and technical design components and requirements
Terry Hensley Database Administrator	• Has more than eight years of experience in creating and maintaining databases • Has 17 years of technical North Carolina MMIS experience • Has more than 21 years of systems engineering experience that the State has come to rely on • Is actively involved in creating and maintaining database schemas and scripts to yield better response times and streamline workloads • Employs techniques to improve the queries to subsecond response times • Is involved in screen conversion and developed utilities to improve the productivity of the Browser team • Has worked on many aspects of the current MMIS, including input conversion, edits, audits, DB2, remittance advice, and financial reporting • Is familiar with the different divisions at the State, as well as most of the jobs and programs in the MMIS
Anthony Perkins Senior State Business Liaison	• Has five years of experience with MMIS analysis, programming, and operations with the North Carolina Medicaid Program • Developed knowledge of the MMIS hierarchy of edits and audits in the Medicaid claims processing system to assist in claims payment resolution and maintain system accuracy according to North Carolina clinical policy

Name and Role	Summary of Experience
	• As a business analyst for the North Carolina account, monitors, maintains, and implements policy initiatives focused on mental health and substance abuse reform • Is experienced in requirements gathering, impact and gap analysis, creation of SLC documentation, and project cost estimation
Jamie Herubin Financial Services Manager	• Has seven years of business analysis and financial operations experience in support of federal and state technology systems. • Currently serves as the IPRS operations manager, supervising the work performed in every area of the IPRS Operations Department, including Adjustments, File Maintenance, Provider Services, ECS, and Security, to provide exceptional support to DMH and the local management entities (LMEs)

Resumes for this leadership team follow.

DDI Organizational Chart

The key and other leadership personnel previously named will lead a DDI organization of more than 190 at peak periods. The DDI Organizational Chart shows how this staff is organized to focus the right numbers and types of personnel on each phase of the DDI. This organization is the foundation on which the DDI Phase will be successfully completed. Milestones are met and errors are minimized through a structure that promotes reliable development, rapid issue identification and mitigation, and efficient use of resources.

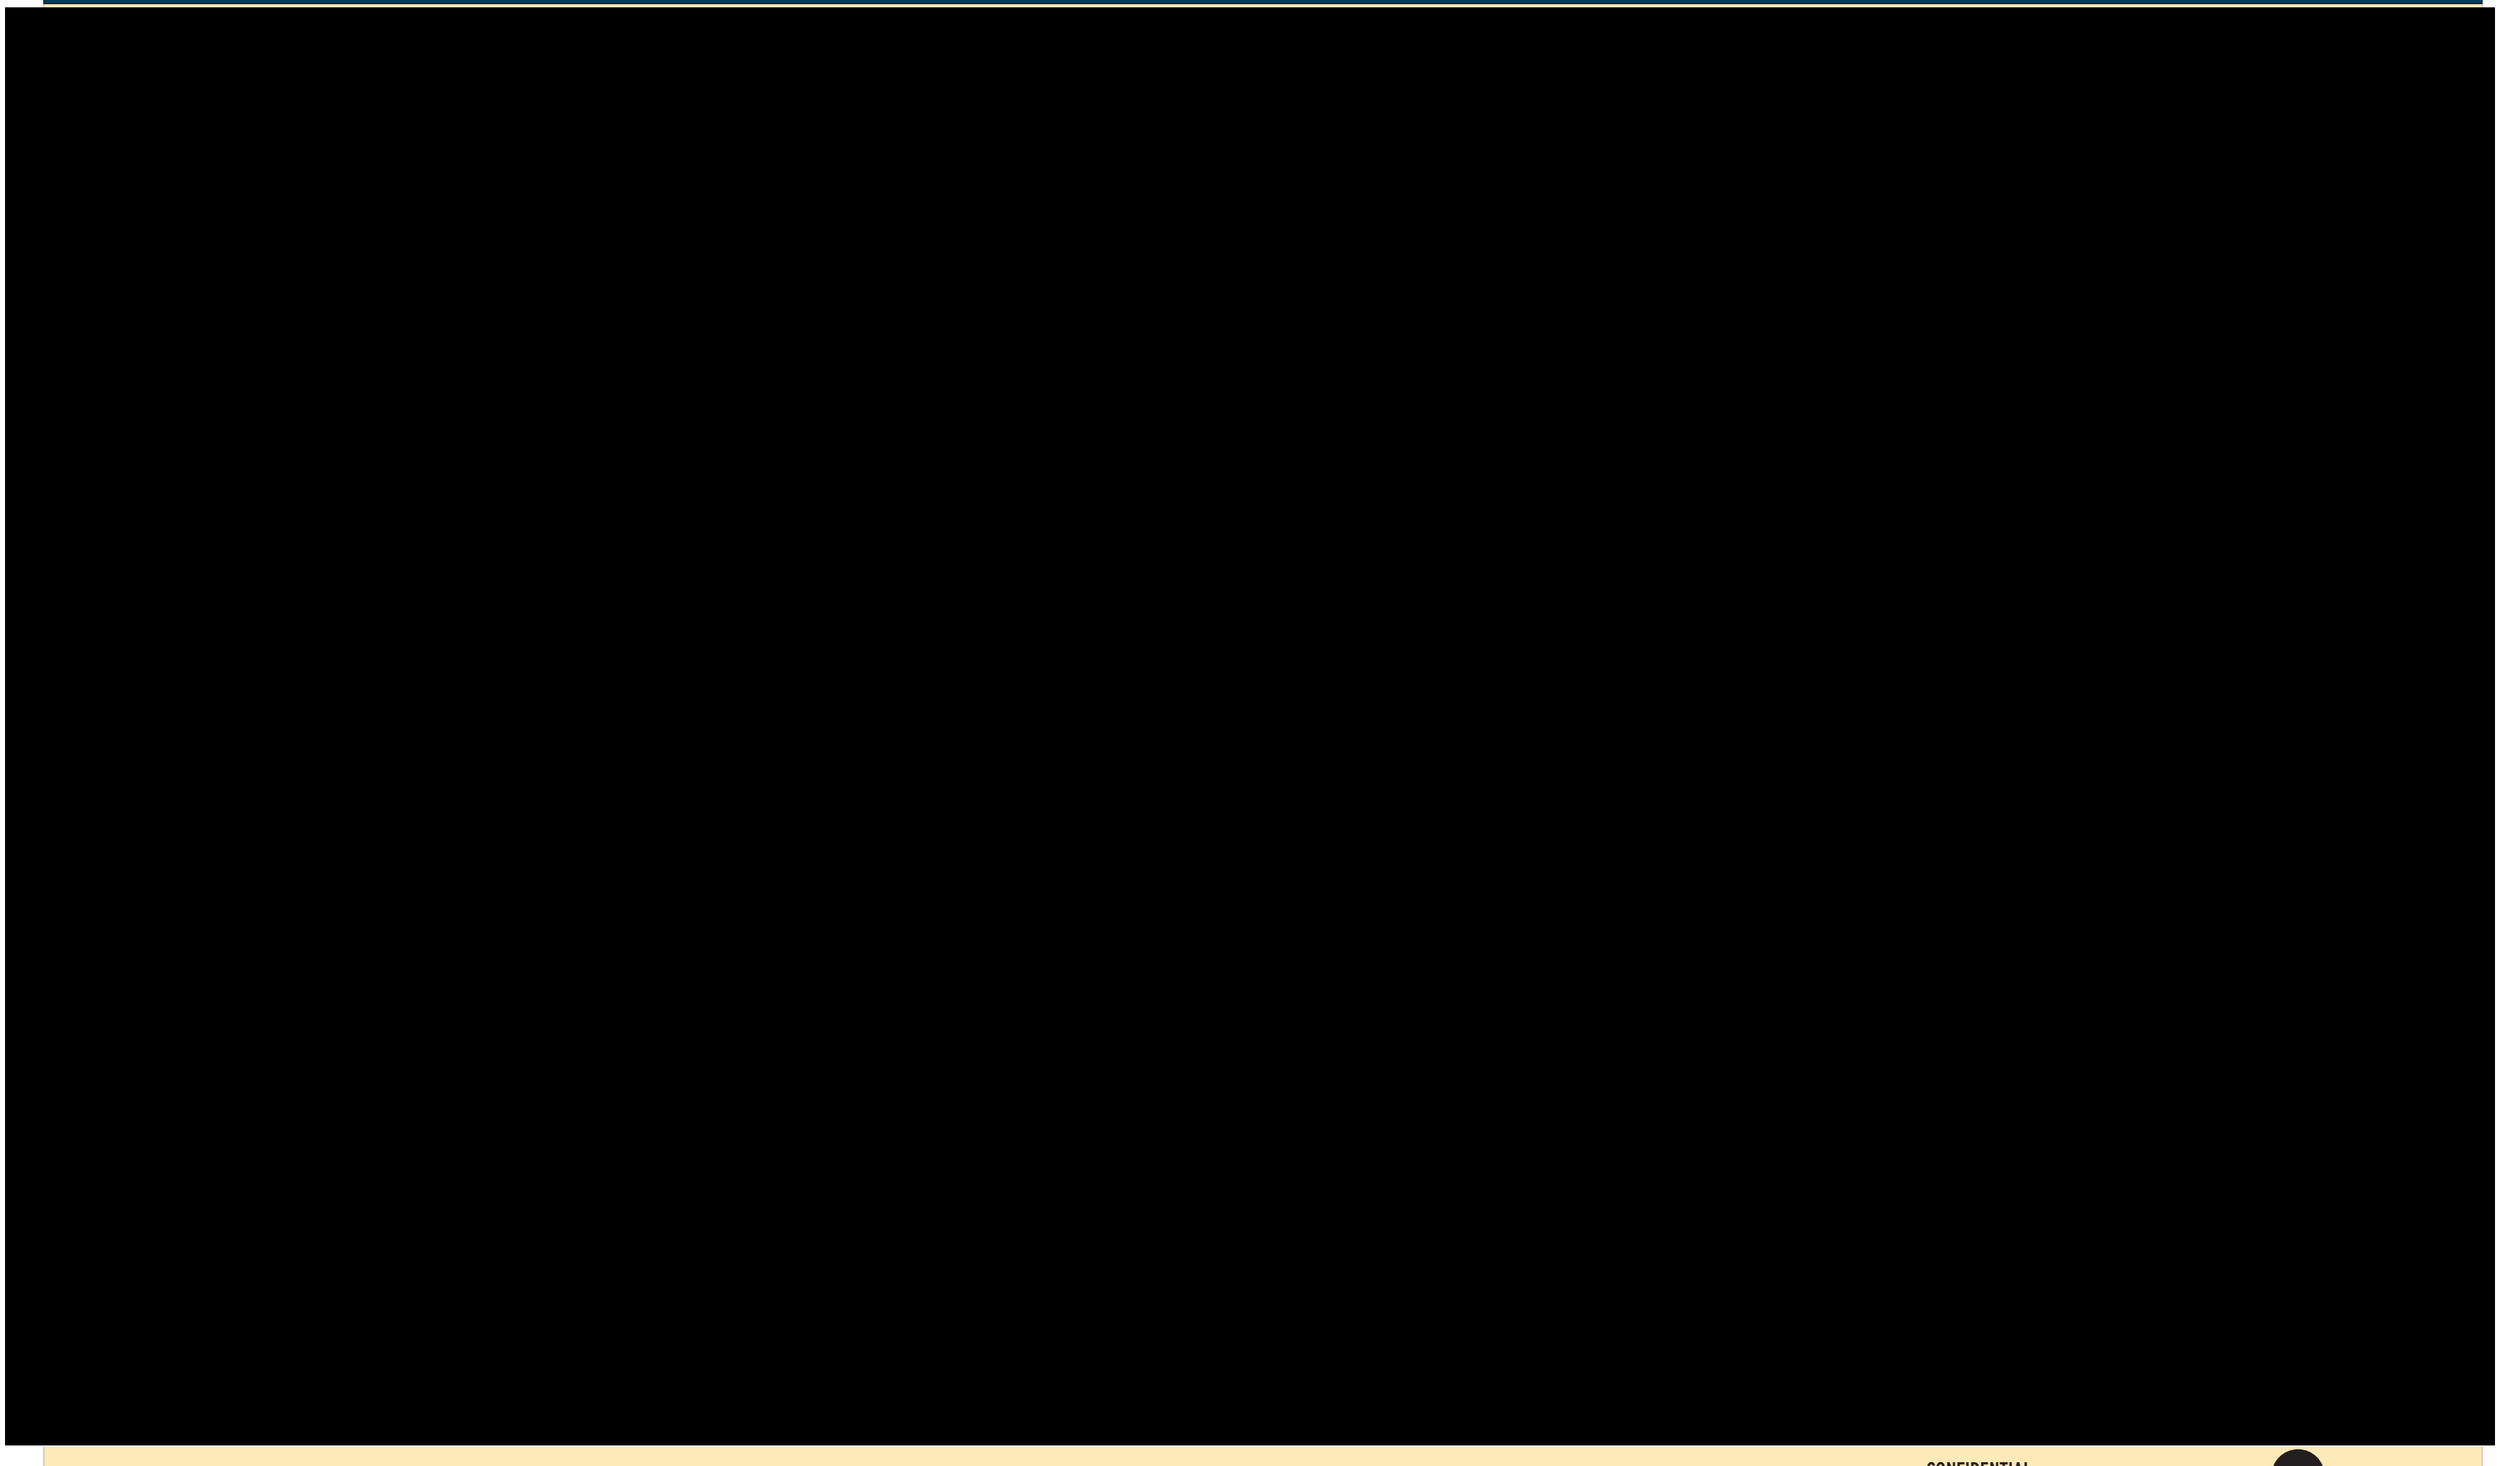
On commencement of the DDI Phase for the Replacement MMIS, EDS will have implemented its core proposed solution in 12 other states. This experience places EDS in a unique position to propose an experienced, successful organization, coupled with our current team of experts in supporting the State. Our intimate knowledge of the demands and intricacies of such a large-scale project will be used to achieve the State's DDI goals.

The exhibit following this page, EDS DDI Organizational Chart, represents a staffing structure that allows for efficient and effective management of the DDI effort, from an enterprise and a subsystem level. Related subsystem components are grouped together under functional project managers. This will allow for optimal resource utilization and open dissemination of knowledge and skills among like areas. The result is an organization that will facilitate clear lines of communication, promote efficient development processes, and reduce the risk of defects.

It also is important to note that, after the successful implementation of the Replacement MMIS, EDS will carry over as many resources as possible to support the Operations Phase of the Replacement MMIS. This will provide an added measure of stability for the State.

Position descriptions for each position on the DDI Organizational Chart can be found at the end of this 50.2.5.4.1 Staffing Approach—DDI section.

EDS DDI Phase Organization



Denotes required positions in Appendix 50, Attachment I

* Operations teams indicated here under the Deputy Account Manager ramp up throughout the replacement phase and the roles in each organization are indicated on the operations chart.

Description of DDI Organization

As noted previously, EDS has developed its DDI organization to maximize performance and facilitate quality delivery of Replacement MMIS DDI tasks. Each branch on the organizational chart has been designed to generate efficiencies in development processes and reduce the risks associated with a project as complex as the DDI Phase for a Replacement MMIS. In the following table, DDI Tasks and Responsibilities, we provide an overview of the major tasks and responsibilities of each of the DDI organization's branches.

DDI Tasks and Responsibilities

Organizational Branch	Tasks/Responsibilities
Project Management Office (PMO)	• Provides overall project management oversight and guidance to DDI efforts • Performs quality control tasks to promote adherence to applicable time lines, regulations, and performance standards • Establishes systematic and organizational means to comply with HIPAA privacy and security requirements • Monitors compliance regularly
Conversion Team	• Manages data conversion efforts from required sources and verifies successful data transfer to the Replacement MMIS
General Requirements Team	• Installs and maintains systemwide features used by each subsystem
Global Testing Organization (GTO)	• Develops and executes comprehensive test plans for system components • Manages time lines and communication channels to make sure issues are readily identified and corrected and that testing milestones are met
Technical Infrastructure Team	• Installs and maintains the technical infrastructure that supports DDI efforts
Electronic Data Interchange (EDI)/ Internet/Electronic Document Management System (EDMS)/ Workflow Integration	• Designs, develops, and implements subsystem components and processes surrounding EDI, Web portal, electronic document management, and workflow integration
BIAR/MAR/MMIS Ad Hoc/Performance Management	• Designs, develops, and implements system reporting functions
Drug Rebate/Pharmacy/PBM	• Designs, develops, and implements subsystem components and processes surrounding drug rebate, pharmacy, and pharmacy benefits management
Claims/Financial/Reference/Benefit Administration/TPL	• Designs, develops, and implements subsystem components and processes surrounding claims, financial management, reference, and benefit administration
Recipient Buy-in/Provider/Managed Care/Health Check/Prior Approval	• Designs, develops, and implements subsystem components and processes surrounding recipient, provider, managed care, buy-in, and prior approval (PA)

Staffing Approach for DDI

Successfully completing the tasks and achieving the milestones of the DDI Phase within the time frame established in the work plan requires the correct numbers and mix of personnel. That is to say: the DDI Phase must be correctly staffed to complete it accurately and on time.

The EDS proposal team, guided by Account Manager Melissa Robinson, started with a careful analysis of the RFP and its many functional capability and service level requirements. This team then performed a gap analysis to judge the level of effort required to install the baseline interChange MMIS and meet the RFP requirements. To complete the gap analysis, the Technical Design team spent approximately six weeks examining each detail line by line to determine if our core product met each requirement, met it through modification, or required new development—then developing our solution.

The contents of the Procurement Library provided a major input to the analysis tasks. Data from the library provided an objective basis for estimating volumes and other service levels.

The proposal team, along with several members of other successful EDS state MMIS implementations, applied its collective experience in staffing and managing similar tasks for other Medicaid projects to analyzing the RFP, the results of the gap analysis, and the data from the Bidders Library. The team studied the scope of work as defined in the RFP, calculated the durations through the work plan, and applied its experience to the solution. We are confident that the organization and numbers that we identify for the DDI Phase is the right staffing plan to complete the tasks of the phase successfully.

The DDI Phase team will be responsible for design, construction, and testing activities. Using a proven process and project management approach, they will execute the activities required to complete the technical aspects of the implementation.

EDS' Recruiting Process

Our North Carolina Staffing and Recruiting team will find the best people for this project from the following sources:

- **Key staff—**The key staff members identified in this proposal have been involved in developing our proposed solution for North Carolina, and they will be ready to assume their official responsibilities after contract signing or as designated in our project work plan.
- **Shared solution center staff—**EDS' national network of shared solution centers is fully staffed to support existing clients and has the resources readily available to participate in the Replacement MMIS project. As

necessary and according to the final project work plan, resources will be assigned to work on specific components of the proposed solution.

- **Legacy MMIS+ staff—**To protect the State's investment in current personnel and support a smooth transition from the Legacy MMIS+ contract to the Replacement MMIS, EDS will develop a transition plan with approaches for training current staff on Replacement MMIS operations and for a gradual transfer of personnel to the new contract, using temporary staff to fill positions and provide service under the legacy fiscal agent contract. We will make sure that any such transitions do not harm the level of service provided under the legacy fiscal agent contract. The transition will be timely and smooth for the State and its providers.
- **Newly hired staff—**If EDS is unable to procure the necessary support using our experienced staff, we will rely on our extensive recruitment and hiring capabilities. Our recruiting efforts include regional experts who can be used to quickly hire staff experienced in almost any technology or discipline required by the project team.
- **Contractors and temporary employees—**EDS has a relationship with several agencies; leaders work with the agencies to identify qualified candidates who are available immediately to fill open positions. The leadership team for DDI is familiar with these agencies and processes, which will allow us to fill positions quickly and observe the employees' performance and ability to work as team players to meet goals before hiring them as permanent employees.

The results of this work can be seen in the DDI organizational chart. The most important result, however, is the level of success provided by the accurate assignment of personnel to this phase.

Getting Ready for First Day of Operations

We will preserve the body of North Carolina program understanding by transferring current staff to the Replacement MMIS operations during the final months of the DDI Phase. However, current staff members familiar with Legacy MMIS+ operations will need substantial training on the new system's operations to get the full benefit from its many advanced features.

The training program will include the following tasks:

- Early training will prepare legacy staff to perform system testing. Each functional area of the current contract will identify employees to receive early training. These selected personnel will then support the testing for their functional areas so that each area has knowledgeable personnel by the first day of operations.
- Remaining staff will be trained in phases, as follows:

  - Everyone will be required to complete a computer-based training (CBT) course before any classroom training to learn the basics of terminology and approach.
  - Staff members must attend an overview class that covers navigation and elements common to all subsystems and shows basic searches in all subsystems.
  - There will be a class for each subsystem that covers "inquiry-only" and "add/update" functions.
  - Every unit will receive unit-specific training that covers the functions they will perform, including add/update processes.
  - Training staff will offer practice sessions with questions, allowing staff to get one-on-one training.
  - All units will have access to a training environment and "self-study" guides and practice exercises before the go-live date.
- Users will be required to complete subsystem self-study guides.
- Practice time and class attendance will be tracked and reported.

The hands-on training approach previously described uses multiple in-class exercises that will evaluate the training to make sure the participants are learning what they need to know to function in the new environment. After instruction on a function, participants will complete an in-class exercise to facilitate their comfort with the application. This is key because users who appear to be following well may have trouble when working through the steps alone.

The training for current staff will be goal-oriented, with the objective of providing an understanding of the Replacement MMIS and its many new features and tools needed by the staff to be fully functional in the new environment on the first day of operations.

Job Descriptions for Key and Other DDI Personnel

Our staffing solution uses corporate-approved descriptions for the positions identified in the organization chart because our DDI of interChange is a well-defined process with standardized positions across the enterprise. The position descriptions in this section provide further evidence that our proposed organization has the right blend of skills to support the many facets of a complex, multi-payer system solution. The positions and people listed in this section are among the many leaders that will facilitate a smooth implementation.

Account Manager

Melissa Robinson's primary responsibilities as the account manager for the DDI Phase comprise the following:

- Overseeing the transfer and implementation of the Replacement MMIS
- Serving as the point of responsibility and primary contact for the State
- Managing the performance of EDS' obligations under the contract
- Reporting progress on issues to the State
- Working with the State to resolve disputes related to contract performance
- Acquiring and maintaining the personnel required to fulfill contractual obligations
- Maintaining a contingency plan for adequate backup and recovery for vital operations
- Conducting weekly status meetings with leadership staff
- Attending State meetings, as requested
- Overseeing the development of performance standards and reports
- Reviewing weekly quality reports to assess current operations performance
- Reviewing corrective action plans as needed
- Establishing and communicating vision and goals to the project staff
- Performing administrative tasks necessary for smooth operation of the project team

Implementation Manager

Dean Taunton's primary responsibilities as the implementation manager for the DDI Phase comprise the following:

- Overseeing the implementation of the Replacement MMIS
- Advising the technical director or systems programming manager and account manager of capabilities and risks
- Working closely with the technical director or systems programming manager to communicate project status and issues and plan, schedule, and coordinate activities
- Analyzing needs and recommending appropriate planning concepts and tools used for planning, scheduling, and tracking projects

- Analyzing project progress and costs and facilitating the development of recommended alternatives
- Developing project control and reporting procedures
- Managing changes in the project work plan and developing contingency plans for identified barriers to time lines
- Attending requirements verification (RV) sessions for the Replacement MMIS
- Attending State meetings, as requested
- Coordinating status review meetings with staff
- Determining, monitoring, and reviewing project economics, including costs, operational budgets, and staffing
- Managing adherence to contract requirements and long-term State goals
- Establishing appropriate metrics for measuring key project criteria
- Planning, directing, and coordinating cross-functional team activities to manage and implement the project through to the final operational stage
- Working with the PMO regarding quality issues and problem tracking and resolution

Operations and Claims Processing Manager

Tammy Wheeler's primary responsibilities as the operations and claims processing manager for the DDI Phase comprise the following:

- Overseeing the operations unit and interacting with other EDS and State leadership team members to establish ongoing operations processes to support efficient claims adjudication
- Supporting requirements definition, testing, and implementation activities
- Having responsibility for developing processes and procedures for Replacement MMIS operations
- Working closely with the PMO to develop and implement performance standards, measurements for the standards, and quality review processes during the DDI Phase for usage during operations
- Establishing and maintaining the relationship with SunGard FormWorks for the continued OCR and data entry efforts
- Overseeing the hiring and transition of staff to support the implemented Replacement MMIS

Senior Technical Analyst and SME for HIPAA

Stacey Barber's primary responsibilities of the senior technical analyst and SME for HIPAA for the DDI Phase comprise the following:

- Providing guidance and expertise to the State to assist in maintaining compliance with federally mandated HIPAA regulations
- Serving as a liaison to the State and EDS operational units
- Reviewing and approving system modification activities that affect HIPAA compliance
- Validating that system requirements and system design components adhere to and accurately reflect HIPAA standards and regulations
- Participating in agreed-on HIPAA-related meetings, seminars, and conferences such as North Carolina Healthcare Information and Communications Alliance (NCHICA)
- Participating in standards-setting organizations, such as X12, to monitor the effect of standards changes to the State's HIPAA implementation and to assist in the development of future HIPAA standards
- Monitoring federal regulations for changes in HIPAA requirements and for new HIPAA requirements
- Working with other Medicaid clients to share ideas and approaches related to HIPAA and determine how these solutions can be used most appropriately for the benefit of the State
- Interfacing with trading partners in the interpretation of HIPAA requirements
- Coordinating the development and implementation of HIPAA-related modifications and enhancements to the Replacement MMIS
- Producing HIPAA-related function and design specifications
- Designing, coding, testing, implementing, and documenting HIPAA-related changes to the Replacement MMIS
- Consulting with the State and other stakeholders on the effect of HIPAA-related modifications and enhancements on the Replacement MMIS and existing business processes
- Participating in the development of test plans and test cases
- Participating in the review, research, and analysis of failed HIPAA-related test cases to determine the effect of claims processing functions within the Replacement MMIS

Database Administrator

Terry Hensley's primary responsibilities of the database administrator (DBA) for the DDI Phase comprise the following:

- Creating efficient database technical designs that meet the analysis and business design specifications, the performance and platform requirements, and DBA organizational standards
- Performing database installation and configuration
- Communicating database standards for database users
- Identifying and reviewing data elements and processes
- Identifying, analyzing, and documenting database system interfaces and database performance-related criteria
- Performing database maintenance and modifications
- Supporting and reviewing data dictionary usage

Implementation Solutions Architect

Scott Lowry's primary responsibilities of the implementations solutions architect for the DDI Phase comprise the following:

- Serving as the senior technical adviser for the most specialized phases of system analysis, design, development and implementation
- Supporting systems engineers in developing sound distribution strategies, considering total system requirements, advanced principles, theories, and concepts to develop plans, strategies, and tools to resolve issues
- Communicating technical alternatives and new technologies to management and recommending action
- Providing technical direction for the project team
- Directing the modifications to the base system to facilitate Replacement MMIS implementation and future implementations and major modifications
- Enforcing policies that maintain the integrity of the data model
- Serving as a technical expert during product presentations to the State
- Giving detailed assignment status to the project manager and technical lead
- Making decisions on the solution's technical aspects that impact implementation
- Coordinating technical direction between development teams

- Directing installation of implementation hardware and software for the new system
- Establishing and managing system environments
- Verifying compliance with technical requirements
- Leading the systemwide team
- Directing development security and systemwide documentation
- Establishing and monitoring system cycles and promotion processes
- Scheduling and conducting environment calls with the technical development teams
- Participating in and monitoring the requirements verification process

Senior State Business Liaison

Anthony Perkins' primary responsibilities of the senior State business liaison for the DDI Phase comprise the following:

- Serving as an intermediary between the State and EDS to help define requirements for customer service requests
- Attending meetings in which new projects are presented to understand the full intent of the project and discern potential areas of impact
- Analyzing stated requirements of projects or policy changes and identifying unanswered questions
- Reviewing requirements documentation and subsequent test results
- Researching identified issues from a business user or operational perspective
- Developing business relationships between systems and operational units

Deputy Account Manager

The primary responsibilities of the deputy account manager for the DDI Phase comprise the following:

- Serving as backup to the account manager
- Helping the account manager plan, direct, and coordinate account operations related to the implementation effort
- Monitoring daily operations and working closely with the PMO to manage contract compliance
- Resolving issues
- Overseeing the development and implementation of internal procedures

- Managing documentation deliverables
- Overseeing the development and obtaining State approval of documentation
- Directing the process of re-enrolling providers
- Overseeing transition provider workshops

Administrative Assistants

The primary responsibilities of the administrative assistants for the DDI Phase comprise the following:

- Supporting the account manager
- Interacting with corporate units to resolve confidential issues, such as employee compensation, employee benefits, and financial reporting
- Planning and coordinating meetings between State and EDS personnel, conferences, and employee functions
- Answering executive telephone calls
- Greeting and registering visitors
- Submitting sundry invoices for approval
- Completing scheduled status reports and assisting in the tracking and reporting of new hires and separations to internal administrative accountants for staffing and organizational reporting

PMO Director

The primary responsibilities of the PMO director for the DDI Phase comprise the following:

- Establishing the program management infrastructure, including development of project plans, schedules, resource requirements, task orders, and benefit and value propositions
- Attending State meetings, as requested
- Maintaining time reporting system for collecting expenditures of effort at the lowest level of detail in each project plan
- Managing project performance by using earned-value or a comparable process
- Maintaining a standard project workbook in iTRACE for each project to collect, store, and disseminate project information, reports, and official communication

- Establishing a problem management plan, a risk management plan, a quality management plan, a change and configuration management plan, and associated monitoring
- Managing multi-agency, multi-payer projects individually and across multiple agencies
- Clearly communicating performance reporting standards
- Overseeing the program and project team members' delivery of quality reports to performance measurement
- Publishing documentation of performance against the plan
- Reporting status to management, including budget plan versus actuals, management of internal change requests, and proposed modifications to reporting templates
- Measuring and monitoring project progress

Project Plan Manager

The primary responsibilities of the project plan manager for the DDI Phase comprise the following:

- Assisting the EDS project manager in the daily operation of the project
- Tracking progress, gathering status, updating schedules, and generating performance reporting for the project
- Reporting status weekly to the EDS project manager
- Helping maintain the project control document and other project plan components throughout the project

Systems Quality Control Manager

The primary responsibilities of the systems quality control manager for the DDI Phase comprise the following:

- Verifying that established processes are being followed
- Performing quality checks on a periodic cycle
- Advising implementation manager and PMO of any issues identified and recommending remediation
- Establishing and maintaining an infrastructure, culture, and capability for continued improvement in quality control functions, encompassing data entry, system inputs and outputs, balancing of jobs, data integrity, provider communications, finance, and accounting

- Prioritizing, planning, and coordinating the implementation of improvement initiatives
- Collecting, understanding, and documenting stakeholder expectations to guide process improvement
- Building support tools such as a status reporting mechanism, communication framework, system for gathering stakeholder expectations and perceptions, stakeholder repository, and expectation management worksheets
- Enlisting project management sponsorship for the process improvement program
- Using appropriate process models and certifications to guide improvement initiatives and measure progress

Privacy and Security Officer—HIPAA

The primary responsibilities of the privacy and security officer—HIPAA for the DDI Phase comprise the following:

- Implementing and managing CMS and State information security directives as mandated by the Administration Simplification portion of HIPAA
- Performing a gap analysis to assess the program's current security compliance status versus necessary status and periodically reassessing this status
- Protecting the confidentiality and integrity of information and maintaining the technical mechanisms of legitimate access to information
- Managing the complex, technically difficult, and dynamic process of policies and procedures across interdivisional lines
- Overseeing the process of ongoing integration of information security with program strategies and requirements
- Coordinating with external entities, such as other commercial and government insurance carriers and regulatory agencies, to improve information security within the organization
- Leading initiatives to contain, investigate, and prevent security breaches

Conversion Team Manager

The primary responsibilities of the conversion team manager for the DDI Phase comprise the following:

- Leading the teams that develop the conversion programs that migrate existing data from many sources to the Replacement MMIS relational database
- Attending State meetings, as requested
- Attending gap solution sessions for the Replacement MMIS
- Managing and monitoring resource plans and conversion jobs
- Validating that teams conduct adequate testing with reasonable volumes to provide credible projections for final conversions and their associated staff and computing resources
- Overseeing output of the computer reports from conversion runs
- Addressing project team deficiencies related to resources and tasks
- Monitoring critical project dates for each functional area, tracking work to be completed, and developing detailed schedules

Conversion Technical Leader

The primary responsibilities of the conversion technical leader for the DDI Phase comprise the following:

- Assisting in the daily operation of the database conversion project
- Providing direction to the development team to meet project delivery commitments
- Participating in reviews of project deliverables
- Estimating effort and duration for project tasks
- Using and supporting the consistent application of EDS methodologies in the development of solutions and deliverables
- Performing assignments following project policies and practices
- Participating in programming code walkthroughs to verify adherence to coding standards
- Providing SME guidance to the technical team

Senior Information Specialist (Senior Systems Engineer)

The primary responsibilities of the senior information specialist (senior systems engineer) for the DDI Phase comprise the following:

- Conducting initial research, code development, and testing for application modifications
- Providing technical guidance to peers
- Updating technical documentation in iTRACE
- Providing daily status to technical functional area lead (TFAL)
- Meeting required development and testing schedules

Information Specialist (Advanced Systems Engineer)

The primary responsibilities of the information specialist (advanced systems engineer) for the DDI Phase comprise the following:

- Designing, coding, testing, implementing, and documenting changes to the Replacement MMIS
- Incorporating the latest advances in technology into the Replacement MMIS, as appropriate
- Bringing specialized technical skills, knowledge, and experience pertinent to the project
- Bringing specific expertise in Internet technology and claims engine internals

Information Analyst (Systems Engineer)

The primary responsibilities of the information analyst (systems engineer) for the DDI Phase comprise the following:

- Designing, coding, testing, implementing, and documenting changes to the Replacement MMIS
- Incorporating the latest advances in technology into the Replacement MMIS as appropriate
- Bringing specialized technical skills, knowledge, and experience pertinent to the project

Business Analyst

The primary responsibilities of the business analyst for the DDI Phase comprise the following:

- Identifying and defining business requirements
- Providing alternatives with cost/benefit justification and solutions
- Completing detailed specifications for system modifications and enhancements
- Working closely with the State, systems engineers, and operations units to analyze, design, and test system modifications and enhancements
- Creating test cases and scenarios to verify State requirements
- Executing test cases, documenting problems, and verifying the corrections
- Providing Medicaid and subsystem training as needed
- Resolving issues
- Attending status reviews with project team members and the State

Technical Leader/Technical Functional Area Lead (TFAL)

The primary responsibilities of the technical functional area lead (TFAL) for the DDI Phase comprise the following:

- Assisting the EDS technical manager in the daily operation of the project
- Participating in requirements validation sessions
- Providing direction to the development team to meet project delivery commitments
- Participating in reviews of project deliverables
- Estimating effort and duration for project tasks
- Using and supporting the consistent application of EDS methodologies in the development of solutions and deliverables
- Performing assignments following project policies and practices
- Participating in programming code walkthroughs to verify adherence to coding standards
- Providing SME guidance to the technical team
- Reporting status weekly to the EDS technical project manager
- Updating documentation related to technical development in iTRACE

Documentation Specialist

The primary responsibilities of the documentation specialists for the DDI Phase comprise the following:

- Developing and maintaining system documentation based on input from DDI resources
- Updating system documentation quickly and with the State's approval
- Distributing documentation update pages and instructions to State and EDS users
- Documenting complex procedures and processes
- Maintaining the Edit/Resolutions Manual
- Maintaining the library of system documentation
- Providing assistance with written documentation for other functional areas
- Receiving, tracking, and responding to State-initiated requests for documentation

Test Director

The primary responsibilities of the test director for the DDI Phase comprise the following:

- Leading the testing team in determining State requirements and completing software development life cycle activities
- Planning, directing, and coordinating team activities to manage and implement the Replacement MMIS
- Planning, scheduling, monitoring, and reporting on testing activities
- Driving continuous process improvement within the team
- Coaching and counseling team members on meeting established task dates and resolving technical issues
- Controlling project requirements, scope, and change management issues
- Establishing appropriate metrics for measuring key project criteria
- Analyzing project progress and costs and facilitating the development of recommended alternatives
- Serving as the interface between State personnel and the technical team
- Overseeing the creation, execution, and verification of test scenarios to verify State requirements

- Resolving issues
- Attending status review meetings with project team members and the State
- Planning, directing, and coordinating the test team's activities through testing for the Replacement MMIS, and demonstrating ownership of the system testing effort through the following activities:
  - Creating a communication plan that makes certain appropriate information is exchanged among key project stakeholders
  - Advising senior management on project capability and risk, and work to mitigate risk
  - Controlling project requirements, scope, and change management issues
  - Coaching and advising team members to accomplish project goals and schedule and providing project status reporting and work plan updates to the PMO

Senior Tester/Testing Lead

The primary responsibilities of the test lead for the DDI Phase comprise the following:

- Communicating directly with the EDS teams and the State as the primary point of contact for assigned subsystems
- Supporting planning, scheduling, and monitoring of subsystem testing tasks assigned to the subsystem team
- Providing project plan and schedule updates according to methods and schedule set by the test director and escalate scope and other issues, as appropriate, to the test director and business area project managers
- Adhering to the change management process and, depending on size of their area of responsibility, creating business impact documentation for the detailed specifications for systems engineers
- Serving as the primary mentor of business analysts and lending requisite interChange expertise in assigned subsystems

- Working in cooperation with their respective TFALs, working with the State to verify and clarify requirements, and making certain that individual subsystem issues are documented and tracked to closure
- Participating in and making certain client walkthroughs are scheduled and completed, and verifying business process documentation is updated and included in the walkthrough packet as appropriate
- Reviewing deliverables for correctness and completeness, and reviewing and approving test case scenarios and test case results developed by the business analysts for submission to the State
- Coordinating work on assigned tasks with other members of the subsystem team
- Compiling and providing testing estimates for the subsystem
- Working with the test team, infrastructure team, conversion team, and operations team to make sure that the entire subsystem is ready for implementation

Tester

The primary responsibilities of the testers for the DDI Phase comprise the following:

- Testing, analyzing, and verifying software and data to conform to the State's requirements
- Analyzing State specifications and requirements
- Creating system and regression scripts
- Making recommendations toward enhancing the usability of products
- Verifying data and results returned from software and report discrepancies
- Validating reference designs
- Creating and conducting system tests

- Being responsible for integration and system testing of the State's devices and technology
- Understanding specifications and executing test plans
- Working closely with testing team to perform unit testing and software quality assurance (SQA)

UNIX Administrator

The primary responsibilities of the UNIX administrator for the DDI Phase comprise the following:

- Implementing and supporting local area network (LAN) hardware and software specifically for the UNIX-based servers and environment
- Analyzing workflow and procedures to recommend operational support tools and technologies
- Maintaining workstation and server data integrity by evaluating, implementing, and managing appropriate software solutions
- Serving as a liaison between the State, suppliers, and other technical groups to resolve network and hardware problems
- Analyzing performance problems and recommending solutions to enhance features, reliability, and usability
- Participating on project teams in the implementation of new or upgraded designs
- Implementing operational support standards and procedures relating to change management, performance management, and security
- Recommending changes and improvements to existing standards
- Implementing a schedule of system backups and database archive operations to support data and media recoverability
- Developing site administration documentation
- Providing user orientation on hardware, software, and network operations

Network Administrator

The primary responsibilities of the network administrator for the DDI Phase comprise the following:

- Planning, coordinating, and directing the activities of the network infrastructure team to support network availability

- Defining and implementing metrics that measure system performance to validate that design specifications are met
- Resolving complex hardware and software problems, performing trend analysis, and creating tools to prevent system interruption
- Overseeing the team and activities involved in monitoring, isolating, resolving, and circumventing network problems
- Establishing processes and procedures for LAN and WAN hardware and software inventory tracking
- Preparing and maintaining documentation for the network platform, backup, and printing procedures
- Providing technical support and training to users
- Administering security procedures
- Investigating, evaluating, recommending, and upgrading hardware and software to meet system requirements

Windows Administrator

The primary responsibilities of the Windows administrator for the DDI Phase comprise the following:

- Designing, testing, implementing, and optimizing portions of LAN, wireless LAN (WLAN), campus area network (CAN), and WAN networks that enable and support business operations
- Investigating, analyzing, and recommending solutions to performance problems to enhance functional capability, reliability, and usability
- Analyzing State workflow and procedures to recommend operational support tools and technologies to satisfy State needs
- Maintaining workstation and server data integrity by evaluating, implementing, and managing appropriate software and hardware solutions
- Analyzing network structures to maintain stability of connections
- Analyzing system service irregularities and disruptions and identifying improvement recommendations
- Acting as a liaison between the State, suppliers, and other technical groups to resolve complex network and hardware problems
- Advising management and the State on security-related issues
- Participating on project teams in the implementation of new or upgraded designs

- Designing and implementing migration strategies
- Designing, developing, and implementing operational support standards and procedures related to change management, performance management, and security
- Analyzing and recommending changes and improvements to existing standards
- Enabling data and media recoverability by implementing a schedule of system backups and database archive operations
- Performing problem and task analysis and trending
- Keeping abreast of emerging operational support technologies and industry trends
- Assisting in the evaluation, testing, and recommendation of hardware, software, and network configuration based on State needs

Model Office Coordinator (Configuration Management)

The model office coordinator is part of a promotion process that is key to configuration management. The primary responsibilities of the model office coordinator (configuration management) for the DDI Phase comprise the following:

- Managing the promotion process to the model office environment for both UNIX and .NET code
- Managing the data supporting the model office environment to make sure the correct data is available for model office functions
- Making sure the correct promotion and quality control procedures are followed
- Participating in code reviews as required

Client Security Officer

The primary responsibilities of the client security officer for the DDI Phase comprise the following:

- Implementing and managing CMS and State information security directives, as mandated by the Administration Simplification portion of HIPAA
- Performing a gap analysis to assess the program's current security compliance status versus necessary status and periodically reassessing this status

- Protecting the confidentiality and integrity of information and maintaining the technical mechanisms of legitimate access to information
- Managing the complex, technically difficult, and dynamic process of security policies and procedures across interdivisional lines
- Overseeing the processes of ongoing integration of information security with program strategies and requirements
- Coordinating with external entities, such as other commercial and government insurance carriers and regulatory agencies, to improve information security within the organization
- Leading initiatives to contain, investigate, and prevent security breaches

Project Manager

The primary responsibilities of the project manager for the DDI Phase comprise the following:

- Coordinating project-related tasks
- Tracking deliverables
- Coordinating team assignments and meetings
- Maintaining vendor relations
- Coordinating with users to obtain information needed for DDI
- Conducting walkthroughs
- Conducting deliverable reviews as dictated
- Conducting project kickoff meetings
- Performing other research-related duties pertinent to the project
- Performing other related work as required

EDI Coordinator/Integration Manager

The primary responsibilities of the EDI coordinator for the DDI Phase comprise the following:

- Identifying and reviewing data elements and processes
- Supporting and reviewing data output from vendors
- Reviewing technical designs for analysis and business design specifications
- Developing standards for users

- Coordinating the testing aspects for inter-system test with the interfacing organizations and systems
- Meeting with operational SMEs to determine business impact of system changes
- Documenting new operational procedures as needed
- Assisting with training documentation for EDI providers
- Logging calls into the Contact Tracking and Management System (CTMS)

Senior Business Analyst

The primary responsibilities of the senior business analyst for the DDI Phase comprise the following:

- Researching business requirements to assist TFALs in technical design effort
- Comparing RFP requirements to modification designs to make sure requirements are met
- Assisting in updating documentation and change order status in iTRACE
- Acting as a liaison to State business leads

50.2.5.4.2 Staffing Approach—Operations

RFP Reference: 50.2.5.4.2 Staffing Approach—Operations, Page 278

Our staffing approach for operations is designed for high service and low risk for the State. With EDS, the State will have the best blend of North Carolina–specific program experience, maximum continuity between the DDI and Operations phases, the most efficient use of State resources, and the least risk of service disruption. The following table, EDS Operations Staffing, identifies the key elements of our Operations Phase staffing approach.

EDS Operations Staffing

Preserving the 30-Year Investment in Personnel Made by EDS and the State
The current operations staff brings more than 1,100 combined years of experience with North Carolina Medicaid and Mental Health policies, procedures, and providers. Fifty members of the current staff each have more than 10 years of experience with Medicaid, and more than 20 members bring 20 years of experience. This represents an enormous investment in training and on-the-job learning and a rich supply of program knowledge and understanding. Our approach is to preserve this staff, train them in the many features and benefits of the interChange-based Replacement MMIS, and move them into the Operations Phase.
Providing Leaders Who Bring Experience With North Carolina Medicaid and Mental Health
The leadership team in operations includes Account Manager Melissa Robinson, Claims Processing Manager Tammy Wheeler, Technical Director and Systems Programming Manager Tim Sullivan, Provider/Recipient Services Manager Chris Ferrell, Prior Approval Manager Sharlene Bryant, and Financial Services Manager Jamie Herubin. These are experienced leaders; they already know the North Carolina Medicaid and Mental Health programs and will be equally familiar with the DPH and ORHCC programs by the beginning of operations.
Basing Our Organization on a Proven National Model With a Local Focus
The EDS Operations Organizational Chart provided in this section shows how we have organized the staff to perform the work required by the RFP. The chart is based on similar work efforts at our other operating interChange accounts, with significant customization to meet the unique requirements of the multi-payer Replacement MMIS and operation.

After the DDI Phase is complete, we will reunite the DDI team with MMIS operations, transitioning our local experts back into operational roles. The following table, Benefits of Using Today's Experts, details how this approach provides the State with continuity between the DDI and Operations phases.

Benefits of Using Today's Experts

Current Knowledge and Skill	DDI Phase Benefit	Operations Phase Benefit
North Carolina Medicaid and Mental Health program policy expertise	• Simplified requirements definition—We already understand the business processes, how RFP requirements apply to them, and how to incorporate them into interChange. • Efficient use of State resources—The State will not need to train existing EDS staff on business processes.	• No loss of the expertise gained during DDI • Retained North Carolina expertise, along with expertise in how interChange has modified and improved the business process
interChange expertise	• Productive on day one of Operations Phase—Using today's experts means there will be no learning curve to add time and inherent risk to each effort.	• Knowledge of policies and procedures that are specific to the Medicaid and Mental Health programs • Ability to quickly adapt to future changes and mandates

This section contains the following information on our approach to staffing the Operations Phase of the Replacement MMIS project:

- Proposed Key Operations Personnel
  - Resumes for Key and Other Operations Personnel
- Operations Organizational Chart
- Staffing Approach for Operations
- Job Descriptions for Key and Other Operations Personnel

Proposed Key Operations Personnel

Any contractor can provide a team of technical experts. We believe it is the combination of technical skills, program expertise, and our underlying determination and commitment that make us the best team for North Carolina. By choosing EDS to continue as its fiscal agent, the State will have a team with skills that cannot be matched or replaced by any other contractor.

This section identifies EDS employees who will assume the key operations personnel positions that have been defined in this RFP. Additionally, EDS has identified one other position—account manager—that we consider key to carrying out a successful Operations Phase. We added the account manager position to the list of key positions because of the level of responsibility that has been defined in our processes, influence over our service delivery, familiarity with the State's environment, and familiarity with the interChange solution.

One position identified in the RFP as being key is the operations and claims processing manager. Supporting the project in this capacity will be Tammy Wheeler, who will be involved from the first day of the DDI Phase. We have identified Tammy because she brings more than 25 years of experience with the North Carolina Medicaid Program; 28 years of large-scale claims processing experience, most of which is with North Carolina; and 11 years of progressively responsible supervisory and management experience. She is currently the medical policy manager.

EDS is proposing the following key Operations Phase staff members:

- Account Manager Melissa Robinson
- Operations and Claims Processing Manager Tammy Wheeler
- Medical Director Dr. Margaret Martin, M.D.
- Pharmacy Director Sharon Greeson, R.Ph.
- Dental Director Dr. David Brooks, D.D.S., M.S.

EDS has identified the following additional staffing positions as critical to the success of the Operations Phase:

- Technical Director/Systems Programming Manager Tim Sullivan
- Provider/Recipient Services Manager Chris Ferrell
- Prior Approval Manager Sharlene Bryant
- Financial Services Manager Jamie Herubin
- Senior Technical Analyst and Subject-Matter Expert (SME) for MMIS and Multi-Payer Mike Frost
- Senior Technical Analyst and SME for HIPAA Stacey Barber
- Database Administrator Terry Hensley
- Senior State Business Liaison Anthony Perkins

We have learned from successful fiscal agent operations in more than 20 states that providing individuals with the right skill sets to focus on the above areas provides a greater level of oversight, rapid adjustments as needed, and keen insight into the resources needed for success. However, it is not enough to know that these positions are critical; they must be filled with talented individuals. EDS has assigned these additional staff members to bring experience in the State's environment and highly specialized experience in HIPAA regulations and database administration.

Resumes for Key and Other Operations Personnel

We provide resumes for the following key and other leadership personnel in the Operations Phase:

- Account Manager Melissa Robinson (Please refer to Melissa Robinson's resume in the DDI Staffing section.)

- Operations and Claims Processing Manager Tammy Wheeler (Please refer to Tammy Wheeler's resume in the DDI Staffing section.)
- Medical Director Dr. Margaret Martin, M.D.
- Pharmacy Director Sharon Greeson, R.Ph.
- Dental Director Dr. David Brooks, D.D.S., M.S.
- Technical Director/Systems Programming Manager Tim Sullivan
- Provider/Recipient Services Manager Chris Ferrell
- Prior Approval Manager Sharlene Bryant
- Financial Services Manager Jamie Herubin (Please refer to Jamie Herubin's resume in the DDI Staffing section.)
- Senior Technical Analyst and SME for MMIS and Multi-Payer Mike Frost
- Senior Technical Analyst and SME for HIPAA Stacey Barber (Please refer to Stacey Barber's resume in the DDI Staffing section.)
- Database Administrator Terry Hensley (Please refer to Terry Hensley's resume in the DDI Staffing section.)
- Senior State Business Liaison Anthony Perkins (Please refer to Anthony Perkins' resume in the DDI Staffing section.)

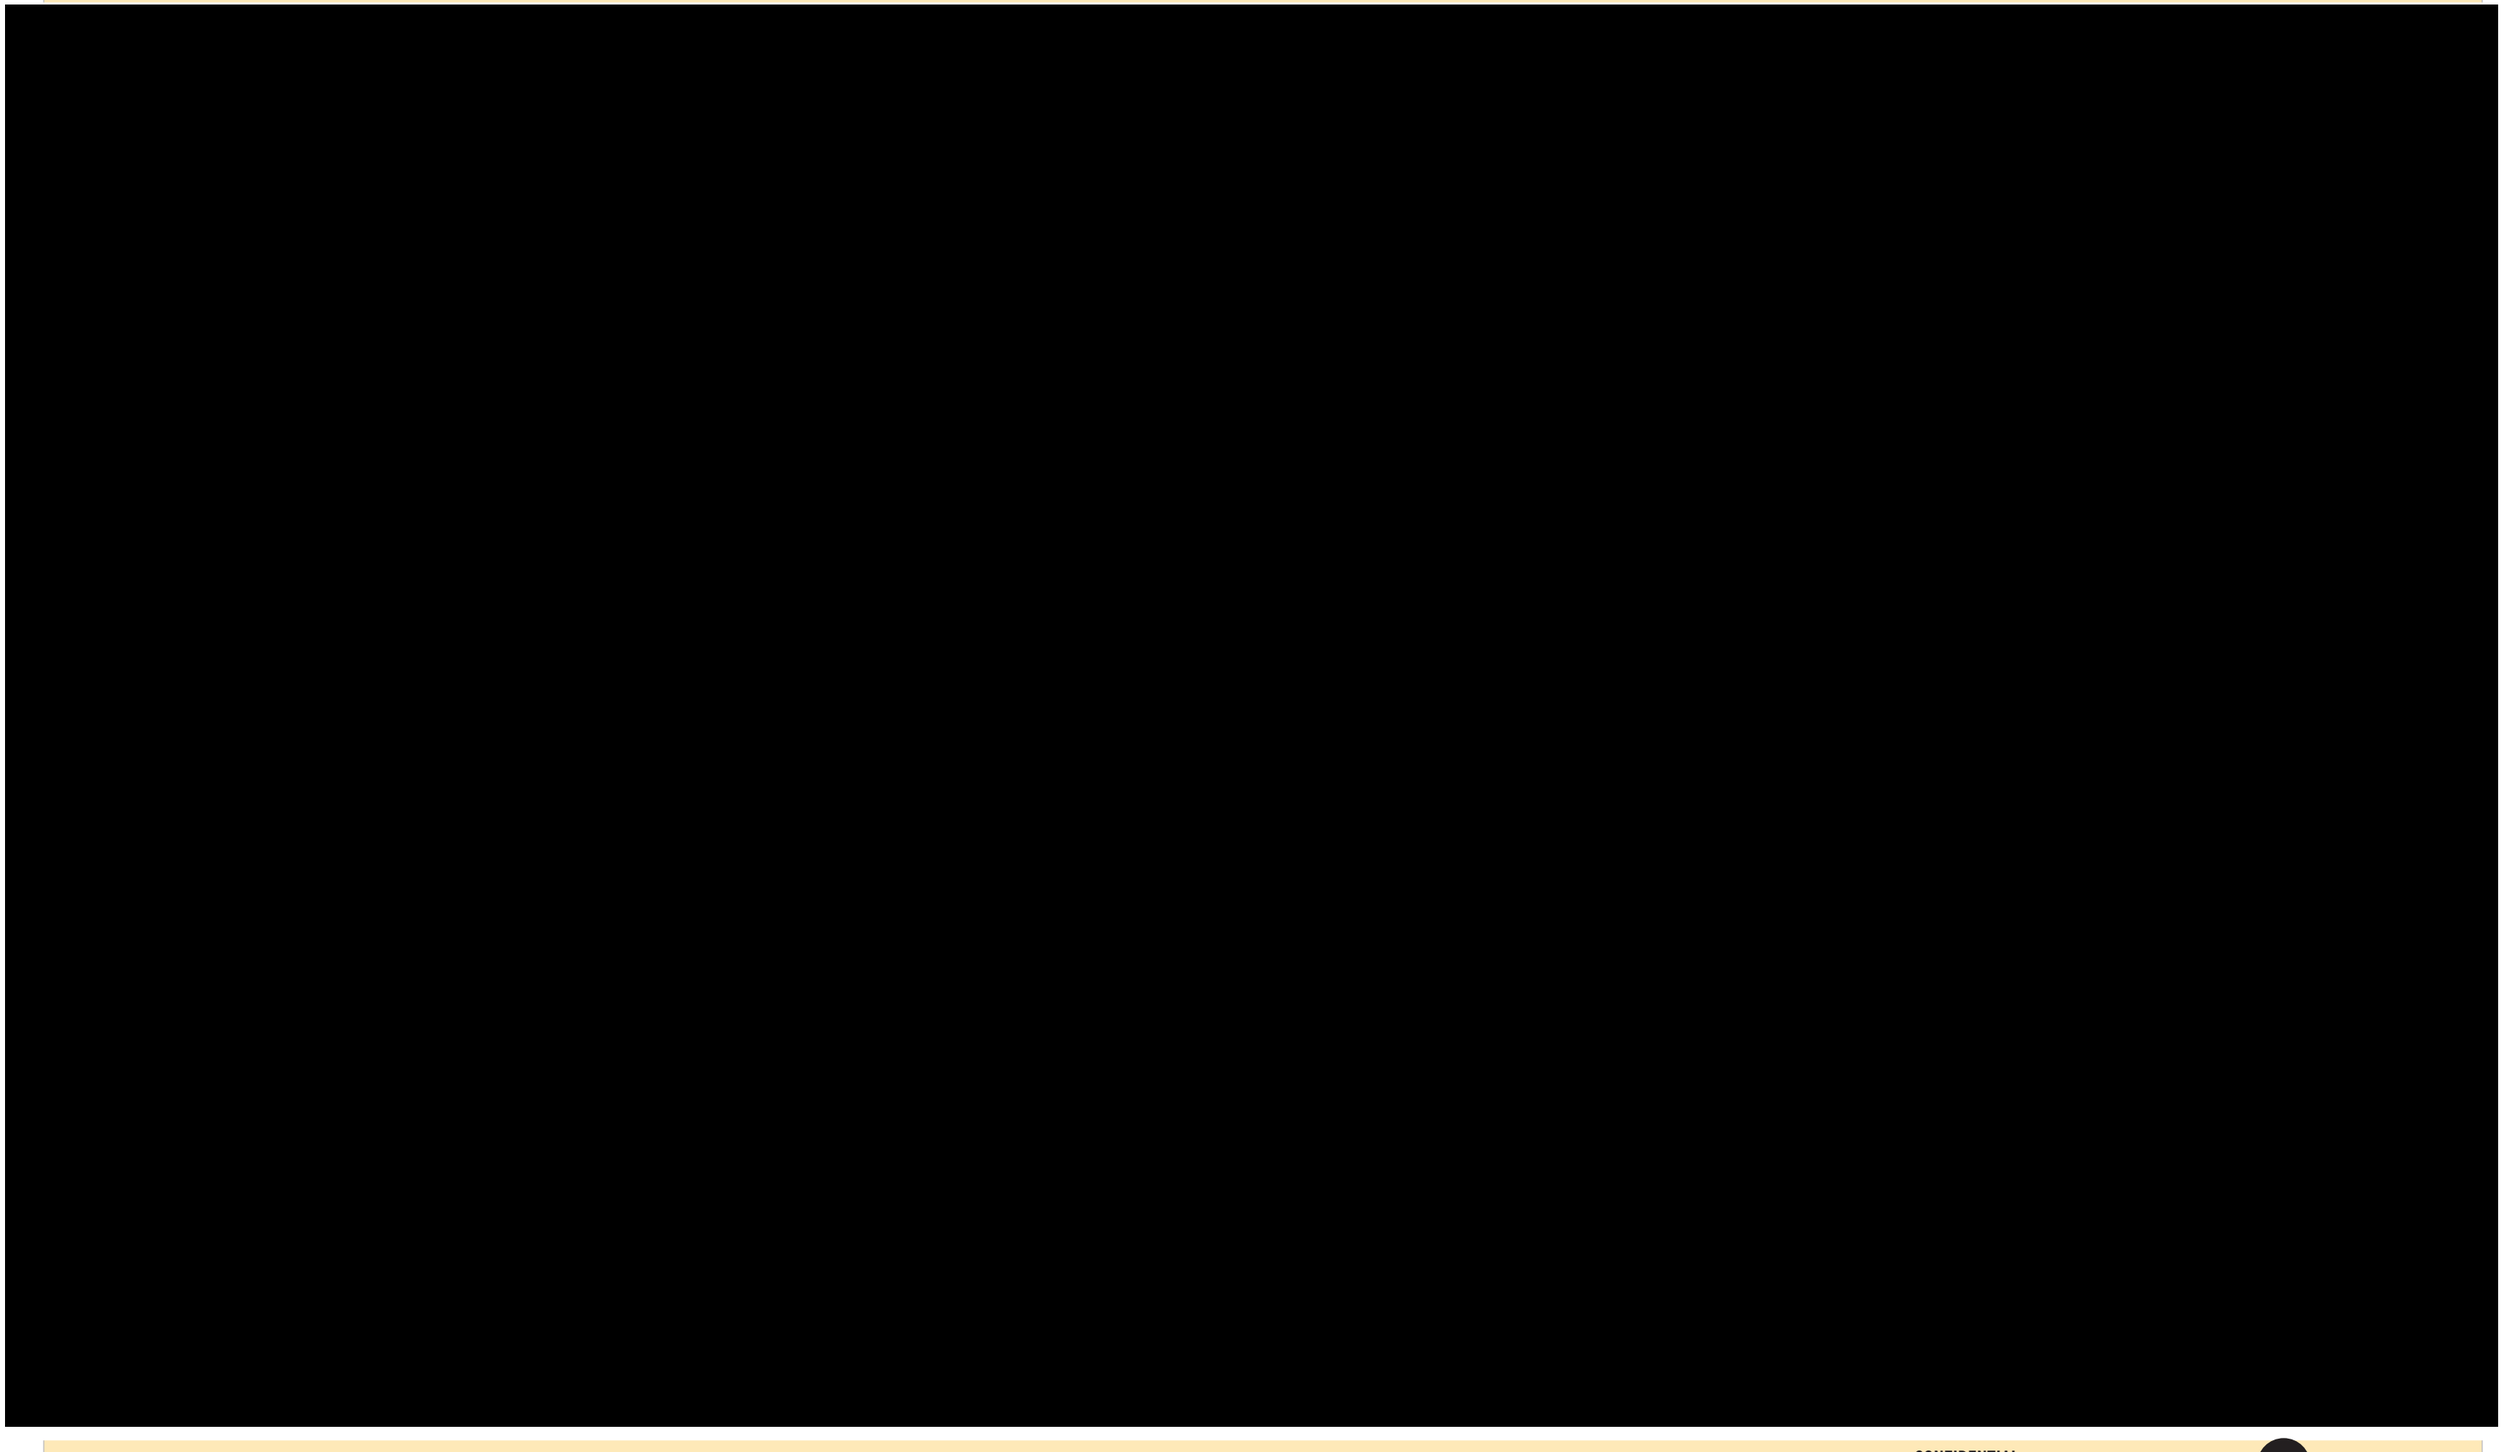
Operations Organizational Chart

EDS has drawn on its deep knowledge of North Carolina Medicaid and Mental Health business functions and requirements to build our operations organization for the Replacement MMIS. We have combined that understanding with our expertise in supporting our base interChange system in multiple states. The result is an organization that is designed in a logical way to most effectively manage the operational complexities surrounding a multi-payer Replacement MMIS.

The following exhibit, EDS Operations Organizational Chart, depicts our vision of the Replacement MMIS operations organization. The chart identifies our proposed key personnel and support staff members, who will make sure the delivery of consistent, reliable, and efficient operational support meets the requirements of the State and its stakeholders. Wherever possible, units conducting similar tasks or work centered on a specific system area are grouped under the same organization to promote efficiencies in support of the system's stakeholders, including the State, providers, and recipients. These groupings facilitate the effective flow of information, work items, and knowledge that are critical to program operations.

Please refer to proposal section 50.2.6 Operations Management Approach for a narrative description of the processes and functions of each branch of the operations organization.

EDS Operations Phase Organization



Denotes required positions in Appendix 50, Attachment I

Staffing Approach for Operations

Our North Carolina staffing and recruiting will find the best people for this project from the following sources:

- **Key staff—**The key staff identified in this proposal have been involved in developing our proposed solution for North Carolina, and they will be ready to assume their official responsibilities on contract signing or as designated in our project work plan.
- **Current (Legacy MMIS+) staff—**To protect the State's investment in current personnel and support the smooth transition from the Legacy MMIS+ contract to the Replacement MMIS, EDS will develop a transition plan with approaches for training current staff on Replacement MMIS operations and for a gradual transfer of personnel to the new contract, using temporary staff to fill positions and provide service under the legacy fiscal agent contract. Please note: We will make sure that any such transitions do not harm the level of service provided under the legacy fiscal agent contract. For the State and providers, the transition will be smooth.
- **Leveraged solution center staff—**EDS' national network of leveraged solution centers used in support of this project is fully staffed to support existing customers, in addition to having the resources readily available to participate in the North Carolina interChange MMIS project. As necessary and according to the final project work plan, resources will be assigned to work on specific components of the proposed solution.
- **Newly hired staff—**To the extent that EDS is not able to procure the necessary support through our resource of experienced staff, EDS will rely on our extensive recruitment and hiring capabilities. Our recruiting efforts include regional experts who can be used to quickly bring on staff experienced in almost any technology or discipline required by the project team.
- **Contractors and temporary employees—**EDS has a relationship with several agencies; leaders work with the agencies to identify qualified candidates who are immediately available to fill open positions. This approach allows us to fill positions quickly, observe the employees' performance and ability to work as team players to meet goals prior to hiring as permanent employees.

The results of this work can be seen in the Operations organizational chart. The most important result, however, is the assurance of success provided by the accurate assignment of personnel to this phase.

Job Descriptions for Key and Other Operations Personnel

Our staffing solution uses corporate-approved descriptions for the positions identified on the organization chart because our fiscal agent operation is a well-defined process with standardized positions across the enterprise. The position descriptions in this section provide further evidence that our proposed organization provides the right blend of skills to support the many branches of a large-scale fiscal agent operation.

Key Personnel and Operations Management Team

Account Manager

Melissa Robinson's primary responsibilities as the account manager for the Operations Phase comprise the following:

- Serving as the single point of responsibility and primary contact for the State
- Managing the performance of EDS' obligations under the contract
- Establishing and communicating the vision and goals to the project staff
- Reporting progress on issues to the State
- Working with the State to resolve disputes related to contract performance
- Acquiring and maintaining the personnel required to fulfill contractual obligations
- Attending meetings conducted by the State
- Overseeing the development of performance standards and reports
- Reviewing quality reports to assess current operational performance
- Reviewing corrective action plans as needed

Deputy Account Manager

The primary responsibilities of the deputy account manager for the Operations Phase comprise the following:

- Serving as a backup to the executive account manager
- Managing and overseeing daily operations, including the functional areas of claims operations, provider and recipient relations, prior approval (PA), pharmacy and financial and banking

- Attending State meetings
- Assist State in answering the State's questions related to account operations
- Work closely with DMA, DMH, DPH, and ORHCC leaders to provide support, assistance and input as needed
- Coordinating receipt of operational status reports from account functional managers and disseminating status reports to the account manager and the State
- Managing and monitoring daily operations to promote contract compliance
- Working with the PMO to monitor State satisfaction and resolve issues that may impact it

Provider/Recipient Relations Manager

Chris Ferrell's primary responsibilities of the provider/recipient relations manager for the Operations Phase comprise the following:

- Serving as backup to the executive deputy account manager
- Managing provider-related services, including provider call center, provider enrollment, and provider travel/field representatives
- Approving written and verbal communication to providers, including letters and the provider manual
- Managing recipient -related services and supporting Certificates of Credible Coverage (COCC) based recipient calls and written inquiries
- Approving written and verbal communication to recipients, including letters such as COCC and Health Check
- Working closely with the State's Provider and Recipient Directors and other NC medical stakeholders to make sure Replacement MMIS processes align with the established provider and recipient requirements
- Overseeing the operational readiness activities for all provider and required recipient areas
- Working closely with the State's Provider and Recipient Services department as well as the PMO to make sure provider and recipient communication is timely and of high quality
- Making sure provider and recipient service levels are met and executed through the Replacement MMIS Operations phase
- Working directly with the State to develop provider training such as workshops, hands-on, one-on-one meetings, and CBT and WBT courses

- Maintaining appropriate staffing levels and mentoring and coaching the provider and recipient services team
- Reviewing quality reports to assess current operations performance and establish with the EDS PMO office any required corrective action plans
- Conducting weekly status meetings with staff
- Attending State meetings
- Reporting progress on issues to the State
- Overseeing the development of performance standards and reports
- Performing administrative tasks necessary for smooth operation of the team

Pharmacy Director

Sharon Greeson's primary responsibilities as the North Carolina Pharmacy Director for the Operations Phase comprise the following:

- Overseeing areas involving the pharmacy program, including pharmacy point-of-sale (POS) and prospective drug utilization review (Pro-DUR) alerts, drug rebate, pharmacy PA, drug file maintenance, pharmacy bulletins, and DUR board meetings
- Overseeing the fulfillment of contract requirements regarding the pharmacy program
- Serving as the primary contact for the State for programs where a pharmacy or drug rebate contact is needed
- Maintaining overall responsibility for the operational success of the pharmacy benefit management services provided
- Working closely with the State's pharmacy directors, clinical program managers, and other NC pharmacy and drug utilization stakeholders to make sure Replacement MMIS processes align with the established medical policy per the RFP
- Overseeing the operational readiness activities for all pharmacy areas
- Working closely with the State's Provider and Recipient Services department and pharmacy program and the EDS Provider and Recipient Services team as well as the PMO to make sure North Carolina pharmacy provider communication is timely and of high quality
- Making sure pharmacy service levels are met and executed through the Replacement MMIS Operations phase
- Maintaining appropriate staffing levels and mentoring and coaching the pharmacy team

- Reviewing quality reports to assess current operations performance and establish with the EDS PMO office any required corrective action plans
- Conducting weekly status meetings with staff
- Reporting progress on issues to the State
- Overseeing the development of performance standards and reports
- Performing administrative tasks necessary for smooth operation of the team

Operations and Claims Processing Manager

Tammy Wheeler's primary responsibilities as the North Carolina Operations and Claims processing manager for the Operations Phase comprise the following:

- Serving as backup to the executive deputy account manager
- Providing leadership and direction to the operations and claims area inclusive of claims, mailroom, output mailing, EDI and reference
- Overseeing each operations unit within the claims area to support timely processing of functions performed
- Managing all inputs through the mailroom, scanning, indexing activities in support of the EDMS solution as well as the managing the claims processing subcontractors SunGard/FormWorks providing optical character reading and key from image data entry support of claims, PA forms and provider enrollment forms
- Managing all outputs through print and supporting vendors for print, pre-sort, mailing of all documents as defined
- Interacting with other EDS and State leadership team members to coordinate operations procedures to support efficient and accurate claims adjudication
- Interacting with the PMO regarding the quality of the claims operation
- Monitoring and assessing processes and procedures to recommend improvements to claims operations
- Monitoring the production and quality of work generated in the claims unit to support timely adjudication
- Attending status meetings and State meetings
- Providing status reports
- Serving as the primary contact for State staff regarding claims and all related issues

Financial Manager

Jamie Herubin's primary responsibilities of the financial manager for the Operations Phase comprise the following:

- Overseeing financial operations in accordance with State and federal guidelines, generally accepted accounting principles (GAAP), and approved operating procedures including all IRS and NC Department revenue required processes and reporting
- Working closely with the State's Financial Directors, DHHS Controller's offices, and other NC financial stakeholders to make sure Replacement MMIS processes align with the established financial requirements of the RFP
- Establishing and maintaining bank and lock box accounts and provide financial reconciliations and reporting as required
- Overseeing the operational readiness activities for financial areas
- Coordinating and designing procedures to support financial management activities
- Working closely with the State Financial department and the EDS Provider and Recipient services team as well as the PMO to make sure North Carolina provider communication is timely and of high quality
- Making sure financial service levels are met and executed through the Replacement MMIS Operations phase
- Maintaining appropriate staffing levels and mentoring and coaching the financial team
- Reviewing quality reports to assess current operations performance and establish with the EDS PMO office any required corrective action plans
- Conducting weekly status meetings with staff
- Reporting progress on issues to the State
- Overseeing the development of performance standards and reports
- Performing administrative tasks necessary for smooth operation of the team

Prior Approval (PA) Manager

Sharlene Bryant's primary responsibilities as the NC PA manager for the Operations Phase comprise the following:

- Overseeing daily operations of PA staff and processes for the review, assessment, and preapproval of medical, dental, orthodontic, optical,

durable medical equipment, surgical, physical therapy services as defined in RFP requirements

- Assisting the State in developing operational procedures and processes that support the State policies providing for payment of only those services and or treatments that are medically necessary, appropriate, and cost-effective
- Working closely with the State's Medical Directors, clinical program managers, and other NC medical stakeholders to make sure Replacement MMIS processes align with the established medical policy per the RFP
- Overseeing the operational readiness activities for all PA areas
- Working closely with the State's Provider and Recipient Services department and Medical program leaders and the EDS Provider and Recipient Services team as well as the PMO to make sure North Carolina provider communication is timely and of high quality
- Making sure PA service levels are met and executed through the Replacement MMIS Operations phase
- Maintaining appropriate staffing levels and mentoring and coaching the pharmacy team
- Reviewing quality reports to assess current operations performance and establish with the EDS PMO office any required corrective action plans
- Conducting weekly status meetings with staff
- Reporting progress on issues to the State
- Overseeing the development of performance standards and reports
- Performing administrative tasks necessary for smooth operation of the team

Medical Director

Margaret Martin's primary responsibilities as the North Carolina Medical Director for the Operations Phase comprise the following:

- Maintaining overall responsibility for the operational success of the medical administration of State's health care programs
- Working closely with the State's Medical Directors, clinical program managers, and other NC medical association stakeholders to make sure Replacement MMIS processes align with the established medical policy per the RFP
- Assisting with operational readiness activities for the medical areas

- Working closely with the State's Provider and Recipient Services and Clinical Policy departments and the EDS Provider and Recipient Services team as well as the PMO to make sure medical provider communication is timely and of high quality
- Reviewing requests for noncovered services or services that exceed State medical policy
- Assisting the EDS PA staff in making appropriate determinations on medical PAs, such as surgeries, that may or may not meet dental criteria
- Reviewing denials for PAs when medical providers inquire regarding the decision made by the PA staff
- Assisting with review of medical records and payment for unlisted medical procedure codes
- Reviewing additional information provided for reconsideration of services or denied payments; if the denial is upheld, the Medical Director will provide support for the State administrative appeal hearing process and provide all data and documentation readily available to us during our review process

Dental Director

David Brooks' primary responsibilities as the North Carolina Dental Director for the Operations Phase comprise the following:

- Maintaining overall responsibility for the operational success of the medical administration of State's health care programs
- Working closely with the State's Medical Directors, clinical program managers, and other NC medical association stakeholders to make sure Replacement MMIS processes align with the established dental policy per the RFP
- Assisting with operational readiness activities for the dental related areas
- Working closely with the State's Provider and Recipient Services and Clinical Policy departments and the EDS Provider and Recipient Services team as well as the PMO to make sure North Carolina dental provider communication is timely and of high quality
- Daily participation in support of operational activities reviewing and providing dental expertise and input as well as guidance according to State dental policy on claims payment/denial and/or PA requests approval or denial
- Reviewing surgical dental procedures

- Reviewing requests for noncovered services or services that exceed dental policy
- Assisting the EDS PA staff in making appropriate determinations on dental or orthodontic PAs that may or may not meet dental criteria
- Reviewing denials for PAs when dental and orthodontic providers inquire regarding the decision made by the PA staff
- Assisting with review of dental records and payment for unlisted dental procedure codes
- Reviewing additional information provided for reconsideration of services or denied payments; if the denial is upheld, the Dental Director will provide support the State administrative appeal hearing process and provide all data and documentation readily available to us during our review process

Certification Manager

The Certification Manager will perform the following tasks:

- Serving as a subject-matter expert for the certification process and providing oversight/direction based on preparation requirements
- Meeting with the State and CMS to demonstrate fulfillment of requirements and equivalent functionality
- Providing oversight for all certification preparation activities, including status reports and other project requirements, leading to the successful certification of the Georgia MMIS
- Overseeing the preparation of a demonstration plan
- Working with the systems group to provide status and report on any conditions requiring remediation, either prior to certification review or during the certification review

Technical Director and Systems Programming Manager

Tim Sullivan's primary responsibilities of the technical director and systems programming manager for the Operations Phase comprise the following:

- Serving as backup to the account manager for technical services
- Attending State meetings
- Analyzing needs and recommending appropriate planning concepts and tools used for planning, scheduling, and tracking projects

- Analyzing project progress and costs and facilitating the development of recommended alternatives
- Controlling project requirements, scope, and change management issues
- Coordinating status review meetings with staff and attending State meetings as requested
- Determining, monitoring, and reviewing project economics, including costs, operational budgets, and staffing
- Developing project control and reporting procedures and managing changes in the project work plan
- Planning, directing, and coordinating cross-functional team activities to manage and implement projects
- Managing adherence to contract requirements and long-term State goals
- Performing administrative tasks necessary for smooth operation of the team
- Managing multiple-stakeholder, multiple-entity projects individually and across multiple project participants

Project Management Office (PMO) Director

The primary responsibilities of the PMO director for the Operations Phase comprise the following:

- Establishing the program management infrastructure, including development of project plans, schedules, resource requirements, task orders, and benefit and value propositions
- Attending State meetings
- Maintaining a time-reporting system for collecting work efforts expended at the lowest level of detail available in each project plan
- Managing project performance by using earned-value or a comparable process
- Maintaining iTRACE for each project to collect, store, and disseminate project information, reports, and official communication
- Enforcing a problem management plan, a risk management plan, a quality management plan, a change and configuration management plan, and associated monitoring
- Managing multi-agency, multi-payer projects individually and across multiple agencies
- Measuring and monitoring project progress

Office Administration Support

Administrative Secretary

The primary responsibilities of the administrative secretary for the Operations Phase comprise the following:

- Providing administrative and clerical support functions
- Applying PC skills and understanding of policies and procedures to complete assignments
- Reconciling administrative reports as required
- Handling confidential material including new hire paperwork, or employee records
- Evaluating, ordering, and organizing office supplies and administrative forms
- Making travel arrangements, coordinating meeting plans, and scheduling appointments
- Answering telephones and resolving questions or taking messages
- Opening and sorting mail and answering routine correspondence
- Using automated office equipment to type correspondence and business reports

Administrative Assistants

The primary responsibilities of the administrative assistants for the Operations Phase comprise the following:

- Supporting administrative tasks of EDS
- Providing primary support for account manager
- Developing and maintaining a correspondence tracking system
- Receiving and delivering all correspondence, including deliverables through e-mail and hard copy
- Scheduling meetings
- Taking minutes at meetings if needed
- Supporting document production, including typing, copying, and distribution

Accountants

The primary responsibilities of the accountants for the Operations Phase comprise the following:

- Preparing basic accounting statements and reports for management
- Performing detailed account reconciliation and analysis of accounting transactions
- Preparing variance analysis reports, and researching and explaining variances
- Preparing journal entries and performing month-end general ledger close activities
- Explaining financial system operations and procedures to field personnel
- Supporting audit requests as needed

Receptionist

The primary responsibilities of the receptionist for the Operations Phase comprise the following:

- Greeting visitors and providers to the EDS facility and making sure they log in and out as required
- Answering telephones and directing callers to EDS staff
- Performing clerical duties as assigned

Provider/Recipient Services Team

Provider/Recipient Services Supervisors

The primary responsibilities of the provider/recipient services supervisors comprise the following:

- Supervising provider and recipient call center functions
- Making sure call center service levels are met
- Staffing to appropriate levels
- Evaluating the performance of call center representatives
- Making sure call center representatives receive appropriate training

Provider/Recipient Service Representatives

The provider/recipient service representatives will perform the following functions:

- Providing first-level support for provider and recipient telephone and written inquiries
- Supporting written and verbal requests from providers
- Entering information into computer system for purposes of tracking each provider or recipient issue or question
- Researching problem areas and documenting processes used to correct the problem

Trainer

The provider/recipient services trainer will perform the following functions:

- Developing and delivering training to EDS staff, State staff, and providers
- Working closely with operational and technical managers and the State to develop detailed training plans
- Identifying and escalating barriers to successfully achieving training objectives as scheduled

Research Analyst

The provider relations research analyst will perform the following functions:

- Receiving and completing provider inquiries that are complex and require additional research and provider assistance for resolution
- Supporting complex and detailed research requests from the State
- Supporting provider services leadership with completion of special projects in support of provider, State, or EDS needs
- Supporting interChange maintenance and modifications or enhancements by providing assistance in testing and determining provider impact related to such change and creating communication and education plans to support these changes
- Assisting provider services call center and field representative team with additional training and guidance on research inquiries and issues

Provider Enrollment Supervisor

The provider enrollment supervisor will perform the following functions:

- Supervising daily operations of the provider enrollment team
- Attending State meetings as required
- Hiring, training, and maintaining required staffing
- Working closely with DMA on provider enrollment questions or issues

- Providing reporting on provider enrollment inventory and tracking
- Coordinating with the supporting vendor, VisionPro, for credentialing activities

Provider Enrollment Service Representatives

The provider enrollment service representatives will perform the following functions:

- Receiving and processing provider enrollment packets
- Communicating and handling provider enrollment inquiries from the State or provider as necessary
- Completing certification and re-enrollment tracking through the Web portal
- Performing online, real-time provider file entry, update, and approval
- Maintaining comprehensive provider letters in EMC | Documentum that authorized users can initiate using point-and-click technology

Provider Relations Supervisor

The provider relations supervisor will perform the following functions:

- Providing leadership and direction for the provider representative team
- Making sure provider relations service levels are met and developing and executing corrective action plans if required
- Coordinating priorities and scheduling with the State
- Hiring, training, mentoring, and coaching provider relations staff
- Attending provider association meetings and other provider workshops as appropriate
- Working closely with the State, Provider/Recipient Services Manager Chris Ferrell, and the PMO to make sure provider communications are timely and of high quality
- Keeping EDS and State leaders informed of any provider issues

Provider Relations Field Representatives

The provider relations field representatives will perform the following functions:

- Scheduling and holding on-site visits with providers; research provider claim and billing history in preparation for the visit

- Documenting topics discussed during visits, following up on any open issues, and monitoring provider claims to provide resolution to issues discussed
- Providing software and billing training; periodic training seminars for mass training
- Serving as liaison between the State and the provider community
- Developing and maintaining relationships with key association groups to facilitate open communication through a variety of methods

Provider Relations Support Representatives

The provider relations support representatives will perform the following functions:

- Providing specific provider billing assistance, specializing in one or more provider types
- Handling and documenting provider visits from State provider referrals
- Visiting provider locations for hands-on instruction support in their assigned regions
- Assisting and conducting regional workshops
- Developing provider bulletins
- Updating provider manuals

Publication Coordinator

The publication coordinator will perform the following functions:

- Overseeing the publication of bulletins and technical handbook material
- Overseeing and creating public stakeholder–facing materials
- Coordinating content and posting it to the Web portal for providers and recipients

Workshop Coordinator

The workshop coordinator will perform the following functions:

- Overseeing the planning of provider workshops, includes booking, arranging, and planning attendance for remote workshops
- Coordinating RSVP, attendance tracking, and follow-up materials for remote workshops

Pharmacy Services Team

Pharmacy Drug Rebate Analyst

The primary responsibilities of the pharmacy drug rebate analyst for the Operations Phase comprise the following:

- Overseeing the drug rebate services
- Making sure drug rebate service levels are met
- Reviewing drug rebate deliverables, such as invoices and related reports, to make sure they are accurate and complete
- Providing drug rebate expertise to the drug rebate team members
- Working with the State, drug rebate team members, and manufacturers to resolve rebate disputes in a timely manner
- Establishing and reviewing cash-handling procedures
- Overseeing training of State staff on the use of the new rebate system

Pharmacy Drug Rebate Accountant

The primary responsibilities of the accountants for the Operations Phase comprise the following:

- Preparing basic accounting statements and drug rebate financial reports for management
- Performing detailed account reconciliation and analysis of drug rebate accounting transactions
- Pursuing timely collection of outstanding drug rebate invoices
- Reconciling lockbox activities
- Generating monthly and quarterly financial and drug rebate reports as required
- Supporting audit requests as needed

Clinical Pharmacist

The primary responsibilities of the clinical pharmacist for the Operations Phase comprise the following:

- Providing pharmacist support to the pharmacy program services
- Providing clinical expertise and pharmacist supervision to the PA call center personnel

- Working with the State to develop educational materials for prescribers, providers, and recipients as required
- Working with the State on operational and policy issues related to the pharmacy program services
- Attending meetings and Fair Hearings as requested by the State

Pharmacy PA Representative

The primary responsibilities of the pharmacy PA representative for the Operations Phase comprise the following:

- Overseeing the PA and preferred drug list (PDL) services
- Making sure PA and PDL service levels are met
- Providing clinical expertise to the PA and PDL teams and the State
- Working closely with the State to coordinate and schedule pharmacy and therapeutics (P&T) committee meetings
- Facilitating Pharmacy & Therapeutic (P&T) committee meetings
- Working closely with the QA manager to make sure PA and PDL deliverables are of high quality
- Advising the State on the administration of the PDL
- Developing PA Fair Hearing summaries for the State's approval
- Attending Fair Hearings as requested by the State
- Working closely with the State on educational materials for recipients, prescribers, and providers

Pharmacy Tech/Business Analyst

The primary responsibilities of the pharmacy tech/business analyst for the Operations Phase comprise the following:

- Identifying and defining pharmacy policy and or drug rebated business requirements
- Providing alternatives with cost/benefit justification and recommended solutions
- Completing detailed pharmacy/drug rebate business specifications for system modifications and enhancements
- Working closely with the State, systems engineers, and operations units to analyze, design, and test system modifications and enhancements
- Creating test cases and scenarios to verify State requirements

- Supporting the State and EDS user acceptance testing process
- Updating iTRACE with desktop/user procedures
- Providing performance metrics and statistics for reporting to the State
- Attending status review meetings with project team members and the State

Claims Operations Services

Mail Room Supervisor

The primary responsibilities of the mail room supervisor for the Operations Phase comprise the following:

- Directing the work activities of the mail room
- Reviewing daily inventory to support timely claims processing
- Reviewing the weekly inventory report sent to the State
- Overseeing work areas to maintain control of inventories and production
- Tracking production, reviewing quality metrics, and maintaining workflows and work process improvements
- Interacting with vendors supporting the mail room equipment
- Interacting with vendors supporting forms and supplies needed for mail-outs
- Performing random sampling of claims and non-claim documents that were screened and batched to validate that the work is being performed accurately
- Serving as a liaison to the account staff and the State to assist with issues associated with the mail room, such as special mailings

Mail Room Data Preparation and Claims Sorting Clerk

The primary responsibilities of the mail room data preparation and claims sort clerk for the Operations Phase comprise the following:

- Performing work related to preparation, control, and sorting of claims and non-claim incoming mail
- Performing claims-sorting and non-claims sorting based on specified criteria
- Preparing claims and non-claim mail for scanning by removing staples and paper clips and inserting bar-coded patch sheets
- Performing data control for incoming claims and special batches

- Serving as trained backup to perform all duties of the data preparation/correspondence clerk as needed

Mail Room Courier

The primary responsibilities of the mail room courier for the Operations Phase comprise the following:

- Performing daily pick and delivery of items in support of the NCXIX account
- Making courier runs to the post office for incoming mail, to the bank for delivery of the daily bank deposit, and to designated State offices for pickup and delivery of correspondence
- Following the HIPAA guidelines for transporting protected health information (PHI)
- Hand-delivering and acquiring signoff for designated items
- Assisting in the distribution and opening of incoming mail
- Coordinating vehicle maintenance and repairs

Mail Room Quality Control and Batch Control Clerk

The primary responsibilities of the mail room quality control and batch control clerk for the Operations Phase comprise the following:

- Validating that the claims scanned are activated and entered for processing
- Monitoring daily and weekly production and claims inventory
- Monitoring and working closely with our subcontractor, SunGard
- Reviewing daily and weekly QA reports for all scanned, optical character read/key from image (OCR/KFI) documents
- Researching and resolving OCR/KFI issues
- Updating and maintaining OCR/KFI instructions
- Assisting in OCR/KFI testing coding changes
- Handling document special batches
- Using various reports to identify the need for retraining or counseling of OCR/KFI personnel
- Generating reports regularly to monitor adherence to the required accuracy rate

Data Capture Scan Operator

The primary responsibilities of the data capture scan operator for the Operations Phase comprise the following:

- Maintaining input and output control processes and procedures for documents to be scanned
- Receiving, logging, and batching claims and non-claim receipts
- Operating a high-volume scanner with accuracy and speed
- Scanning claims and non-claim documents
- Assigning an internal control number (ICN) to each document for tracking, retrieval, and viewing purposes
- Resolving routine issues and escalating non-routine issues to the supervisor

Data Capture Document Indexing Clerk

The primary responsibilities of the data capture document indexing clerk for the Operations Phase comprise the following:

- Entering the specific data, such as provider number and tax ID, from an imaged document to provide linking to the document control number assigned
- Linking of the DCN and provider number to allow for non-claim documents to be searched, retrieved, and viewed by entering the provider number as search criteria
- Escalating any documents that cannot be indexed because of issues such as legibility and lack of data to the designated person for further research

Mail Room Outgoing Mail Clerk

The primary responsibilities of the mail room outgoing mail clerk for the Operations Phase comprise the following:

- Stuffing, labeling, metering, and distributing outgoing mail
- Sorting and distributing incoming mail
- Scanning paper claims and prescreen claims for required information
- Transporting documents to and from the account
- Transporting documents to and from the post office

EDI Help Desk Supervisor

The primary responsibilities of the EDI supervisor for the Operations Phase comprise the following:

- Preparing the monthly EDI billing report for invoicing
- Assigning processor control numbers to POS providers
- Monitoring translator processes
- Assisting providers and vendors with formatting issues
- Maintaining archives of claims transmissions
- Coordinating and assisting in HIPAA transaction testing
- Supporting software training workshops
- Performing routine telephone response and data analysis
- Training internal staff on changes to format and data flow
- Analyzing issues with claims file processing for problem resolution
- Monitoring the performance and quality of the technical help desk staff
- Handling escalated technical calls from the team

EDI Service Reps/Help Desk Analyst (Technical)

The primary responsibilities of the EDI help desk analyst (technical) for the Operations Phase comprise the following:

- Responding to telephone inquiries from providers and vendors regarding electronic claims submission issues and transmission problems
- Assisting providers with various software concerns and questions
- Troubleshooting and escalating claim and transmission problems and notifying providers of the resolution
- Confirming data transmissions
- Maintaining backups of transmissions received
- Assisting providers and vendors with testing
- Coordinating the implementation and testing of value-added networks (VANs)
- Assisting the project team in acquiring connectivity for the appropriate access required by the VANs
- Promoting ECS and quality improvements through numerous projects
- Marketing the electronic claims submission process

- Providing support for testing HIPAA-compliant transaction sets for providers and vendors
- Maintaining trading partner agreements
- Creating mailboxes and processes for claims and non-claims submissions

Claims Resolution and Adjustment Supervisor

The primary responsibilities of the claims resolution and adjustment supervisor for the Operations Phase comprise the following:

- Managing the claims resolution and adjustment team to make sure the work is performed within the RFP requirements and performance standards
- Serving as the backup to the operations claims manager
- Conducting team meetings
- Attending State meetings and supporting research requests received from the State
- Performing administrative tasks necessary for smooth operation of the team
- Managing adherence to contract requirements and long-term State goals
- Hiring, training, mentoring, and coaching claims resolution and adjustment staff

Claims Resolution/Adjustments Clerical

The primary responsibilities of the claims resolution/adjustments analyst for the Operations Phase comprise the following:

- Interpreting and determining appropriateness of providers' adjustment requests
- Reviewing and processing adjustments of previously paid claims and making final decisions on adjustments regarding diagnosis coding, procedure coding, pricing, and program coverage

Claims Resolution/Medical Policy Analyst

The primary responsibilities of the claims resolution/medical policy analyst for the Operations Phase comprise the following:

- Reviewing suspended claims using resolution criteria that does not require medical review
- Providing keying support of determined resolution

Claims Resolution/Medical Review Nurse

The primary responsibilities of the claims resolution/medical review nurse for the Operations Phase comprise the following:

- Reviewing submitted claims and adjustment requests where medical determination is required
- Reviewing weekly, monthly, quarterly, and annual reports for claims payment in adherence with federal guidelines
- Assisting in the implementation of yearly updating of CPT/HCPCS codes
- Reviewing and filing submitted consent forms and statements

Reference Support Staff

The primary responsibilities of the reference support staff for the Operations Phase comprise the following:

- Receiving, reviewing, analyzing, and working all reference file-related State requests
- Interacting with internal and external contacts to analyze, define, test, and implement reference file changes
- Gathering requirements necessary to implement reference file changes
- Interfacing with systems engineers to develop and review test plans and documentation
- Assisting other business units in reference file-related research
- Supporting the State in its desire to implement new services and new health care programs

Financial Services Team

Financial Accountant Analyst and Financial Business Analyst Professional

The primary responsibilities of the accountant analyst for the Operations Phase comprise the following:

- Balancing weekly reports to make sure that checkwrite activities have been appropriately recorded throughout the Replacement MMIS
- Receiving and processing electronic funds transfer (EFT), or direct deposit, requests
- Preparing monthly financial statements
- Processing governmental agency liens and levying withholdings

- Processing DMA withholds, payouts, and recoup requests
- Processing First- and Second-B Notices and tracking responses for required IRS backup withholding actions
- Inputting data to generate manual checks for previously funded issues and withholding payments to government agencies
- Processing bad debt for consideration for write-off on approval of the State
- Serving as the point of contact for Internal Revenue Service (IRS) Form 1099-MISCs issues by January 31 annually and Corrected IRS Form 1099s issues in the spring
- Researching issues referred by Provider Services, EDS and the State
- Support system modifications and maintenance changes on any area related to finance, tax, collections
- Responding to calls forwarded to Finance regarding questions about any of the aforementioned responsibilities

Finance Cash Receipt Clerical Staff

The primary responsibilities of the finance clerical staff for the Operations Phase comprise the following:

- Interpreting, coding, keying, and validating entry of provider refunds sent to the appropriate lockbox
- Researching returned paid claims checks and voiding claims where necessary
- Supporting research of refunds applied based on information supplied by or lacking from the provider
- Researching and requesting refunds of overpayments of recipient premiums as appropriate

Buy-In Processing Staff

The primary responsibilities of the buy-in processing staff for the Operations Phase comprise the following:

- Reconciling buy-in cycle outputs for both Medicare Part A and Medicare B buy-in processes
- Preparing buy-in transactions for buy-in cycle processing such as , accretes, deletes, and history change requests
- Verifying eligibility of North Carolina Medicaid recipients to make sure the State receives appropriate credits for those who are eligible

- Supporting suspended claims review for Medicare suspect
- Recommending codes to send to CMA to achieve the expected result

Third-Party Liability (TPL) Clerk

The primary responsibilities of the TPL clerk for the Operations Phase comprise the following in support of the DPH recovery activities:

- Interpreting, coding, keying, and validating entry of TPL recoveries
- Contacting providers to resolve questions or issues as necessary
- Researching and requesting as appropriate any recoveries in error or excess of recorded amounts

Recipient Processing Staff

The primary responsibilities of the recipient processing staff for the Operations Phase comprise the following:

- Interpreting, coding, keying, and validating entry of recipient premium recipients sent to the appropriate lockbox
- Researching any premium related questions/issues
- Resolving pending transactions
- Researching and issuing refunds on recipient premium as needed

Prior Approval Services

PA Supervisor

The primary responsibilities of the PA supervisor for the Operations Phase comprises the following:

- Serving as the backup to the PA manager
- Overseeing the PA department to make sure the work is performed within the RFP requirements and performance standards
- Conducting team meetings
- Attending State meetings and supporting the State research requests
- Performing administrative tasks necessary for smooth operation of the team
- Managing adherence to contract requirements and long-term State goals

PA Optical and Hearing Aid Analyst

The primary responsibilities of the PA optical and hearing aid analyst for the Operations Phase comprise the following:

- Performing reviews for visual aids and hearing aids
- Sending visual aid orders to the State's support vendor
- Giving refraction approvals by telephone when the AVRS is not available
- Performing optical and hearing aid worksheet resolution
- Assisting State and providers with optical and hearing aid PA issues

PA Analyst

The primary responsibilities of the PA analyst for the Operations Phase comprise the following:

- Performing preliminary work on PA forms, such as researching paid history, PAs existing, and background reviews to expedite the handling and reviewing of PA requests
- Conducting worksheet resolution for PA edits and audits
- Researching problems and questions Provider Services or other departments may need answered or researched
- Resolving PA denial reports
- Assisting the State and providers with issues regarding PA requests

PA Clerical Staff

The primary responsibilities of the PA clerical staff for the Operations Phase comprise the following:

- Performing worksheet resolution for PA edits and audits
- Gathering and organizing PA documents for medical director or dental director review
- Performing mail-backs for the unit

PA Registered Dental Hygienist

The primary responsibilities of the PA registered dental hygienist for the Operations Phase comprise the following:

- Performing review for dental services that require PA
- Performing dental worksheet resolution
- Assisting State and providers with dental PA questions and issues

Consulting Orthodontist

The consulting orthodontist is responsible for the following functions:

- Operating as a backup to the dental director
- Participating daily in the support of operational activities
- Providing orthodontist expertise and input on State dental policy for claims payment or denial and PA request approval or denial
- Reviewing requests for noncovered services or services that exceed orthodontic policy
- Assisting the EDS PA staff in making appropriate determinations on orthodontic PAs that may or may not meet dental criteria
- Reviewing denials for PAs when orthodontic providers inquire regarding the decision made by the PA staff
- Reviewing additional information provided for reconsideration of services or denied payments; if the denial is upheld, supporting the State administrative appeal hearing process and making data and documentation readily available during the review process

Dental Consultant

The dental consultant will perform the following functions:

- Operating as a backup to the dental director
- Assisting with operational readiness activities for the dental-related areas
- Reviewing surgical dental procedures
- Reviewing requests for noncovered services or services that exceed dental policy
- Assisting the EDS PA staff in making appropriate determinations on dental PAs that may or may not meet dental criteria
- Reviewing denials for PAs when dental providers inquire regarding the decision made by the PA staff
- Assisting with review of dental records and payment for unlisted dental procedure codes
- Reviewing additional information provided for reconsideration of services or denied payments; if the denial is upheld, supporting the State administrative appeal hearing process and making data and documentation readily available during the review process

PA Physical Therapist

The primary responsibilities of the PA physical therapist for the Operations Phase comprises the following:

- Performing reviews to determine the medical necessity for pediatric mobility equipment that is submitted on a CMN/PA form
- Assisting the State and providers with questions and issues on pediatric mobility PA requests

PA Nurse (DME)

The primary responsibilities of the PA registered nurse (DME) for the Operations Phase comprise the following:

- Reviewing certificates of medical necessity (CMN)/PA forms (for codes that require PA) to determine the medical necessity for the DME
- Reviewing and pricing required repairs to equipment for which Medicaid recipients are approved
- Performing worksheet resolution for manually priced items and repairs
- Assisting State and providers with problems and questions about DME PAs

Training Services

Training Supervisor

The training supervisor will perform the following functions:

- Providing oversight and standardization for account training and development activities
- Providing leadership and direction to the training team
- Reviewing deliverables and provide quality assurance input
- Partnering with the State to confirm requirements and identify areas for consideration
- Setting department goals, objectives and priorities
- Directing the training team resources and activities for State user training and provider training
- Defining, generating, and producing training requirements
- Reviewing and evaluating the post-session user evaluations
- Working closely with the instructional design specialist, trainers and other key stakeholders with daily operational issues

- Mentoring and coaching trainers
- Maintaining appropriate staffing levels

Trainers

The trainers will perform the following functions:

- Reviewing appropriate training and provider information to learn training session content
- Delivering effective training to State and EDS users, as well as the provider community when needed
- Verifying that training products are technically accurate and matched appropriately to the audience
- Testing and implementing training products, such as materials and computer-based training courseware
- Providing tutoring and supplemental training to the State, EDS, and provider community participants based on need and request

Instructional Design Specialists

The instructional design specialists will perform the following functions:

- Developing and deploying training solutions that are aligned with EDS and State training needs, including training material solutions
- Determining the optimum mix of training media, including trainer-led, CBT, and WBT
- Developing the project management approach to training solutions for the enterprise and setting the framework for future training activities, including scheduling training sessions
- Facilitating training to the State, EDS, and the provider community
- Preparing the annual training plan and training reports

Documentation Specialists

The documentations specialists will perform the following functions:

- Coordinating documentation to be included in iTRACE and on the Provider and Recipient Web Portal
- Developing and maintaining operations and stakeholder documentation
- Updating documentation in a timely manner and with the State's approval
- Documenting procedures and processes

- Maintaining the library of operations documentation
- Providing assistance with written documentation in other functional areas
- Receiving, tracking, and responding to all State-initiated requests for documentation

Quality Monitoring and Control

Operations Quality Control Manager

The primary responsibilities of the quality control manager for the Operations Phase comprise the following:

- Serving as the backup to the PMO director
- Establishing and maintaining an infrastructure, culture, and capability for continued improvement in quality control functions encompassing data entry, system inputs and outputs, balancing of jobs, data integrity, provider communications, finance, and accounting
- Prioritizing, planning, and coordinating the implementation of improvement initiatives
- Collecting, understanding, and documenting stakeholder expectations to guide process improvement
- Building support tools such as a status reporting mechanism, communication framework, system for gathering stakeholder expectations and perceptions, stakeholder repository, and expectation management worksheets
- Enlisting project management sponsorship for the process improvement program
- Using appropriate process models and certifications to guide improvement initiatives and measure progress

Quality Assurance Support Staff

The quality assurance support staff will perform the following functions:

- Establishing and maintaining an infrastructure, culture, and capability for continued improvement in quality control functions encompassing data entry, system inputs and outputs, balancing of jobs, data integrity, provider communications, finance, and accounting
- Prioritizing, planning, and coordinating the implementation of improvement initiatives
- Collecting, understanding, and documenting stakeholder expectations to guide process improvement

- Building support tools such as a status reporting mechanism, communication framework, system for gathering stakeholder expectations and perceptions, stakeholder repository, and expectation management worksheets
- Enlisting project management sponsorship for the process improvement program
- Using appropriate process models and certifications to guide improvement initiatives and measure progress

Security/Privacy Officer

The primary responsibilities of the security officer for the Operations Phase comprise the following:

- Managing the HIPAA-directed privacy program in compliance with federal and state laws and applicable regulatory accreditation standards
- Providing developmental guidance and assisting in the identification, implementation, and maintenance of organization information privacy policies and procedures
- Performing information privacy risk assessments and compliance monitoring activities in coordination with the program's assessment functions
- Working with the legal team to review contracts or other legal agreements that are subject to HIPAA standards and applicable State laws
- Serving as a liaison to the State for HIPAA privacy issues
- Maintaining current knowledge of applicable federal and state privacy laws and accreditation standards and monitoring advancements in information privacy technologies
- Implementing and managing CMS and State information security directives as mandated by the Administration Simplification portion of HIPAA
- Performing a gap analysis to assess the program's current security compliance status versus necessary status and periodically reassessing this status
- Protecting the confidentiality and integrity of information and maintaining the technical mechanisms of legitimate access to information
- Managing the complex, technically difficult, and dynamic process of policies and procedures across interdivisional lines
- Overseeing the process of ongoing integration of information security with program strategies and requirements

- Coordinating with external entities, such as other commercial and government insurance carriers and regulatory agencies, to improve information security within the organization
- Leading initiatives to contain, investigate, and prevent security breaches

Systems Quality Control Manager

The primary responsibilities of the systems quality control manager for the Operations Phase comprise the following:

- Developing and maintaining a vigorous quality control function that encompasses verification of system testing and production outputs, balancing of jobs, validating data integrity, controlling and accounting for system inputs, and providing adequate internal controls and quality checks
- Identifying and addressing system and data issues that affect the integrity of the system
- Applying and maintaining quality requirements that include the creation and execution of methods and procedures for testing and debugging programs
- Promoting testing results that are easily accessible and understandable
- Documenting and handling deviations identified during quality control activities and tracking the deviations to closure
- Aligning the system with changing program needs as necessary

Systems Group

Systems Maintenance Technical Leader

The primary responsibilities of the Systems Maintenance Technical Leader in the Operations Phase comprise the following:

- Scheduling and assigning maintenance work to systems engineer staff
- Working closely with the State to communicate maintenance project status, issues, or questions
- Participating in maintenance project deliverable walkthroughs
- Serving as leader on-call for production-related issues
- Making sure production system meets the contractual service levels
- Escalating issues or barriers to meeting contractual service levels

BizTalk Analyst

The BizTalk Analyst will perform the following functions:

- Designing, coding, testing, and implementing document interface and workflow changes to the Replacement MMIS
- Incorporating the latest advances in SOA/integration technology into the Replacement MMIS as appropriate
- Bringing specialized technical skills in the areas of integration and workflow, as well as pertinent knowledge and experience, to the project
- Updating technical documentation in iTRACE
- Providing regular status reports to technical functional area lead (TFAL)
- Coordinating and meeting required development and testing schedules across functional areas as they relate to integration

Senior Information Specialist

The primary responsibilities of the senior information specialist for the Operations Phase comprise the following:

- Designing, coding, testing, implementing, and documenting changes to the Replacement MMIS
- Incorporating the latest advances in technology into the Replacement MMIS as appropriate
- Bringing specialized technical skills, knowledge, and experience pertinent to the project
- Bringing specific expertise in Internet technology and claims engine internals
- Providing technical guidance to peers
- Updating technical documentation in iTRACE
- Providing regular statuses to technical functional area lead (TFAL)
- Meeting required development and testing schedules

Information Specialists

The primary responsibilities of the information specialists for the Operations Phase comprise the following:

- Designing, coding, testing, implementing, and documenting changes to the Replacement MMIS

- Incorporating the latest advances in technology into the Replacement MMIS as appropriate
- Bringing specialized technical skills, knowledge, and experience pertinent to the project
- Bringing specific expertise in Internet technology and claims engine internals
- Conducting initial research, code development, and testing for application modifications
- Providing technical guidance to peers
- Updating technical documentation in iTRACE
- Providing regular statuses to technical functional area lead (TFAL)
- Meeting required development and testing schedules

Information Analysts

The primary responsibilities of the information analysts for the Operations Phase comprise the following:

- Designing, coding, testing, implementing, and documenting changes to the Replacement MMIS
- Incorporating the latest advances in technology into the Replacement MMIS as appropriate
- Bringing specialized technical skills, knowledge, and experience pertinent to the project
- Updating technical documentation in iTRACE
- Providing regular statuses to technical functional area lead (TFAL)
- Meeting required development and testing schedules

Senior State Business Liaison

Anthony Perkins' primary responsibilities of the senior State business liaison for the Operations Phase comprise the following:

- Serving as an intermediary between the State and EDS to help define requirements for Replacement MMIS maintenance and/or modification efforts
- Attending meetings in which new projects are presented to understand the full intent of the project and discern potential areas of impact
- Analyzing stated requirements of projects or policy changes and identifying unanswered questions

- Reviewing requirements documentation and subsequent test results
- Researching identified issues from a business user or operational perspective
- Developing business relationships between systems and operational units and coordinating the communication to operations and the NC provider community

Senior Business Analyst Professionals

The primary responsibilities of the senior business analyst for the Operations Phase comprise the following:

- Researching business requirements to assist TFALs in technical design effort
- Working closely with the State, systems engineers, and operations units to analyze, design, and test system modifications and enhancements
- Comparing RFP requirements to modification designs to make sure requirements are met
- Assisting in updating documentation and change order status in iTRACE
- Acting as a liaison to State business leads
- Providing Medicaid and subsystem training as needed

Business Analyst and Testing Professionals

The primary responsibilities of the business analyst for the Operations Phase comprise the following:

- Identifying and defining business requirements
- Providing alternatives with cost/benefit justification and recommended solutions
- Completing detailed specifications for system modifications and enhancements
- Working closely with the State, systems engineers, and operations units to analyze, design, and test system modifications and enhancements
- Creating test cases and scenarios to verify State requirements
- Executing test cases, documenting problems, and verifying the corrections
- Providing Medicaid and subsystem training as needed
- Attending status review meetings with project team members and the State

Documentation Specialists

The primary responsibilities of documentation specialists for the Operations Phase comprise the following:

- Coordinating documentation to be included in iTRACE
- Developing and maintaining systems documentation
- Updating systems documentation in a timely manner and with the State's approval
- Distributing documentation update pages and instructions to State and EDS users
- Documenting complex procedures and processes
- Developing statements of understanding related to system change requests
- Maintaining the Edit/Resolutions Manual
- Maintaining the library of system documentation
- Providing assistance with written documentation in other functional areas
- Receiving, tracking, and responding to all State-initiated requests for documentation
- Periodically reviewing and approving the site administration manual documentation

Integrated Test Function Coordinator

The integrated test function coordinator will perform the following functions:

- Identifying and defining business requirements for the integrated test facility (ITF)
- Providing alternatives with cost/benefit justification and recommended solutions for ITF
- Completing detailed specifications for system modifications and enhancements to ITF
- Working closely with the State, systems engineers, and operations units to analyze, design, and test system modifications and enhancements to ITF
- Creating test cases and scenarios to verify State requirements and maintain ITF throughout the life of the contract
- Executing test cases, documenting problems, and verifying the corrections
- Providing Medicaid and subsystem training as needed on ITF requirements and functionality

- Attending status review meetings with project team members and the State

Data Analyst

The data analyst will perform the following functions:

- Attending deliverable walkthroughs to maintain quality and consistency of data definition and use
- Working with the business analysts to make sure reference data is consistently defined and used
- Working with the systems team to make sure data is consistently defined and used across the functional areas

Senior Technical Analyst and SME for MMIS and Multi-Payer

Mike Frost's primary responsibilities as the senior technical analyst/SME for MMIS and Multi-Payer for the Operations Phase comprise the following:

- For MMIS:
  - Validating that the Replacement MMIS is operational and meeting contractual performance standards
  - Coordinating development and implementation priorities and scheduling requests for maintenance and user support and modifications and enhancements
  - Assisting staff in the analysis and design of the Replacement MMIS maintenance and modifications
  - Designing, coding, testing, implementing, and documenting changes to the Replacement MMIS
  - Consulting with the State and other stakeholders on changes to the Replacement MMIS that support business processes
  - Providing in-depth knowledge of interfaces and common MMIS function points among DMA, DMH, DPH, and ORHCC
  - Maintaining a technical relationship with other State agencies, other EDS Medicaid accounts across the nation, insurance carriers, and federal agencies to facilitate the transfer of information electronically
  - Incorporating technology enhancements into the Replacement MMIS as appropriate
  - Participating in the development of test plans and test cases

  - — Participating in the review, research, and analysis of failed related test cases to determine the impact of enhancements and modifications on claims processing functionality within the Replacement MMIS
  - — Participating in periodic unit reviews of quality and performance
- For Multi-Payer
  - — Providing in-depth knowledge and expertise regarding the Replacement MMIS Multi-payer functionality, capabilities, and architecture
  - — Providing in-depth knowledge of interfaces and common multi-payer function points among DMA, DMH, DPH, and ORHCC
  - — Providing guidance and expertise during requirements determination to accurately document the needs of each division
  - — Serving as a liaison and supporting timely communication among all agencies
  - — Reviewing the technical design documents to verify that designs accurately address each division's requirements
  - — Setting the approach for use of common modules that can be leveraged across divisions and payers
  - — Assisting staff in the analysis and design of the Replacement MMIS maintenance and modifications

Senior Technical Analyst and SME for HIPAA

Stacy Barber's primary responsibilities of the senior technical analyst/SME for HIPAA for the Operations Phase comprise the following:

- Providing guidance and expertise to the State to assist in maintaining compliance with federally mandated HIPAA regulations
- Serving as a liaison to the State and EDS operational units
- Reviewing and approving system modification activities that impact HIPAA
- Validating that system requirements and system design components adhere to and accurately reflect HIPAA standards and regulations
- Participating in agreed-on HIPAA-related meetings, seminars, and conferences such as North Carolina Healthcare Information and Communications Alliance (NCHICA)
- Participating in standards-setting organizations, such as X12, to monitor the impact of standards changes to the State's HIPAA implementation and to assist in the development of future HIPAA standards

- Monitoring federal regulations for changes in HIPAA requirements and for new HIPAA requirements
- Working with other EDS Medicaid clients to share ideas and approaches related to HIPAA and determine how these solutions can most appropriately be used for the benefit of the State
- Interfacing with trading partners in the interpretation of HIPAA requirements
- Coordinating the development and implementation of HIPAA-related modifications and enhancements to the Replacement MMIS
- Producing HIPAA-related function and design specifications
- Designing, coding, testing, implementing, and documenting HIPAA-related changes to the Replacement MMIS
- Consulting with the State and other stakeholders regarding the impact of HIPAA-related modifications and enhancements on the Replacement MMIS and existing business processes
- Participating in the development of test plans and test cases
- Participating in the review, research, and analysis of failed HIPAA-related test cases to determine the impact of claims processing functionality within the Replacement MMIS

LAN/WAN Manager

The primary responsibilities of the LAN/WAN manager for the Operations Phase comprise the following:

- Planning, coordinating, and directing the activities of the network infrastructure group to support network availability
- Overseeing the team and activities involved in monitoring, isolating, resolving, and circumventing network problems
- Advising management and interfacing with the State concerning problems affecting network performance
- Defining present network needs and planning for future requirements by investigating, evaluating, recommending, and upgrading hardware and software to meet system requirements
- Serving as the primary point of contact with the State to facilitate the implementation of enhancements and upgrades to the network
- Preparing and maintaining documentation for current network platform, backup, and printing procedures

- Resolving complex hardware and software problems, performing trend analysis, and creating tools to prevent system interruption
- Managing the installation of new computer hardware and software for account staff
- Providing technical support and training to users
- Troubleshooting computer problems with EDS software
- Administering security procedures
- Establishing processes and procedures for inventory and accounting management
- Submitting purchase orders for hardware and software
- Monitoring software and hardware inventory
- Designing and implementing automated processes to keep hardware, system and application software, and network components operational
- Defining and implementing metrics that measure system performance to make sure design specifications are met

Database Administrator (DBA)

Terry Hensley's primary responsibilities of the DBA for the Operations Phase comprise the following:

- Creating efficient database technical designs that meet analysis and business design specifications, performance and platform requirements, and DBA organizational standards
- Developing policies and procedures for maintaining the security and integrity of the database
- Designing data models, performing imports, creating and maintaining database schemes, performance tuning and capacity planning, monitoring the database for potential problems, and creating user reports
- Working with other systems and operations business units to maximize the value of the data and determine the impact of changes on other systems
- Performing database maintenance and modifications
- Establishing and maintaining processes and procedures as well as standards related to database management in accordance with the State's technical architecture
- Identifying, analyzing, and documenting database system interfaces and database performance-related criteria

- Handling database change management
- Performing database space management and managing database products and utilities
- Supporting and reviewing data dictionary usage

Network Specialist

The primary responsibilities of the network specialist for the Operations Phase comprise the following:

- Serving as the primary point of contact for network-related issues
- Monitoring network performance
- Providing network status as scheduled or required to management and to affected users
- Troubleshooting network problems, determining appropriate responses, and implementing the solution
- Preparing network-related recommendations
- Assisting users with network connectivity issues

Technical Help Desk Analyst/Desktop Support

The primary responsibilities of the help desk analyst (technical) for the Operations Phase comprise the following:

- Responding to telephone inquiries from internal users regarding technology and application issues and problems
- Assisting internal users with various software, hardware, and network concerns and questions
- Troubleshooting and escalating problems and notifying users of the resolution

UNIX Administrator

The primary responsibilities of the UNIX administrator for the Operations Phase comprise the following:

- Implementing and supporting local area network (LAN) hardware and software specifically for the UNIX based servers and environment
- Analyzing workflow and procedures to recommend operational support tools and technologies
- Maintaining workstation and server data integrity by evaluating, implementing, and managing appropriate software solutions

- Serving as a liaison between the State, suppliers, and other technical groups to resolve network and hardware problems
- Analyzing performance problems and recommending solutions to enhance functionality, reliability, and usability
- Participating on project teams in the implementation of new or upgraded designs
- Implementing operational support standards and procedures relating to change management, performance management, and security
- Recommending changes and improvements to existing standards
- Implementing a schedule of system backups and database archive operations to support data and media recoverability
- Developing site administration documentation
- Providing user orientation on hardware, software, and network operations

Windows Administrator

The primary responsibilities of the Windows administrator for the Operations Phase comprise the following:

- Designing, testing, implementing, and optimizing portions of LAN, wireless LAN (WLAN), campus area network (CAN), and WAN networks that enable and support business operations
- Investigating, analyzing, and recommending solutions to performance problems to enhance functionality, reliability, and usability
- Analyzing State workflow and procedures to recommend operational support tools and technologies to satisfy State needs
- Maintaining workstation and server data integrity by evaluating, implementing, and managing appropriate software and hardware solutions
- Analyzing network structures to maintain stability of connections
- Analyzing system service irregularities and disruptions and identifying improvement recommendations
- Acting as a liaison between the State, suppliers, and other technical groups to resolve complex network and hardware problems
- Advising management and the State on security-related issues
- Participating on project teams in the implementation of new or upgraded designs

- Designing and implementing migration strategies
- Designing, developing, and implementing operational support standards and procedures related to change management, performance management, and security
- Analyzing and recommending changes and improvements to existing standards
- Enabling data and media recoverability by implementing a schedule of system backups and database archive operations
- Performing problem and task analysis and trending
- Keeping abreast of emerging operational support technologies and industry trends
- Assisting in the evaluation, testing, and recommendation of hardware, software, and network configuration based on State needs

Modernization Team Technical Leader

Please refer to the position description for the Systems Maintenance Technical Leader for responsibilities assigned to the technical leader position.

Senior MMIS Application System Architect

The primary responsibilities of the Senior MMIS Application System Architect for the Operations Phase comprise the following:

- Serving as the senior technical advisor on the most specialized phases of system design, implementation, analysis, and programming
- Supporting systems engineers in developing sound architecture and distribution strategies, taking into account total system requirements, advanced principles, theories, and concepts to develop plans, strategies, and tools to resolve issues
- Communicating technical alternatives and new technologies to management and recommending action
- Providing technical direction for the account
- Directing the modifications to the base system to facilitate future implementations
- Enforcing policies that maintain the integrity of the data model
- Serving as a technical expert during product presentations to the State
- Providing leadership and advice to the entire organization on technology issues that optimize delivery capabilities

Project Manager

The project manager's primary responsibilities will comprise the following:

- Measuring and monitoring daily progress to deliver project requirements that meet or exceed expectations in accordance with project goals and objectives
- Maintaining the program management infrastructure by coordinating with other project managers regarding project plans, schedules, resource requirements, task orders, and benefit and value propositions
- Monitoring and managing project staffing needs
- Enabling the ongoing execution of risk management activities
- Attending State meetings as requested
- Providing input to project teams and management for ongoing operations and new project activities
- Monitoring project performance by using earned-value or a comparable process
- For active projects and identified account activities, making sure project standards are maintained for each project to collect, store, and disseminate project information, reports, and project communication
- Providing integration management by managing a portfolio of plans, such as a risk management plan, a quality management plan, a change and configuration management plan, and staffing management plans
- Managing multiple-stakeholder, multiple-entity projects individually and across multiple project participants
- Formulating contingency plans in areas such as schedule revisions, resource adjustments, and areas of risk
- Monitoring, assessing, and maintaining appropriate reporting on metrics such as performance report cards data
- Overseeing ongoing configuration and change management activities
- Working with the Quality Management team to make sure appropriate quality monitoring and control activities are followed

Work Planner

The work planner will perform the following functions:

- Developing and maintaining project work schedules, including maintaining schedules, resource allocation, cost controls, and task predecessor/dependency relationship management

- Working closely with the project managers, systems manager, deputy account manager, and quality assurance manager to make sure all tasks are in the work plans and status is accurately reflected
- Identifying and monitoring each project's critical path
- Providing project status reports and metrics as required by contract and other additional reports as requested by the account manager and project managers

Project Management Specialist

The primary responsibilities of the project managers for the Operations Phase comprise the following:

- Coordinating project-related tasks
- Tracking deliverables
- Coordinating team assignments and meetings
- Maintaining vendor relations
- Coordinating with users to obtain information needed for DDI
- Conducting walkthroughs
- Conducting deliverable reviews as dictated
- Conducting project kickoff meetings
- Performing other research-related duties pertinent to the project
- Performing other related work as required

PMO Services

Performance Metrics Analyst

The primary responsibilities of the metrics analyst for the Operations Phase comprise the following:

- Consolidating operational performance metrics for the dashboard and continued monitoring and review
- Maintaining the dashboard and related reports
- Creating, consolidating, reviewing, and reporting on operational and project-related benchmarks

50.2.5.5 Communications Approach

RFP Reference: 50.2.5.5 Communications Approach, Pages 278-279; Joint DDI Communications Plan CDRL, Page 264

Open, consistent, and informative communication is essential to accomplishing the internal and external changes associated with deployment and subsequent modification of the Replacement MMIS. Our robust communication approach fosters well-defined interaction among the project's stakeholders, and it is built on a foundation of trust from many years of working with the State.

Vital to the success of this undertaking is the effective communication among EDS and State stakeholders and leadership. As the current fiscal agent, EDS has worked diligently with State personnel to achieve effective working relationships with the Division of Medical Assistance (DMA) and the Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH). We will continue to build on these relationships and look forward to the addition of the Division of Public Health (DPH) and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC). Working together will enable a smooth implementation of and transition to the Replacement MMIS.

Because communication is such a critical part of this implementation effort, EDS will develop a joint communication plan with the State after contract award. As required in the RFP, this activity will involve EDS' preparation of a communication plan and then collaboration between the State and EDS to prepare the joint communication plan. Working with the State, we will determine what communication to send, the audience, the timing, and the method so that our messages are clear, concise, and understood by the affected parties.

Communicating With DMA, DMH, DPH, and ORHCC

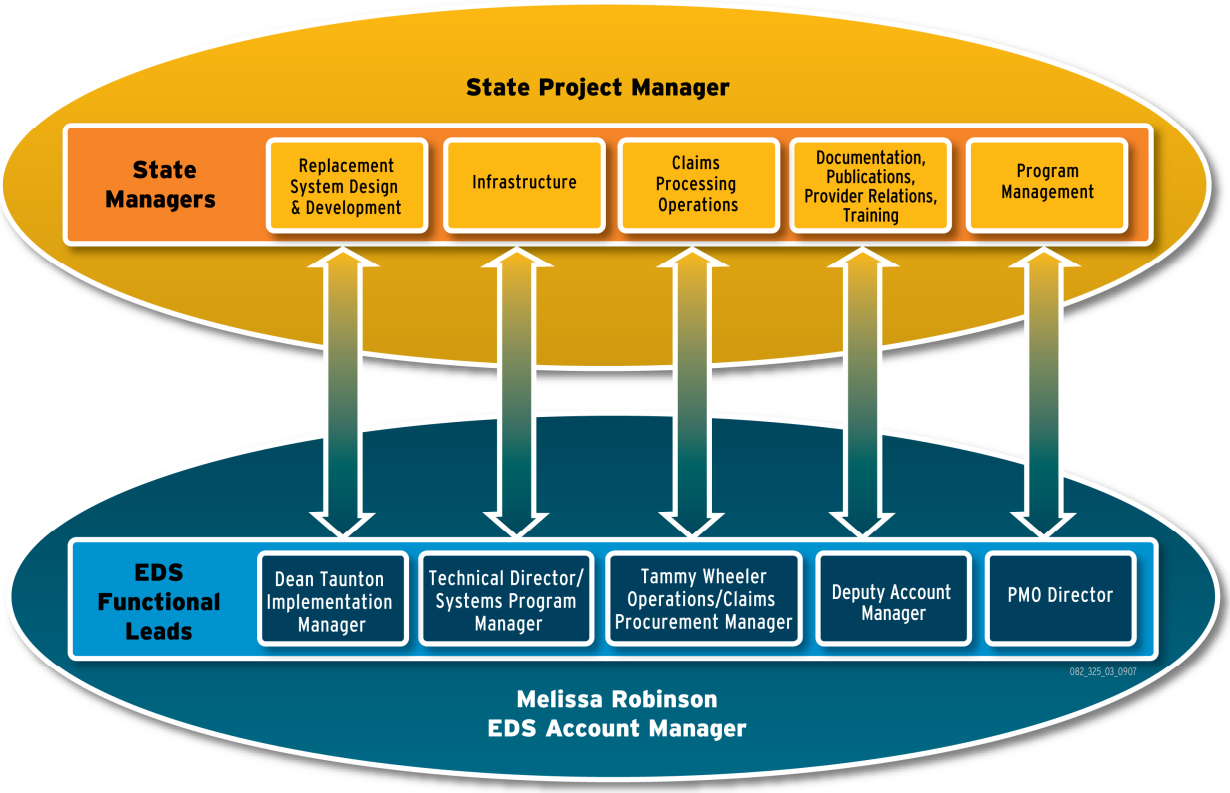
Frequent communication—scheduled and as needed—with State staff will be a key component of our approach to project management during the DDI and Operations phases. Our communication approach includes numerous scheduled interactions for such purposes as the review and submission of deliverables, project planning, and project status checks. In addition to these scheduled checkpoints, project staff from the four divisions using the Replacement MMIS—DMA, DMH, DPH, and ORHCC—and EDS will work together daily to perform the many tasks of the DDI and Operations phases. In this section, we describe the

most common approaches to communication with State staff from the four divisions.

We have noted that the RFP requires all communication with the State to go through the Office of MMIS Services (OMMISS). We will implement the communication strategy described in this section with the involvement and permission of the OMMISS.

As illustrated in the following exhibit, Functional Leads, each State functional manager will have a direct functional lead counterpart in our service delivery organization.

Functional Leads



Every State task manager has a counterpart EDS functional lead, providing program integration and speed to service and value.

These leads will respond to their State counterparts for the following:

- Working daily problem-solving and issue resolution
- Establishing mutual goals and objectives for their areas of responsibility
- Developing technical solutions to issues
- Establishing close relationships built on mutual trust and respect

The purpose of this functional structure gives the State the ability to have a real-time contact person or organization that can respond to the evolving needs of their business. Over the years, EDS has built a relationship model that functions

daily to accomplish this task. This interaction between the State functional managers and our functional leads is one of the key features of our solution. We will cultivate and thrive on strong relationships among these managers to facilitate rapid reaction to issues and a clear common ground from which to continuously improve our service.

While most issues or enhancements will be worked within the vertical relationship between two managers, there are occasions requiring cross-functional integration. In these instances, Account Manager Melissa Robinson will assume the integration responsibilities and make sure the issues are properly addressed.

Just as the counterpart to our account manager is a highly experienced individual, the counterparts to our functional leads are experts in their fields who interact on a planning, policy, and oversight level with our leads. Our leads will maintain a constant dialogue with State functional leads to make sure we are working the right problems and providing the right service at the right time.

We envision the following three primary interactions with State personnel:

- Regularly scheduled meetings between State and EDS personnel
- Periodic reports and publications
- Ad hoc communication exchanges among the organizations

Taken together, these three approaches will help us keep the State fully informed of the status of the Replacement MMIS project, communicate issues and concerns early, and make the information needed for decision-making available to the decision-makers.

Communication Management

EDS brings a robust communication and coordination planning and delivery process to the Replacement MMIS project. This process provides for well-defined communication between key stakeholders, such as the State, the OMMISS project team, EDS interChange team, external stakeholders, and the EDS and project management staff. We are committed to open, consistent, and informative communication, which is essential in accomplishing the internal and external changes associated with deployment and subsequent modification of the Replacement MMIS.

Equal to this commitment is our focus on maintaining uninterrupted service to the current and expanded MMIS user community. An integral part of our communication approach is the training plan and deployment of user training necessary to facilitate a smooth transition from the current legacy system to the new, interChange-based Replacement MMIS.

Our structured approach to communication planning and stakeholder management is a critical function in any project. EDS' project managers, who are

responsible for DDI planning and operations, will focus on developing well-defined communication plans and keeping the State well informed.

Mutual communication planning and ongoing stakeholder coordination is a core function of our joint project management team. The larger project team, staffed by State and EDS project management professionals, will closely integrate their work with the other stakeholders to plan and deliver effective project communication. Our goal is to make sure the internal and external stakeholders are represented and to implement the project with minimal impact to the MMIS user community. A tool we will use to reach that goal is the stakeholder analysis matrix, which we will incorporate into the joint communication plan. This matrix will identify who the stakeholder are, their involvement, degree of information needed, and their areas of concern.

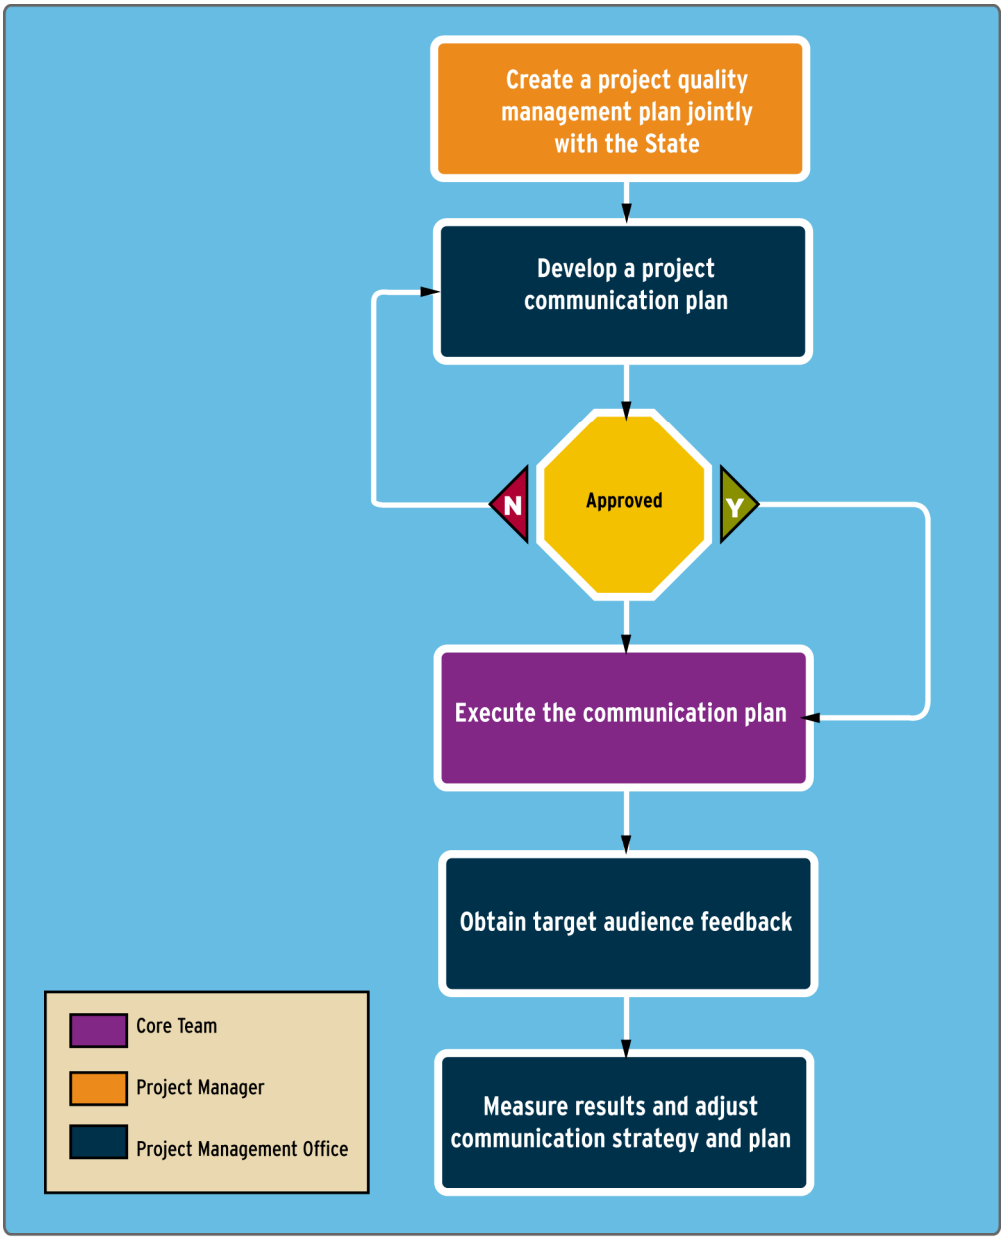
As we learn more about the stakeholders' needs, we will work closely with the State to update communication plans and project activities. This approach of developing well-defined communication plans will continue through the Operations Phase.

In working with other states to deliver interChange MMIS solutions, we have found that addressing the various communication needs of individual stakeholder groups at different points of the program requires an overarching communication framework that includes communication and coordination principles, strategies, approaches, and deliverables. This in turn provides the foundation for tactical communication activities that address specific areas of need concerning the initiative, such as

- Project-level communication
- Governance communication
- External communication
- Operations communication

EDS and State project teams will work together to effectively manage project communication. The following exhibit, Effective Communication Management, demonstrates the flow of communication management tasks.

Effective Communication Management



Effective communication management requires an understanding of project scope and audience and a plan for delivering information and receiving feedback.

Communication Plan

The Project Management Office (PMO) director will update the project communication plan. Working in collaboration with the State, a joint communication plan will be developed. We recognize that the State represents not a single audience but a broader collection of internal and external stakeholders, and that different State divisions will have different needs.

Therefore, the communication plan will document each audience and its communication and coordination needs, the vehicles by which each audience will be reached, the kinds of information and messages required by each audience, how the information will be prepared, and how and when it will be delivered.

The joint communication plan will set forth standards for status reporting mechanisms and protocols for information distribution. The plan will be a working document that presents guidelines for repeatable methods of communication. Effective communication guidelines require regularly scheduled reviews to make sure that, as business and communication needs change, the document is revised for continuity of purpose, design, and audience. This can be readily accomplished because it will be stored in iTRACE, our browser-based project information repository. The following subsections outline an example of a communication plan.

Purpose

Communication among the individuals fundamental to a project must be clear and straightforward and carry a consistent message. The communication plan will be used during the Start-Up Phase to document the types of communication that will occur throughout the project and how each team member will be affected by the communication event. The plan also will set forth standards for status reporting mechanisms and protocols for communication delivery.

Objectives

The communication plan will increase stakeholder understanding, commitment, and involvement by meeting the following objectives:

- Provide timely, accurate, appropriate, and detailed information about the Replacement MMIS project
- Create regular checkpoints for feedback to assess the effectiveness of the communication and adjust the plan accordingly
- Communicate both minor and major milestones of the project, status, and issues

The communication plan will serve as a mechanism for making sure stakeholders receive the information they need when they need it, as well as making them aware of their responsibilities for communicating during the DDI and Operations phases of the project. The plan will identify regularly scheduled meetings and communication, as well as project reporting procedures to relay pertinent information to the groups included in the plan.

The communication plan will accomplish the following for the Replacement MMIS project:

- Identify the stakeholder groups affected by communication events
- Identify the most common communication events that will occur throughout the implementation and raise awareness of these events among the stakeholders
- Identify the frequency and the media for each communication event
- Identify how progress will be measured as we reach milestones in the project to acknowledge and celebrate achievements throughout the implementation process and into operations
- Identify the standards that will be adopted to make communication more efficient and measurable
- Provide stakeholders with relevant information concerning progress issues and the schedule of project activities
- Provide stakeholders with the "who, what, when, why, and how" of relevant and critical issues
- Encourage stakeholders to accept and promote project decisions and activities
- Reduce the level of misinformation and misunderstanding about the project
- Provide stakeholders with information concerning decisions, delays, and changes in the implementation process

Stakeholders

The communication plan will service and support State and EDS affected parties. It will identify the people and groups with whom we need to communicate to achieve our objectives over the course of the implementation. When developing our communication strategy, it is important that we recognize the various interests, needs, and differences among stakeholders, such as location, title, and job responsibility. During project implementation, the State and EDS will define each of the specific parties that make up each of the teams.

Roles

The communication plan will identify implementation team members and document their roles and responsibilities.

Effective Communication Vehicles

Several communication vehicles we and other State clients have found to be effective will be used to communicate the Replacement MMIS project's activities, including the following:

- **Status/project updates—**Face-to-face meetings to openly communicate project status, work plan task progress, and key issues
- **Training sessions—**Sessions to train project stakeholders so they fully understand and can access and use the MMIS processes that affect them
- **Project e-mails or memos—**Written correspondence relaying project information, delivered by e-mail or formal memorandum
- **Progress reports—**Written reports that document project status, including key issues and work plan task progress
- **Project briefings—**Face-to-face meetings to openly communicate project status and key issues
- **Work plan updates—**Updates to the work plan that identify and define each project task, subtask, activity, and completion date
- **Issue/decision log—**A written record that documents project problems and the resolution of the problems
- **Project deliverable walkthroughs—**Face-to-face joint reviews with project team members to examine project deliverables to facilitate understanding and expedite the approval process
- **Test result walkthroughs—**Face-to-face joint reviews with project team and testing participants to examine test results to facilitate understanding of the test approach and test results
- **Policy updates—**Updates issued by the State to alert stakeholders of new or revised policy
- **iTRACE—**An online tool that documents and communicates the activities related to the project, providing a common storehouse for the work products completed during each project task
- **Other reports—**Written reports containing required project data, defined as the project progresses and stakeholder informational needs are identified, as defined up front by the PMO
- **Provider relations meetings—**Face-to-face informational meetings between the provider community and EDS staff to relay information pertaining to the Replacement MMIS
- **Meeting schedules—**A listing of planned meetings used to inform project stakeholders of project meetings where their attendance is required
- **Project updates—**Monthly written updates to keep stakeholders informed about project happenings

- **Informal discussions—**Daily casual communication to supplement scheduled meetings, such as impromptu meetings, discussions in the corridor, and telephone calls—including appropriate project follow-up
- **Remittance advice alert—**Text added to the provider remittance advice to alert providers regarding critical program information

Communication Standards

The communication plan will create standards that set accepted norms for communication and lead to greater awareness of the expectations of the team and project leaders. The general rules for meetings include the following:

- **Frequency—**Regularity with which the meeting is held
- **Format—**Whether the meeting is by teleconference or in person
- **Attendees—**The intended participants for the meeting
- **Responsibility—**Who is responsible for calling and facilitating the meeting
- **Meeting output—**Documentation expected from the meeting, which will be published for immediate review and finalization in iTRACE

Other communication guidelines will incorporate standards for meeting protocols and agendas, scheduling meetings and conference calls, and recording meeting minutes into the communication plan.

General Communication Guidelines

The following guidelines, EDS' standard practice, are provided to govern communication development and execution activities:

- Acknowledge e-mails with an answer, a date and time when there will be an answer, or a referral to someone who can get the answer within the same or the next business day.
- Acknowledge written correspondence.
- Return telephone calls in a timely manner.
- Present messages in a positive and fact-based manner.
- Make the message consistent across every stakeholder group, but tailored to meet the needs of the particular stakeholder.
- Communicate the message in a manner that is understandable to all audiences.

Following these guidelines allows information to be presented clearly and concisely and helps eliminate delays and misunderstanding.

The communication plan will document the most common communication events and the purpose they serve during project implementation. As demonstrated in the following table, Internal and External Communication, the plan will include information about how the events will be recorded, the media chosen to distribute documentation, the frequency of the events, and the person accountable for making sure the process is completed.

Internal and External Communication

Type (1)	Description/ Purpose (2)	Attendees/ Stakeholders (3)	Distribution (4)	Media (5)	Timing (6)	Standard (7)
Type of communication	Purpose and timeliness, such as event-driven or regularly scheduled	Who will participate	Distribution of agenda and meeting minutes	How information will be distributed	When the communication will occur	

The following table, Communication Matrix, will guide the planning of immediate and long-term communication needs. It contains a list of each stakeholder group and its communication needs.

Communication Matrix

Group	Stakeholder Involvement	Information Needed	Areas of Concern	Types of Communication	Frequency	Responsible Party
Identify the stakeholder	Degree of involvement					

Approach to Incident Reporting and Escalation

During DDI and the Operations phases of the contract, EDS will notify the State immediately if a critical problem occurs. We will report noncritical problems through the weekly status report to the State. We will create an issue-tracking log and assign each issue to an owner for resolution. The State and EDS will determine points of contact. We will establish communication protocols for incident reporting, escalation, and resolution.

Communication Management Activities

The following table, Communication Management Activities and Tasks, identifies the activities within the communication management tasks.

Communication Management Activities and Tasks

Activity	Tasks
Establish a project communication strategy	• Identify and confirm target audiences and communication needs and requirements • Identify additional communication objectives • Analyze historical communication mechanisms performed • Review any lessons learned • Document the communication management strategy in other management plans, as appropriate
Develop a project communication plan	• Complete communication plan template with appropriate elements that describe each communication item • Submit to the State for approval • Review with interChange implementation stakeholder representatives and provide them with a copy of the project communication plan • Define and document project communication measures for use in measuring project communication effectiveness
Execute the communication plan	• Receive status report format and content approval before the commencement of status reporting • Distribute information by means such as meetings, reports, and iTRACE • Communicate effectively with the State and other project stakeholders through status reports and meetings • Post current status reporting and meeting minutes on iTRACE to keep them as an audit trail of status
Obtain target audience feedback	• Capture target measures that were defined in the project communication plan • Survey target audience • Capture feedback for formal and informal reviews
Measure results and adjust the communication strategy and plan	• Analyze feedback using target measures • Identify and document any new issues or risks in iTRACE so that everyone with access can view the information • Document lessons learned and success stories • Use the feedback to improve the communication strategy and plan • Submit the new strategy and plan to the State for approval and put into use

The State-approved joint communication plan will be available in iTRACE and will contain a schedule of communication activities and a calendar of communication and coordination events. It also will contain a project contact list.

We will integrate the communication plan into the overall project plan, which will reflect and incorporate visible communication and coordination activities and deliverables. During the planning phase of the Replacement MMIS project, we will work with the State to refine and complete the communication plan and then change it as appropriate for project communication during operations.

Building on Current Successful Approaches

In the DDI and Operations phases of the Replacement MMIS project, we propose a continuation and expansion of communication approaches that have proven helpful in our current contract with the State.

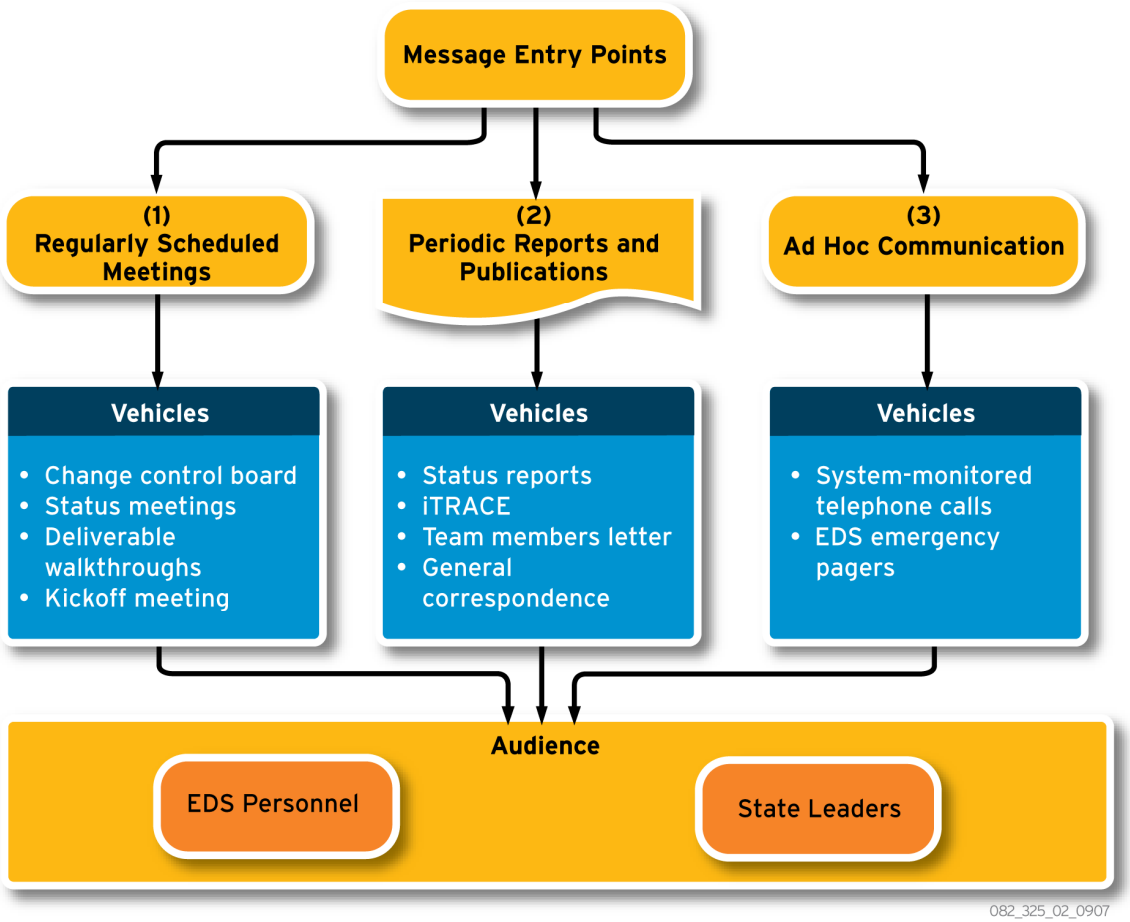
The first class of communication tools is regularly scheduled meetings. Our current approach includes the following scheduled meetings:

- A monthly meeting with the State director and the EDS account manager
- Participation on a monthly basis at one of the weekly State Medicaid assistant director meetings, allowing for open dialogue on issues, concerns, and new initiatives
- For DMH, a weekly meeting (called the Core Meeting) to focus on the specific needs of DMH, an approach we believe will work well for DPH and ORHCC

Besides these existing meetings, we propose to attend meetings with the State and other vendors that are supporting State programs to work through implementation and interface needs of expanded programs and services feeding into the Replacement MMIS. This is current practice today, as EDS meets with Value Options and Affiliated Computer Services (ACS) to discuss DRIVE, SMart PA, PA PHarmacy, and other projects. As is the current practice, we will continue to do everything possible to work with and support the success of State initiatives that require the assistance of other vendors.

The following exhibit, Communication Events, describes the events needed to complete the Replacement MMIS implementation and provide ongoing operational support.

Communication Events



Our three primary communication interfaces enable an inclusive, comprehensive, and timely exchange of information with State staff.

The second class of communication tools includes periodic reports and publications. These documents may be paper-based, sent by e-mail, or published in iTRACE, depending on the type of communication and the project's phase.

The third class of communication that will interface with the State includes ad hoc tools such as system-monitored telephone calls and communication by our cell phones or pagers. These tools are effective when the State or EDS must contact key leaders in either organization. This communication may be necessary in the event of a catastrophic system or telecommunications failure, or in the event of a significant State event that has an immediate effect on our ability to complete our tasks under the Replacement MMIS contract.

Of the many contract requirements that will support the DDI and Operations phases, we expect effective communication with the State and other stakeholders to be the easiest for us to meet. We can facilitate many kinds of communication through the solid working relationships our North Carolina team has already

established with the State. We have built trust and respect over many years of working together and are ready to build the new system on this solid foundation.

To demonstrate our successful approach to project communication, we provide a sample excerpt from the Kentucky MMIS Stakeholder Communication and Coordination Plan following this page. As stated in RFP section 50.2 Technical Proposal Requirements, this sample does not count toward any page limit.

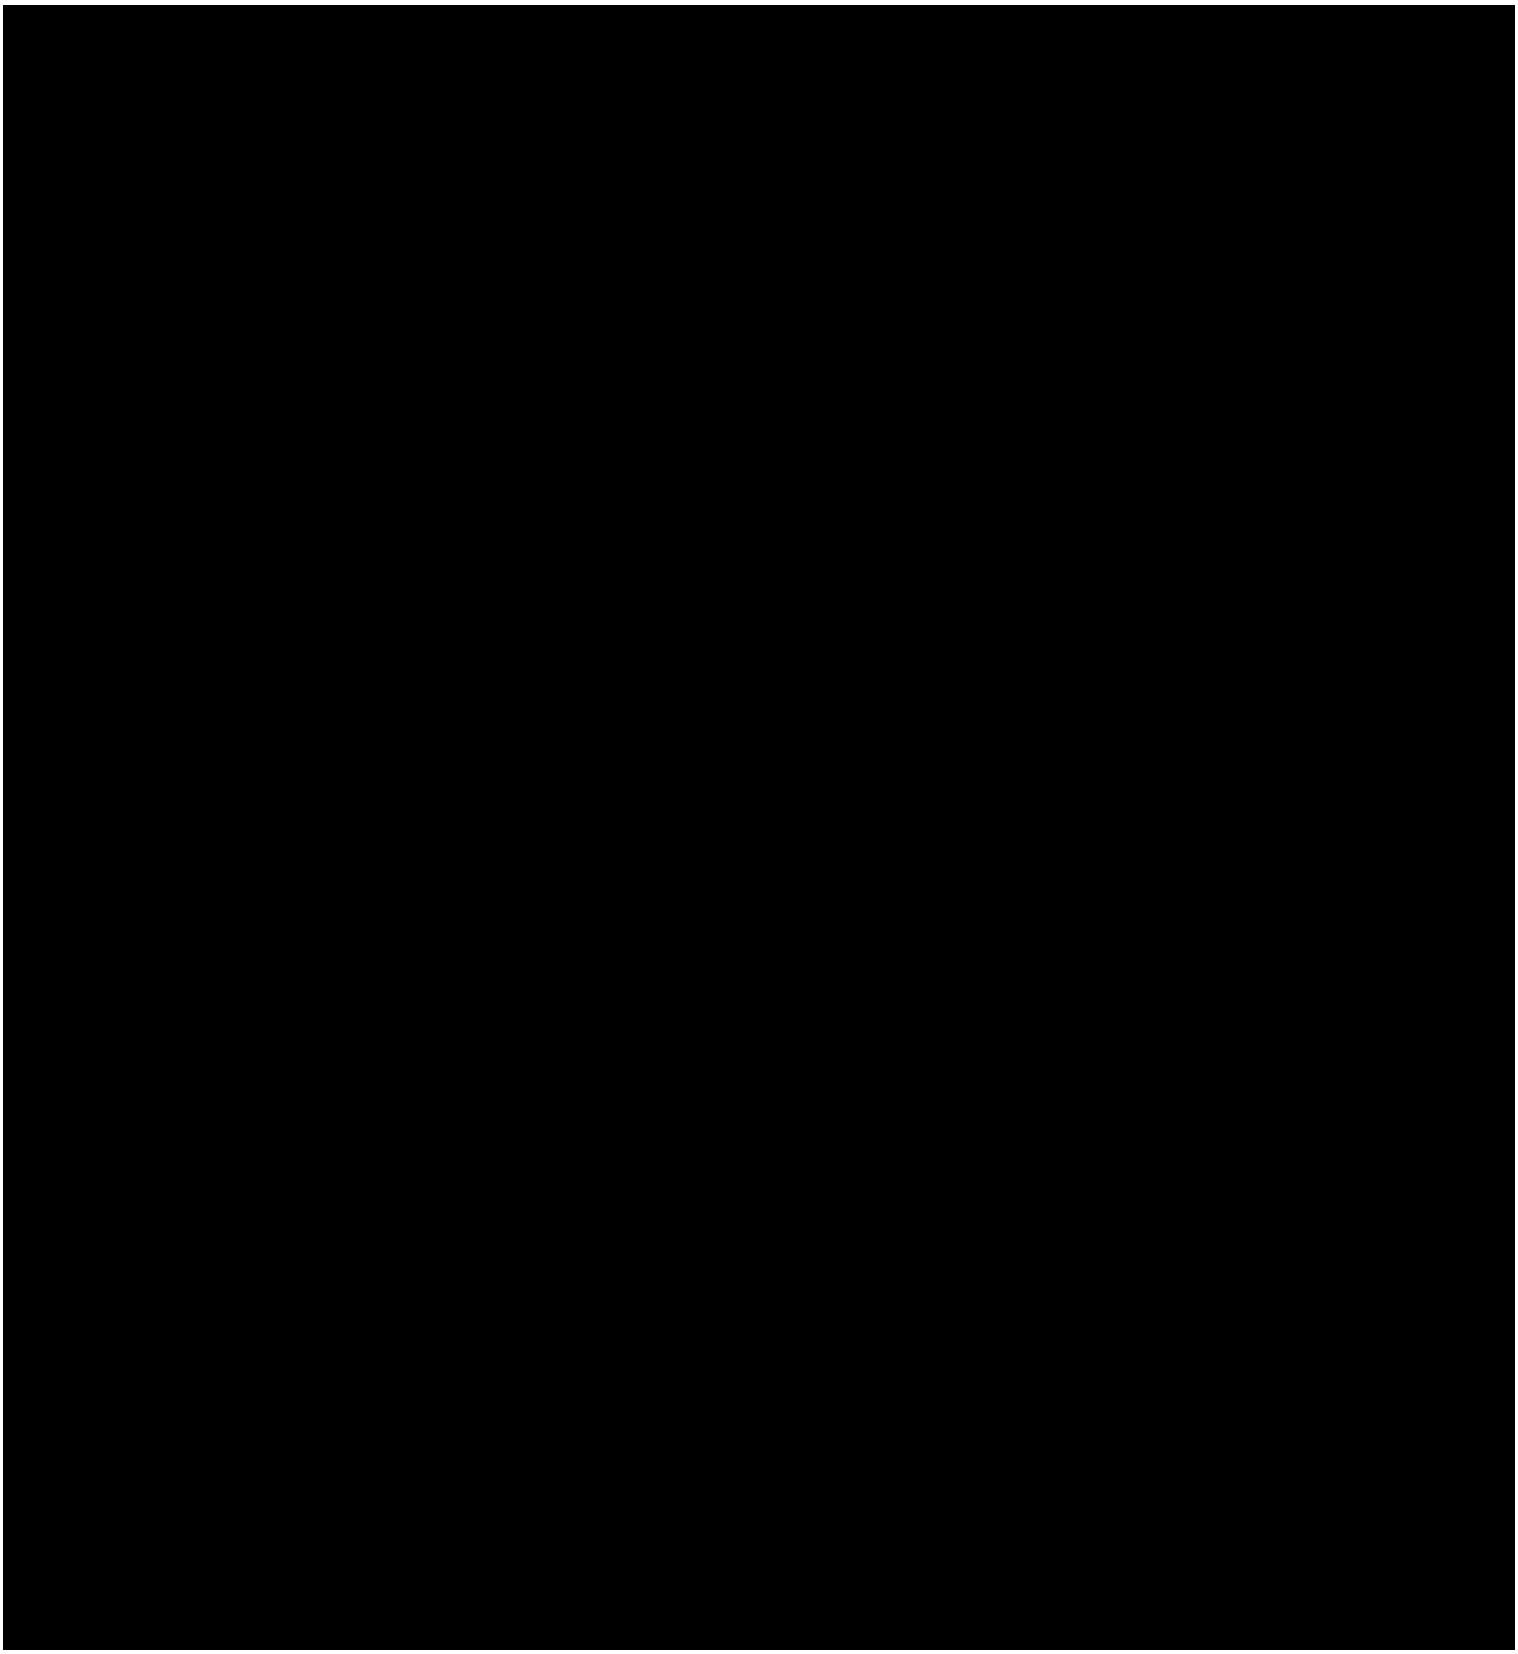
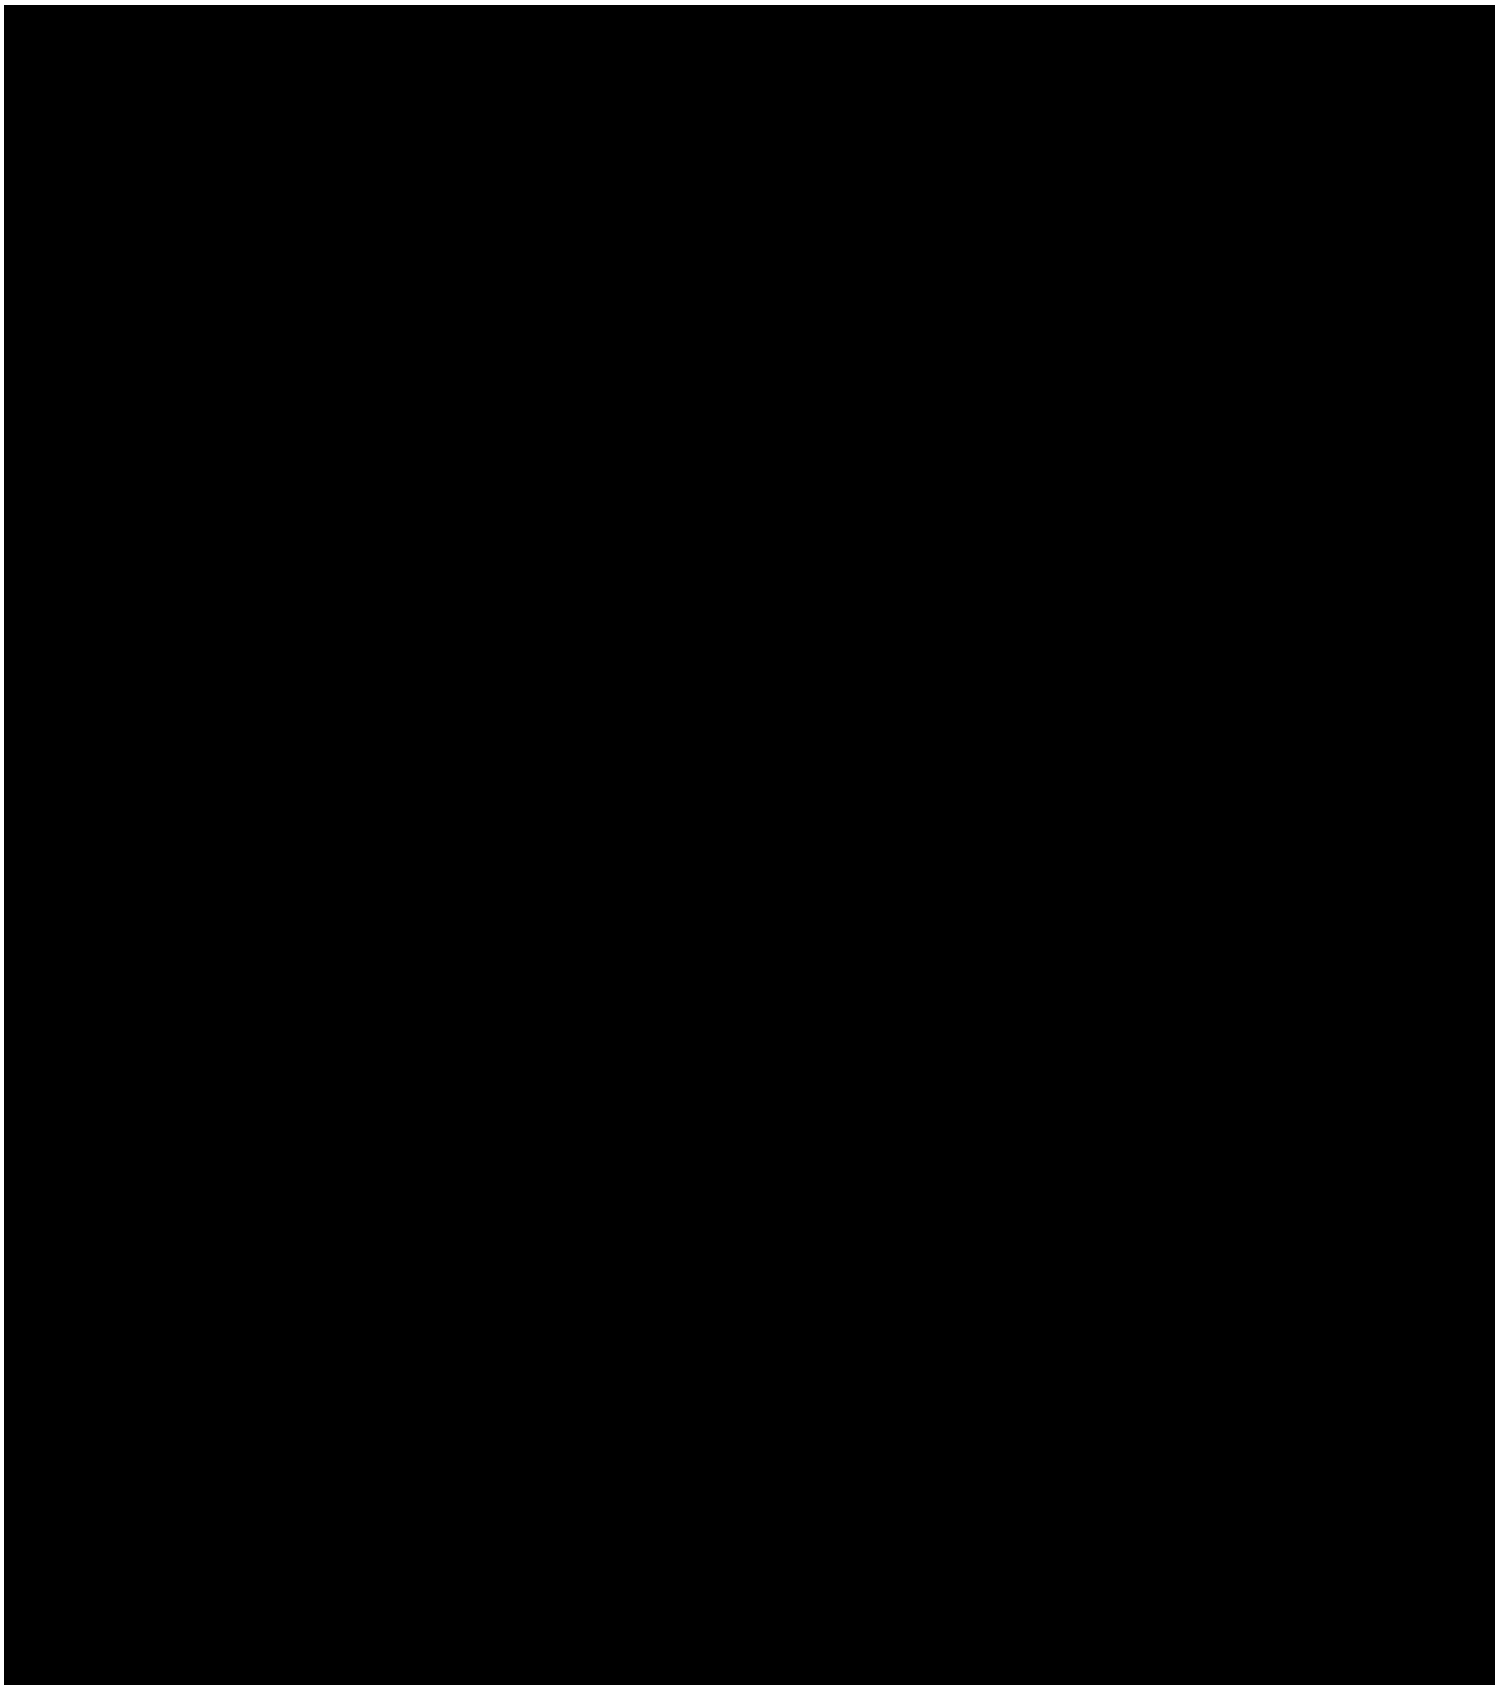
Stakeholder Communication and Coordination Plan

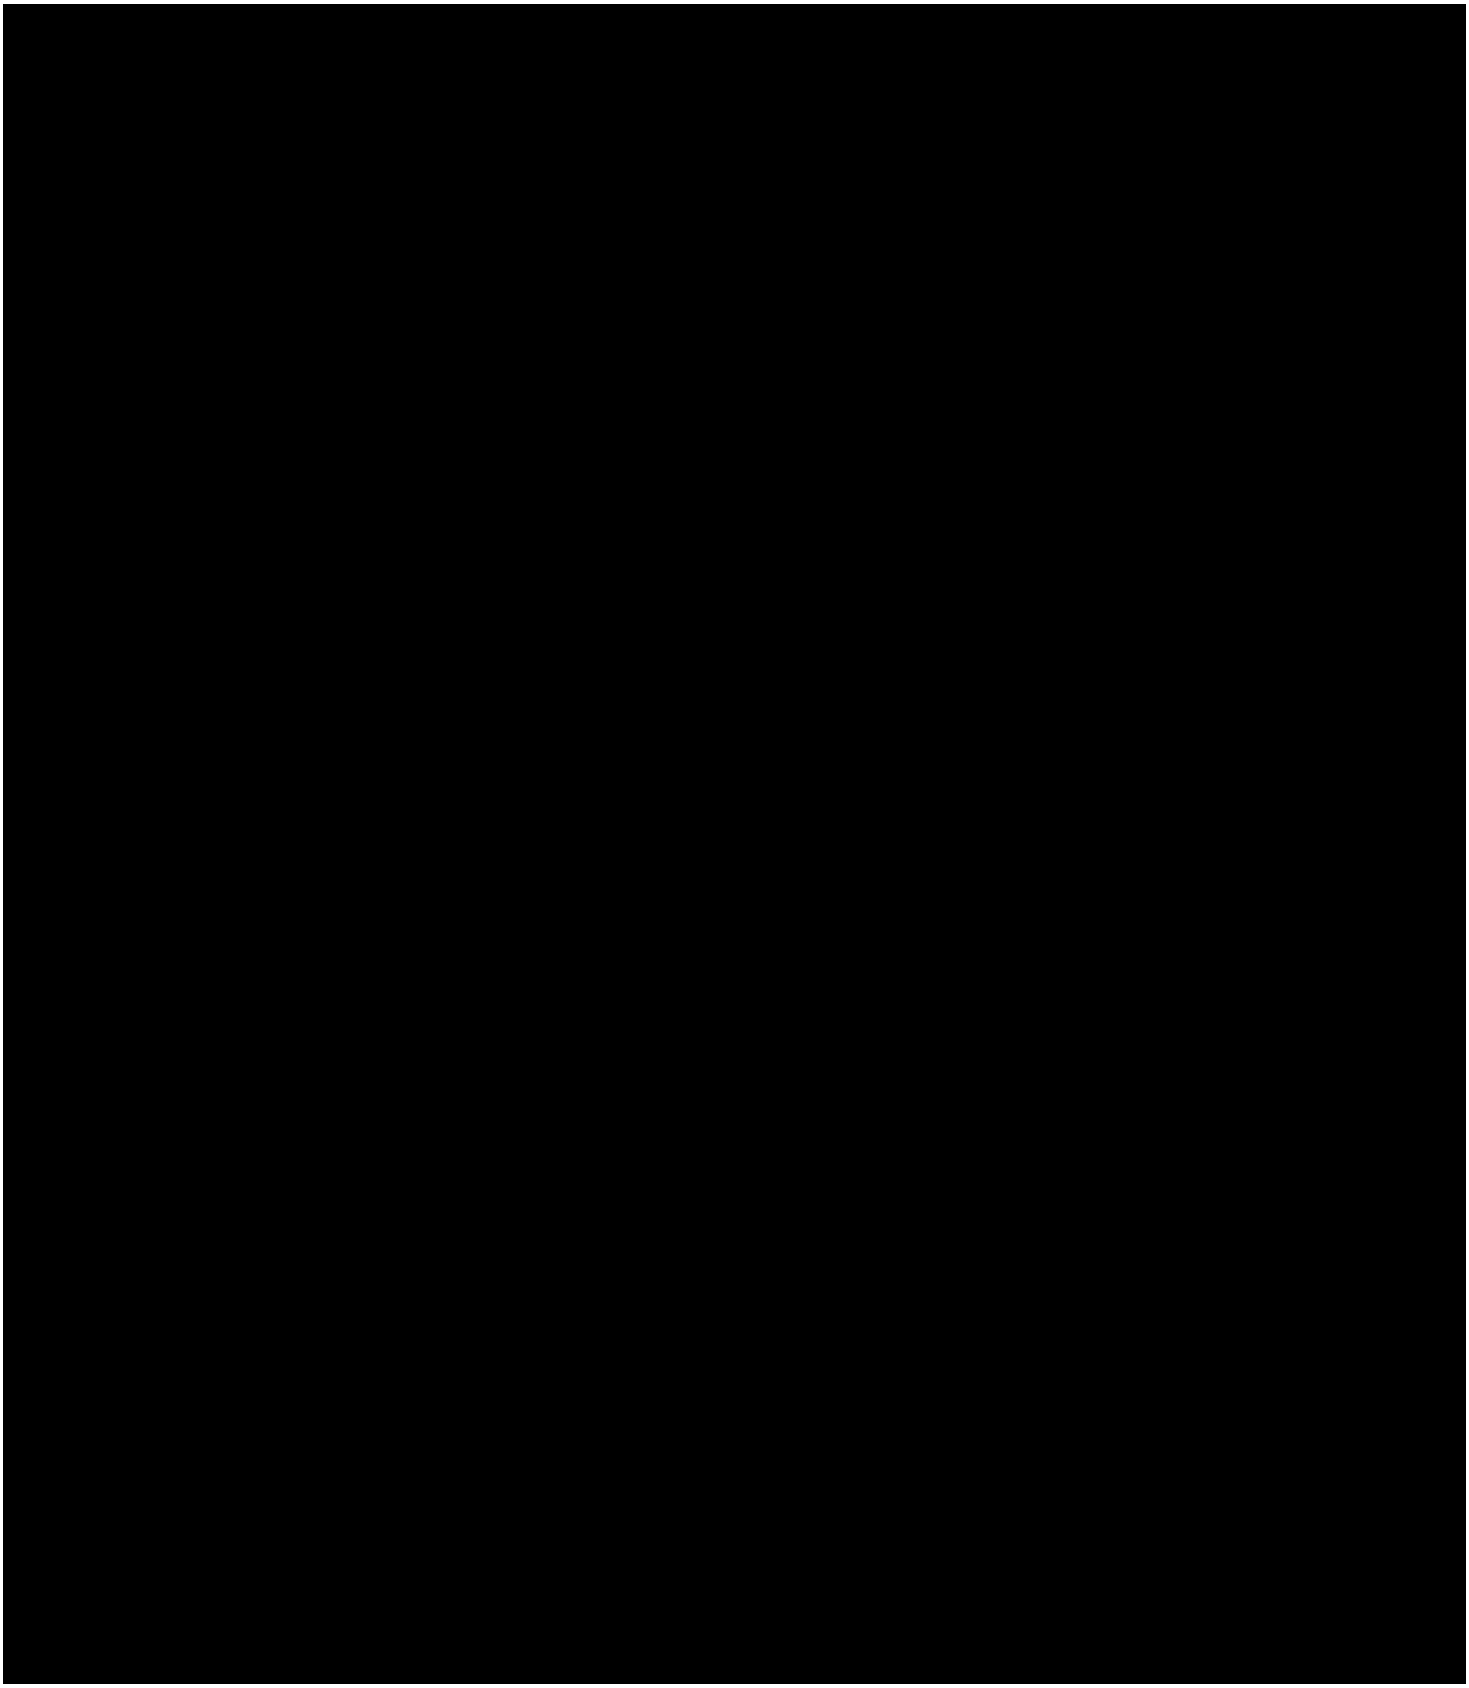
Kentucky MMIS Project

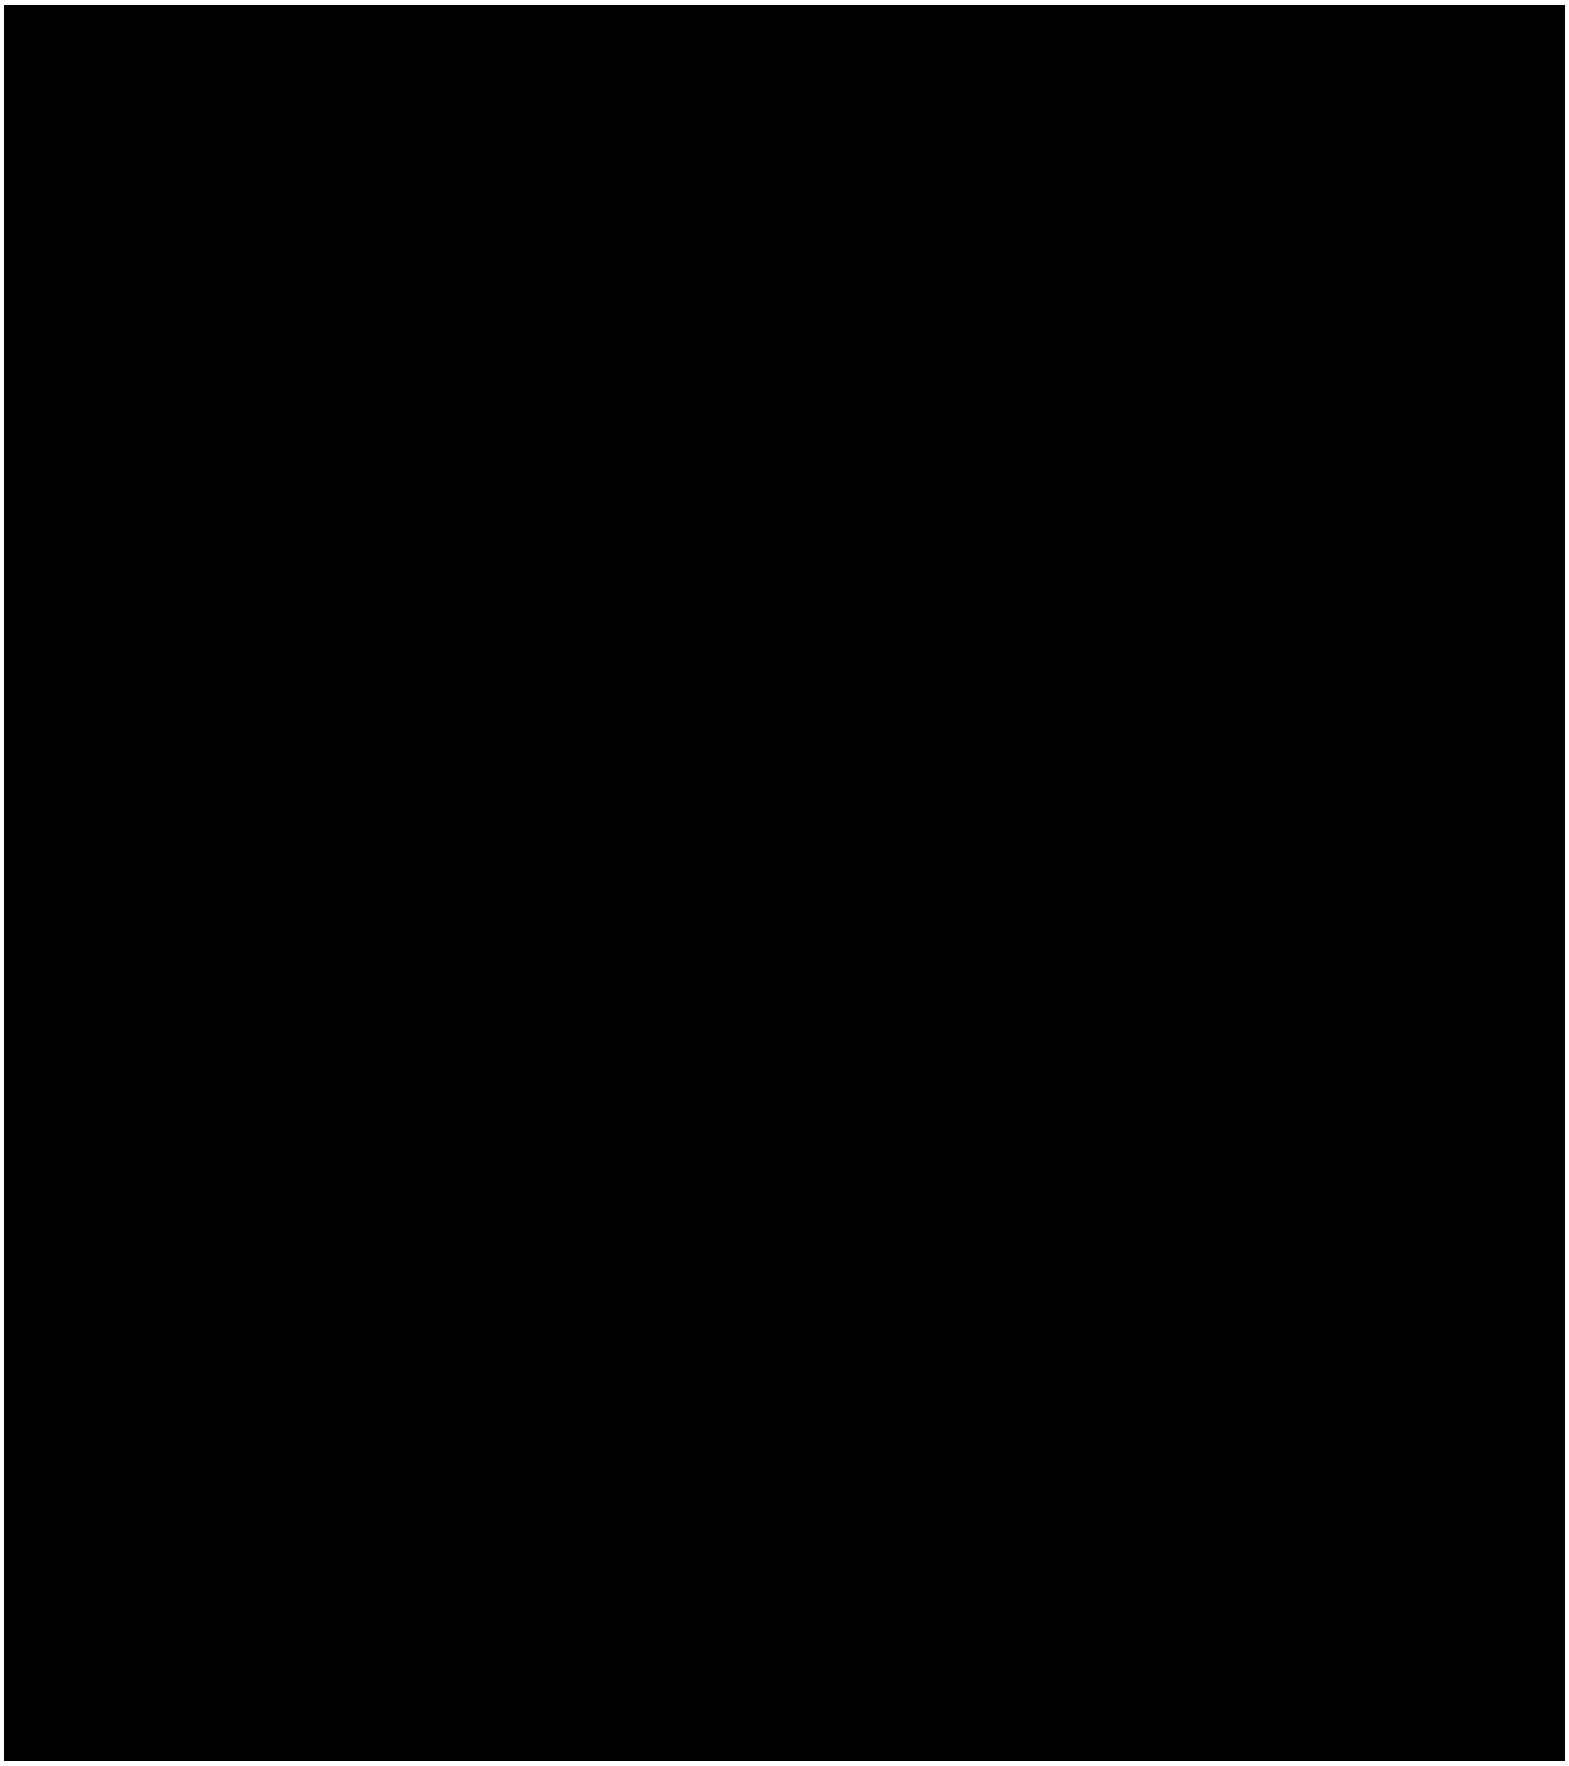
[redacted]

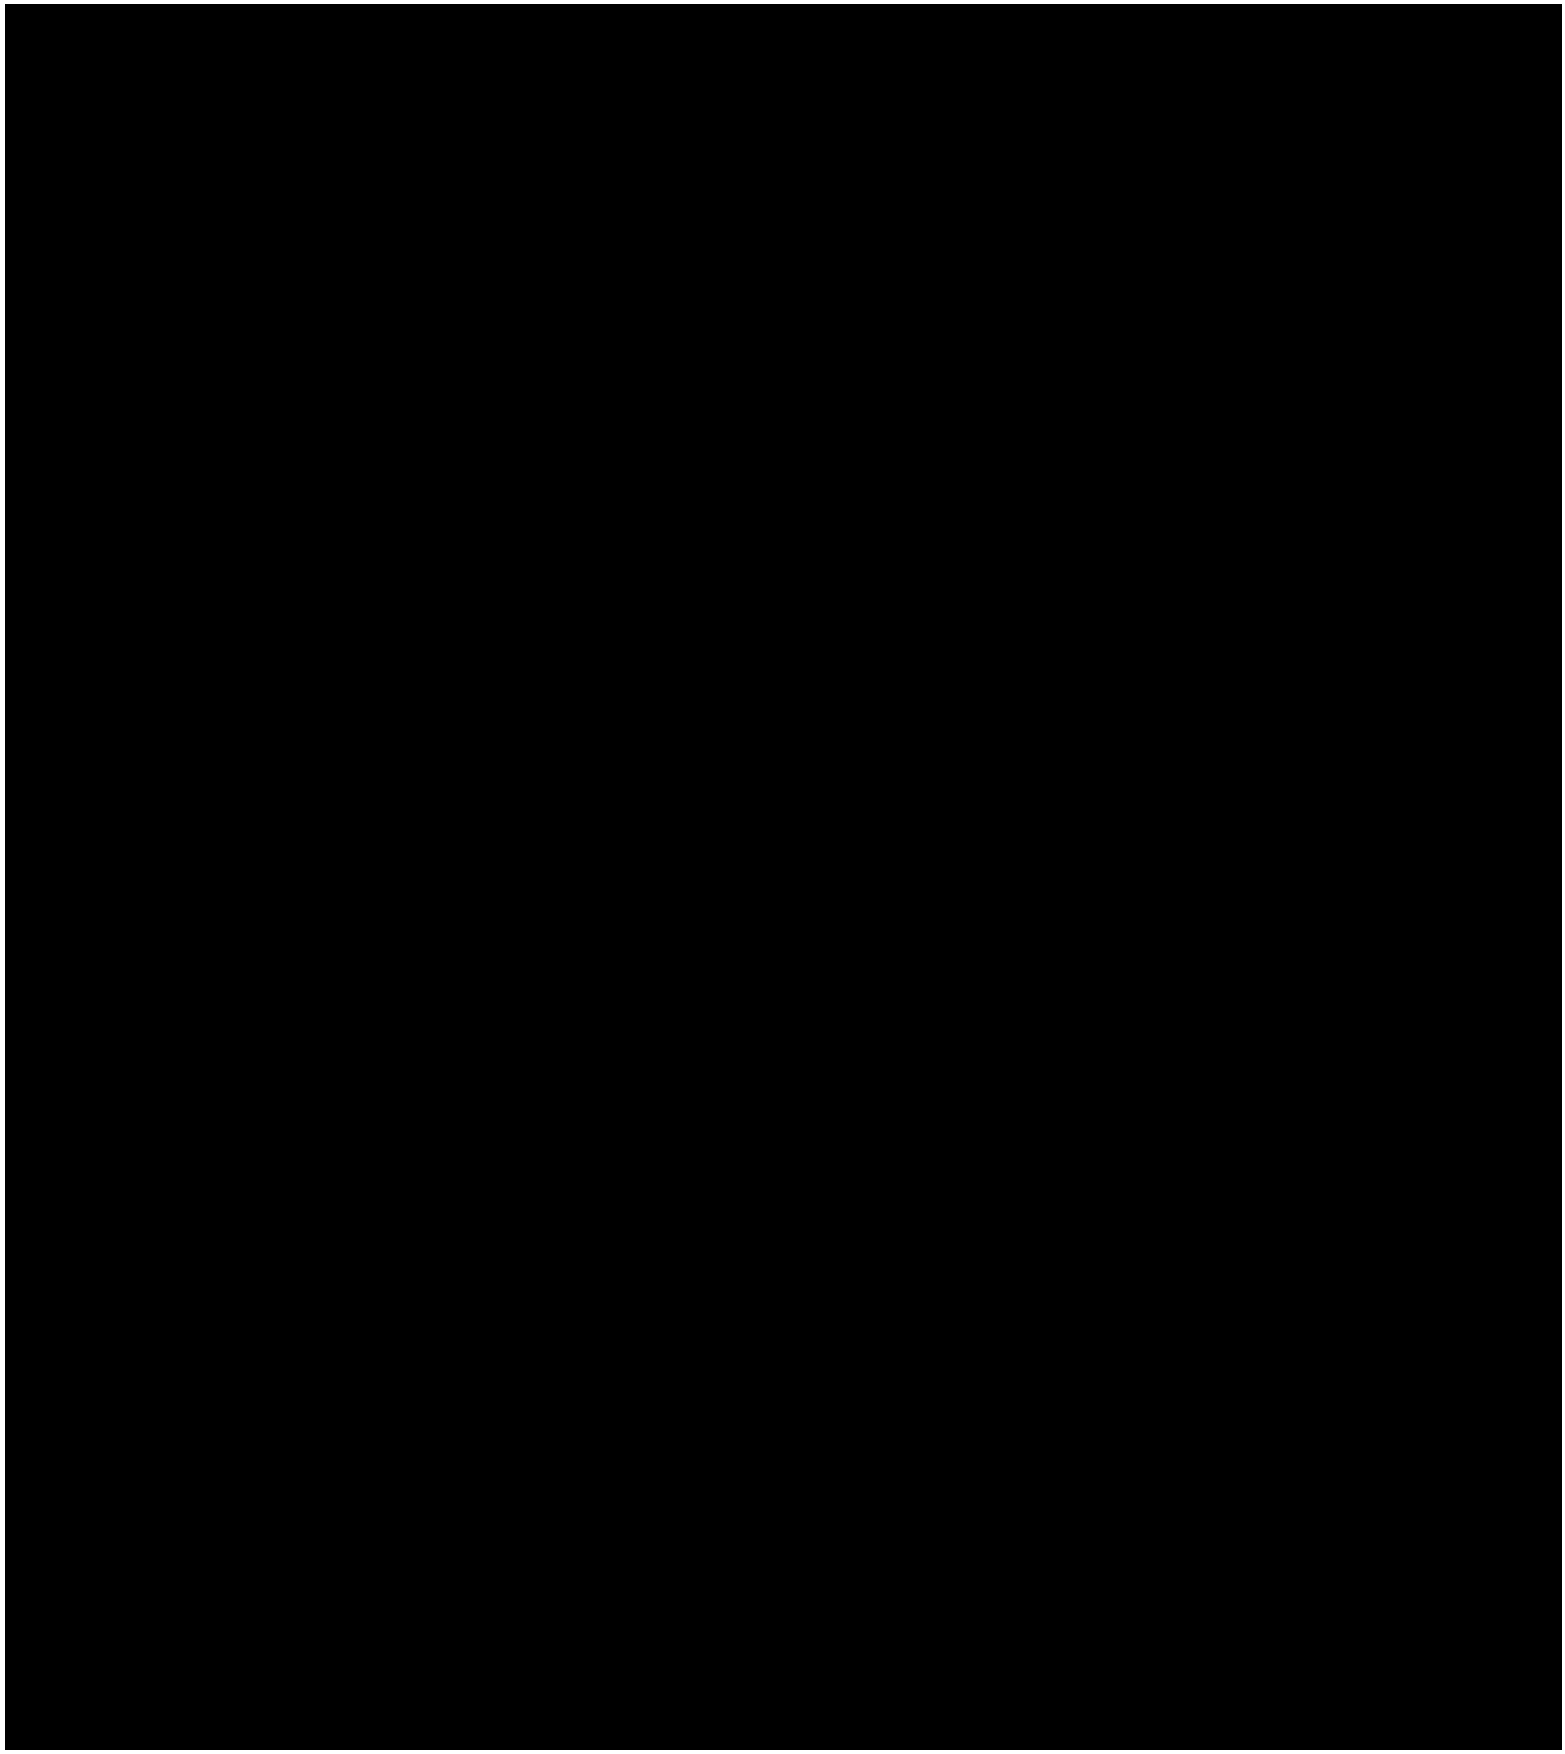
Table of Contents

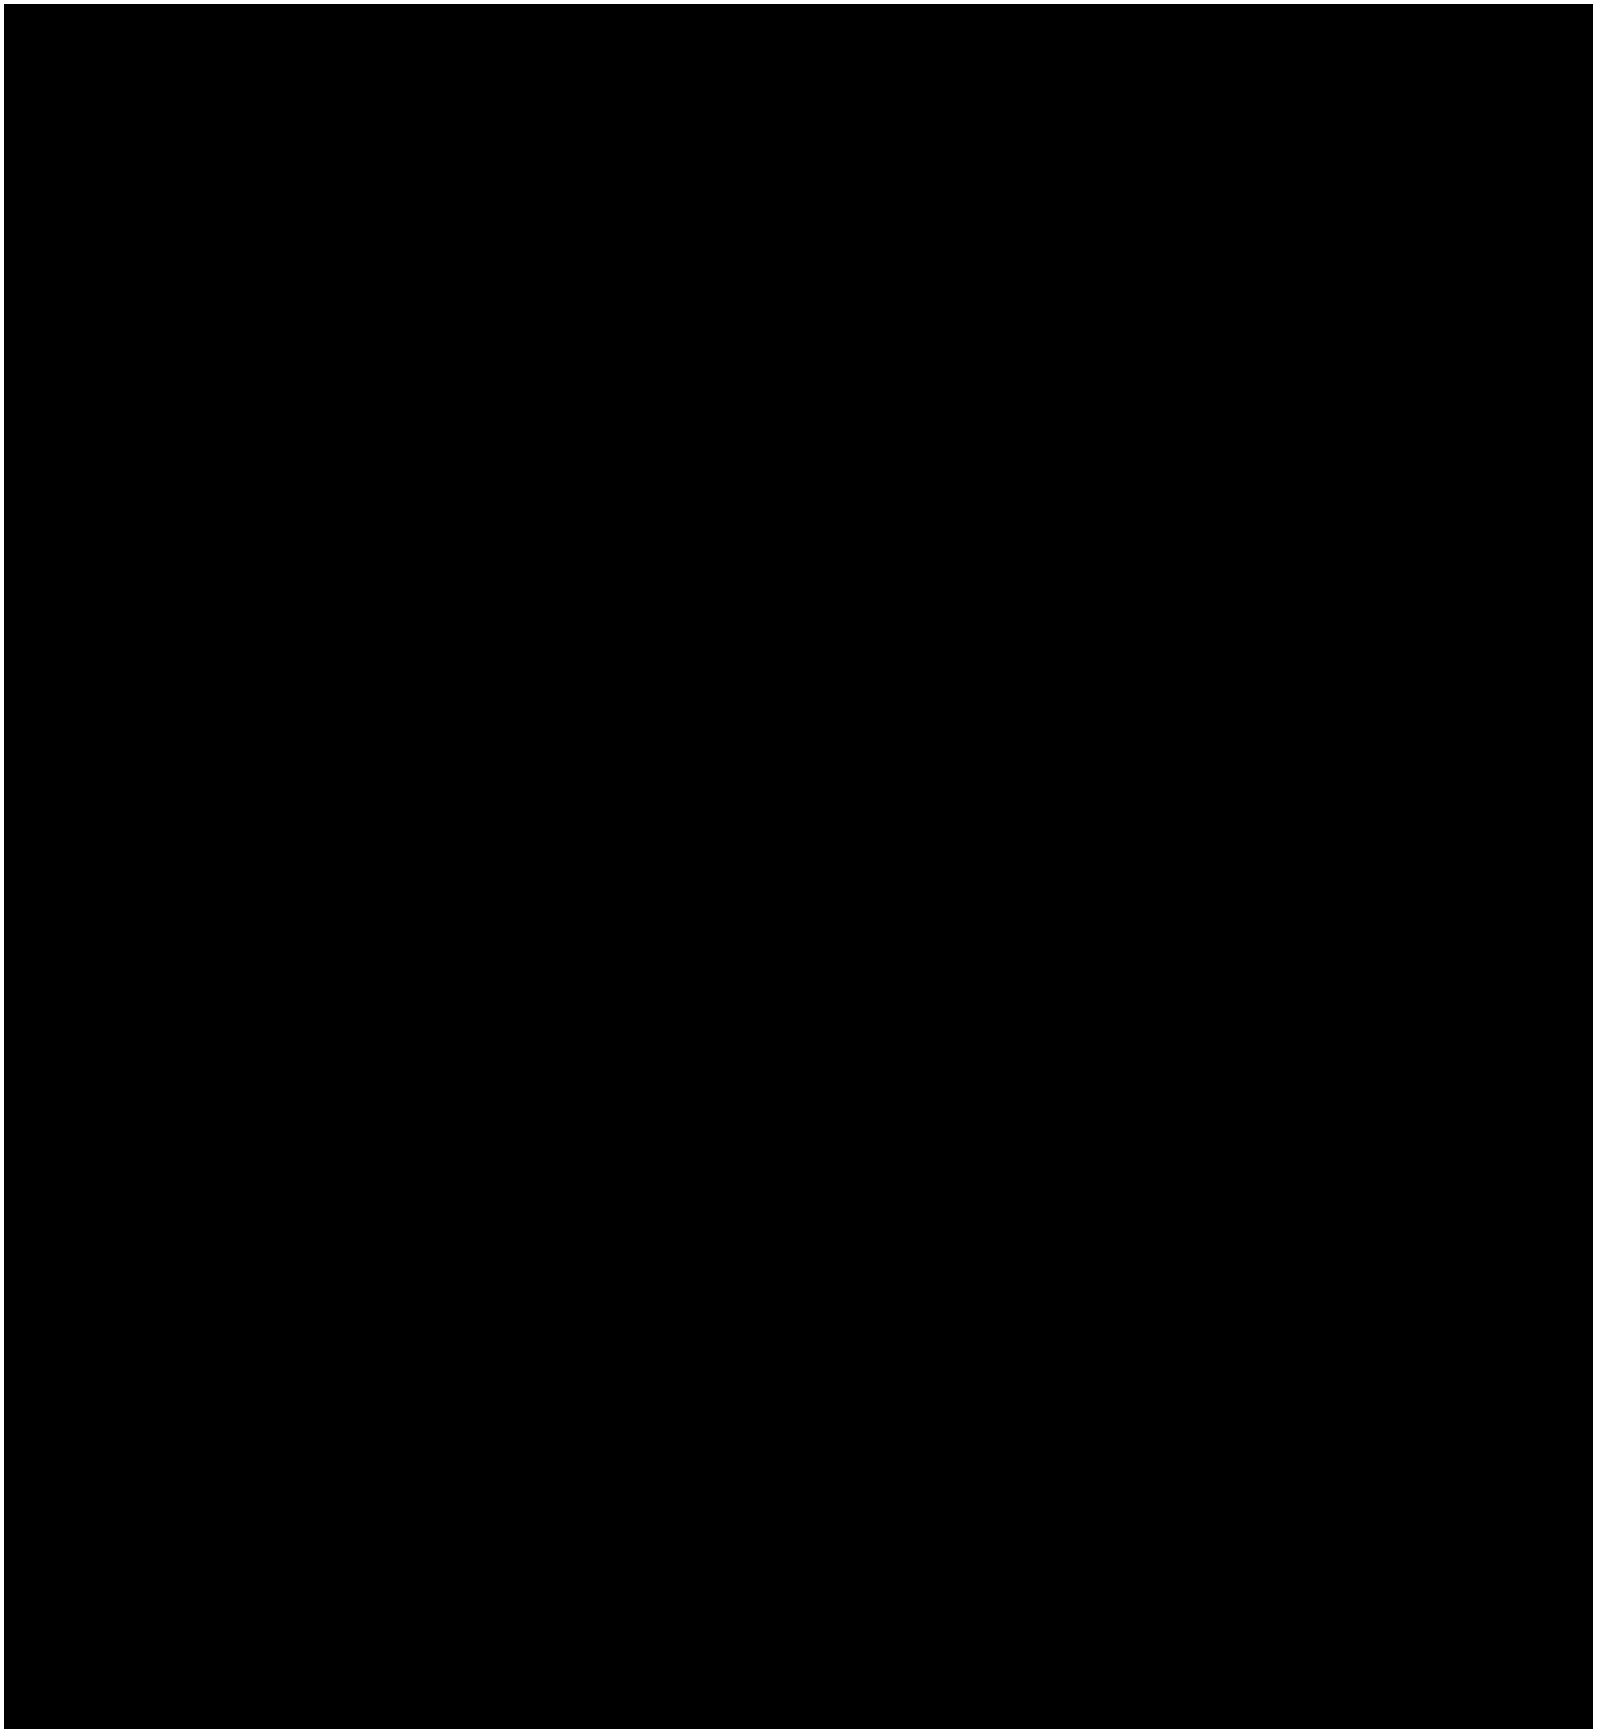


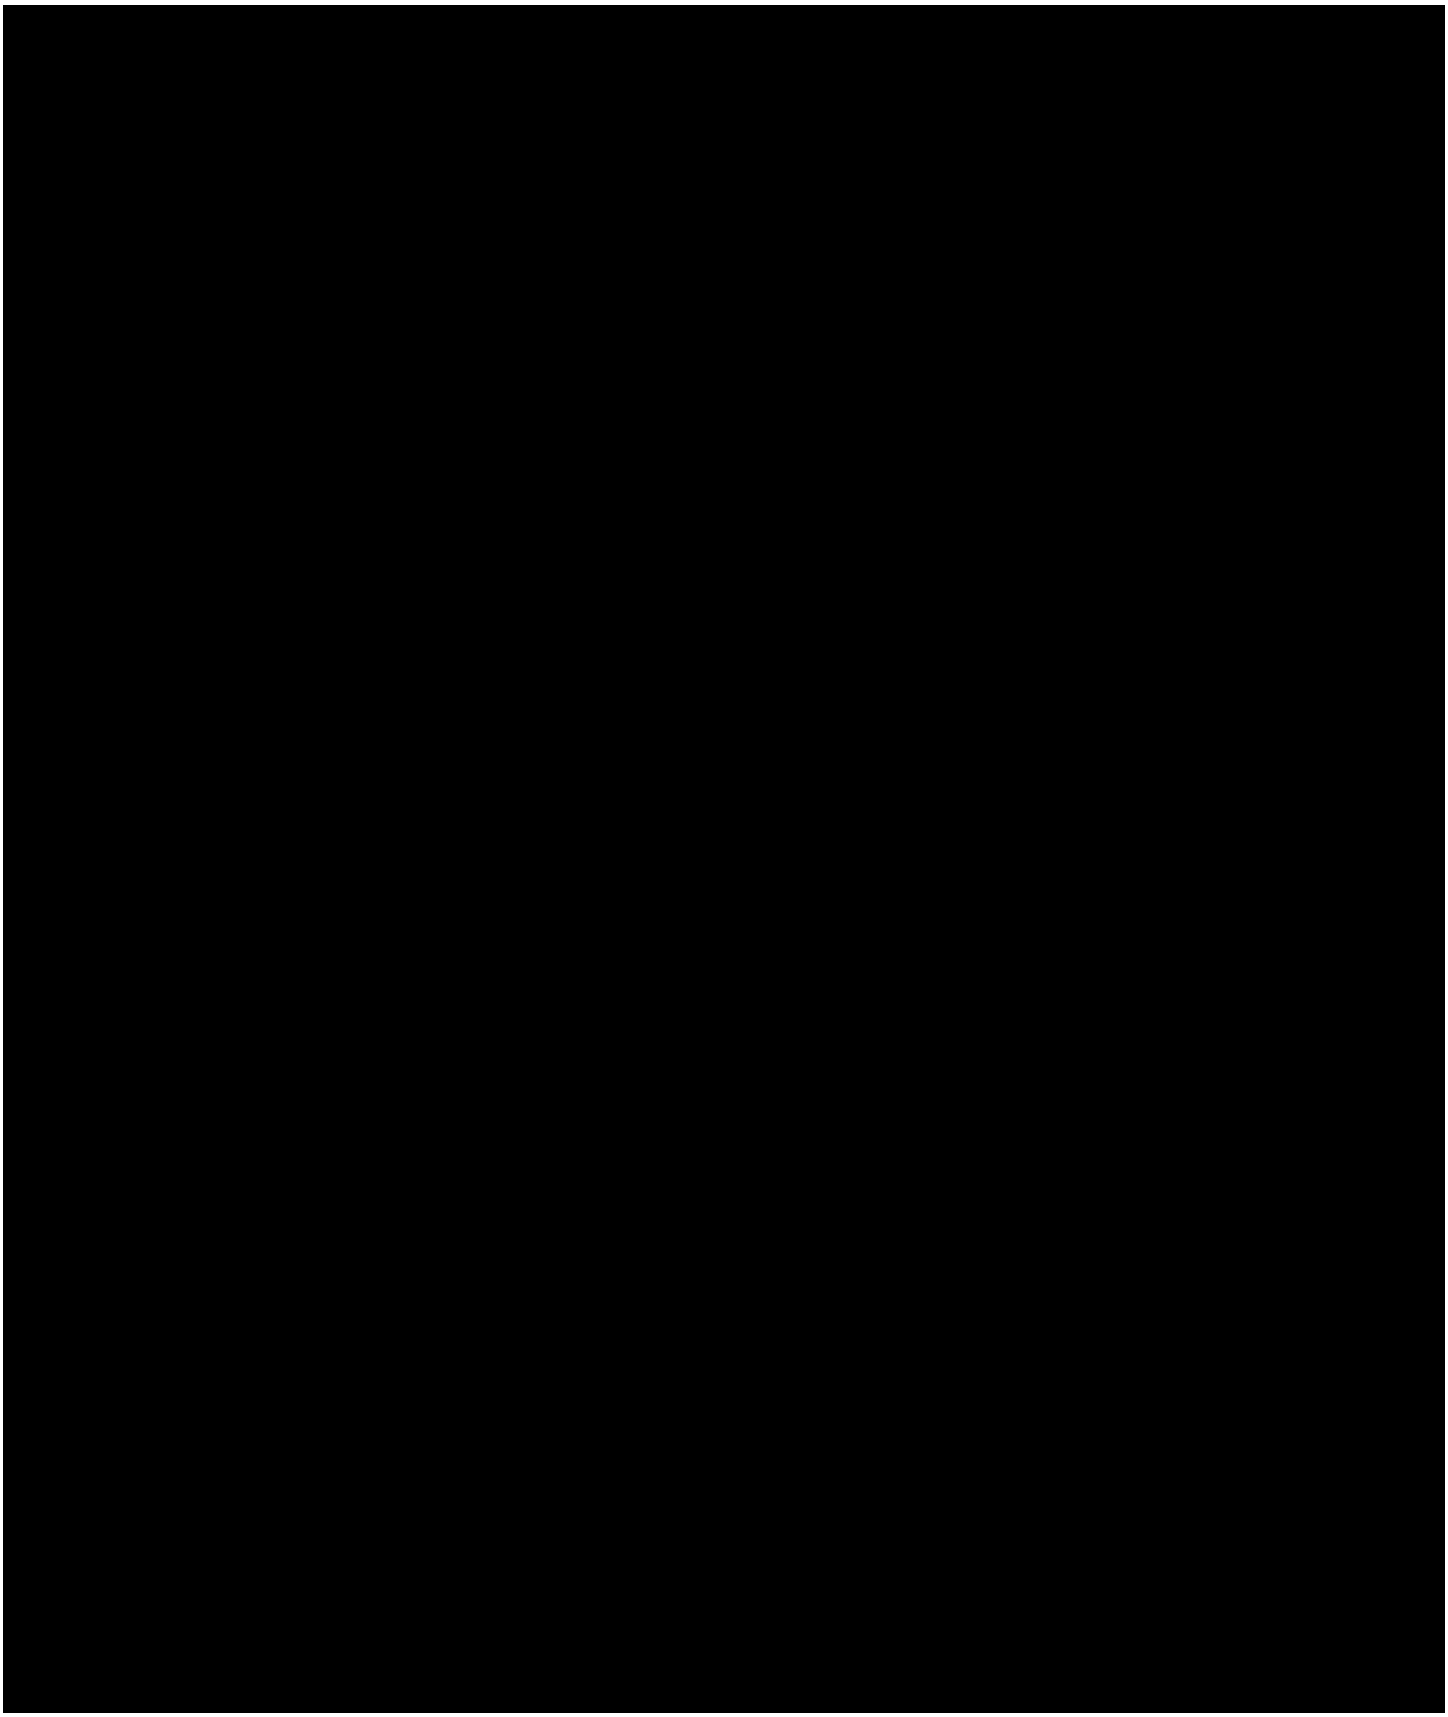


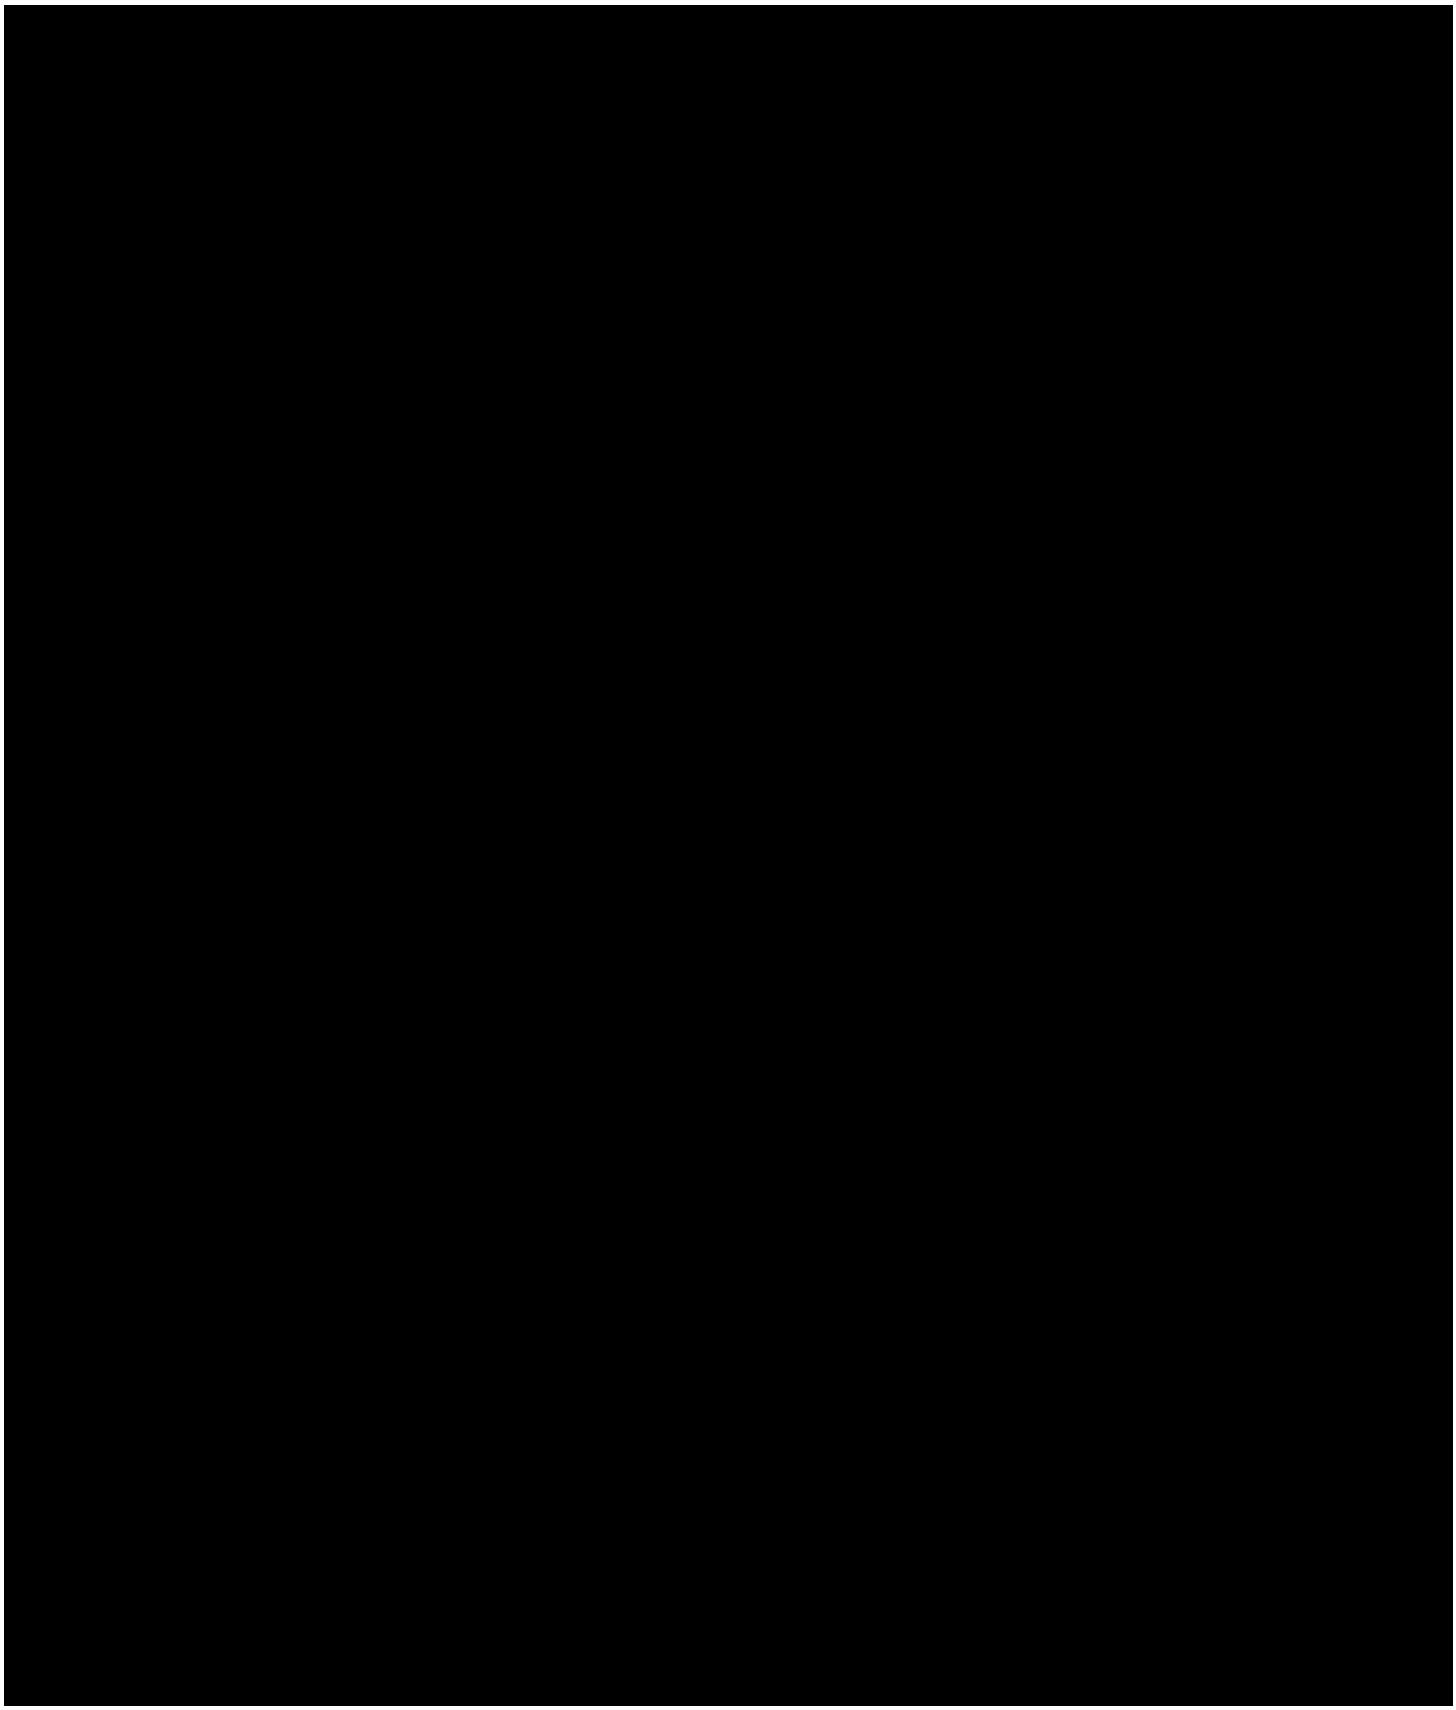


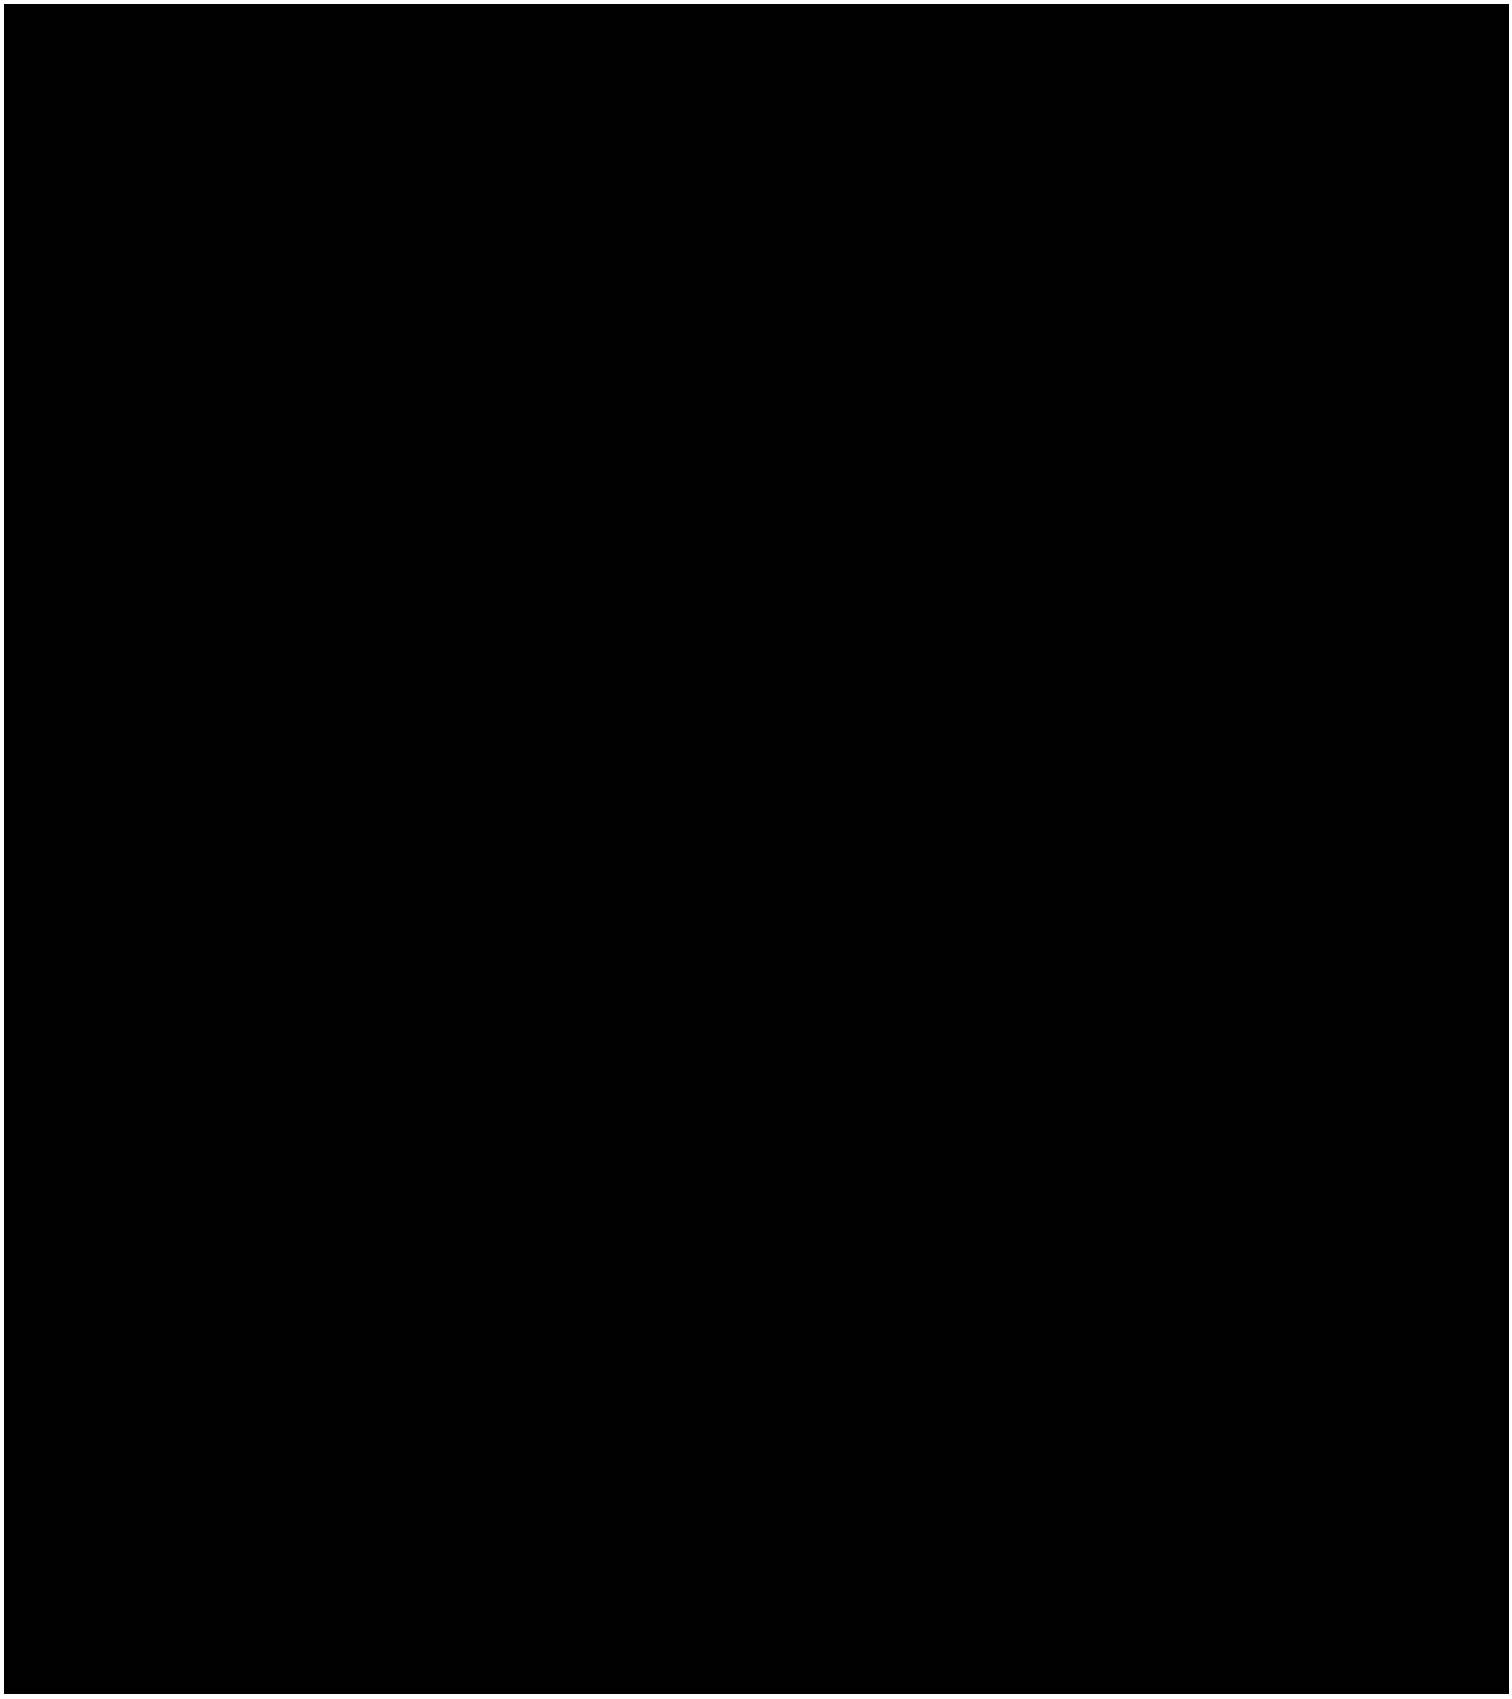


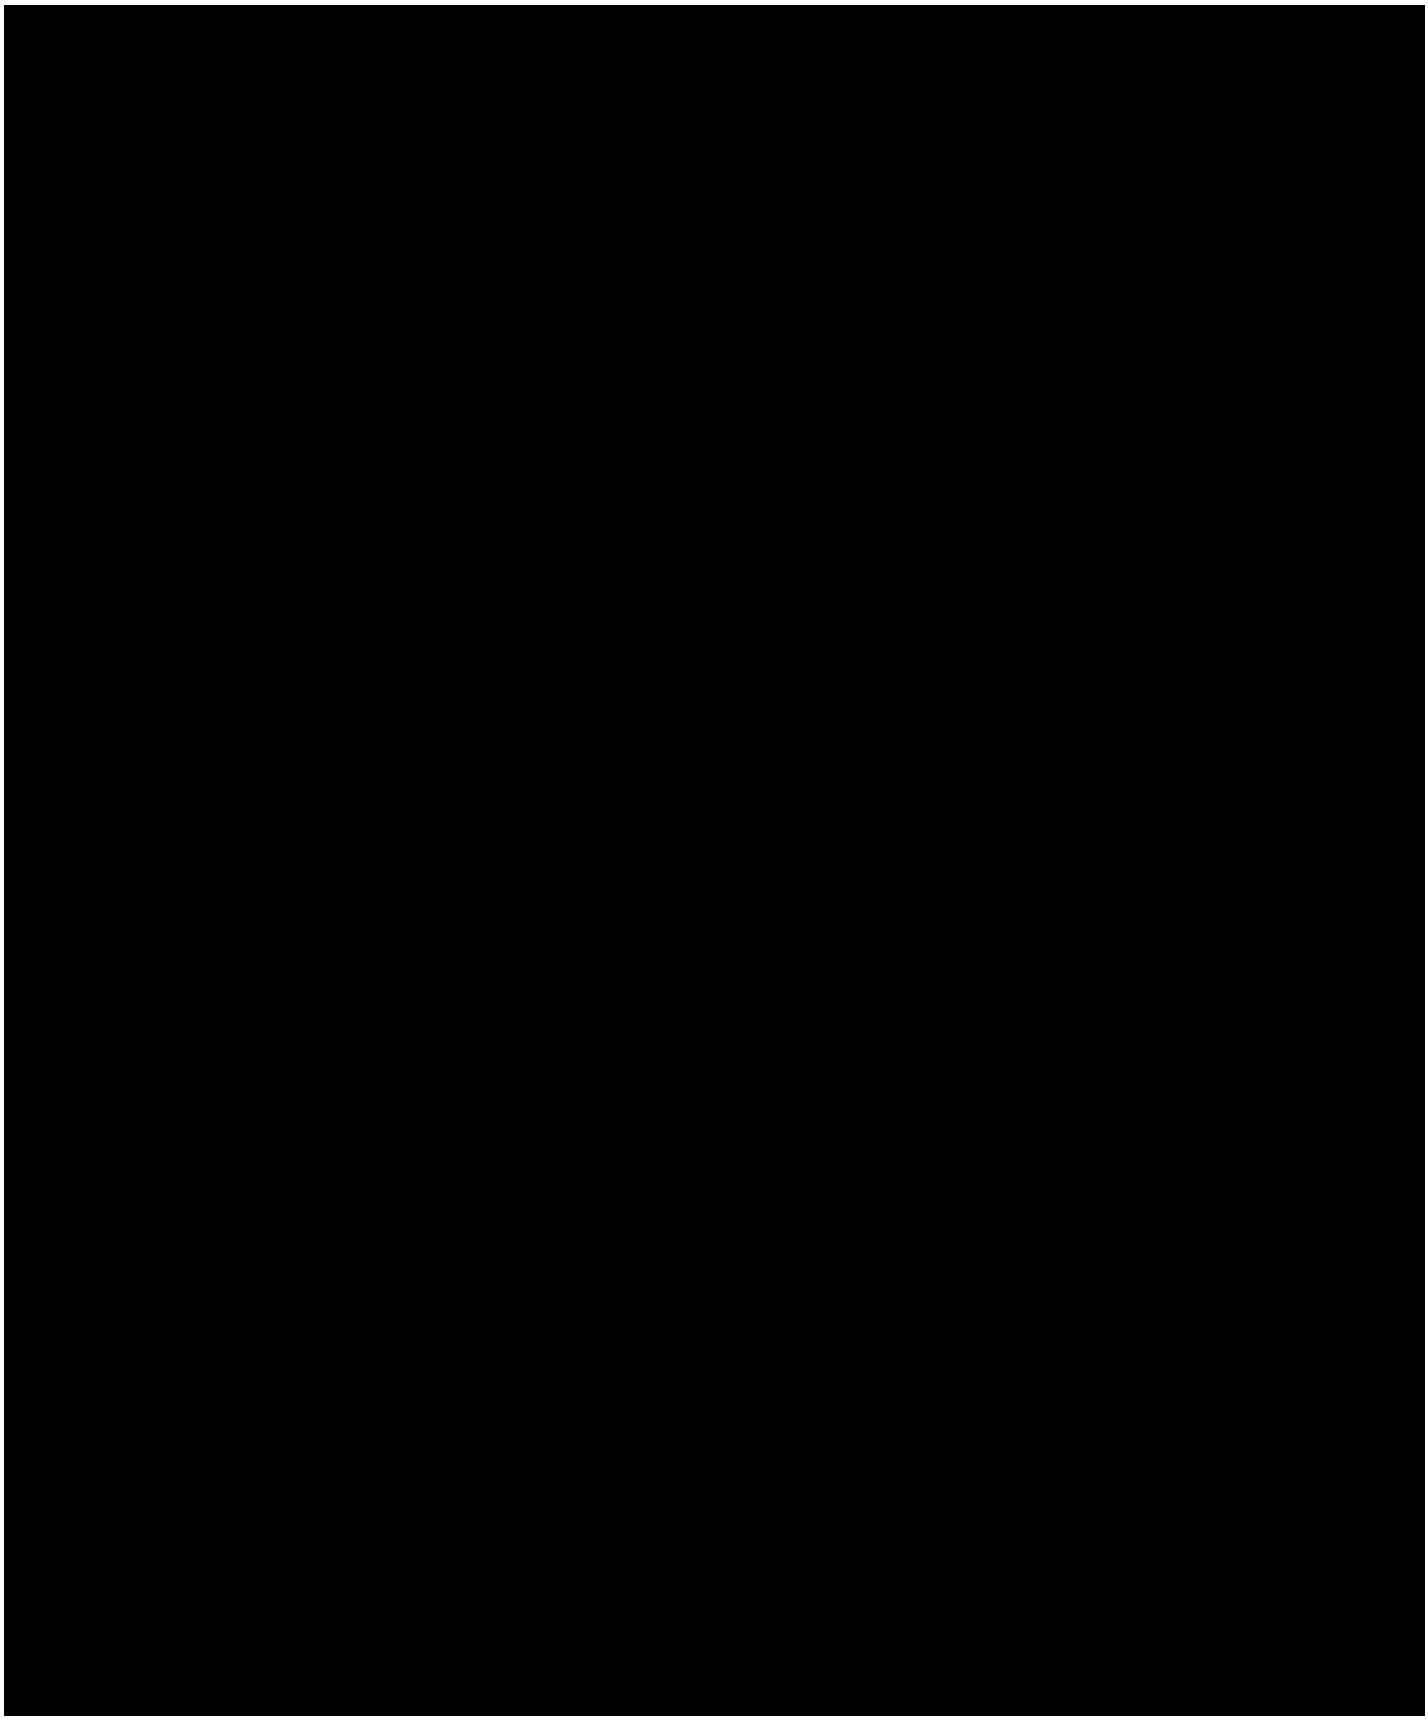


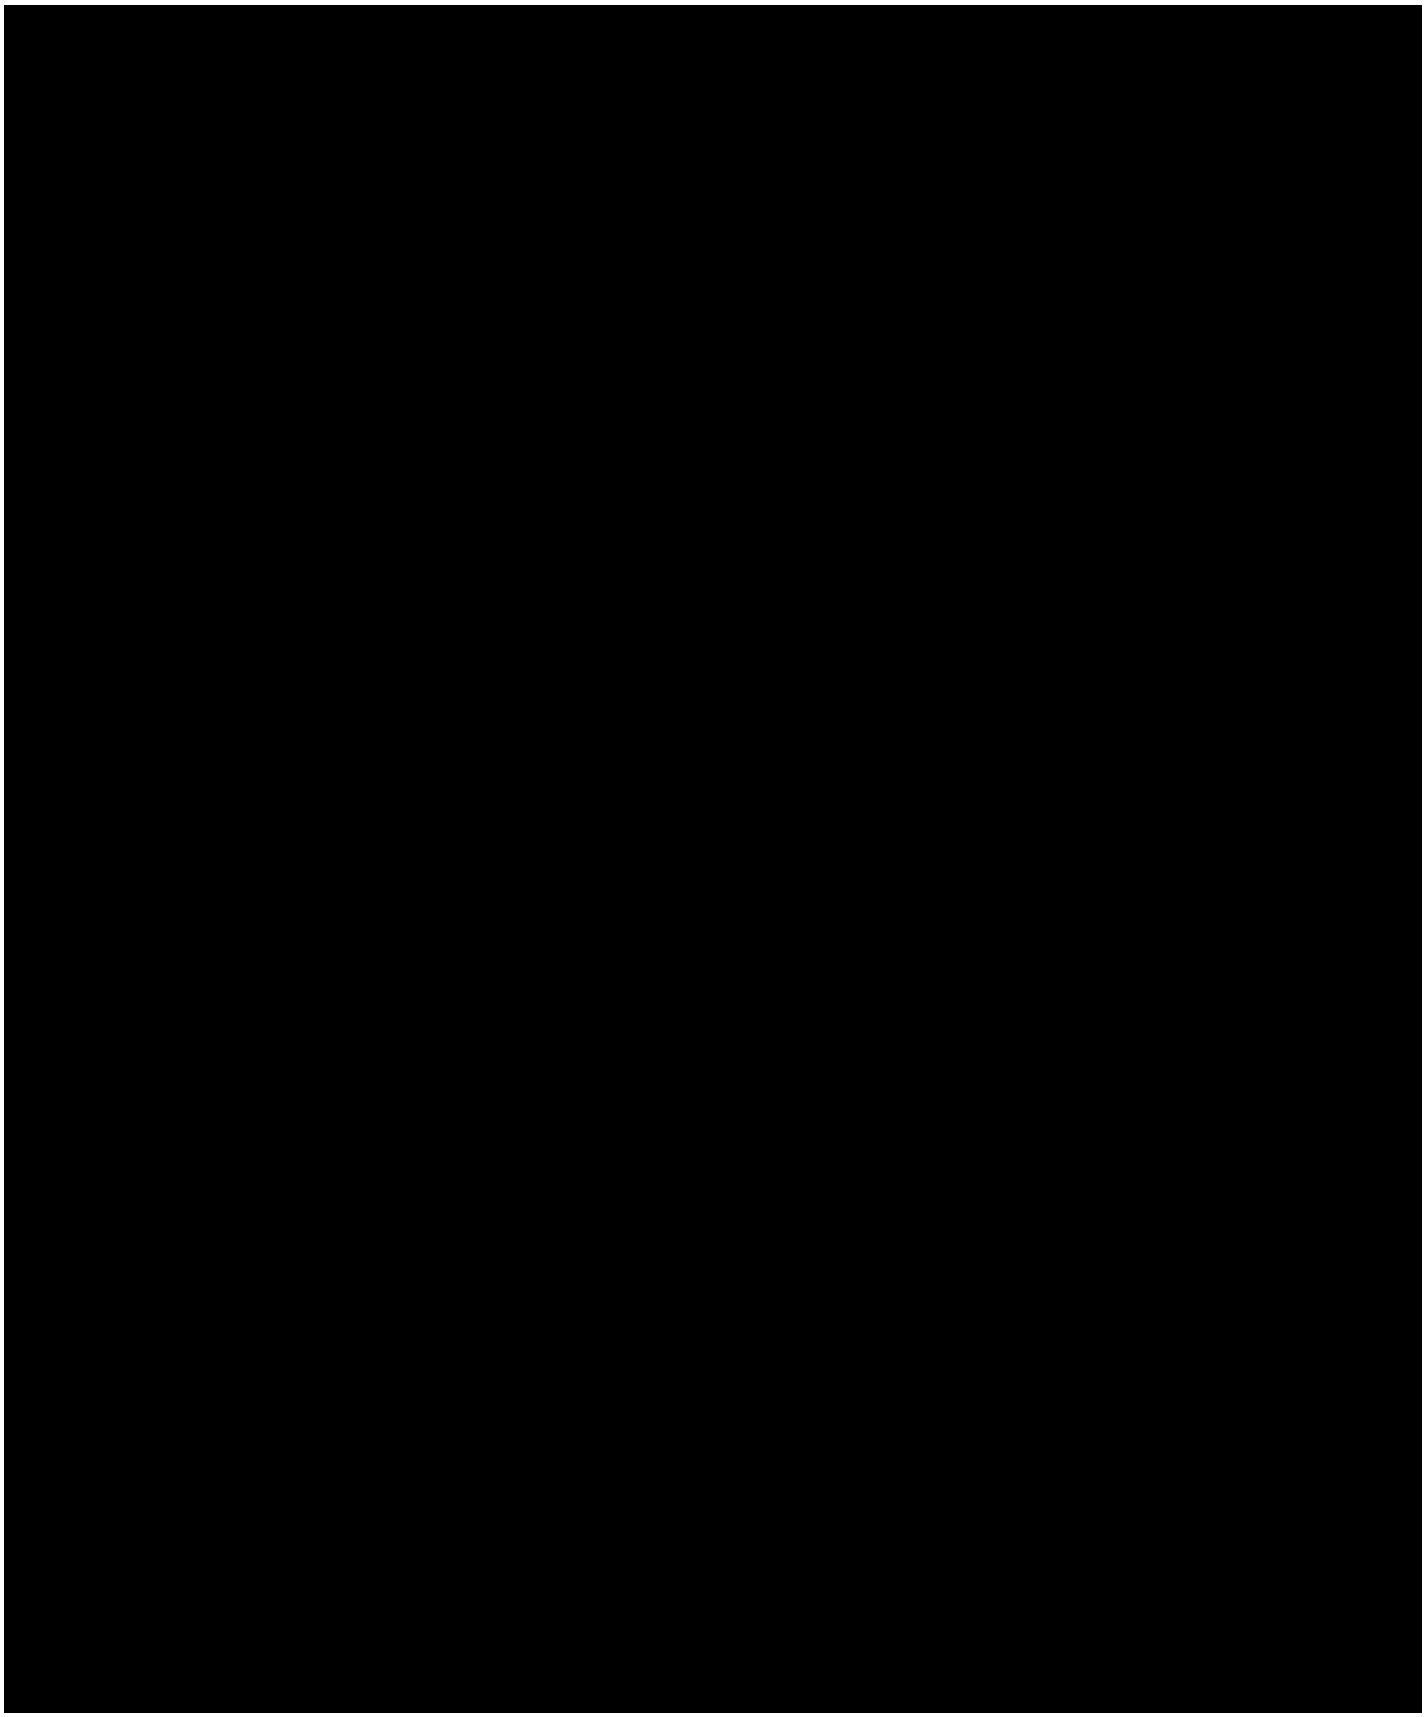


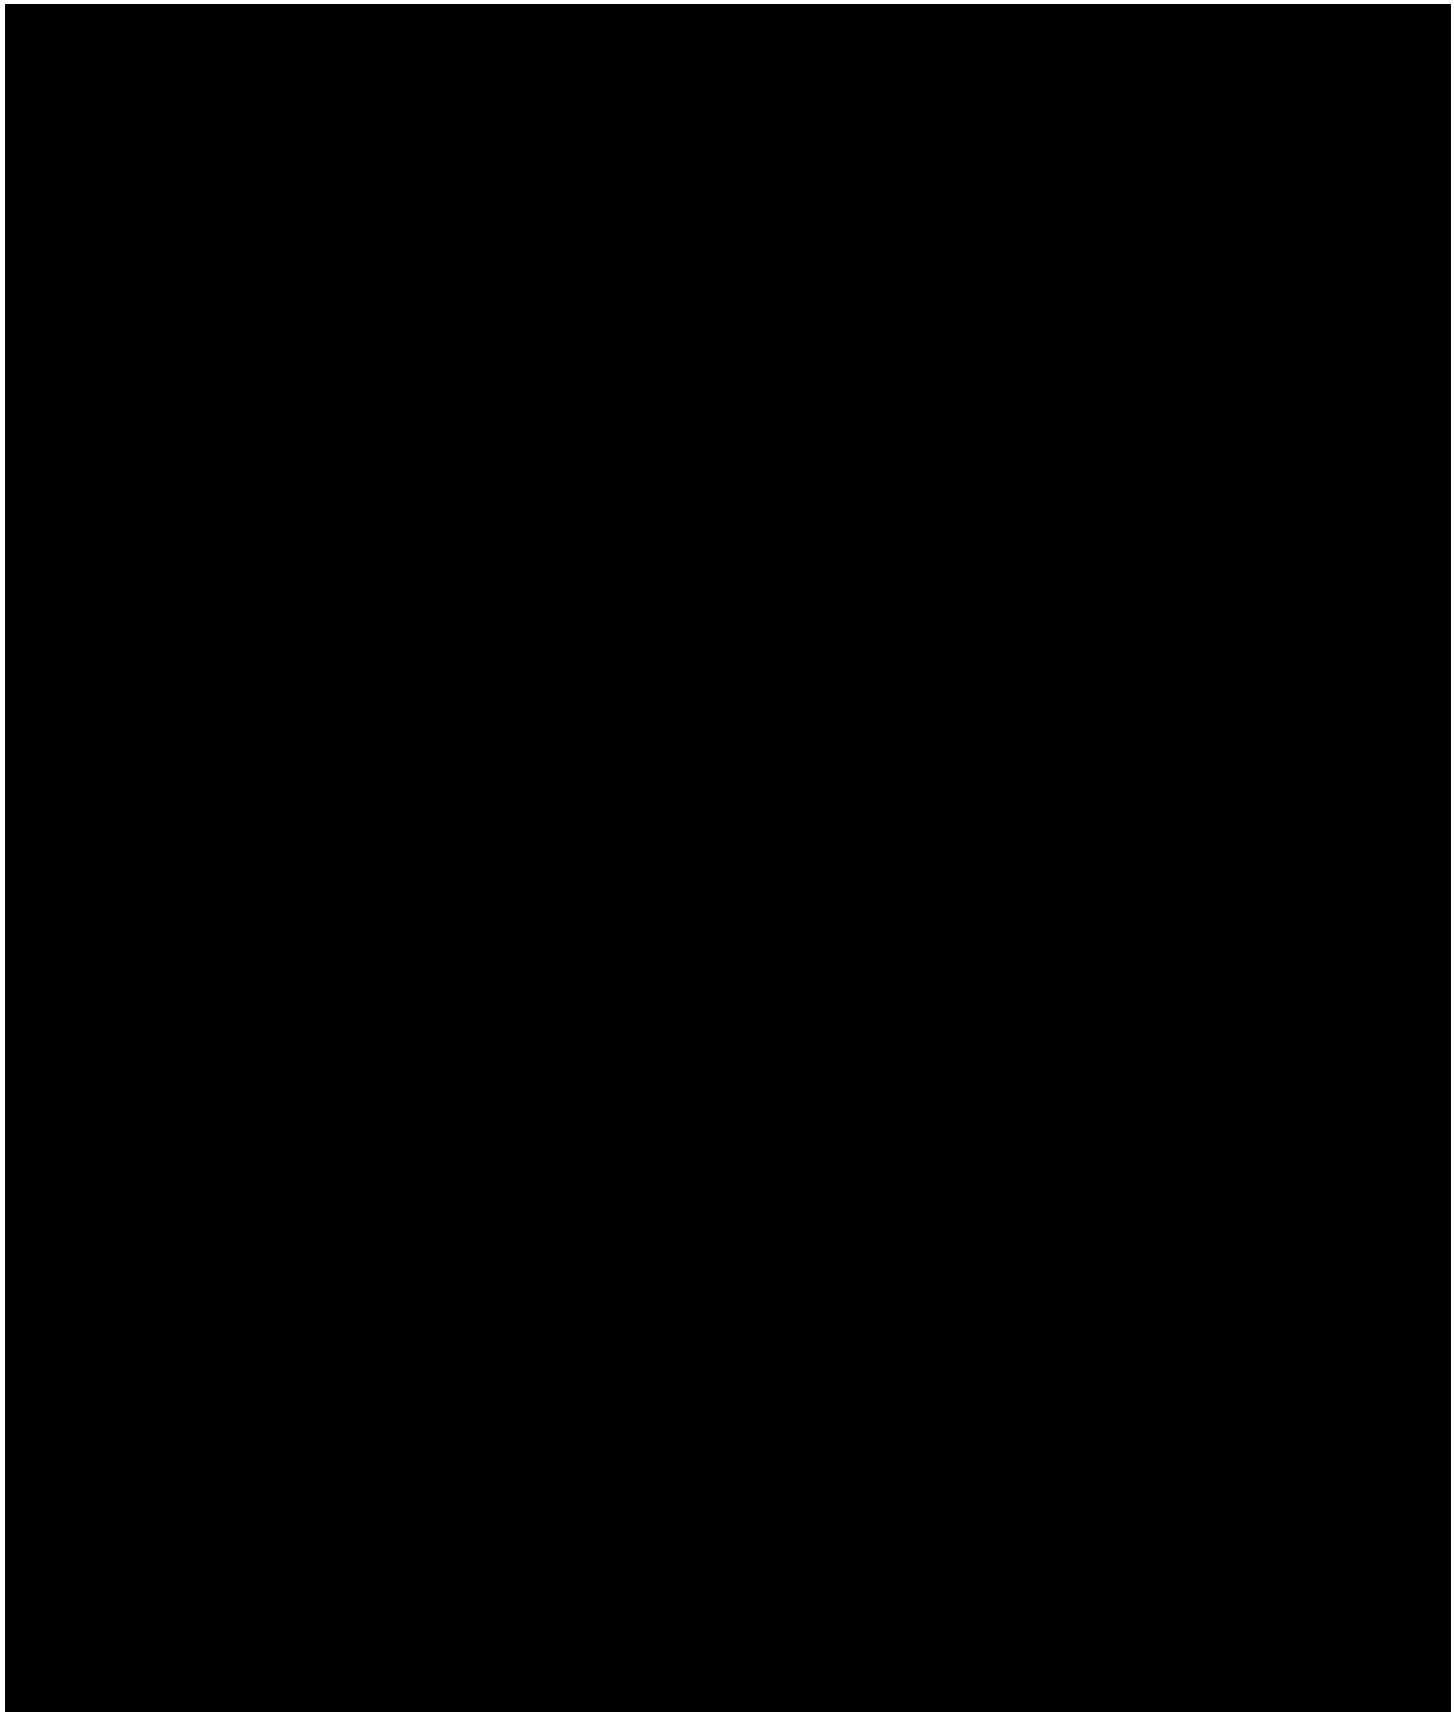


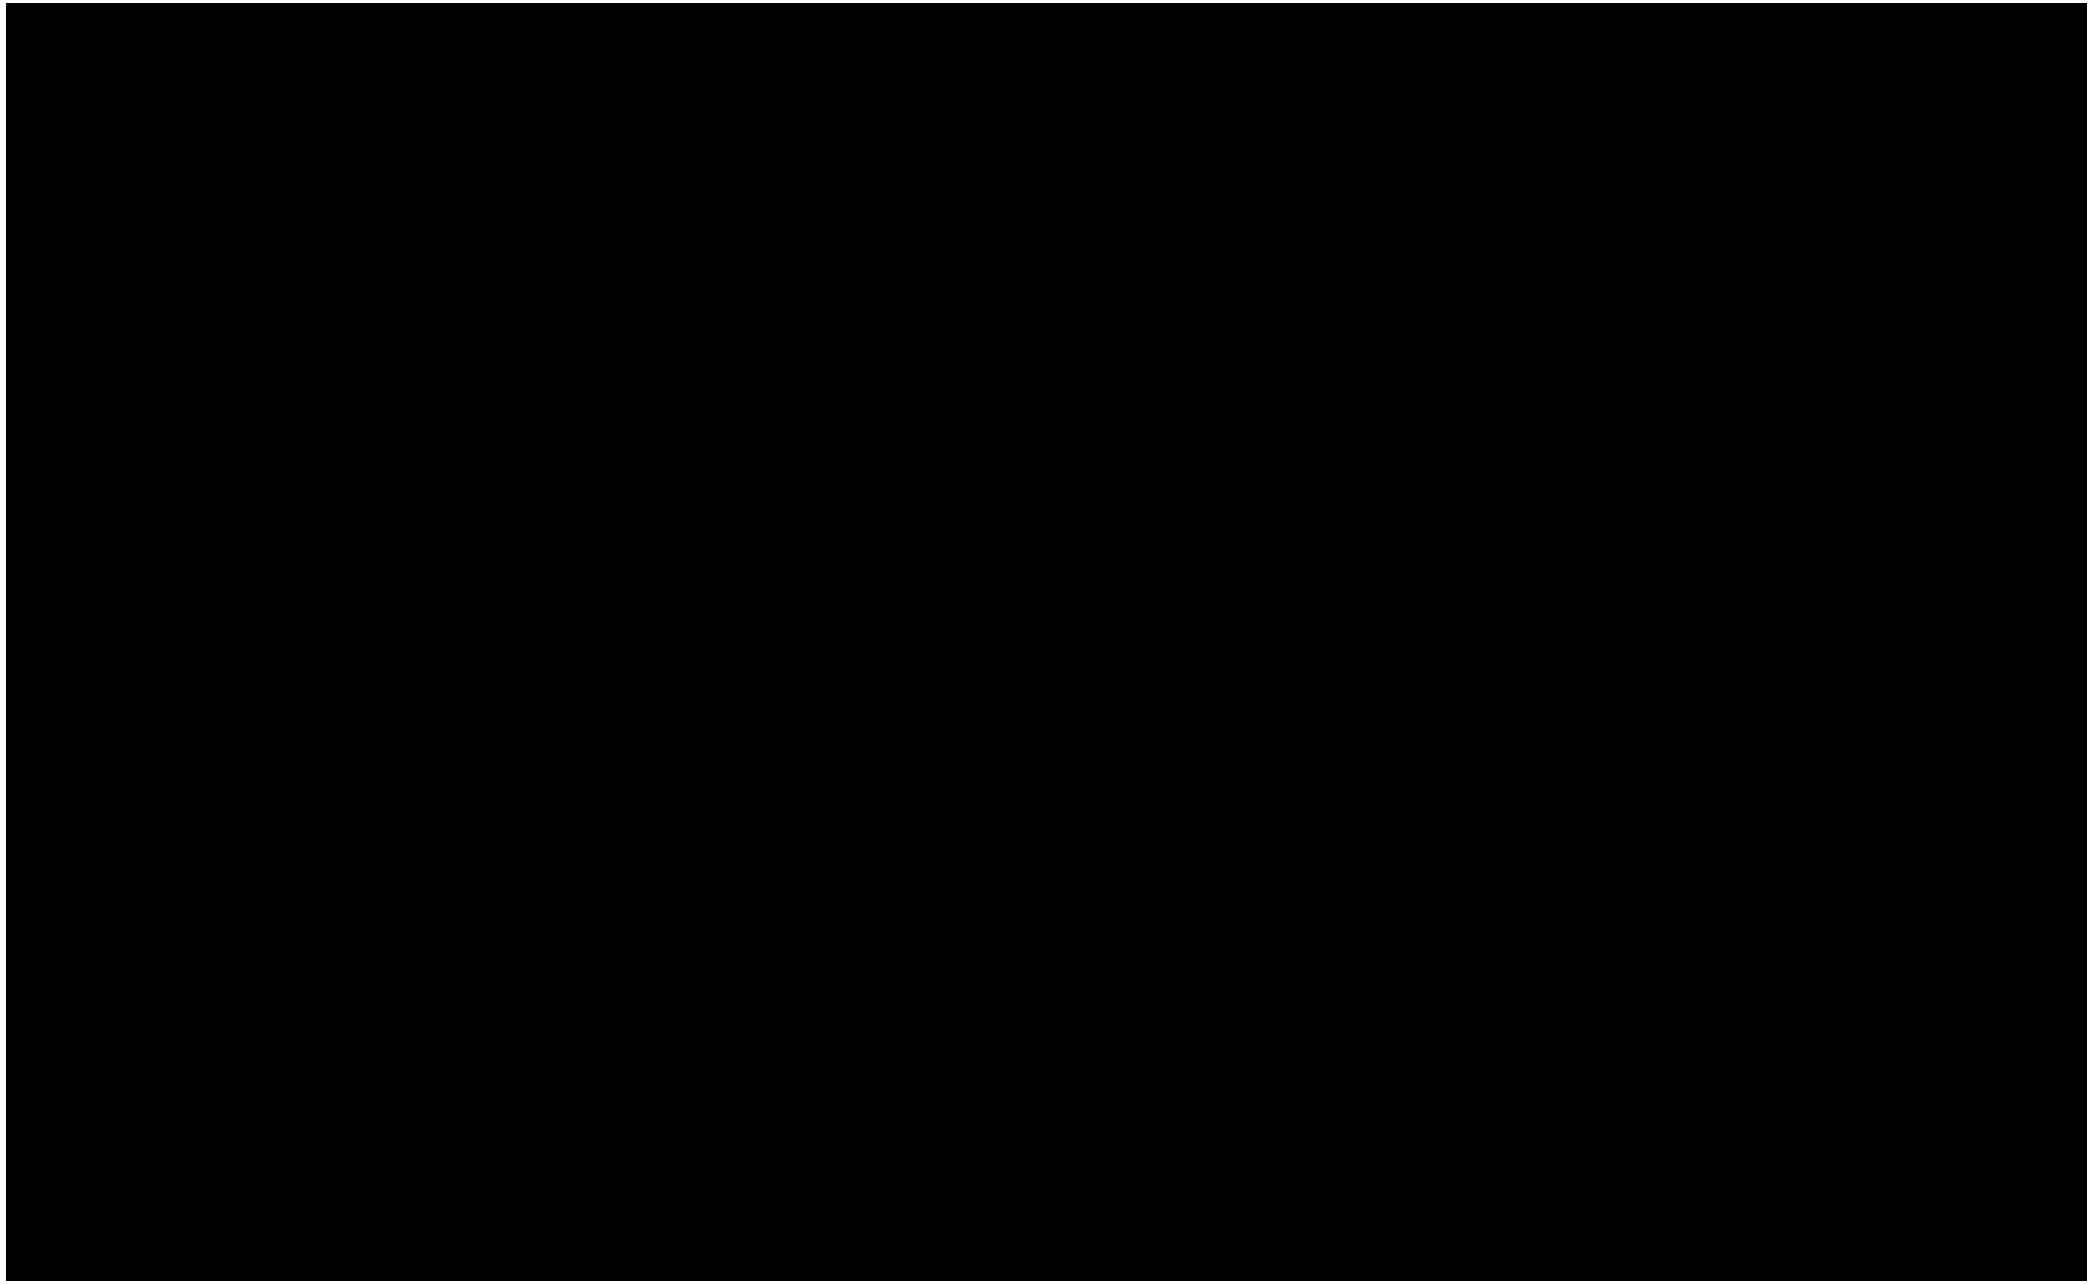


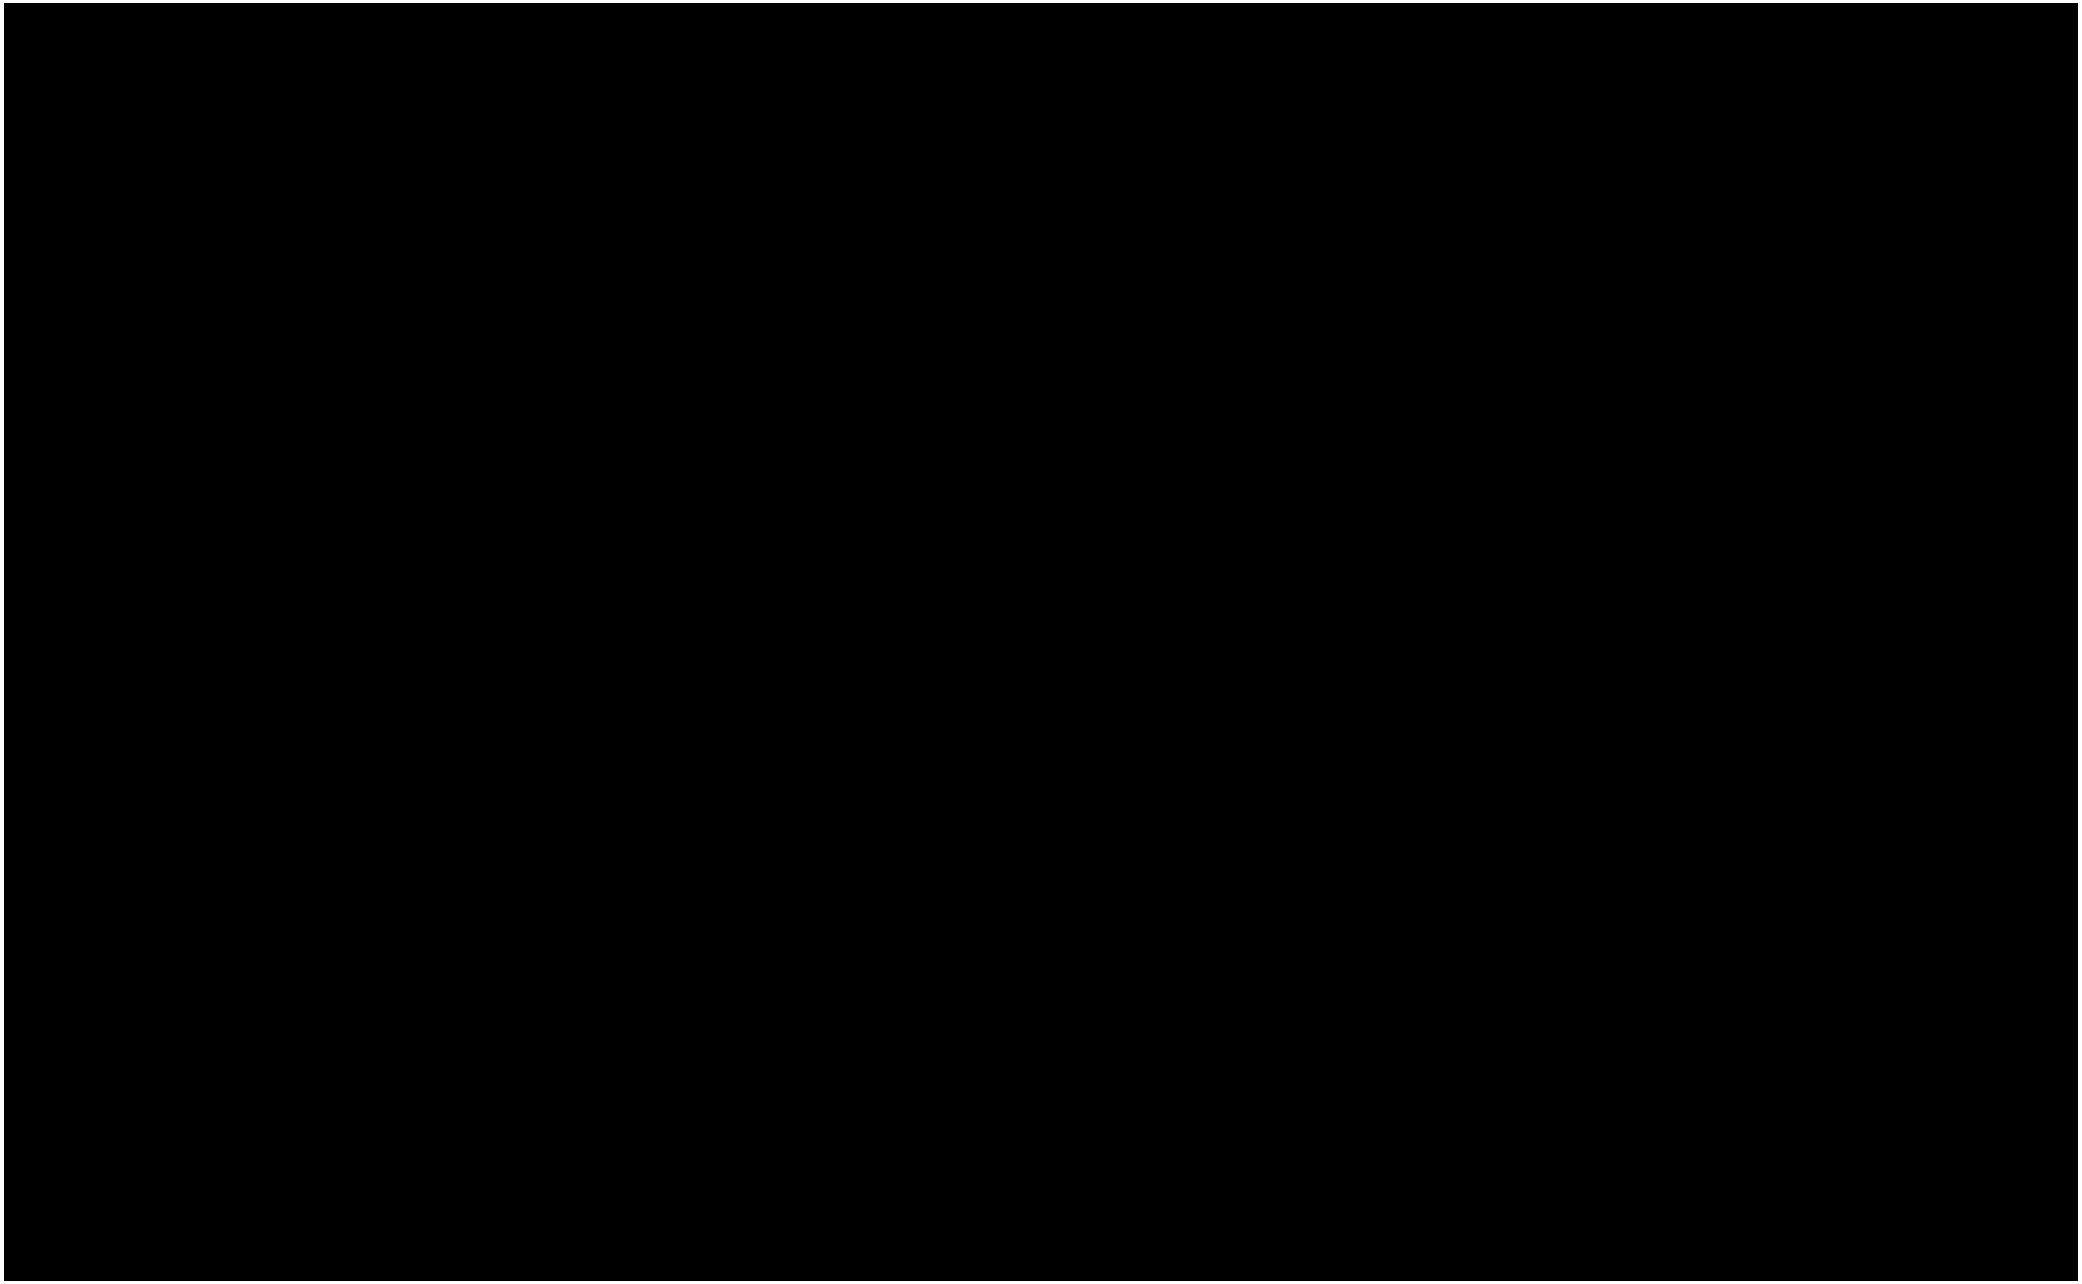


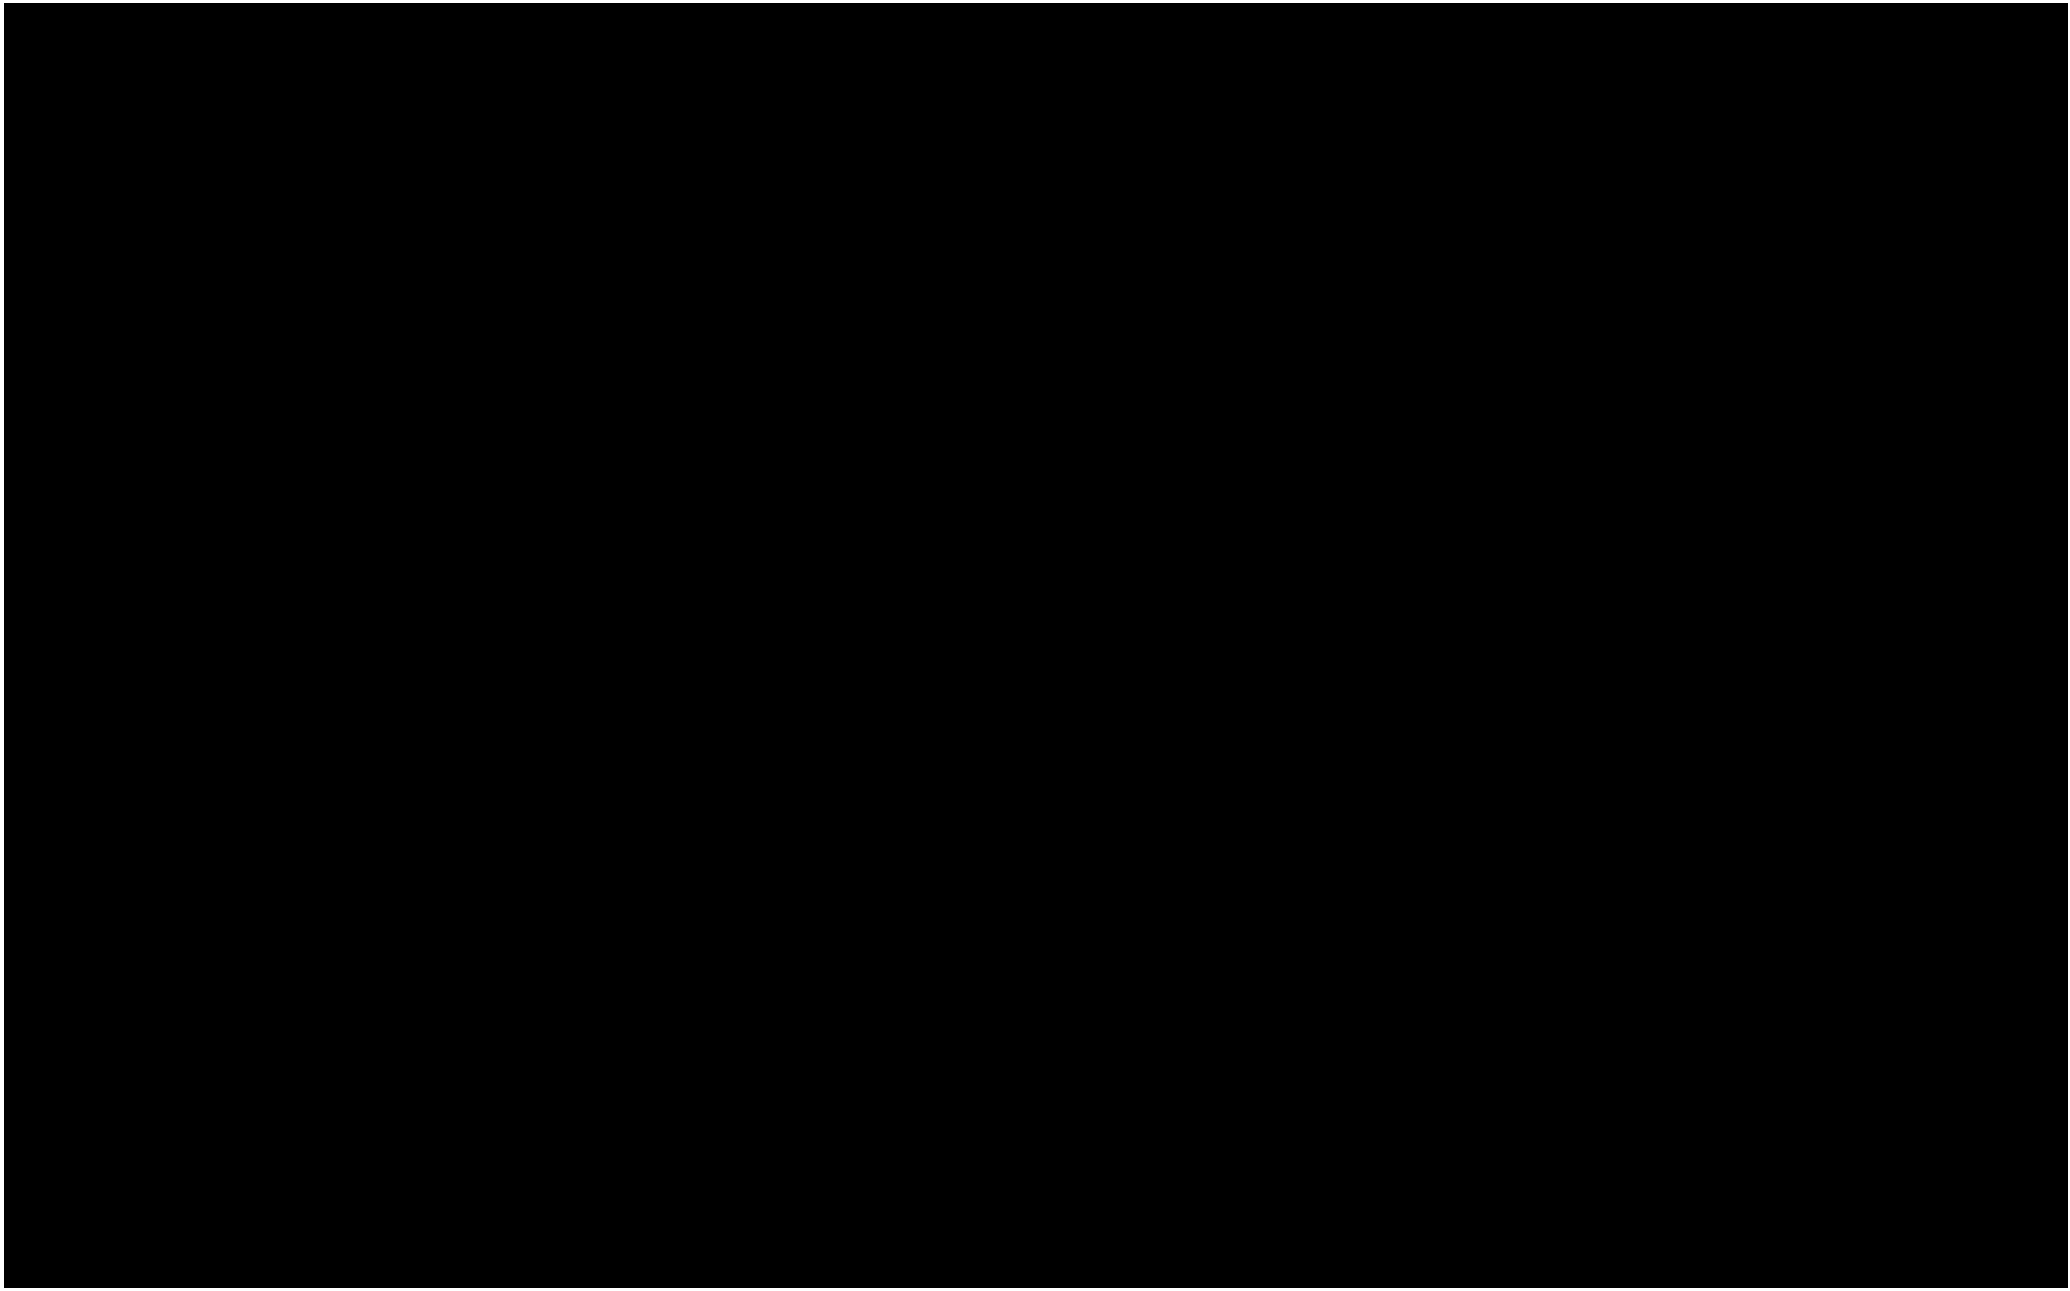


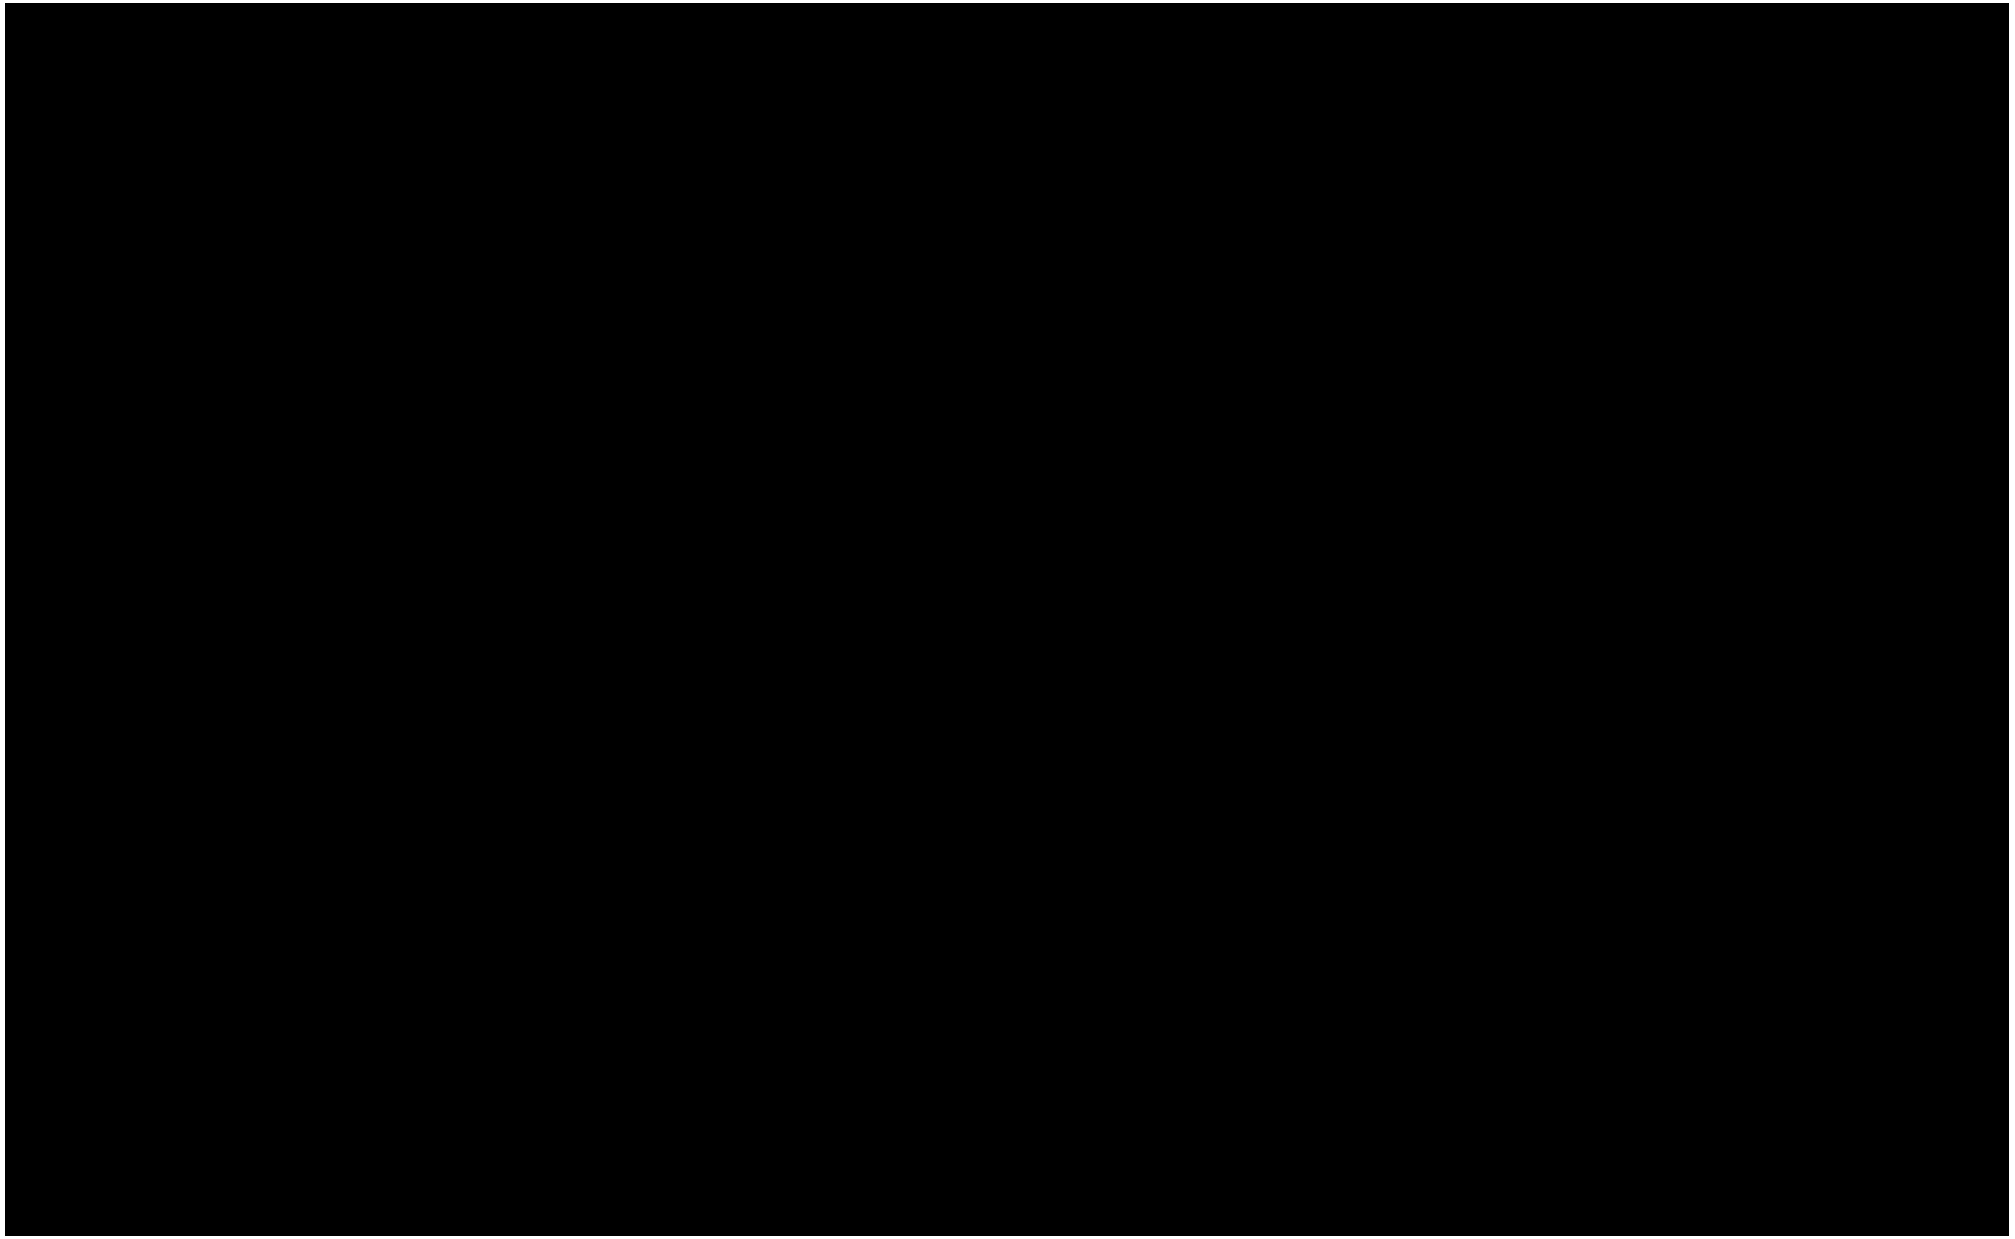


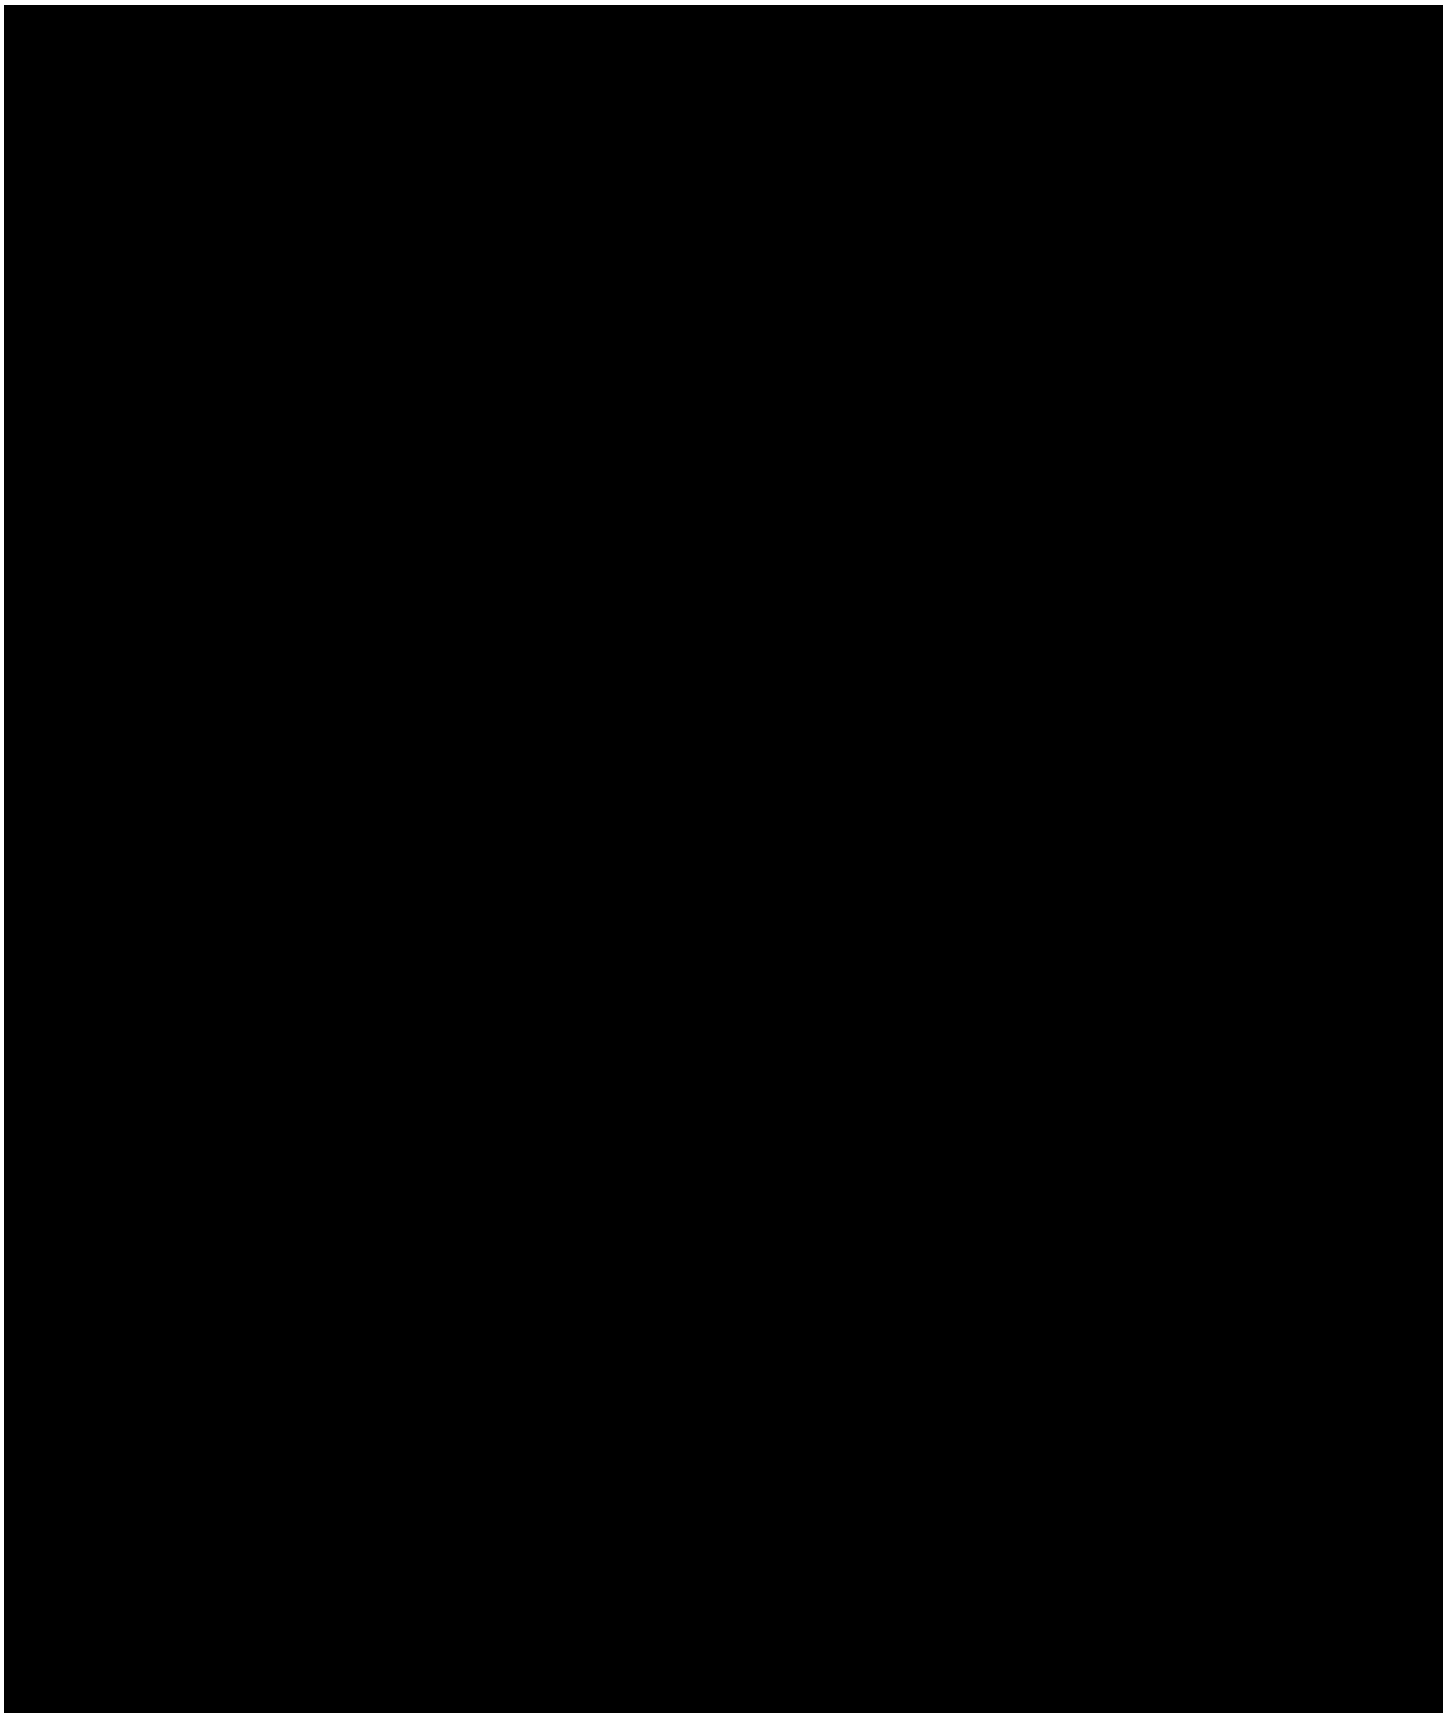


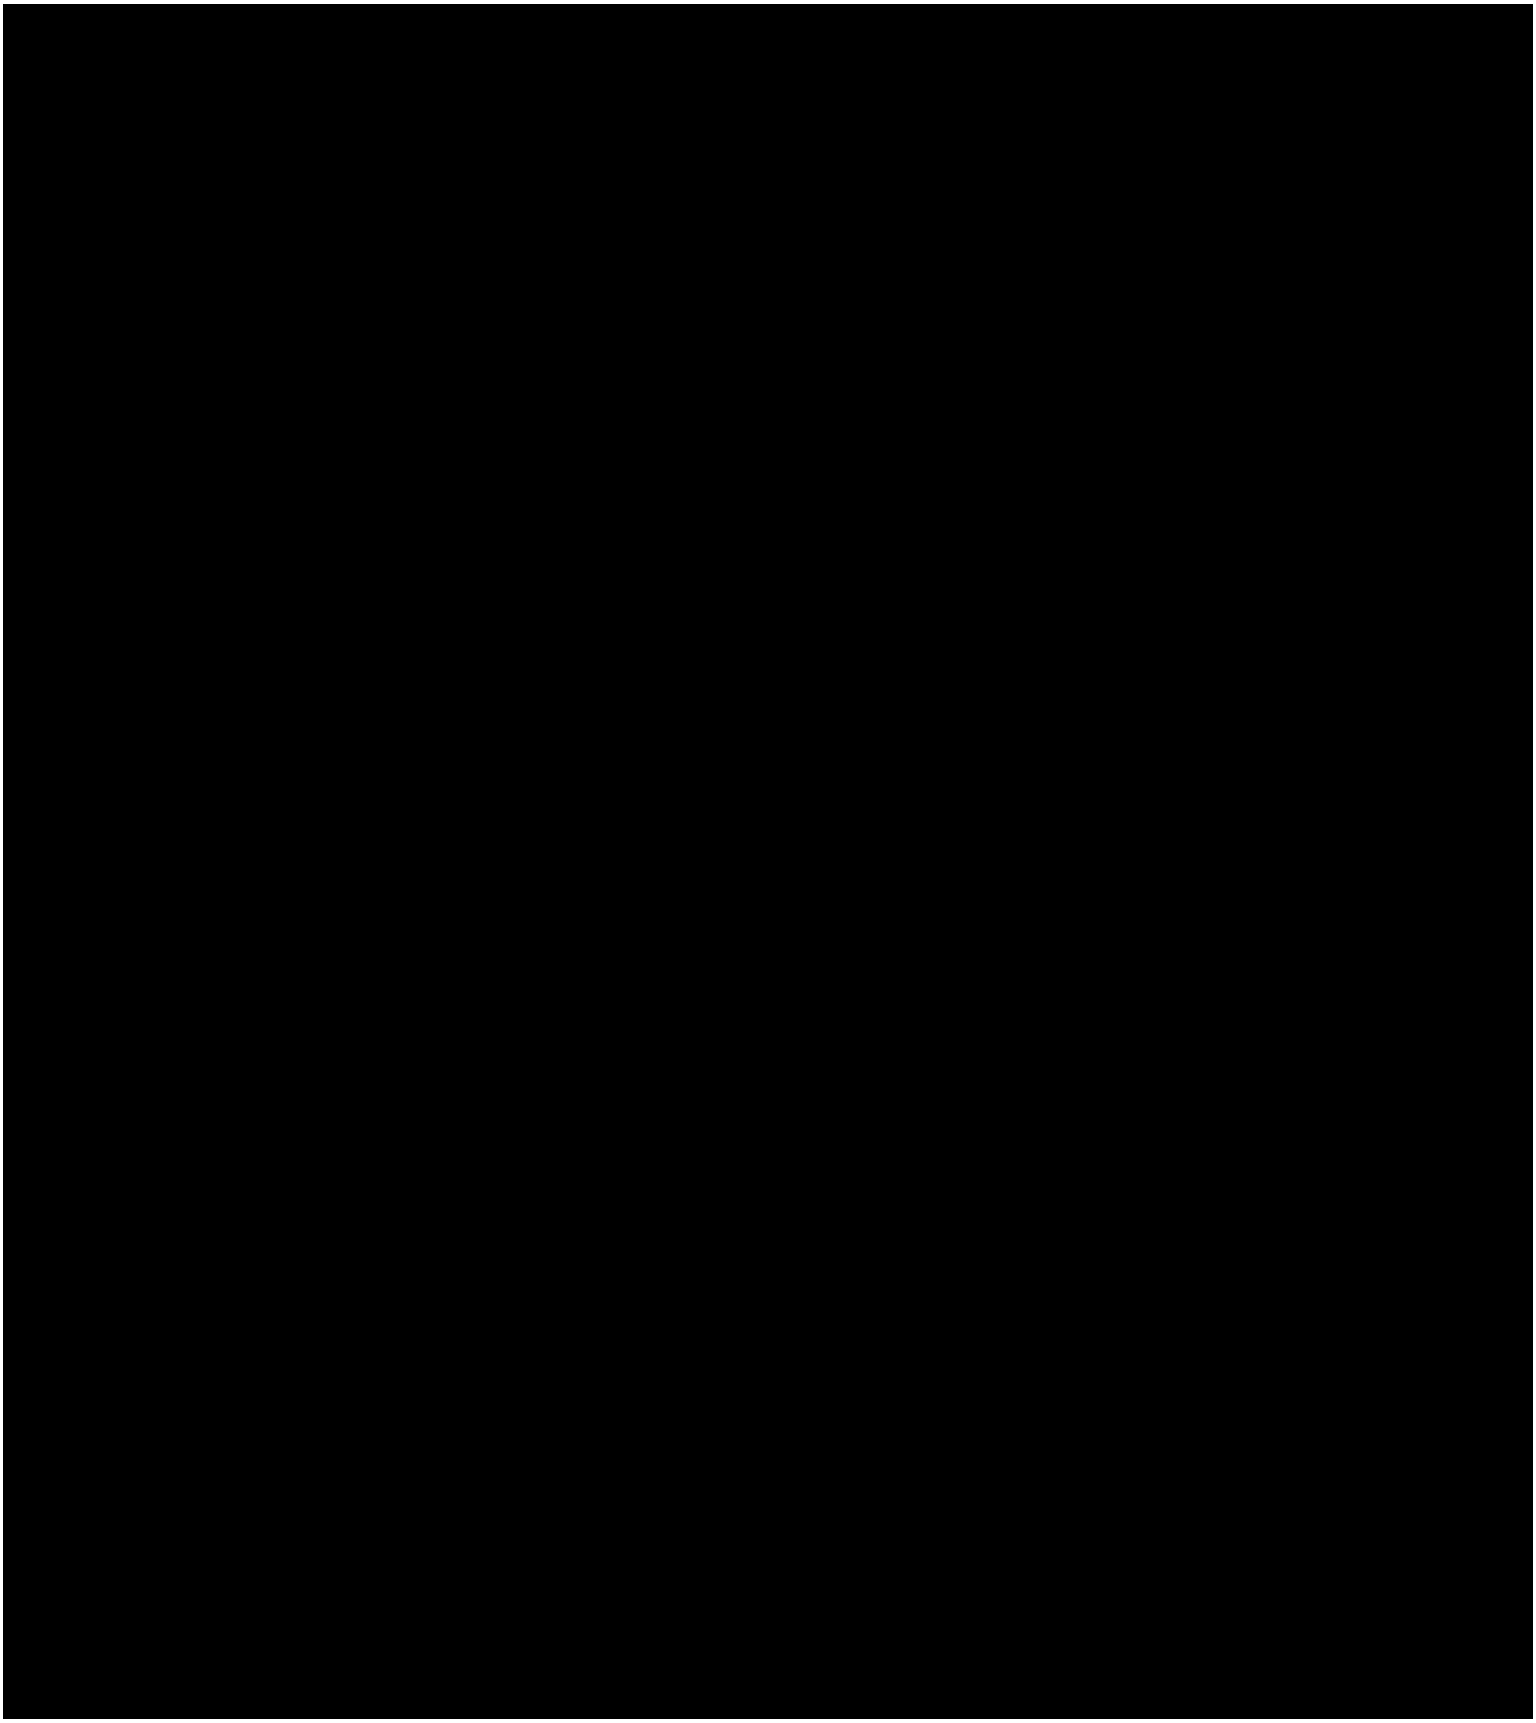


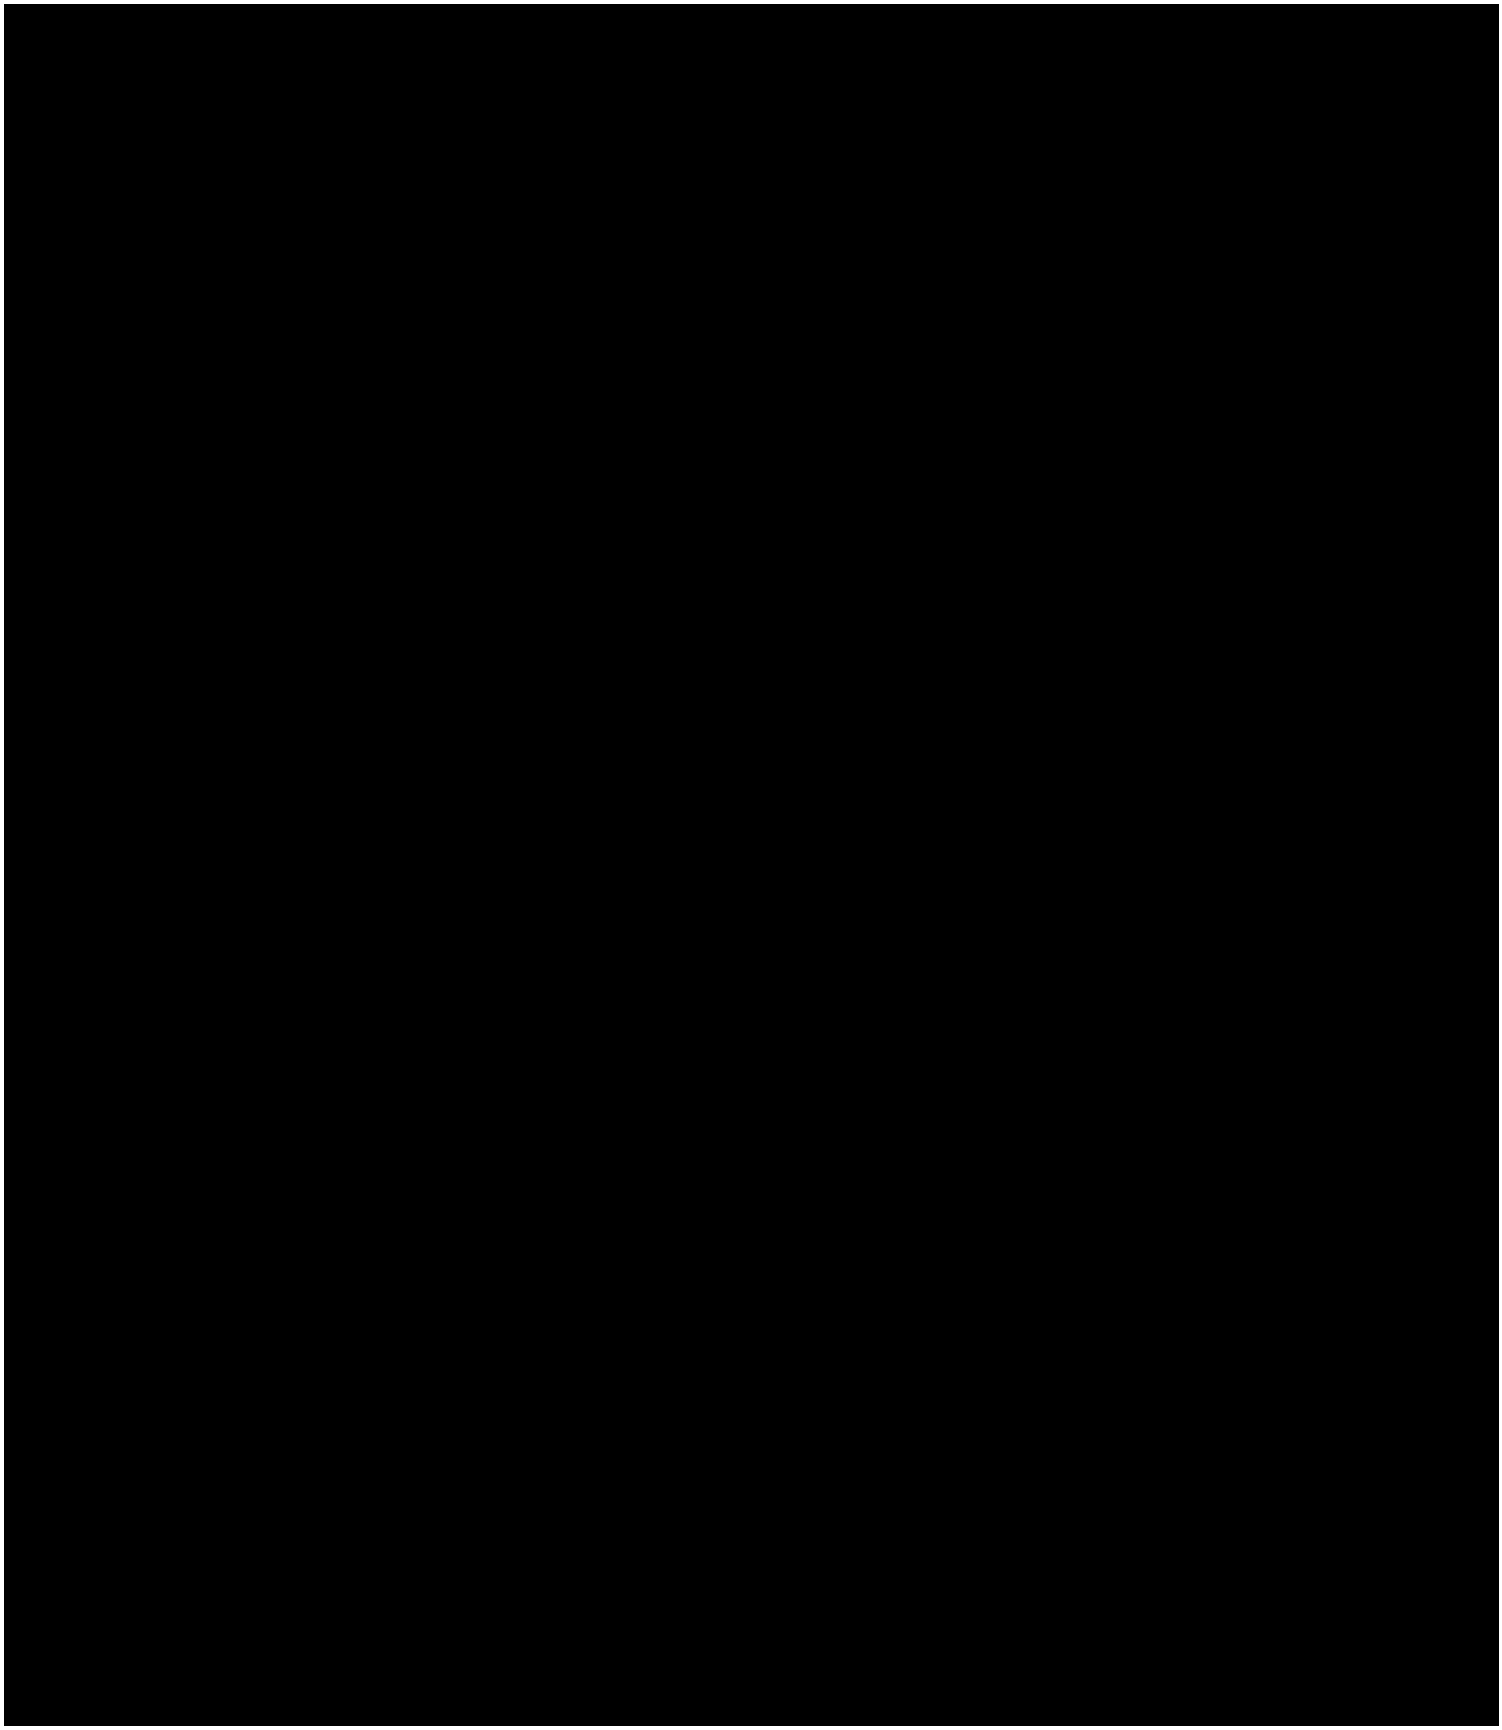


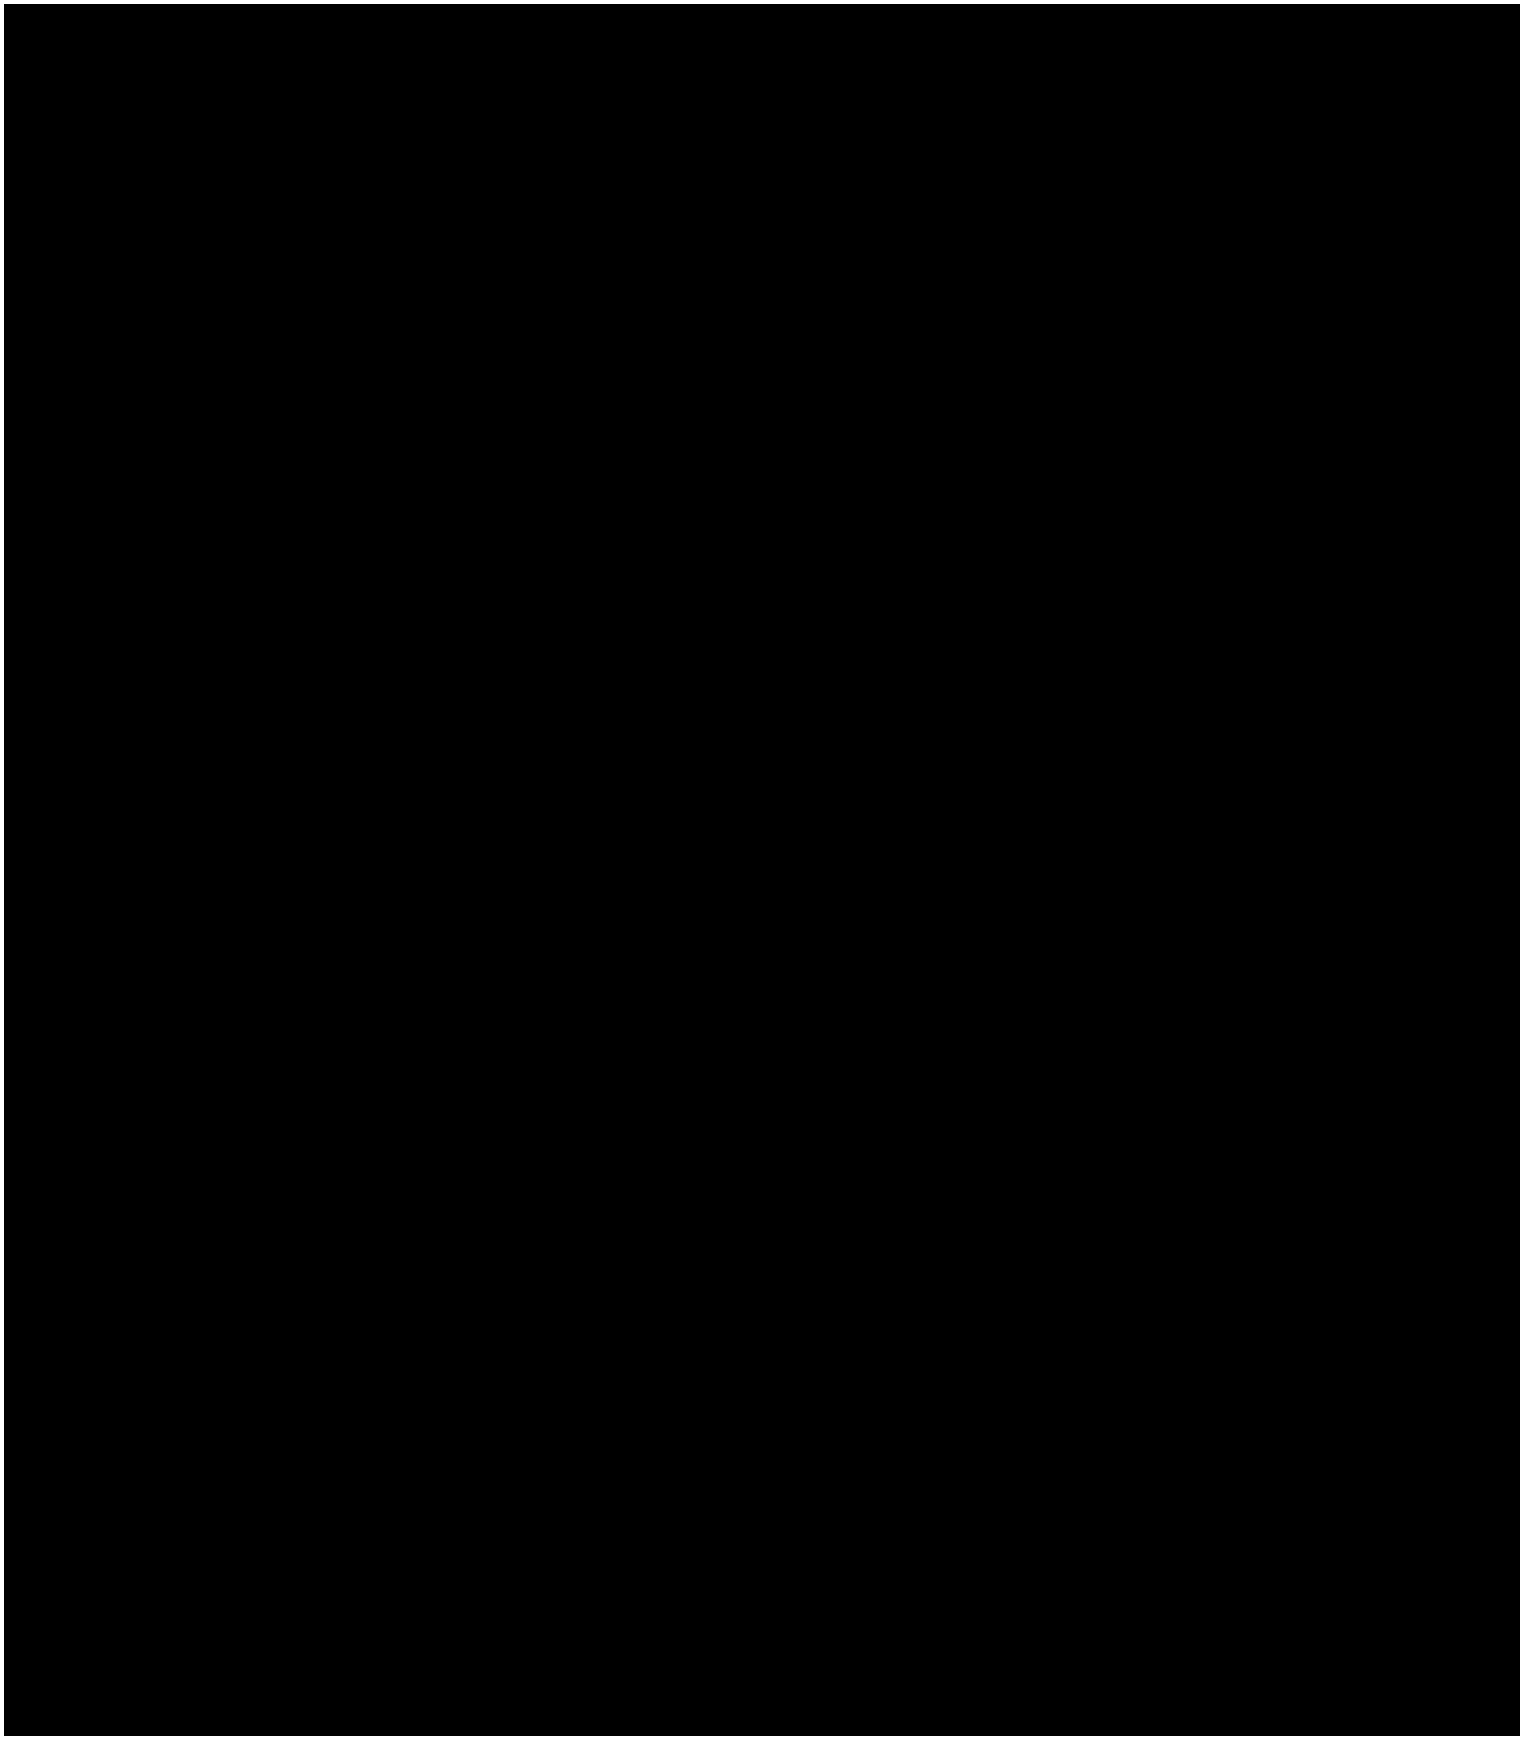


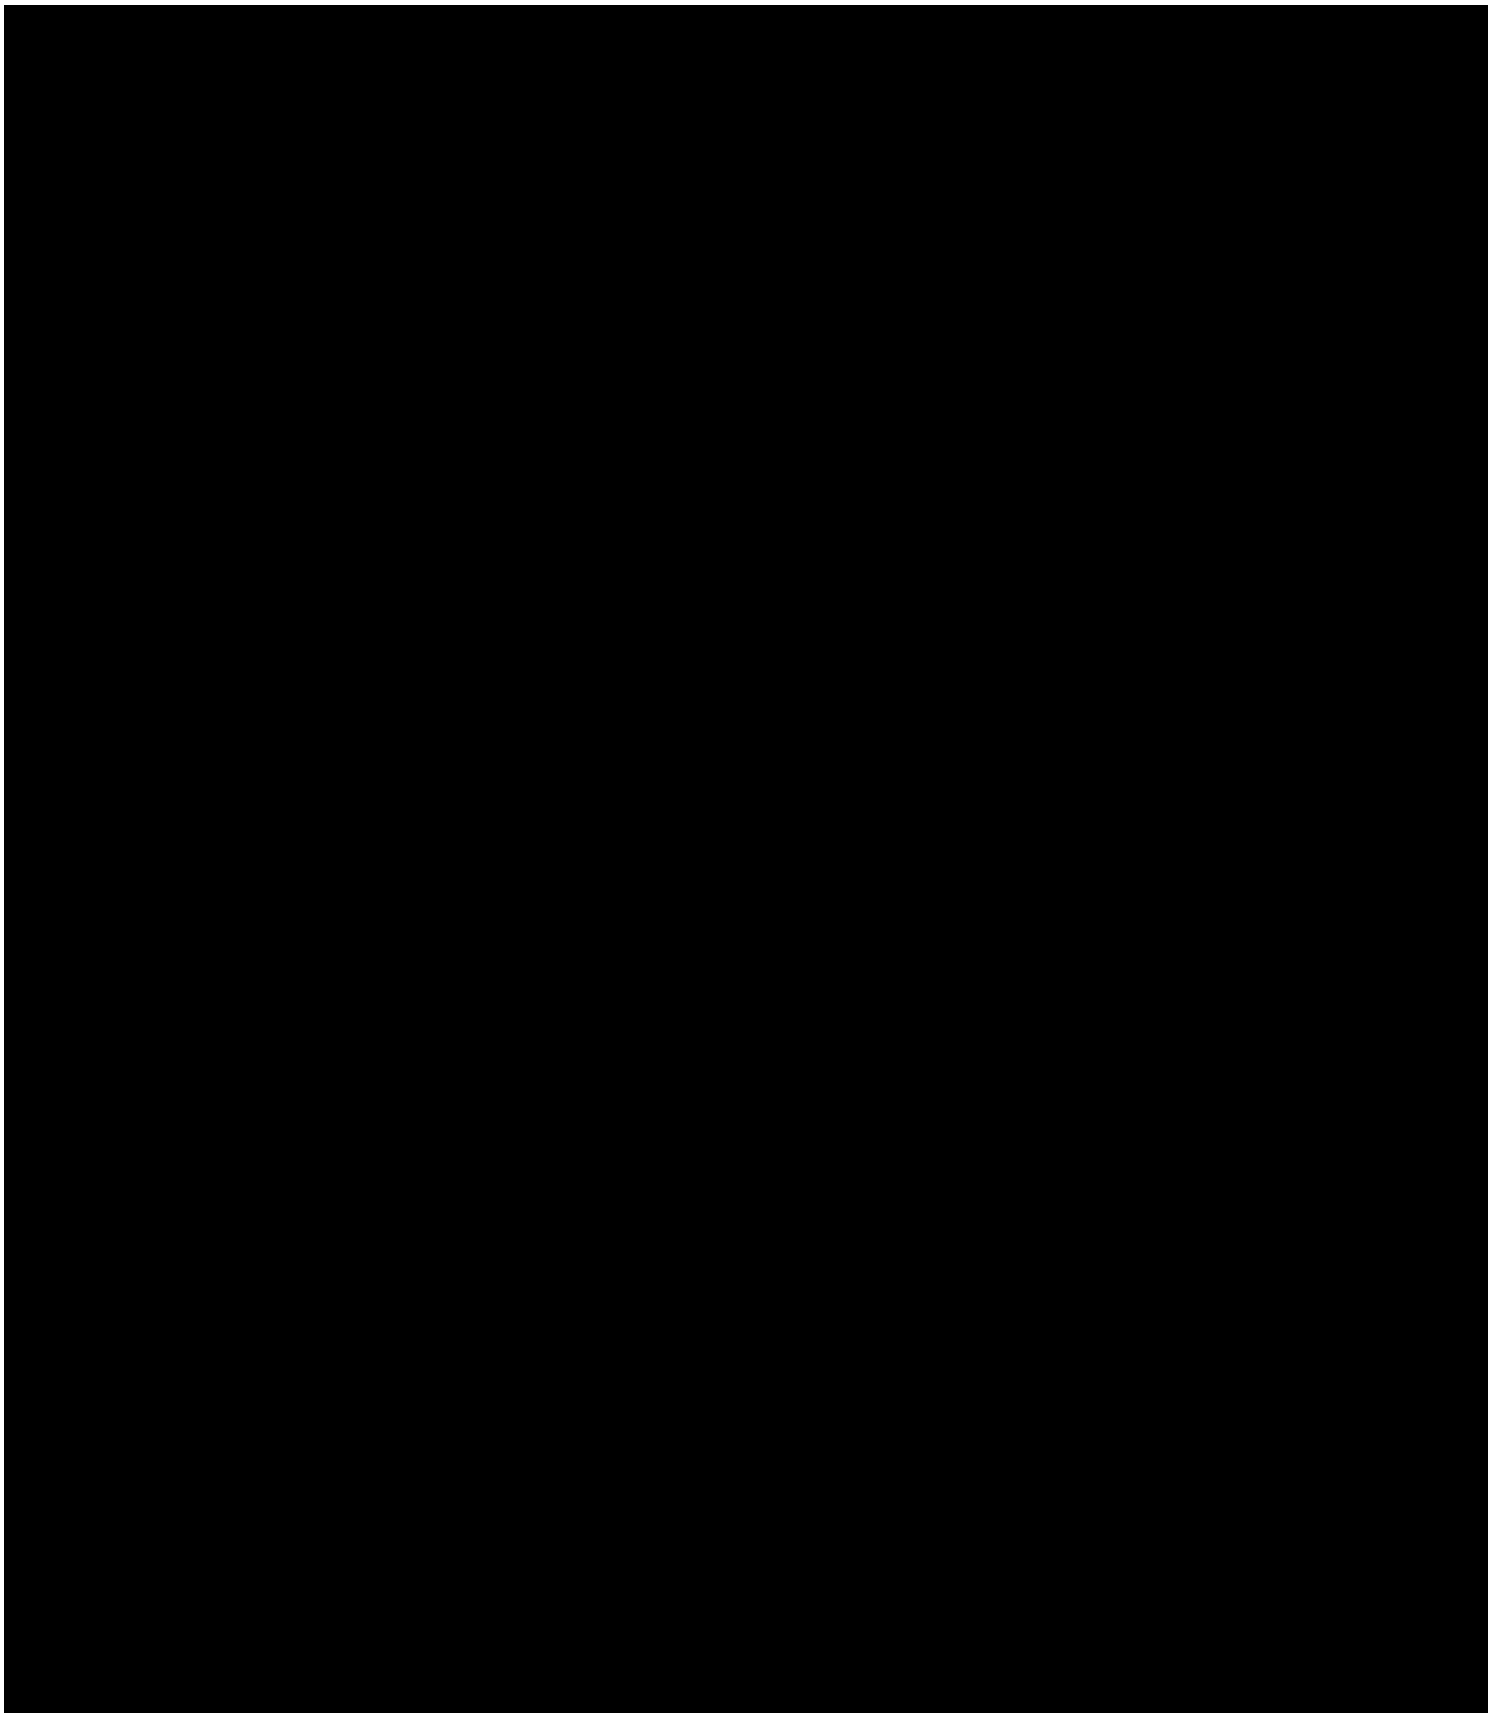


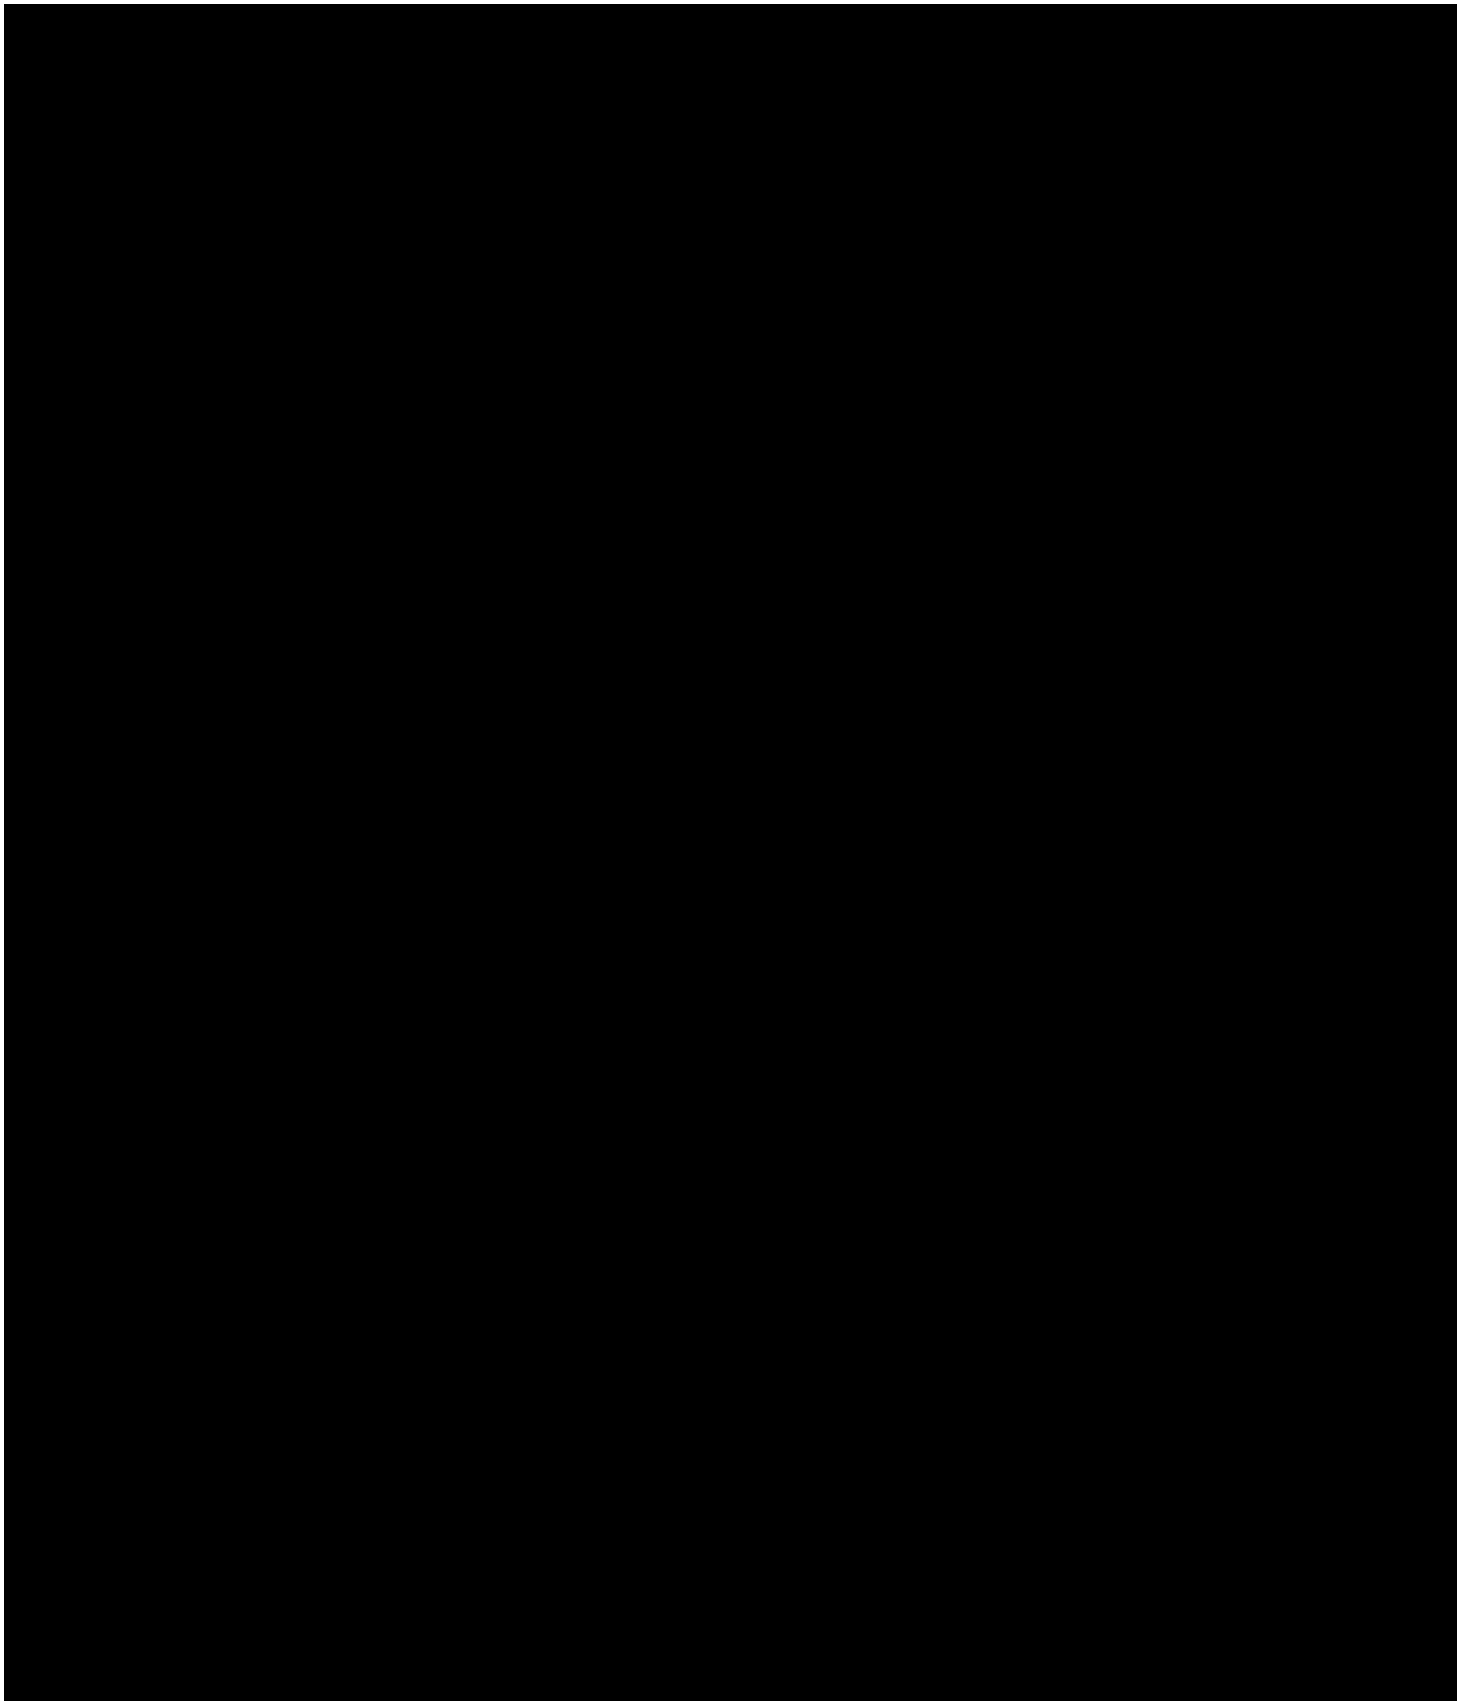


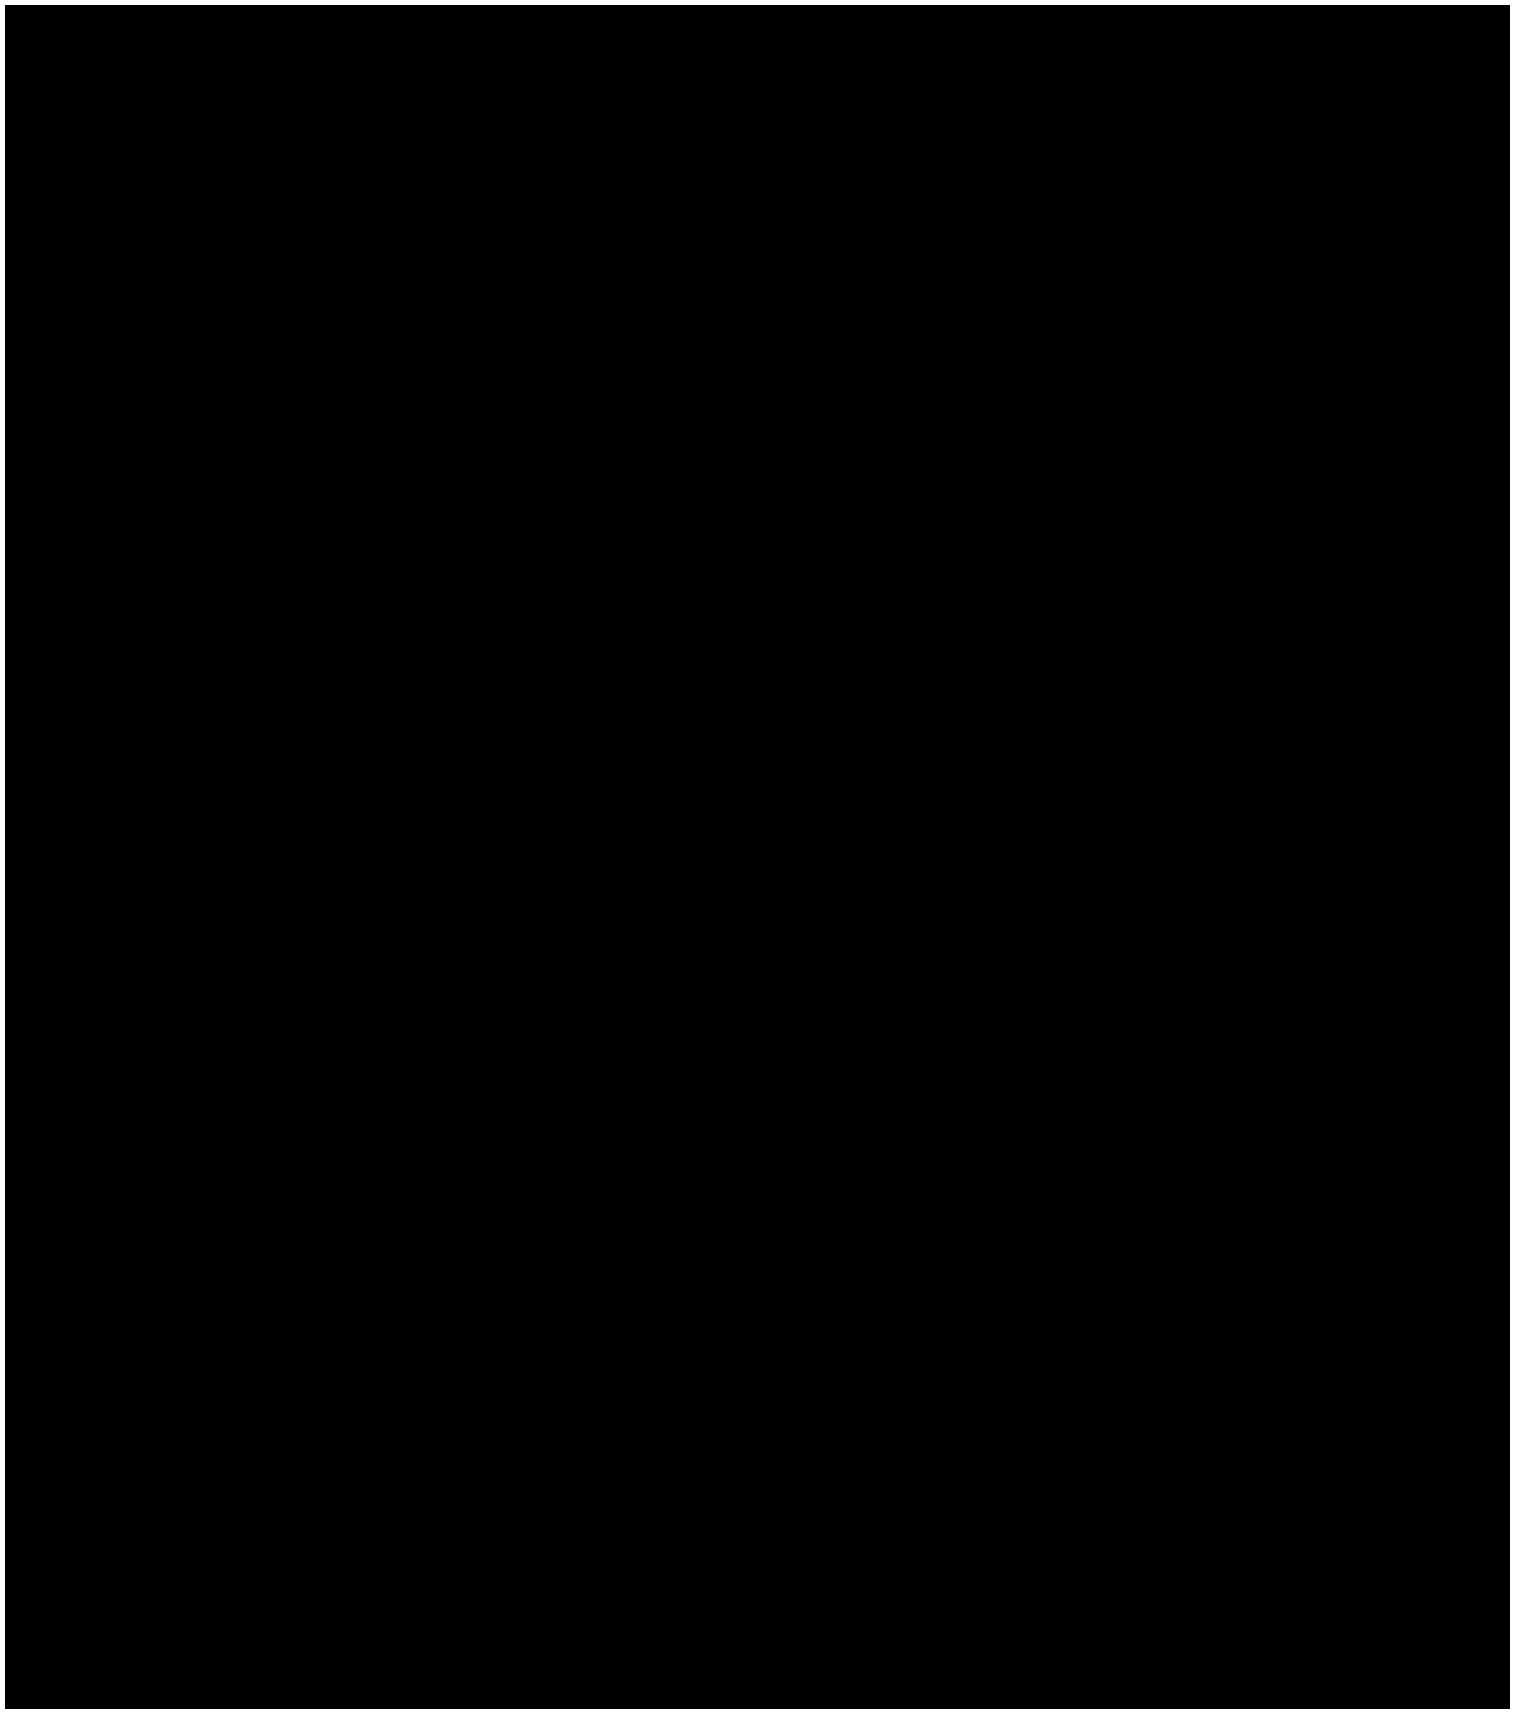


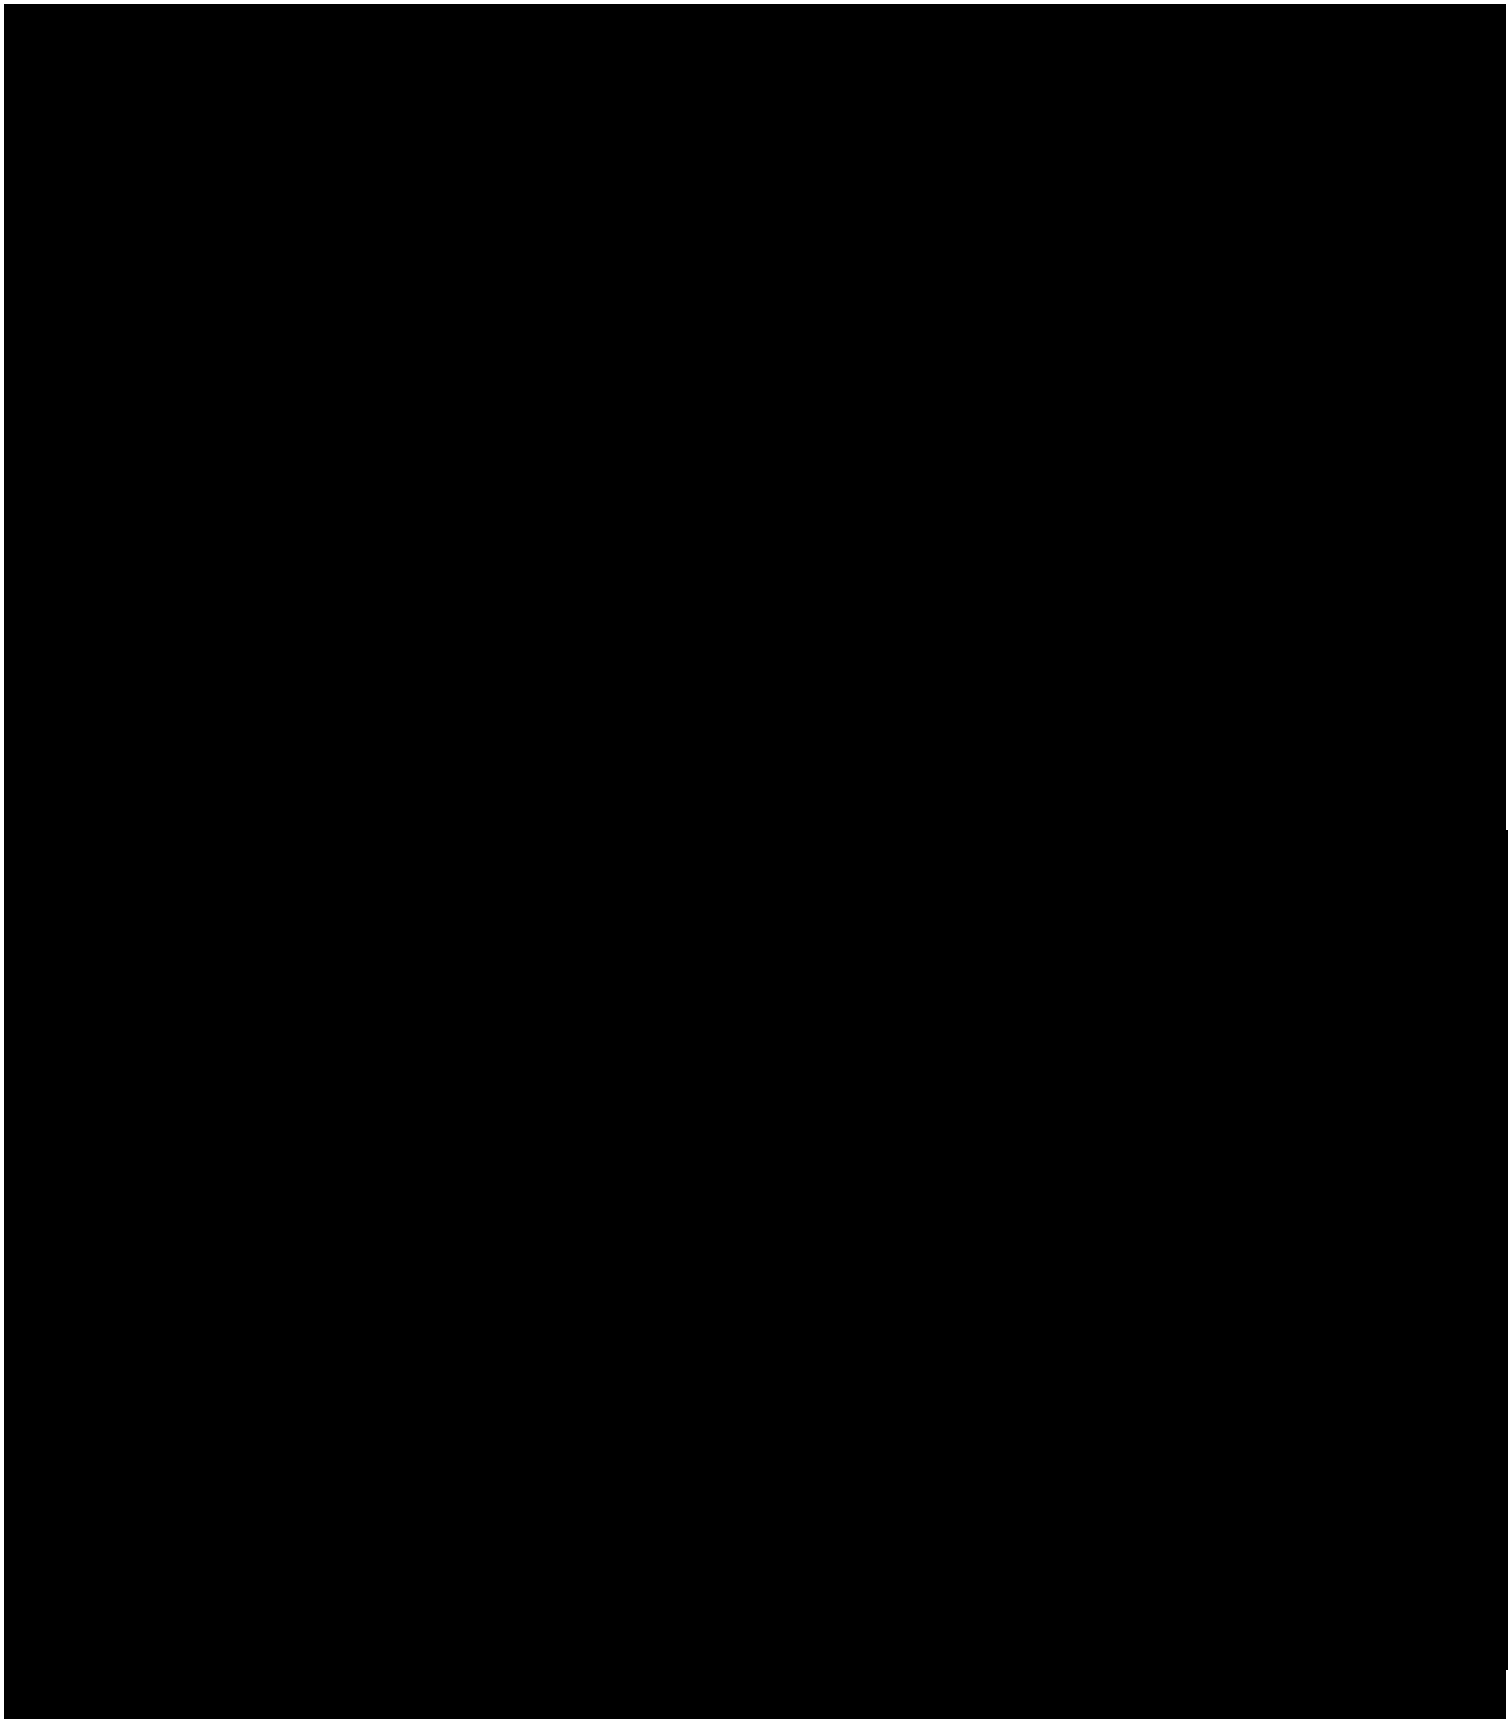


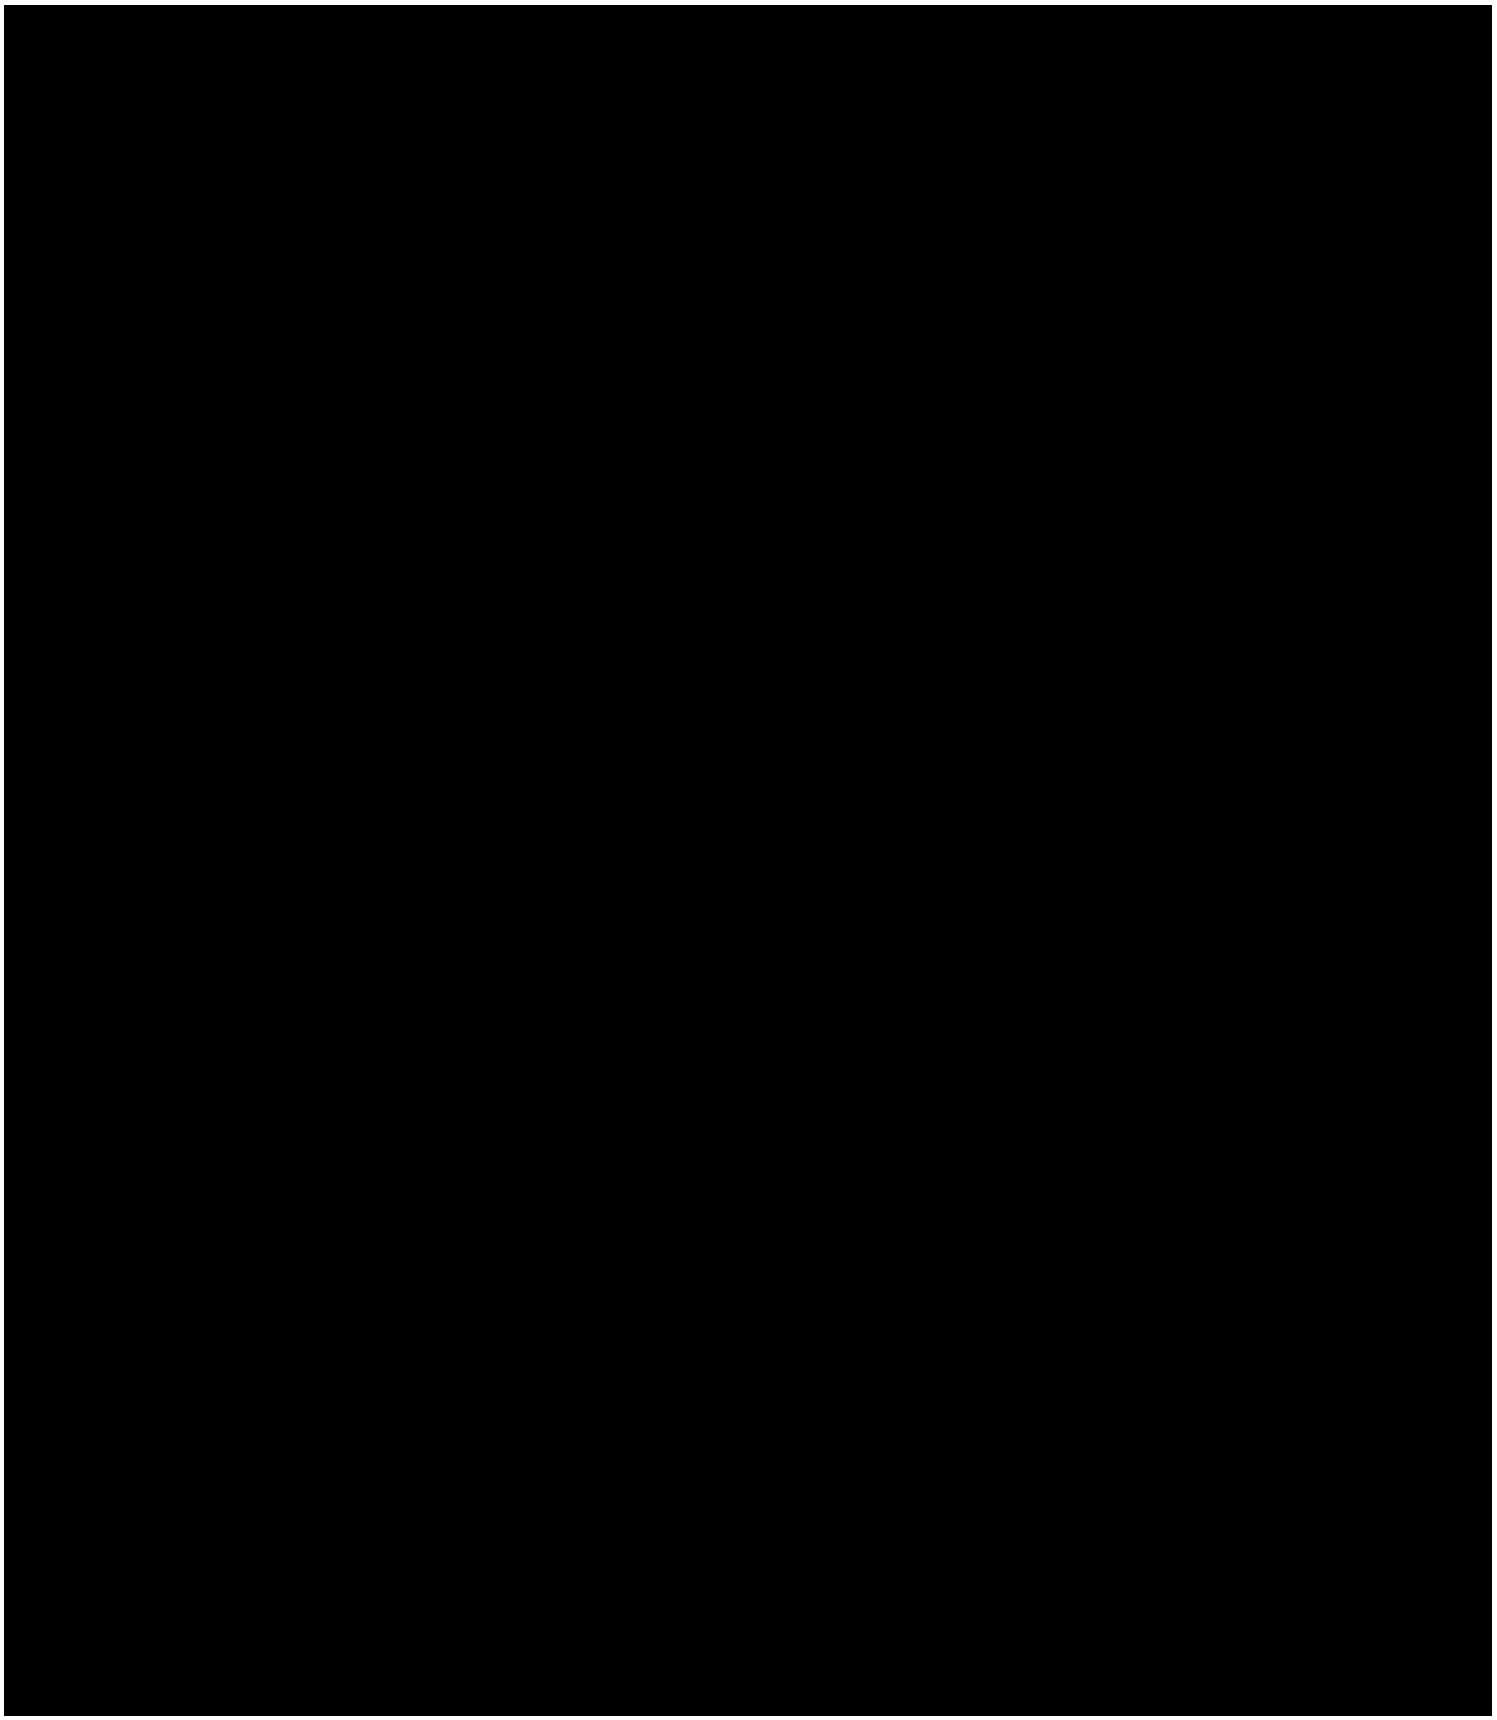


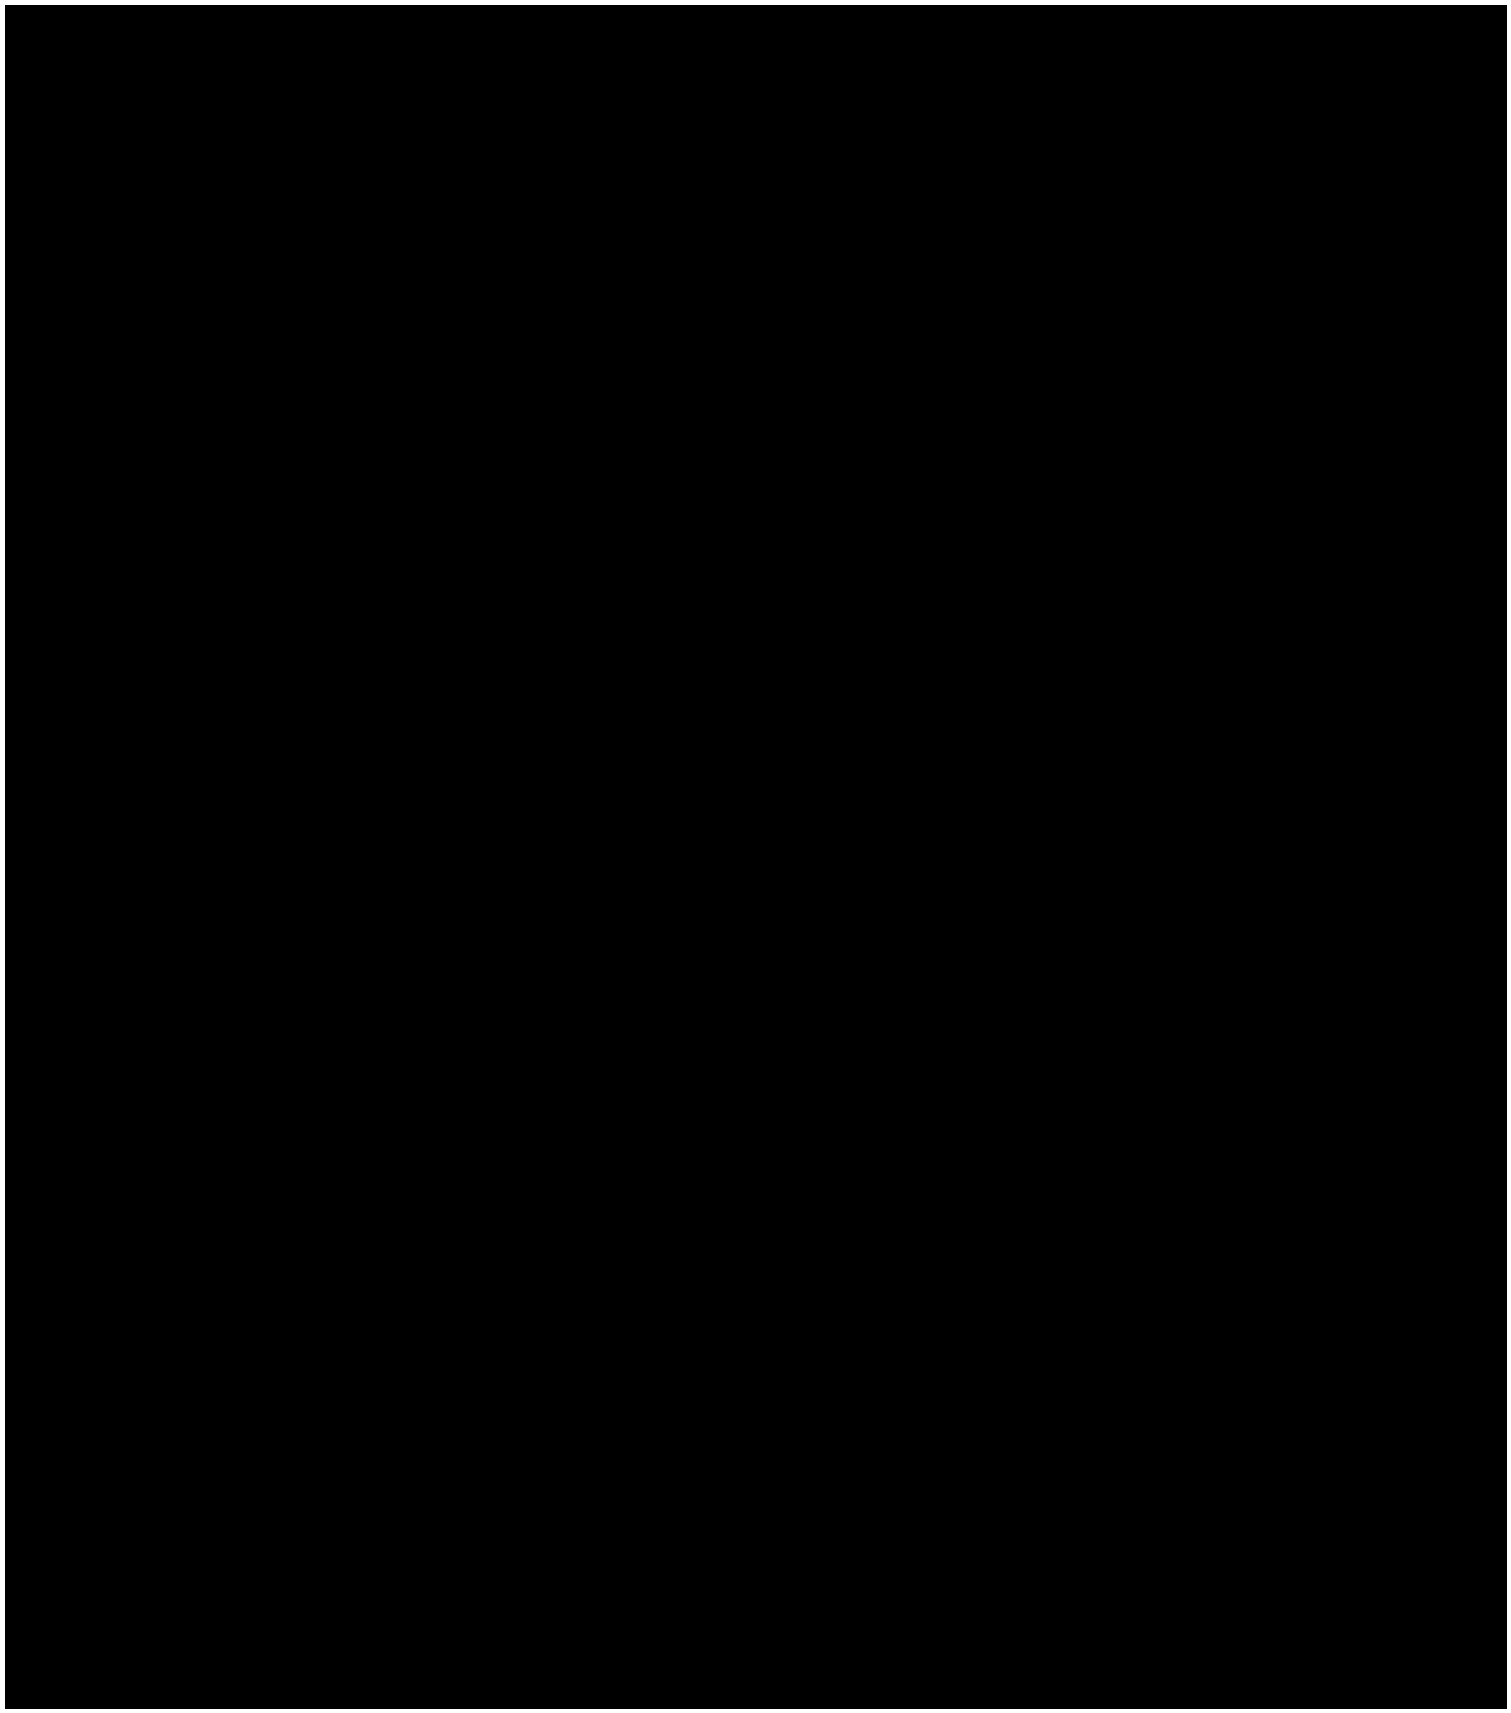


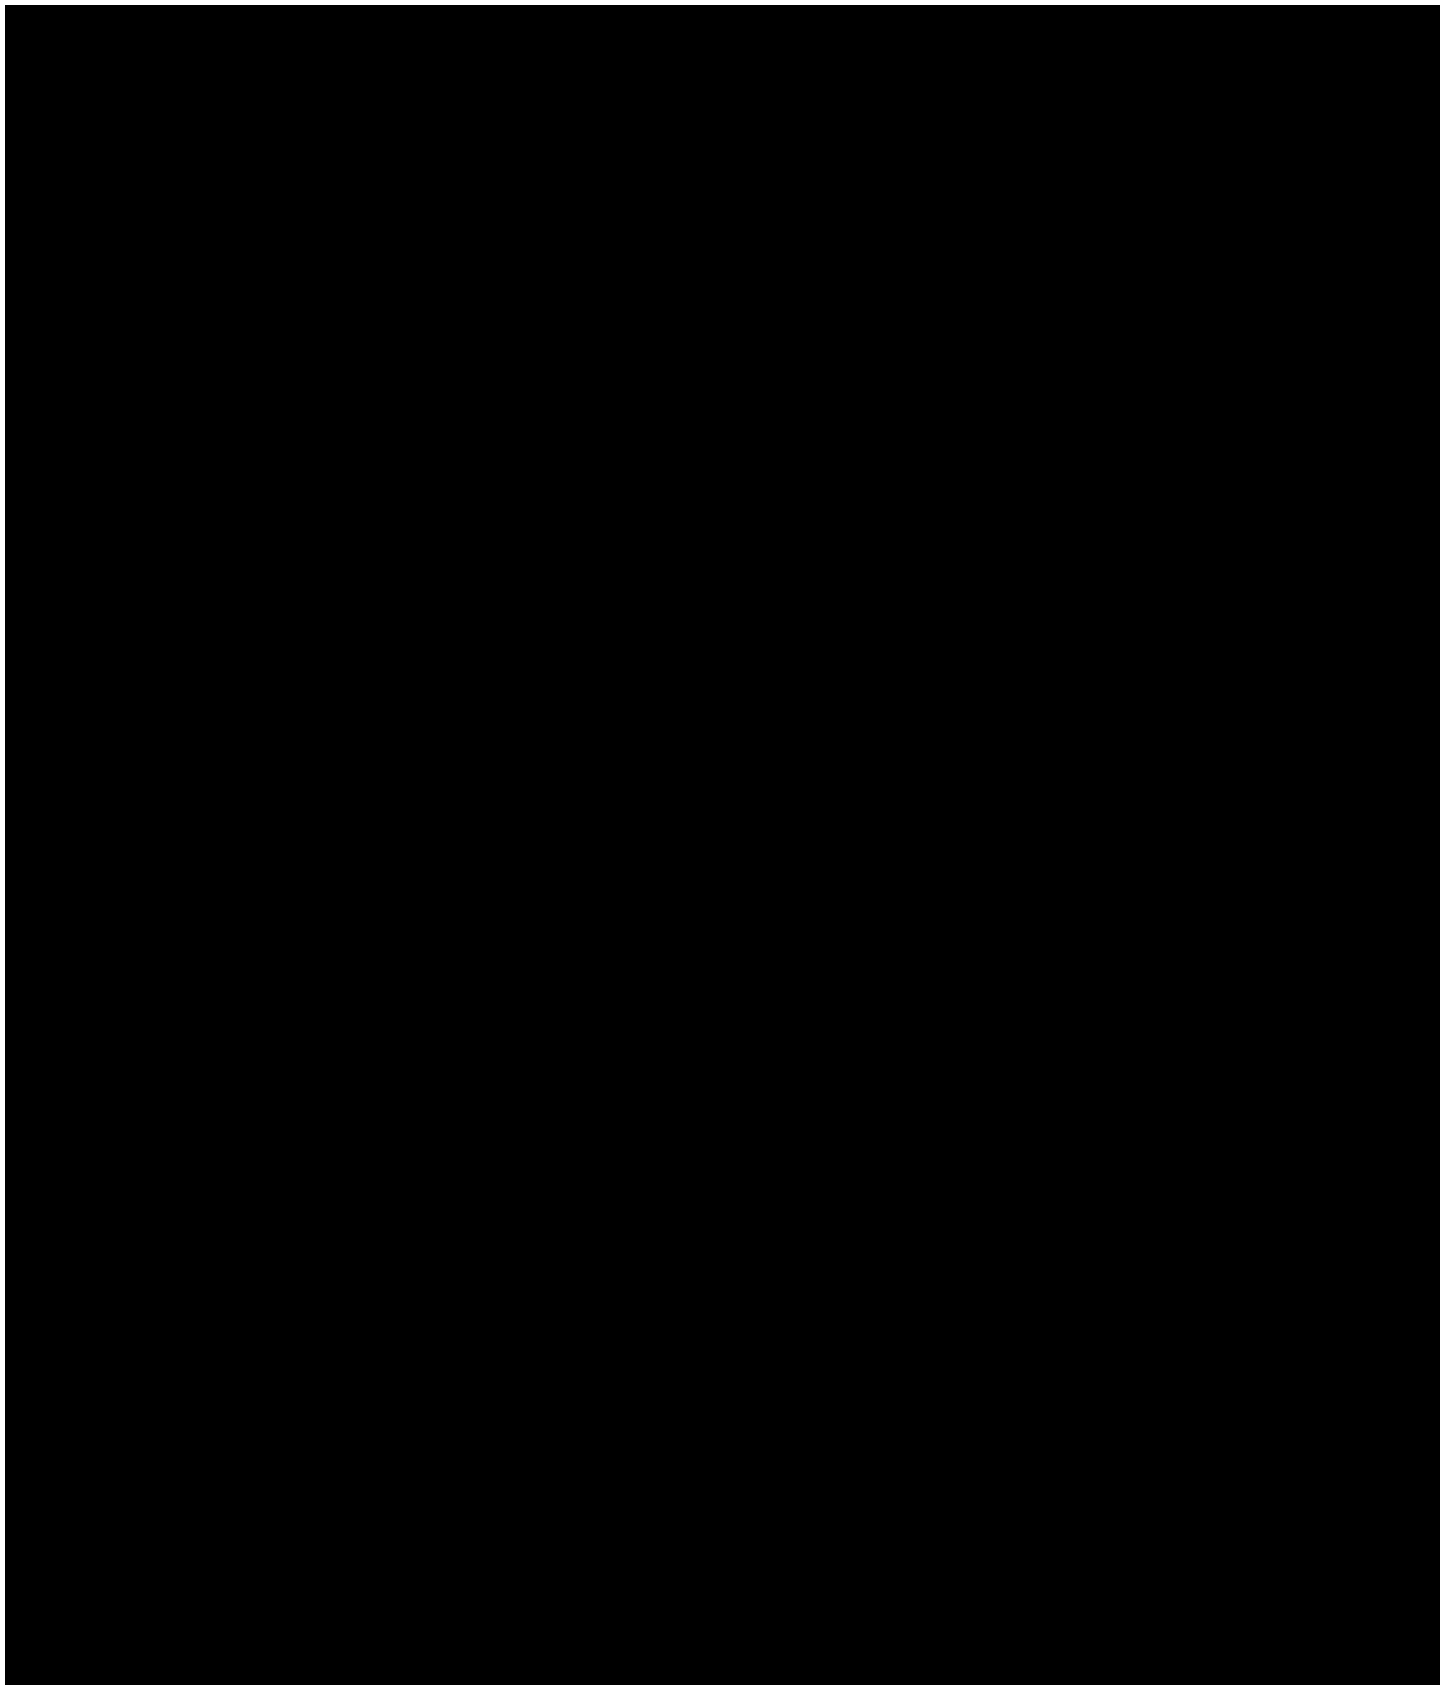


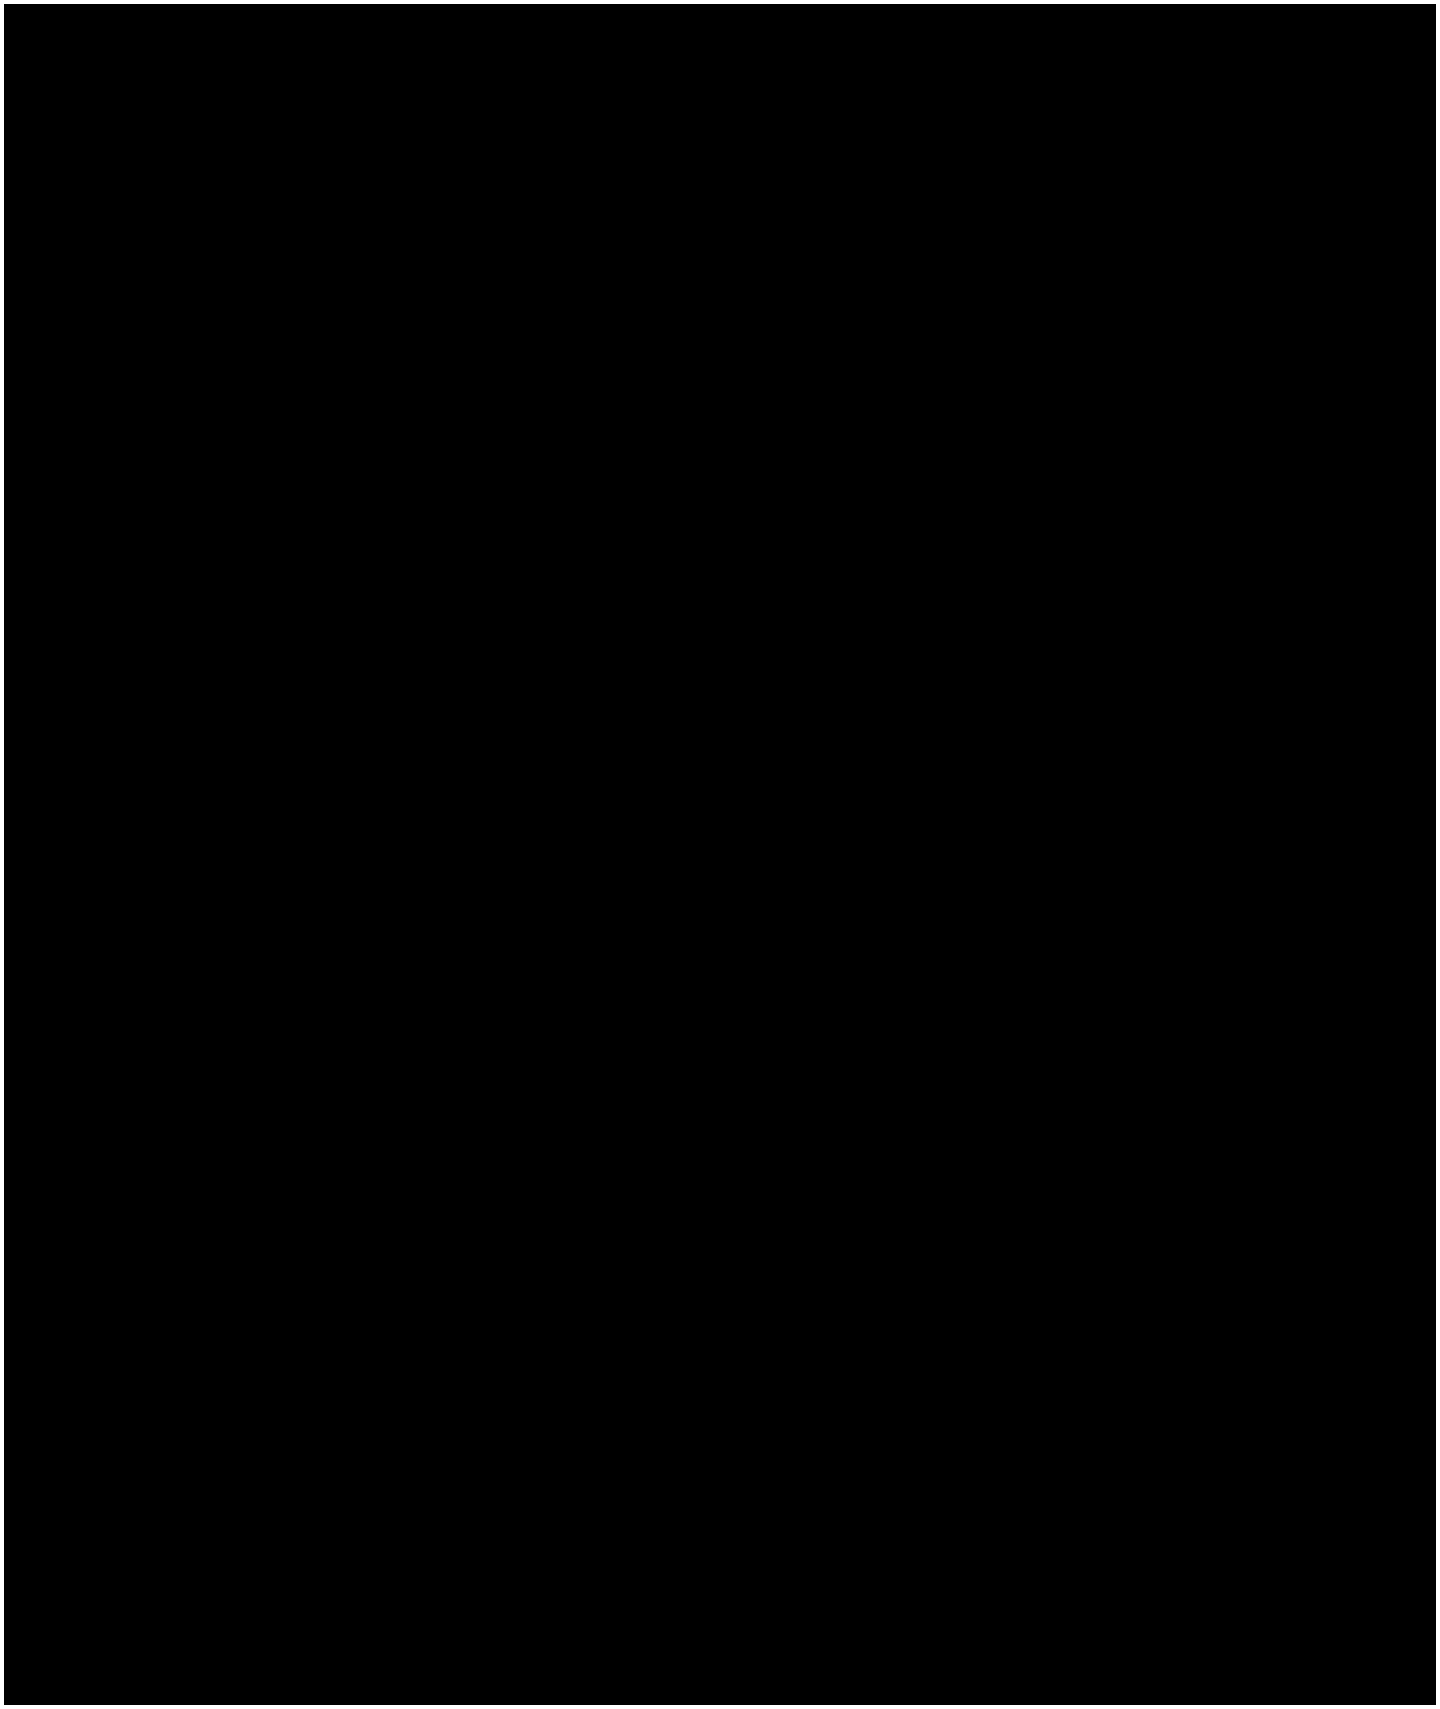


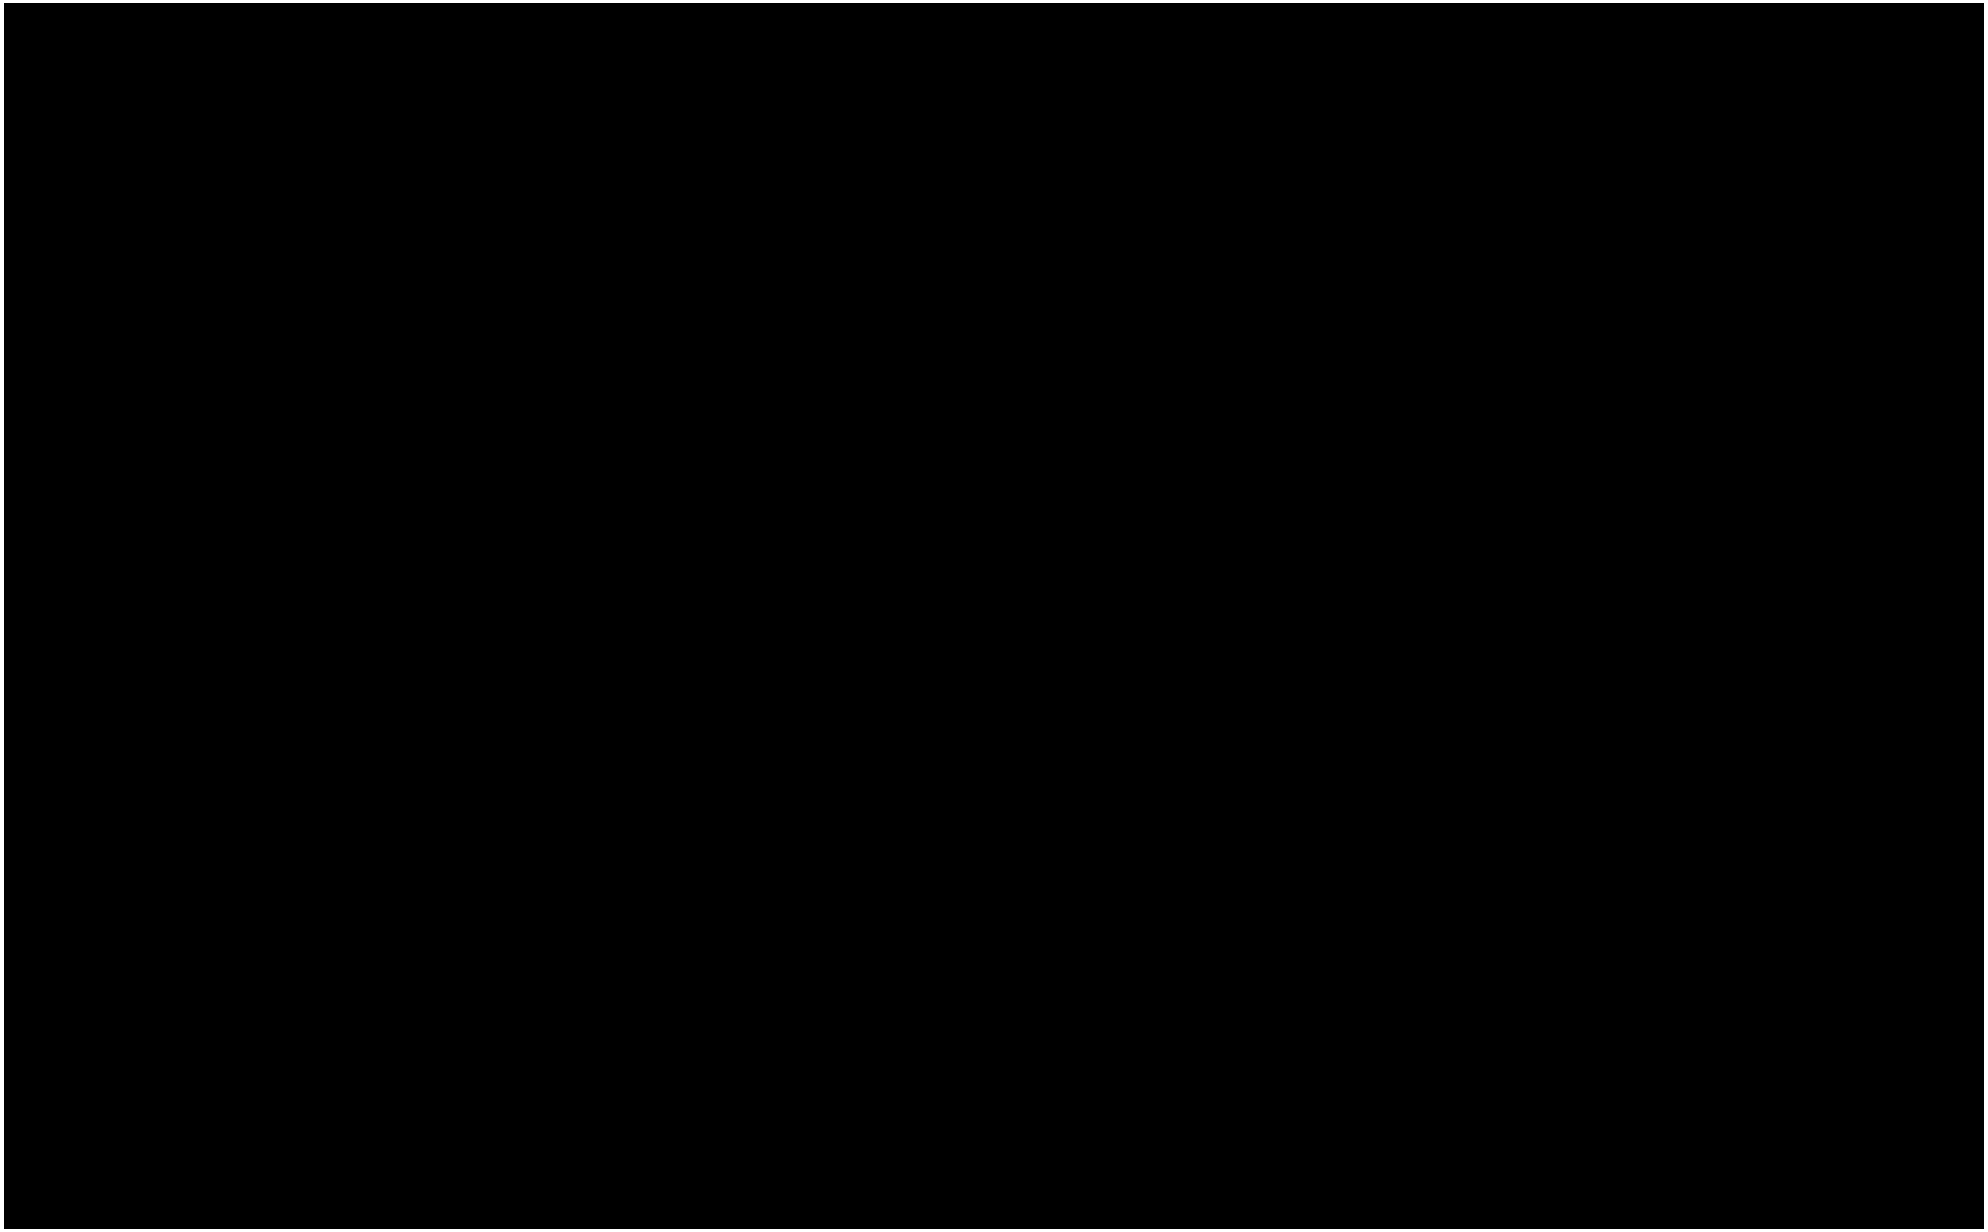


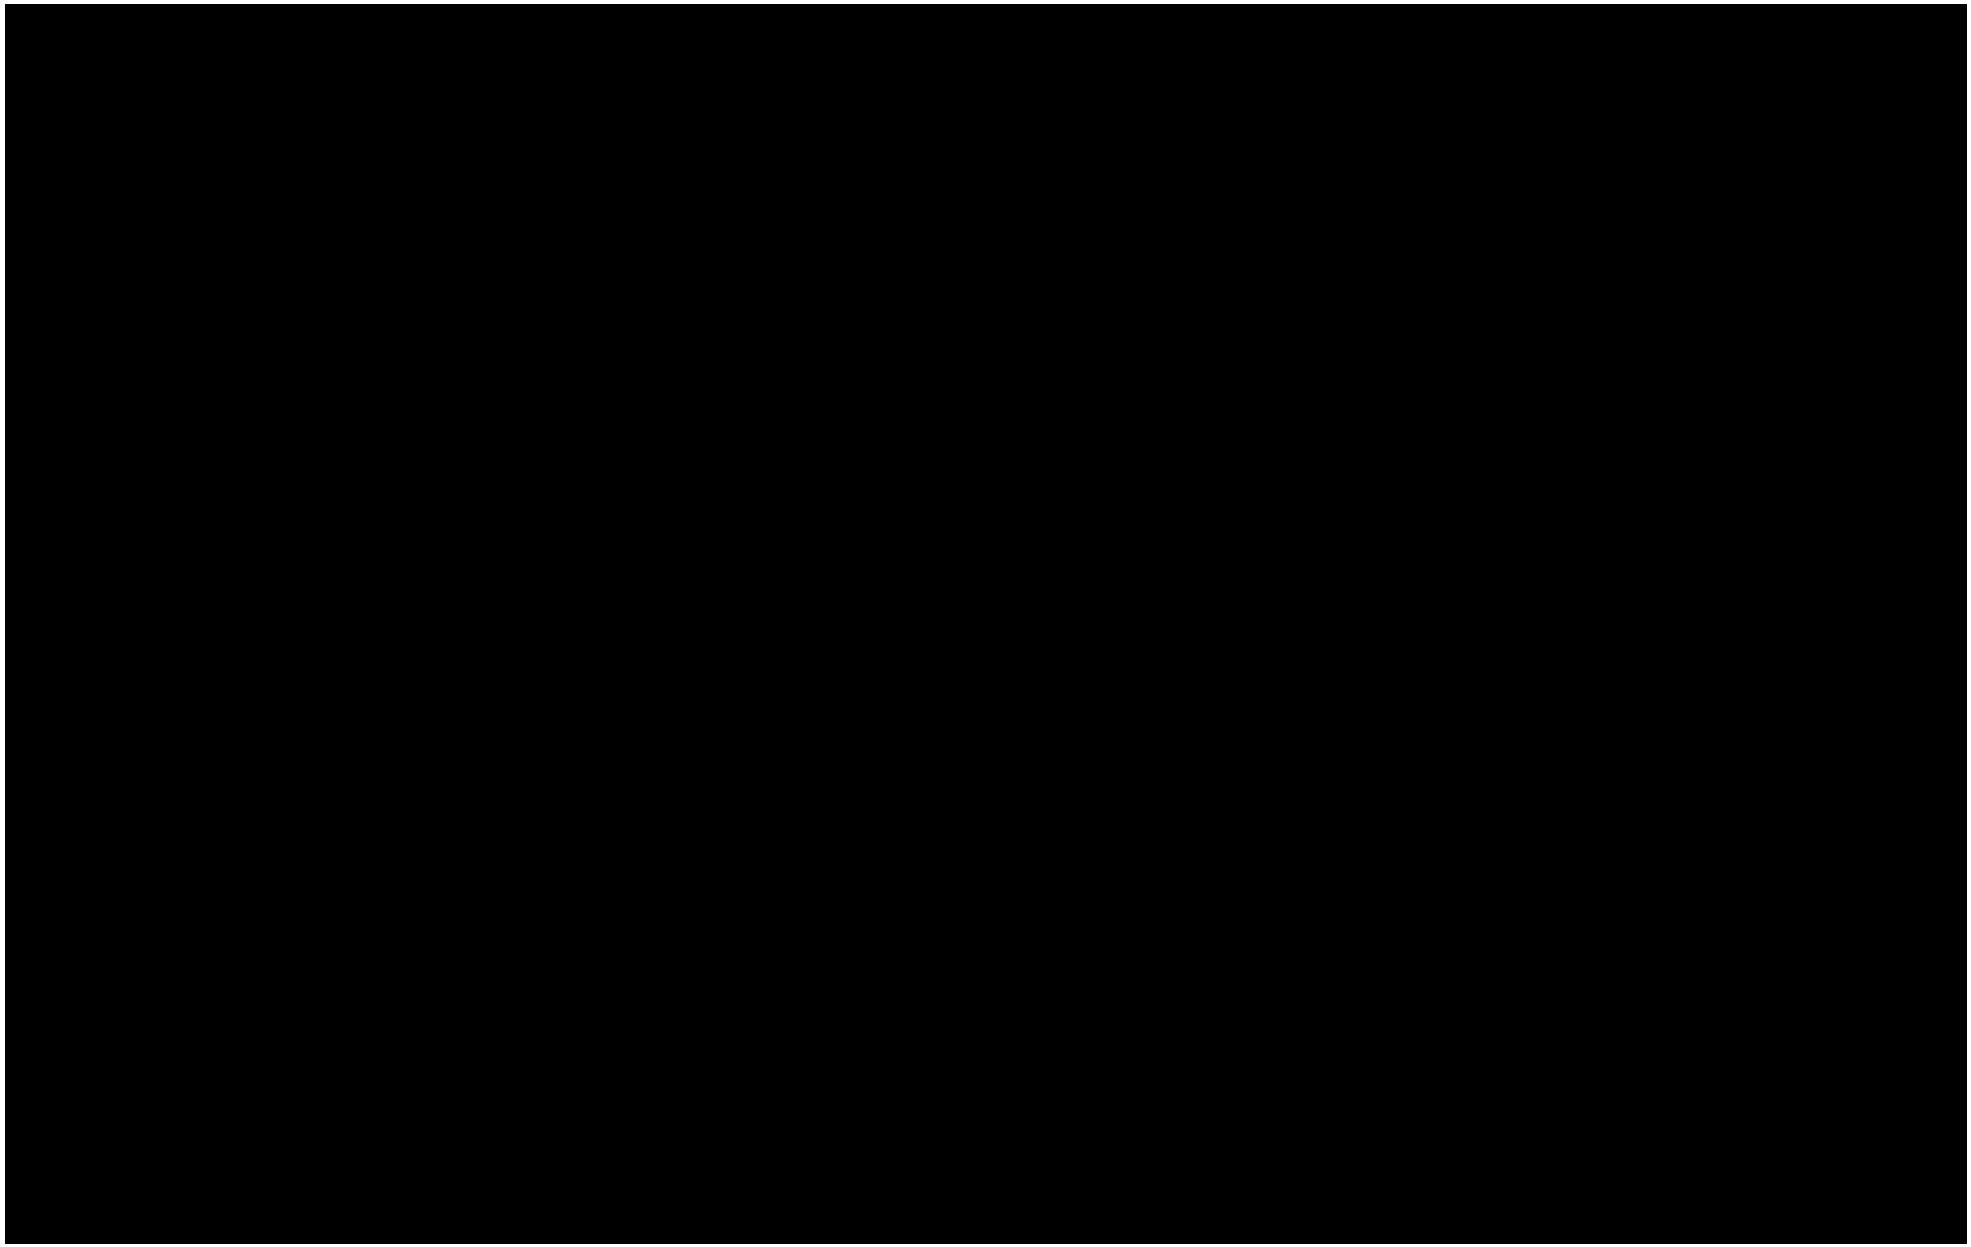


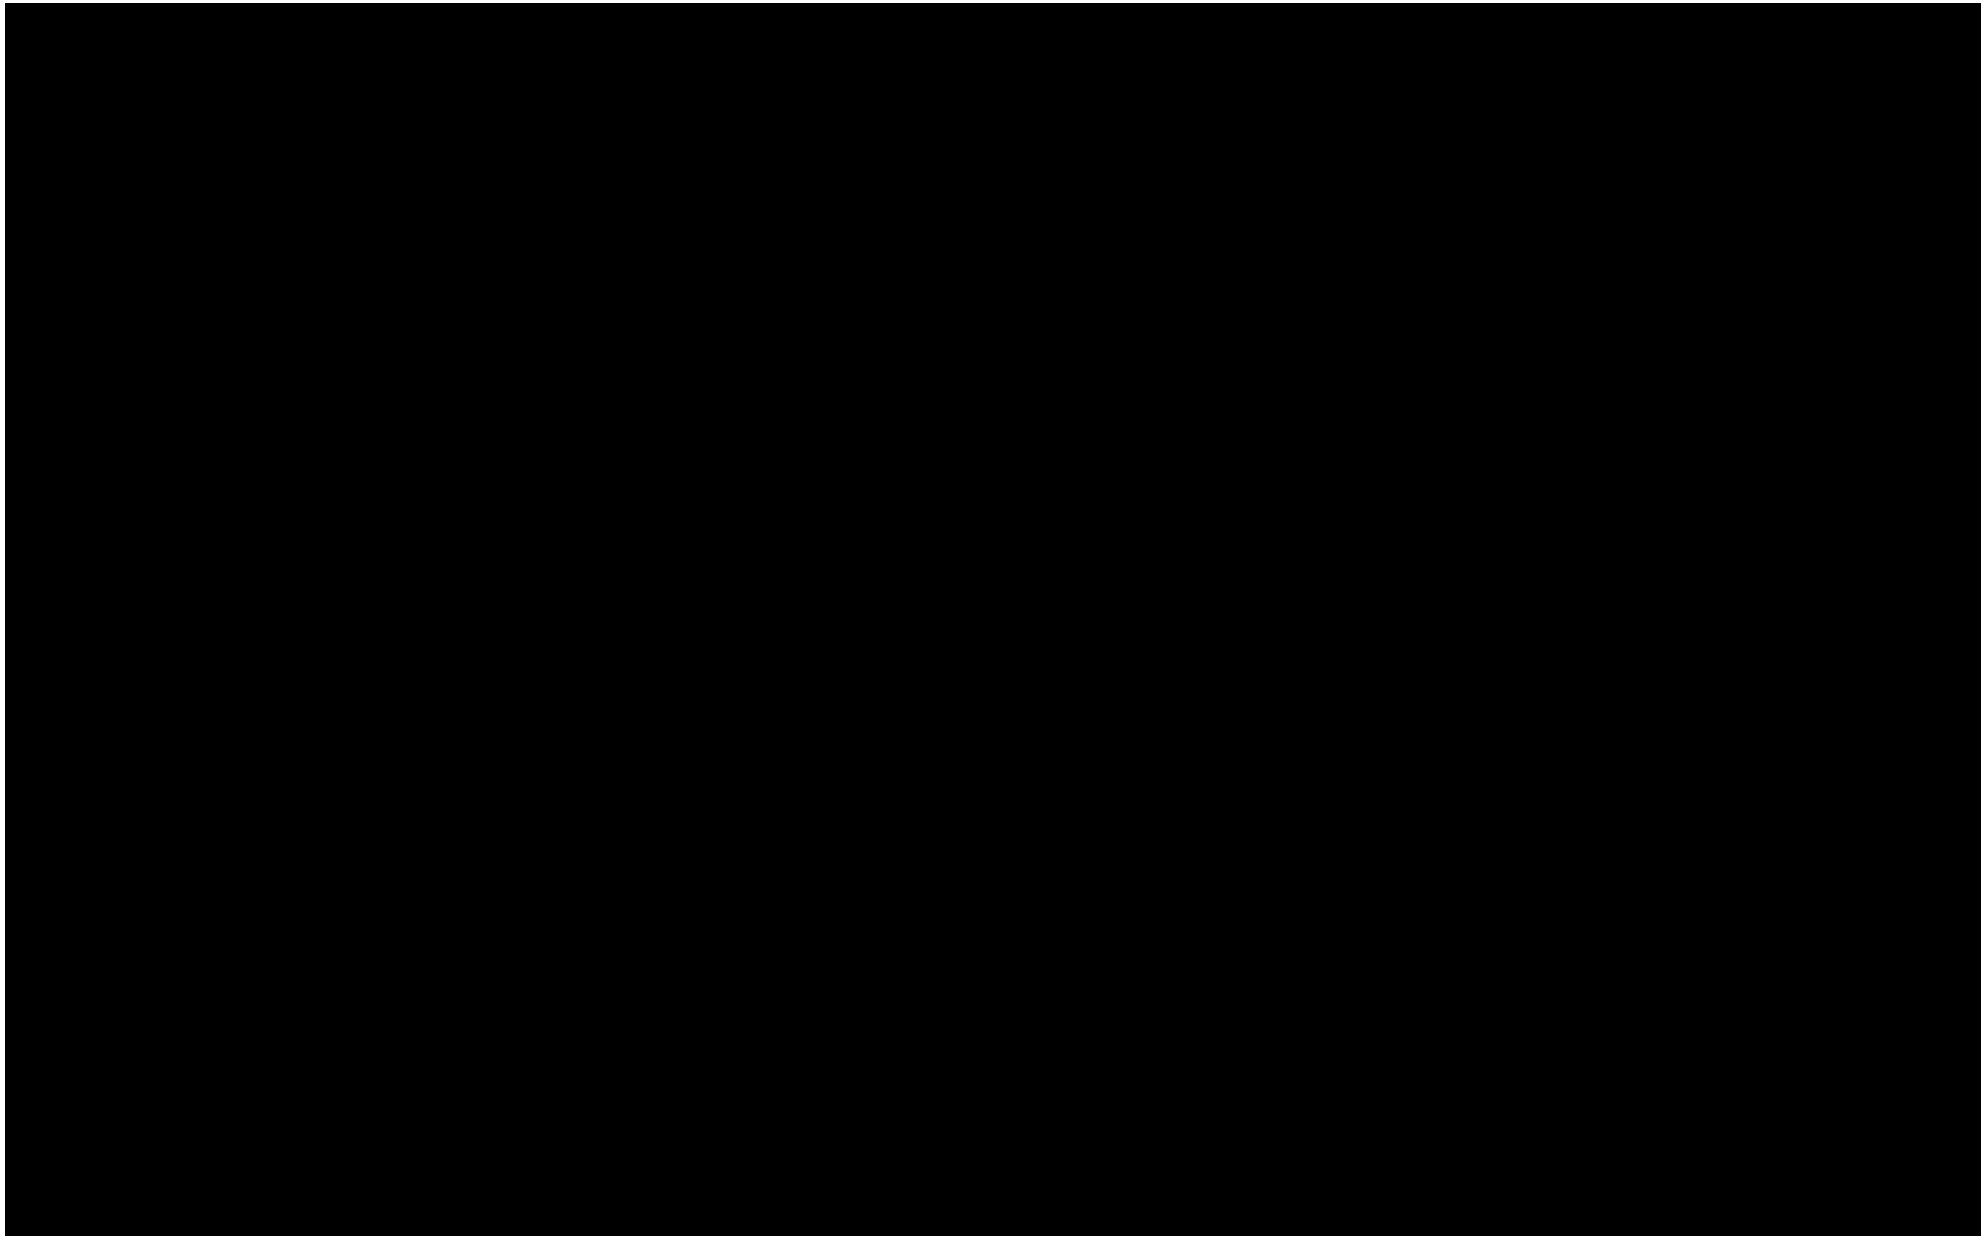


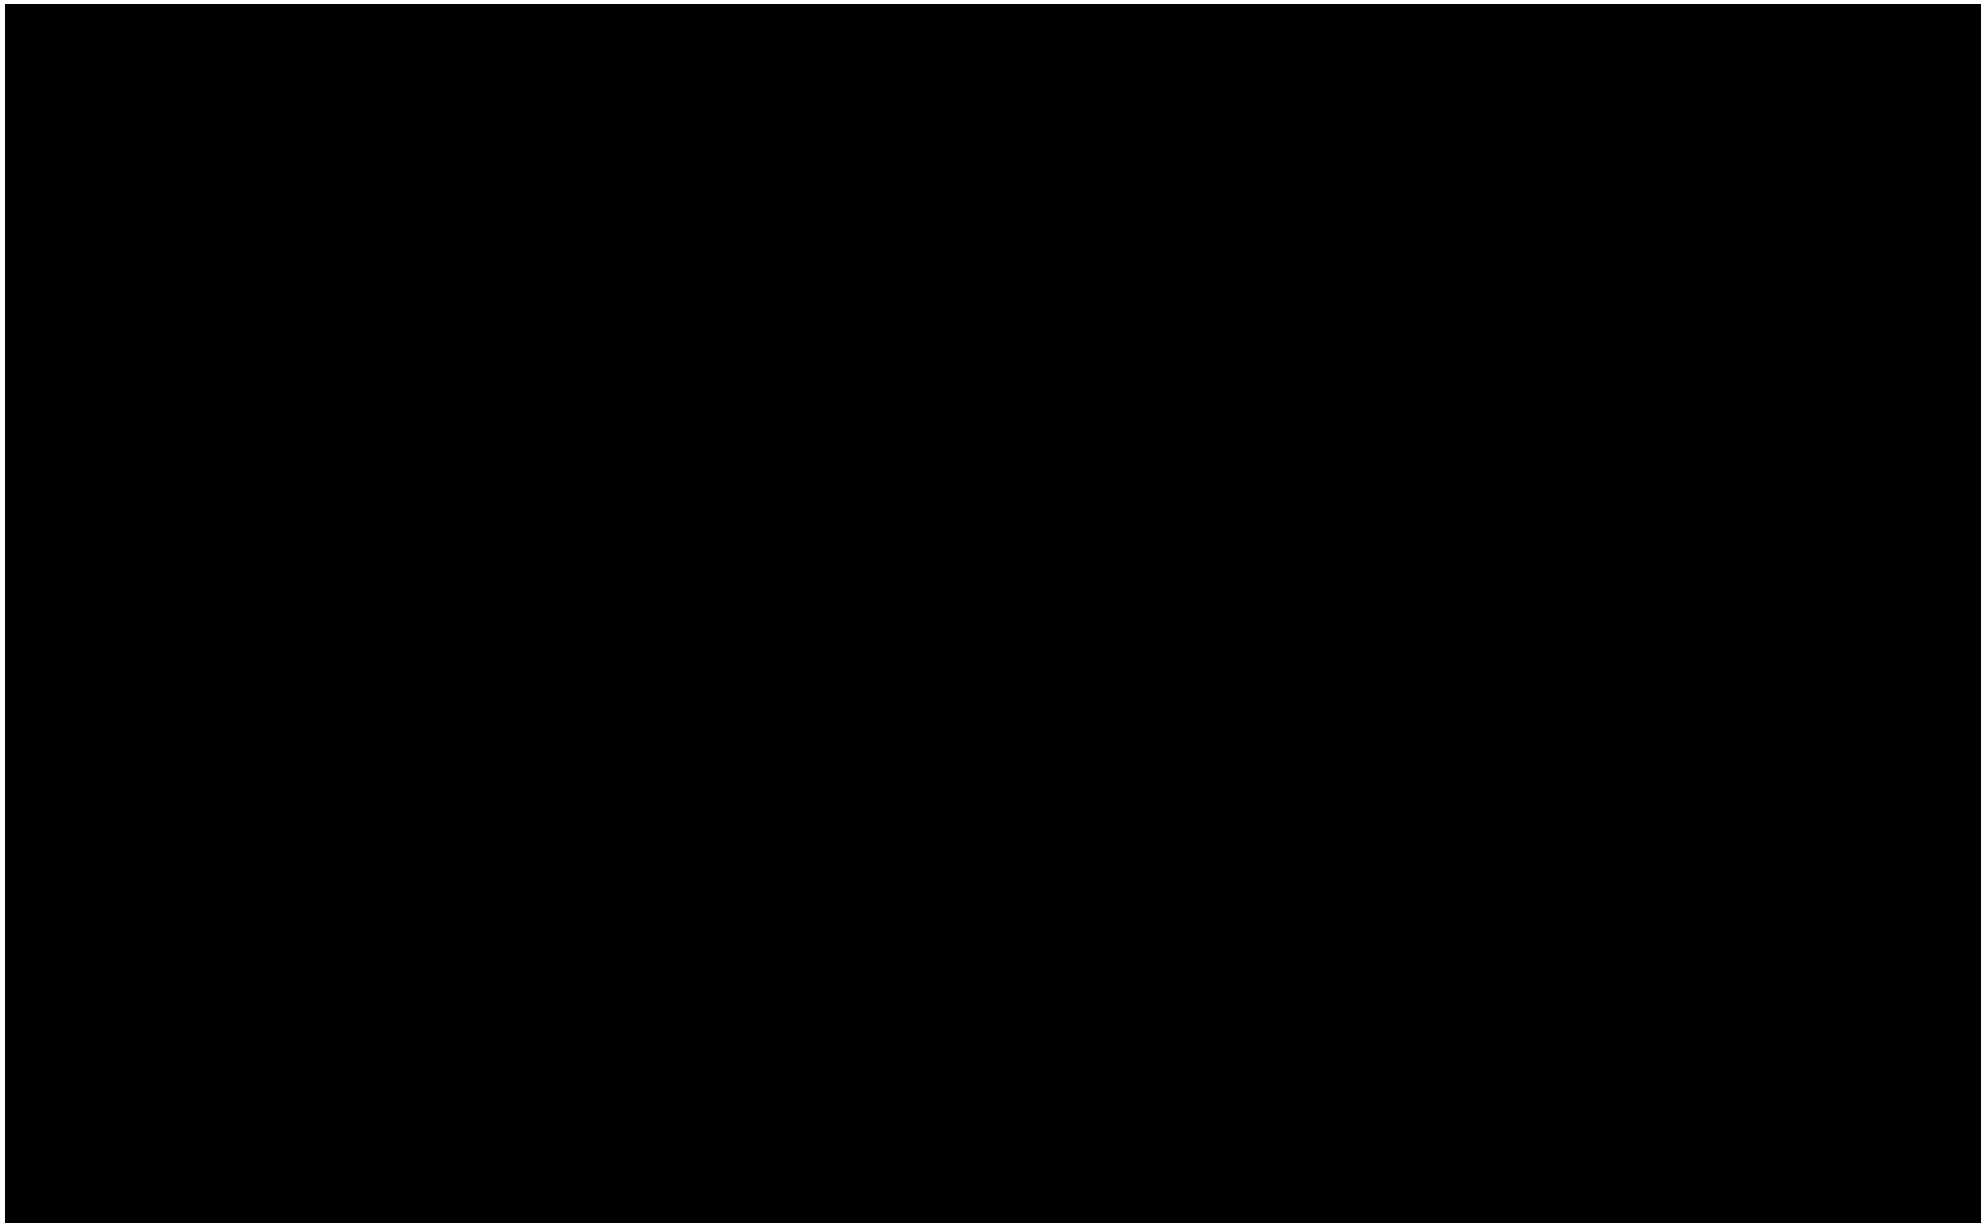


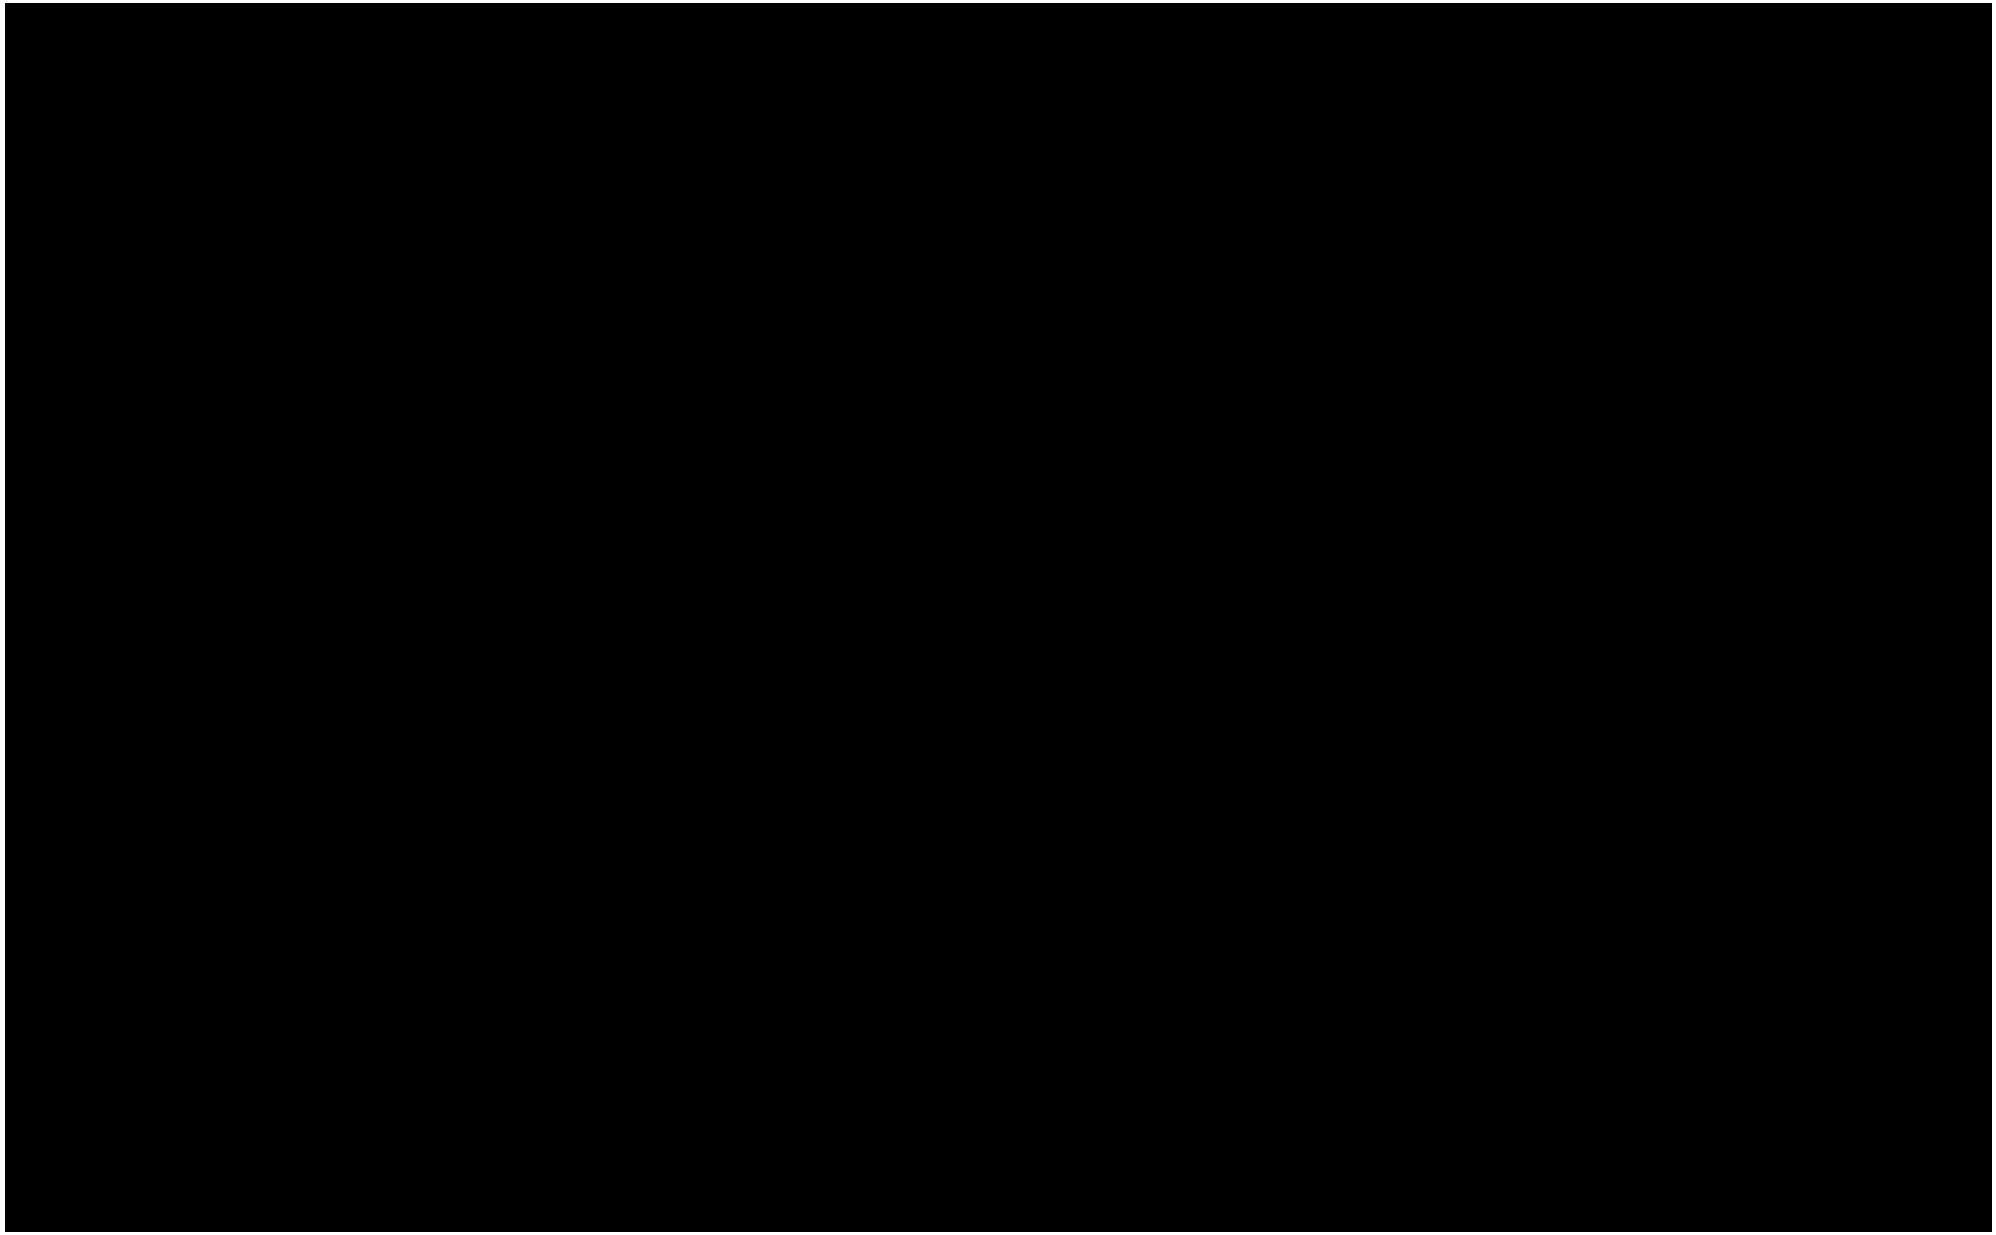


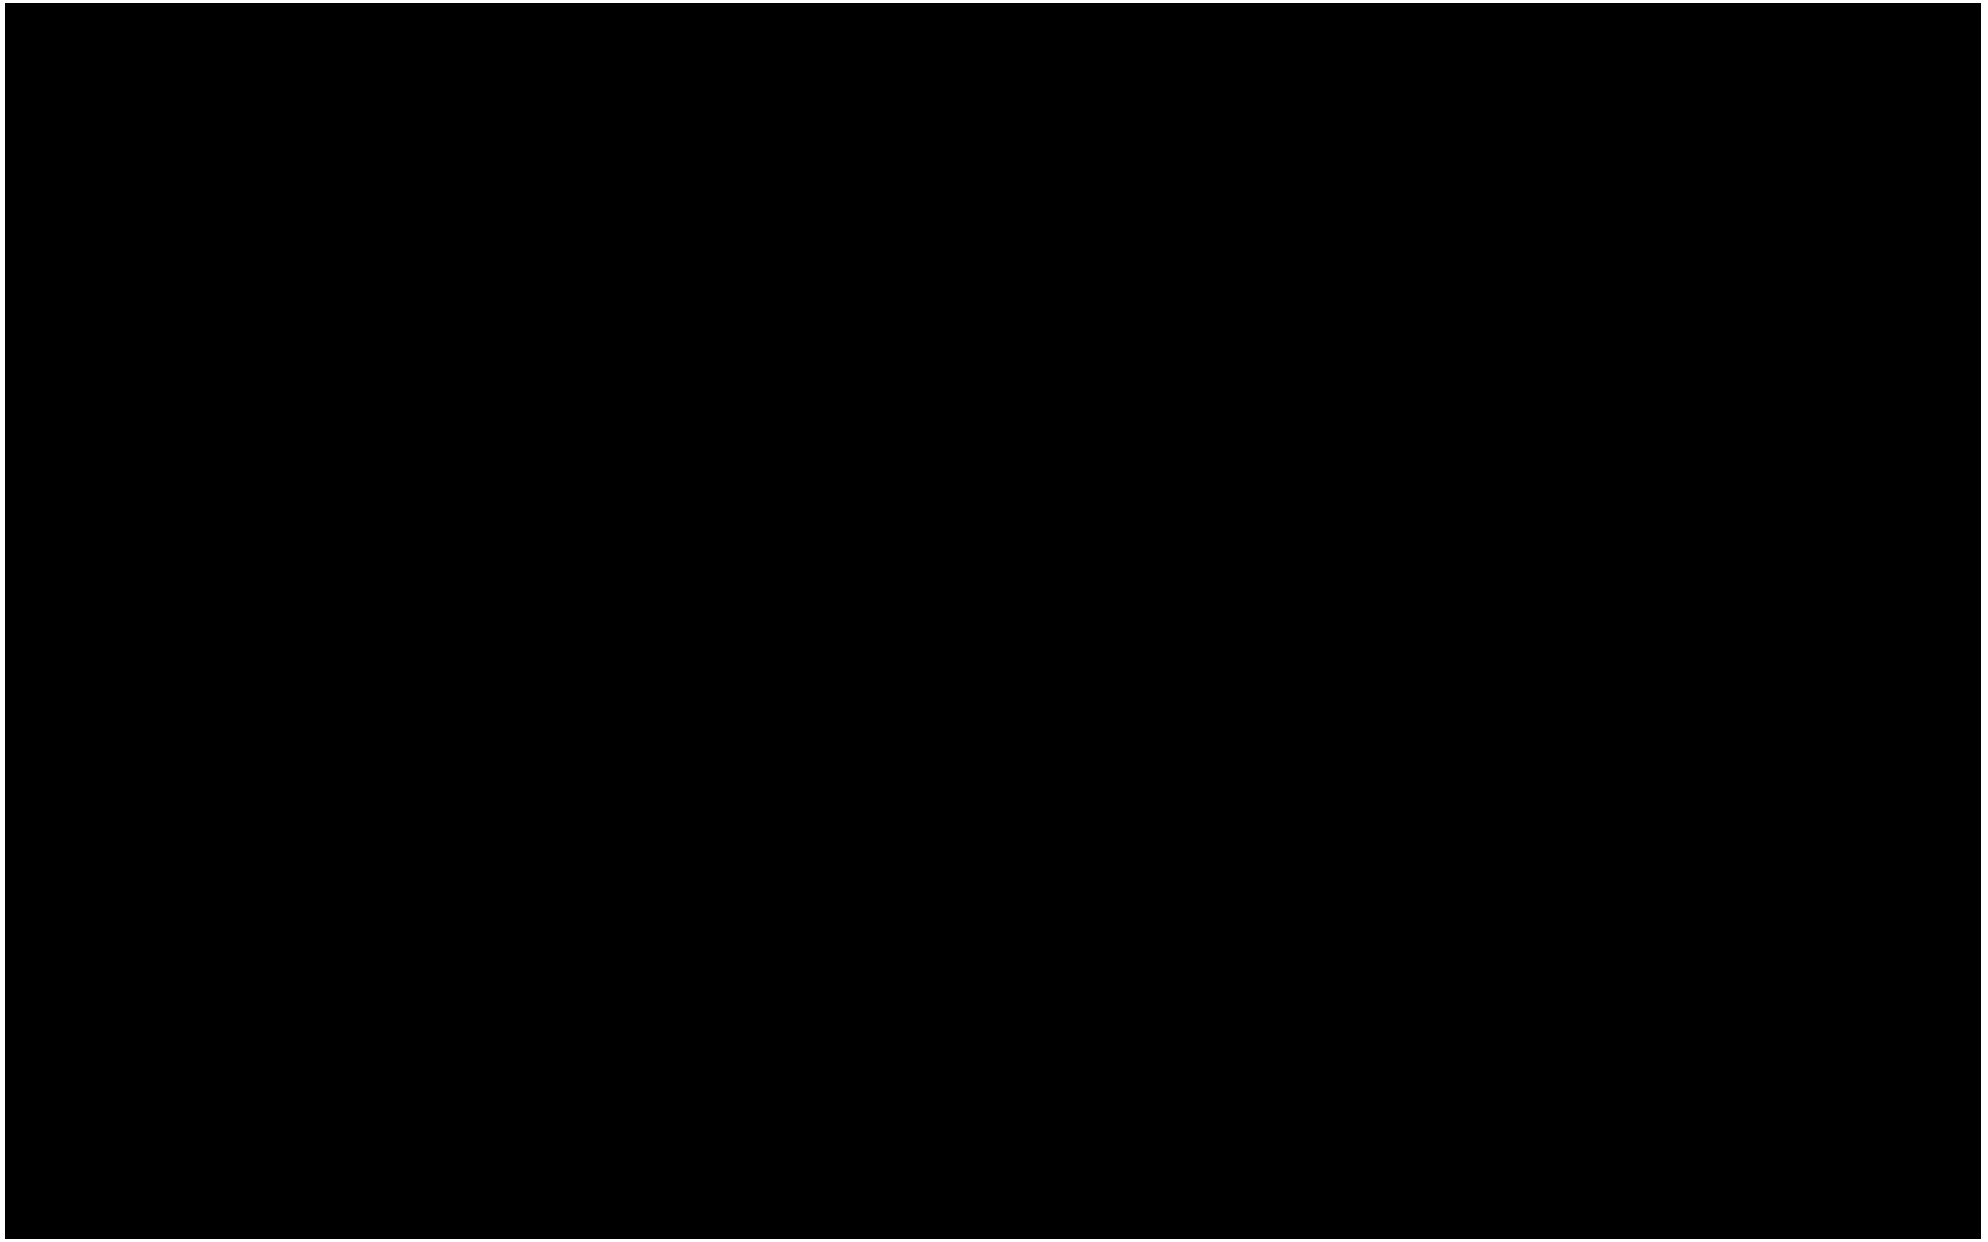


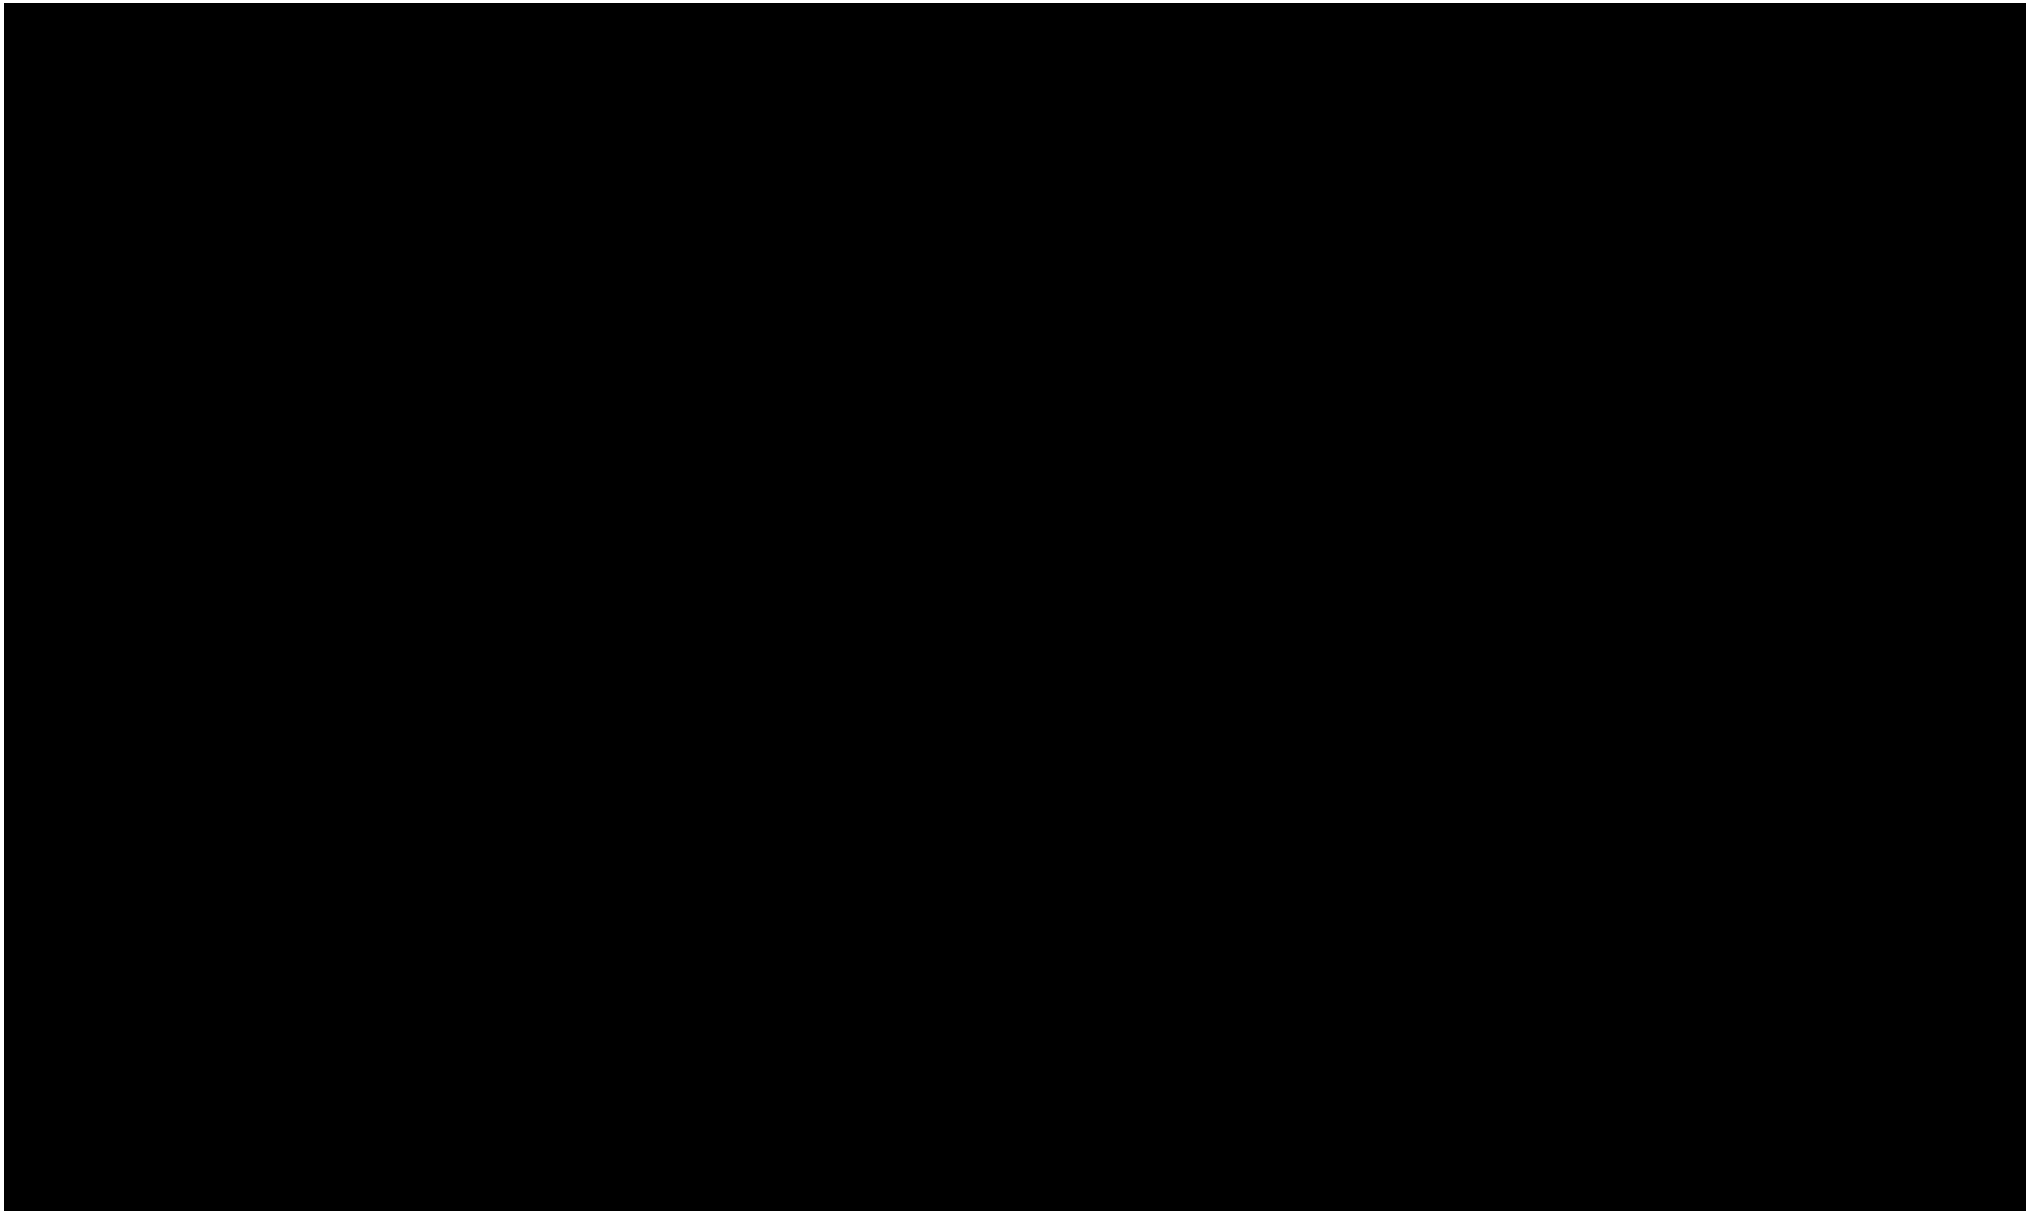


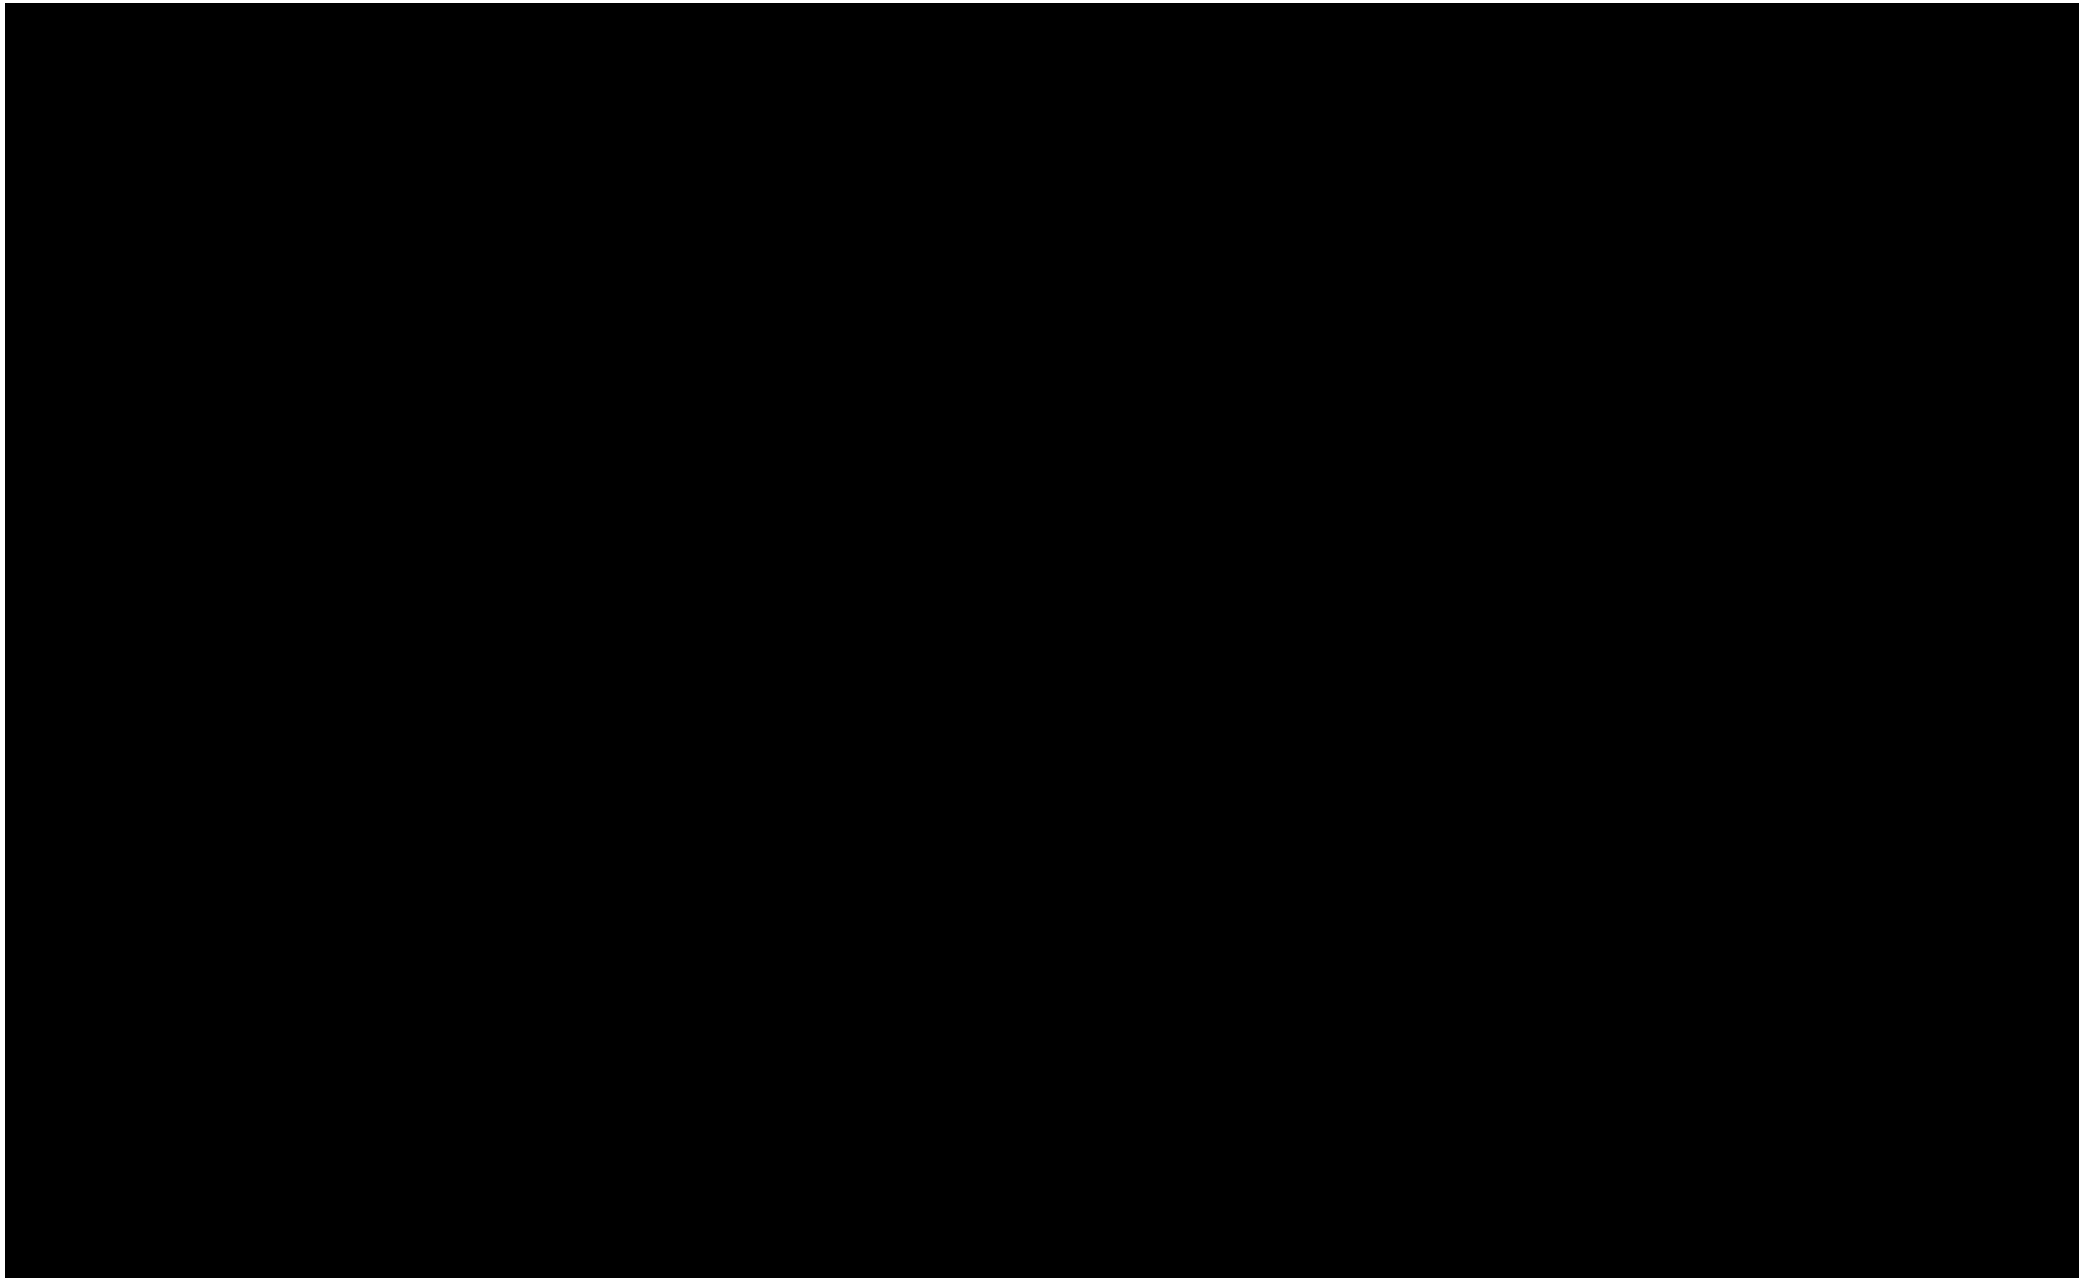


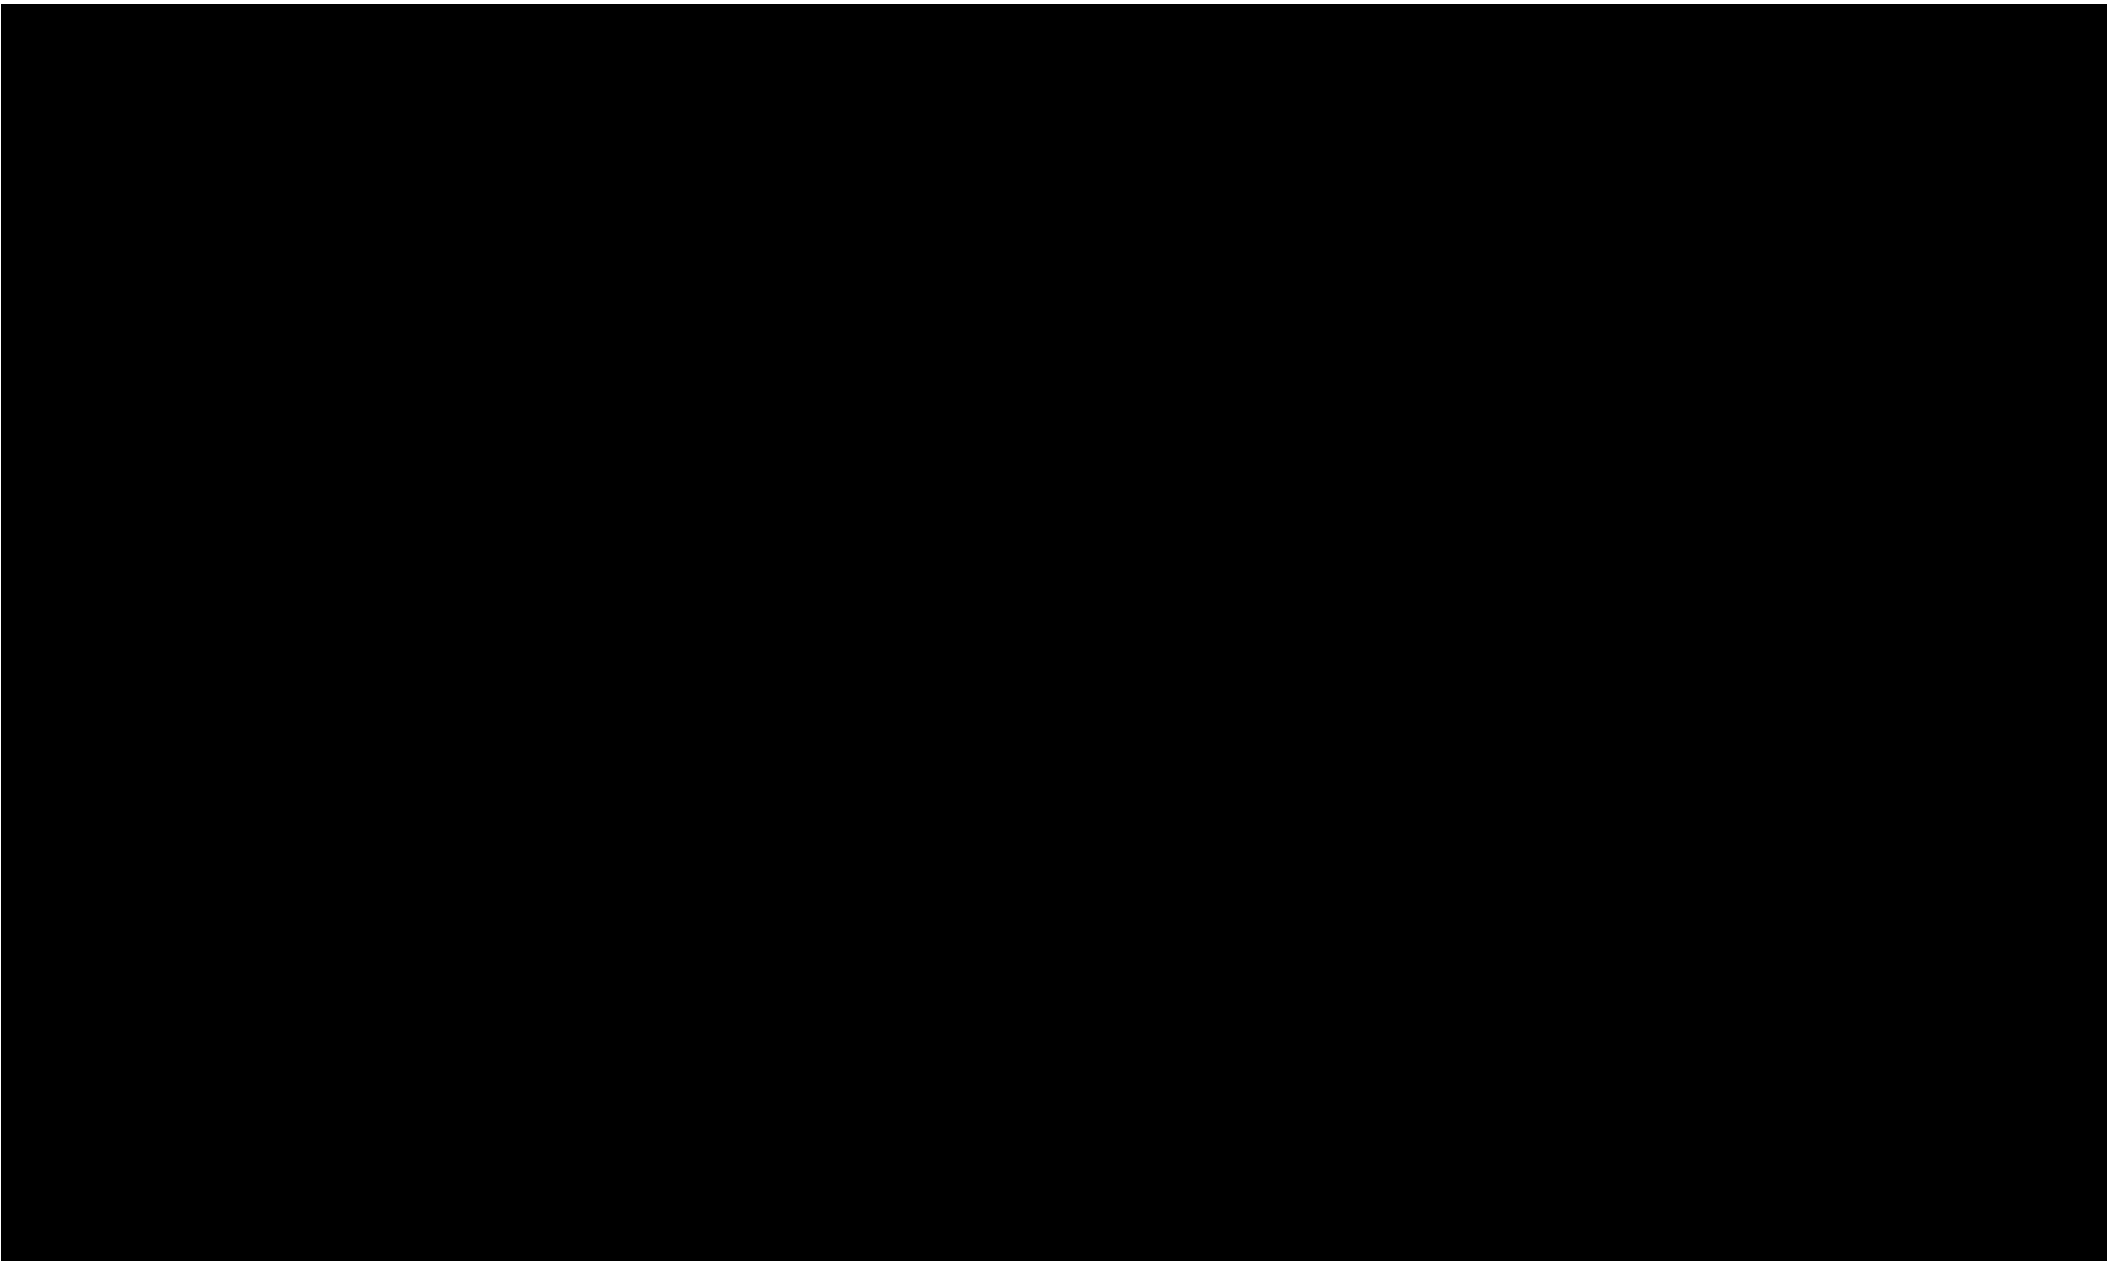


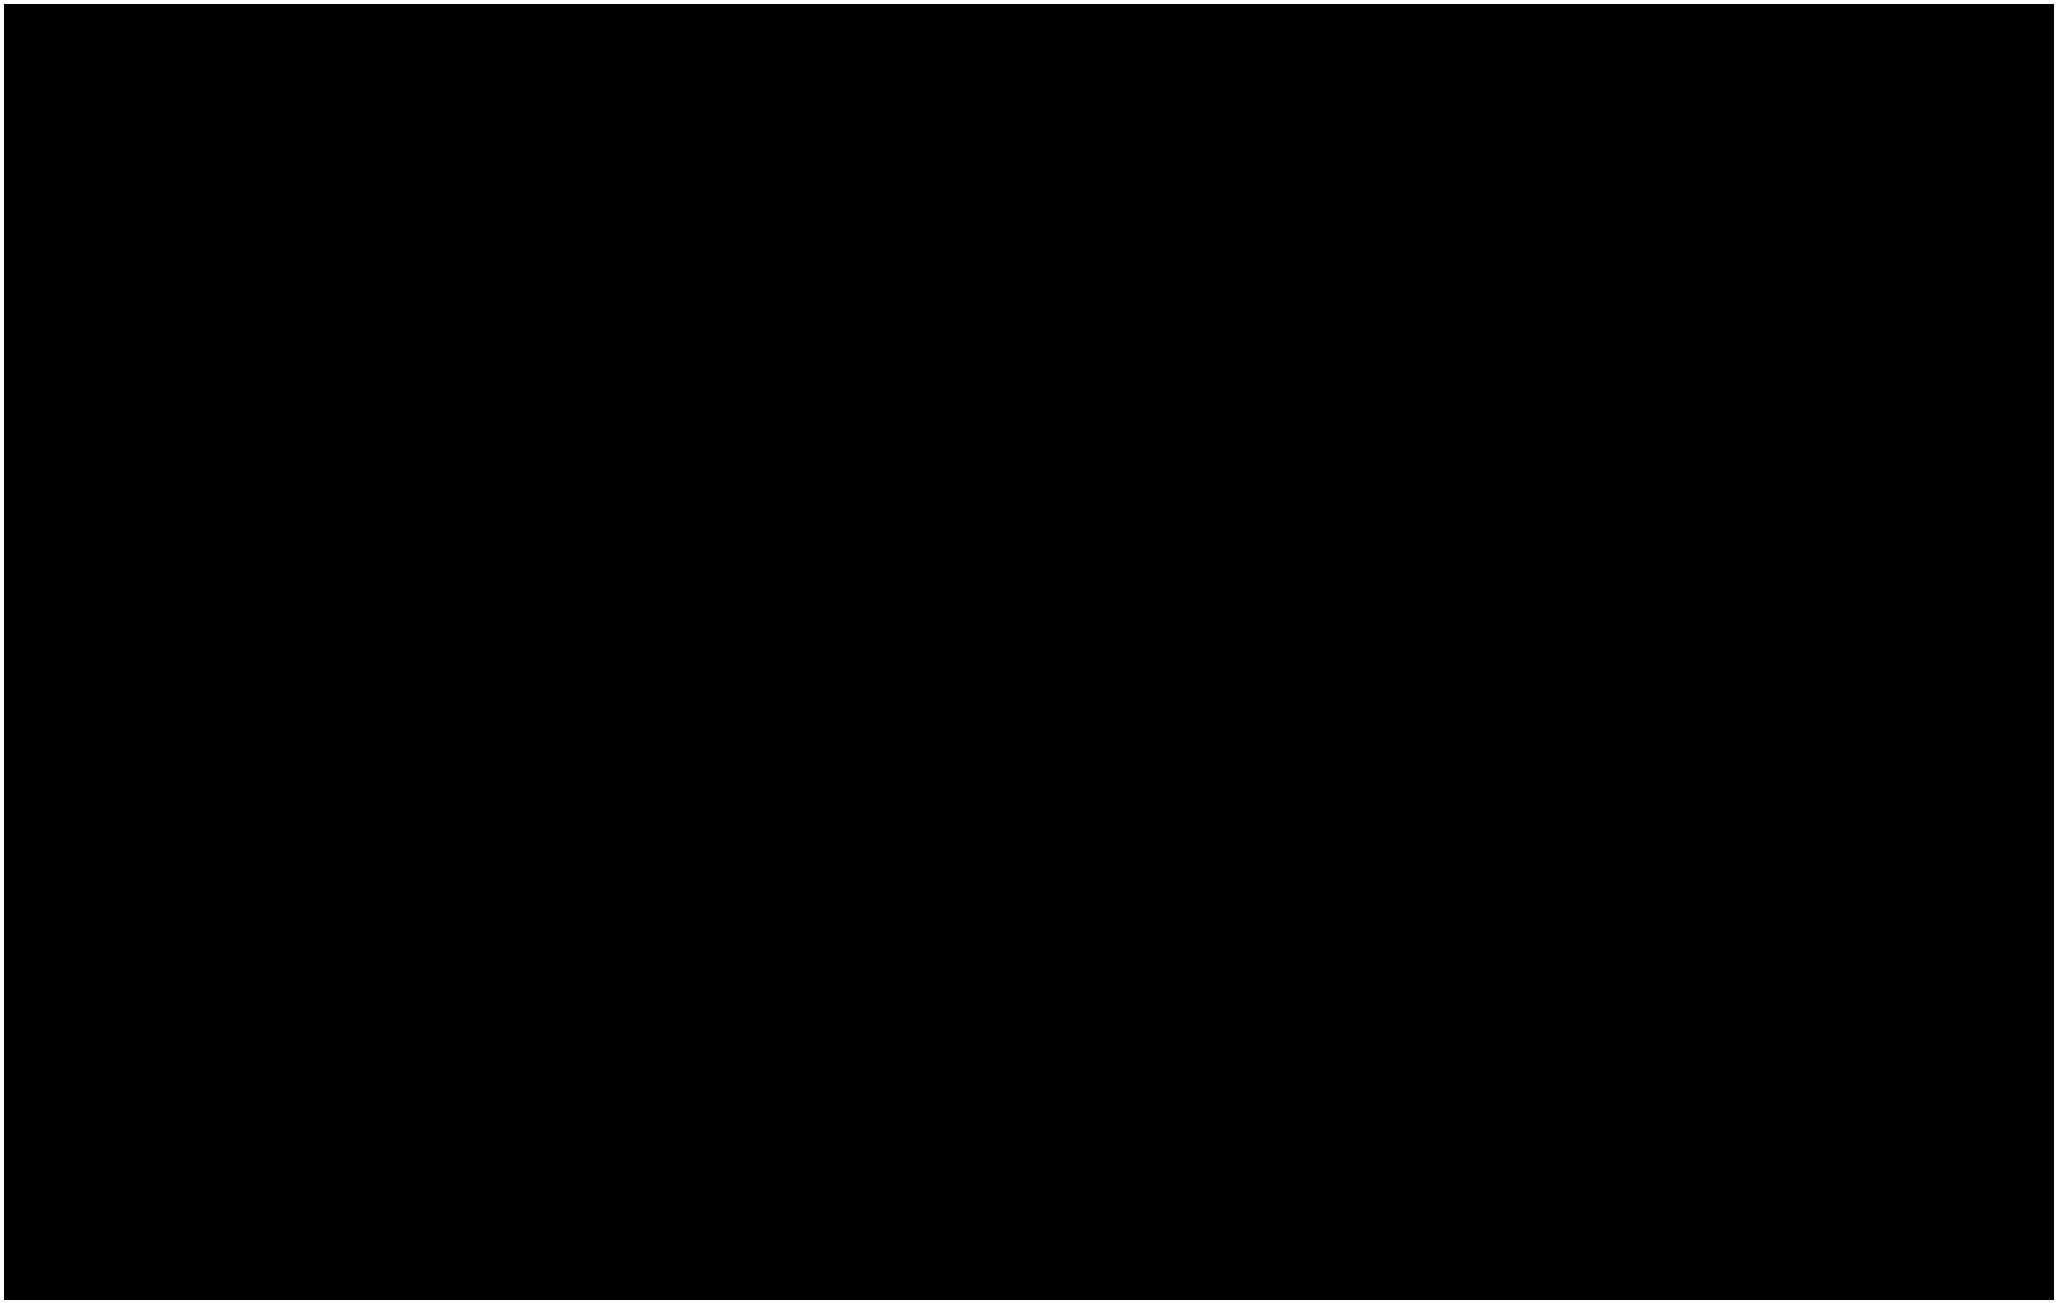


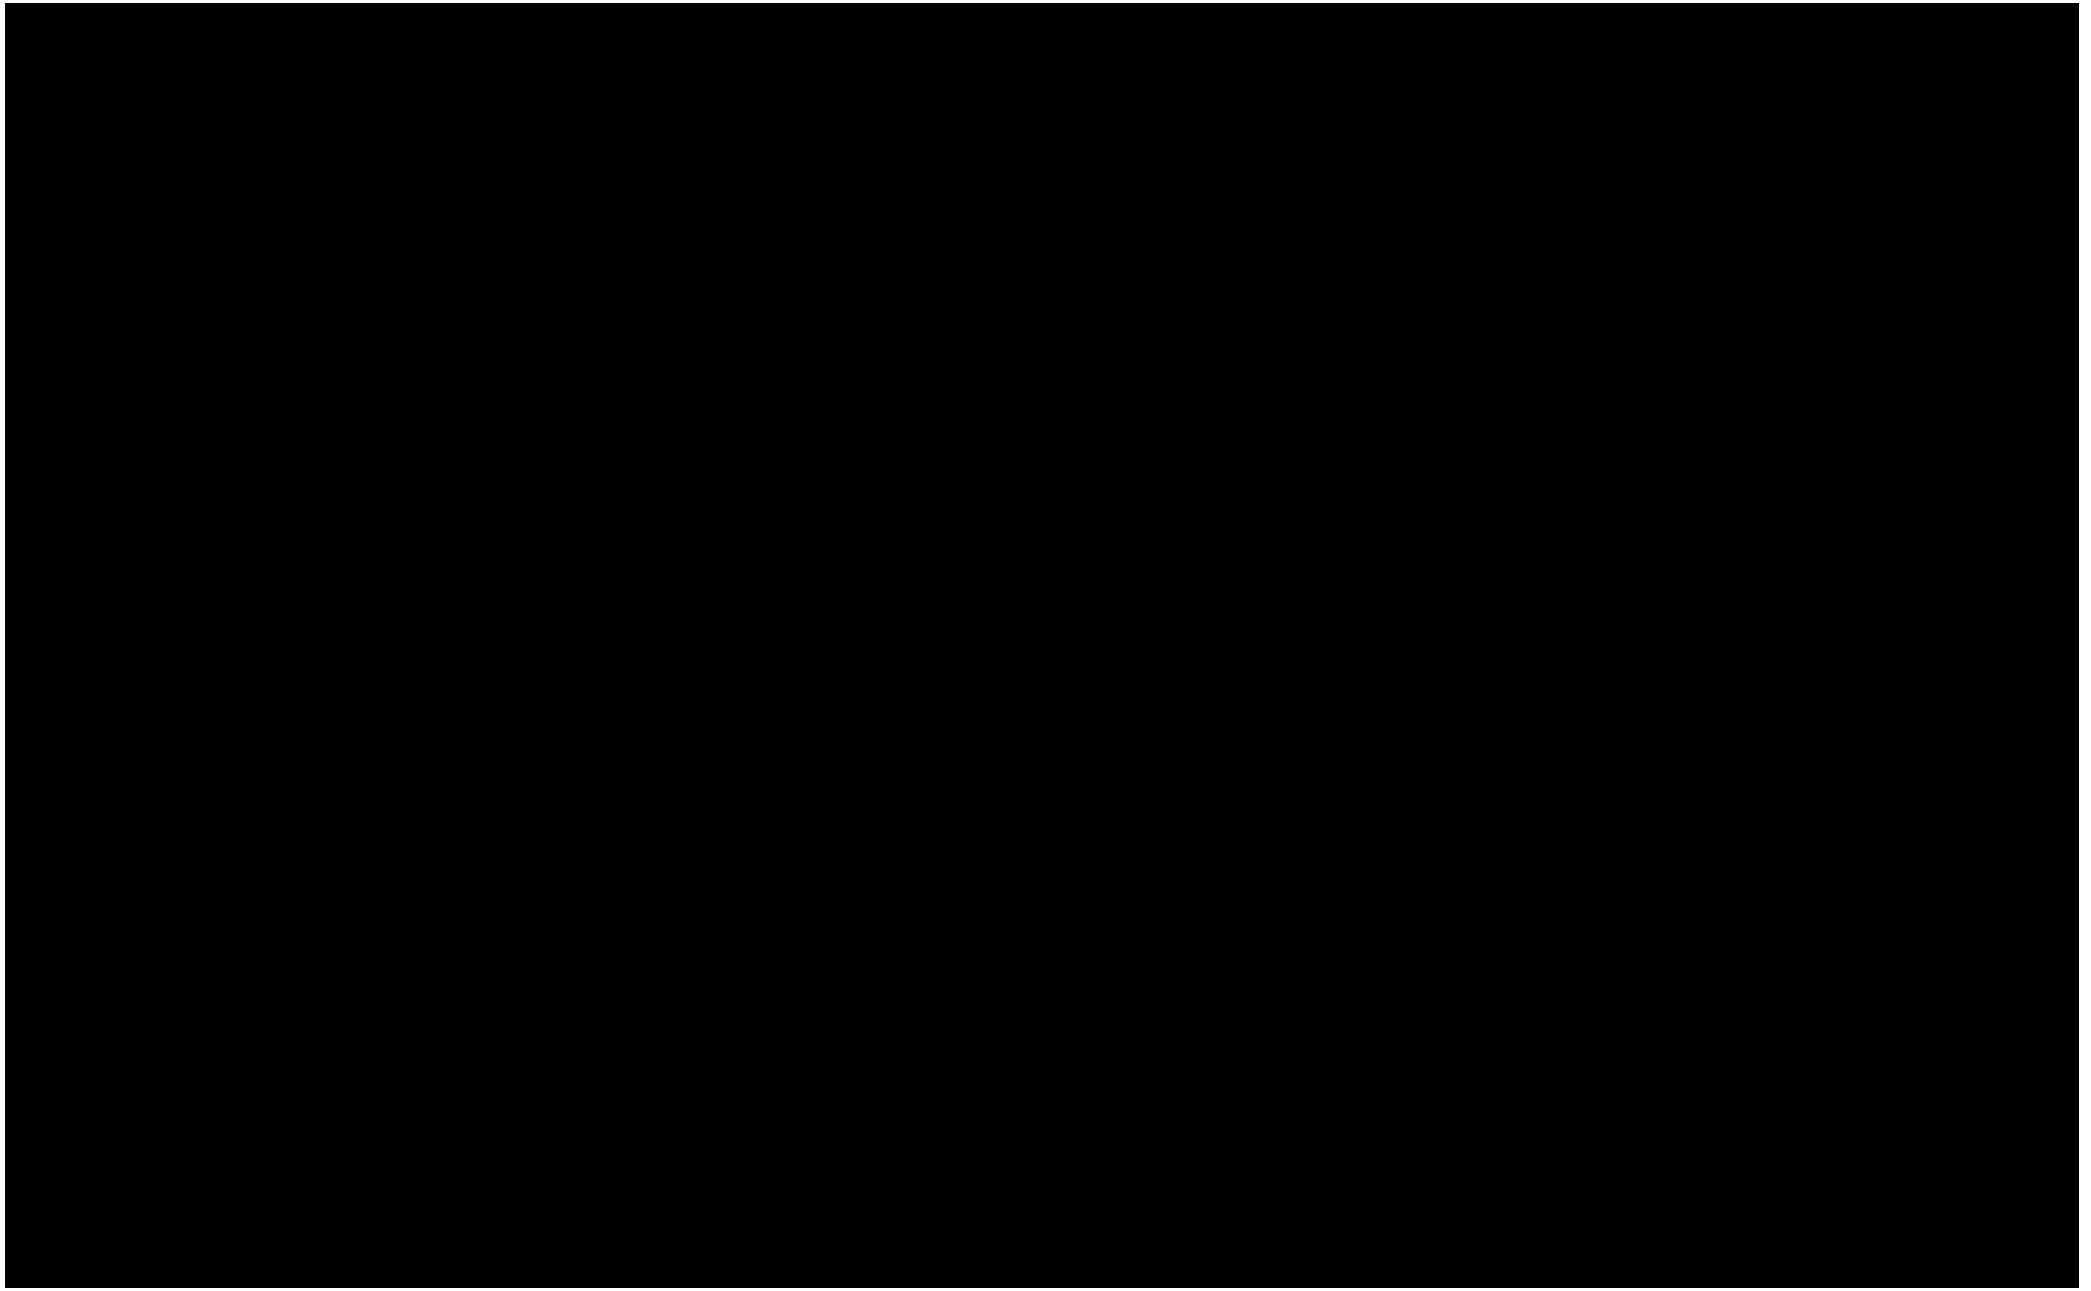


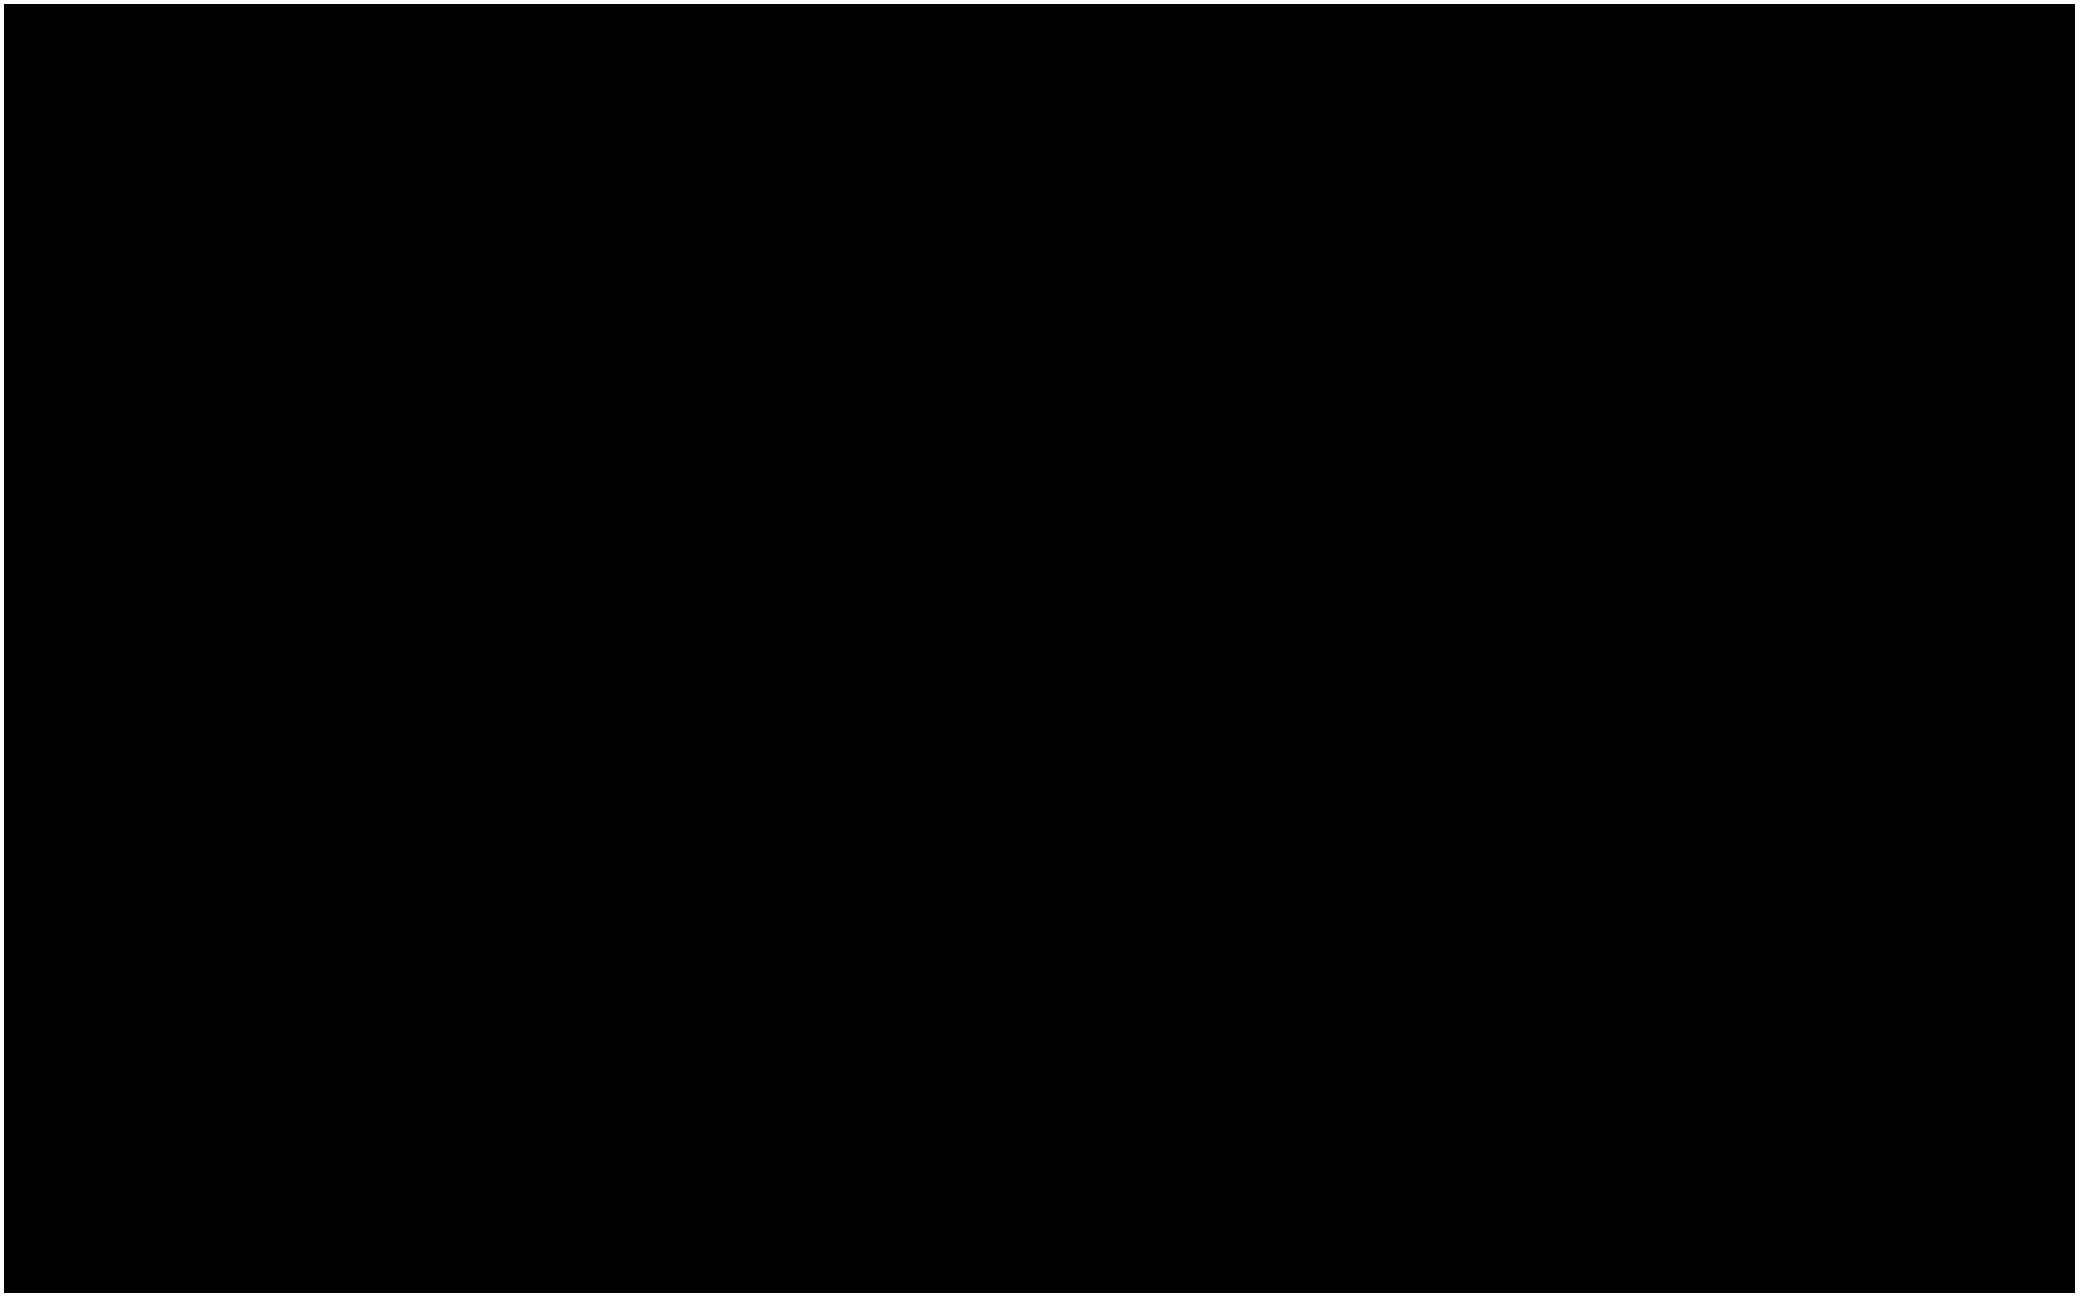


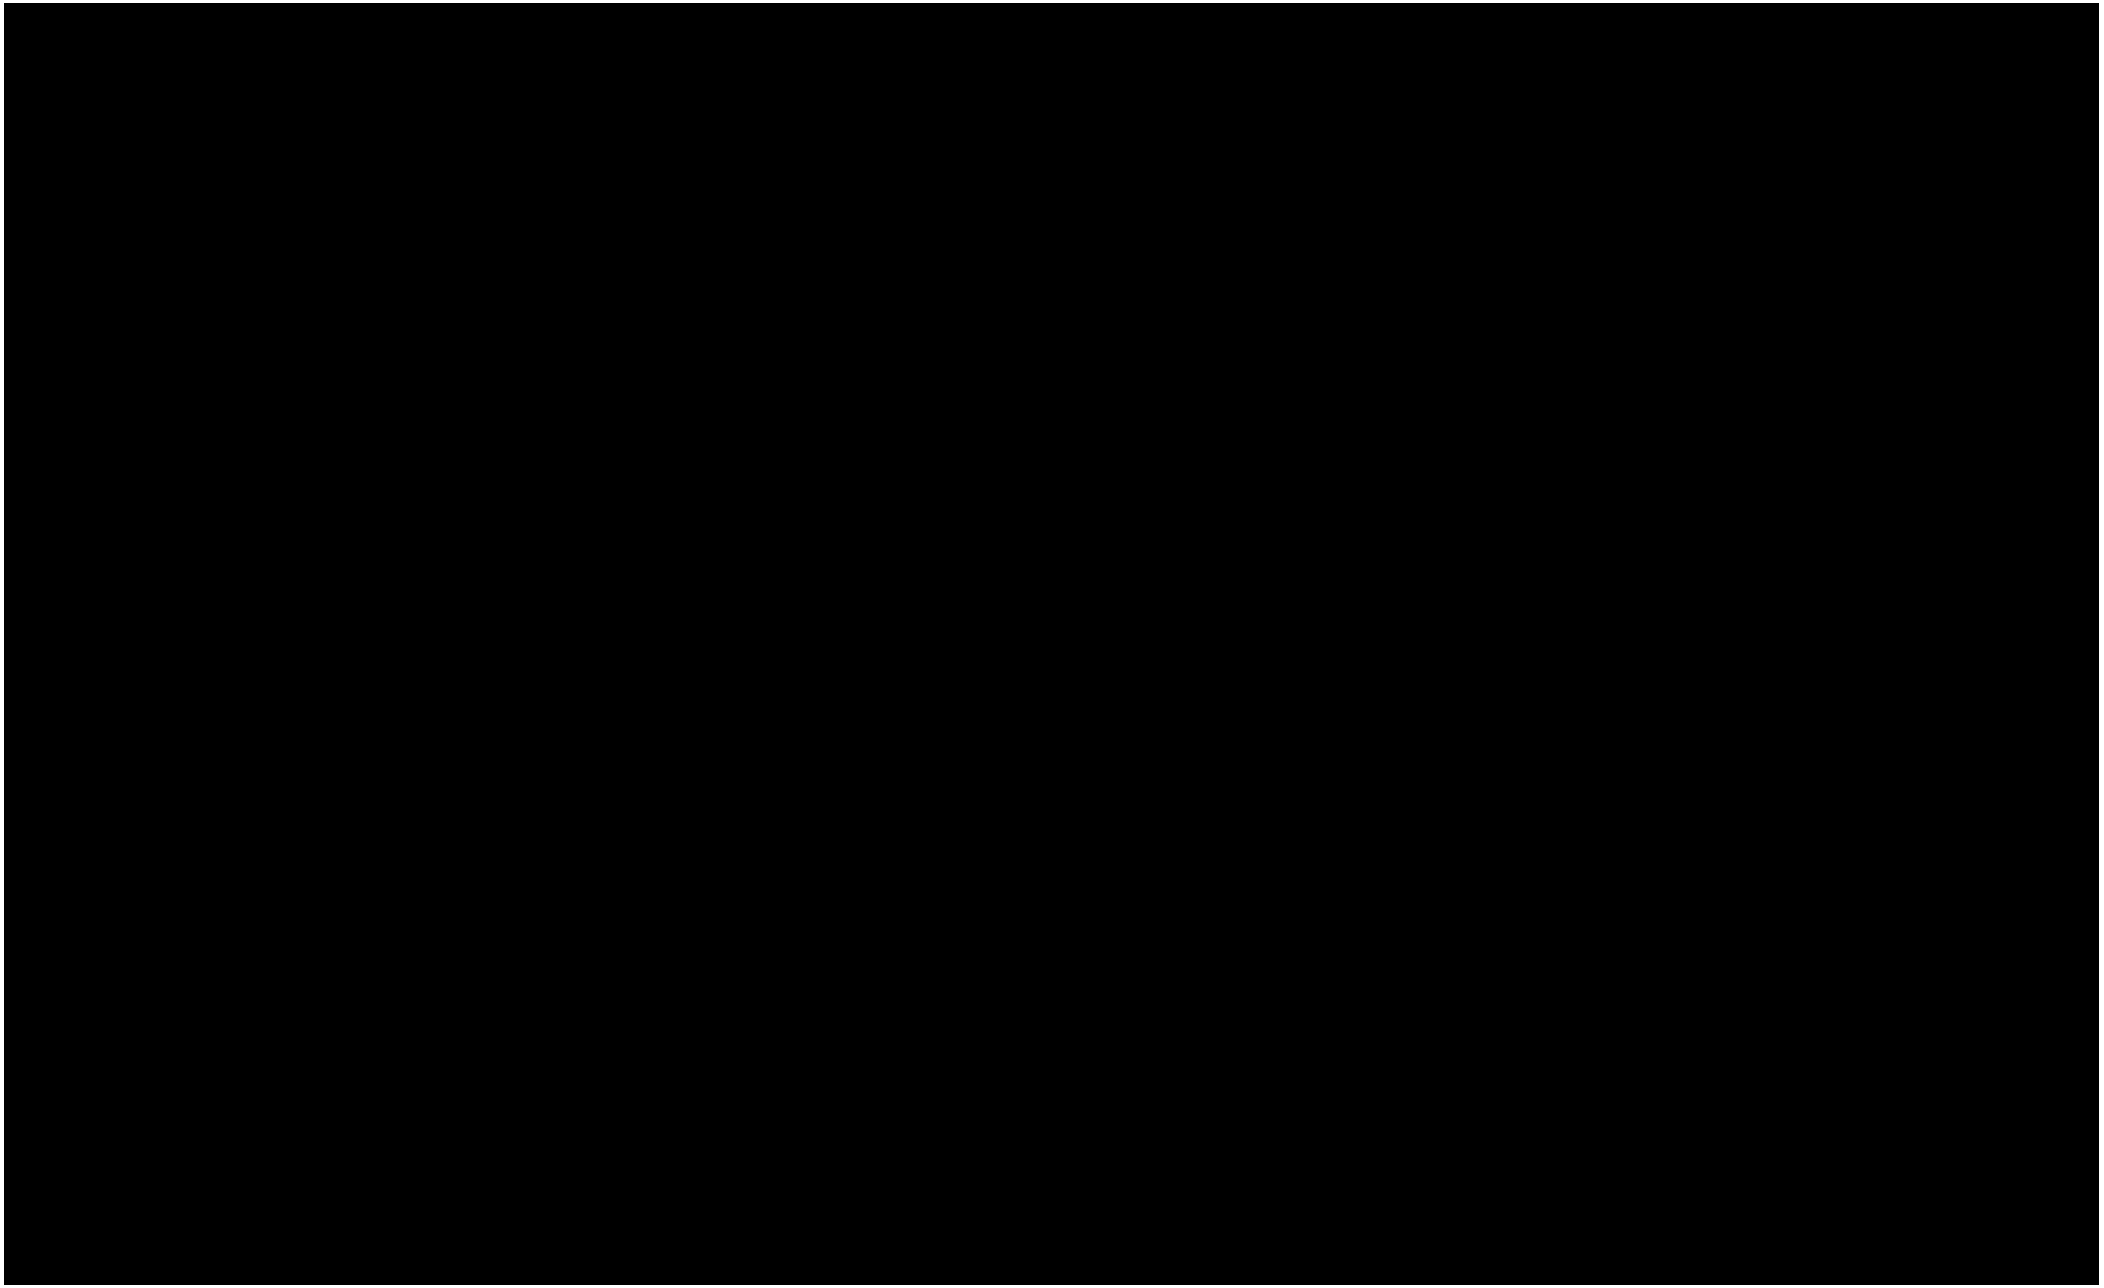


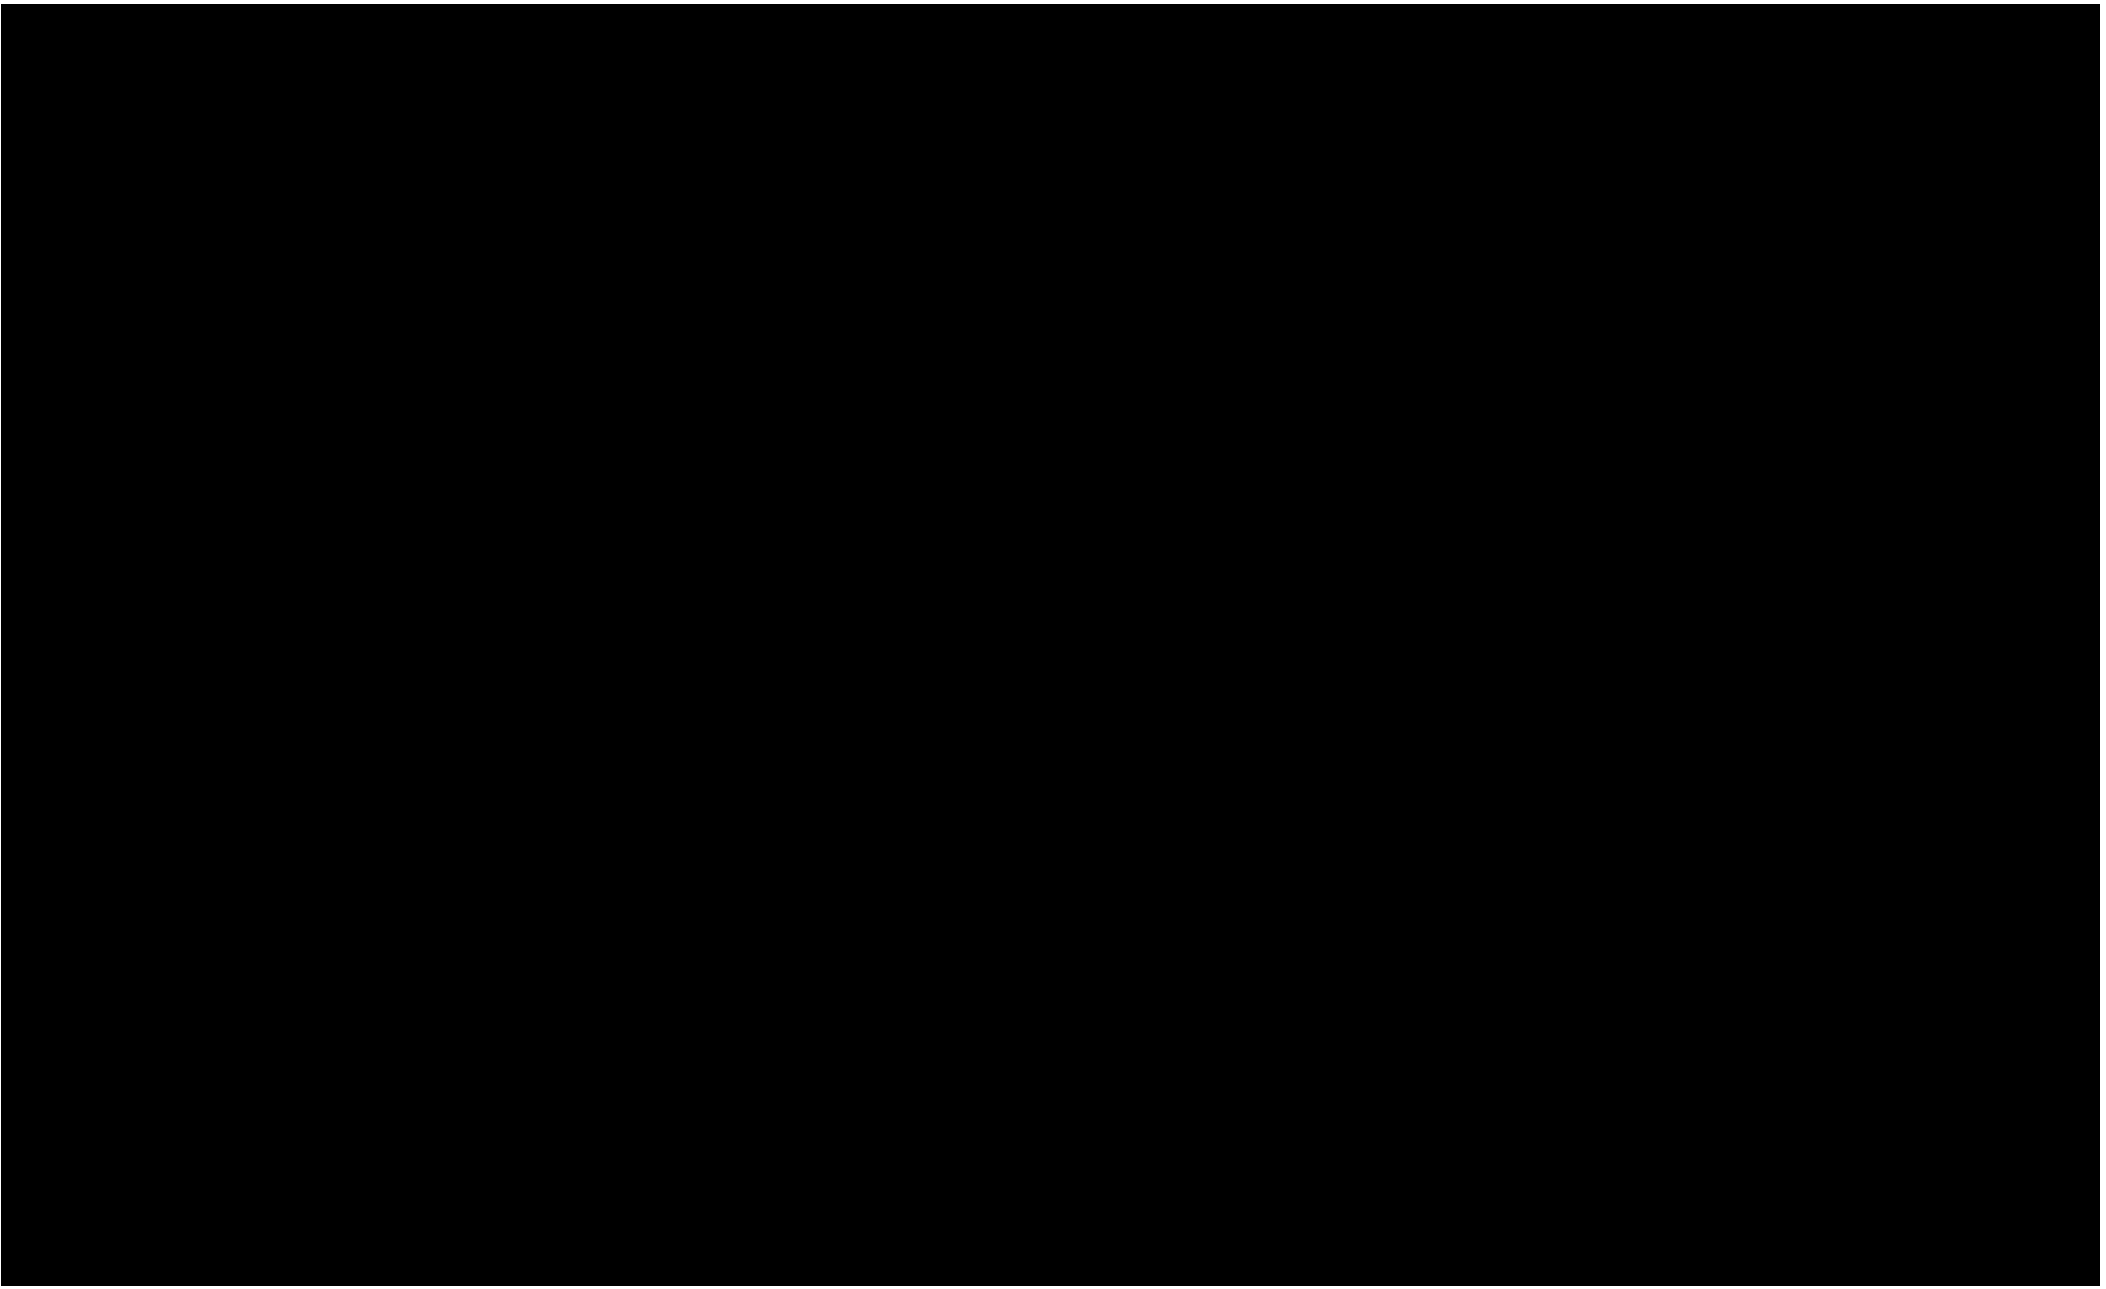


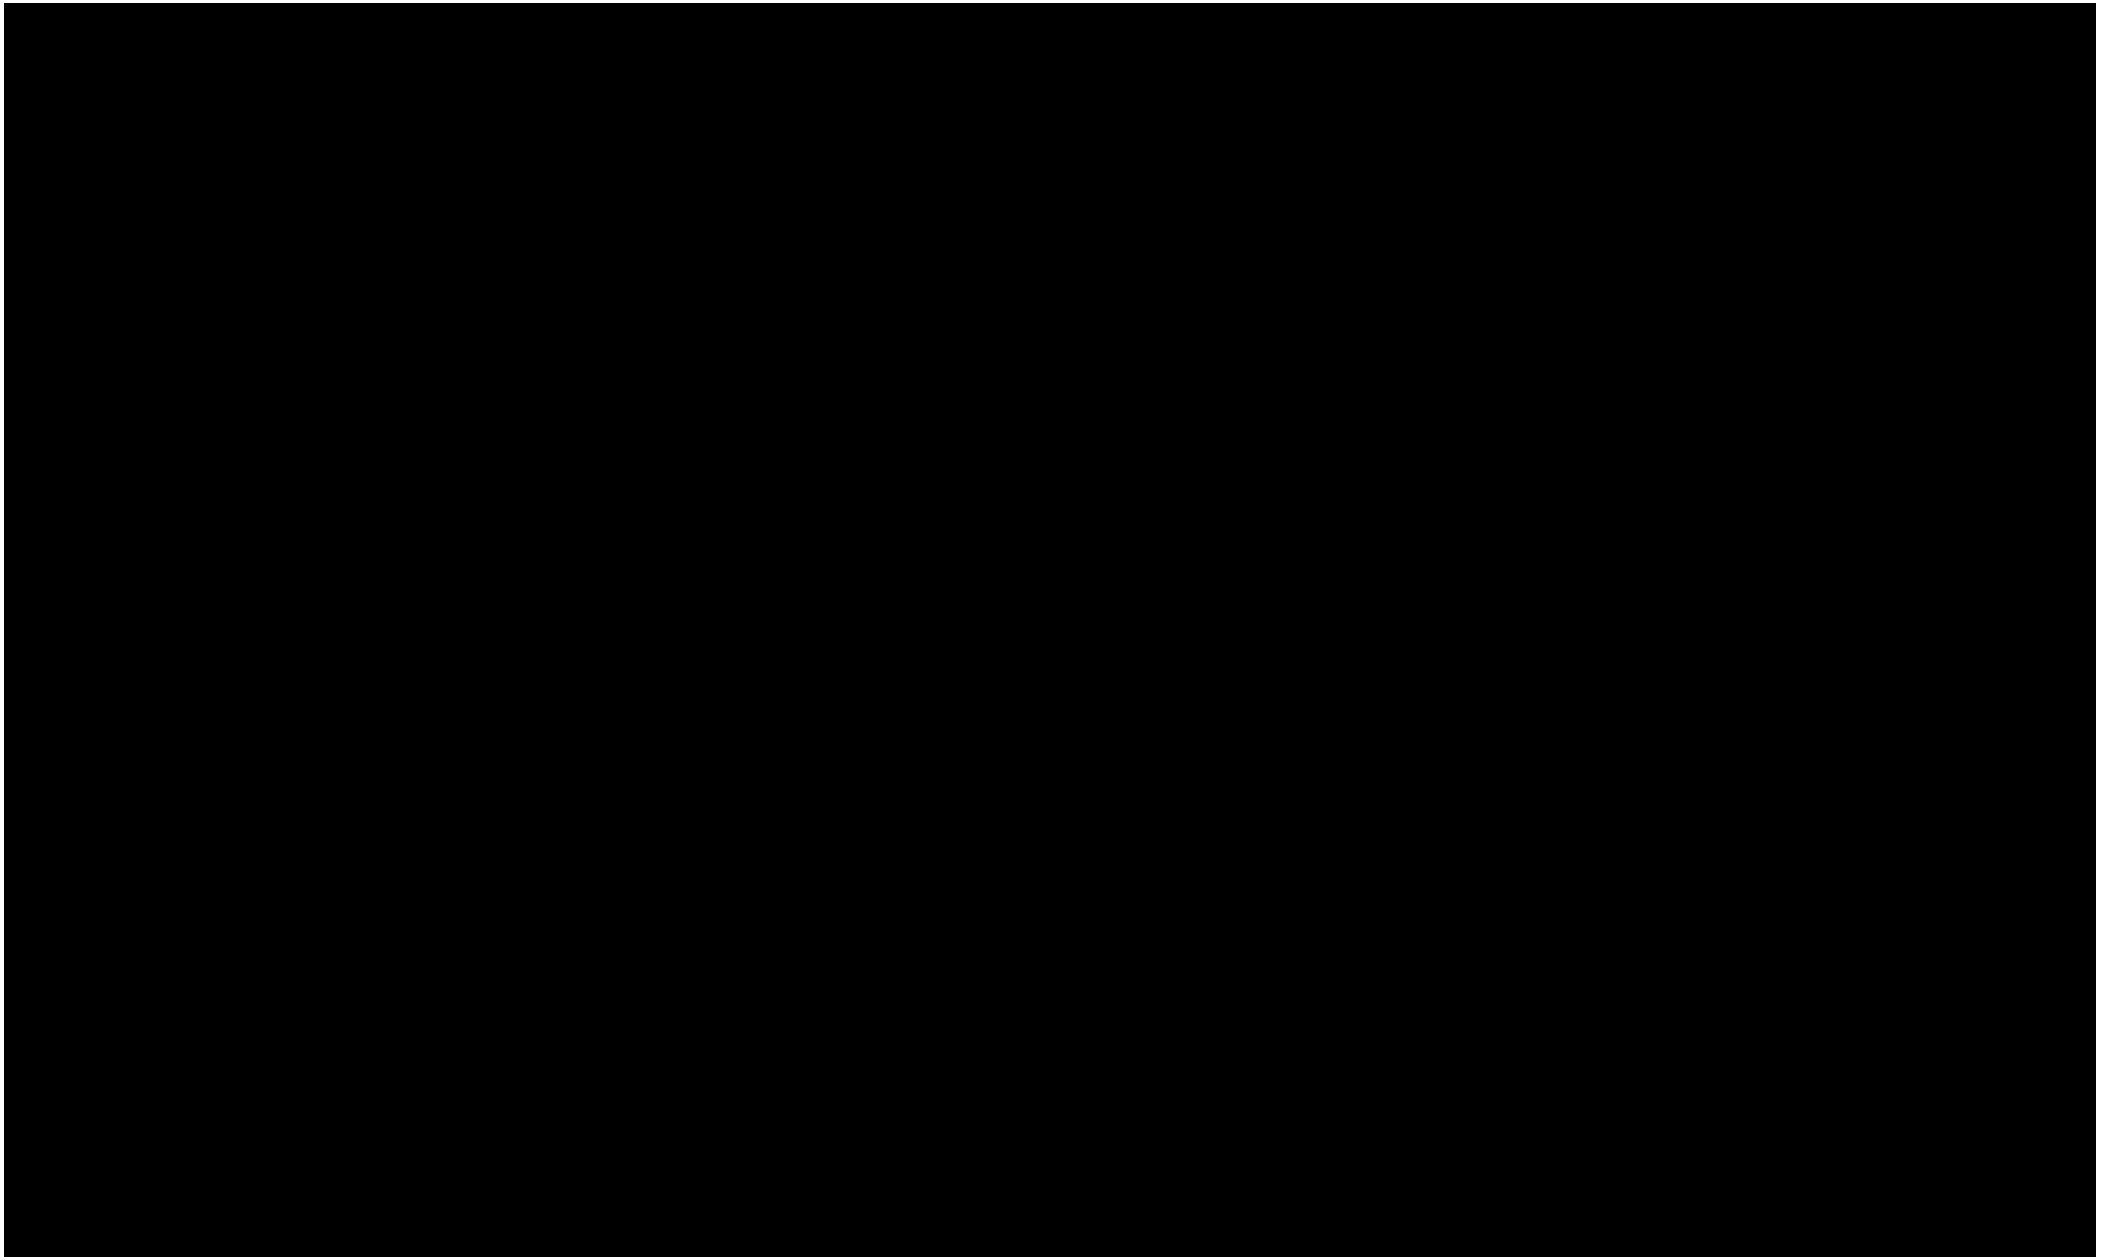


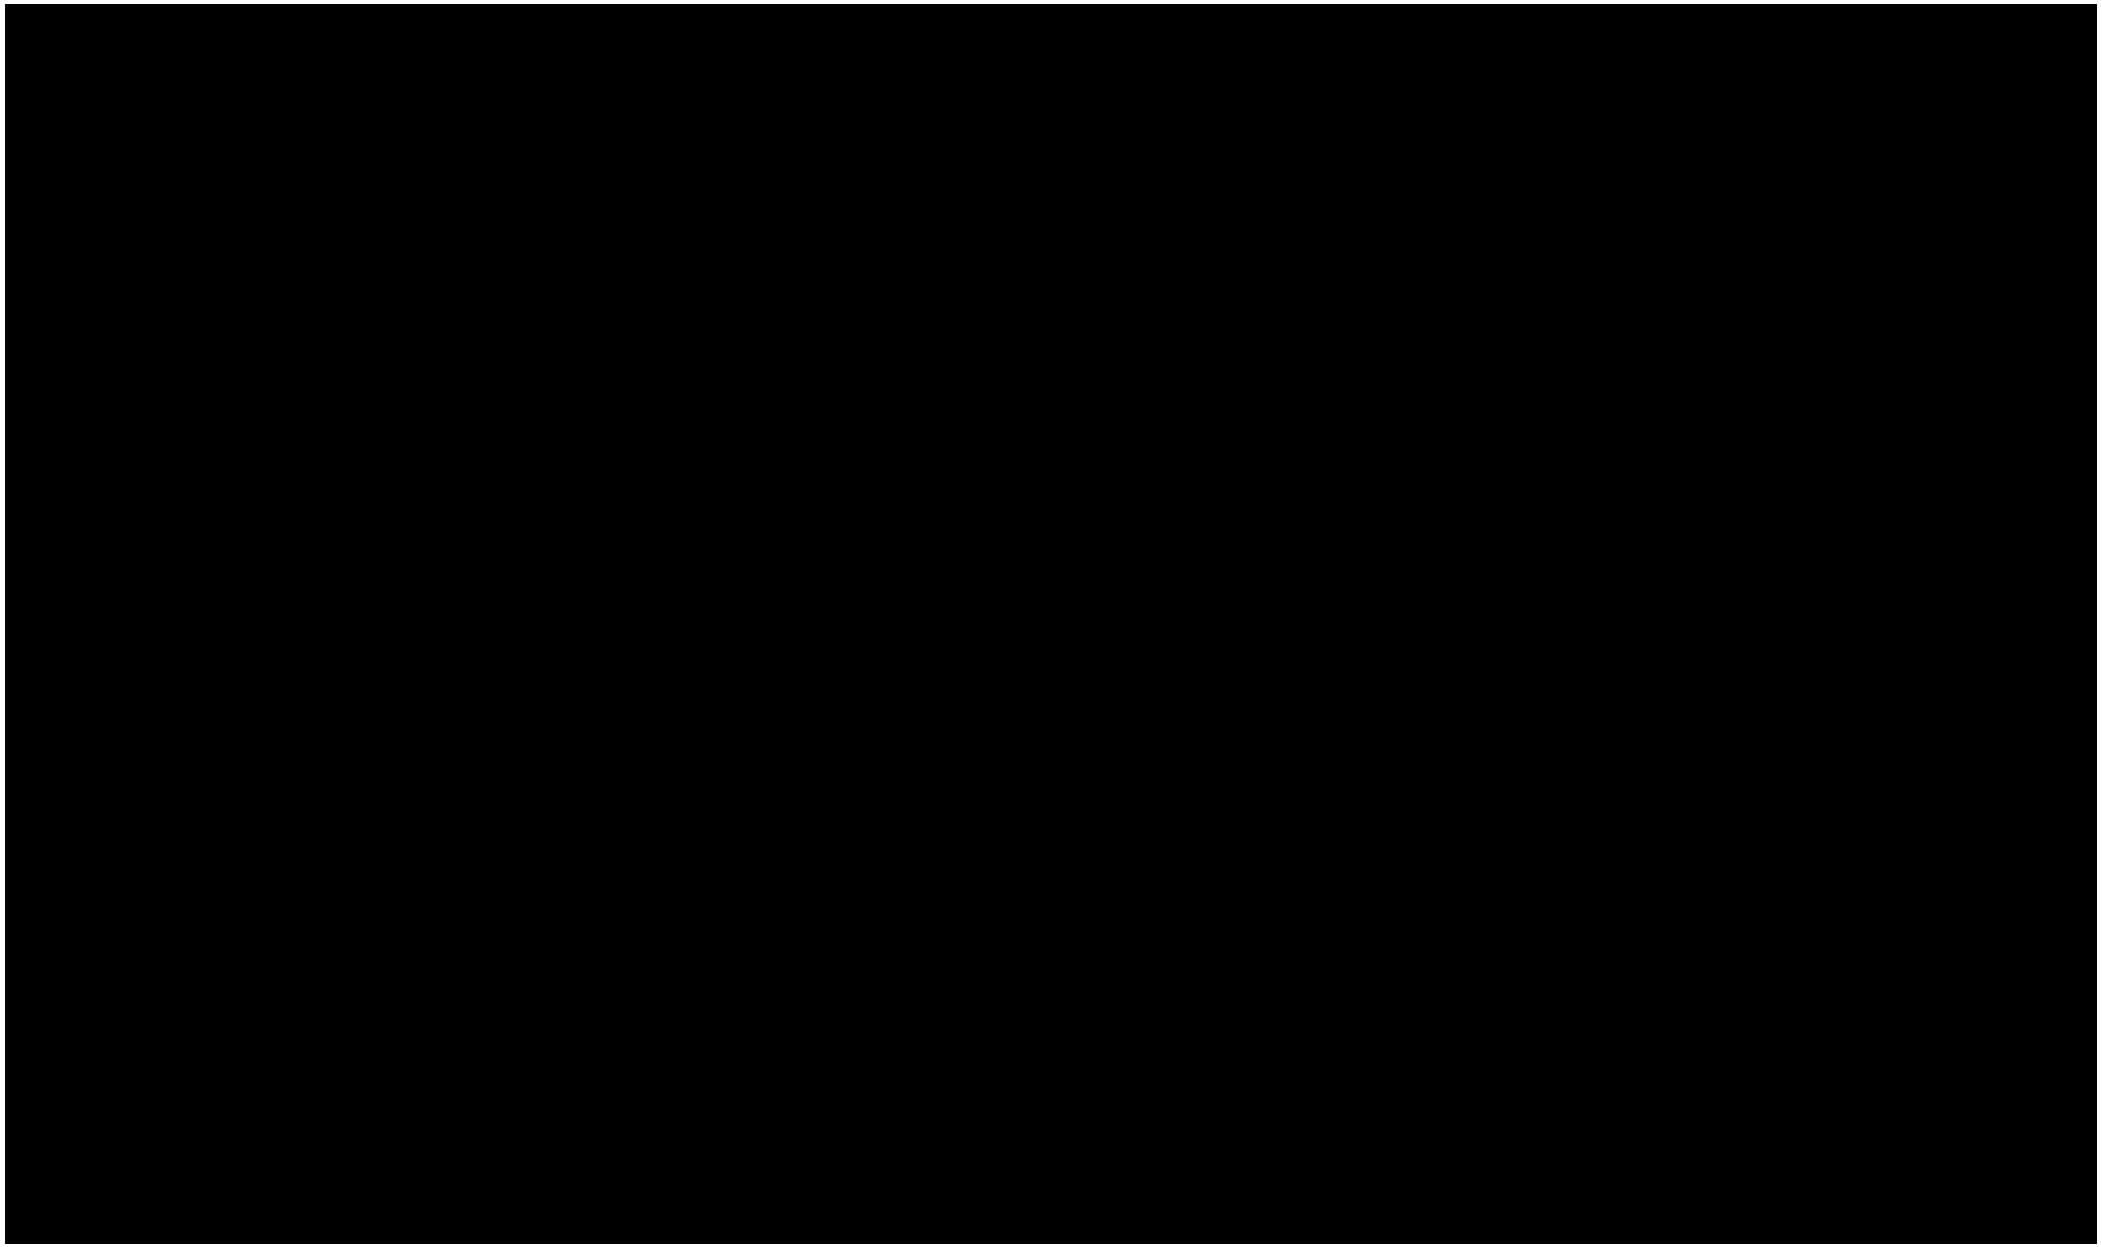


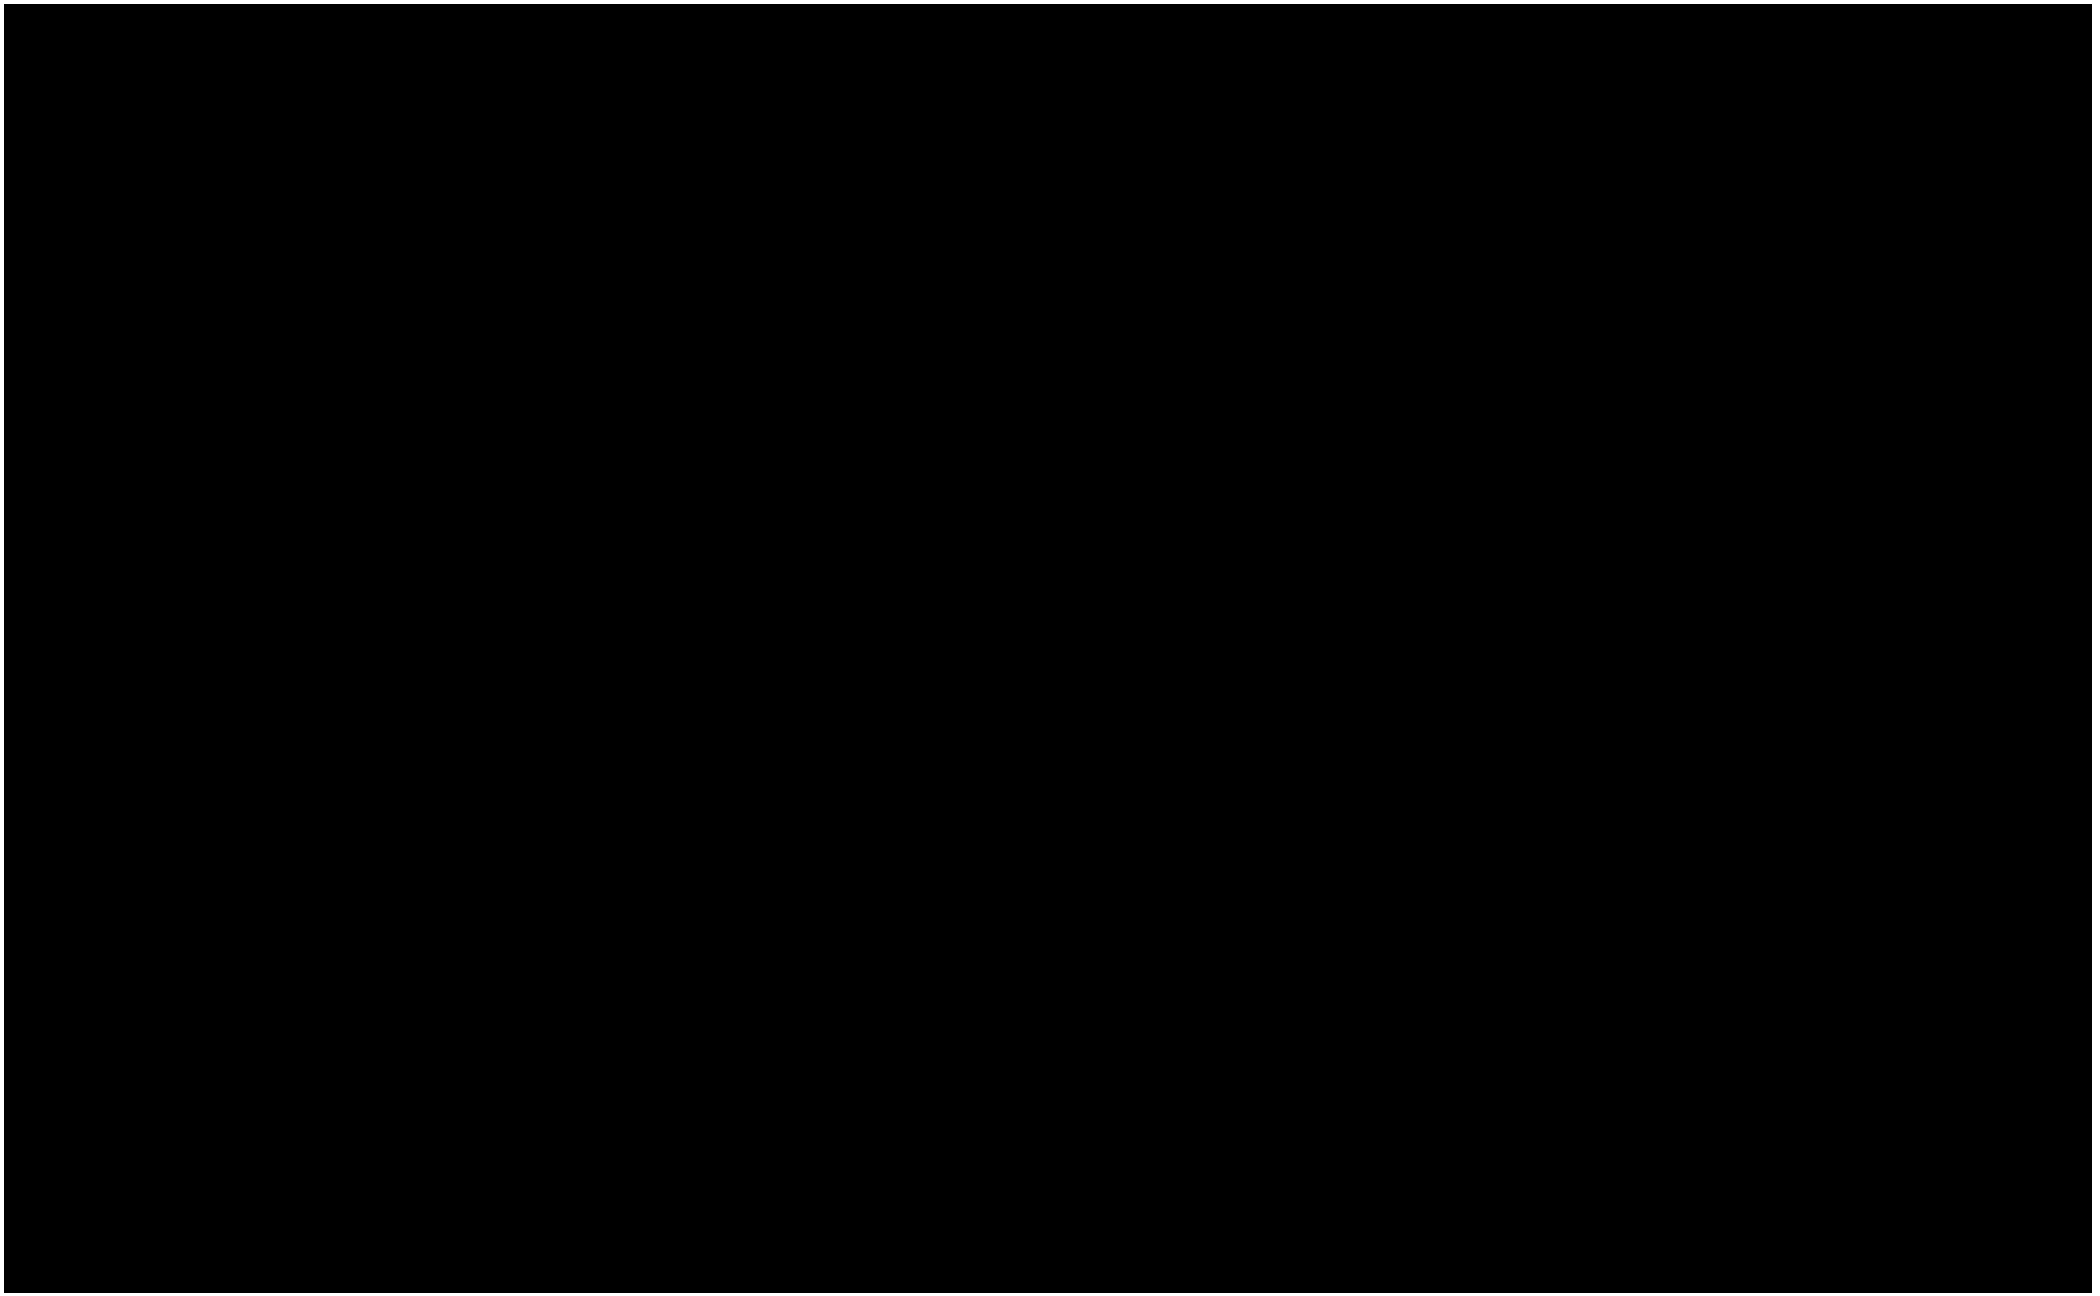


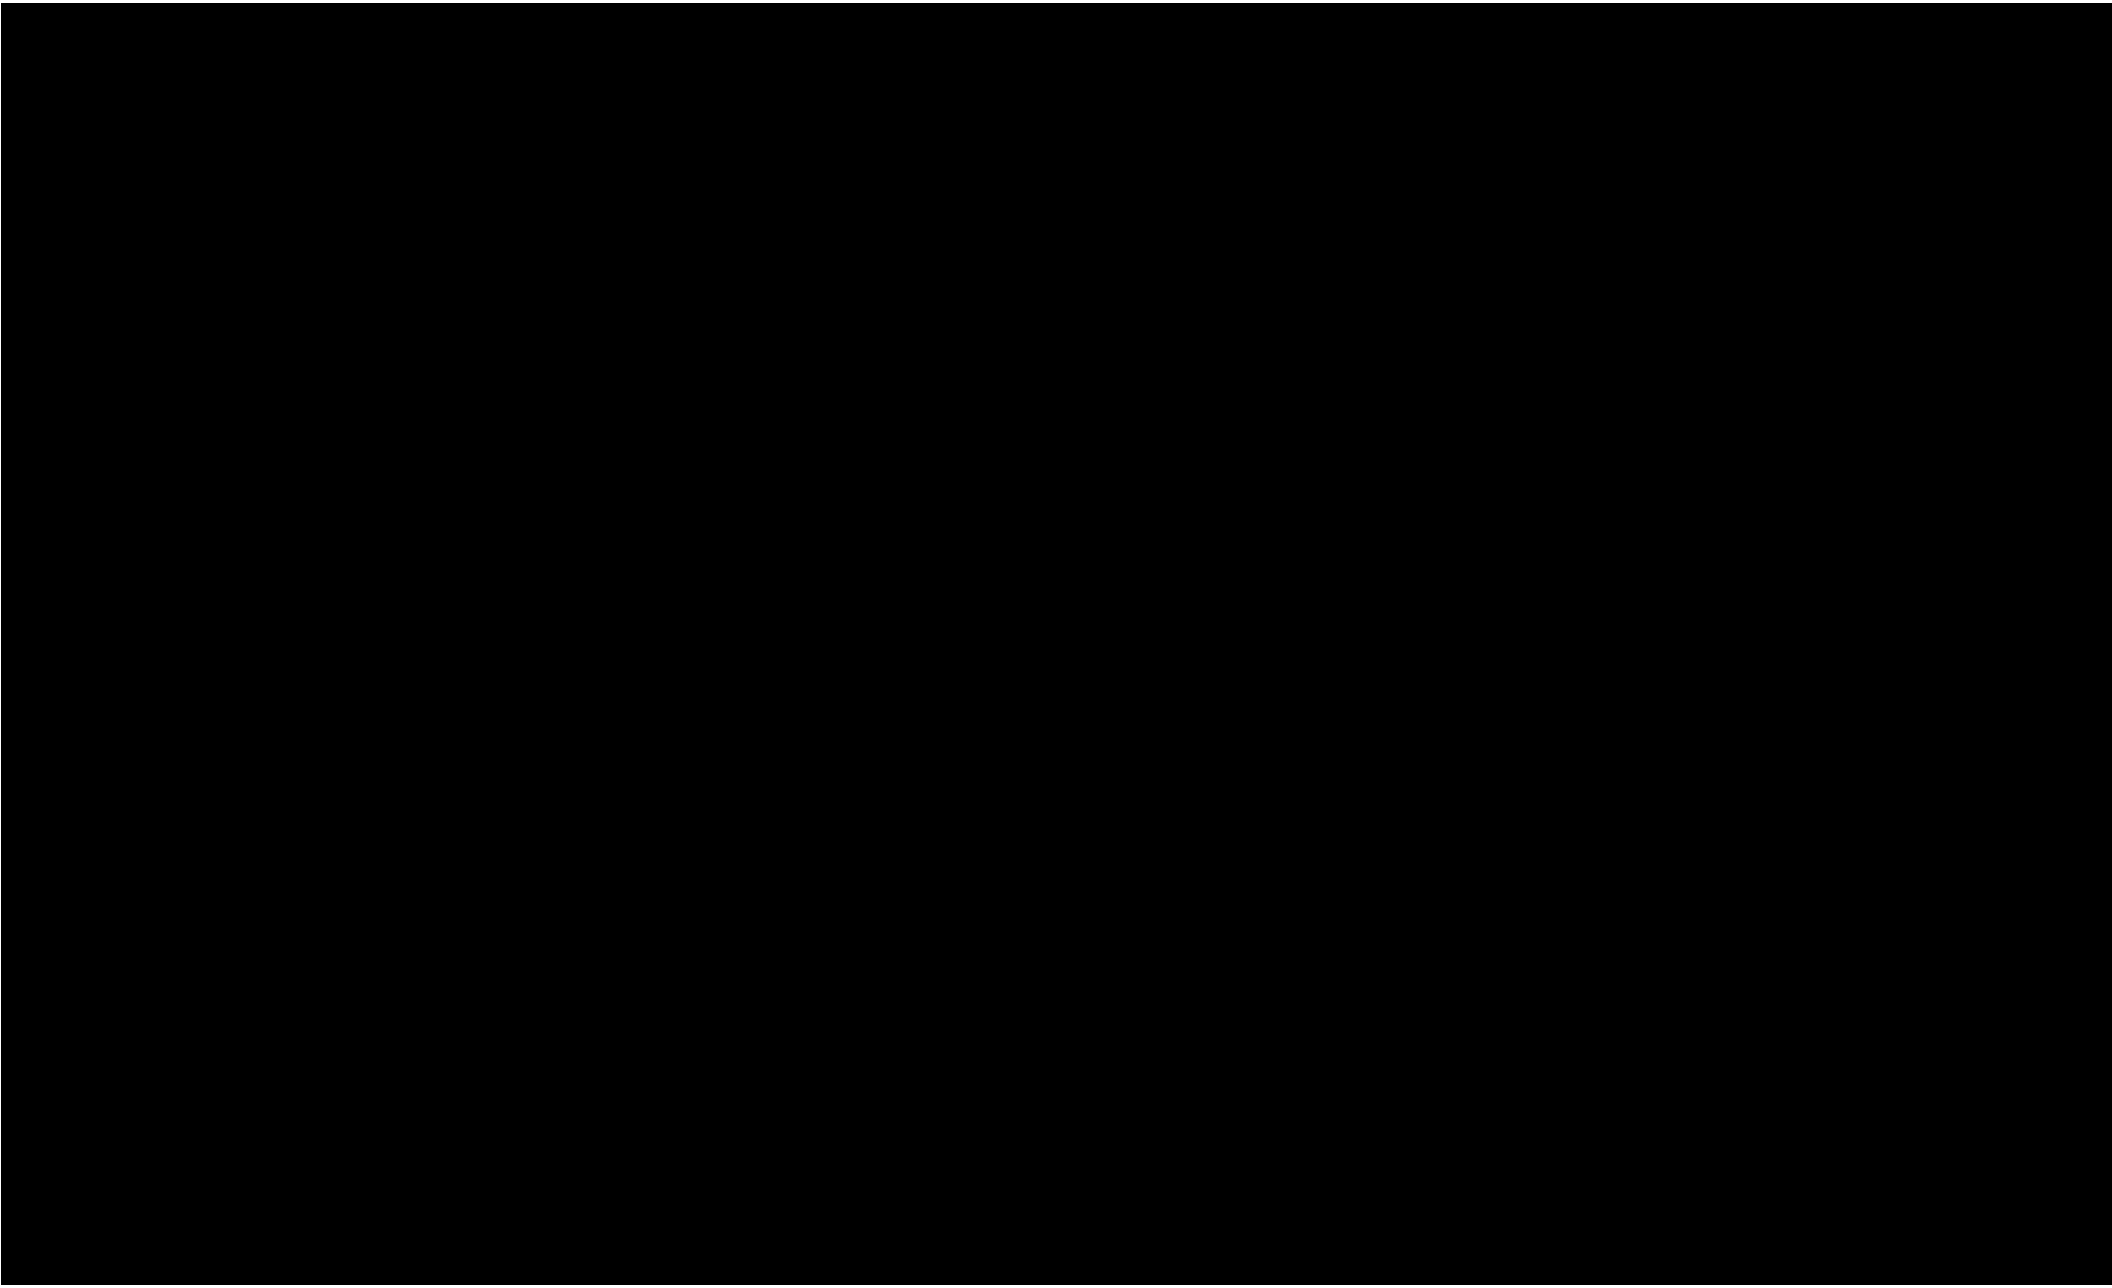


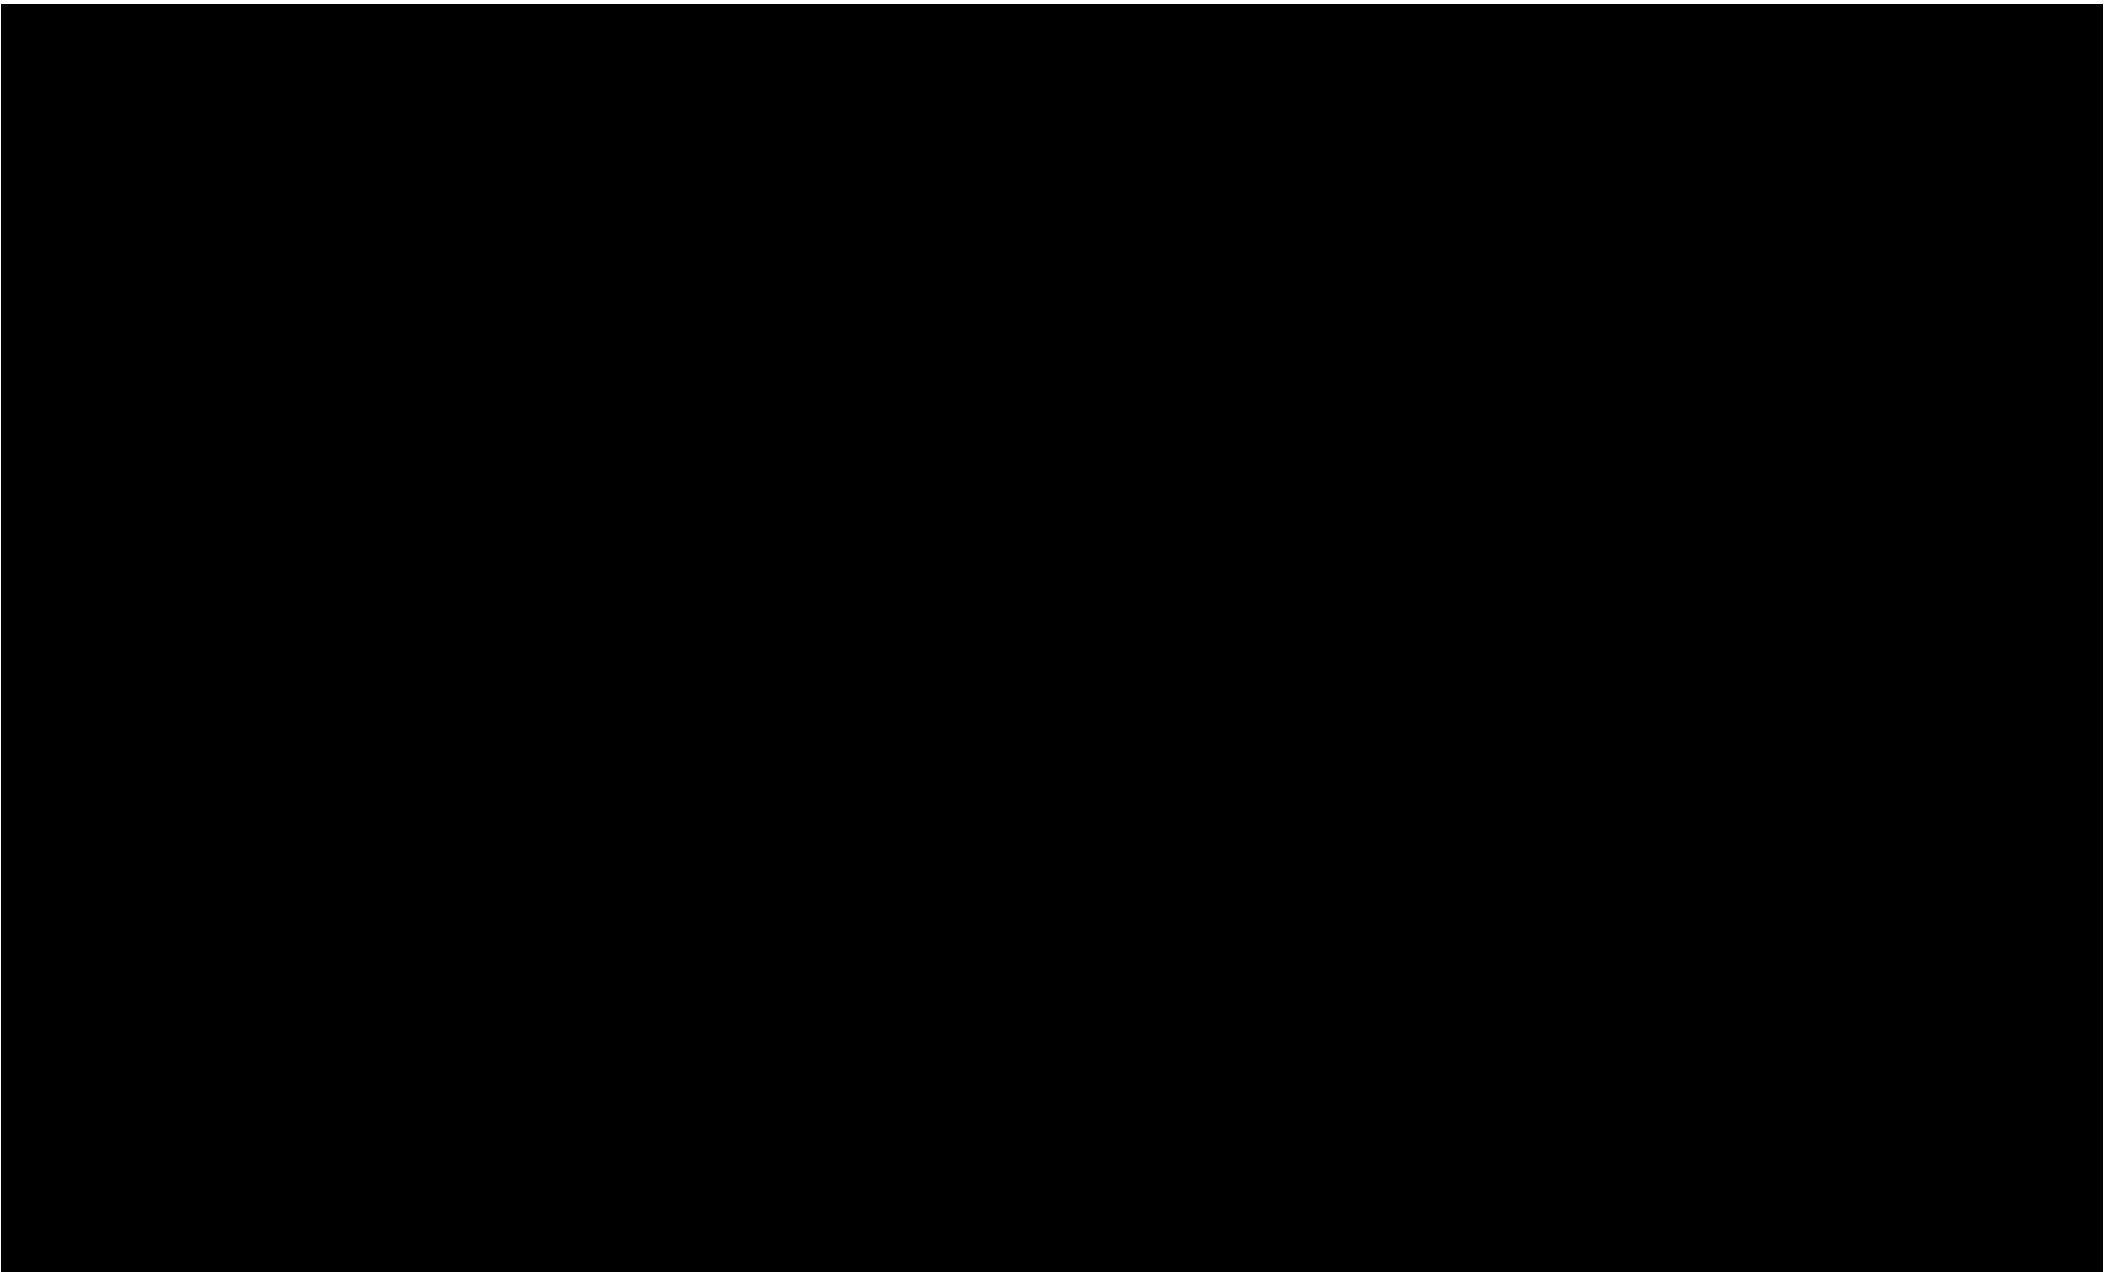


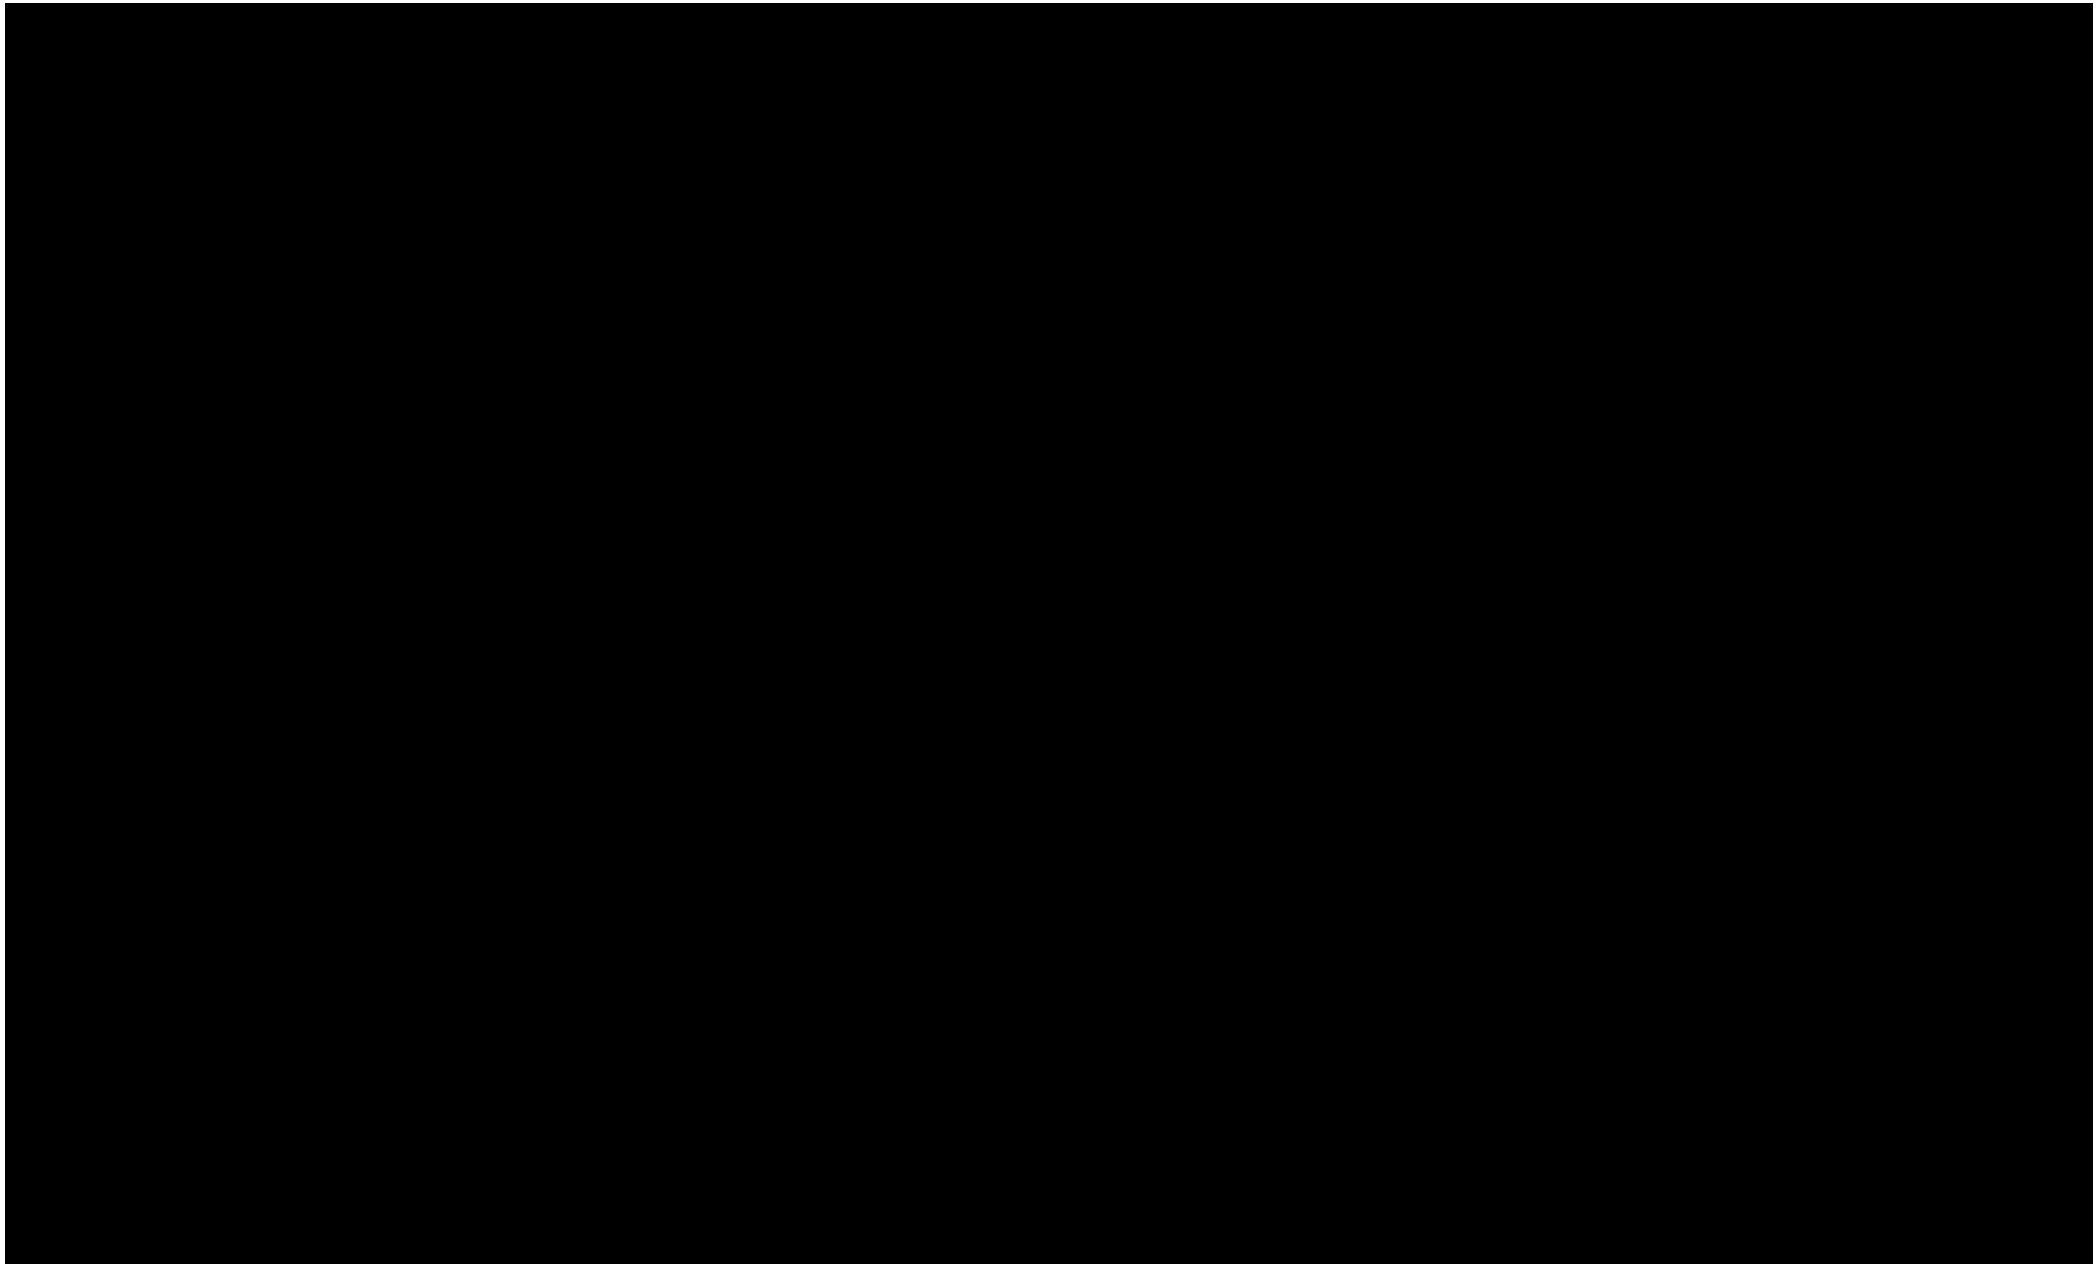


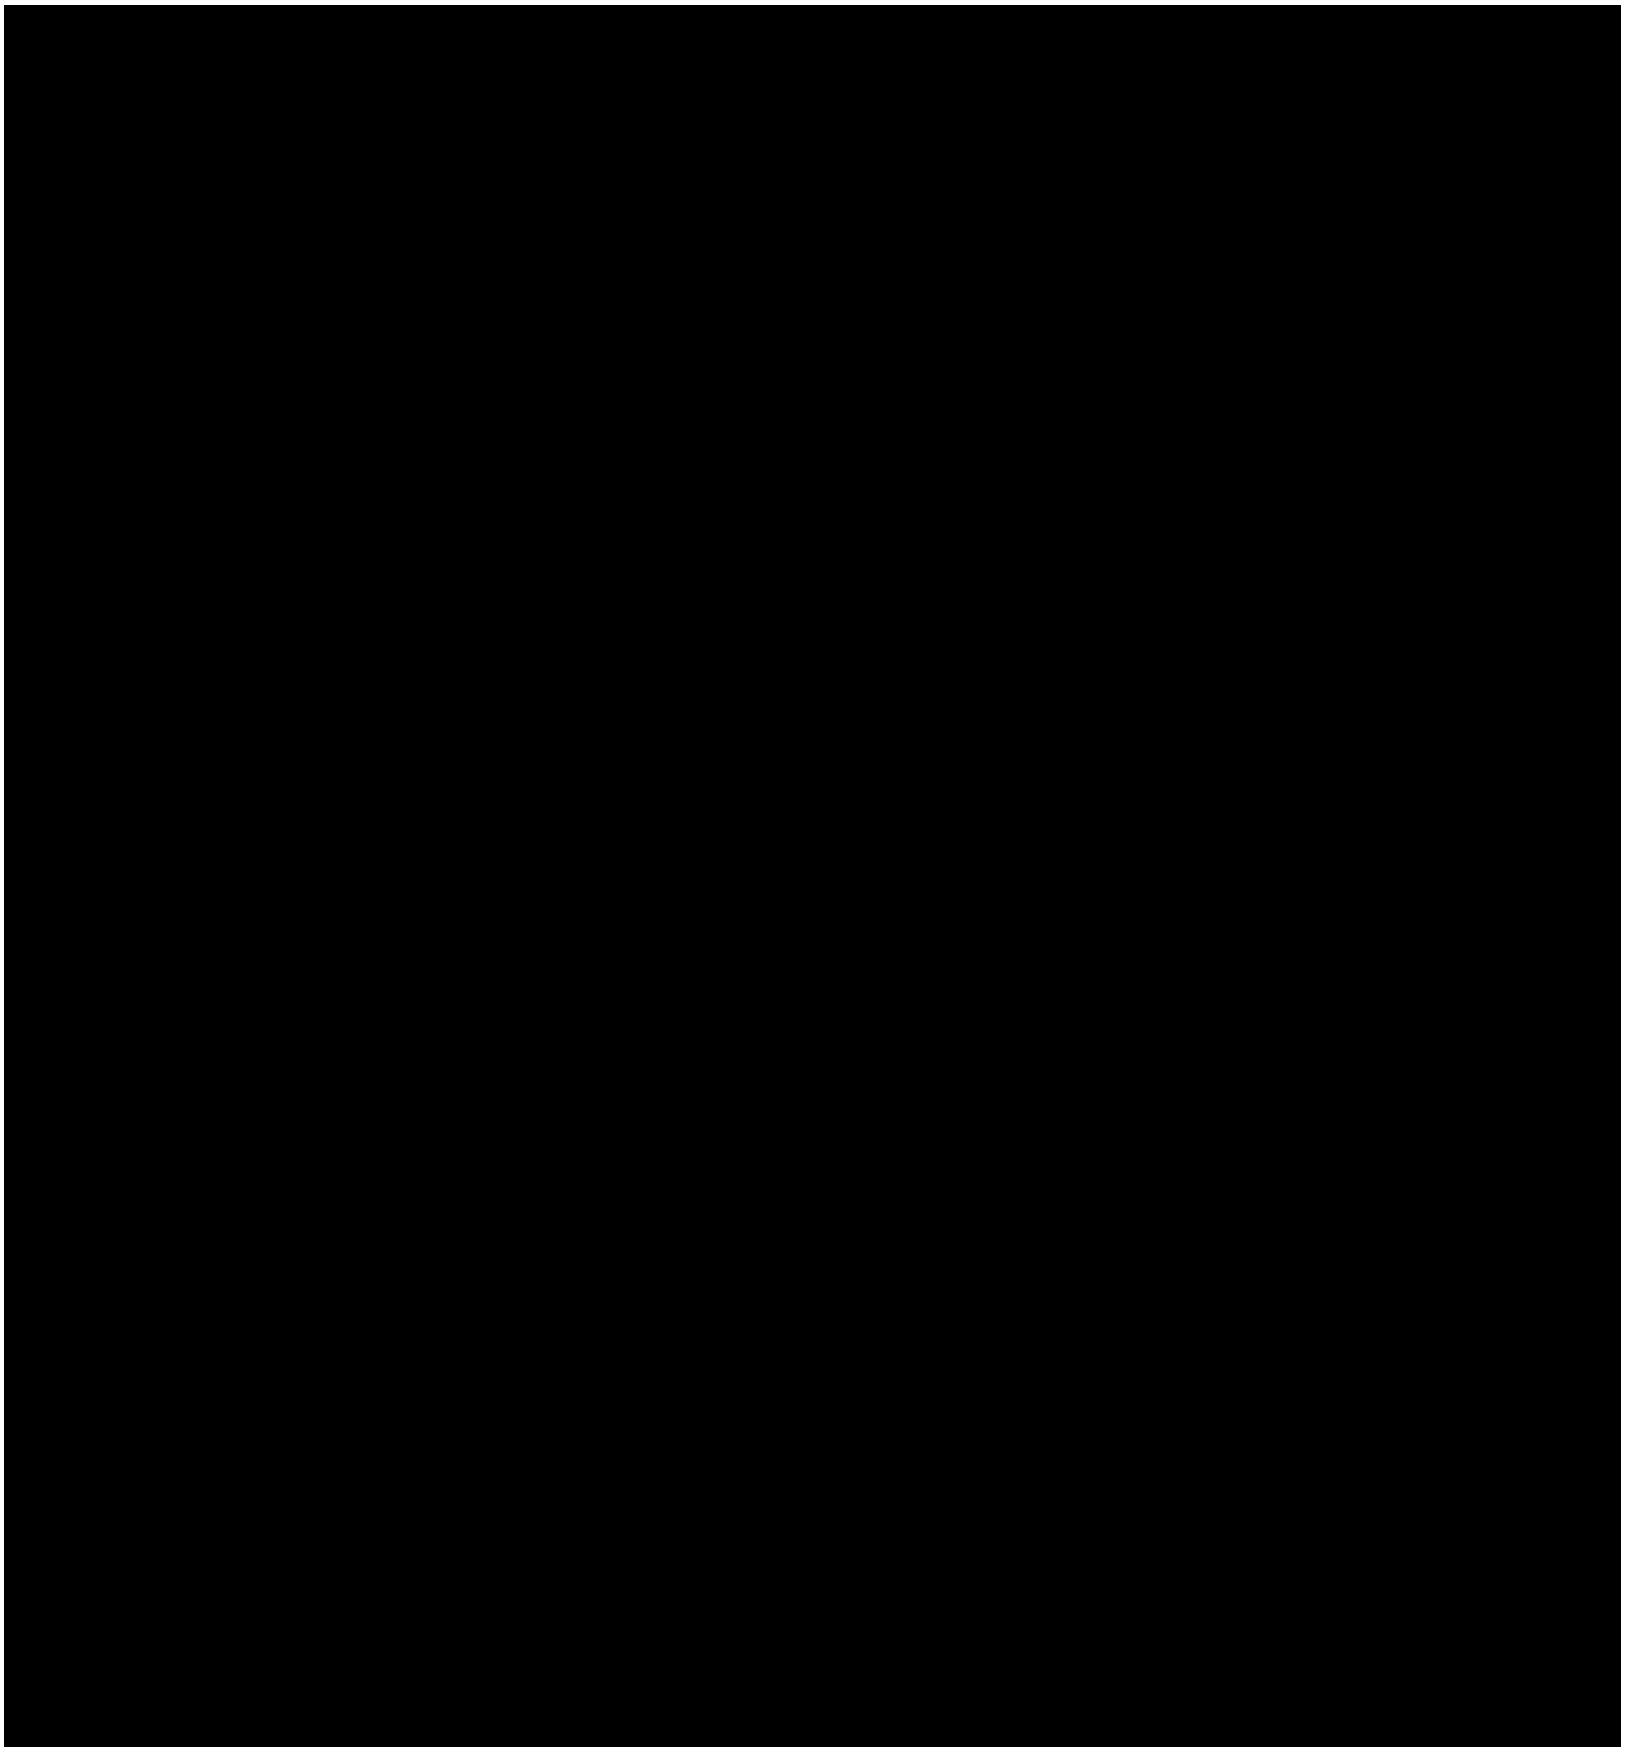












50.2.5.6 Risk and Issue Management Plan

RFP Reference: 50.2.5.6 Risk and Issue Management Plan, Page 279; Risk and Issue Management Plan CDRL, Page 258

EDS' risk and issue management approach identifies high-impact or critical risks early and manages them proactively. We have an established method for risk escalation that promotes appropriate and timely risk visibility. We will continue to help the State minimize risks that have the potential of impacting project quality, cost, or schedule.

State of North Carolina

The history of EDS reveals a company that does not fear taking risks to achieve great rewards. But EDS' attitude toward risk is not cavalier. Instead, EDS takes a carefully calculated approach that is woven into the very DNA of the corporate culture. EDS was the first company to look at risk as a multi-dimensional business challenge.

One month before the 2001 World Trade Center attack, EDS established a privacy and security consulting practice for our clients. EDS recruited industry leaders Rebecca Whitener, Al Decker, and Dave Morrow to drive the convergence of their expertise in risk management, security, and privacy. Casually known as the Security Dream Team, this structure was the first of its kind in the IT industry.

This team sharpened the EDS edge by successfully raising security, privacy, and risk management from a micro-level technical discussion to the strategic level required by executives today. EDS works with companies across industries and across the globe and, as a result, the kinds of issues that are important to our clients are also important to us.

Internally, the Security Dream Team leads and influences across organizational lines. They consult with executives to develop and implement visionary business continuity plans, understanding that unit executives maintain ownership of their individual risks.

Externally, the team is available for client visits, whether consulting or accompanying a sales team. They expertly explain how EDS manages its security and privacy risks. And just as they consult internally with executives, they are willing to advise clients about risks they need to address.

According to Whitener, "It's about credibility. There's no issue or concern our clients have that we ultimately don't have for ourselves, for EDS, so we address them cohesively. We care about their risk issues as much as we care about our own."

EDS not only brings proven risk management processes in the development and operation of the Replacement MMIS, but also innovative thought leaders in risk,

security, and privacy. Whitener, Morrow, and Decker are industry leaders in the development of risk management techniques for EDS and ultimately for clients across the country and around the world, including North Carolina.

Rebecca Whitener is vice president, EDS Enterprise Risk Management, chief risk officer, and an EDS Fellow. Whitener is a recognized authority in security and privacy solutions with more than 25 years of experience in a wide range of industries.

Dave Morrow is the EDS chief security and privacy officer. With 30 years of experience in the security industry, Morrow is a recognized leader in the security discipline. Throughout Morrow's career, he has had direct involvement in various security matters, computer forensics, and technology-related criminal investigations.

Al Decker is director of enterprise risk management for EDS. He is recognized as an authority on information security, privacy, and risk, with more than 25 years of experience in computer security and IT auditing, both in private industry and public accounting. He has delivered and managed services for companies worldwide in areas such as risk management, internal controls, security implementation, security audits, and training.

EDS Risk Management in Action

Effective risk management plays a vital role in the successful completion of projects for the North Carolina healthcare program. The multi-payer aspect of the Replacement MMIS DDI and operations would present an unprecedented risk for any vendor without multi-payer experience and without North Carolina Medicaid experience. This risk is increased four-fold by the requirement for the Replacement MMIS to serve four divisions within the North Carolina Department of Health and Human Services (the State). EDS reduces this risk by bringing the right combination of multi-payer experience, North Carolina Medicaid and Mental Health program knowledge, and experienced personnel in the DDI and Operations phases to mitigate risk to the State and its stakeholders.

Example 1

An example of EDS' established risk management experience occurred midway through the Kentucky DDI process, when the State received approval from CMS for a new cost-reduction strategy that resulted in expansion from five benefit plans to more than 35 benefit plans. This created a potential risk to the DDI schedule. EDS assembled a policy team to analyze the requirements for the plans and policies and determined that the plans could be accommodated through the configuration capability within the existing DDI schedule of the new interChange policy engine, thereby mitigating the potential risk.

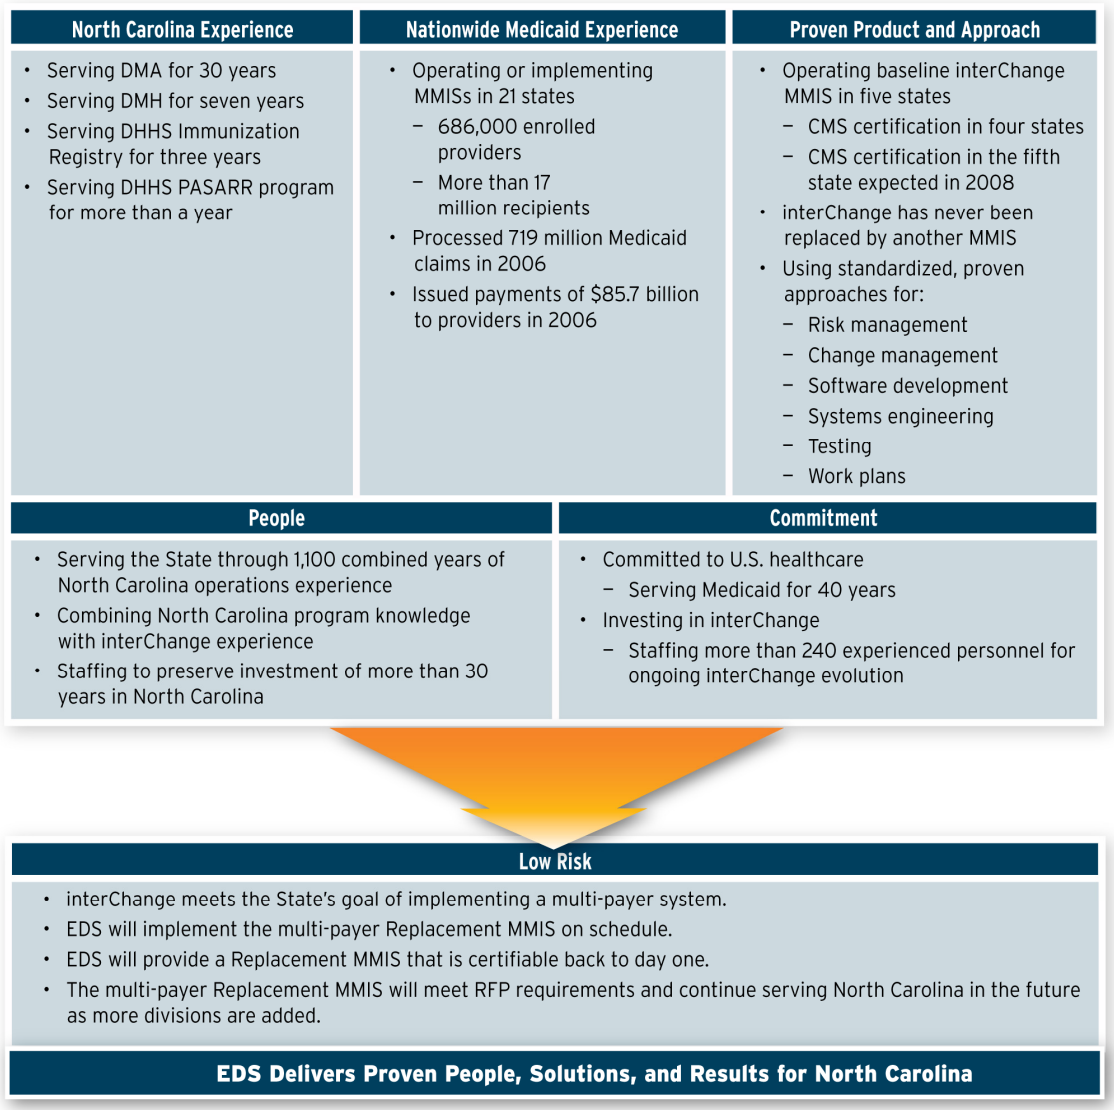
Example 2

Another example of EDS' experience with mitigating risks occurred during this same Kentucky DDI process. With the potential failure of another vendor to deliver a new provider enrollment application (separate state contract) by the interChange implementation go-live date, there was a risk that the application would not be ready for providers wishing to enroll. After discussing potential options, it was decided to implement a full provider-enrollment capability in interChange as a contingency, thereby mitigating the risk if the state's other vendor failed to deliver.

As always, EDS will work with the State to identify, evaluate, and mitigate risks and issues. This is true for both the DDI and Operations phases. This process has already started: The design team has focused on the special needs of the multi-payer system and has produced a design that satisfies these unique needs for all four divisions.

Please note that our entire offering—experience, proven product and approaches, people, and commitment—is our strongest indicator of successful risk management and mitigation, as illustrated in the following exhibit, Risk Managed Through EDS' Comprehensive Offering.

Risk Managed Through EDS' Comprehensive Offering



Our experience, proven product and approaches, people, and commitment are the strongest indicators of our success in risk management for the State.

Risk and Issue Management Plan

As indicated by the RFP's Risk and Issue Management Plan (RIMP) Contract Data Requirements List (CDRL), EDS is submitting the first draft of our RIMP with the proposal.

The RIMP contains the strategy and timing for addressing risk identification and creating the risk identification log, staff involved in the process, tools and techniques used for qualitative and quantitative analysis of risk likelihood and

impact, risk response planning, prioritization, and risk monitoring and control. These activities occur with other project planning and controlling activities.

Our risk and issue management approach facilitates a shared understanding where high-impact or critical risks are identified early and managed proactively. A basis for risk escalation is established to promote appropriate and timely risk visibility. Risks that could impact project quality, cost, and schedule are minimized with our proven approach. This has been a critical factor in our history of implementing successful projects, not only for MMIS applications, but also for thousands of commercial applications.

Our RIMP involves identifying and controlling risks by having the right people involved in the process. It also involves using appropriate tools and techniques to identify and analyze risks, monitoring and developing plans to take action for reducing or eliminating risks, and reporting the risk status, changes in the risk, or a trigger of risk events.

In the following sections, we discuss our plan for risk and issue management and the processes and procedures used to support the RIMP:

- General Process for Risk and Issue Management
- Application of the General Process
- Roles and Responsibilities
- Corrective Action Plan

General Process for Risk and Issue Management

EDS will follow an RIMP approved by the State. Our plan will address the following topics:

- Risk monitoring and control
- Risk identification process and timing
- Risk management process team members
- Risk identification and analysis tools and techniques
- Risk quantification and qualifications
- Risk response planning

To effectively manage project risks for medium and large projects, a proactive risk management approach using these processes and steps will be applied that identifies project risks and the appropriate management actions to mitigate or eliminate the risk.

The main purpose of risk management is to focus the project staff's effort on eliminating or reducing risks and resolving problems as early as possible. A DDI team member dedicated to risk management will report to the EDS NC Project Management Office (PMO) director and serve as the overall risk management

specialist for the project. This team member is skilled in managing risks and will work with the delivery teams and the State to eliminate or mitigate risks.

As implied in the RFP requirement, effective risk management requires a thorough analysis of work before each activity begins. Early in the initiation of medium and large projects, the EDS NC PMO director and his or her staff, with support from the delivery teams, will use the RIMP to produce a list of identified and potential risks. A complete understanding of inherent risks will enable preventive action against schedule delays and overruns.

Our risk management approach is a continuous process that reduces risk to a manageable level or eliminates it entirely. It also necessitates that appropriate risk control actions be planned, implemented, and monitored.

Our plan for risk management includes the following steps:

- Dedicating a DDI PMO member with responsibility for overall risk management and setting the environment for a proactive approach to risk identification, assessment, and control activities and continuation of these efforts in operations under the leadership of the EDS NC PMO director
- Adhering to the RIMP to identify, analyze, respond to, resolve, and monitor risk
- Identifying and controlling project risks from the time the project starts through project completion
- Reviewing the status of active risks in routine status meetings and holding dedicated risk management meetings to provide direction and additional follow-up to risk identification and control activities
- Enlisting the full commitment of team members, both inside and outside of EDS
- Enlisting the EDS North Carolina account manager to participate in the various risk management activities, reflecting an understanding that the team cannot lose focus on the active and potential risks that may impact the project
- Preparing risk response plans to plan and document what actions are to be taken to address risks
- Maintaining the risk identification log that is part of iTRACE, making it easily accessible by the project's participants
- Producing risk management reports to assist in the logging of risks and monitoring of risk until closure

The risk management specialist is the driving force behind the risk management process. The risk management specialist role sets the tone for a proactive

approach to risk identification, assessment, and control activities through the following actions:

- Verifying that members are aware of the risk management process and are instructed in the use of the risk management techniques
- Receiving risk information, updating the risk identification log, and running reports that will be available in iTRACE
- Logging and tracking identified risks to closure and communicating the status to the risk identifier and project stakeholders
- Including risk management actions in the project work plan
- Supporting the risk management work group activities

The PMO routinely will address the identification, analysis, and management of risks in project status meetings.

Risk management will be a standing agenda item that involves team members in the process of identifying risks. The PMO will coordinate and hold risk management meetings, known as risk management work group meetings. These meetings will be scheduled to analyze and address newly identified risks or risks that have been elevated in significance.

The project's risk management work group will review and provide input on the priority and resolution of identified risks and monitor the status of prioritized risks. The risk management specialist will chair the risk management work group. Risks addressed in the status meeting and work groups will be communicated to EDS' leadership and the State in a time frame to be determined with the State.

The risk management work group will perform the following functions:

- Identify and review impact of project risks
- Provide overall guidance on risk management matters
- Establish and implement the provisions of the RIMP
- Review any risk reports and determine the most realistic courses of action to control and mitigate risk
- Determine an appropriate contingency action to address risk

The risk management process will require the full commitment of the project team members. This commitment will be secured through the following steps:

- We will facilitate team member understanding of the risk management processes and procedures. Complete risk management documentation will be available through iTRACE and will be fully supported by EDS.

- The PMO will maintain ongoing contact with team members to make sure they are considering risks that may affect the ability to deliver the work detailed in the team objectives and plans.
- The PMO or assignee will be responsible for processing risk information received to demonstrate the importance of this information.
- The PMO will provide feedback of risk assessments and activities to team members, EDS leadership, and the State.

Application of the General Process

The risk management function is part of overall project management and is closely correlated with other knowledge areas such as scope and time management. Risks can affect scope, time, and cost management—and often the reverse is true, as well. Accordingly, activities that encompass the management of risk are integrated into the existing processes of initiation, planning, execution, controlling and monitoring, and closing.

Our risk management processes are based on Project Management Institute (PMI) Project Management Body of Knowledge (PMBOK) principles and involve identifying and managing risks through risk management planning, risk identification, qualitative risk analysis, quantitative risk analysis, risk response planning, and risk monitoring and control.

The following exhibit, Risk Management Process, summarizes this process.

Risk Management Process

Our risk management process is a closed loop, where risks are documented, evaluated, appropriately handled, and reported through closure.

The RIMP will document how risks are identified, prioritized, analyzed, planned for, monitored, and controlled. The prioritized risks will be carried forward in a systematic procedure from risk assessment to risk control to facilitate the

effective management of risks. The procedure will be ongoing and monitored by the PMO and project leadership.

Ongoing mechanisms will communicate risks to stakeholders. Risks will be documented, tracked, and reported in iTRACE. Among the enhanced capabilities of iTRACE is the increased ability for the State and EDS to see documented risks, mitigation plans, and other information. These plans will help us minimize risk before service delivery begins.

The following is a detailed discussion of the underlying procedures for implementing the processes of risk and issue management planning, risk identification, qualitative risk analysis, quantitative risk analysis, risk response planning, and risk monitoring and control.

Risk and Issue Management Planning

The purpose of the RIMP for medium and large projects is to describe the approach used for risk management that supports the identification of any areas of known risks or potentially significant risks and to make sure those risks are continually identified, evaluated, controlled, and reported. Additionally, risk solutions are developed and implemented to minimize any adverse effect on the project's objectives.

Minimizing the effect of unscheduled and unanticipated risk to the project is the fundamental objective of risk management. To effectively perform this, EDS will have a dedicated risk management specialist who will make sure risks are identified at an early stage and throughout the life of the project. The risk can then be eliminated or managed and controlled on an ongoing basis for the duration of the project.

The RIMP will become a component to be referenced in the project plan. As a result of analysis of identified risks, a risk response plan will be created for the project. This plan will document mitigation and contingency actions that could affect other project plan components, such as the staffing plan, schedule, budget, or milestones.

The scope of the RIMP will cover the approach for identifying, evaluating, controlling, and reporting risks associated with project work. It also will contain the details of the identification, staff involved in the process, tools and techniques used for qualitative and quantitative analysis of risk, risk response planning, and risk monitoring and control. The RIMP will be an input to the other processes used in risk management.

Risk Identification

EDS project members will perform risk identification and assist in producing the list of the project-specific risks. Risks will be identified as early as possible to effectively reduce problems that may limit the success of the project.

A high-level risk assessment will provide a general, qualitative evaluation of the broad degree of risk that the project faces, based on the overall project characteristics. The high-level risk assessment will examine the following topics:

- The areas of risk based on project attributes or characteristics, such as size, structure, technology, and impact
- The degree of risk or project concern for each of the project's attributes (for example, low, medium, and high)
- Notes about factors within each risk area that contribute to a high degree of risk

At the beginning of the project, and ongoing thereafter, we will use checklists to identify and evaluate risks by category. The team members will identify and document perceived risks either in brainstorming sessions or individually. After a risk is identified, it will be documented in the risk identification log. The risk management specialist will review risks regularly with project teams so progress is made in risk reduction and elimination.

At any time during the life of the project, any team member can identify a risk based on regularly assigned project activities. The project manager (PM) or risk management specialist will assign a risk owner to be responsible for documenting the risk.

The following information is updated in the risk identification log:

- **Risk ID—**Unique number assigned to each risk
- **Date Identified—**Date that the risk was raised for documentation and analysis
- **Risk Title—**Summary description of the risk that clarifies the content or intent
- **Assigned To—**Individual responsible for addressing the risk
- **Status—**Values describing the risk status, including the following:
  - Active: A risk assessment is in process or the risk plan is approved and risk triggers are being monitored
  - Escalated: Assigned to a higher organization for assessment and action
  - Cancelled: No longer applicable because of other, outside factors
  - Postponed: No action being taken
  - Closed: No further action or monitoring required
- **Probability—**Based on the analysis of the percentage that reflects the chance of the risk occurring

- **Impact—**Based on risk analysis, rating of the impact the risk will have if it occurs, with 1 being the lowest and 5 the most severe impact
- **Exposure—**Based on risk analysis, a calculated field that is the product of probability and impact
- **Category—**Values describing the risk category, including the following:
  - Internal: Risk based on factors internal to EDS and partner organizations
  - External: Risk based on external factors
- **Risk Response Plan—**Values describing the following:
  - Y: Risk has a risk response plan
  - N: Risk does not have a risk response plan
- **Due Date—**Date action plan will be in place to address the risk

Risk Case Study: State Legislature Reduces DHHS Budget

Part I: Using the Risk Identification Log

An example of a risk that might be identified and documented in the risk identification log is the possibility that the State legislature may reduce the State's budget for the upcoming fiscal period. This event would have implications for the healthcare program because the State may have to reduce program expenditures. The State and EDS may request that this item be documented in the risk identification log.

When the risk is entered, log fields that can be completed are filled out. The fields that are initially completed are Risk ID, Date Identified, Risk Title, and Status. The remaining fields are populated at subsequent risk management stages.

As risks are identified and documented in the risk identification log, the information will be made available through iTRACE.

Qualitative Risk Analysis

An important component of risk analysis is prioritizing risks. Risk prioritization is the ordering of identified risks from the greatest to the least level of risk exposure to the project. Using a risk analysis tool, risks can be assessed to determine the level of risk associated with one or more project risk attributes, such as size of change, level of effort, cost associated with the risk, impact to schedule, or other project attributes. Based on ranges of impact for each attribute, a risk assessment level of low, medium, or high will be assigned. This initial qualitative approach to risk analysis will allow project management staff to order risks from highest to lowest, based on either a high-level risk analysis or the risk exposure determined through quantitative risk analysis.

Qualitative risk analysis prioritizes risks initially. This prioritization and initial analysis provides a decision point where risks can be closed, canceled, or postponed if applicable. The risk can be escalated or can remain in an active status for further analysis.

Risk Case Study: State Legislature Reduces DHHS Budget

Part II: Performing Qualitative Risk Analysis

Using the qualitative risk analysis process, the impact of the reduction to the administration of the healthcare program is documented. The risk is assessed based on its specific characteristics. These risk attributes receive a risk rating that is used to set the initial risk priority and status based on the information gained from the qualitative assessment.

EDS will use qualitative risk analysis in its ongoing effort to monitor, assess, and reprioritize risks as the project progresses. This type of analysis is useful in the overall risk planning process so we can focus on the risks most likely to have the most severe consequences and those that produce the greatest benefit in risk reduction.

Quantitative Risk Analysis

Risk analysis, which begins with the separation of risk by exposure level, is performed by the assigned risk owner and reviewed routinely in status meetings. Risks that have a significant level of risk exposure will have a risk response plan created. Identified risks will remain in the risk identification log. Risks with low exposure ratings are monitored in the log but will not need a risk response plan. Risk response plans will be created following the quantitative risk analysis.

Risk analysis will produce an assessment of the loss probability and loss magnitude associated with each identified risk. Risks will be analyzed in terms of the probability of the risk occurring with an unsatisfactory outcome and the impact of the loss to the stakeholders.

Probability and impact will be assigned numeric values. Each risk will be assigned a probability value between 1 and 5, with 1 being the lowest probability of occurring and 5 being a certainty that the risk will occur.

An impact rating also will be assigned. In assessing the impact, the same scoring method will be used, and full consideration will be given to the risk's costs, schedule, and performance impacts. A 1 will be the lowest impact rating, and 5 will be the highest severity impact rating.

The following tables, Probability Assessment Scale and Impact Assessment Scale, are examples of assessment scales used for probability and potential impact.

Probability Assessment Scale

Description of Probability Assessment	Score
Very high probability of occurring in the current project development phase (about 90 percent probability)	5
High probability of occurring in the current project development phase (about 75 percent probability)	4
Medium probability of occurring in the current project development phase (about 50 percent probability)	3
Low probability of occurring in the current project development phase (about 25 percent probability)	2
Very low probability of occurring in the current project development phase (about 10 percent probability)	1

Impact Assessment Scale

Description of Potential Impact	Score
The project's ability to support the required operational capabilities (functions and availability) is at risk of a **very serious** impact due to a major project component not being available.	5
The project's ability to support the required operational capabilities (functions and availability) is at risk of a **serious** impact due to part of a major project component not being available.	4
The project's ability to support the required operational capabilities (functions and availability) is at risk of a **moderate** impact due to a small part (one-tenth) of a major project component not being available.	3
The project's ability to support the required operational capabilities (functions and availability) is at risk of a **minor** impact due to a very small part (one-twentieth) of a major project component not being available.	2
The risk has a **very low or negligible** impact on the project or any functional area. Acceptance of the risk is valid.	1

After probability and impact are entered into the risk identification log, the exposure rating will be generated from the two values based on the calculation of risk exposure (RE) = probability x impact. The risk exposure rating has a range of 1 to 15 (or higher). Depending on the calculated risk exposure level, we will classify a risk as a low-, medium-, or high-exposure risk. The following table, Risk Exposure Scale, provides a sample of this exposure rating.

Risk Exposure Scale

Risk Scale Category	Value Range	Priority
Low Exposure	1-6	Low
Medium Exposure	8-12	Medium
High Exposure	15 or higher	High

As a part of the RIMP, EDS' risk management specialist will work with the State to confirm the description of the probability and impact rating scales. Additionally, we will work with the State to determine and document the ranges of risk exposure that fall into the low, medium, and high ranges. The risk level for each risk will assist in the determination of its expected project impact and the prioritization of risk-reducing responses developed in subsequent stages of the risk mitigation process.

Risk Case Study: State Legislature Reduces DHHS Budget

Part III: Performing Quantitative Risk Analysis

The risk undergoes assessment for probability that the risk would occur during the project and the impact that the risk would have if it did occur. A value in the range of 1 to 5 is assigned to the probability and impact based on the descriptive assessment of the probability and impact of the risk to the project. After probability and impact are given values, the risk exposure is calculated to determine if the risk has low, medium, or high exposure. Based on the guidelines set with the State for risk exposure values, a change in program funding may require risk response planning.

Risk Response Planning

For controllable risks, risk response planning will focus first on monitoring and contingent actions. The project manager, risk management specialist, or risk owner will be assigned responsibility for completing the risk response plan to address risks of significance and to verify plan implementation.

First, the assigned person will update the risk identification log with the name of the person assigned responsibility for completing the risk response plan in the Assigned To field. Additionally, the Risk Response Plan field value will be set to Y.

Second, the approach for dealing with the risk will be determined and added to the risk response plan. The approach will be defined as follows:

- **Mitigated—**Actions will be planned and carried out to reduce the probability or impact of the risk to the greatest degree feasible before the risk is realized. A mitigation (action) plan will outline how the project team will act to this end. Mitigating actions will be carried out as planned.

A mitigation-based response will be integrated into the work plan. The risk then will be monitored as part of the regular performance and project progress.

- **Transferred—**The objective will be to shift the adverse impact of a risk, if realized, by transferring the risk to another entity. The transfer approach will be a special case of the mitigation approach, whereby the degree of adverse impact of a risk to the project will be eliminated (reduced to zero). Transferring a risk to the party best equipped to handle it, such as a specialist or subcontractor, is a risk transfer response. An investigation will be launched when a specific risk mitigation technique cannot be identified.
- **Avoided—**Avoidance of a risk will be addressed in one of three ways to avoid risk impact. The project management plan can be changed to eliminate the risk threat, the project's objectives can be isolated from the risk, or the project objective in danger can be changed. An example of the last strategy is to change a project due date to allow the risk to be addressed so the project remains on track.
- **Accepted—**Acceptance of a risk will occur when the risk is low or outside the project control and there is no method to mitigate the risk.

Third, for risks requiring a risk response plan, the project manager or risk owner will document the approach and actions to be taken to address the risk. The following topics will be used to develop the risk response plan:

- **Actions to be taken—**Approach to eliminate or reduce the likelihood of the negative impact from occurring; schedule information and individuals or groups responsible included as appropriate
- **Measurement—**Measurement criteria (trigger) used to track mitigation actions
- **Planning—**Activities that will be added to plans to mitigate risks
- **Tracking—**Frequency and actions to be taken to track planned activities to mitigate risks

Finally, a contingency plan will be prepared to document what actions are to be taken if the risk is realized. The risk response plan will be updated with the contingency plan and triggers that describe what will be done if steps to eliminate or mitigate the risk are not effective and a contingency is triggered.

In our risk example where the state legislature reduces the State's budget and the State must reduce program funding, several things would happen in this phase of risk management. A risk response plan would be created for this risk. A responsible party would be assigned ownership of the risk, and the responsible party would determine the approach to address the risk. Additionally, the State's funding issues would potentially affect the four divisions that will be using the

Replacement MMIS. For example, if the legislature modifies the budgets for two of the four divisions using the Replacement MMIS, the risk plan would address risks associated with the two divisions affected by the modified budget and validate that the remaining two divisions are not affected by the change.

The risk identification log would be updated to reflect the risk owner and the risk approach (mitigation, transfer, avoidance, or acceptance), and the risk response plan field would be updated to a Y because the risk has been determined to need a response plan. Next, the risk response plan for the risk would be completed. This plan would describe the risk, its symptoms, actions to be taken, when it will occur, risk impact, risk priority, actions to be taken, and contingency plans. After this documentation is complete, the specific actions or monitoring that are associated with the risk of reduced program budgets would be performed.

Risk Case Study: State Legislature Reduces DHHS Budget

Part IV: Performing Risk Response Planning

A risk response plan is created for this risk based on the State's funding issues potentially affecting the four divisions using the Replacement MMIS. If the legislature modifies the budgets for two of the four divisions, the risk plan would address risks associated with the two divisions affected by the modified budget and validate that the remaining two divisions are not affected by the change.

Risk Monitoring and Control

If a risk is triggered, the risk management PM will work with the appropriate team members to mitigate the risk. The PM or appropriate team member will verify that the actions identified in the risk response plan are integrated into the project's work plan and implemented. The risk will be monitored and tracked as a part of regular performance and project progress until it is closed.

Execution of planned risk management actions will require effort and resources. Execution of these risk-related actions will be incorporated into the project's budget, schedule, and other project plan components.

Risk monitoring will involve tracking the risk and taking corrective action when appropriate. It also will involve monitoring risk items for increasing or decreasing significance to the project and adjusting the risk response plan accordingly. When a risk no longer has a significant impact on the project, the PM will retire the risk.

As part of the agenda during project status meetings, risks will be monitored. The group will review the status of risks, perform follow-up activities as appropriate, and revise risk assessments and contingency plans. The group also will review the status of mitigation actions, initiate planned contingency actions as necessary, and close risk items that no longer need to be tracked. Additionally,

the group will identify any new risks and review previously identified risks that had low probability and impact.

A risk identification log in iTRACE and regularly produced risk management reports will be important tools in the ongoing monitoring of risks and the risk management process. The following risk documentation and reporting mechanisms will be employed to assist in verifying that risks are appropriately identified, logged, and monitored until closure:

- **RIMP—**Describes the approach used for risk management so that any identified areas of known or potentially significant risks are continually being identified, evaluated, controlled, and reported
- **Risk identification log—**Contains the risk number, date opened, tracking code, risk item description, person responsible, and status, with filters that can be applied to structure the types of information available
- **Risk response plan—**Contains information available about each open or closed risk required to have a risk response plan, distributed to EDS leadership, the State, and team members for comments and decision-making activities and used by the PM, risk management specialist, and other members when information is required regarding a specific project risk
- **Risk identification summary report—**Provides another view of the information contained in the risk identification log, with additional information such as the priority of the risk

Risk status will be included in status reporting. The project risks will be reported to the account manager and PMO as part of the monthly status report. Risks defined as high will be further reported in monthly senior leadership and State status reports. If there are changes in risks or a trigger in risk events, the State will be promptly notified. Risk measurements will be collected, analyzed, and reported for ongoing monitoring of risk activity, as follows:

- Number of risks with high rating that are open
- Number of risks with medium rating that are open
- Number of risks with high rating that are closed
- Number of risks with medium rating that are closed

Risk Case Study: State Legislature Reduces DHHS Budget

Part V: Monitoring and Controlling Risk

This risk is monitored and tracked using the risk identification log and the risk response plan. The risk is addressed as part of the project status meetings, and changes in the data for the risk are updated in the appropriate document in iTRACE as soon as the information is identified. If this risk is triggered and meets the criteria set by the State and EDS for escalation, the change in status of the risk would be immediately communicated to the State.

The risk management approach of our overall project management methodology helps teams systematically assess, monitor, and manage the risk factors of a project. High-exposure risks are identified, monitored, and managed. Potential project losses related to quality, cost, schedule, and technical issues are minimized. Our risk management approach and processes documented in the RIMP will provide the State and EDS with a shared understanding of the approach to risk management for the Replacement MMIS implementation.

Roles and Responsibilities

EDS is committed to proactively managing risks for this implementation. While team members at every level are responsible for risk management, the risk management specialist will coordinate with the State, EDS NC PMO director and his or her staff, and assigned DDI project managers so that risks are managed and, when identified, mitigated promptly. We will organize our team so that risks are promptly identified and mitigated. Other stakeholders also will be included in risk management as necessary.

The following table, Roles and Responsibilities for Risk Management, identifies the key players in risk and issue management and their responsibilities regarding identifying and mitigating risks and issues. We will work with the State to further refine these roles and responsibilities and will include an updated version of it in the RIMP after contract award.

Roles and Responsibilities for Risk Management

Group	Phase	Responsibility
Risk Management — DDI PM with support from the EDS NC PMO director and staff	Risk Identification	• Facilitates brainstorming sessions and identifies risks • Logs risks in the risk identification log • Immediately notifies the implementation planning manager of high-impact risks • Works with the State and EDS implementation manager, systems programming manager, and technical director to identify risks throughout the implementation
	Risk Analysis	• Works with the implementation planning manager, systems development manager, and project manager for design and development to categorize risks across the implementation • Prioritizes risks through qualitative analysis • Performs risk assessment to quantify risks • Presents recommendations to implementation planning manager

Group	Phase	Responsibility
	Risk Response Planning	• Assigns owners to the risks • Works with risk owner to develop risk strategy • Documents significant risks in a risk response plan • Communicates with risk owners to determine resolutions
	Risk Monitoring and Control	• Regularly communicates with risk owners • Recommends changes to risk strategies and risk resolutions • Leads risk monitoring discussions • Immediately notifies implementation planning manager of risk trigger events • Participates in risk mitigation and corrective action efforts • Develops and presents monthly risk analysis report • Works closely with the State and EDS to monitor and control risks across the implementation • Closes risks in the risk tracking spreadsheet
EDS Implementation Manager	Risk Identification	• Actively identifies risk throughout the project • Works with State and EDS project management professionals for design and development and implementation planning to identify risks across the implementation
	Risk Analysis	• Works with the project management specialists and project management professionals for implementation to categorize risks across the implementation • Reviews and validates proposed risk analysis • Assigns risk owners
	Risk Response Planning	• Participates in development of risk response plans • Reviews risk response plans
	Risk Monitoring and Control	• Participates in risk monitoring discussions • Approves and modifies changes to risk strategies • Reviews and decides on risk resolution recommendation • Participates in risk mitigation and corrective action efforts • Reviews and comments on monthly risk analysis report • Works closely with the State and EDS to monitor and control risks across the implementation • Communicates critical risks to the State and the stakeholders, with support from the PMO

Group	Phase	Responsibility
State PMO, Office of MMIS Services (OMMISS)	Risk Identification	• Participates in brainstorming sessions • Actively identifies risk throughout the project • Receives and logs new risks throughout the project • Immediately notifies EDS PMO risk manager of high-impact risks
	Risk Analysis	• Reviews and discusses risk analysis
	Risk Response Planning	• Provides input into risk response planning • Notifies the State risk owner of assignment for joint risks
	Risk Monitoring	• Monitors risks and implements risk strategies • Participates in risk monitoring discussions • Recommends risk resolution, when appropriate • Shares status and mitigation efforts • Communicates strategy changes to risk owners • Communicates resolution to risk owners • Immediately notifies EDS of risk trigger events • Reviews and comments on monthly risk analysis report
EDS Account Manager	Risk Identification	• Actively identifies risk throughout the project • Works with the State, the risk management specialist, and the design and development and implementation managers to help determine ways to mitigate risks
	Risk Analysis	• Reviews and validates proposed risk analysis • Assigns risk owners • Works with the State, the risk management specialist, and the design and development and implementation managers to help determine ways to mitigate risks
	Risk Response Planning	• Participates in development of risk response plans • Reviews risk response plans
	Risk Monitoring and Control	• Participates in risk monitoring discussions • Reviews and approves risk resolution recommendation • Reviews the monthly risk analysis report • Participates in risk mitigation and corrective action efforts, as appropriate • Serves as the escalation point for critical risks

Group	Phase	Responsibility
Stakeholder	Risk Identification	• Participates in brainstorming sessions • Actively identifies risk throughout the project • Immediately notifies EDS account manager of high-impact risks
	Risk Analysis	• Reviews and discusses risk analysis
	Risk Response Planning	• Provides input into risk response planning • Notifies risk owner of assignment for shared risks
	Risk Monitoring and Control	• Monitors risks and implements risk strategies • Recommends risk resolution, when appropriate • Participates in risk monitoring discussions • Reviews and comments on monthly risk analysis report • Provides input into risk response planning • Notifies risk owner of assignment for shared risks

Corrective Action Plan

Using current information regarding the implementation and information from the risk response planning as inputs, EDS will create a corrective action plan. If the Replacement MMIS does not perform according to specifications and a risk event is triggered, we will execute the corrective action plan.

The corrective action plan will include options for responding to various processing, schedule, or implementation-related events. The corrective action plan will perform the following functions:

- Define tasks to be performed if it is determined that the implementation will be highly affected
- Address situations that have varying levels of impact to the implementation, ranging from minimal to severe, such as the following:
  - Falling behind schedule
  - Hardware failure
  - Application error that prevents the system from running
- Define associated triggers for those events to execute contingency actions

The detailed elements of the corrective action plan are as follows:

- **Task**—Identifies the task associated with a specific contingency action
- **Description**—Provides a detailed description of the task

- **Risk**—Provides a detailed description of an event with adverse consequences for the project
- **Trigger**—Identifies the event or circumstance that activates the corrective action plan
- **Resources**—Specifies the resources required to perform the task associated with the contingency
- **Effort**—Specifies how much effort is required to do the task
- **Authority**—Specifies the person who has the authority to activate the task
- **Stakeholders**—Specifies the stakeholders who will be affected
- **Start and end dates**—Specifies the timing for the task

EDS is confident in our ability to provide the State with on-time delivery of the Replacement MMIS and assume fiscal agent responsibilities without disruption in services or payments. The purpose of corrective action planning is to prepare for unexpected events, so we are ready to address them quickly and mitigate the impact of the risk.

Identifying and Mitigating Risks

Risk is inherent in all projects, especially large and significantly complex projects like the implementation of an MMIS. Our risk management capabilities, proven over time with many successful implementations, are a combination of industry and project management best practices and real-world experience. Using our processes and tools, such as risk identification lists, we identify risks that may adversely affect implementation planning goals. As we eliminate risk, we are continually watching for new risks.

The risks are assessed, analyzed, addressed, and reported according to established procedures for the following:

- Risk analysis
- Risk response planning
- Risk monitoring and control

These iterative steps successfully identify and respond to risks, minimizing the impact to the State. The outputs, or documents, from these established procedures will be available to the State in iTRACE. In addition, risks can be tracked as they are identified through the risk identification log available in iTRACE for the State to view at any time.

EDS is familiar with the factors, at the detail level, that may adversely affect the project. Our experience gives us the expertise to work through the problems and issues that may adversely affect delivery of services. Please refer to proposal section 50.2.5.7 Initial Risk Assessment (Risk Profile) for a description of

potential project risks in the Replacement, Operations, and Turnover phases and our plans for mitigating those risks.

Benefits of EDS' Risk Management Process

The following discussion presents the benefits of our risk management and mitigation process:

- **Improvement to current processes—**The dedicated work provided by EDS' identified risk management team members and the PMO director and staff will focus our efforts to recognize, handle, and report DDI and operational risks. iTRACE, risk management work groups, and risk management quantitative and qualitative processes will enhance the EDS risk management staff's ability to effectively manage the Replacement MMIS' DDI Phase. These tools also will provide the State with open access into our risk management efforts, as articulated in the discussion points below.
- **Proven ability to manage risk—**Using the tools and processes described in this section, EDS has effectively managed and resolved risks in the implementation and subsequent operation of the baseline interChange MMIS for Kentucky, Kansas, Oklahoma, Tennessee, and Pennsylvania. These processes and tools also are supporting current interChange implementations in an additional seven states.
- **Systems view of risk management—**Our risk management approach takes the big picture into account. We examine risks at both the detail level and across the implementation. We know from our extensive experience in the Medicaid arena what integrated elements are affected by risks. By taking an integrated approach to risk management, these elements will be taken into account and risks will be successfully eliminated for affected areas.
- **Involvement in risk management decision-making—**The most effective risk management strategy promotes full cooperation between the State and EDS. Our account manager, implementation planning manager, and risk management PM will work openly to involve State personnel in our risk management and mitigation activities.
- **Definitive process underlying the corrective action plan—**EDS will work closely with the State to effectively manage risks. We will work diligently to engage State personnel in risk management and mitigation planning to produce the corrective action plan if it is needed.
- **Clear accountability for risk management—**Our process carefully identifies the people responsible for addressing and mitigating risks,

which gives the State clear contact information and increases accountability for risk management performance.

- **Easy access to risk information—**Besides discussing risks at weekly status meetings with the State, EDS will make risk information available at any time for State personnel through our innovative Web-based iTRACE tool, where they can review identified risks, the status of actions taken to mitigate those risks, and other risk-related information.

Our proactive approach to project risk management will help us keep the Replacement MMIS project on track for timely delivery of services. We will carefully monitor the project for risks. When risks are identified, we will quickly determine how to best respond to them. We will focus our efforts on eliminating or reducing risks and resolving problems as early as possible. Our depth of experience and availability of resources will empower us to navigate through the myriad obstacles that may arise during implementation planning. Our risk management process will fully support our primary objective of providing on-time implementation of fiscal agent services for the State and its stakeholders.

50.2.5.7 Initial Risk Assessment (Risk Profile)

RFP Reference: 50.2.5.7 Initial Risk Assessment (Risk Profile), Page 279

Our proven risk assessment processes will allow us to identify and mitigate risks and communicate them to the State quickly, accurately, and openly. We will work with the State to determine the impacts and approaches required to resolve the risks and keep the project on time, on budget, and at a high level of quality.

State of North Carolina

Our risk and issue management processes have been highly successful in allowing us not only to identify and mitigate risks, but also to communicate them to our clients quickly and accurately. We openly share these risks and their mitigation plans so that we can jointly determine the impacts and approaches required to resolve the risks and keep the project on time, on budget, and at a high level of quality. We discuss these risk and issue management processes in detail in the preceding proposal section 50.2.5.6 Risk and Issue Management Plan.

The section identifies common risks associated with MMIS implementations, with brief descriptions of anticipated actions for mitigation of the risks. These risks apply to the four DHHS divisions represented in the RFP: DMA, DMH, DPH, and ORHCC. Using the risk analysis methods described in the Quantitative Risk Analysis subsection of proposal section 50.2.5.6 Risk and Issue Management Plan, we have placed these risks in the order of their highest potential probability and impact on the project.

This is EDS' list of risks and their likelihood. Other bidders will have additional risks and a different order of risks. For example, our DDI Risk #11, Understanding Complex Business Rules and Processing Requirements, is considerably farther down our list because of our extensive knowledge of two of the four State divisions. Other vendors would have to invest a considerable amount of time learning the basics of the business in addition to managing a system implementation. Other vendors will have to mitigate the fundamental risk of having an MMIS application that is not currently running in any state, a risk that does not apply to EDS' proven interChange solution.

The initial risk assessment that follows marks the beginning of our risk and issue management processes. Once we begin the project, we will document and manage these risks in a more complete format. However, in compliance with the RFP requirement for this proposal section, we limited each of our identified risks to one page.

Potential DDI Phase Risks

DDI Risk #1: Expansion of Project Scope Due to Alteration of Requirements	
Risk Description	Additional features, change orders, federal or North Carolina legislation, or CMS or State directives expand project scope to go beyond the available implementation schedule. This is especially prevalent in a project that has a long duration (more than a year) and with so many stakeholders, and in an industry that is continuing to change.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	5: Very high probability of occurring in the current project development phase (about 90 percent probability)
Impact if Risk Occurs	5: The project's ability to support the required operational capabilities (functions and availability) is at risk of a very serious impact due to a major project component not being available.
Exposure	25: High exposure
Risk Mitigation	During the proposal development process, EDS documented how each requirement will be met by the Replacement MMIS. These included identification of whether interChange met the requirement, required configuration, required custom code for North Carolina, or surpassed the requirement. During the requirements validation process, EDS will review with the State each system requirement and proposed feature to gain concurrence to the requirements mapping that was done as part of the proposal process. We also will review change orders. If new change orders are required, they will be documented and will go through our change control board (CCB) process, as defined in proposal section 50.2.5.8 Change Management Approach. The CCB will review proposed changes against the RFP, proposal, and the requirements specification document and weigh change criticality against the risk of implementing a change. If a desired or required change is determined to be outside the project scope, the CCB will mutually agree on the cost to the State for the change, prioritize and schedule change implementation, and assign personnel to accomplish this change in the required time frame. As with any change, the business need of the change must be considered against the overall impact to the project time line and budget. We will propose a recommended number of change control hours during the DDI Phase to address scope changes that cannot be postponed until after the go-live date. These estimated hours will be based on other successful implementations of interChange and will represent our best estimate. However, we acknowledge that each state's needs are unique, from a program perspective as well as timing of state or federal regulations, and that this estimate may need changes based on the specific needs of North Carolina.

DDI Risk #2: Limited Access to and Participation from State Stakeholders and SMEs	
Risk Description	The project requires active participation from stakeholders to share knowledge and reveal information so that business functions can be understood. It is critical that the appropriate staff members are available at the appropriate time to stay on schedule. Also, all deliverables must be completed by all parties according to the schedule, including such things as sign-off. Limited availability of full-time dedicated State staff members with the necessary decision-making authority to provide thorough and timely review of project deliverables and make decisions regarding project scope and requirements could affect the implementation schedule or create cost overruns.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	4: High probability of occurring in current project development phase (about 75 percent probability)
Impact if Risk Occurs	5: The project's ability to support the required operational capabilities (functions and availability) is at risk of a very serious impact due to a major project component not being available.
Exposure	20: High exposure
Risk Mitigation	The State and EDS will identify the State participants from the four divisions and other stakeholders as part of the start-up process and determine who has authority to make binding decisions on business processes, requirements, and designs. EDS will work with the State to identify what personnel are needed and the knowledge required for particular evolutions of the solution. EDS will use iTRACE to provide project information to State and EDS team members' desktops for real-time information and updates regarding project deliverables. We will use status meetings to review and identify potential threats to the work plan before they affect the dates, cost, and resources. Agendas will be circulated for key meetings and followed up with minutes sent to each participant to document discussions on key aspects of the project.

DDI Risk #3: No System Freeze	
Risk Description	System modifications required by federal or legislative mandate—or otherwise deemed critical by the State—that must be implemented shortly before or during the DDI Phase may require making the same changes to the Legacy MMIS+, DPH, and ORHCC applications, increasing costs and complicating DDI efforts.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	4: High probability of occurring in current project development phase (about 75 percent probability)
Impact if Risk Occurs	4: The project's ability to support the required operational capabilities (functions and availability) is at risk of a serious impact due to part of a major project component not being available.
Exposure	16: High exposure
Risk Mitigation	Changes will go through the agreed-to change control process, and they will be evaluated for impacts to scope, schedule, budget, and system quality. At the State's direction, EDS will defer the development of nonessential changes to the system to facilitate completion of DDI scope. The current EDS team will continue to support the Legacy MMIS+. EDS will work with the State to keep a log of system modifications. Change orders that are deferred until after the Replacement MMIS goes live will be entered into and tracked in iTRACE. We will propose a recommended number of change control hours during the DDI Phase to address scope changes that cannot be postponed until after the go-live date. These estimated hours will be based on other successful implementations of interChange and will represent our best estimate. However, we acknowledge that each state's needs are unique, from a program perspective as well as timing of state or federal regulations, and that this estimate may need changes based on the specific needs of North Carolina.

DDI Risk #4: Dependencies on Other Entity Interfaces	
Risk Description	Other State agencies that will work with the Replacement MMIS may not agree to participate in inter-system testing or be prepared to go live in accordance with our implementation time line. This will require the coordination between the four divisions and 258 interfaces with external systems.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	3: Medium probability of occurring in current project development phase (about 50 percent probability)
Impact if Risk Occurs	5: The project's ability to support the required operational capabilities (functions and availability) is at risk of a very serious impact due to a major project component not being available.
Exposure	15: High exposure
Risk Mitigation	The EDS Legacy MMIS+ team already manages interfaces with two of the in-scope divisions and has established relationships with these organizations. Therefore, coordination for these interfaces will have continuity of personnel. The State and EDS will identify the stakeholders early in the project and plan for their participation. This will include agencies, offices, individuals, and people to serve as points of contact. EDS will develop an interoperability plan that catalogs and defines external interfaces with the Replacement MMIS. This document will define the pertinent information about each interface. Early in the project, the EDS test director and test manager will work with the State to identify the entities required to participate in inter-system testing. An inter-system test plan will be created and buy-in will be achieved from those organizations' testing teams. The plan will include environment, data, and high-level test plan scenarios. System testing will test the interface files using simulated interfaces. Inter-system testing execution will use test interfaces and will identify any issues with the integration between the Replacement MMIS and any external systems. An interface manager will be assigned to act as a single point of contact for the external interfaces and to communicate with each interface stakeholder.

DDI Risk #5: Deliverable Development and Review Cycle Delays	
Risk Description	The deliverable requirements for submitting, reviewing, and revising documents may prove more time-consuming than anticipated. Delays in receiving comments and approvals could cause project delays.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	3: Medium probability of occurring in current project development phase (about 50 percent probability)
Impact if Risk Occurs	4: The project's ability to support the required operational capabilities (functions and availability) is at risk of a serious impact due to part of a major project component not being available.
Exposure	12: Medium exposure
Risk Mitigation	We have provided deliverable examples within our proposal. We will publish a review schedule two weeks before the reviews. We also will provide the review materials at least two days in advance. To facilitate a more streamlined documentation process, documentation will be provided electronically through iTRACE. State-authorized stakeholders and approvers will have access to iTRACE. To promote timely completion of the deliverables and project goals within required time frames, we will use a proven 10-3-5-day review process for the documentation reviews, as follows: • **10—**EDS will deliver documentation according to the master plan and CDRL. After delivery, the State will have 10 working days to review the document and enter comments in a comment log. • **3—**After the log is returned to EDS, we will review the comments, enter proposed responses in the log, and schedule a comment review. The review session will occur within three working days of receipt of the log from the State and will be focused solely on the comments. • **5—**After the review of the comments, we will update and redeliver the documentation to the State for a final five-day review and approval period. If a written response is not provided within the final five-day time frame, EDS will assume the State has approved the deliverable. This process provides two opportunities for State review of documentation before final approval, which has been proven to work well on other implementations.

DDI Risk #6: Milestone Date Slippage	
Risk Description	Milestones in the Replacement Phase work plan may be missed, possibly affecting the implementation deadline agreed to by the State and EDS.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	3: Medium probability of occurring in current project development phase (about 50 percent probability)
Impact if Risk Occurs	4: The project's ability to support the required operational capabilities (functions and availability) is at risk of a serious impact due to part of a major project component not being available.
Exposure	12: Medium exposure
Risk Mitigation	EDS' project plan incorporates methods and tasks to identify issues, risks, assumptions, and project constraints early and throughout the project, allowing us to be proactive and work with the State to resolve and avoid problems that affect the schedule. EDS uses metrics to track on-time creation and review of project deliverables and milestones. We monitor progress and take corrective action if needed to get the schedule on track. Our communication systems support the quick identification and resolution of issues before they can undermine adherence to the project schedule. We will hold status meetings to review progress and provide early detection of schedule slippage and a plan for resolution.

DDI Risk #7: Data Conversion Issues	
Risk Description	Data conversions are typically complex when converting from an aging legacy application to a new application. This complexity is amplified by the inclusion of data from the four divisions: DMA, DMH, DPH, and ORHCC. If there are significant issues with the originating data, such as bad data, inconsistent data, or incomplete data, these tasks may be much more complex and time-consuming than planned.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	2: Low probability of occurring in current project development phase (about 25 percent probability)
Impact if Risk Occurs	4: The project's ability to support the required operational capabilities (functions and availability) is at risk of a serious impact due to part of a major project component not being available.
Exposure	8: Medium exposure
Risk Mitigation	EDS already manages the data for DMA and DMH. We have identified SMEs for these programs who will assist in the data mapping to the Replacement MMIS. Therefore, we already know two of the four divisions' data that requires conversion. To further mitigate this risk, we will take the following actions: • Conduct extensive analysis at the data element level to normalize the data model, confirm valid values, check data element integrity, validate business and technical rules, and determine field-level distinct values • Analyze data content within key fields across records within the same file and records across different files • Perform a gap analysis between the source data and the Replacement MMIS to determine data compatibility • Identify and resolve differences in field-level data contents, valid values, field lengths, and field formats • Match critical and key data elements from the source data to the Replacement MMIS and document elements for which a clear match is not identified • Identify and resolve with the State key elements not accounted for in the source data • Conduct parallel testing of claims processing, comparing claims payment results in the existing system to payment and disposition results in the new system

DDI Risk #8: Severe Defects	
Risk Description	Severe defects may prevent operation of the new platform, which could create implementation delays.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	2: Low probability of occurring in current project development phase (about 25 percent probability)
Impact if Risk Occurs	3: The project's ability to support the required operational capabilities (functions and availability) is at risk of a moderate impact due to a small part (one-tenth) of a major project component not being available.
Exposure	6: Low exposure
Risk Mitigation	interChange is a proven product that is being customized for a portion of the State's requirements. The base product will have been thoroughly tested before customization begins. If defects are found within the base product, the system corrections will be incorporated into the State's version of the code. Iterative reviews and approval throughout the project's requirements validation, design, development, and testing phases will be performed to make sure we remain on track. By using the Right From the Start methodology, in conjunction with the EDS processes, we will be able to identify gaps in requirements and design early in the process, and we will build testing scenarios as we go through these early phases of the project. Our thorough approach to system testing significantly minimizes the risk of undetected severe defects. Our data conversion plans include phased testing iterations of conversion programs, including detailed walkthroughs of conversion results. Our testing scope and implementation plans include regression testing, parallel testing, and a comprehensive countdown before going live. Defects are tracked in iTRACE and monitored or managed using iTRACE's features. Because the State's stakeholders will have access to iTRACE, they will have visibility into any defects and the progress made in resolving them.

DDI Risk #9: Resistance to Critical Business Process Reengineering Changes	
Risk Description	State and program stakeholders may undermine project success by resisting critical business process reengineering changes designed to maximize State investment in new technology.
Risk Owner	Account Manager Melissa Robinson
Status	Active
Risk Probability	2: Low probability of occurring in current project development phase (about 25 percent probability)
Impact if Risk Occurs	3: The project's ability to support the required operational capabilities (functions and availability) is at risk of a moderate impact due to a small part (one-tenth) of a major project component not being available.
Exposure	6: Low exposure
Risk Mitigation	The State and EDS will mitigate this risk by using cultural business change management practices. The plan will support the cultural business change organization by achieving the following: • Involving leaders from stakeholder organizations in the project to help stakeholders share a common vision of the future and promote active, visible sponsorship • Creating training programs that highlight the benefits of the changes that come with using the Replacement MMIS • Leading by example, with our EDS Operations team being open to changes that will make them more efficient and effective at serving the needs of the State's stakeholders, providers, and recipients • Employing a strong team to perform a gap analysis between the current cultural environment and the future environment, with team members responsible for particular program areas using their knowledge of existing business processes and interChange features to document new procedures and develop customized training materials • Addressing ongoing organizational and cultural issues and concerns with frequent two-way communication to set appropriate expectations • Establishing clear objectives and metrics for project success to enable us to objectively measure and communicate project success to the stakeholders

DDI Risk #10: Hardware Downtime/Software Reliability	
Risk Description	The system cannot process claims and encounters through the Replacement MMIS because of unanticipated hardware downtime or lack of hardware reliability.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	1: Very low probability of occurring in current project development phase (about 10 percent probability)
Impact if Risk Occurs	5: The project's ability to support the required operational capabilities (functions and availability) is at risk of a very serious impact due to a major project component not being available.
Exposure	5: Low exposure
Risk Mitigation	We have 14 years of experience with the hardware platforms and software integration with interChange. We have a superior relationship with EDS partners, EDS preferred software and hardware partners, and Agility Alliance partners to expedite or escalate assistance. We monitor systems to initiate immediate problem resolution during development, testing, and production. Risks are mitigated by thorough testing of patches and upgrades and maintaining current operating system patches and firmware. Platform configuration can be modified to enable critical task processing in a different server domain. Desktop procedures for infrastructure management will be established with a global business continuity and disaster recovery plan to mitigate potential impact from service outages. We incorporate solid design of the development and testing environments based on prior large MMIS implementation experience. We will perform daily incremental backups of the development and model office environments. Full backups of the development and model office environments will be performed weekly, and we will store these backup files off-site. EDS also offers years of experience using the processing platform, regular backups, solid and proven procedures, and extensive security supporting the platform. For example, our Pennsylvania interChange application is running at 99.5 percent uptime.

DDI Risk #11: Understanding Complex Business Rules and Processing Requirements	
Risk Description	The time required for a Replacement MMIS vendor to get up to speed understanding North Carolina's complex healthcare processing needs may put the entire project schedule in jeopardy.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	1: Very low probability of occurring in current project development phase (about 10 percent probability)
Impact if Risk Occurs	5: The project's ability to support the required operational capabilities (functions and availability) is at risk of a very serious impact due to a major project component not being available.
Exposure	5: Low exposure
Risk Mitigation	EDS has been supporting DMA since 1977 and DMH since 2001. We already have experienced staff members in place who understand the business needs of these divisions and continue to provide service excellence to them every day. No other bidder can make such a claim. Additionally, our extensive experience with these two divisions allows us to quickly identify requirements and any needed system modifications for DPH and ORHCC. We have identified leaders—Melissa Robinson, Tim Sullivan, Jamie Herubin, Dean Taunton, and Scott Lowry—who understand the State's business. Dean and Scott recently led and completed a successful interChange implementation in Kentucky. We also have a significant pool of business analysts, developers, database administrators, and testers available to work on the Replacement MMIS DDI who will have completed interChange implementations for other states.

DDI Risk #12: Delay in Equipment Delivery	
Risk Description	Delays in installation and operation of equipment may be caused by a delay in equipment delivery.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	1: Very low probability of occurring in current project development phase (about 10 percent probability)
Impact if Risk Occurs	3: The project's ability to support the required operational capabilities (functions and availability) is at risk of a moderate impact due to a small part (one-tenth) of a major project component not being available.
Exposure	3: Low exposure
Risk Mitigation	EDS has global equipment agreements in place with major vendors to provide rapid response to acquisitions for the Replacement MMIS contract. We have included appropriate lead time in the master plan for acquisition and logistics to support the initial tasks. EDS will solidify the hardware and software requirements before contract signing. After contract signature, orders will be placed for hardware and software on a predefined schedule that was considered when creating the proposal time line and estimates. If necessary, we will use equipment from elsewhere in EDS to support the new contract until the ordered equipment arrives and is functional.

DDI Risk #13: Adapting a System From Another State	
Risk Description	A Replacement MMIS that is being adapted from another state may not have the flexibility needed to incorporate North Carolina's specifications without a major rewrite, undermining the State's desire for a proven, existing MMIS and incurring excessive cost, time, and risk.
Risk Owner	Implementation Manager Dean Taunton
Status	Active
Risk Probability	1: Very low probability of occurring in current project development phase (about 10 percent probability)
Impact if Risk Occurs	1: The risk has a very low or negligible impact on the project or any functional area. Acceptance of the risk is valid.
Exposure	1: Low exposure
Risk Mitigation	EDS' interChange MMIS product is not a system designed for the needs of a single state, but rather an innovative, proven multi-payer MMIS designed with the flexibility necessary to support successful implementation and use in numerous states. We have taken the product approach with interChange, building a baseline application that meets the consistent needs across our clients' environments. We also have incorporated common requirements from other implementations into our core product, so the features and functions that are common in the industry are part of our core product. The architecture, including COTS products, allows for customization for features unique or specific to an individual state and support the evolving MITA direction.

Potential Operation Phase Risks

Operational Risk #1: Providers' Ability to Transition to Using a New MMIS	
Risk Description	Transitioning to a new MMIS is sometimes met with resistance and lack of cooperation and participation.
Risk Owner	Account Manager Melissa Robinson
Status	Active
Risk Probability	3: Medium probability of occurring in current project development phase (about 50 percent probability)
Impact if Risk Occurs	4: The project's ability to support the required operational capabilities (functions and availability) is at risk of a serious impact due to part of a major project component not being available.
Exposure	12: Medium exposure
Risk Mitigation	EDS will conduct training workshops, jointly develop and post provider bulletins, and, in some cases, recertify electronic submitters to assist in educating providers on the new system. This will be done with the oversight of Provider/Recipient Services Manager Chris Ferrell. Chris has filled this role for the past eight years. As the current fiscal agent, we are experienced in determining the appropriate media and content for providers to ease the transition to a new system. We are familiar with the provider community and have established relationships with facilities and workshop sites to maximize attendance. Working with the State, EDS will identify entities such as provider associations, groups, and large billers to develop provider advocates for the new system and focus communication and training on high-impact groups. This includes e-mail messages and alerts. New and advanced technology and features in interChange allow providers to receive immediate feedback regarding their interactions with the Replacement MMIS, such as true real-time claims and encounters processing. The Web portal has been designed as a browser-based application based on current Web design standards. It is user-friendly and intuitive. Many members of the provider community are well-versed in using Web applications and navigating through the browser in today's Internet world. This will contribute to an easy transition to the new features of the Replacement MMIS, such as online, real-time claim submission and adjudication. Additionally, provider workshops will be conducted on the portal features to make sure providers are ready on the first day of operation.

Operational Risk #2: Hardware Downtime/Software Reliability	
Risk Description	The system cannot process claims and encounters through the Replacement MMIS because of unanticipated hardware downtime or lack of hardware reliability.
Risk Owner	Account Manager Melissa Robinson
Status	Active
Risk Probability	1: Very low probability of occurring in current project development phase (about 10 percent probability)
Impact if Risk Occurs	5: The project's ability to support the required operational capabilities (functions and availability) is at risk of a very serious impact due to a major project component not being available.
Exposure	5: Low exposure
Risk Mitigation	We have 14 years of experience with the hardware platforms and software integration with interChange. We have a superior relationship with EDS partners, EDS preferred software and hardware partners, and Agility Alliance partners to expedite or escalate assistance. EDS has global equipment agreements in place with major vendors to provide rapid response to acquisitions for the new contract. We have included appropriate lead time in the master plan for acquisition and logistics to support the initial tasks. We monitor systems to initiate immediate problem resolution during development, testing, and production. Risks are mitigated by thorough testing of patches and upgrades and maintaining current operating system patches and firmware. Platform configuration can be modified to enable critical task processing in a different server domain. Desktop procedures for infrastructure management will be established with a global business continuity and disaster recovery plan to mitigate potential impact from service outages. We incorporate solid design of the development and testing environments based on prior large MMIS implementation experience. We will perform daily incremental backups of the development and model office environments. Full backups of the development and model office environments will be performed weekly, and we will store these backup files off-site. EDS also offers years of experience using the processing platform, regular backups, solid and proven procedures, and extensive security supporting the platform. For example, our Pennsylvania interChange application is running at 99.5 percent uptime.

Operational Risk #3: Disaster Strikes EDS' Raleigh Data Center or Office	
Risk Description	EDS' production MMIS data center or operational facility may be taken out of service because of a natural or manmade disaster, extended power failure, or other calamity.
Risk Owner	Account Manager Melissa Robinson
Status	Active
Risk Probability	1: Very low probability of occurring in current project development phase (about 10 percent probability)
Impact if Risk Occurs	3: The project's ability to support the required operational capabilities (functions and availability) is at risk of a moderate impact due to a small part (one-tenth) of a major project component not being available.
Exposure	3: Low exposure
Risk Mitigation	EDS will develop a comprehensive disaster recovery plan to address each aspect of preparation for and recovery from a data center disaster. EDS and the State will conduct annual disaster recovery drills to proactively identify shortcomings in the disaster recovery plan. We will incorporate our data center—to—data center data replication process to mirror production data from the Raleigh data center at the Herndon disaster recovery site, providing the shortest possible recovery time if a disaster occurs. EDS will develop a comprehensive business continuity plan to address each aspect of preparation for and recovery from a disaster or other business interruption at our Raleigh facility. We will identify an alternate operations site to be used if a physical disaster occurs at our Raleigh facility.

Operational Risk #4: Automated or Manual Workflow Backlogs	
Risk Description	Backlogs may develop in automated processing because of technical problems, unanticipated volumes, or other causes.
Risk Owner	Account Manager Melissa Robinson
Status	Active
Risk Probability	1: Very low probability of occurring in current project development phase (about 10 percent probability)
Impact if Risk Occurs	2: The project's ability to support the required operational capabilities (functions and availability) is at risk of a minor impact due to a very small part (one-twentieth) of a major project component not being available.
Exposure	2: Low exposure
Risk Mitigation	In the electronic world of claims, adjustment, and refund submission, this potential influx of claims would be processed daily and paid according to the State schedule. Today, 98 percent of our claims processed are electronic claims. Our Performance Reporting System Dashboard provides information on the operation of the system and the volume of various data being processed by the system, thus allowing for root-cause determination and correction before the backlog becomes critical. Based on the nature of the backlog, we will develop and invoke an appropriate contingency plan to maximize the reduction of the backlog. For example, with State approval, we could hold claim types that take the longest to process until other claim types are caught up and introduce the longer-running claims in a staggered manner to maintain efficient throughput. Our Performance Reporting System Dashboard includes processing metrics for many operational functions and displays metric data across time, thus allowing additional staffing needs to be anticipated and obtained—or other corrective measures to be taken—before the backlog becomes critical. Our account leaders and operational unit managers and supervisors will closely monitor the throughput of the respective units and address or escalate any concerns about backlogs developing. The Project Management Office (PMO) director will have oversight responsibilities for the operational units. Possible mitigations include but are not limited to authorizing overtime, hiring temporary staff, leveraging available employees from other EDS accounts, and hiring additional permanent staff members.

Potential Turnover Phase Risks

Turnover Risk #1: Attrition of EDS Experienced Staff	
Risk Description	After the award of a contract to a successor vendor, EDS operational staff members may be motivated by anticipated job loss to pursue other employment before the end of the contract, resulting in operational backlogs and loss of institutional knowledge of business processes or system features needed for operations and turnover activities.
Risk Owner	Account Manager Melissa Robinson
Status	Postponed
Risk Probability	5: Very high probability of occurring in current project development phase (about 90 percent probability)
Impact if Risk Occurs	3: The project's ability to support the required operational capabilities (functions and availability) is at risk of a moderate impact due to a small part (one-tenth) of a major project component not being available.
Exposure	15: High exposure
Risk Mitigation	EDS will identify key staff members and encourage continuity of employment to maintain staffing levels through the end of the contract. Mitigation strategies to address operational backlogs also are applicable, such as authorizing overtime, hiring temporary staff members, leveraging available employees from other EDS accounts, and hiring additional permanent staff members to meet operational requirements.

Turnover Risk #2: Loss of EDS Institutional Knowledge	
Risk Description	After the contract ends, EDS staff members may be unavailable to the State or the new vendor to answer questions or provide institutional knowledge.
Risk Owner	Turnover Manager
Status	Postponed
Risk Probability	5: Very high probability of occurring in current project development phase (about 90 percent probability)
Impact if Risk Occurs	3: The project's ability to support the required operational capabilities (functions and availability) is at risk of a moderate impact due to a small part (one-tenth) of a major project component not being available.
Exposure	15: High exposure
Risk Mitigation	A turnover manager and a turnover technical director or systems programming manager will be available to address turnover-related issues. EDS will provide a support warranty period for the turnover of our systems operation and verify that our expert staff members are on call for three months to respond to questions or address issues.

Turnover Risk #3: No System Freeze	
Risk Description	System modifications required by federal or legislative mandates—or otherwise deemed critical by the State—that must be implemented shortly before or during the Turnover Phase may require making the same changes to the Replacement MMIS and the successor MMIS, increasing costs and complicating turnover efforts.
Risk Owner	Turnover Manager
Status	Postponed
Risk Probability	2: Low probability of occurring in the current project development phase (about 25 percent probability)
Impact if Risk Occurs	4: The project's ability to support the required operational capabilities (functions and availability) is at risk of a serious impact due to part of a major project component not being available.
Exposure	8: Medium exposure
Risk Mitigation	At the State's direction, EDS will defer the development of nonessential changes to the system to facilitate transition to the successor vendor. EDS will work with the State to keep a log of system modifications. Design documents for system modifications will be shared with the State so that they may be provided to the successor vendor. Change orders that are deferred until after the new system goes live will be entered into and tracked in iTRACE.

Turnover Risk #4: State Staff Unavailable	
Risk Description	State staff members may not be available to address operational needs during the Turnover Phase.
Risk Owner	Turnover Manager
Status	Postponed
Risk Probability	2: Low probability of occurring in current project development phase (about 25 percent probability)
Impact if Risk Occurs	4: The project's ability to support the required operational capabilities (functions and availability) is at risk of a serious impact due to part of a major project component not being available.
Exposure	8: Medium exposure
Risk Mitigation	As EDS will maintain continuity of the system through turnover, the State will mirror this effort to verify that providers and recipients are not adversely affected by the turnover. The new vendor will create a turnover plan that includes the expectations of EDS and State support. The State can expect the same level of commitment on turnover that they did for the Replacement MMIS project.

Turnover Risk #5: New Vendor Failing to Meet Contractual Obligations	
Risk Description	The new vendor may not assume its contractual obligations as fiscal agent or MMIS integrator on schedule.
Risk Owner	Account Manager Melissa Robinson
Status	Postponed
Risk Probability	3: Medium probability of occurring in current project development phase (about 50 percent probability)
Impact if Risk Occurs	2: The project's ability to support the required operational capabilities (functions and availability) is at risk of a minor impact due to a very small part (one-twentieth) of a major project component not being available.
Exposure	6: Low exposure
Risk Mitigation	EDS will negotiate in good faith with the State to extend our contract as necessary and to support operations at the same level of service excellence we have delivered for the past 30 years. EDS will work closely with the State and the new vendor through the turnover process to maintain continuity for the State's recipient and provider communities.

Turnover Risk #6: Lack of Communication Among the New Vendor, the State, and EDS	
Risk Description	Lack of communication or understanding may occur between the new vendor, the State, and EDS, affecting time lines, deliverables, or expectations.
Risk Owner	Account Manager Melissa Robinson
Status	Postponed
Risk Probability	3: Medium probability of occurring in current project development phase (about 50 percent probability)
Impact if Risk Occurs	2: The project's ability to support the required operational capabilities (functions and availability) is at risk of a minor impact due to a very small part (one-twentieth) of a major project component not being available.
Exposure	6: Low exposure
Risk Mitigation	The turnover schedule, planning, and meetings will be held with the State and the successor vendor to mitigate this concern while balancing and providing continued operations support. EDS will work with closely with the State and the new vendor through the transition process to maintain continuity for the State's recipient and provider communities.

Turnover Risk #7: Delay of Closure of Fiscal Agent Financial Accounts	
Risk Description	Closure of the required fiscal agent financial accounts may fail to occur in accordance with the turnover schedule.
Risk Owner	Turnover Manager
Status	Postponed
Risk Probability	2: Low probability of occurring in current project development phase (about 25 percent probability)
Impact if Risk Occurs	2: The project's ability to support the required operational capabilities (functions and availability) is at risk of a minor impact due to a very small part (one-twentieth) of a major project component not being available.
Exposure	4: Low exposure
Risk Mitigation	EDS will work with a banking institution and the State to close the required fiscal agent bank accounts, report stale-dated items to the State, and issue final bank and fiscal agent financial statements as necessary. Any issues will be raised immediately with the State and the financial institution for quick resolution. We also will work with the new vendor to enable a smooth turnover of financials.

Turnover Risk #8: Claim, Adjustment, and Refund Volume Spikes	
Risk Description	Providers may become nervous about not getting paid by the successor MMIS and submit as many claims and other transactions as possible in the closing days of the contract, resulting in operational backlogs and abnormally large suspense files.
Risk Owner	Turnover Manager
Status	Postponed
Risk Probability	1: Very low probability of occurring in current project development phase (about 10 percent probability)
Impact if Risk Occurs	2: The project's ability to support the required operational capabilities (functions and availability) is at risk of a minor impact due to a very small part (one-twentieth) of a major project component not being available.
Exposure	2: Low exposure
Risk Mitigation	In the electronic world of claim, adjustment, and refund submission, this potential influx of claims would be processed daily and paid according to the State schedule. Paper claims, adjustments, or refunds would be inventoried according to an established cutoff date to provide clear turnover of these documents for adjudication by the new vendor.

50.2.5.8 Change Management Approach

RFP Reference: 50.2.5.8 Change Management Approach, Page 279; Change Management Plan (CMP) CDRL, Page 259

The ability to effectively predict, analyze, and control changes will contribute to the success of the Replacement MMIS project. Our experience has led us to appreciate the benefit of a formal change management process, a shared responsibility between EDS and the State that will foster timely and reliable changes.

Given this project's size, scope, and the dynamic nature of the State's requirements, the need to address changes is inevitable. The ability to effectively predict, analyze, and control those changes will enable the project's success. Our experience has led us to appreciate the benefit of a formal change management process that is a shared responsibility between EDS and the State. To be successful, management of changes must be timely and continuous, thus creating a routine that team members can rely on.

Identified changes must be addressed in a thoughtful and detailed manner to realize the full impact of each decision going forward. Though taking this approach does not necessarily equal a change in project scope or cost, it can prevent misunderstandings about which changes are to be implemented, how, and when and the potential time, resource, and cost impacts on the project.

Multiple factors play into decisions about implementing changes during a project and whether the change will affect the project budget. Those factors include the timing of the change request and the degree to which it affects the project schedule and requirements for resources. The change management plan provides a method for accommodating a new or revised requirement, regardless of whether it requires an amendment to the contract. The methodologies, tools, and procedures described in this section are designed to achieve these objectives.

The change management approach described in our response to RFP section 50.2.5.8 is flexible and supports the change management needs of the DDI Phase and the Operations Phase. We wrote this section using the RFP's Change Management Plan (CMP) Contract Data Requirements List (CDRL) as a guide. As indicated in the CDRL, we recognize that configuration management is closely related to the change management plan. For this reason, our response to 50.2.5.8 combines our discussion of change management and configuration management.

Change Management

Change management involves identifying and tracking normal modifications and enhancements to the Replacement MMIS, as well as changes to the scope of requirements agreed to by the State and EDS for any project. Scope is defined as the total of project activities, resources, deliverables, quality standards, and performance. Change requests that affect the cost, schedule, or contract are classified as scope changes and require additional analysis and review. The change management resolution process documents the procedures and standards used to track, control, and consistently manage requested changes to project scope during the Replacement MMIS implementation.

To facilitate the change management process, EDS will work with the State to establish a change control board (CCB) to monitor, approve, and prioritize changes to the system that are effective, efficient, and beneficial to the State and EDS. This recommendation is based on our experience developing change management processes for similar projects. We will work with the State to review and tailor this process to meet the specific needs of the North Carolina state healthcare program service delivery and overall administration.

EDS understands that business needs do not stop as the State makes the transition to the Replacement MMIS. Federal or state rule changes or other business initiatives may necessitate changes to the existing MMIS even while the Replacement MMIS implementation is under way. These changes may need to be considered for inclusion in the Replacement MMIS, and the impact to the project plan, contract, and implementation schedule must be understood and agreed to by both the State and EDS.

Changes approved for inclusion in the project will be entered into our browser-based project information repository, information Tracking Repository And Collaboration Exchange (iTRACE), as change orders (COs), and the project plan will be updated to reflect the added effort.

Using our proven change management processes, we will work with the State to determine when changes in the current MMIS will cease and be carried as change requests in the ongoing support of the Replacement MMIS.

Change Control Board

A CCB will be established in the Start-Up Phase of the project. The State and EDS will be responsible for identifying respective organizational resources to participate as CCB members. Throughout the DDI planning phases of the project and through the life of the contract, the CCB will serve as a clearinghouse for recommended and required changes affecting the contract. The CCB will review proposed changes against the RFP, proposal, and the requirements specification document and weigh change criticality against the risk of implementing a change.

The CCB can take any of the following steps:

- The CCB can deny the change based on lack of need, high risk, out-of-scope request, or cost to implement.
- The CCB can approve the change as within the scope to be implemented as part of the new Replacement MMIS and to be operational on the operations start date.
- The CCB can approve the change as outside the project scope but to be implemented as part of the Replacement MMIS and to be operational on the operations start date. The CCB will mutually agree on the cost to the State for the change, prioritize and schedule change implementation, and assign resources to accomplish this change in the required time frame.
- The CCB can approve the change as within the project scope and to be implemented as part of ongoing system operations after the operations start date. The CCB will prioritize, schedule change implementation, and assign resources to accomplish the change by the scheduled release date.
- The CCB can approve the change as outside the project scope but to be implemented as part of the ongoing system operations after the operations start date. The board will mutually agree on the cost of the change to the State and then prioritize, schedule the change implementation, and assign resources to accomplish this change in the required time frame.
- The CCB can request additional information on which to make an informed decision. The additional information may include the number of recipients affected, number of claims affected, number of providers affected, additional description of the change or the process, or the cost to make the change. The CCB may set a date for the information to be furnished.
- The CCB can reprioritize a CO based on other COs. EDS, like the State, has a finite amount of resources assigned to the Replacement MMIS implementation. Situations may occur where there are more COs than resources (either for EDS to implement or the State to test and approve) available to implement the changes. In these cases, the CCB will be responsible for reprioritizing a change in relation to other changes that may have higher or lower importance, risk, cost, or resource requirements.

CCB membership encompasses the following roles:

- **CCB lead roles—**CCB lead roles include the following:
  - **State business leads—**State business leads consist of individuals from each of the program areas that may be affected by a change in requirements. There will be representatives from the Division of Medical Assistance (DMA), the Division of Mental Health (DMH), the

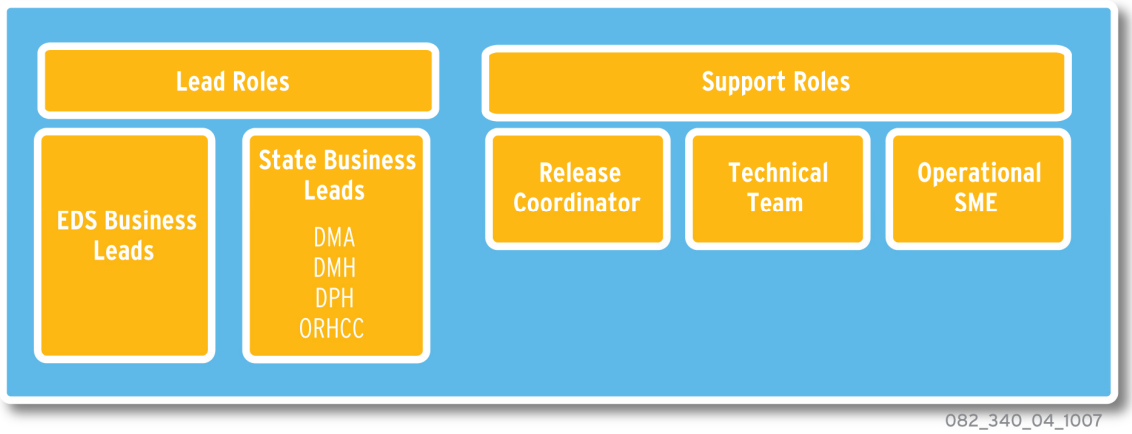
Division of Public Health (DPH), and the Migrant Health Program, Office of Rural Health and Community Care (ORHCC). This group plays an active role in prioritizing the COs during the change request process.

- **EDS business lead—**The EDS business lead is the chair of the CCB. This person administers and manages the change control process to enable the solution teams to respond quickly and effectively to change. During DDI, the implementation manager would serve as EDS' business lead. During operations, the systems manager would serve as EDS business lead.

- **CCB support roles—**CCB support roles include the following:
  - **Release coordinator—**The release coordinator works with the CCB and other leaders to prioritize and group releases of requested changes, maintenance, and other approved modifications.
  - **Technical team—**The Technical team comprises technical architects, functional architects, database architects, and information analysts. This group provides insight into the scope, complexity, and technical impact of the change requested. This information feeds the cost and effort estimate for the requested change and contributes to the overall prioritization of the CO.
  - **Operational subject-matter experts (SMEs)—**The operational SMEs are the team members most experienced in the functional area affected by the change. They will work closely with the CCB, providing in-depth knowledge and insights that only experience provides, making certain that every aspect of the change is considered.

The structure of the CCB is summarized in the following exhibit, Change Control Board Membership.

Change Control Board Membership



The CCB will serve as a clearinghouse for recommended and required changes affecting the contract.

These recommendations are based on our experience in developing change management processes for similar projects. For the Operations Phase, EDS will use the same project management standards, approach, and tools that we use in the DDI Phase and apply equal rigor to system changes. As part of the Operations Phase start-up, we will work with the State to review and modify these recommendations to meet the specific needs of the State.

Smoothly implementing system changes and enhancements is critical to improving the quality and cost-effectiveness of Medicaid services, resulting in better support of providers and recipients. The State will benefit from EDS' use of industry-standard processes along with proven tools to accommodate effective and secure change control. These benefits include the following:

- **Reduced project risk—**A comprehensive change management process supports the State and EDS in validating that changes in scope are prudent and support project goals rather than introducing unnecessary project risk or distracting personnel from achieving critical project objectives.
- **Flexibility to implement critical changes—**An effective process and toolset streamlines the effort required to incorporate necessary changes during every phase of the project.
- **Clear project focus—**A strong and well-established change management process promotes discipline and confirms for the State that the project resources are accountable for making sure their project activities tie to mutually agreed-to project requirements.
- **Streamlined decision-making—**Easy-to-access reports of change requests ready for the State's review, hyperlinks to change request documentation, and full online access to relevant background information streamline the review and decision-making process.
- **Common knowledge and understanding for project team members—**Because changes are tracked in iTRACE, as well as historical information and the State's decisions, team members share a common understanding of expectations, which increases the efficiency of project work.

During DDI, changes to scope, process, or deliverables not included in the EDS proposal must be addressed through the CCB. This will help make sure we balance requests against time, budget, and quality.

Change Management Process

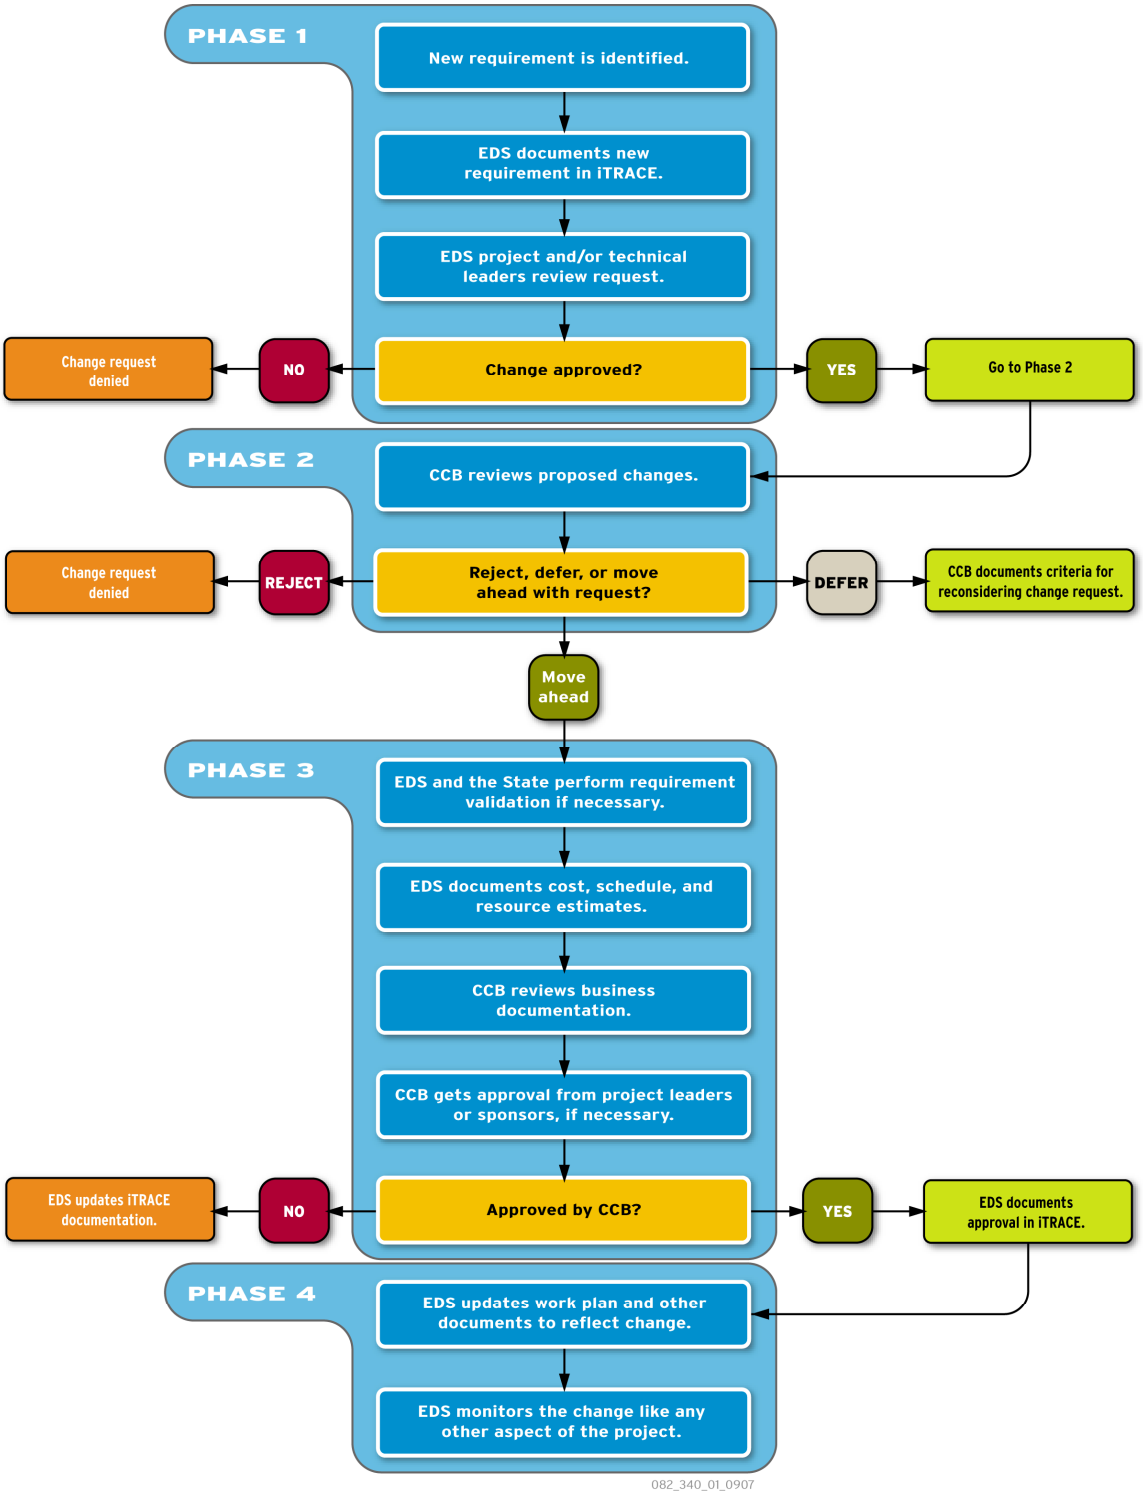
EDS recommends a four-phased change management process that will enable us to effectively manage changes as they move through initiation, evaluation, development, and implementation, as shown in the following table, Change Management Process.

Change Management Process

Phase	Description
Phase 1: Initiation	The State and EDS will identify a requirement that falls outside the project scope for one of several reasons: • The team uncovered a new requirement not identified in the RFP or project CO. • We misinterpreted a requirement in preparing for requirements validation sessions. • A new requirement has been added because of a federal mandate, a new waiver authority or operational option, or North Carolina legislative or administrative policy initiatives. In these scenarios, the requested system modification will be documented in iTRACE, where the status of the change is tracked until completion. These requests will be reviewed by the State and EDS project and technical leaders for impact to determine if they should be escalated to the CCB and included in the implementation under way.
Phase 2: Evaluation	The CCB will review each request and make an initial determination to reject, defer, or move ahead with the request. Our team members then will hold requirements validation sessions to provide additional information or perform more research on the request.
Phase 3: Development	After requirements validation sessions are complete, EDS will develop estimates of the cost, schedule, and resources needed to implement the change. The CCB will review the request and determine whether to proceed, defer, or reject the change request.
Phase 4: Implementation	After the CCB approves the change, the Project Management Office (PMO) will designate it as an update to an existing project's work plan or a new project based on the decision from Phase 1. As part of an existing project's work plan, the requested change then will be monitored for completion within the overall schedule. The new project then will be managed according to the project management requirements for its size.

This process is summarized in the following exhibit, Change Management Process Flow.

Change Management Process Flow



EDS recommends a four-phased change management process that will enable us to effectively manage changes as they move through initiation, evaluation, development, and implementation.

When an upgrade is necessary, we will use the change management process to do the following:

- Evaluate the impact to system availability, downtime, and processing
- Develop a plan that includes prerequisites, actions, review, and contingencies
- Strive to schedule the upgrade activity so that it minimizes the impact on the system
- Review the plan, schedule, and possible impacts with the State and obtain approval before proceeding with the upgrade

Upgraded or replacement equipment will be subject to the same acceptance criteria as the other products and services of the contract.

iTRACE

The processes described are supported by a Web-based tool, iTRACE, that will help both EDS and the State track changes through every step of the process. Starting with the original request and following through each step to successful implementation, iTRACE will provide online status and documentation for each change request.

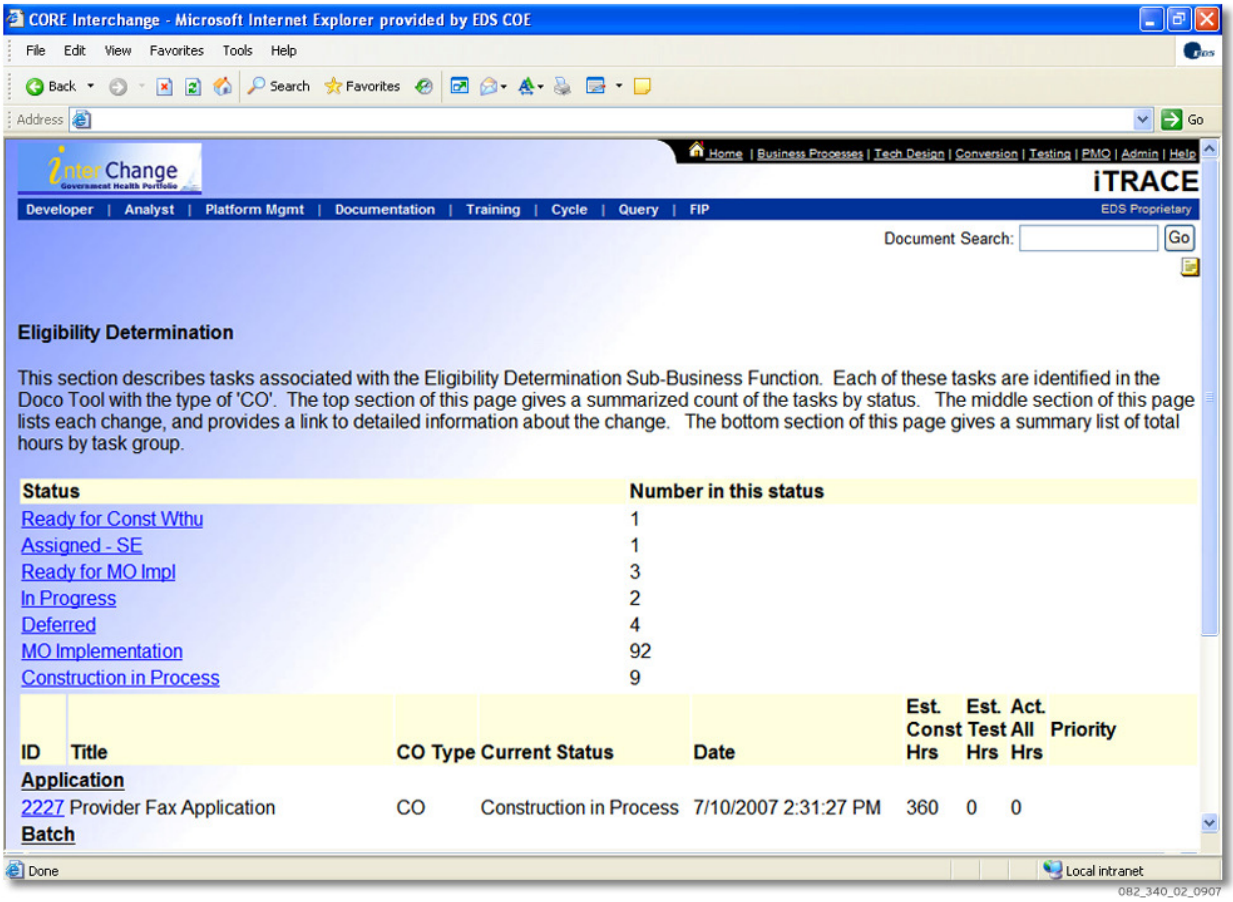
iTRACE is an information and document management system that allows the State and EDS to maintain easily accessible information on the Replacement MMIS, including project status and deliverables.

iTRACE has been instrumental in the implementation of many of our interChange MMISs and has proven to be a valuable and flexible tool for the needs of both DDI and Operations Phases. So valuable, in fact, that the Centers for Medicare & Medicaid Services (CMS) has recognized and acknowledged its valuable contribution to the implementation and successful certification of the interChange MMISs.

A complete description of iTRACE and its many features can be found in proposal section 50.2.4.1.2 Software Development and Systems Engineering Methodology. However, in addition to major system implementations, iTRACE supports change management, as described below.

Users can click on the COs link on the Subsystem Introduction Web page, which will present them with the Change Request Overview Web page, as shown in the following exhibit, Sample Change Request Overview Page. This page will provide the status of each CO submitted for the subsystem. Additionally, the top of the page will provide a summary of the total number of COs, COs that have been documented, or the issues identified.

Sample Change Request Overview Page

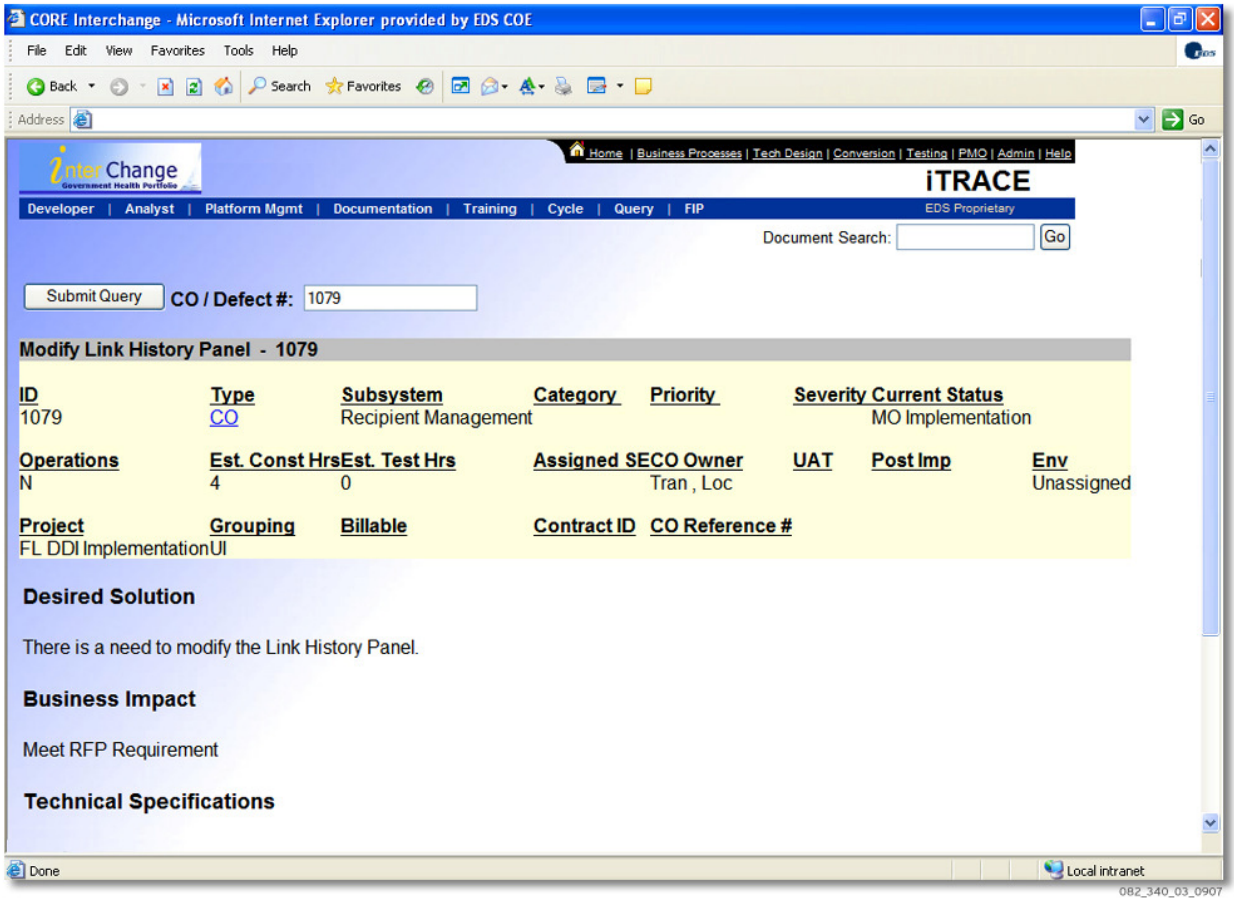


The Change Request Overview page will provide the status of each CO submitted for the subsystem.

In the preceding exhibit, a summary of COs affecting a particular subsystem is presented for quick review. Users can readily determine the status of all the changes that affect that particular subsystem. More detailed information can be gathered on particular COs by selecting the desired CO.

Each CO number is a link to further detail for that change request. When users click on the CO number link, they are presented with the Change Order Web page, as shown in the following exhibit, Sample Change Order Page. This page presents status information combined with significant related information such as a description of the desired solution, a business impact justification narrative, links to related system requirements, links to the actual RFP citation and EDS proposal citation, CO status, and a narrative of any additional documentation relevant to the CO.

Sample Change Order Page



The Change Order page presents the status of the CO and other related information.

In the preceding example, many aspects of the CO are conveniently displayed on one page. The Desired Solution section clearly states what the expected outcome will be. The Business Impact section can provide useful information on the extent to which the change will affect the overall system. Taken together, the iTRACE tool provides a concise means of tracking change.

In the following exhibit, Sample Change Order Management Page, the Change Order Status listing makes the change management effort a matter of inventory control. The State and EDS will work to close the inventories successfully and implement the Replacement MMIS. By having the detailed status of each stage of each CO available online, accurate evaluations of each CO and overall DDI development progress can be made.

CO Clarifications

Date	Description
6/19/2007 2:51:03 PM	Additional changes for the Case Information and Case Base panels: Case Information panel • Remove Income Amount Case Base panel • Remove or Hide Income Amount (Default the value to zero when Adding a new Case) • Remove or Hide Number of Adults (Default the value to zero when Adding a new Case) • Remove or Hide Number of Children (Default the value to zero when Adding a new Case) • Make Source Code Read-only (Default to ONL when Modifying or Adding a new Case)

iTRACE is valuable in managing the COs, which are grouped by system area.

In the preceding exhibit, the Change Order Release section provides the broader picture of the system development release that this specific CO will be a part of. A large application development effort such as an MMIS needs this level of overall system impacts to provide context to each individual CO development and release for testing to be successful.

The Change Order Clarification section is where notes between EDS and State stakeholders are entered and maintained. This feature of the tool and development work pattern solves the problem of meeting decisions being lost in handwritten notes or status reports, and directly enables long-term tracking of important information for each requirement and CO.

iTRACE will become the cornerstone of EDS' change management system that guides business improvement initiatives. The EDS solution will couple iTRACE with industry-standard methodologies, such as SLC 3 and extensive Medicaid experience. The State will receive a proven, standards-based, Web-enabled change management solution that supports system modifications and change management activities. Along with reporting and tracking software, iTRACE will provide meaningful project metrics, giving the State insight into the project's status at each project phase.

In addition to system changes, EDS also will use structured processes to maintain version control of documentation and user manuals.

iTRACE also will allow authorized State and EDS personnel to easily review requested system changes, the status of these change requests, and any notes relating to the implementation of these changes.

Additionally, the State can easily create reports for review using the information retained in iTRACE. For example, using reports provided by iTRACE, the State and EDS can easily identify the number of new change requests to bring to the CCB before the meeting.

SLC 3 Methodology

EDS' Systems Life Cycle, Version 3 (SLC 3) methodology is a critical element of our change management approach. SLC 3 is a systems engineering methodology that evolved from EDS' collective systems engineering experience, industry insight, and development approaches recommended by the Software Engineering Institute (SEI). SLC 3 integrates with SEI's Capability Maturity Model Integration (CMMI) framework by supporting the CMMI key process areas at the detail level.

The SLC 3 methodology supports the State's unique needs and deliverables. SLC 3 applies technology to develop solutions that will meet North Carolina's changing business needs. We will deliver value by providing a strong combination of engineering discipline and flexibility. The methodology also supports maintenance, minor enhancement, development, systems integration,

and other work. It offers the flexibility to support systems engineering on various platforms and tools.

SLC 3 consists of the following six-phase spiral approach that blends planned iteration with management control:

- **Define—**Identify the business need and determine high-level requirements
- **Analyze—**Refine high-level requirements into detailed business requirements
- **Design—**Build design specifications
- **Produce—**Translate designs into executable components to satisfy the business need
- **Optimize—**Verify that the produced system is ready to implement
- **Implement—**Install the produced system

The first four phases will be repeated as a group to produce intermediate results for the State's verification, approval, and validation. This phased repetition, or iteration, helps focus on different areas and requirement levels as the system evolves.

This standardized approach will be a primary methodology for change management, as it will be with the Replacement MMIS implementation and ongoing operations. For more detail on SLC 3, please refer to proposal section 50.2.4.1.2 Software Development and Systems Engineering Methodology.

Configuration Management

Configuration management focuses on the rigorous control of the managerial and technical aspects of work products including the system, documentation, processes, and software. We will plan for configuration management in the early stages of the project by defining standards and requirements to be applied to projects and by involving the State to gain your concurrence.

Configuration Management Process

Our configuration management process incorporates the following activities:

- Identifying the configuration of selected work products that compose the baselines at given points in time
- Controlling changes to configuration items
- Building or providing specifications to build work products from the configuration management system
- Maintaining the integrity of baselines

- Providing accurate status and current configuration data to developers, users, and the State

Our configuration management procedures are standardized to verify that management of Replacement MMIS software and other work products are addressed in a common, comprehensive, and verifiable manner. We will implement configuration management procedures so that products developed are consistent, complete, and compliant with RFP contractual requirements, HIPAA security standards, and the State's security policies. Our planning efforts will define configuration management responsibilities, tools, and procedures that will be used during the life cycle of projects in support of the Replacement MMIS.

As described above, we propose establishing a CCB jointly with the State. The CCB will provide objective review and concurrence across stakeholder populations. The CCB will be responsible for making sure that changes to the Replacement MMIS occur only after they have been reviewed, estimated, and approved.

Configuration Management Tools

EDS' approach to configuration management focuses on effectively using tools and processes to control and facilitate change, verifying that we meet version control and change control requirements as follows:

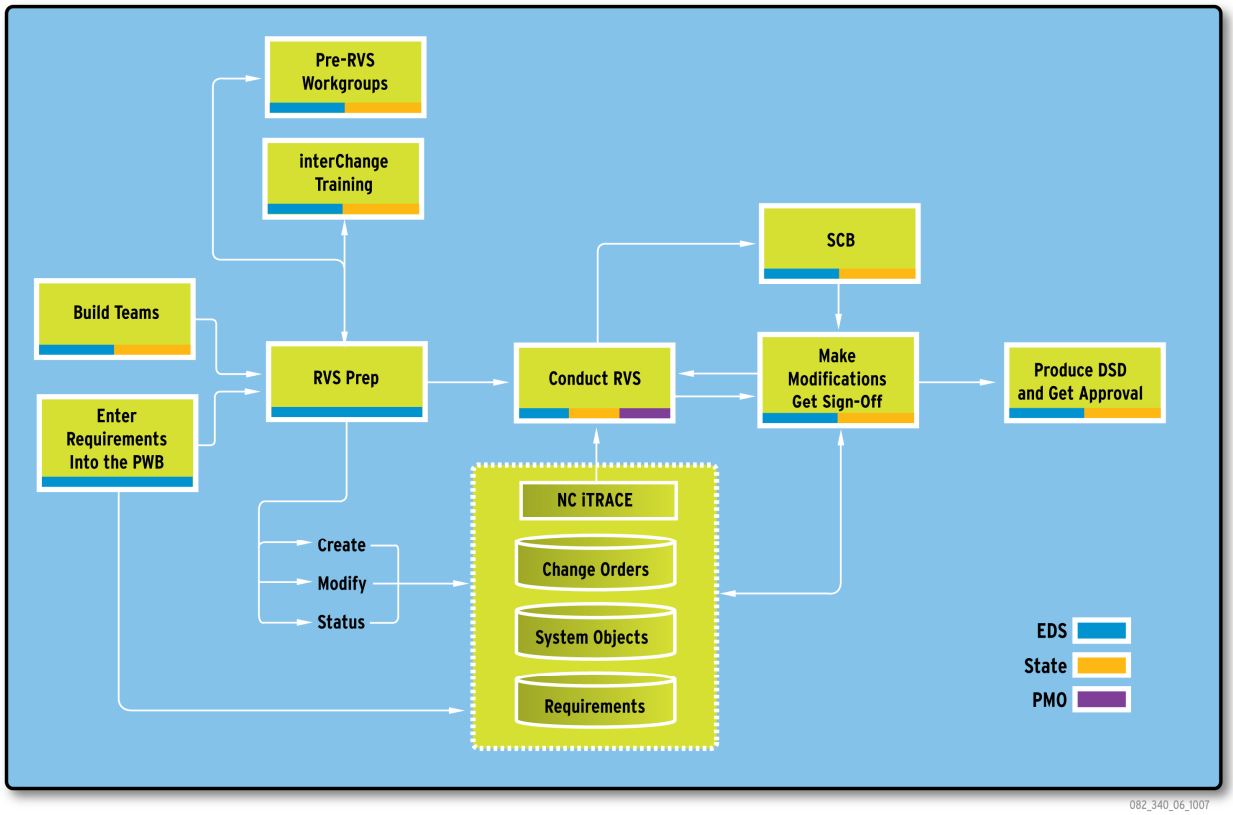
- Software version control
- Hardware and off-the-shelf software version control
- Document and user manual version control
- Change management processes

Change management processes govern the following aspects of potential change:

- In-scope COs generated as part of the system development and maintenance processes
- Potential out-of-scope COs that constitute additional work effort above and beyond the original requirements

In-scope and out-of-scope COs can be generated as part of the requirements validation and verification process. If a change is deemed necessary to accommodate a requirement, the CO will be initiated. The following exhibit, Requirements Verification Process, depicts the decision and change management process during requirements verification sessions.

Requirements Verification Process



If a change is deemed necessary to accommodate a requirement, a CO will be initiated.

After these changes are identified, they are entered into the iTRACE tool to begin their software life cycle. These changes can be identified as either in-scope or potentially out-of-scope. If the change is in scope, it will follow a traditional development and testing process with multiple checkpoints, including the following:

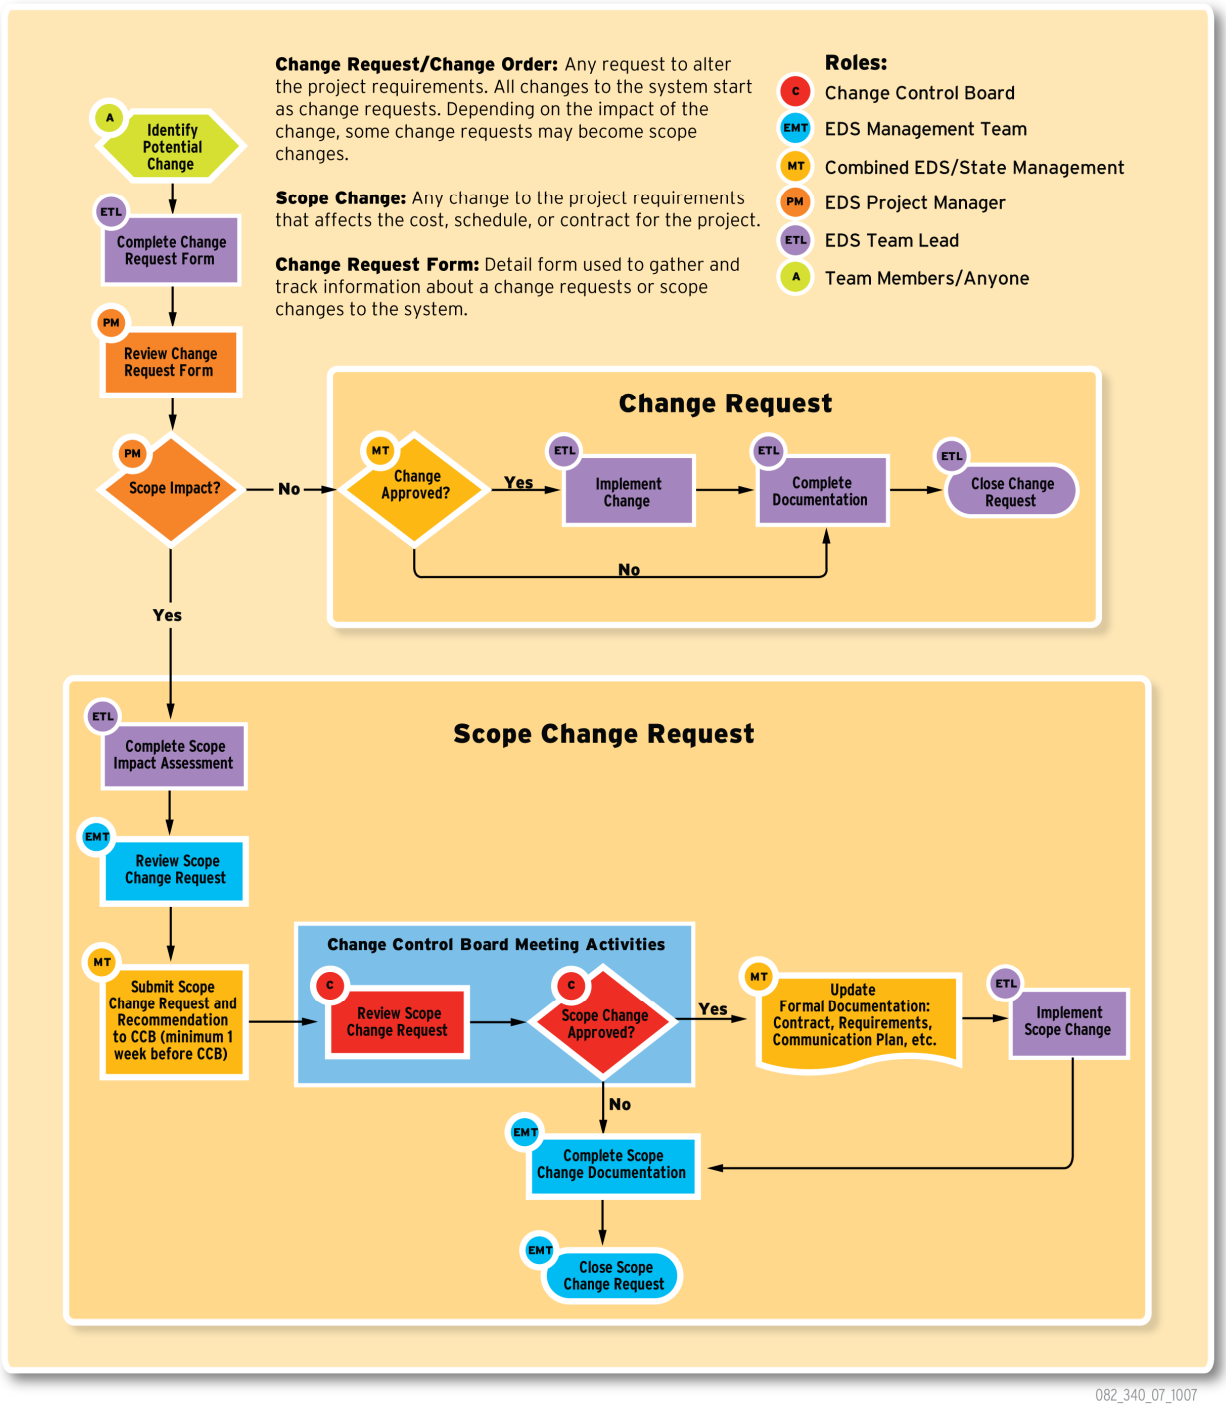
- Initial development and collaboration with the user
- Unit testing by the developer
- Code walkthroughs
- Promotion to model office
- User testing in the model office environment
- Approval of the system test results
- Promotion to user acceptance testing (UAT)
- Testing and approval by the client
- Promotion to production

These change management steps constitute some of the control mechanisms in place for in-scope changes to the system.

As shown in the following exhibit, Scope-Control Process, if a change is identified as a potential increase in scope or a change in requirements, the CO is

processed through the CCB to reach consensus on the in-scope or out-of-scope decision and whether it will be approved if out of scope.

Scope-Control Process



Scope-control processes serve to manage change in a methodical, proven approach to keep the implementation on target with regard to time and resources.

The ability to easily track and control change is embedded in the interChange design. The flexible table-driven, modular architecture of the system allows us to implement change faster and more easily than is possible with a conventional mainframe system. We will rely on a variety of tools and processes to record, define, and analyze Replacement MMIS changes.

After a change is approved for development and implementation, it will be subjected to the same stringent implementation and configuration management process as the components of the original implementation. Besides using tools that control system changes, EDS will record changes using a variety of processes to maintain version control of documentation and user manuals.

EDS will provide the State's MMIS configuration manager with online access to our browser-based iTRACE. This will provide the State the benefit of being able to independently monitor EDS' progress toward implementing changes.

We will use a combination of the EDS-developed Version Control (vctl) system, Visual SourceSafe for the .NET version control, Project InVision Version 4 (PIV-4) for tracking hours, ERwin/ModelMart, and our SLC 3 methodology to control software development.

The vctl is a versioning, issue management, and configuration-build tool that EDS uses to manage software versions and manage access to code to prevent code overwrites and lost changes. EDS will use this tool to manage software development, including check-in and check-out processes.

Visual SourceSafe is the version control tool for the interChange .NET software. Visual SourceSafe will provide an extensive feature set designed for reliable source code control. It will enable development teams to automatically protect and track the .NET source code as it changes throughout the software life cycle.

ERwin is a database design tool for client/server development used by EDS to create and maintain relational databases on a physical and logical level. Combining ERwin with ModelMart (an add-on repository tool) produces a sophisticated model management system that provides multi-user access. This combination will provide an environment for versioning and archiving of model changes as well as a method for users to lock the model while changes are made, effectively creating a check-in and check-out environment. Additionally, an audit trail will be generated within the archiving process.

ERwin uses a Windows-based graphical user interface (GUI) combined with powerful entity-relationship diagramming tools and custom editors to define database objects such as tables, indexes, triggers, and views. The features within ERwin will provide the capability to easily create and maintain relational databases on a physical level and a logical level. ERwin and ModelMart will combine to provide a change management system for data modeling, allowing for versioning and archiving of model changes.

We will use our SLC 3 methodology as the structured business process around which these tools will be used. The SLC 3 framework can be customized according to the project, environment, or tool set. We will document and follow repeatable processes so the project is effectively planned, managed, and monitored.

The processes will be documented, monitored, and reported through iTRACE. Through this collaboration tool, the system life cycle will come to life and provide control of every phase of the design, coding, testing, and implementation of changes. As a quality assurance approach for code migration, authority to promote code will be restricted, providing a gatekeeper for code validation and promotion to each level.

Organizational structure will assist in controlling system development and maintenance. For example, developers must review their changes with a set of their peers. As they identify issues, such as a standard that was not followed, a syntax error, or a more efficient solution, the issues will be documented. The developer must resolve those issues before progressing to the next phase. If the process is circumvented, system security or software configuration management permission will prohibit the software from progressing from one environment to another.

EDS will deploy the following testing of changes as they flow through the development process:

- **Unit test—**The unit test will allow for single components to be tested on a stand-alone entity. Unit testing will verify that a single component is resilient and will function correctly. The unit test environment will be configured similarly to the production environment so that the systems engineer can verify that modifications will function according to specifications and that the system can query, modify, edit data, calculate, and handle errors appropriately and without failure. Promotion from unit test to model office test will occur after a thorough unit test is confirmed successful and the technical leadership grants approval to promote the change to model office testing.
- **Model office test/system test—**The model office/system test will allow different but interconnected systems and functional areas to be tested together in an integrated fashion. The Analysis and Test team will comprised of business analysts and professional testers who use proven work patterns and processes to identify and develop test cases, set up test data, execute test cases, and thoroughly document test results. The team is highly skilled at using the tool suite available in iTRACE and Mercury's Quality Center and EDS Global Testing Organization (GTO)testing practices and methodologies. Only after the tester has signed off and the technical staff has granted approval can the change be promoted to the next level, Integration System Test.

- **System integration testing (SIT)—**SIT will allow the Testing team to validate that all interfaces, both into and out of the application, are functioning properly. This testing must be coordinated early in the project, since it requires alignment of data and application test availability with all interfacing systems and organizations.
- **UAT—**UAT will give State personnel the opportunity to create and run their own test cases to jointly verify with EDS that the system changes are functioning as expected and that they meet the design requirements.
- **Parallel test—**Parallel testing involves performing claim regression testing.

Our software development management process will combine the business processes, procedures, tools, and organizational structure described previously into a single integrated process.

Improved Current Operations

Our proposed change and configuration management solution will address the needs of the RFP and bring extra value to the Replacement MMIS. The following are some of the additional benefits the State will realize:

- **Time and cost savings—**Because iTRACE offers a repository of current, easily accessible documentation, many EDS clients have eliminated the need to produce paper copies of documentation, which is a time-saving and cost-effective approach that the State can benefit from.
- **Proven success—**In a recent review of MMIS implementations, Gartner singled out the use of iTRACE as a key differentiator in requirements capture, analysis, validation, and tracking. Currently, the Oklahoma, Kansas, Pennsylvania, Tennessee, and Kentucky interChange MMIS teams use iTRACE, and EDS is implementing it in Oregon, Massachusetts, Wisconsin, Florida, Connecticut, and Alabama. iTRACE quickly gained strong acceptance from the users in the implemented states because of its prompt delivery, ease of use, iterative development process, and availability of information to project participants. This central repository provides consistency in documents because we derive documentation procedures maintained within the repository. iTRACE will bring these same advantages to the State from the beginning of implementation and throughout the years of the contract. In fact, the requirements that were listed in the RFP have already been entered into iTRACE and were used to document the gap analysis work done.
- **Increased clarity—**iTRACE will allow for requirements traceability. The information involving system changes can be tied back to the original requirements and policies in iTRACE, as well as to the test cases used to

verify the accuracy of the change. Having easy access to this data will increase efficiency in testing and reporting testing results.

- **Greater user control**—interChange allows the State to make many changes through convenient Web portals, eliminating the need to involve programmers, drastically decreasing time to market and at a substantial cost savings over existing technologies and methodologies.
- **Manageability—**The interChange system allows the State to manage change across a larger enterprise. A coordinated change to one, unified system will now benefit not only DMA and DMH, but also DPH and ORHCC. The State will gain efficiencies and will realize costs savings in reduced person-hours.

The features of the Replacement MMIS and the open and collaborative nature of iTRACE will translate to real benefits for the State in terms of cost, timeliness, and quality of delivery.

Reduced Risk Through Managed Change

The change management processes and tools described in this section have been developed to support the special needs of large-scale Medicaid implementations and operations. They are proven to work and are currently supporting interChange implementations in seven states and interChange operations in five states. This proven approach to managing change is one of the many methods we bring to the State for reducing risk and enabling the success of the Replacement MMIS.

50.2.6 Section F—Operations Management Approach

RFP Reference: 50.2.6 Section F—Operations Management Approach, Pages 279-280; 10.12.1 Operations Management, Pages 13-15

To provide the North Carolina Department of Health and Human Services (the State) with responsive, high-quality services, the EDS team is taking an approach to operations management that will transform the organizational workflow and the way work is performed in every branch of the operations. Our approach to operations management is based on the following essentials:

- Efficiently operating, maintaining, modifying, and enhancing the Replacement MMIS to support and manage the programs of the State's Division of Medical Assistance (DMA), Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH), Division of Public Health (DPH), and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC); the provider and recipient communities; other stakeholders; and future State divisions
- Meeting the State's operational performance standards with our experienced staff
- Delivering a true multi-payer system to the State
- Continually collaborating with the State, using EDS' local subject-matter experts (SMEs) who bring the expertise to assist with the State's healthcare initiatives

- Expanding our presence in the current Raleigh facility on Wycliff Road with the additional staff required to support DPH and ORHCC
- Moving toward a paperless environment using the interChange provider and recipient Web portals, Automated Voice Response System (AVRS) for provider and recipient inquiries, Electronic Document Management System (EDMS) and EMC | Documentum repository, iTRACE (our interChange documentation repository), online computer-based training (CBT), Web-based training (WBT), and much more

For delivery service excellence, EDS will provide account leadership and technical and operational support staff members who are fully trained in interChange and who bring many years of experience with the North Carolina Medicaid Program. This interChange knowledge and our North Carolina experience make us uniquely qualified to carry forward the fiscal agent role with the Replacement MMIS and support two additional divisions (DPH and ORHCC) beyond today's current scope of work supporting DMA and DMH. Our team is excited about expanding the current knowledge to include two more programs and to provide the support necessary for DPH and ORHCC as well as DMA and DMH.

DMA, DMH, DPH, and ORHCC will have direct access to an online performance-based report card and dashboard, which will allow the State to evaluate how EDS is performing against established performance metrics. Additionally, the iTRACE tool will allow the State to review progress on customer service requests (CSRs) and projects and also provide online access to operational tools such as reference manuals. Direct access to this information allows State personnel to monitor and respond rapidly, without having to rely on others for data.

The EDS operations management approach brings the following benefits to the State:

- Reliable service to State stakeholders, providers, and recipients as a result of the proven, strong operations capabilities of the nation's leading Medicaid claims processor, EDS
- Effective coordination and communication with DMA, DMH, DPH, and ORHCC
- Improved operational efficiency in service delivery as a result of the implementation of interChange and proven processes, procedures, and people
- Enhanced ability to analyze the impact of potential and actual programmatic changes

These benefits support our overall objective: to provide the State, providers, recipients, and other stakeholders with outstanding service.

This section describes the key elements of our approach to managing the fiscal agent operations and demonstrates that our strategy will enable the fulfillment of the operations management requirements. It also reflects the operations management plan. As shown in technical proposal section 50.2.7 Section G—Contract Data Requirements List, the proposed first submission date for the operations management plan is October 31, 2008.

Strategic Plan for Operations

The task of planning and managing the new operation has already begun. Account Manager Melissa Robinson and her team in Raleigh met throughout the proposal development process to discuss the new operation and how it will be affected by the enhanced capabilities of the Replacement MMIS and by the expanded scope of DPH and ORHCC.

Melissa and her team have identified business locations, named staff members to support the State's operations, determined the organizational structure, and begun planning and developing the new processes required to support the Replacement MMIS and meet operational performance metrics. This is not a strategy to maintain status quo, but a strategy to transform the operation by taking advantage of the our proven technology, interChange, and, with our experienced staff, deliver each day on the performance metrics necessary to meet the needs of the State. Simultaneously, this proven technology will provide the State and provider and recipient communities new methods of accessing critical program information, submitting claims, and obtaining pertinent claim results and other medical processing data.

Other aspects of our operations management approach can be found in the following additional sections of our proposal:

- **50.2.4.2.1 Proposed Solution for Operations—**This section provides individual responses to all Section 40 Operations requirements: General Operations Requirements, Operational Requirements for all 13 business areas/subsystems, and Operational Performance Standards for all 13 business areas/subsystems. We also have provided in this section performance metrics for each branch of the operations.
- **50.2.5 Section E—Project Management Plan—**This section describes EDS' best practices in managing large-scale projects of the size and complexity of the Replacement MMIS fiscal agent operation.
- **50.2.5.4.2 Staffing Approach—Operations—**This section describes the project organization that will perform the work and provide excellent service to the State every day of the contract.

Taken as a whole, these operations sections (including this Section F—Operations Management Approach) tell how EDS will fulfill the primary operational requirements described in Section 40 of the RFP. **Additionally, the**

experienced personnel and proven technology described throughout these sections are strong indicators of reduced risk. Our offering—people, technology, and processes—is proven to work for similar large-scale Medicaid programs and within the North Carolina Medicaid environment.

New Location

We are consolidating our operations in an established EDS site, which is just a few blocks away from the current Waters Edge Drive address. The site is located less than 10 miles from the State's facilities, well within the RFP requirement of 15 miles. This will allow for more efficient use of time for meetings and training activities conducted at either site. The new location is equipped with multiple meeting rooms and a training facility, as well as office space for State personnel. For the new contract, the primary site for EDS' fiscal agent business operations and staff will be centrally located at the following secure facility:

2610 Wycliff Road, Suite 401
Raleigh, NC 27607

The Wycliff Road building is conveniently located one block west off the Lake Boone Trail Exit of Interstate 440. All Replacement MMIS data center and operations support for the new contract will be supported from this new office.

Program Operations: A Tour of Your New Fiscal Agent Operations

The Operations Phase will begin following the final delivery of the Replacement MMIS and continue throughout the life of the contract. The Replacement MMIS will bring improvements and efficiencies to every branch of the operation and stakeholders: DMA, DMH, DPH, ORHCC, State vendors and interfaces, providers, and recipients. The EDS team, supported by the Replacement MMIS, will meet the operational performance standards and metrics in each branch of the organization. Collectively, the EDS team and our solution will position the State for the future. The State's evolving healthcare program needs (such as State waiver programs and additional payers such as State Employees Health Care Plan) can be supported through augmentation and expansion of the interChange solution and EDS' Operations team.

To provide a stronger picture of the new Operations Phase, we discuss the charter, processes, and improvements to legacy system operations within each branch of the operation:

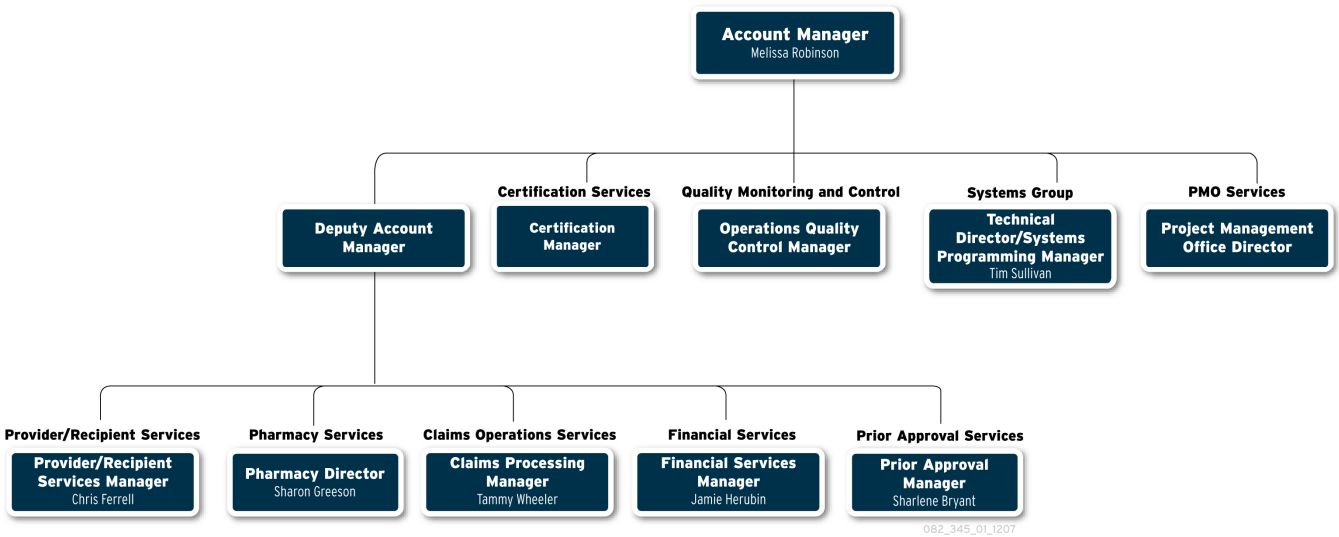
- Operations Management Function
- Provider/Recipient Services
- Claims Management Services
- Prior Approval Services

- Pharmacy Services
- Financial Services
- Systems Group

The project organization's leadership team is responsible for operations management. This leadership team is summarized in the following exhibit, Operations Management Team.

For more details on the Operations Phase, please refer to our response to RFP sections 50.2.4.2.1 Proposed Solution for Operations and 50.2.5.4.2 Staffing Approach—Operations.

Operations Management Team



Melissa Robinson and her leadership team, including the Project Management Office, will be responsible for ongoing operations management, providing the guidance needed to consistently meet operational performance metrics.

Operations Management Function

Charter

Operations management will guide the daily work performed by the fiscal agent staff in the Operations Phase. Operations management will be performed primarily by Account Manager Melissa Robinson, the deputy account manager, the department managers, and the Project Management Office (PMO) director.

This leadership team will work with the fiscal agent staff to make sure the fiscal agent activities are being performed accurately and promptly. Operations management will verify that each task performed within each of the departments of the operations organization is accurate and on time while also meeting operational performance standards and metrics, enhancement and modification projects are on schedule and meet the State's objectives, and the Replacement MMIS is performing accurately and meeting requirements for timely processing and uptime.

Melissa Robinson Qualifications:

- 14 years of North Carolina leadership experience
- Deputy account manager, overseeing all operational units
- Key player in the development of the multi-payer Legacy MMIS+
- Project manager on recent critical enhancements

Processes

Operations management and quality assurance (QA) work together to validate accurate, dependable service. Communication throughout the organization and training are key elements of operations management. The primary processes performed by operations management are described in the following subsections.

CMS Certification

The critical process in the first year of operations will be the Replacement MMIS' certification by CMS. EDS is familiar with the certification process and the services provided by the fiscal agent in support of this critical event. Four of the five current interChange installations have been through CMS certification (and passed the test easily), and all other MMISs being operated by EDS are CMS-certified. Account Manager Melissa Robinson will appoint a certification manager, who will report directly to Melissa. The certification manager will work with account personnel to provide any data or reports required to support certification.

Leaders Who Enforce Operations Requirements

Department managers (such as Provider/Recipient Relations Manager Chris Ferrell or Claims Operations Manager Tammy Wheeler) will know and understand the contractual requirements for performance of the functions for which they are responsible, the associated operations performance standards, and the interChange functions and other relevant aspects of the EDS solution their teams will use to perform the work.

Leaders Who Embrace Training and Mentoring

Through training, supervision, and follow-up, the department managers will make sure their respective teams understand the requirements and are using this training to correctly perform their tasks.

Weekly Leadership Meetings

Account Manager Melissa Robinson will meet with the leadership team (deputy account manager, department managers, and PMO director) each week to review performance in each of the departments, progress on enhancements and modifications, and any required corrective action plans.

Trained Project Managers for All Projects

Project managers will lead all enhancement and modification projects, not just the major projects.

Independent, Account-Wide QA

The PMO will be responsible for account-wide QA in daily operations and the progress of enhancements and modifications. The PMO director will report directly to Account Manager Melissa Robinson for support from EDS management for modifications to operating procedures that will provide continual operational improvement and maximize the Replacement MMIS operations service levels.

Annual SAS-70 Audit

Annually, EDS will contract with an independent qualified audit firm to perform a Statement on Auditing Standards (SAS) 70 audit of the Replacement MMIS. We will provide information and facilities that are needed for the external auditor to complete the audit and issue a SAS 70 Type 2 report, which will be provided to the State as needed.

Enhanced Service

The Operations Phase will provide new approaches to operations and project management that will provide stronger oversight, follow-up, and accountability than on the current fiscal agent account.

The PMO is one of the most notable improvements in operations management. It does not exist in the Legacy MMIS+ operations organization and is being implemented to serve the DDI Phase first, and then the many tasks and responsibilities of the Operations Phase. In the new organization, the PMO will centralize and manage the account's many QA functions, including the following:

- The PMO will monitor the work performed within each of the departments to verify conformance with operational performance

standards and, when needed, recommend retraining and other corrective actions.

- The enhancement/modification project managers will report to the PMO director, who will monitor the progress of the enhancement or modification.
- Coordination and communication among projects, made possible by this centralization within the PMO, will improve the quality of the work performed.
- The monitoring performed by the PMO director and reported to Account Manager Melissa Robinson will communicate concerns directly to the highest levels of the organization.

The addition of project managers for each project is another major improvement over Legacy MMIS+ operations, where only the major projects receive their own project managers and less visible or critical projects might be managed by a supervisor or team leader. In the new contract, however, all projects will be managed professionally trained project management specialists who can focus their specialized training on the scope of work defined for the enhancement or modification.

The assignment of experienced professional staff (Senior State Business Liaison Anthony Perkins, Senior Technical Analyst and SME for MMIS and Multi-Payer Mike Frost, and Senior. Technical Analyst and SME for HIPAA Stacey Barber) to required technical positions focuses their many years of experience on key aspects of the operation and design projects.

Provider/Recipient Relations Department

Charter

Provider/Recipient Relations Manager Chris Ferrell will have front-line responsibility for the successful operation of provider and recipient relations activities. His team will include many long-time, dedicated members of the Provider Relations team, including Kathy Rickard, Mario Vescio, Tonya Eaves, Brenda Boone, Marianna Diana, Kari Smith, and Suzie Pezzoni.

The EDS Provider/Recipient Relations organization manages call center functions, education, training, and communication with the programs' providers and recipients. EDS currently works with the more than 50,000 North Carolina Medicaid and Mental Health providers. To this established base of operations, we will add providers supporting DPH and ORHCC, as well as recipients and other stakeholders.

Chris Ferrell Qualifications:

- Has nine years' experience with the N.C. Provider Services team
- As travel representative and travel representative supervisor, has developed strong bonds with the State's provider community
- Developed training for call center staff and travel representatives
- Is a frequent presenter at conferences and at DMA

Processes

The Provider/Recipient Relations organization will complete its work through a combination of automated and hands-on processes. These processes will be executed in support of DMA, DMH, DPH, and ORHCC. The major processes include the following:

- Responding quickly and effectively to telephone, Web portal, and written inquiries from providers through our knowledgeable, well-trained Call Center team, led by Tomeka Evans, and using our state-of-the-art AVAYA telephone system in conjunction with documenting and tracking calls and inquiries through the Contact Tracking Management System (CTMS)
- Maintaining a provider relations field representative team, with field representatives located throughout the major regions of the State providing onsite visits and preparing and conducting provider workshops
- Performing the training functions and maintaining manuals and scripts for provider access with the Web portal and State access through iTRACE
- Establishing and maintaining a sound relationship with the provider community through visits, presentations at conferences, and interactive training
- Establishing and maintaining relationships with the critical provider associations (such as hospital and physician) and supporting them through visits, presentations at conferences, and interactive training

- Reaching out to a targeted provider segment for visits using denial reports, feedback from seminars, visits, and customer requests
- Providing call center support to the recipient and employer base regarding Certificate of Credible Coverage (COCC) inquiries
- Providing Web Portal support and AVRS access to the provider and recipient communities 24 hours a day, 7 days a week (except during minimal maintenance periods per State request)
- Continuing all tasks for provider enrollment and credentialing (required for early implementation) and transitioning from the Legacy MMIS+ processes and procedures to interChange's automated enrollment features and workflow processes for electronic submission, processing, and retention of enrollment and credentialing results

Enhanced Service

Our success with interChange implementations and operations in several other states has given us the confidence to propose this system for North Carolina. Our proven solution brings many features that will improve current operations in all aspects of provider and recipient relations. In the following subsections we describe the most prominent features of interChange and its integrated tools that will improve provider and recipient services.

Provider Web Portal

The interChange Web portal will allow providers to submit and have their claims processed in a real-time environment, as well as submit adjustments and prior approval (PA) requests in real time. In today's environment, providers (with the exception of the pharmacy community) must submit claims in batch mode or on paper and wait for the results of the checkwrite and receipt of their 835 or paper remittance status report to determine if payment or denial has occurred. The Web portal, however, will greatly increase the provider's ability to expedite adjudication of the claim or adjustment and receive payments as quickly as possible, which means improved cash flow. Providers will have access to Web-based tutorials, manuals, bulletins, alerts, and their own secure mail boxes for download of remittance advice (RA) data. This information will be immediate and at their fingertips 24 hours a day, 7 days a week.

AVRS

We provide this feature today; however, the Replacement MMIS' AVRS also will provide PA, claims, payment, drug coverage, and much more—not only to the provider community, but also to recipients through the interChange toll-free AVRS. This added recipient function will better serve recipients by providing quick access to much-needed information while alleviating some of the burden

felt by the State's recipient call centers. Specifically, the interChange AVRS provides the following:

- Toll-free access in three seconds or less to recipients and providers 24 hours a day, 7 days a week
- Online audit trails of inquiries and verification responses
- The option to switch from English to another language while accessing the AVRS through the AVRS or a touch-tone telephone keypad
- A new help option giving recipients and providers the choice of being transferred to our call center during established business hours or given secure access to a specific Web site for detailed instructions

CTMS

This tool will be available to call center staff, field staff, and the State and will provide an avenue for documentation and tracking of provider and COCC-related recipient requirements. CTMS will be invaluable for tracking provider issues and concerns and provide a detailed documentation trail readily available to Chris Ferrell and his team for reporting and communication with the State.

interChange Provider Enrollment Workflow and Other Supporting Tools

New entities seeking to become providers and active providers wishing to expand services will be able to submit enrollment applications online through the Web portal and send the necessary follow-up paperwork to the EDS Provider Enrollment team. EDS' team will use the online application tool, interChange's provider enrollment workflow processes, and the scanning solution (EDMS) to track, process, and report to completion each submitted enrollment application. Additionally, EDS and the State will use the Documentum reporting function to access this information in process as well as the final results of credentialing and enrollment. Documentum will provide electronic retention and reference to critical provider enrollment and credential documentation.

Operations/Claims Management Department

Charter

Operations/Claims Processing Manager Tammy Wheeler will have front-line responsibility for the successful operation of operations and claims management activities. Her team will include many long-time, dedicated members of the Claims Operations team, including Kathy Stewart, Joy Clark, Martha Harris, Shirley Stearns, Leann Bartolotti, Glenda Raynor, Alan Martin, and Dwight McLamb.

Tammy Wheeler Qualifications:

- 28 years of North Carolina healthcare experience
- Broad base of experience in claims, provider services, and systems
- Steady progression with more responsible leadership positions

The operations management – claims business process provides for the capture, control, editing and auditing of claims and encounter data from initial receipt to final disposition. EDS' professional staff includes medical and dental directors, nurses, analysts, and clerical staff. They will execute these processes according to the established State-approved procedures in conjunction with the automated interChange function supporting the receipt of claims, scanning of related documents, workflow for claims, encounter and adjustment adjudication, reference updates, modifications, and maintenance. The claims staff also will respond to calls from providers regarding electronic data interchange (EDI) questions and setup for providers using automated tools. Besides the EDS team and interChange technical solution, our subcontractor SunGard will receive the scanned documents and provide the optical character recognition (OCR), quality review of OCR data, and key-from-image services needed to capture the data and transmit it to interChange for processing. Their services and the EDS team will provide the most efficient and effective claims operations for DMA, DMH, DPH, and ORHCC.

Processes

The Operations/Claims Management team will complete its work through a combination of automated and manual processes. The major processes include the following:

- Receive physical documents through the mail room, such as paper claims, adjustments, PA requests, provider enrollment, and provider inquiries
- Scan and data-capture paper documents through SunGard's OCR technology to greatly reduce key-from-image requirements and decrease the time from receipt to entry of paper documents
- Review and resolve suspended claims using interChange panels that provide an inherent workflow process and support an efficient and effective process for final adjudication using the State's established claims resolution policy

- Review and process provider and mass adjustments to final adjudication using the State's established adjustment resolution policy
- Support the State's clinical policy departments with our experienced staff to assist in research requests and recommendations for claims processing modifications
- Update, maintain, and enhance reference file data and processes to adjudicate claims in the most efficient manner according to State clinical and pricing policy
- Manage the EDI function that allows providers to submit electronic transactions directly to the Replacement MMIS
- Assist providers with questions and concerns using the experienced EDI help desk supervised by Alan Martin
- Obtain provider trading partner agreements; for any new providers, billing entities, or value added networks (VANs), fully test and obtain State approval to move them to production for submission of EDI transactions

Enhanced Service

The critical area of claims processing encompasses EDI, mail room/data capture, medical policy, and reference responsibilities. The new technology and solutions we are proposing will bring improvements in these claims-related functions. In the following subsections, we list the technology and processes benefiting from interChange.

Claims Submission (EDI and Mail Room/Data Capture)

SunGard's document scanning software offers the most accurate and reliable OCR technology for the capture of paper claims data and conversion to an electronic format for transmission to the Replacement MMIS. The proposed OCR technology will increase quality and decrease the time required to get a paper claim into interChange for adjudication.

In today's environment, 97 percent of claims are submitted in some form of electronic transaction, but in batch mode. This means that providers have no opportunity to correct and resubmit problem claims until they read the error messages on their next RAs. The interChange MMIS, however, provides a real-time adjudication environment for claims submission and interactive responses, whether the claims are submitted through the Web portal or in batches. This interactive environment allows providers to correct and resubmit claims within seconds of their submission. This interactive feature will greatly assist the provider community in obtaining claim adjudication information and the time frames for payments. Better cash flow and a greater ability to support the recipient community are added benefits.

After transactions have been captured and adjudicated, the data can be accessed through online interChange Web panels. The Documentum solution will offer direct access to scanned images of claims and adjustments for reference in correspondence to interChange claims and adjustment adjudication data.

Medical Policy Workflow (Claims Suspension Processes)

A workflow process is inherent within interChange. The interChange panels will provide for efficient and effective routing of suspended claims. The workflow processes within interChange bring the following capabilities:

- The system can automatically assign claims to staff based on specialty, workload, category of service, claim type, and error code as defined by the State's business rules.
- Medical Policy and Adjustment staff members will apply data corrections directly through interChange panels, thereby decreasing manual effort and the time line to final adjudication.
- State-designated staff will have access to the workflow process and related claims data. Exceptional claims requiring State review can be routed through interChange to the appropriate staff by workflow process.
- interChange provides the ability to modify the workflow/routing criteria and suspended claim locations online by an authorized user, providing the operational management team the ability to effectively manage the resolution of suspended claims and adjustments.

Table Updates for Accurate Claims Processing

EDS users can quickly and easily change business rules and update tables that immediately affect the claims adjudication process. This critical area is a driving force behind accurate claims adjudication rules. Highlights of the enhanced services include the following:

- Reference file updates will include a reference file number that will be used to link to the State memo initiating the change.
- The reference updates or enhancements supporting the change, add, or delete will be documented, stored, and retained in the iTRACE document repository.
- iTRACE will provide the State and EDS this reference data in an online tool.
- From point of receipt to entry in the system, interChange can retain the required reference data elements and maintain a clear audit trail for use by EDS and the State when researching or monitoring a claim through the adjudication process.

Prior Approval Operations

Charter

Prior Approval Manager Sharlene Bryant will have front-line responsibility for the successful operation of PA activities. Her team will include many long-time, dedicated members of the Provider Relations team, including Ellen Mundt and Tammy Freeman.

Sharlene Bryant Qualifications:

- 23 years of technical support for EDS' federal and state healthcare clients
- 13 years with our Medicaid projects, mostly in North Carolina
- Currently the PA manager

The function of the PA Operations team is to verify that State recipients receive timely authorizations for medically necessary, appropriate, and cost-effective services. EDS currently processes, reviews, and determines the appropriate outcome for PA requests, and we will bring this expertise to the new contract. The Replacement MMIS offers the latest technologies in workflow management and systematic application of processing rules to enhance EDS' ability to apply program policy. This ability allows recipients to receive timely authorizations for services while allowing the State to control expenditures. To this established base of operations, EDS staff, including medical and dental directors, physical therapists, nurses, dental hygienists, and others, will support the providers and recipients of the DMA, DMH, DPH, and ORHCC healthcare programs.

Processes

The PA organization will complete its work through a combination of established, documented, and effective automated interChange processes, with the experienced supporting staff conducting the PA medical reviews. Major processes include the following:

- Receive and process PA transactions from multiple input sources, including the Web portal and batch transmissions using standard HIPAA-compliant transactions and telephone, fax, and paper
- Use automated workflow systems configured within interChange to route, review, update, adjudicate, and track PA requests, document denials, and process overrides and amendment requests
- Use interChange panels and the integrated letter generator software tool for free-form documentation of medical review notes and research to support PA decisions
- Generate provider and recipient notification letters with combinations of fixed, variable, and free-text formats that are automatically triggered or that users can initiate through point-and-click technology

- Respond to provider requests and recipient inquiries related to PA through the EDS PA call center staff and respond to their needs according to the inquiry and State-approved criteria and protocol
- Support the State's administrative appeals process by providing supporting documentation and testimony, if needed, in support of the medical review process and PA decision

The EDS PA Operations team will continue to provide clinical expertise and a strong understanding of North Carolina healthcare policy to apply sound healthcare principles and make crucial medical necessity decisions.

Enhanced Service

interChange will bring the following service improvements to the PA process:

- Flexibility to meet the State's program changes due to healthcare and legislative reform
- Flexibility to meet the changing needs of providers and recipients and provide the following types of information through the AVRS, provider and recipient Web portals, and EDS PA call center staff:
  - Providers can obtain the available dollars and units remaining on their PA requests, which facilitates accurate claims processing.
  - Specification of beginning and end dates, provided at the detail level, will give providers the additional information they require and decrease research time.
  - Capability for online inquiry, online submission, and update access through the AVRS and the Web portal will offer providers and recipients direct access to critical data 24 hours a day, 7 days a week.
  - Providers will have access to experienced, well-trained, knowledgeable call center staff, who will respond to PA inquiries.
- Reduced administrative time through the following features:
  - interChange enables the definition, routing, and monitoring of workflow processes and work queues based on defined business criteria and limits.
  - PA, override, and referral request forms will be imaged through the EDMS and accessible 24 hours a day, 7 days a week through Documentum, which will be in sync with the PA data on the interChange Web panels.
  - Inquiries (telephone, fax, or paper) will be responded to and documented in CTMS for easy reference to history of inquiries and for resolution of new or updated inquiries.

Pharmacy Department

Charter

Pharmacy Director Sharon Greeson will have front-line responsibility for the successful operation of all pharmacy activities. Her team will include many long-time, dedicated members of the Pharmacy team, including Dora De Van and Sherrie Mellinger.

Pharmacy PA, pharmacy benefit management, and drug rebate will fall under pharmacy operations management. This will include the oversight of staff that performs call center duties for pharmacy PA, the criteria for DUR+, pharmacy benefit management (PBM) duties, and drug rebate management services for DMA, DPH, and ORHCC using the pharmacy benefit in the Replacement MMIS. EDS staff, including the pharmacy director, support pharmacists, and pharmacy technicians, will work with the more than 2,000 pharmacy Medicaid providers, pharmacy associations, and the DUR Board currently serving the Medicaid Program and will be there to support the needs of DPH and ORHCC.

Sharon Greeson Qualifications:

- 23 years of experience as a pharmacist
- 11 years in claims processing, claims operation, and drug rebate
- On the board of directors for the North Carolina Association of Pharmacists
- Supported all major pharmacy initiatives for the past 11 years, including the J code to NDC crosswalk, drug rebate interest assessment, and pharmacy-related cost avoidance edits

Processes

The Pharmacy PA, PBM, and Drug Rebate teams will complete their work through a combination of automated and manual processes. We have asked Health Information Design (HID) to provide systems and services in support of the retrospective drug utilization review (Retro-DUR). HID is a nationally known and respected provider of Retro-DUR services and is one of our major subcontractors. The major processes performed by EDS and HID include the following:

Pharmacy PA

- Pharmacy PA will be handled through an automated process using DUR+ to the extent the criteria allow.
- The call center will respond to provider requests for PA as determined by State-approved criteria and protocol.
- The call center will be staffed with clinical pharmacists and trained call center staff.
- The system will produce generated letters to recipients and providers of the status of PA requests and handle PA appeals.

- The clinical pharmacist will review new drugs that are added to a current PA class and make recommendations on criteria and protocol.

PBM

- A clinical pharmacist will oversee the POS system, edits, audits, Pro-DUR, and Retro-DUR functions and monitor coordination with the State's Community Care Program.
- The PBM team will provide oversight of the drug file review of new drugs and make recommendations for the Preferred Drug List (PDL) and the Prescription Access Litigation (PAL) project.
- The PBM team will write and consolidate articles for the monthly pharmacy newsletter.
- The PBM team will perform claims resolution for any pharmacy paper claims.
- The PBM team will prepare the CMS annual report.
- The PBM team will attend monthly meetings and prepare minutes.
- Working with HID, the PBM team will provide a Retro-DUR solution, including online access to claims data through their RxExplorer Web software.

Drug Rebate

- The Drug Rebate team will provide drug rebate functions, including electronic invoicing, handling check deposits, check disposition, dispute processing, and dispute resolution.
- The Drug Rebate team will provide drug rebate reporting, end-of-month reconciliation, and interest assessment.
- *New function*—The Drug Rebate team will scan drug rebate documentation to create a more efficient way of storing information.
- *New function*—The Replacement MMIS will provide electronic invoices, which will speed the collections of drug rebate money.

The Pharmacy Operations Management team will bring its years of experience to the new system for a smooth transition.

Enhanced Service

interChange offers efficient, real-time pharmacy claims processing and adjudication with immediate claim status information. The Pro-DUR function of interChange provides clinically significant alerts that describe the conflict, severity, and available references. Providers can contact a responsive pharmacy help desk with questions or concerns. DUR+ will provide an automated PA

function that is integrated for increased efficiencies. These efficiencies will provide enhanced support to reduce provider frustration.

Pharmacy claims data will be fed automatically to HID's Web-based RxExplorer for specialized trending analyses by its team of clinical experts, EDS, or State staff.

To increase cost-savings, the clinical pharmacist will review new products as they come on the market, paying special attention to those that are very expensive or have a high rate of misuse or abuse. They also will make recommendations for the PAL or the PDL as drugs are identified.

Our experienced Drug Rebate team will manage drug rebate and increase collections with the help of interChange, which will automate manual activities, such as calculating rebate amounts due, generating electronic invoices, and generating reports. Our team will work proactively with manufacturers to send accurate invoices, avoid disputes, and maximize drug rebate collections by supporting financial processes. The system also simplifies research tasks by placing necessary information at specialists' fingertips in user-friendly panels.

Today, providers can access the AVRS toll-free or through a local call, 24 hours a day, 7 days a week. Using the telephone keypad, the AVRS allows providers to check claim status, checkwrite information after the checkwrite cycle has run, other insurance coverage or Carolina ACCESS, drug coverage, procedure code pricing information, PA, and eligibility verification.

For the Replacement MMIS, however, the AVRS will be better than ever. The AVRS will provide toll-free access in three seconds or less to recipients and providers 24 hours a day, 7 days a week (unless undergoing maintenance), with online audit trails of inquiries and verification responses made. Callers can switch from English to another language while accessing the AVRS through Interactive Voice Response or a touch-tone telephone keypad. The new help option will allow recipients and providers to choose to be transferred to the fiscal agent call center during regular business hours or directed to a specific Web site for detailed instructions.

The user-friendly system can be accessed by providers using the Legacy MMIS+ provider identification number or the National Provider Identifier (NPI). Providers can access real-time claim, PA, and eligibility information and more. Recipients can access recipient eligibility and enrollment information.

Financial Services

Charter

Financial Services Manager Jamie Herubin will have front-line responsibility for the successful operation of financial services activities. His Financial Services team will include many long-time, dedicated members of the Financial team, including Cathy Watts, Winnie Eden, Rosemary Brockington, and Ysensia Orsenio.

The financial management and accounting organization will manage and perform financial activities that impact providers and DMA, DMH, DPH, and ORHCC, as well as other stakeholders such as DHHS' Controller's Office. The unit will work closely with these stakeholders to achieve required business objectives and communicate appropriately. Financial Services will manage cash applications, accountant analysts, recipient premiums, buy-in, and third-party liability (TPL). Additionally, a dedicated financial business analyst will support the unit's operations. Members of the Financial Services team also will work closely with other branches of North Carolina State government, such as the State's Budget, Program Integrity, and Controller's offices and supporting State vendors, such as Health Management Systems (HMS).

Jamie Herubin Qualifications:

- Seven years of business analysis and financial operations experience in support of federal and state technology systems
- Currently, the IPRS operations manager
- Area of specialization: the IPRS system's financial modules

Processes

The Financial Management and Accounting organization will complete its daily work efforts through automated tools available in interChange, augmented by manual processes whenever necessary. The major processes are described in the following subsections.

Accountant Analysts

- Support each checkwrite processing with the front-end and back-end entry, reconciliation, and reporting requirements necessary to issue provider payments according to the State checkwrite schedule
- Issue provider checkwrite payments for DMA, DMH, DPH, and ORHCC through electronic funds transfer (EFT) or check if requested and generate the remittance and status reports for the providers
- Support month-end, quarterly, and annual financial processes such as reconciliations of program expenditure reporting and financial participation reporting
- Work closely with the State to make sure checkwrite funding is in place and disbursed promptly and is accounted for, reconciled, and reported to the State in monthly financial statements

- Handle all tax-related activities such as provision of 1099 data, IRS-required reporting, corrected 1099 requirements and reporting, CP2100 notice requirements, and backup withhold requirements
- Process and track activity regarding requests for withholdings, recoupments, and advances
- Process and track liens, levies, and garnishments from government agencies, issuing funds as required or appropriate
- Assist in researching finance-specific issues as needed by the State, providers, and departments within EDS

Cash Applications

- Receive provider refund receipts and process through bank lockboxes
- Process provider refunds for overpayments, following up with the provider according to procedures if additional information is required for posting of received refunds
- Research and process returned healthcare program payments when the issued payment is returned by the provider or U.S. Post Office

Recipient Premiums

- Receive and process through bank lockboxes and post recipient premium payments to interChange Web panels
- Issue recipient refunds as required

Buy-In

- Respond to State requests regarding buy-in of Medicaid-eligible recipients
- Process CMS Part A and Part B Medicare files monthly
- Report and reconcile monthly outputs and provide data as required to the State

TPL

- Process DPH/ORHCC-related TPL recoveries/collections, including receipt and disposition of funds divided out in multiple bullets
- Provide claims data from DMA TPL support vendors, such as HMS, as required to support these State TPL collection activities

Enhanced Service

The Replacement MMIS will use current technology to handle the financial activities required. The EDS Financial Services team, along with DMA, DMH,

DPH, and ORHCC, will have the following services available to support their financial activity needs:

- Today, approximately 85 percent of approved payments are sent to providers through EFT accounting. Through the provider re-enrollment process, we expect to raise this EFT rate to more than 95 percent.
- Use of Positive Pay on the issuing bank account of the provider payments will provide an additional check before authorizing payment to a provider on a check that has been identified by the banking system as fraudulent.
- Lockboxes will be used for receipt of provider or recipient funds, as well as drug rebate monies, to provide the highest level of security for funds received. Additionally, 24-hour-per-day deposits to banks mean quicker availability of funds to the State.
- interChange's online financial panels are easy to use for inquiries and updates, which is critical to the EDS Financial Services team in meeting the operational data entry requirements for refund receipts.
- Reporting features inherent with interChange and in the supporting Business Intelligence Analytical Reporting (BIAR) tool will be readily available to EDS and the State for reviewing, comparing, and analyzing healthcare program expenditure data for projections, historical reviews, and budgetary needs.
- The Replacement MMIS financial and banking data will be easily compiled to provide monthly financials to the State in a manner that assists the State in reporting to CMS and the legislature.
- The processes of the Financial Management department will be supported by the following technology:
  - EDMS for scanning and retaining financial documentation
  - Documentum for retention, viewing, and inquiry on scanned documentation and interChange reports
  - iTRACE for process and procedures for finance
  - BIAR for ad hoc financial reporting
  - CTMS for provider financial inquiries, to which the Financial team will have access for documentation of provider contacts
  - AVRS for provider access 24 hours a day, 7 days a week to claim payment and total payment information
  - Web portal for provider access 24 hours a day, 7 days a week to claim payment, claim inquiry, and remittance and status reporting through the provider's secure mailbox

Systems Group

Charter

Technical Director/Systems Programming Manager Tim Sullivan will have front-line responsibility for the successful operation of systems activities. His Systems team will include many long-time, dedicated members of the IPRS and Medicaid technical teams, including Terry Hensley, Mike Frost, Mark Oates, Jon Teitelbaum, Anthony Perkins, Stacey Barber, Gina Brown, Traci Hawkins, Marie Polyniak, Horace Macon, Bob Earl, Paul Carr, Mukesh Karmalkar, and Sandy Flores.

The Systems organization mission is to provide technological leadership in the management and distribution of information by providing excellent and cost-effective solutions and services to support the State. Some of the most important aspects of this include maintenance required for the system to continue performing within accepted tolerances, correctly processing data and accurately communicating results, making changes as authorized by the State, and maintaining the security of data and access to the system.

Tim Sullivan Qualifications:

- 17 years of experience managing and performing software engineering activities
- 11 years of experience with MMIS development and maintenance activities
- Supported all major imple-mentations, including DB2, HIPAA remediation, and the PASARR implementation
- Five years of experience as systems manager in current operation

Processes

At the heart of our operational processes is the EDS Systems Life Cycle, Version 3 (SLC 3) methodology. This software development methodology is the framework for interChange DDI, enhancement, and modification projects and is being used on our current interChange implementations. SLC 3 provides the framework (phases and tasks) and the deliverables for software design projects of all sizes and durations. Please refer to section 50.2.4.1.2 Software Development and Systems Engineering Methodology for more details on this methodology.

The Systems organization will complete its work through a combination of automated and manual processes. The major processes include the following:

- Incorporate and maintain the interfaces needed to provide the exchange of data to and from interChange with other State business partners
- Monitor system performance to verify compliance with service-level agreement (SLA) requirements and identify improvements
- Provide required systems modification and maintenance staffing, such as project managers, systems engineers, and business analysts, to work with colleagues at DMA, DMH, DPH, and ORHCC to devise innovative and

cost-effective solutions for requested or mandated changes and proactively address any concerns and expand the Replacement MMIS to meet State healthcare program needs

- Monitor and provide the support 24 hours a day, 7 days a week for production cycles and interChange components, such as Documentum, BIAR, CTMS, Letter Generator, iTRACE, Web portals, and AVRS
- Provide HIPAA privacy and subject-matter expertise and oversight for the Replacement MMIS and operations
- Provide MMIS and multi-payer subject-matter expertise along with the State business liaison to support effective communication and implementation of Replacement MMIS maintenance and modifications

Enhanced Services

The Systems team will work to configure, modify, and enhance the Replacement MMIS throughout the life of the contract to support DMA, DMH, DPH, and ORHCC and provide the flexible, multi-payer platform for future State healthcare program technical needs. interChange technology and processes will bring the following improvements to current operations:

- Automated, flexible, parameter-driven capabilities that reduce maintenance and enhancement efforts will reduce dependence on staffing.
- A parameter-driven environment allows the maintenance staff to support not only the Replacement MMIS but also components such as BIAR, Documentum, iTRACE, AVRS, and Web portals.
- System-experienced resources will be readily available through the modification pool to support other State enhancement directives, allowing the State or EDS to make changes more quickly with less impact to the system. This will result in easier and faster implementation of enhancements, with less impact to State and EDS staff and providers.
- iTRACE will provide a powerful tool for organizing and communicating changes, system objects, requirements, testing, and other aspects of the system. iTRACE will provide a single view of projects, their progress, and historical data, which will benefit the next project implementation effort.
- Our automated workflow management solution includes the integration of the K2 workflow engine into interChange through BizTalk Server 2006 service-oriented architecture (SOA). This tool is an XML- and standards-based workflow solution used for enabling task-sharing across multiple enterprises using Web services. It provides a framework for designing, deploying, monitoring, and administering workflow processes based on Business Process Execution Language (BPEL) standards. It provides support for the following features:

- Web service standards such as XML, SOAP, and WSDL
- Dehydration (enables the states of long-running processes to be automatically maintained in a database) and correlation of asynchronous messages
- SOA
- Parallel processing of tasks
- Fault handling and exception management
- Event time outs and notifications
- Version control and audit trails for tracing business flow history

Critical Operations Management Functions

The operations organization described above will complete the operations activities identified in RFP Section 40. The organization also will support the contractual amendments throughout the life of the contract. EDS and the State will work together to define the scope of work to be performed, timeframes for delivery, and costs for all contract amendments. The key tasks performed across the organization (in all departments) are described in the following subsections.

Performing Operations Management Reviews

As noted in proposal section 50.2.5.5 Communications Approach, EDS proposes a monthly meeting between the State director and Account Manager Melissa Robinson to discuss the status of operations. Based on our experience, we recommend the State consider the following proposed agenda for these operations management reviews:

- Overall Status and Accomplishments
- Performance Metrics (for example, Report Card review)
- Customer Service Requests
- Integrated Master Schedule
- Financials
- Staffing
- Quality
- Risks and Issues
- Stakeholder Communications
- Training
- Security

We will work with the State to tailor the meeting to support a shared insight and understanding of operations status and performance quality.

Managing Quality

During the life of the contract, we will focus on the quality of work performed in every area of the operational Replacement MMIS. The EDS QA team will perform quality checks to verify that the processes, activities, standards, and procedures are being followed to achieve the best level of service for the State, providers, and business partners. The results from these monitoring activities will verify that operational reporting and processing activities meet the expectations of the State. Additionally, the results will be readily available through the Performance Dashboard, as applicable, and through iTRACE.

Our approach to the required operational quality checkpoints consists of the following key steps:

- **Sample work—**Each team's manager or supervisor may select any type of work in process and review it for quality, accuracy, and timeliness of processing.
- **Observation—**The QA team will observe work as it is performed and validate it against the documented processes and procedures to determine if staff members are conducting work as required, if they require additional training or oversight, or if processes and procedures can be modified to make the operation more efficient.
- **Review system and operational output—**The team will examine outputs and work products from every department. The following list, organized by department, identifies examples of such outputs that will be reviewed:
  - **Provider Services—**Provider enrollment inventory reports, call center CTMS documentation, and AVAYA telephone system statistics
  - **Prior Approval—**PA request forms and written correspondence, CTMS documentation, and AVAYA telephone system statistics
  - **Financial Services—**Refund receipts and data entry results and related system output reports
  - **Claims Operations—**Reference data entry results and reports, scanned image review for quality, CTMS and written correspondence for EDI efforts, and mail room reports of processed items and postage
  - **Pharmacy—**Review of drug rebate entry results and system output reports and review of pharmacy PA requests and related AVAYA telephone system stats
  - **Systems—**Uptime and audit trail system outputs

EDS builds an environment of continuous business process improvement that results in increased quality and productivity. We will report on quality compared to previous periods using the performance-based metrics that the State and EDS jointly identify and agree on.

We will meet the performance requirements and standards contained in the RFP. Data from the monitoring and benchmarking of interChange will be available as needed to produce samples, reports, and other statistical documentation required for State review.

Every action we take in planning, organizing, and managing staff and activities throughout the life of the Replacement MMIS operations will support our primary objective: outstanding service to the State and the recipients of the programs supported by the Replacement MMIS. We are confident that we have placed the right focus on quality, stressed the importance of delivering a quality project, and developed solid and proven processes and procedures. We bring the professionalism, commitment, and capability to deliver a state-of-the-art MMIS that meets the needs of the State and its provider and recipient communities.

Meeting Performance Metrics

EDS recognizes and understands the need for system performance benchmarks. To make sure State programs run at optimal levels, we will work with the State to establish operational baselines that provide a bar against which we measure efficiency and performance. Whether technical or business-related, meaningful and measurable benchmarks are valuable feedback mechanisms that initiate ongoing improvements to system and business processes.

The State has constructed performance standards at the contract level and for each major operational area described in RFP Section 40. EDS will develop and deliver a monthly Report Card in the State-approved format to report on our performance in these areas. The Report Card function helps set priorities and encourages performance improvement, effectiveness, efficiency, and appropriate levels of internal controls. The operational teams described in this section will be responsible for meeting the Section 40 performance standards applicable to their areas of work.

Please refer to proposal section 50.2.4.2.1 Proposed Solution for Operations. This section provides individual responses to all Section 40 Operations requirements, including the operational performance standards identified for the 13 business areas/subsystems. We also identify the metrics for the operational performance standards.

Managing Resources

Besides the system performance measures, another critical aspect of meeting the State's expectations is having the appropriate quality and quantity of personnel

to perform the tasks necessary for on-time, on-budget delivery of the Replacement MMIS. In recent years, EDS has successfully implemented interChange for five states. Through these implementations, we have developed a vast pool of technical and business personnel with expertise in the methodologies, approaches, and tool sets necessary for the success of the Replacement MMIS and ongoing operation of fiscal agent responsibilities. We are prepared and pleased to provide the State with a team who will bring the experience, knowledge, focus, and "can do" attitude necessary for implementing the next-generation MMIS for the State.

We will work closely with the State to gain a full understanding of State-specific policies, programs, and approaches to business throughout project implementation and carry this knowledge into operations. EDS managers will monitor employee performance and conduct annual performance reviews. They will work with employees to establish goals and objectives and measure accomplishments to understand each employee's performance and areas for improvement. Employees also will receive formal feedback from their managers quarterly, enabling employees to understand how their performance contributes to the project and how they can improve performance.

EDS is solely responsible for the performance of our subcontractors. Part of our selection criteria for inclusion on the EDS team was our subcontractors' successful history of service delivery excellence. We will routinely monitor their performance against objectives and provide feedback as appropriate.

We invite the State to provide feedback about any employee or contractor concerns. We will perform regularly scheduled performance reviews of staff members to make sure they meet performance standards.

Additional Information

Additional information on our operations and how we manage it can be found in other sections of the proposal. The following table, Fiscal Agent Operations: Many Considerations, Many Disciplines, identifies other key aspects of fiscal agent account operations and the proposal section where they are discussed.

Fiscal Agent Operations: Many Considerations, Many Disciplines

Subsection	Overview	Proposal Section
Staffing and Project Organization	An experienced EDS team with a depth of Medicaid program and system knowledge	50.2.5.4.1 Staffing Approach—DDI and 50.2.5.4.2 Staffing Approach—Operations
Training and Continuing Education	EDS' training plan that provides the guidance needed by the State, providers, and our own staff to make full use of the Replacement MMIS	50.2.4.4 Training Approach
Communications	A client-centric organization that can respond to the State's evolving business needs	50.2.5.5 Communications Approach

Subsection	Overview	Proposal Section
Coordinating Workflow Processes	Manual and automated processes brought together in a stable and manageable environment to reduce costs while improving system connectedness and effectiveness	Workflow Management subsection of our response to General System Requirements in proposal section 50.2.4.1.1
Change Management	Proven change management tools and processes that facilitate accurate, timely changes	50.2.5.8 Change Management Approach
Risk and Issue Management	A proven risk and issue management process that identifies and mitigates high-impact and critical risks	50.2.5.6 Risk and Issue Management Plan and 50.2.5.7 Initial Risk Assessment (Risk Profile)
Disaster Recovery and Continuity of Operations	Detailed plan for enabling the continuation of business operations	50.2.6.3 Business Continuity/ Disaster Recovery Approach
Security	A commitment to preserving the confidentiality, integrity, and availability of the sensitive information we manage for our clients, above and beyond HIPAA requirements	50.2.8 Section H—Security Approach
Maintaining Secure Operations Environment	Comprehensive policies, procedures, and systems necessary for privacy requirements, confidentiality of data, and safe work space	50.2.8 Section H—Security Approach
Methods and Metrics for Evaluating Performance	Manual and automated procedures for monitoring application and personnel performance	Operational Performance Standards subsections of proposal section 50.2.4.2.1 Proposed Solution for Operations
Quality Management	A quality management process that is embedded in our delivery culture	Managing Quality subsection earlier in this section

Operations Management—Designed for Success

Operations management must be vigilant, proactive, and applied every day. Operations management, supported by the Replacement MMIS, will guide the operations organization, keeping the team on track to deliver the tasks and meet the operational performance standards identified in RFP Section 40. Our approach for operations management combines the elements needed for this complex task: staff members who know the North Carolina Medicaid and Mental Health programs, staff members who are fully trained in interChange, an organization that assigns the right types and numbers of people to each branch of the operations, and the technology and training required to complete the operations tasks defined in RFP Section 40 correctly and efficiently. Working with DMA, DMH, DPH, and ORHCC, we will provide outstanding service—every day—to the recipients and providers of these programs.

50.2.6.1 Change and Configuration Management

RFP Reference: 50.2.6.1 Change and Configuration Management, Page 280; 50.2.5.8 Change Management Approach, Page 279

Please refer to proposal section 50.2.5.8 for a discussion of our approaches to both change management and configuration management.

50.2.6.2 Risk and Issue Management

RFP Reference: 50.2.6.2 Risk and Issue Management, Page 280; 50.2.5.6 Risk and Issue Management Plan, Page 279

Please refer to proposal section 50.2.5.6 Risk and Issue Management Plan, which includes our risk management approach to operations, systems, and DDI.

50.2.6.3 Business Continuity/Disaster Recovery Approach

To show that we have met the RFP's page limitation of 15 pages for this section and 30 pages for all other sections of 50.2.6 Section F—Operations Management Approach, we have placed our response to this section following this page. The section spans pages E-31 to E-45, meeting the RFP requirement.

50.2.6.4 Ongoing Training

RFP Reference: 50.2.6.4 Ongoing Training, Page 280; 50.2.4.4 Training Approach, Page 277

Please refer to proposal section 50.2.4.4 Training Approach for a discussion of our approach to training, which includes our ongoing training processes and procedures.

50.2.6.5 Communications Process/ Procedures

RFP Reference: 50.2.6.5 Communications Process/Procedures, Page 280; 50.2.5.5 Communications Approach, Pages 278-279

Please refer to our proposal section 50.2.5.5 Communications Approach for a discussion of our overall approach to communication, which includes communication processes and procedures.

50.2.6.3 Business Continuity/Disaster Recovery Approach

RFP Reference: 50.2.6.3 Business Continuity/Disaster Recovery Approach, Page 280; Business Continuity/Disaster Recovery Plan CDRL, Page 262

During Hurricane Floyd in 1999, the eastern part of North Carolina was hit by tremendous flooding. Several providers needed their payments so they could continue to serve their patients. EDS provider relations staff members hand-delivered checks to providers in this area. Our commitment is to the continued operations of the State's healthcare programs.

State of North Carolina

Access to the Replacement MMIS and related systems is vital to enabling the State to provide services to the North Carolina community. We understand our key role in protecting and maintaining the availability of the systems, data, and processes that comprise the Replacement MMIS. In this age of heightened security threats, disaster response and backup plans have become essential business components. EDS has a long history of protecting clients' data and maintaining system availability, even in adverse conditions.

EDS manages disaster recovery solutions for many clients in the private and public sectors. If a disaster occurs, decisions are made quickly to determine the appropriate level of response so business functions can be resumed as rapidly as possible. EDS will develop a comprehensive disaster recovery and business continuity plan with the State. To make sure that the Replacement MMIS solution continues to evolve to meet the State's needs, the plan will address the following:

- Recovery of business functions, business processes, and human resources
- Technology infrastructure
- Documentation and training

The approach described in this section summarizes the contents of the business continuity/disaster recovery plan that EDS will submit for State approval. The plan will meet the requirements identified in the RFP's Business Continuity/Disaster Recovery Plan CDRL.

The following table, RFP Business Continuity/Disaster Recovery Plan Checklist and EDS Approach, highlights the requirements requested in the RFP and the corresponding EDS approach and policy to meet each.

RFP Business Continuity/Disaster Recovery Plan Checklist and EDS Approach

Requirement	EDS Approach/Policy
Roles and responsibilities of participants	The Operations Incident Management Team (OIMT) will define roles and responsibilities for each key player.
Processes that address preparation and planning	The business continuity/disaster recovery plan will describe the plan policies for recovery of operations and system environments.
Awareness and recognition training	Required training for employees will be included in the business continuity/disaster recovery plan. Emergency drills will be tested annually.
Business service and process relocation	A remote site and associated processes identified in the business continuity plan will define the critical operations and plan for recovery of vital business operations, equipment, and data.
Notification and communication	Contact information, scripts, and evacuation procedures will be defined for various disasters. The communication plan with the State also will be defined in the business continuity/disaster recovery plan.
Testing and auditing processes for ensuring the currency of the plan	An annual test of the recovery plan will be executed. Any issues or updates will be made and communicated to the State for approval.
Response plans for disasters that may result in prolonged work force absence from the fiscal agency location	The business continuity/disaster recovery plan will include the off-site location and potential work force availability.

Business Continuity

The North Carolina Division of Medical Assistance (DMA), Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH), Division of Public Health (DPH), and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC) have become increasingly dependent on the availability and reliability of automated systems to provide services to State residents. Information is an important asset for the daily operations and must be available even after a disaster. These critical programs directly affect the health, safety, and security of the State's residents and the State's financial position.

The business continuity plan will have defined business processes, functions, equipment, and staff identified to recover from any service interruption. Training, annual testing, and updates to the plan will be necessary. Uninterrupted payment to providers and availability to their customer information is our goal for a successful business continuity plan. To achieve this goal, we will do the following:

- Make sure employees are safe
- Identify an alternate site for systems processing and operational functions

- Assemble a high-performance OIMT of experienced support professionals who will execute the business continuity plan and will be the State's point of contact if an emergency occurs
- Put in place processes to safeguard staff and assets to maintain the ability to recover important operational functions and processes
- Understand the impact to other business areas and venders
- Assess and mitigate risk of loss of business area or resources
- Make sure the business continuity plan and associated responsibilities for employees and the State are understood

Contingency Planning for Service Interruptions

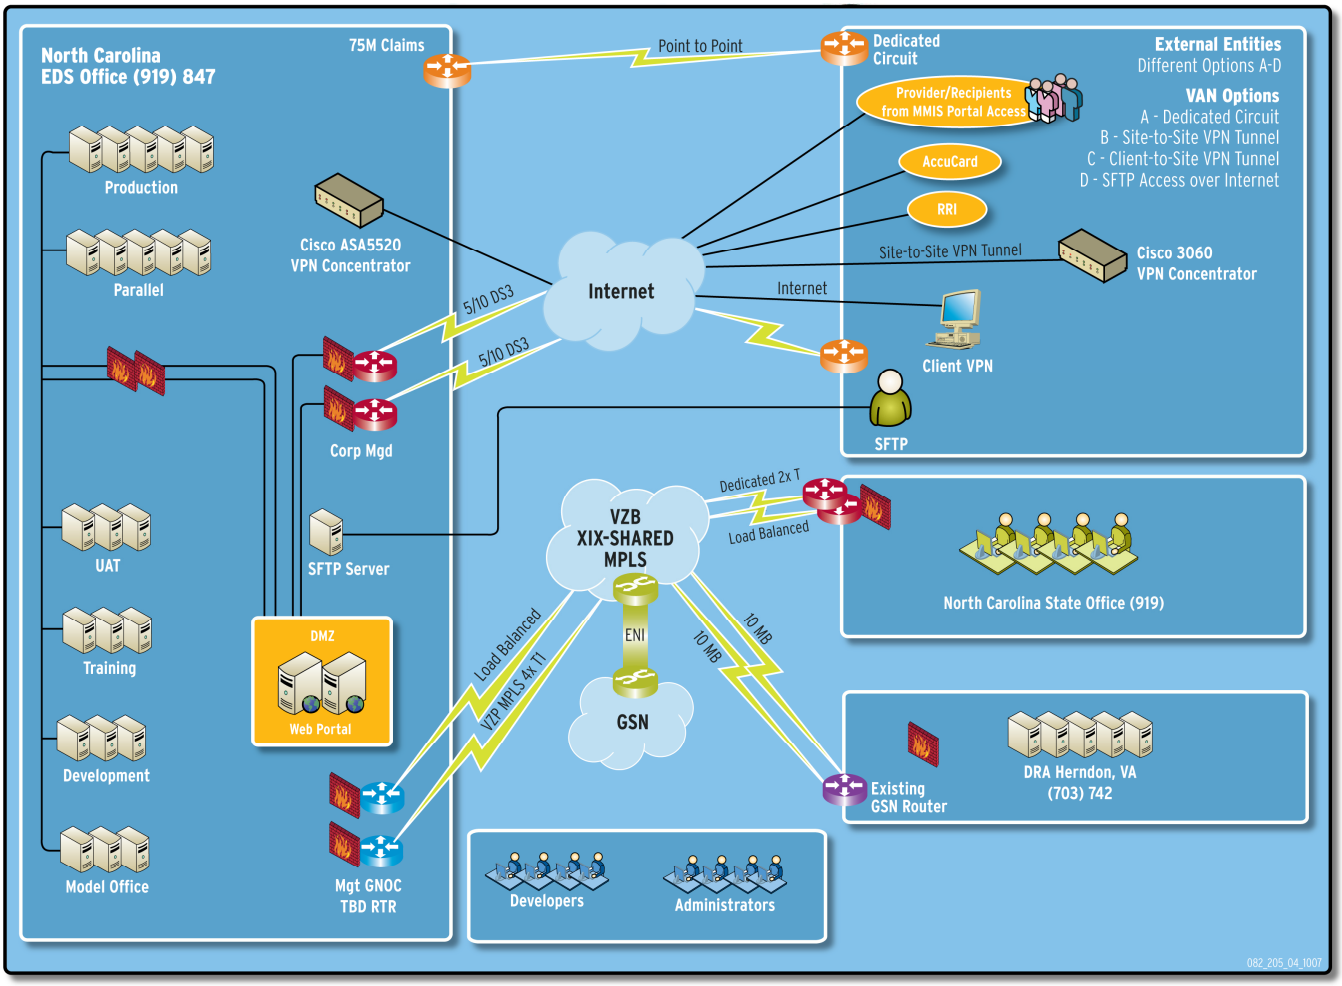
EDS will collaborate with the State to identify, maintain, test, and support contingency planning to meet critical processing needs if short- or long-term interruptions of service occur.

EDS will maintain a primary office to host EDS staff members at Wycliff Road in Raleigh, N.C., within 15 miles of the State's headquarters. If the primary EDS office is unavailable during a disaster, an alternate operations site will be used. This site will be identified during the DDI Phase. Typically, this is another EDS MMIS account within the same geographical region.

EDS has chosen the Herndon, Va., facility as the remote systems site if a major disaster occurs. This site has been conducting successful monthly disaster recovery drills for the last two years. It is a fully functional disaster recovery facility with firewalls, DMZs, Internet connections, and various hardware, tape libraries, and storage area network (SAN) devices. With multiple system redundancies and an impressive ability to endure severe weather conditions, this center is ideally equipped to serve as the first line of defense in keeping service interruptions to a minimum. This site will enable electronic claims to be processed through edit, audits, and pricing. Web access to claim history will enable our operational staff members to continue to give exceptional support to providers, regardless of their location.

The following exhibit, Network Communication Diagram, shows the relationship between the entities involved in a major recovery effort.

Network Communication Diagram



EDS will work with the State to identify, maintain, test, and support contingency planning to meet critical processing needs.

OIMT

The Operations Incident Management Team (OIMT) is the EDS North Carolina core management team for emergencies at the local facility. They will be the central point for reporting any incidents affecting continuous operations. They will be responsible for executing the business continuity plan, have the authority to make decisions regarding the management of the account during a disaster, and coordinate activities during a disaster.

The Emergency Management team will comprise the account manager, technical director, operations manager, and PMO director. The other managers and the Health Insurance Portability and Accountability Act (HIPAA) privacy official on the account will provide vital input to the team but will not be decision-makers for the purposes of executing the business continuity plan.

The following table, OIMT Responsibilities, lists the positions and the responsibilities of the OIMT.

OIMT Responsibilities

Position	Responsibilities
Account manager	• Account for personnel • Assess the situation and determine, along with the technical director, whether to declare an emergency • Make major decisions concerning the plan and activities • Prioritize critical jobs along with other members of the OIMT • Use the communication process to coordinate with EDS and the State • Account for personnel • Authorize expenditures related to the situation • Update status lines with the latest announcements
Technical director	• Account for personnel • Assess the situation and determine, along with account manager, whether to declare an emergency • Determine to what extent the emergency procedures will be activated • Use the communication process to coordinate with EDS and the State • Execute the business continuity/disaster recovery plan • Serve as the single point of contact for disaster recovery activities for the State • Prioritize critical jobs, along with the account manager • Communicate with employees • Direct the shutdown of operations when necessary • Direct the transition to the alternate location when necessary • Set up the permanent location and coordinate the move when necessary • Update status line with the latest announcements
Operations or claims manager	• Assist the account manager and technical director in executing the business continuity/disaster recovery plan • Make sure outside emergency services such as medical aid and the local fire department are called when necessary • Make sure employees' health and safety are a priority • Make employees aware of regulatory requirements in the plan
PMO director	• Make sure the business continuity documents are maintained annually • Assist in the review, risk, and impact of the incidents

Business Continuity Planning

Business continuity planning includes the following tasks:

- Business continuity gap analysis
- Business impact analysis
- Business continuity risk assessment/business criticality analysis (BCA)
- Business continuity management strategy
- Business continuity planning and testing
- Business continuity program audit

We will employ our business continuity planning methodology to develop the business continuity plan. This methodology is based on best practices from the Business Continuity Institute (BCI), Disaster Recovery Institute International (DRII) and Information Technology Infrastructure Library (ITIL).

Testing of Business Continuity Plan

The State and EDS technology teams will test business continuity plans with the business area owners annually for currency and make sure that appropriate actions exist in accordance with the existing risk management philosophy.

Making sure staff members are aware of emergency practices is critical to the execution of the business continuity plan. We will execute practice drills annually and conduct continued security training courses. The business continuity coordinator will make sure personnel are accounted for and that the appropriate communication with the local emergency agencies has been completed. Employees who need special assistance will be paired with other employees to help them safely evacuate. After each practice drill, we will perform a review to identify the success of the exercise and determine if any modifications to the plan are needed.

Business Analysis Activities

The business criticality analysis (BCA) document will describe the processes involved in establishing a complete analysis of the business functional relationships. An annual review of the risk assessment and BCA will enable us to provide recommendations on improving the business continuity and disaster recovery plans. The State can review these recommendations with the associated cost-versus-risk factors. For each core business process, EDS will assist the State in the activities described in the following subsections.

Identification of Potential System Failures

We will identify potential system failures for each process and indicate the most likely cause. Potential failure conditions will be documented in the plan and serve as input to the risk analysis activity.

Risk Analysis

We will examine potential risks and points of failure and correlate them with the specific processes and locations to which they apply. The analysis will include the relative likelihood of each risk. These risks include technological threats such as hardware component failure, environmental threats such as storms or fires, and human threats such as hacker-initiated denial-of-service attacks. Each risk will have corresponding trigger events that indicate that the potential risk has materialized, requiring implementation of one or more contingency plans.

Analysis

We will analyze the possible business impact and risk exposure of these risks to the core business functions if they occur. The exposure of any risk is based on many factors, such as the severity of the event, the likelihood of the event to occur, and the cost in dollars, time, and effort to mitigate it or recover from it.

Minimum Acceptable Levels of Outputs

Each process will have an associated minimum level of output that must be maintained, such as a minimum number of data entry claims keyed per hour. Risk remediation strategies will be targeted at achieving at least these minimum levels of performance for the MMIS to continue providing essential services.

Communication of the Business Recovery Plan

The business recovery plan will include contact information for key staff required to recover from a disruptive event. Copies of the plan will be available on several types of media to enable easy access from a remote area if necessary for the State and OIMT. The various detailed communication procedures defined in the business continuity plan will be followed to enable employee safety, prompt notification to the State, identification of business affected, and guidelines to enable a quick recovery response.

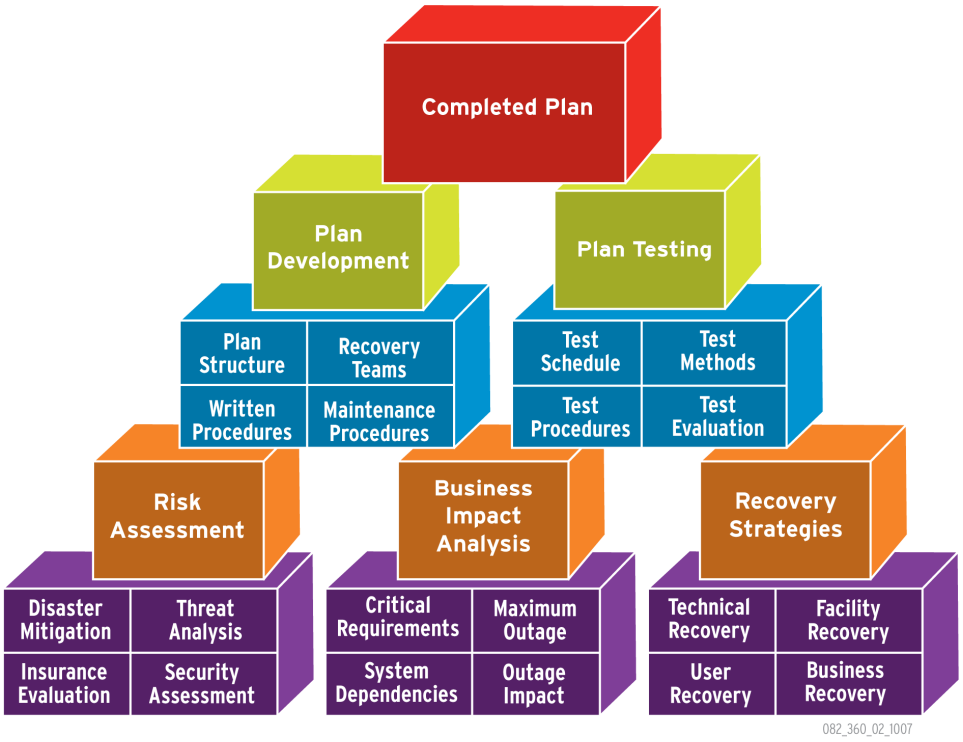
Disaster Recovery Plan

The disaster recovery plan (DRP) will document the guidelines, support, and technical resources needed should a disaster impact the Replacement MMIS

infrastructure. The plan will be activated when an emergency beyond the scope of standard operating procedures occurs. It is designed to reduce confusion created during a disaster, and provides a framework for recovery and restoration of critical systems, voice and data communications, business processes, and facilities that are necessary to continue payment to providers and State support. To accomplish that goal, we have developed an approach to planning and recovery of vital services. The concept identifies services vital to daily operations and maps those services to the infrastructure required to support that service.

The DRP is a result of processes that build up a structured methodology to verify successful execution of the recovery of the vital daily operations and system features. The following exhibit, Disaster Recovery Building Process, shows the steps necessary to complete the DRP and the relationship between each unit.

Disaster Recovery Building Process



The DRP is a result of essential processes that build up a structured methodology to verify successful execution of the recovery of the vital daily operations and system features.

The DRP will include the following elements:

- Description of scope
- Event response triggers and thresholds
- Planning activities
- Root-cause analysis process
- Disaster declaration procedures
- Communication procedures

- Recovery strategies
- Resumption of regular operations
- Training activities
- Emergency procedures and drills
- Evacuation plans
- Contact lists

DRP Benefits

The benefits of preparing a workable DRP are presented in the following table, DRP Benefits.

DRP Benefits

Time Frame	Benefit Description
Before a disaster event	• Reduce dependence on key personnel • Improve necessary documentation • Decrease potential threats and exposures • Lower the possibility of a disaster event
During a disaster event	• Protect employees • Minimize disruptions to business processes • Safeguard critical assets • Minimize confusion and delays
After a disaster event	• Verify organizational stability and an orderly recovery • Reduce potential financial loss • Decrease potential legal liability • Adhere to legal, statutory, and regulatory requirements • Resume operations at the primary site

Disaster Recovery Methodology

Interruptions in service can come from many potential sources. The Replacement MMIS must be protected from the following:

- Hardware and software failure of system components
- Natural disasters and accidents that could affect entire facilities
- Communication failures and other potential interruptions of service

EDS will support the successful, on-time development of the Replacement MMIS. We will do this by maintaining a high level of system availability for interChange during the DDI and Operations phases, providing the State with

access to the resources needed to keep the system development process moving forward. Additionally, we will do the following:

- Assemble a high-performance virtual team of experienced interChange developers and support professionals from multiple locations that are focused on delivering a comprehensive, best-in-class solution to meet the State's needs
- Put in place processes to safeguard system development assets and maintain the ability to recover important system and data files and preserve progress made in developing the Replacement MMIS
- Perform regular system backups of the development environment throughout the DDI Phase as the production backup and DRP is being developed
- Back up production and development environments regularly after implementation according to the developed plan

We will provide the following elements to support high levels of system availability:

- A proven system architecture already in use in multiple Medicaid programs
- Defined system availability reporting and problem resolution processes
- State-of-the-art information processing facilities with multiple redundant systems, such as power and telecommunications
- Comprehensive system and data backup and restore capabilities
- Solid disaster recovery planning, including the following:
  - Off-site protected storage for backup tapes in an access-controlled location with fireproof storage units
  - A separate operations recovery site to be used if the production site becomes unavailable
  - Documentation of critical business processes that must continue to be performed even if the production site becomes unavailable
  - A regular program of recovery plan testing to verify its effectiveness

EDS will maintain the State-approved plan. We will make this plan available to State auditors and authorized State and EDS users at any time through iTRACE.

The State will benefit from our approach because the interChange base system is a mature, stable solution that has benefited from the input of the multiple state MMIS programs where it is in use. EDS will maintain high levels of system availability during the development process. We have demonstrated that ability during our administration of the current Legacy MMIS+.

Point-in-Time Recovery

The procedures EDS will develop and document in the DRP for recovery of telecommunications, data circuits, and MMIS subsystems will include the procedures for point-in-time recovery.

The Replacement MMIS will include appropriate point-in-time recovery capabilities and other features necessary to promote reliability and recovery. Recovery procedures will provide step-by-step recovery instructions for each service and its supporting infrastructure, allowing technical support personnel who are unfamiliar with the current systems to bring a particular service back online.

The Replacement MMIS will use the Oracle database's archive logging ability and Oracle Recovery Manager (RMAN) with a robust tape management system to enable point-in-time recovery of the database up to the last completed transaction.

If a restore from tape is required, the database will first be restored to the previous weekend's backup. Archive logs would then be used to apply transactions that occurred since that full backup, up to just before the problem occurred.

A related benefit of the Oracle logging feature mentioned is its ability to back out update transactions.

Retention and Storage of Backup Files and Software

EDS will create a detailed backup plan as part of the development of the DRP, which will include retention periods for backup media and required conditions for the storage of backup files and software. This plan will correspond with the compliance requirements identified in the State Record Retention Policy.

The Replacement MMIS will use a comprehensive backup strategy that includes the components—such as the automated voice response system—that are part of the Replacement MMIS solution. EDS recognizes that factors such as retention time may not be identical for each component, and we will work with the State to determine the appropriate parameters, which will be documented in the backup plan.

Hardware Backup for Main Processors

Hardware backup for the main processors and other critical system components is one more technique EDS uses to maximize system availability and provide superior service to the State. Hardware backup will be accomplished internally through component redundancy and externally by hardware at an off-site recovery facility.

Internally, the main processors will be configured with multiple central processing units (CPUs) to provide redundancy and improve performance. With multiple CPUs in operation, the Replacement MMIS can continue to operate and provide services to the State even if one or more units suffer a failure. EDS will monitor the status of the hardware to detect any such failure conditions and resolve them to restore the protection provided by this component redundancy.

The Replacement MMIS also will include redundancy for system memory modules, for similar reasons. Critical system and data disks also are protected through mirroring or redundant arrays of independent disks (RAID 5) redundancy. Other redundancies are described in the following discussion points.

Externally, servers at an off-site recovery facility will provide hardware backup if a disruption of services occurs at the primary data center. The Business Resumption team will create the business continuity/disaster recovery plan and use it to determine when to initiate recovery activities at the remote site.

Telecommunications Network Backup

The Replacement MMIS' data center will have extensive network and telecommunications capabilities. The network is designed with redundant communications to each mission-critical system. The North Carolina Data Center will connect to the Internet through two sets of six bundled T1 lines that will be routed through separate switches at the Local Exchange Carrier (LEC) to provide redundancy. This will provide high-availability connectivity to areas such as the Provider and Recipient Web Portals, value-added networks (VANs) using site-to-site VPN tunnels, SunGard FormWorks for data entry, and other entities needing to exchange interface files.

The State offices will have redundant connectivity to the Replacement MMIS. This will be provided by two load-balanced sets of two bundled, dedicated T1 lines. These lines also will be routed to separate switches at the LEC.

Finally, the North Carolina Data Center will connect to the multiprotocol label switching (MPLS) network through independent switches by two load-balanced sets of four bundled T1 lines. These MPLS clouds will connect to the Herndon Disaster Recovery site across two redundant 10 MB data lines.

A visual representation of these data lines is shown in the exhibit, Network Communication Diagram, in the "Contingency Planning for Service Interruptions" section.

UPS at Primary and Alternate Sites

Uninterruptible power supplies (UPSs) will be available at the primary and alternate sites with the capacity to support the system and its components.

UPS and electrical system capabilities are particularly robust at the primary Replacement MMIS data center. Dual AC power feeds lead into the data center, and other elements of the data center infrastructure have been designed with N+1 capacity to maximize availability. This includes UPSs; power distribution units; cooling, heating, and humidity controls, and emergency generators. UPSs can power the entire data center, including connectivity, security, air conditioning, and fire suppression systems.

Emergency diesel generators have a three-day fuel supply stored on-site. During extended periods of electrical utility outages, the data center can call on existing fuel vendor contracts to supplement the three-day on-site fuel supply so that the generators can continue to power the facility indefinitely.

File Backup and Recovery

EDS understands the importance of the systems and data in our care and our responsibility in preserving access to these assets using multiple levels of protection. EDS will provide the State with superior backup and recovery capabilities as a core building block of the Replacement MMIS.

EDS will provide a detailed backup plan and procedures, including secure off-site storage of the Replacement MMIS' critical files, instructions, procedures, documentation, and programs, to begin during the Implementation Phase. The plan also will include a schedule for the generation and retention of backup files. This backup plan and associated procedures, locations, and protocols will be approved in advance by the State and in place before operations are assumed. Each aspect of the DRP will be detailed as to State and EDS responsibilities and will satisfy contractual requirements.

Data will be replicated from Raleigh to Herndon using the EMC RecoverPoint appliance. This is a SAN-to-SAN snapshot replication performed every 24 hours across the WAN. Herndon has sufficient equipment dedicated to North Carolina to support the claim-processing function of the Replacement MMIS. Our solution is to include a 48-hour recovery time objective (RTO) and a 24-hour recovery point objective (RPO). Network connectivity between the State and Herndon will exist if a disaster occurs.

Call Center (AVRS) Recovery

EDS has outlined three levels of recovery responses for correcting an interruption within the call center. Each level is an overview example of the size and recovery efforts involved.

Level 1—Single Device Failure

In this event, a single voice-response server has encountered a hardware or platform software failure. These self-service applications are engineered to run

on multiple hardware platforms at one time. This will eliminate a single point of failure, thus eliminating any noticeable failures to the callers. If the failure happens during a high call volume, we can move call traffic to a partial disaster recovery site, allowing EDS to bring up the applications to the partial disaster recovery site running their applications simultaneously.

Level 2—Local Event/Multiple Device Failures

In this scenario, the local premise is non- or partially habitable. This type of event could be the result of a building fire, storm damage, or massive power surge possibility. In this event there could be no power, telecommunications, or data network possible on premise. Employees could work from home or hotels as needed by their business role, while the self-service applications are brought online at other U.S. locations.

This type of event allows for account staff members to work from home or from clustered hotel segments. Premise-based hardware might be decommissioned, and replacement hardware is shipped from a ready staging area. This scenario will be implemented in two stages. At first inception, it will appear as a regional event, where self-service applications are brought online at multiple disaster sites around the United States within the first few hours. As replacement hardware is available and premises' connectivity is restored, self-service applications are moved back in-house smoothly.

Level 3—Regional Event

In this event, a regional disaster is generally a more planned phased event. The most likely disaster in this category is a hurricane that moves up or down a coastline. EDS can preemptively move call traffic out of the event's path well before the event occurs. Before this transition, disaster sites are staged to run the affected self-service applications. When the event is eminent, the caller's experience is not impacted. After the all-cleared alert has been issued and the premise hardware is verified as operational, the same phased approach is used to smoothly transfer capacity back to the regular account site.

System Downtime

Processes to communicate scheduled system downtime will be detailed in the communication plan. Scheduled system downtime can be caused by installing hardware or software, or as part of a disaster recovery drill. Progress notices will be sent to reflect the system status and estimated time of completion to users impacted. The State will be notified of any scheduled system downtime events.

Recovery Experience

EDS will maintain high levels of system availability and respond quickly to interruptions to the production environment. Any problems with the MMIS application software that require it to be restored will be resolved with the highest urgency. EDS has been successful in executing recovery efforts from past disasters. For example, during the 2004 hurricane season—one of the worst in decades—the Orlando Data Center continued to maintain system availability for its clients, despite a succession of four strong hurricanes.

EDS also responds quickly to even larger-scale events such as Hurricanes Katrina and Rita in 2005. EDS was in action before, during, and immediately after the storms to provide safety for more than 1,000 employees in the affected areas, besides keeping clients operating by using such methods as transitioning call center operations to facilities outside the danger areas.

Overcoming unexpected emergencies and fulfilling our provider community expectations of uninterrupted service is one of this account's strength. On December 4 and 5, 2002, Raleigh was hit with a severe ice storm that left thousands without power in some areas for days. The EDS team responded. As soon as power went out at our Raleigh Data Center, our UPS and generator kept the services and applications up and available to our clients and our providers in the rest of the State. During the entire incident, we accepted claims, received provider telephone calls, and completed the cycle to send provider payments.

In such cases, EDS Situation Management teams and tools such as the toll-free Global Emergency Support Line are used to coordinate responses.

The Best Plan—Being Prepared

North Carolina's Medicaid and mental health systems and services have been protected by EDS' business continuity plans for many years. With the implementation of the Replacement MMIS, this protection will be extended to DPH and ORHCC. The plans we are proposing are in place for our Medicaid clients across the country and have been approved by Medicaid agencies in each of those states. The plans we propose cover a single primary objective: resume service to North Carolina's healthcare stakeholders as rapidly and efficiently as possible, while protecting our employees.

To demonstrate our successful approach to business continuity and disaster recovery planning, we provide a sample excerpt from the Kentucky MMIS Disaster Recovery Plan following this page. As stated in RFP section 50.2 Technical Proposal Requirements, this sample does not count toward any page limit.

New KY MMIS Disaster Recovery Plan
Kentucky MMIS Project

Cabinet for Health and Family Services
Departmant for Medicaid Services

July 20, 2006

Table of Contents

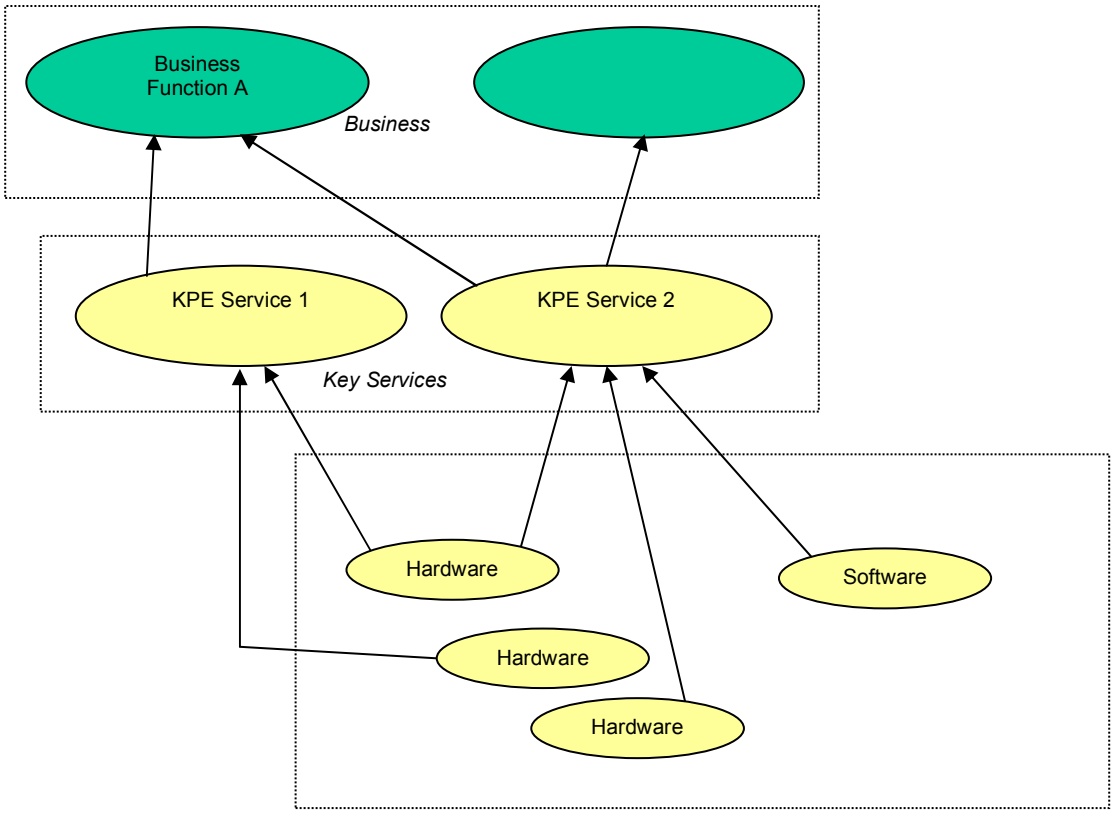
1 Introduction

The Commonwealth MMIS Disaster Recovery Plan (DRP) has been developed to document the guidelines, support, and resources needed should a disaster impact the MMIS infrastructure located at Cold Harbor, EDS Frankfort facilities, and the EDS Orlando Data Center. The plan will be activated when an emergency beyond the scope of standard operating procedures occurs. It is designed to reduce confusion created during a disaster, and provides a framework for recovery and restoration of critical systems, voice and data communications, business processes, and facilities that comprise the Key Process Environment.

1.1 Disaster Recovery and Business Continuity

The plan is designed around the concept of recovery of the key production services used in the Key Production Environment (KPE). Recovery of the critical portions of the KPE is paramount in the event of a natural/unnatural disaster or catastrophic infrastructure failure. To accomplish that goal, we have developed a KPE-centric concept and approach to planning and recovery of vital services. The concept identifies all KPE services vital to day-to-day operations and maps those services to all infrastructure required to support that service. This matrix of system vulnerability identifies infrastructure that may be supporting multiple KPE services such that the full impact of failure of a particular piece of infrastructure is fully understood.

Procedures are being developed that will provide step-by-step recovery instructions for each service and its supporting infrastructure, allowing technical support personnel who are unfamiliar with the current systems to bring a particular service back online. So, in this concept, the infrastructure is at the center, or core, mapping to all of the KPE services provided for day-to-day operations, and at the highest level those services will map to the business units or entities that require them allowing the business units to exercise their existing desktop procedures to perform their daily processes.



KPE-Centric DR Model

The diagram above is a simple view of the model but demonstrates the mapping and recovery strategy to re-establish services and business functionality. The actual matrix is extensive and detailed as one would expect when you need to make sure every key piece of supporting infrastructure is mapped to the services. This model, and the documentation developed as a result, is applicable to day-to-day failures as well as major catastrophic events. The same procedures, or a subset thereof, can be applied to a single hardware or software failure. From a business continuity angle during disaster recovery, the KPE services will ultimately have to be prioritized for order of restoration based on business priority. The KPE-centric concept allows a business unit to assume that the current level of services will be provided in the recovery location and operations can be scaled as needed. Thus, the desktop procedures used on a daily basis are applicable in this approach. One other piece to be developed will be establishment and maintenance of open agreements with certain vendors for hardware, software, communications, transportation, facilities, supplies, and so on, to be exercised in the event of a disaster that requires temporary relocation.

Elements of the plan will be tested periodically. Core services will be tested annually. Appendix R: Disaster Recovery Test Frequency contains the break down of the KPE and their testing cycles. The plan must be modified regularly based upon test results, as well as changes to hardware, software, applications, procedures, personnel, and the organization structure. The plan documents are stored electronically, backed up and saved off site, and made available in electronic form to authorized individuals. Primary access to the plan will be via the Intranet.

1.2 Benefits

The benefits of preparing a workable disaster recovery plan are presented below:

Time Frame	Benefit Description
Pre-Disaster Event	• Reduce dependence on key personnel; • Improve necessary documentation; • Decrease potential threats and exposures; and, • Lower the possibility of a disaster event.
During A Disaster Event	• Minimize disruptions to business processes; • Protect employees; • Safeguard critical assets; and, • Minimize confusion and delays.
Post-Disaster Event	• Reduce potential financial loss; • Decrease potential legal liability; • Ensure organizational stability and an orderly recovery; and, • Adhere to legal, statutory and regulatory requirements.

1.3 Plan Objectives and Scope

The objectives of this project are to develop a disaster recovery plan for the MMIS that helps to ensure the continued operation of the mission critical business processes should an interruption occur due to a disaster event. The plan ensures minimal disruption to operations in the event of significant problems and interruptions, and ensures organizational stability and an orderly recovery.

Although the plan addresses the worst case of the total loss of the facility including Information Technology (IT) equipment and services, the approach is applicable even in the event of a partial loss. The appropriate steps to recover key process services can be used to implement the required recovery actions.

1.4 Policy Statement

Commonwealth of Kentucky government has become increasingly dependent on the availability and reliability of automated systems to provide services to its citizens. Information is an important asset for the operation of the Commonwealth. These critical applications and functions directly affect the health, safety, and security of the citizens of the Commonwealth and its financial position.

EDS has developed a plan to assure the continuity of claims processing resources for critical applications and services. Determination of the appropriate priorities for recovery of Key Process Services is a joint effort between EDS, the Commonwealth, and its vendors. Therefore, contingency planning must be conducted by all parties in concert with the Cabinet for Health and Family Services (CHFS), the Commonwealth Office of Technology (COT), and other vendors to ensure a complete and viable plan should execution of the plan become necessary.

1.5 Disaster Recovery Plan Mission Statement

The Disaster Recovery teams are empowered to provide the KY MMIS operations enterprise with a rapid recovery process to assure high availability of critical operations based on the Customer needs of the Cabinet for Health and Family Services. The teams are charged with maintaining, implementing, and if necessary, updating procedures and plans to:

- Gain control of problem situations early;
- Minimize the impact of an operational outage on the Cabinet for Health and Family Services;
- Gather critical information into a central repository;
- Reduce risks to essential information resources;
- Make decisions in advance of a crisis; and
- Test annually.

1.6 Purpose of the plan

The purpose of this plan is to formalize and document the Disaster Recovery Policies and Procedures of the EDS teams and to provide guidelines to:

- Restore the claims processing operations;
- Return to a permanent Key Process Environment; and,
- Resume time-sensitive business operations.

The Disaster Recovery Plan addresses the logical flow of events in responding to major disruptions in services, business processes, and technology infrastructure. Specifically, the Plan addresses the flow of events to:

- Continue/resume time-sensitive business operations for the critical and essential business processes;
- Activate the resumption and support of those services. (The chain of command, identifying who pulls the trigger and manages the resumption support.)
- Provide ability to initiate restoration procedures of critical computer processing and data communications capabilities quickly following a declared disaster;
- Define how CHFS and EDS Departments will communicate and coordinate with the Disaster Recovery Teams;

- Identify the staff assigned to implement resumption support (Disaster Recovery Teams) and their responsibilities;
- Restore critical operating systems, application systems, functions and telecommunications according to the recovery time objectives;
- Achieve each of the above objectives in a timely, efficient, and cost effective manner; and,
- Return to a permanent operating environment.

1.7 Plan Assumptions

The DRP plan is based on the following assumptions:

- Sufficient key staff is available to perform the necessary procedures described in the plan;
- Sufficient technical staff can be notified and can report to the recovery site to perform critical recovery and reconstruction activities;
- Off-site storage media and materials are available, are current, correct and readable;
- The Disaster Recovery Plan is current and available;
- In the event of a disaster, the plan will be accessed via the Intranet or the Internet, and status information will be added as the restoration proceeds. Copies of the plan, both electronically and in paper will be located at the off-site storage facility. Also, team members may have copies at their homes as needed;
- Subsets of the overall plan can be used to recover from minor interruptions;
- Recovery services from critical vendors are available;
- A rapidly recoverable WAN technology has been implemented prior to the disaster;
- The replacement sites (any number of locations where servers will be installed on the WAN replace primary facility servers) can be located at any accessible site via the WAN;
- The backup servers and tape system will be located at the recovery site;
- The primary leveraged solution recovery site will be the EDS facility at 13600 EDS Drive, Herndon, VA 20171;
- A disaster of severe magnitude may occur and that the disaster could result in a total loss of the Commonwealth Data Center in Frankfort, Kentucky, the EDS Data Center in Frankfort, or the EDS Data Center in Orlando, Florida;
- The Disaster Recovery Site will be available as ensured by contract;
- There may be a shortage of personnel due to the disaster, but between the disaster recovery service personnel and the major hardware and software vendor's personnel, disaster recovery operations will be initiated;
- AT&T or MCI can be used to restore vital data communications;

- Adequate financial and personnel resources will be made available each year to test the recovery plan to assure its continuing viability, and,
- During a disaster, some degradation of service to user agencies may occur until recovery operations are completed and EDS Data Center operations have returned to normal. Business will be operated in a disaster mode at a reduced level of service, returning to full service as soon as possible.

1.8 Maintenance & Distribution

The Business Continuity Administrator is responsible for overseeing the maintenance, distribution, and annually testing of the recovery plan. The maintenance activities are assigned to various individuals or groups within the organization with overall responsibility for coordination of the activities designated to the Business Continuity Coordinator.

The Disaster Recovery Plan is a restricted document and classified as confidential, given the nature of the contents. Each individual with access to, or a copy of, the plan is responsible for security and control of the document in accordance with policies.

The Business Continuity Administrator is responsible for authorized access to the Disaster Recovery Plan and maintains a master access list. Additionally, the Business Continuity Administrator should maintain a current copy on site and a copy off site of both printed and electronic versions.

1.9 Recovery Team Organization Structure

Because an unexpected interruption in business operations and systems may occur at any time requiring a coordinated response, each occurrence requires a managed approach that fosters consistency of effort and reduces the escalation of damage or outage. The recovery teams are organized to address all issues related to an emergency and authorized to make certain decisions relative to recovery efforts. Specific team members are assigned to manage these efforts, and the teams are also staffed with members capable of performing each task. The teams are designed to handle a specific set of tasks to be accomplished before, during, and/or after an emergency. The documented restoration procedures are intended to be in sufficient detail that in the event that specific key members are not able to participate in the recovery, other individuals who are knowledgeable in the particular operations and/or technology could, following the procedures, restore the business operations and systems involved.

Team members have several roles. Team managers have the responsibility to assign personnel to staff the teams necessary to address emergency situations. Multiple roles are sometimes unavoidable based on available resources, emergency conditions, and time constraints. Alternates are assigned as back-ups for team manager positions and team members to reduce the possibility of a vacancy in the command chain.

The Disaster Recovery Plan is structured with five recovery teams. The primary team is the Management Recovery Team, with complete functional responsibility for all recovery-planning activities. Each team has a separate plan section. Recovery teams are operational groups responsible for specific functions. The teams have specific responsibilities that allow for a rapid and smooth recovery process. Each team has the authority to carry out the procedures contained in their section of the plan. The recovery teams (and related plan sections) are color coded to facilitate the use of this document as described below:

Color Name	Team Description	Appendix
Gray	Management Recovery Team	A
Blue	Administrative Recovery Team	B
Green	MMIS Recovery Team	C
Orange	Distributed Systems Recovery Team	D
Red	Network Recovery Team	E

Each appendix details the procedures and specific responsibilities for each respective team. Each appendix is written and formatted for use on a stand-alone basis. The last sections of the plan include exhibits which may be needed to support the procedural sections of the plan. The Business Continuity Team Structure is illustrated on the following page.

1.10 Methodology

This Disaster Recovery Plan was developed in phases using the following methodology:

Risk Assessment and Reduction: The first step in the planning process identified the areas of highest exposure to the organization. The most probable threats and vulnerabilities of the organization were identified and analyzed. The process also included evaluating existing physical and environmental security and controls, and assessing their adequacy relative to the potential threats to the organization.

Although the exact nature of potential disasters or their resulting consequences are difficult to determine, the risk assessment identified various threats that can realistically occur. The process addressed issues to minimize or eliminate exposures that have the possibility of creating a disruption or interfering with the recovery.

Business Impact Analysis: The business impact analysis identified the critical business processes, and determined the impact of not performing the processes beyond the maximum acceptable outage. The critical and essential business processes and their related software applications were identified throughout the core Medicaid and peripheral applications including all interfaces. Based on the analysis, the related infrastructure requirements were identified and prioritized.

Recovery Strategies: Important aspects of business continuity planning are to determine recovery strategies and develop written agreements related to the most feasible alternative(s). Based on this analysis, recovery alternatives for critical equipment, processes, and facilities were evaluated. The results of the business impact analysis and risk assessment process were used to determine the most cost effective recovery strategies for each consideration. This phase of the process focused on identifying critical resources that result in cost-effective recovery strategies.

Recovery plan: The contents of the plan follow a logical sequence and are written in a standard and understandable format. The plan, which is brief and to the point, is written to reduce the time required to read and understand the procedures. This should provide improved team performance if the plan has to be used. The plan documents the initial actions necessary to assess the damage, outage or impact of an emergency situation and the activities required to maintain control and recover from the disaster event.

Training and testing: It is essential that training be provided for all team members and other participating personnel. In addition, the plan should annually be tested and evaluated at least once a year and more frequently when systems or process changes result in plan changes. Procedures to test the plan are documented in the testing plan. The tests will provide the organization with the assurance that all necessary steps are included in the plan.

The tests will provide, in addition to information regarding any further steps that may need to be included, changes in procedures that are not effective or other appropriate adjustments. The plan must then be updated to correct any problems identified during the test. Testing should also be a part of the method for training the team members on the plan.

The diagram below illustrates the process used for developing the Disaster Recovery Plan. An important aspect of the methodology is that each phase of the process is built on a solid foundation.

1.11 Plan Activation Process

Authority to declare a disaster is a crucial element of the plan and is assigned to a restricted number of individuals within the organization. This procedure should be verified annually for accuracy and improvements. The activation process for the Disaster Recovery Plan is illustrated below. Disaster event guidelines for the following types of damage or outage are also illustrated below:

- Building Damage;
- MMIS Outage;
- Distributed Systems Outage;
- WAN Outage; and,
- Hardware Outages Outage.

A flow chart of the plan activation process is attached.

1.12 Mission Critical Applications and Connectivity

Refer to the following exhibits that are located at the end of the plan:

- Appendix: G: Key Process Services Recovery Priorities; and,
- Appendix O: KPE Mapping

1.13 Relocation Strategies

If the Orlando Data Center is unusable, a facility at 13600 EDS Drive, Herndon, VA 20171 will be prearranged for operations. If the Orlando Data Center becomes unusable for an extended period of time, this office could function as an input-output, user support, and terminal area.

As a result of a disaster or outage, the initial meeting location of all special teams is: Lobby Conference Room

In the event that this site is unusable, the alternate site is: EDS Education Account located in Louisville, KY

1.14 Communications plan

Proper internal and external communications are critical to successful recovery from a disaster. Therefore, it is important that the organization maintain specific communication policies as defined in this Disaster Recovery Plan. A comprehensive communications strategy is critical for many reasons, including:

- Effectively resolving any issues that may arise in the course of recovery;
- Building the commitment of the members of the recovery team;
- Ensuring the allocation of sufficient resources to the recovery process;
- Facilitating effective teamwork and coordination of activities;
- Minimizing the time span of the recovery; and,
- Establishing appropriate expectations of the recovery process among the impacted parties.

1.14.1 Internal Communications

Depending on the disaster event experienced, employees may need to be provided information regarding the organization's response to the disaster situation. The Management Recovery Team will determine the type of information that needs to be provided to staff and will determine the most appropriate method of dissemination. Potential methods of internal communications will vary depending on the type of event and whether normal systems and communications channels have been affected. Potential communications methods may include:

- Employee assistance telephone line;
- Intranet announcements;
- E-mail announcements;
- Voice mail announcements;

- Radio, television or newspaper announcements to employees; and,
- Newsletters sent to employee homes or distributed through interoffice mail.

1.14.2 External Communications

The Management Recovery Team will be responsible for directing and approving all methods of external communications following a disaster event. The Management Recovery Team will work with all recovery teams to determine the information to be communicated, the form of communication that should be used and the audiences that should receive it. The Management Recovery Team has the sole authority to answer questions with predetermined limitations and to make on-the-spot decisions and arrangements necessary for proper relations.

According to the Communications Standards and Protocols, under normal operating conditions all official CHFS correspondence that is intended to represent the view of CHFS as a whole, the commissioner's office and/or the executive staff must have pre-approval before distribution. The commissioner, deputy commissioner, executive directors, directors, branch managers, project leaders, and other designated employees are the only employees authorized to send official correspondence outside of CHFS. An executive director, prior to issuance, must approve any correspondence to all members of groups with which the commissioner or deputy commissioner have working relationships (i.e., all Information resource managers, all commissioner's, media, etc.). Official CHFS correspondence should be sent using the CHFS official state letterhead.

1.14.2.1 Communications Matrix

In general, the Management Recovery Team will be solely responsible for informing the public following a disaster event.

The Management Recovery Team is responsible for gathering and disseminating timely information for external audiences during times of disaster, given the following objectives:

- Provide timely and accurate information and direction to those affected by the disaster;
- Reduce rumor and uncertainty; and,
- Maintain CHFS credibility and minimizing damage to its reputation.

Other than the above the following communication matrix applies to all communications during a disaster:

Activity Description	CHFS Office of Contract Oversight	Commissioner	Management Recovery Team	Administrative Recovery Team	MMIS Recovery Team	Ancillary Systems Recovery Team	Network Recovery Team
1. Discussions with and inquiries from the Governor.		☸					
2. Official CHFS correspondence that is intended to represent the view of CHFS as a whole, the Commissioner's office and/or the executive staff.		☸					
3. Financial or contractual correspondence.	☸						
4. Distribution and communication of press releases.			☸				
5. Inquiries from the press regarding the disaster, security, viruses, and CHFS policy or any other CHFS related issue.			☸				
6. Inquiries from any legislative office regarding the disaster, security, viruses, and CHFS policy or any other CHFS related issue.			☸				
7. Acts as liaison with emergency response personnel.			☸				
8. Communicates information about the disaster to all team leaders.			☸				
9. Inquiries and communications with Recovery Teams with regard to their specific recovery activity and needs with regard to the recovery activity.				☸			
10. Communications and inquiries with/ from the Administrative and Management Recovery Teams with regard to damage or outage assessment.					☸	☸	☸
11. Communications and inquiries with/ from the MMIS and Distributed Systems Teams with regard to network communication assessment & outage.							☸
12. Communications and inquiries with/ from the Distributed Systems and Network Recovery Teams with regard to items stored at the off-site storage facility.					☸		

Activity Description	CHFS Office of Contract Oversight	Commissioner	Management Recovery Team	Administrative Recovery Team	MMIS Recovery Team	Ancillary Systems Recovery Team	Network Recovery Team
13. Communications and inquiries with/ from the Distributed Systems and Network Recovery Teams with regard to items in transit from the off-site storage facility.					☸		

1.15 Emergency Procurement

The Management Recovery Team is responsible for monitoring and controlling disaster related expenses during the recovery process. The Administrative Recovery Team is responsible for purchasing and recording disaster related expenses. A disaster event may cause circumstances where normal purchasing policies cannot be followed due to the need to quickly obtain equipment and supplies. Whenever possible, purchasing policies should be followed. In the event of a disaster, recovery team managers have purchasing authority based on the existing procurement policies.

All purchases should be recorded in the EDS Corporate Account System (CAS) financial system. Information contained in this log should include:

- Item purchased;
- Date purchased;
- Date delivery promised;
- Address to deliver;
- Method of delivery;
- Vendor purchased from;
- Cost of item;
- Purpose of purchase; and,
- Name of purchaser.

Receipts should be obtained to document each purchase. All emergency purchase information and supporting documentation should be provided to the Administrative Recovery Team.

2 Plan Organizational Structure

The organizational structure of the plan during and after a disaster closely resembles the current organization structure. The contingency organization is designed to provide a structure similar to the operational organization. The goal of the contingency organization is to accomplish a rapid and smooth recovery process.

Recovery teams are operational groups responsible for restoring specific functions. The teams have specific responsibilities that allow for a quick and successful recovery process. Each team should have the authority to implement and accomplish the procedures contained in their functional area.

The plan assumes minimum contingency staff is available to perform team functions. Certain business recovery roles are diversified based on the size of the team and the magnitude of the disaster. The Business Continuity Team structure identifies reporting lines as well as responsibilities for key individuals.

2.1 Recovery Team Definitions

There are five major recovery teams designed within the plan. These teams are color coded to facilitate the use of this document as described below:

Color Name	Team Description	Section
Grey	Management Recovery Team	2.4.1
Blue	Administrative Recovery Team	2.4.2
Green	MMIS Recovery Team	2.4.3
Orange	Ancillary Systems Recovery Team	2.4.4
Red	Network Recovery Team	2.4.5

Each of these teams has a separate section of the plan addressing specific responsibilities and procedures to be followed in the event of a disaster.

In addition to the establishment of recovery teams, the plan has assigned team positions and members. Team positions include:

- Recovery administrator;
- Team member;
- Business continuity coordinator;
- Alternate team manager; and
- Team manager.

These persons provide the necessary leadership and direction to implement the plan and carry out the assigned duties and responsibilities at the time of a disaster. The Disaster Recovery Plan Team structure is illustrated above.

The recovery team structure includes two important positions, the business continuity administrator and the business continuity coordinator.

2.2 Recovery administrator

The recovery administrator is responsible for supervising and controlling recovery activities on an overall basis, and providing managerial direction to the leaders of all teams.

2.3 Business Continuity Coordinator

The business continuity coordinator is responsible for coordinating recovery activities between the Management Recovery Team and the other recovery teams. The business continuity coordinator is also responsible for maintaining documentation relative to the recovery process.

Responsibilities of the business continuity administrator and business continuity coordinator are further defined in the Management Recovery Team section of the plan. In addition, this position is responsible for:

- Maintaining the Business Continuity plan;
- Distributing the plan and subsequent updates;
- Business Continuity plan training; and,
- Testing the plan.

2.4 Team managers

Team managers will be responsible for coordinating all recovery activities of their respective teams to reestablish operations to acceptable levels within the shortest possible timeframe. These individuals will:

- Serve as the prime decision-makers for situations included and not included in the plan;
- Evaluate and critique initial disaster assessment reports and action plans;
- Submit disaster assessment reports to the Management Recovery Team;
- Identify additional recovery positions needed to assist in recovery activities;
- Direct and motivate the team members;
- Track the actual progress/completion of recovery activities against the projected sequence of recovery events (i.e., function as a project manager for the recovery process);
- Establish with the Management Recovery Team, progress-reporting times (hourly, every two hours, etc.) to ensure that required activities are being performed as planned; and,
- Submit final disaster assessment reports to the Management Recovery Team.

2.4.1 Management Recovery Team

The **Management Recovery Team** has the following general responsibilities:

- Receiving the initial disaster alert;

- Serving as primary liaison to emergency response personnel;
- Verifying the disaster event;
- Assessing the disaster event;
- Activating all or part of the Disaster Recovery Plan with the assistance of the Administrative Recovery Team;
- Activating the recovery center(s);
- Working with the Administrative Recovery Team to establish the DR Command Center:
  - Facilities;
  - Equipment and supplies; and,
  - Personnel.
- Providing strategic direction to the Administrative Recovery Team;
- Performing public relations;
- Addressing legal issues; and,
- Monitoring recovery operations.

2.4.2 Administrative Recovery Team

The **Administrative Recovery Team** has the following general responsibilities:

- Activating all or part of the Disaster Recovery Plan as directed by the Management Recovery Team;
- Notifying Administrative Recovery Team members;
- Notifying appropriate recovery team managers;
- Prioritizing actions and activities;
- Performing recovery action planning;
- Working with the Management Recovery Team to establish the DR Command Center:
  - Facilities;
  - Equipment and supplies; and,
  - Personnel.
- Documenting recovery operations:
  - Recovery status report; and,
  - Emergency accounting procedures.
- Providing strategic direction to all recovery teams and personnel;

- Arranging for alternate facilities, if needed;
- Directing salvage efforts;
- Arranging for basic support services;
- Obtaining office equipment as necessary;
- Arranging transportation and travel;
- Verifying personnel status;
- Contacting construction and service vendors to arrange facility reconstruction as necessary;
- Arranging security:
  - Disaster site; and,
  - Alternate processing and facility sites.
- Arranging for temporary personnel;
- Notifying postal and courier services;
- Coordinating insurance claims;
- Analyzing records retention and salvage requirements;
- Coordinating asset removal;
- Executing recovery procedures;
- Assessing office damage;
- Issuing status reports;
- Monitoring recovery operations; and,
- Reporting status to the Management Recovery Team.

2.4.3 MMIS Recovery Team

The **MMIS Recovery Team** has the following general responsibilities:

- Determining system and application status;
- Notifying and scheduling recovery team members;
- Retrieving backup media from the offsite storage location;
- Restoring MMIS infrastructure;
- Implementing MMIS backup file restoration;
- With respect to the MMIS:
  - Protecting media and equipment at the Disaster Recovery Site;

- Restoring system files, applications, and data from backup copies of electronic media in collaboration with agency recovery teams;
- Executing recovery procedures;
- Recovering and verifying applications/data;
- Implementing security procedures; and,
- Reporting status to the Management Recovery Team.

2.4.4 Ancillary Systems Recovery Team

The **Ancillary Systems Recovery Team** has the following responsibilities:

- Determining system and application status;
- Notifying and scheduling recovery team members;
- Installing/configuring servers;
- With respect to distributed systems:
  - Protecting media and equipment;
  - Restoring system files and applications from backup copies of electronic media;
  - Executing recovery procedures;
  - Recovering and verifying applications/data;
  - Implementing security procedures; and,
  - Reporting status to the Management Recovery Team.

2.4.5 Network Recovery Team

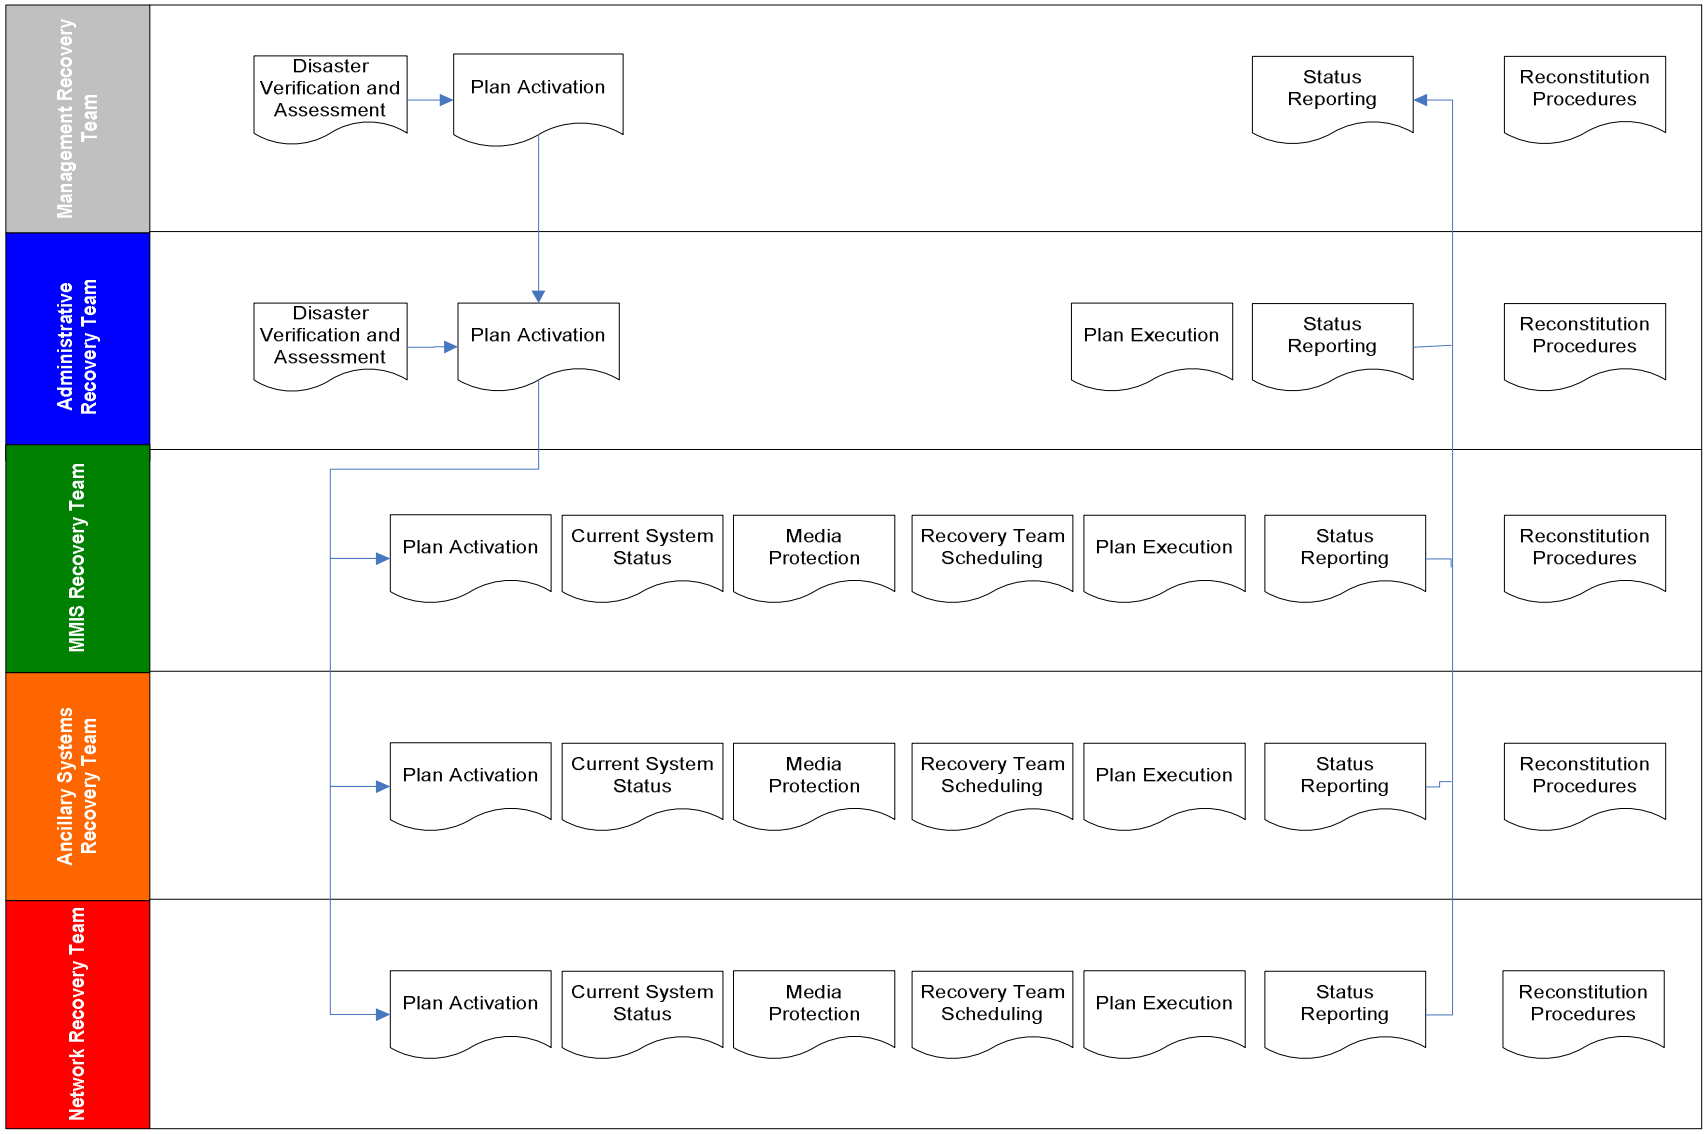
The **Network Recovery Team** has the following responsibilities:

- Determining the status of the network;
- Notifying and scheduling recovery team members;
- Protecting media and equipment;
- Installing/configuring equipment and servers;
- Activating the backup network; and,
- With respect to networked systems equipment Including routers, switches, firewalls and email systems:
  - Restoring system files from backup copies of electronic media;
  - Restoring connectivity to customers and providing connectivity from the hot site to customers;
  - Executing recovery procedures;

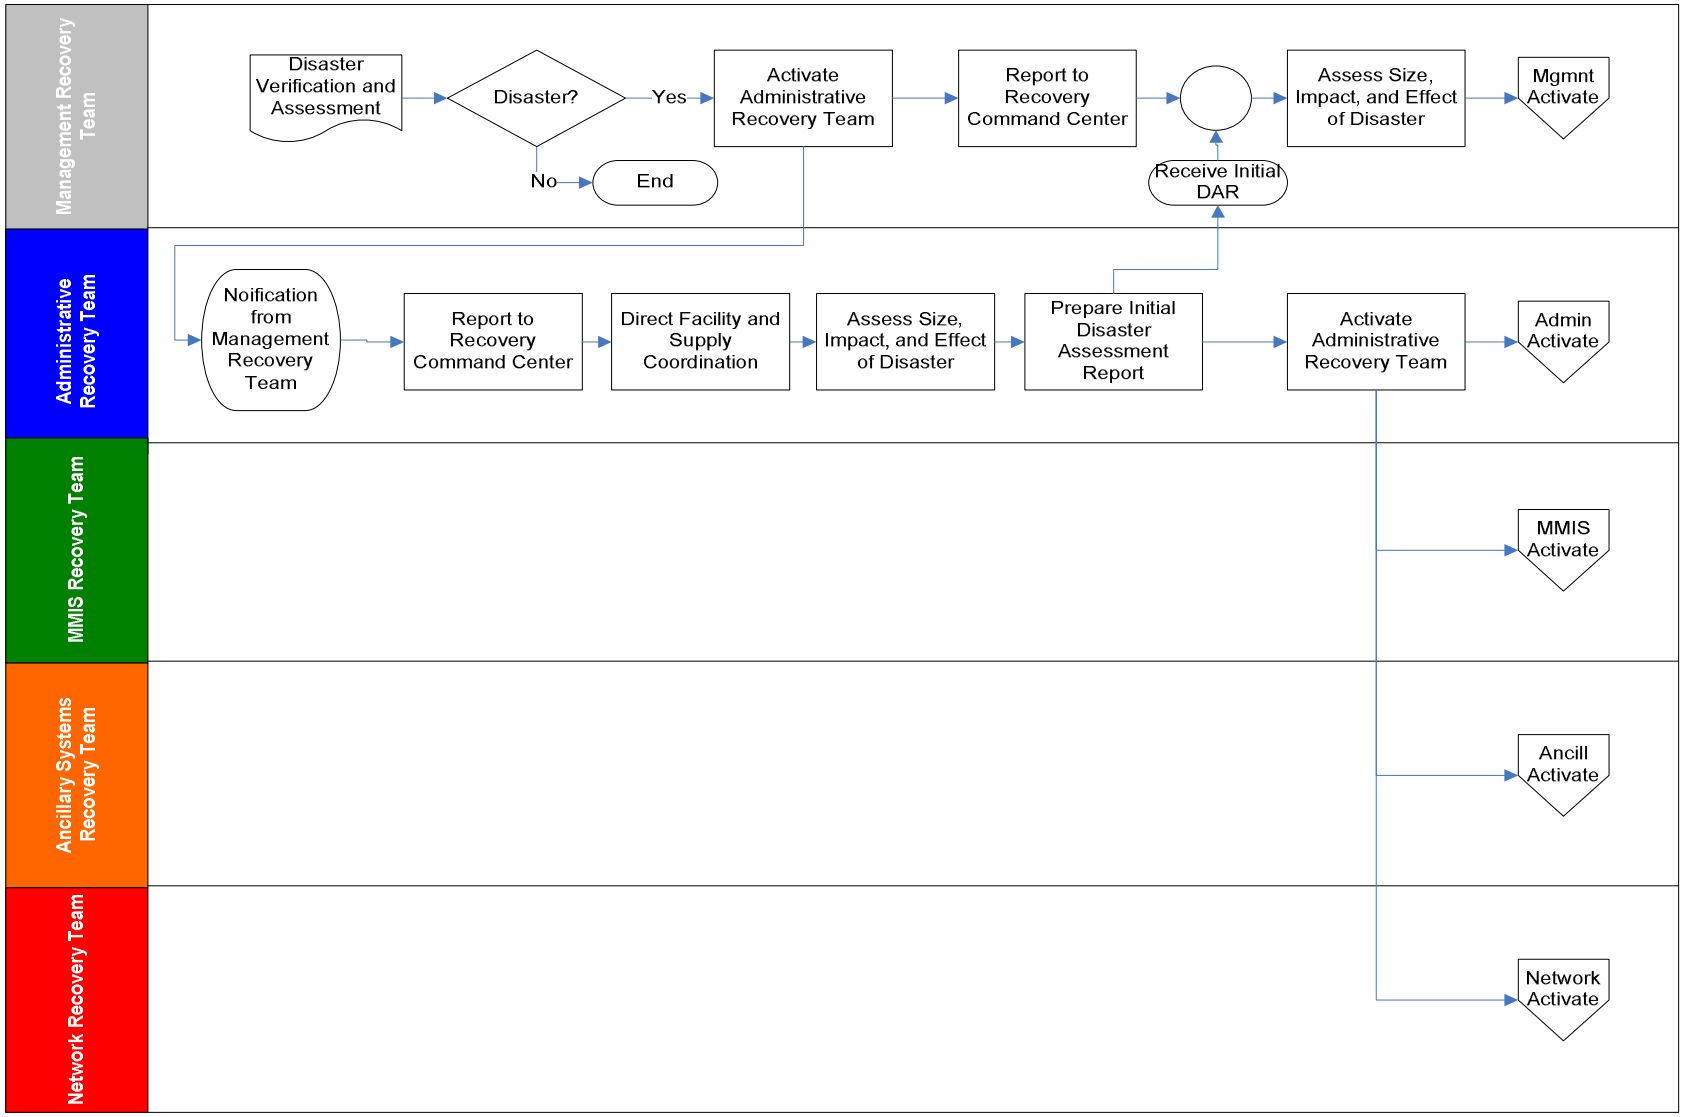
- Implementing security procedures; and,
- Reporting status to the Management Recovery Team.

Note: A summary flow chart of the **MMIS DISASTER RECOVER PLAN** with summary team activities is attached.

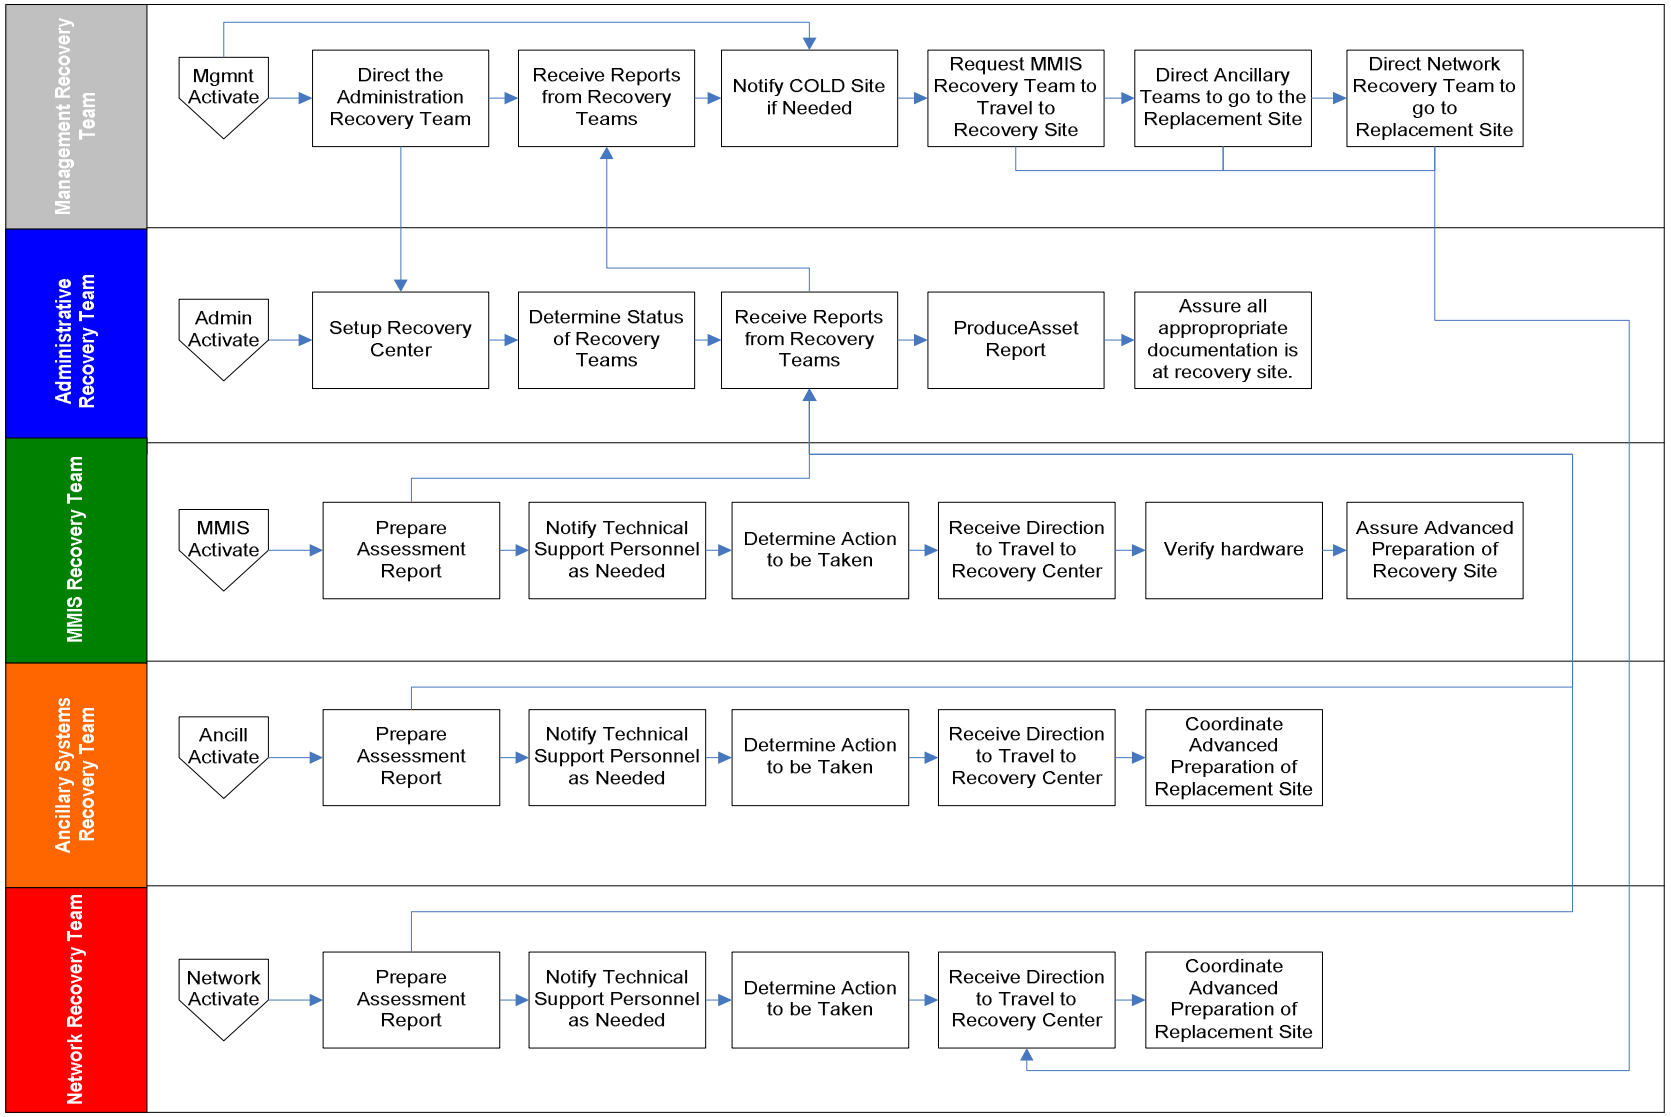
MMIS Disaster Recovery Plan



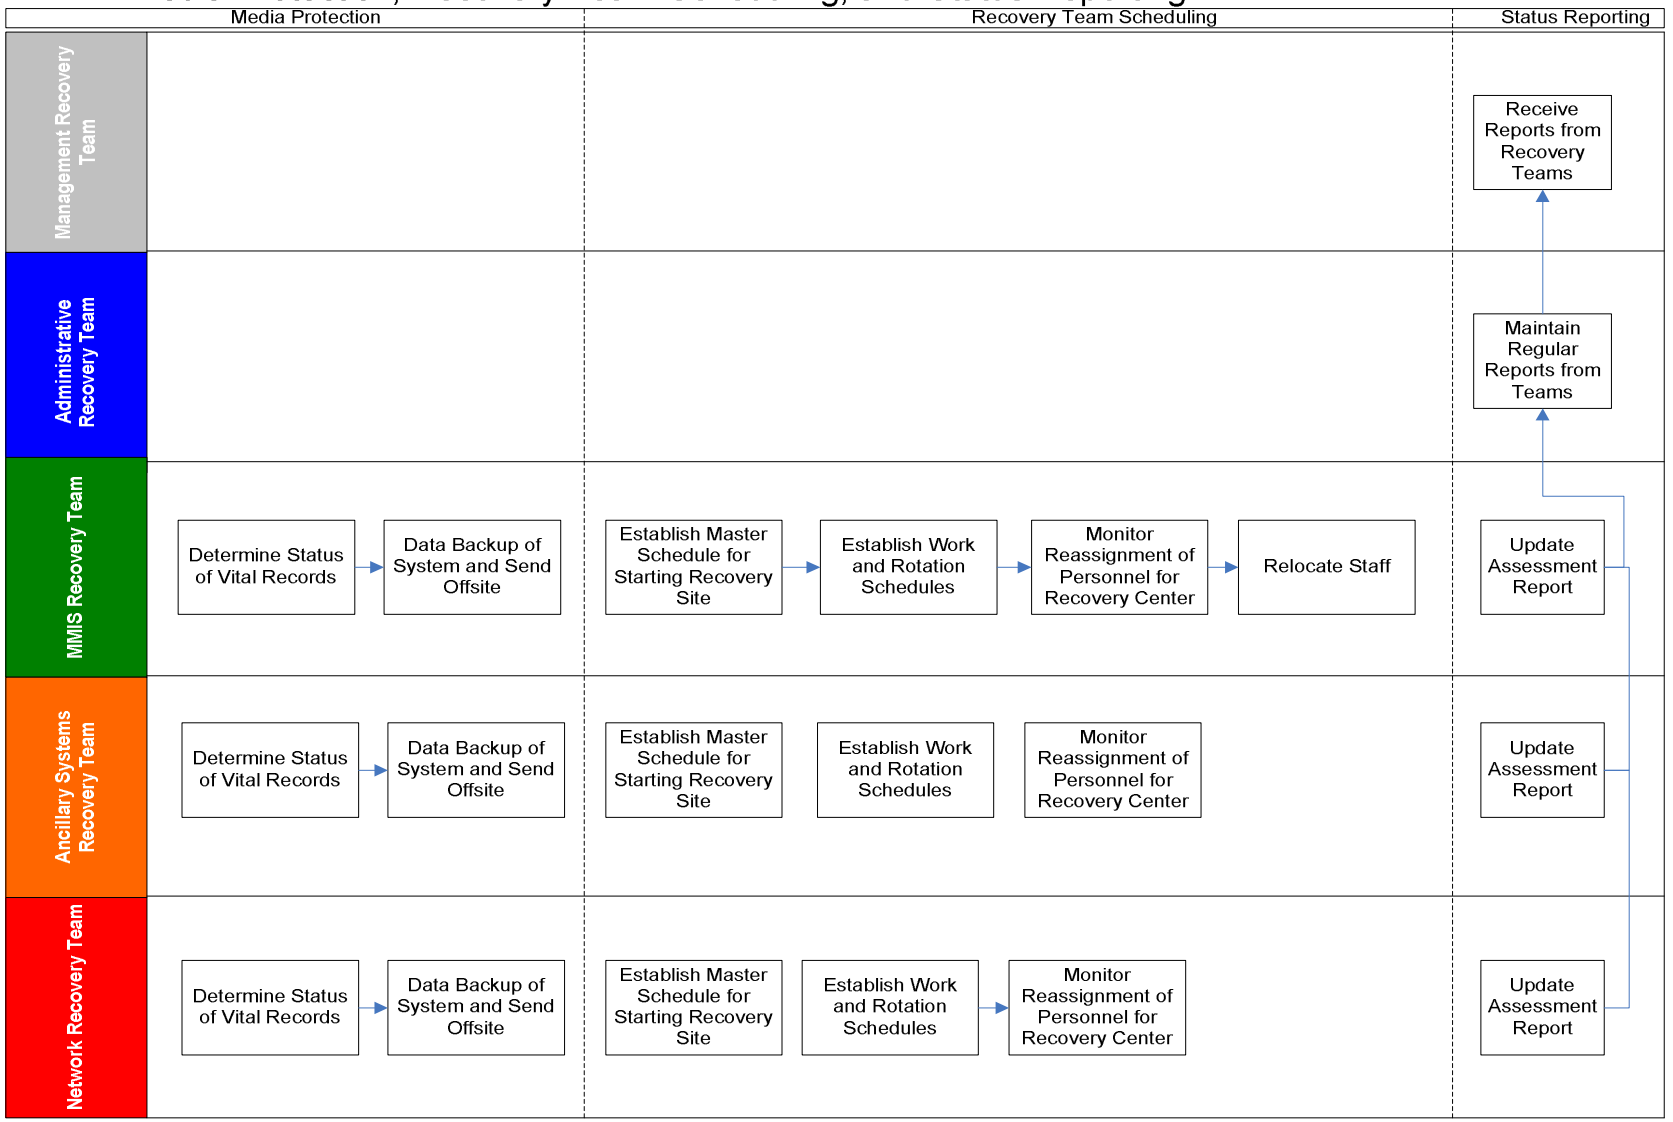
Disaster Verification and Disaster Assessment



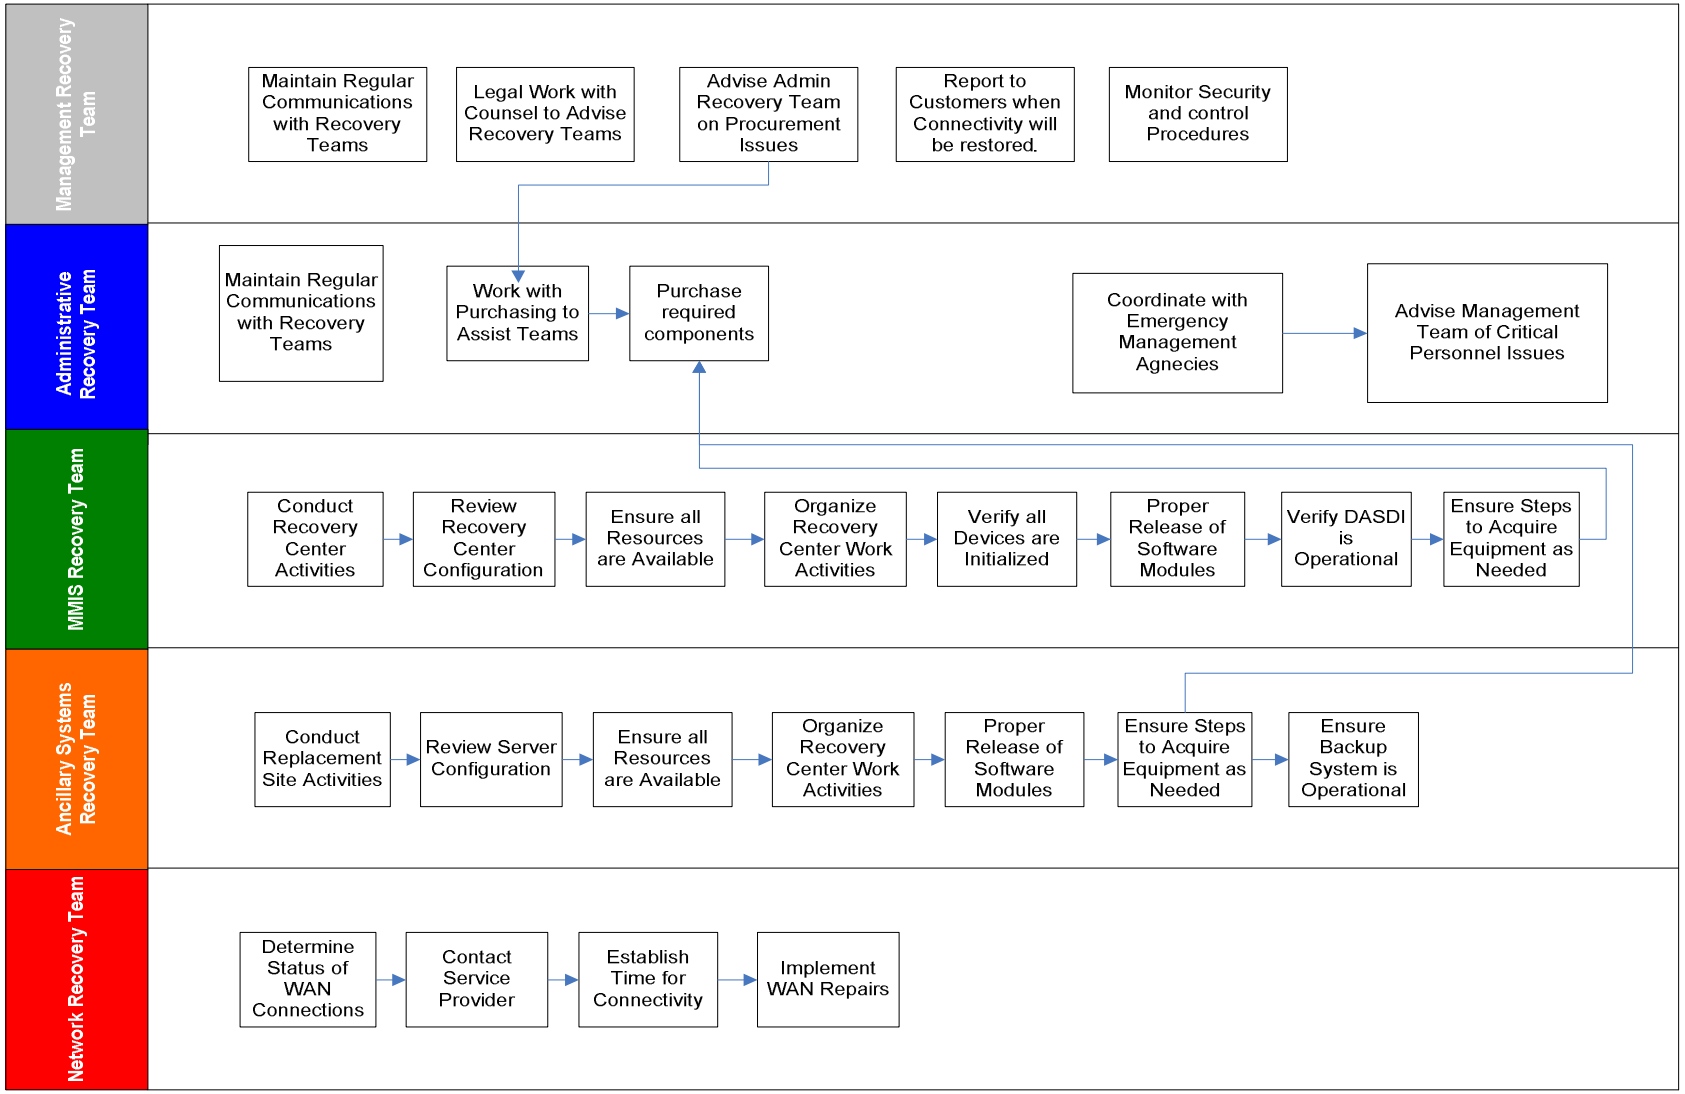
Plan Activation



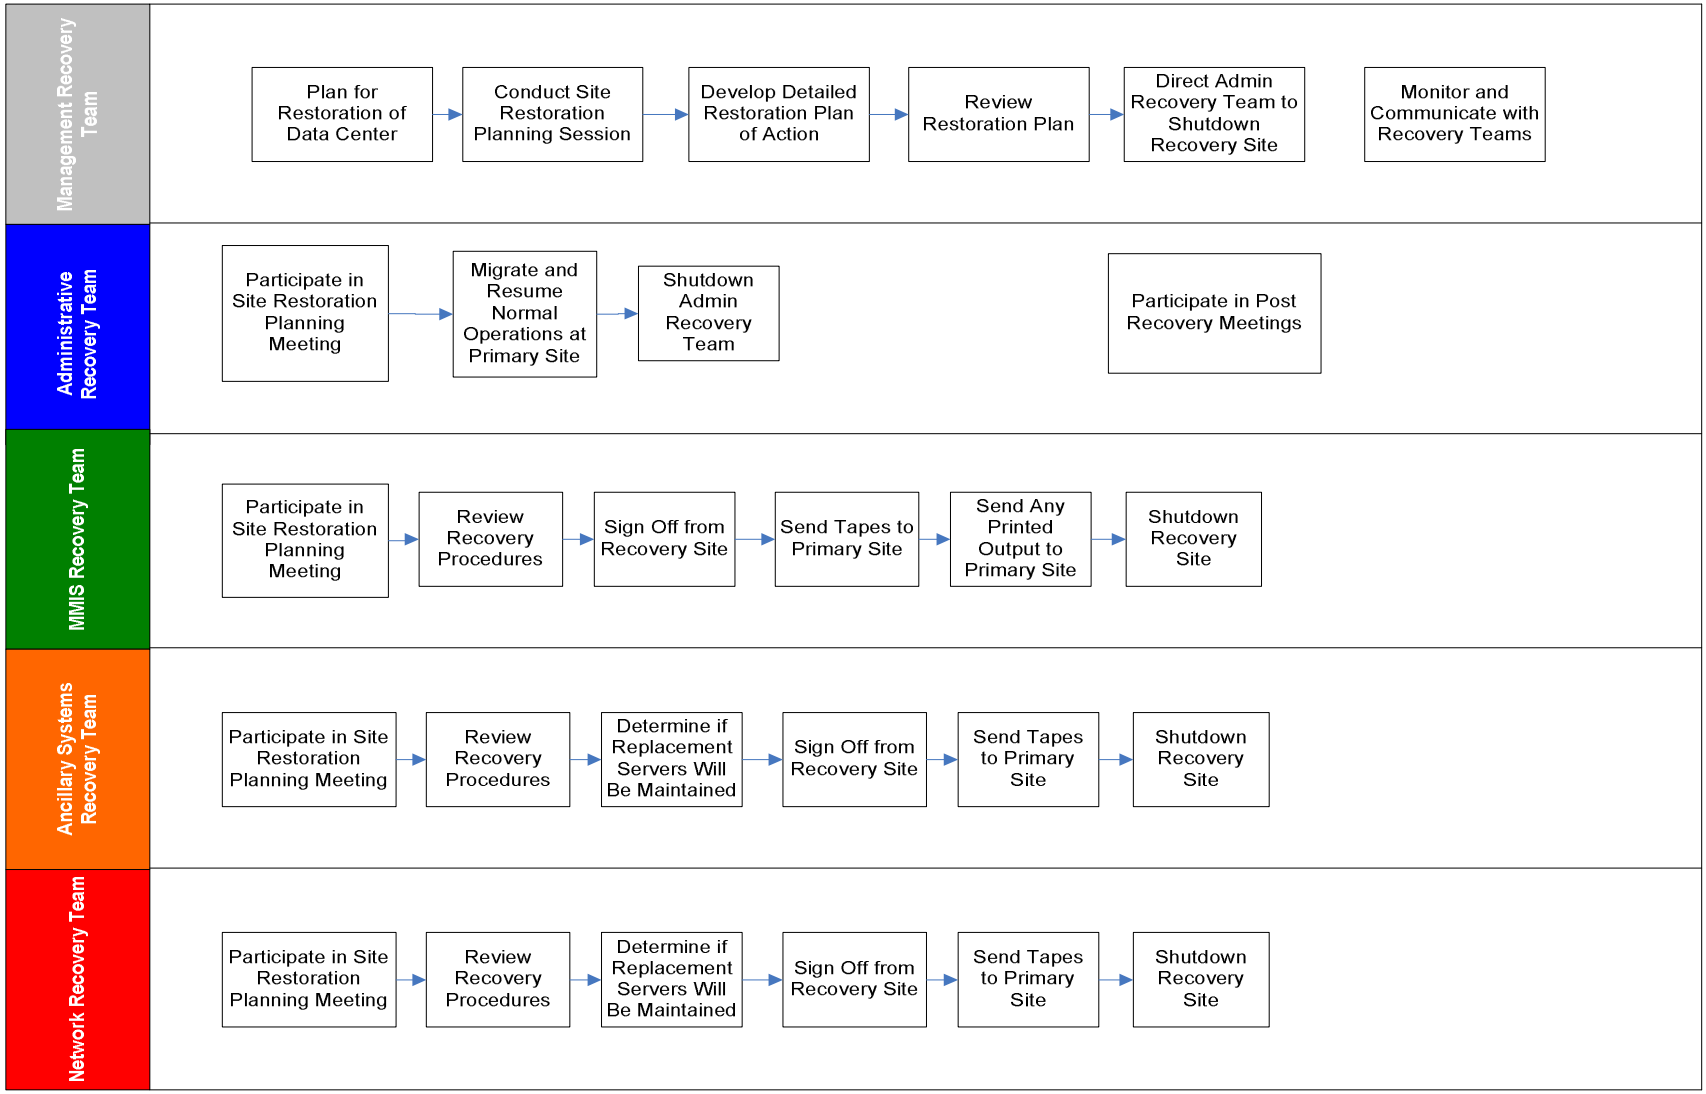
Media Protection, Recovery Team Scheduling, and Status Reporting



Plan Execution



Reconstitution Procedures



3 Plan Activation Process

Authority to declare a disaster is a crucial element of the plan and is assigned to a restricted number of individuals within the organization. The absence of these individuals could jeopardize the effectiveness of the Disaster Recovery Plan if the declaration process is delayed. Authorized members are listed in Appendix A. This procedure should be verified annually for accuracy and improvements. The activation process for the Disaster Recovery Plan is illustrated in Section 1.11 Plan Activation Process.

.

3.1 Disaster Event Guidelines

The decision to activate the plan in full or in part depends on a number of factors ultimately judged by the person(s) in charge. These factors include:

- The type of disaster incident;
- The effect of the incident including the extent and type of damage or outage;
- How long critical/essential services are unavailable or inaccessible;
- Whether the services are mission critical; and,
- The anticipated recovery time.

The following chart provides guidelines for the various disaster events:

Incident	Impact	Outage	Action Description
Building Damage	Facility unavailable, minor damage and situation under control	< 4 hours	Alert building management. Notify Management Recovery Team. Alert customers.
	Facility unavailable, moderate damage and situation may escalate	4 - 48 hours	Activate Management Recovery Team. Activate EDS Command Center. Alert recovery teams. Alert recovery center. Alert customers.

Incident	Impact	Outage	Action Description
	Facility unavailable, major damage and situation has escalated	> 48 hours	Activate Management Recovery Team. Activate EDS Command Center. Activate recovery teams. Activate recovery center. Activate alternate work site(s). Alert customers.
MMIS Outage	Critical services unavailable, minor outage and system can be repaired onsite	< 4 hours	Call maintenance vendor and initiate repairs. Notify Management Recovery Team. Alert customers.
	Critical services unavailable, moderate outage and situation may escalate if repairs are unsuccessful	4 - 48 hours	Activate Management Recovery Team. Activate EDS Command Center. Alert recovery teams. Alert recovery center. Alert customers.
	Critical services unavailable, major outage, repairs are not possible, and situation has escalated	> 48 hours	Activate Management Recovery Team. Activate EDS Command Center. Activate recovery teams. Activate recovery center. Alert customers.
Ancillary Systems Outage	Critical services unavailable, minor outage and system can be repaired onsite	< 4 hours	Call maintenance vendor and initiate repairs. Notify Management Recovery Team. Alert customers.

Incident	Impact	Outage	Action Description
	Critical services unavailable, moderate outage and situation may escalate if repairs are unsuccessful	4 - 48 hours	Activate Management Recovery Team. Alert recovery teams. Alert hardware vendor(s). Alert customers.
	Critical services unavailable, major outage, repairs are not possible, and situation has escalated	> 48 hours	Activate Management Recovery Team. Activate recovery teams. Activate EDS Command Center. Order replacement equipment if required. Alert customers.
Network Outage	Critical services unavailable, minor outage and system can be repaired onsite	< 4 hours	Call maintenance vendor and initiate repairs. Notify Management Recovery Team. Alert customers.
	Critical services unavailable, moderate outage and situation may escalate if repairs are unsuccessful	4 - 48 hours	Activate Management Recovery Team. Alert recovery teams. Alert hardware vendor(s). Alert customers.
	Critical services unavailable, major outage, repairs are not possible, and situation has escalated	> 48 hours	Activate Management Recovery Team. Activate recovery teams. Activate EDS Command Center. Order replacement equipment if required. Alert customers.

3.2 Chain of Command

In the event the DRP is activated, the existing leadership structure and authority levels will generally remain in place. Realizing that one or more persons within the leadership structure may be unable to assume their duties, the following succession plan has been established:

Position
1. Account Manager
2. Deputy Account Manager
3. Operations Manager
4. Systems Operations Manager
5. Claims Manager
6. Provider Relations Manager

3.3 Recovery Team Assignments

In organizing the recovery teams, each person's responsibilities are assigned based on the restoration of specific business processes. Team members have the authority to carry out the responsibilities within their assigned area. The team structure consists of various sub-groups to facilitate the identification and resolution of systems and operational disruptions. Recovery teams have been defined to distribute recovery tasks as necessary.

Members of the recovery teams are listed in the following exhibits:

Team Name	Appendix
Management Recovery Team	Appendix A: Recovery Team Assignments
Administrative Recovery Team	Appendix A: Recovery Team Assignments
MMIS Recovery Team	Appendix A: Recovery Team Assignments
Ancillary System Recovery Team	Appendix A: Recovery Team Assignments
Network Recovery Team	Appendix A: Recovery Team Assignments

4 Appendix A: Recovery Team Assignments

See Appendix J Emergency Contact List for cross reference of role and name as well as alternative contact information.

4.1 Management Recovery Team

Name	Work Number
Kentucky Medicaid Account Manager	209-3190
Kentucky Medicaid Deputy Account Manager	209-3191
Kentucky Medicaid Operations Manager	209-3195
Kentucky Medicaid Financial Manager	765-451-4763
Kentucky Medicaid Systems Operations Manager	209-3126
Kentucky Medicaid Claims Manager	209-3129
Kentucky Medicaid Provider Relations Manager	209-3176

4.2 Administrative Recovery Team

Name	Work Number
Kentucky Medicaid Deputy Account Manager	209-3191
Kentucky Medicaid Administrative Assistant - Personnel	209-3189
Kentucky Medicaid Administrative Assistant – Business Office	209-3192
Kentucky Medicaid Administrative Assistant	209-3000
Kentucky Medicaid Communications	209-3078

4.3 MMIS Recovery Team

Name	Work Number
Kentucky Medicaid Technical Delivery Manager	209-3174
Kentucky Medicaid DSS Manager	209-3128

Name	Work Number
EDS MMIS UNIX System administrator	972-604-6630
USGS Leverage Delivery Infrastructure Analyst	972-604-7204
EDS MMIS Database administrator	972-604-3341

4.4 Ancillary Systems Recovery Team

Name	Work Number
EDI Technical Functional area lead	972-604-2566
EDS Documentation Storage SME	972-604-3180
EDS MMIS UNIX System administrator	972-604-4499
EDS MMIS Database administrator	972-604-3341
USGS Leverage Delivery Infrastructure Analyst	972-604-7204

4.5 Network Recovery Team

Name	Work Number
Kentucky Medicaid LAN Manager	209-3177
EDS MMIS Platform SME	972-604-4499
EDS System Architect	972-604-0201
EDS Orlando Data Center Operation SME	407-207-8990 X 260
Kentucky Medicaid Infrastructure Specialist - Security	209-3149
Kentucky Medicaid Infrastructure Specialist - Network	209-3148

5 Appendix B: Management Recovery Team Procedures

5.1 Automated Voice Response System (AVRS)

5.1.1 Level 1

Critical services are unavailable, minor damage or outage and system can be repaired on site.

Duration: Less than four hours.

5.1.1.1 Receiving the initial event alert

5.1.1.1.1 Notified by AVRS team of outage and estimated time of restoration of service

5.1.1.2 Verifying the disaster event

5.1.1.2.1 Contact the AVRS team point of contact to determine initial status

5.1.1.3 Providing strategic direction to the Administrative Recovery Team

5.1.1.3.1 Authorize the ancillary team point of contact to complete repairs

5.1.1.4 Performing public relations

5.1.1.4.1 Notify the appropriate Commonwealth users of the outage and estimate the time to complete the fix

5.1.1.4.2 Notify internal EDS teams of the outage and estimate time to complete the fix

5.1.1.5 Addressing legal issues

5.1.1.5.1 Determine the effect of the outage in relation to the contract

5.1.1.6 Monitoring recovery operations

5.1.1.6.1 Notified by AVRS of the status of restoration activities

5.1.2 Level 2

Critical services are unavailable, moderate damage or outage and situation may escalate if repairs are unsuccessful.

Duration: More than four hours but less than 48 hours.

5.1.2.1 Receiving the initial disaster alert

5.1.2.1.1 Notified by AVRS team of the outage and estimated time of restoration of service

5.1.2.2 Verifying the disaster event

5.1.2.2.1 Contact AVRS team contact to determine the initial status

5.1.2.3 Assessing the disaster event

5.1.2.3.1 Determine the extent of the event in consultation with the AVRS team contact

5.1.2.4 Activating all or part of the Disaster Recovery Plan

5.1.2.4.1 Determine that the event classifies as a level 2 outage based on the AVRS team evaluation of the time required to restore the AVRS system to full functionality

5.1.2.4.2 Provide the authority to acquire replacement hardware/software

5.1.2.4.3 Provide the authority to activate the backup site

5.1.2.5 Providing strategic direction to the Administrative Recovery team

5.1.2.5.1 Notify Administrative Recovery team of the priority of restoration of service

5.1.2.6 Performing public relations

5.1.2.6.1 Notify appropriate Commonwealth users of outage and estimate time to complete fix

5.1.2.6.2 Notify internal EDS teams of outage and estimate time to complete fix

5.1.2.7 Addressing legal issues

5.1.2.7.1 Determine effect of outage in relation to contract

5.1.2.8 Monitoring recovery operations

5.1.2.8.1 Notified by AVRS team lead of status of restoration activities

5.1.2.9 Serving as primary liaison to emergency response personnel

5.1.2.9.1 Notify emergency response personnel if outage/damage warrants

5.1.2.9.2 Notify EDS Security if outage/damage warrants

5.1.2.10 Activating the recovery center(s)

5.1.2.10.1 Notify back-up AVRS site contact that account request cut over.

5.1.3 Level 3

Critical services unavailable, major damage or outage, repairs are not possible, and situation has escalated

Duration: Greater than 48 hours

5.1.3.1 Receiving the initial disaster alert

5.1.3.1.1 Notified by AVRS team of outage and estimated time of restoration of service

5.1.3.2 Verifying the disaster event

5.1.3.2.1 Contact AVRS team contact to determine initial status

5.1.3.3 Assessing the disaster event

5.1.3.3.1 Determine the extent of the event in consultation with AVRS team contact

5.1.3.4 Activating all or part of the Disaster Recovery Plan

5.1.3.4.1 Determine that event classifies as a level 3 outage based on AVRS team evaluation of the time required to restore the AVRS system to full functionality

5.1.3.4.2 Provide authority to acquire replacement hardware/software

5.1.3.4.3 Provide authority to activate the backup site providing strategic direction to the Administrative Recovery team

5.1.3.4.4 Notify Herndon disaster recovery site of long term back up requirements

5.1.3.5 Performing public relations

5.1.3.5.1 Notify appropriate Commonwealth users of outage and estimate time to complete fix

5.1.3.5.2 Notify internal EDS teams of outage and estimate time to complete fix

5.1.3.5.3 Notify EDS Corporate Relations of outage/damage for their drafting of official news release

5.1.3.6 Addressing legal issues

5.1.3.6.1 Determine effect of outage in relation to contract

5.1.3.7 Monitoring recovery operations

5.1.3.7.1 Notified by AVRS team lead of status of restoration activities

5.1.3.7.2 Notified by EDS Corporate Real Estate of status of relocation activities

5.1.3.8 Serving as primary liaison to emergency response personnel

5.1.3.8.1 Dial 911 and notify local emergency services (such as the fire department and police) if outage/damage warrants

5.1.3.8.2 Notify EDS Security if outage/damage warrants

5.2 Bulletin Board System (BBS)

Note: The BBS refers to Kentucky Health Net

5.2.1 Level 1

Critical services are unavailable, minor damage or outage and system can be repaired on site.

Duration: Less than four hours.

5.2.1.1 Receiving the initial event alert

5.2.1.1.1 Notified by BBS team of outage and estimated time of restoration of service

5.2.1.2 Verifying the disaster event

5.2.1.2.1 Contact the BBS team point of contact to determine initial status

5.2.1.3 Providing strategic direction to the Administrative Recovery Team

5.2.1.3.1 Authorize the ancillary team point of contact to complete repairs

5.2.1.4 Performing public relations

5.2.1.4.1 Notify the appropriate Commonwealth users of the outage and estimate the time to complete the fix

5.2.1.4.2 Notify internal EDS teams of the outage and estimate time to complete the fix

5.2.1.5 Addressing legal issues

5.2.1.5.1 Determine the effect of the outage in relation to the contract

5.2.1.6 Monitoring recovery operations

5.2.1.6.1 Notified by BBS team of the status of restoration activities

5.2.2 Level 2

Critical services are unavailable, moderate damage or outage and situation may escalate if repairs are unsuccessful.

Duration: More than four hours but less than 48 hours.

5.2.2.1 Receiving the initial disaster alert

5.2.2.1.1 Notified by BBS team of the outage and estimated time of restoration of service

5.2.2.2 Verifying the disaster event

5.2.2.2.1 Contact BBS team contact to determine the initial status

5.2.2.3 Assessing the disaster event

5.2.2.3.1 Determine the extent of the event in consultation with the BBS team contact

5.2.2.4 Activating all or part of the Disaster Recovery Plan

5.2.2.4.1 Determine that the event classifies as a level 2 outage based on the BBS team evaluation of the time required to restore the BBS to full functionality

5.2.2.4.2 Provide the authority to acquire replacement hardware/software

5.2.2.4.3 Provide the authority to activate the backup site

5.2.2.5 Providing strategic direction to the Administrative Recovery team

5.2.2.5.1 Notify Administrative Recovery team of the priority of restoration of service

5.2.2.6 Performing public relations

5.2.2.6.1 Notify appropriate Commonwealth users of outage and estimate time to complete fix

5.2.2.6.2 Notify internal EDS teams of outage and estimate time to complete fix

5.2.2.7 Addressing legal issues

5.2.2.7.1 Determine effect of outage in relation to contract

5.2.2.8 Monitoring recovery operations

5.2.2.8.1 Notified by BBS team lead of status of restoration activities

5.2.2.9 Serving as primary liaison to emergency response personnel

5.2.2.9.1 Notify emergency response personnel if outage/damage warrants

5.2.2.9.2 Notify EDS Security if outage/damage warrants

5.2.2.10 Activating the recovery center(s)

5.2.2.10.1 Notify back-up BBS site contact that account request cut over.

5.2.3 Level 3

Critical services unavailable, major damage or outage, repairs are not possible, and situation has escalated

Duration: Greater than 48 hours

5.2.3.1 Receiving the initial disaster alert

5.2.3.1.1 Notified by BBS team of outage and estimated time of restoration of service

5.2.3.2 Verifying the disaster event

5.2.3.2.1 Contact BBS team contact to determine initial status

5.2.3.3 Assessing the disaster event

5.2.3.3.1 Determine the extent of the event in consultation with BBS team contact

5.2.3.4 Activating all or part of the Disaster Recovery Plan

5.2.3.4.1 Determine that event classifies as a level 3 outage based on BBS team evaluation of the time required to restore the BBS to full functionality

5.2.3.4.2 Provide authority to acquire replacement hardware/software

5.2.3.4.3 Provide authority to activate the backup site providing strategic direction to the Administrative Recovery team

5.2.3.4.4 Notify Herndon disaster recovery site of long term back up requirements

5.2.3.5 Performing public relations

5.2.3.5.1 Notify appropriate Commonwealth users of outage and estimate time to complete fix

5.2.3.5.2 Notify internal EDS teams of outage and estimate time to complete fix

5.2.3.5.3 Notify EDS Corporate Relations of outage/damage for their drafting of official news release

5.2.3.6 Addressing legal issues

5.2.3.6.1 Determine effect of outage in relation to contract

5.2.3.7 Monitoring recovery operations

5.2.3.7.1 Notified by BBS team lead of status of restoration activities

5.2.3.7.2 Notified by EDS Corporate Real Estate of status of relocation activities

5.2.3.8 Serving as primary liaison to emergency response personnel

5.2.3.8.1 Dial 911 and notify local emergency services (such as the fire department and police) if outage/damage warrants

5.2.3.8.2 Notify EDS Security if outage/damage warrants

5.3 Claim Image Viewing (CIV)

Note: The Kentucky MMIS InterChange Claims Image Viewing solution is Hyland Software, Inc's. OnBase®

5.3.1 Level 1

Critical services are unavailable, minor damage or outage and system can be repaired on site.

Duration: Less than four hours.

5.3.1.1 Receiving the initial event alert

5.3.1.1.1 Notified by the CIV team of outage and estimated time of restoration of service

5.3.1.2 Verifying the disaster event

5.3.1.2.1 Contact the CIV team point of contact to determine initial status

5.3.1.3 Providing strategic direction to the Administrative Recovery team

5.3.1.3.1 Authorize the ancillary team point of contact to complete repairs

5.3.1.4 Performing public relations

5.3.1.4.1 Notify the appropriate Commonwealth users of the outage and estimate the time to complete the fix

5.3.1.4.2 Notify internal EDS teams of the outage and estimate time to complete the fix

5.3.1.5 Addressing legal issues

5.3.1.5.1 Determine the effect of the outage in relation to the contract

5.3.1.6 Monitoring recovery operations

5.3.1.6.1 Notified by the CIV team of the status of restoration activities

5.3.2 Level 2

Critical services are unavailable, moderate damage or outage and situation may escalate if repairs are unsuccessful.

Duration: More than four hours but less than 48 hours.

5.3.2.1 Receiving the initial disaster alert

5.3.2.1.1 Notified by the CIV team of the outage and estimated time of restoration of service

5.3.2.2 Verifying the disaster event

5.3.2.2.1 Contact the CIV team contact to determine the initial status

5.3.2.3 Assessing the disaster event

5.3.2.3.1 Determine the extent of the event in consultation with the CIV team contact

5.3.2.4 Activating all or part of the Disaster Recovery Plan

5.3.2.4.1 Determine that the event classifies as a level 2 outage based on the CIV team evaluation of the time required to restore the CIV system to full functionality

5.3.2.4.2 Provide the authority to acquire replacement hardware/software

5.3.2.4.3 Provide the authority to activate the backup site

5.3.2.5 Providing strategic direction to the Administrative Recovery team

5.3.2.5.1 Notify Administrative Recovery team of the priority of restoration of service

5.3.2.6 Performing public relations

5.3.2.6.1 Notify appropriate Commonwealth users of outage and estimate time to complete fix

5.3.2.6.2 Notify internal EDS teams of outage and estimate time to complete fix

5.3.2.7 Addressing legal issues

5.3.2.7.1 Determine effect of outage in relation to contract

5.3.2.8 Monitoring recovery operations

5.3.2.8.1 Notified by the CIV team lead of status of restoration activities

5.3.2.9 Serving as primary liaison to emergency response personnel

5.3.2.9.1 Notify emergency response personnel if outage/damage warrants

5.3.2.9.2 Notify EDS Security if outage/damage warrants

5.3.2.10 Activating the recovery center(s)

5.3.2.10.1 Notify back-up CIV site contact that account request cut over.

5.3.3 Level 3

Critical services unavailable, major damage or outage, repairs are not possible, and situation has escalated

Duration: Greater than 48 hours

5.3.3.1 Receiving the initial disaster alert

5.3.3.1.1 Notified by the CIV team of outage and estimated time of restoration of service

5.3.3.2 Verifying the disaster event

5.3.3.2.1 Contact the CIV team contact to determine initial status

5.3.3.3 Assessing the disaster event

5.3.3.3.1 Determine the extent of the event in consultation with the CIV team contact

5.3.3.4 Activating all or part of the Disaster Recovery Plan

5.3.3.4.1 Determine that event classifies as a level 3 outage based on the CIV team evaluation of the time required to restore the CIV system to full functionality

5.3.3.4.2 Provide authority to acquire replacement hardware/software

5.3.3.4.3 Provide authority to activate the backup site providing strategic direction to the Administrative Recovery team

5.3.3.4.4 Notify Herndon disaster recovery site of long term back up requirements

5.3.3.5 Performing public relations

5.3.3.5.1 Notify appropriate Commonwealth users of outage and estimate time to complete fix

5.3.3.5.2 Notify internal EDS teams of outage and estimate time to complete fix

5.3.3.5.3 Notify EDS Corporate Relations of outage/damage for their drafting of official news release

5.3.3.6 Addressing legal issues

5.3.3.6.1 Determine effect of outage in relation to contract

5.3.3.7 Monitoring recovery operations

5.3.3.7.1 Notified by the CIV team lead of status of restoration activities

5.3.3.7.2 Notified by EDS Corporate Real Estate of status of relocation activities

5.3.3.8 Serving as primary liaison to emergency response personnel

5.3.3.8.1 Dial 911 and notify local emergency services (such as the fire department and police) if outage/damage warrants

5.3.3.8.2 Notify EDS Security if outage/damage warrants

5.4 Decision Support System (DSS)

5.4.1 Level 1

Critical services are unavailable, minor damage or outage and system can be repaired on site.

Duration: Less than four hours.

5.4.1.1 Receiving the initial event alert

5.4.1.1.1 Notified by the DSS team of outage and estimated time of restoration of service

5.4.1.2 Verifying the disaster event

5.4.1.2.1 Contact the DSS team point of contact to determine initial status

5.4.1.3 Providing strategic direction to the Administrative Recovery team

5.4.1.3.1 Authorize the ancillary team point of contact to complete repairs

5.4.1.4 Performing public relations

5.4.1.4.1 Notify the appropriate Commonwealth users of the outage and estimate the time to complete the fix

5.4.1.4.2 Notify internal EDS teams of the outage and estimate time to complete the fix

5.4.1.5 Addressing legal issues

5.4.1.5.1 Determine the effect of the outage in relation to the contract

5.4.1.6 Monitoring recovery operations

5.4.1.6.1 Notified by the DSS of the status of restoration activities

5.4.2 Level 2

Critical services are unavailable, moderate damage or outage and situation may escalate if repairs are unsuccessful.

Duration: More than four hours but less than 48 hours.

5.4.2.1 Receiving the initial disaster alert

5.4.2.1.1 Notified by the DSS team of the outage and estimated time of restoration of service

5.4.2.2 Verifying the disaster event

5.4.2.2.1 Contact the DSS team contact to determine the initial status

5.4.2.3 Assessing the disaster event

5.4.2.3.1 Determine the extent of the event in consultation with the DSS team contact

5.4.2.4 Activating all or part of the Disaster Recovery Plan

5.4.2.4.1 Determine that the event classifies as a level 2 outage based on the DSS team evaluation of the time required to restore the DSS to full functionality

5.4.2.4.2 Provide the authority to acquire replacement hardware/software

5.4.2.4.3 Provide the authority to activate the backup site

5.4.2.5 Providing strategic direction to the Administrative Recovery team

5.4.2.5.1 Notify Administrative Recovery team of the priority of restoration of service

5.4.2.6 Performing public relations

5.4.2.6.1 Notify appropriate Commonwealth users of outage and estimate time to complete fix

5.4.2.6.2 Notify internal EDS teams of outage and estimate time to complete fix

5.4.2.7 Addressing legal issues

5.4.2.7.1 Determine effect of outage in relation to contract

5.4.2.8 Monitoring recovery operations

5.4.2.8.1 Notified by the DSS team lead of status of restoration activities

5.4.2.9 Serving as primary liaison to emergency response personnel

5.4.2.9.1 Notify emergency response personnel if outage/damage warrants

5.4.2.9.2 Notify EDS Security if outage/damage warrants

5.4.2.10 Activating the recovery center(s)

5.4.2.10.1 Notify the Herndon disaster recovery site contact that account request cut over.

5.4.3 Level 3

Critical services unavailable, major damage or outage, repairs are not possible, and situation has escalated

Duration: Greater than 48 hours

5.4.3.1 Receiving the initial disaster alert

5.4.3.1.1 Notified by the DSS team of outage and estimated time of restoration of service

5.4.3.2 Verifying the disaster event

5.4.3.2.1 Contact the DSS team contact to determine initial status

5.4.3.3 Assessing the disaster event

5.4.3.3.1 Determine the extent of the event in consultation with the DSS team contact

5.4.3.4 Activating all or part of the Disaster Recovery Plan

5.4.3.4.1 Determine that event classifies as a level 3 outage based on the DSS team evaluation of the time required to restore the DSS to full functionality

5.4.3.4.2 Provide authority to acquire replacement hardware/software

5.4.3.4.3 Provide authority to activate the backup site providing strategic direction to the Administrative Recovery team

5.4.3.4.4 Notify Herndon disaster recovery site of long term back up requirements

5.4.3.5 Performing public relations

5.4.3.5.1 Notify appropriate Commonwealth users of outage

5.4.3.5.2 Notify internal EDS teams of outage and estimate time to complete fix

5.4.3.5.3 Notify EDS Corporate Relations of outage/damage for their drafting of official news release

5.4.3.6 Addressing legal issues

5.4.3.6.1 Determine effect of outage in relation to contract

5.4.3.7 Monitoring recovery operations

5.4.3.7.1 Notified by the DSS team lead of status of restoration activities

50.2.7 Section G—Contract Data Requirements List

RFP Reference: 50.2.7 Section G—Contract Data Requirements List, Pages 280-281; 40.15 Contract Data Requirements List, Pages 254-267; 10.10 Life-Cycle Support Objectives, Paragraph 6, Page 12

The Contract Data Requirements List (CDRL) is a catalog of deliverables EDS will present to the State with the proposal and at various points during the Design, Development, and Implementation (DDI) Phase of the Replacement Medicaid Management Information System (MMIS).

In organizing our response to Section G, we started with the CDRLs listed in RFP Section 40.15 and added the data deliverables required by the work plan appearing in the Integrated Master Schedule.

The following table, Five Categories of CDRLs, organizes the CDRLs into five categories of data deliverables and identifies the source of each one.

Five Categories of CDRLs

CDRL	RFP Section 40.15	EDS Work Plan
Project Management		
Integrated Master Plan (IMP)	X	
Project Management Plan	X	
Integrated Master Schedule (IMS)	X	
Integrated Master Schedule—Post Requirements Validation		X
Integrated Master Schedule—Post Detailed System Design		X
Integrated Master Schedule—Post Construction		X

CDRL	RFP Section 40.15	EDS Work Plan
Earned Value Management System (EVMS) Reports	X	
Cost and Budget Estimates		X
Joint DDI Communications Plan	X	
Stakeholder Analysis		X
Staffing Management Plan		X
Risk and Issue Management Plan	X	
Identification, Analysis, & Response Plan		X
Change/Configuration Management Plan	X	
Software Development and Systems Engineering Methodology	X	
Security Plan	X	
Training Plan	X	
Deployment/Rollout Plan	X	
Business Continuity/Disaster Recovery Plan	X	
Turnover Plan	X	
Data Accession List (DAL)	X	
Technical Design		
General Technical Requirement Design		X
System-wide Architecture Technical Design		X
Recipient Technical Design		X
Eligibility Verification System (EVS) Technical Design		X
Benefit Administration Technical Design		X
Provider Technical Design		X
Claims/Point of Sale Technical Design		X
Third-Party Liability (TPL) Technical Design		X
Prior Approval (PA) Technical Design		X
Automated Voice Response System Technical Design		X
Managed Care Technical Design		X
Management and Administrative Reporting System (MARS) Technical Design		X
Data Entry Technical Design		X
Reference Technical Design		X
Financial Technical Design		X

CDRL	RFP Section 40.15	EDS Work Plan
Health Check — Early and Periodic Screening, Diagnosis, and Treatment (DPSDT) Technical Design		X
Drug Rebate Technical Design		X
Drug Utilization Review (DUR) Technical Design		X
Enterprise Integration Services (EIS) Technical Design		X
Transition		
MMIS System Documentation		X
Training Materials/Manuals		X
Provider Documentation		X
MMIS Certification Documentation and Presentation Materials		X
Operations Management Plan (OMP)	X	
Operations Manuals		X
Special Contingency Plan		X
Testing		
Master Test and Quality Assurance Plan (MTQAP)	X	
Integrated Structured Testing (IST) Results		X
Parallel Test Results		X
Volume/Stress Test Results		X
Conversion		
Data Conversion and Migration Plan	X	
Preliminary Conversion Test Results		X
Final Conversion Test Results		X

In some cases, EDS added information to the above artifacts already identified by the State in the RFP and supplemented the descriptions by adding a new row titled "EDS DESCRIPTION." Our suggested changes to the CDRLs are based on our proven best practice DDI delivery work pattern to reduce the implementation risk through proven processes and deliverables.

EDS will deliver most project and system documentation within iTRACE, the real-time information repository. iTRACE is a fully client-facing Web site that serves as the repository for system and project documentation. Through an intranet connection, staff members will have full read access (and, where appropriate, update access) to iTRACE. Therefore, if staff members need general

and detailed system information, they can access that information through iTRACE. (For more information on iTRACE, please refer to proposal section 50.2.4.1.2, Software Development and Systems Engineering Methodology.)

Project Management

TITLE	Integrated Master Plan (IMP)		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	With Proposal: see proposal section 50.2.5.1
METHOD OF DELIVERY	Electronic and paper with Proposal; electronic thereafter, through iTRACE		
DESCRIPTION	This document is an event-based plan consisting of a hierarchy of project events (milestones), with each event being supported by specific accomplishments and each accomplishment associated with specific criteria to be satisfied for its completion. ❑ An event is a project assessment point that occurs at the culmination of significant project activities: accomplishments and criteria. ❑ An accomplishment is the desired result(s) before or at completion of an event that indicates a level of the project's progress. ❑ Criteria provide definitive evidence that a specific accomplishment has been completed. Entry criteria reflect what must be done to be ready to initiate a review, demonstration, or test. Exit criteria reflect what must be done to clearly ascertain the event has been successfully completed. If there are any important processes supporting events that are not described in other plans or proposal approaches, a brief narrative should be written to provide greater understanding. Additionally, any support the Vendor requires from the State must be identified for each item in the IMP in enough detail for the State to understand the quantity and types of resources it needs to make available. There are overlaps in the content of IMP and the Statement of Work (SOW). The SOW should be comprehensive, thus allowing some reduction in the content and descriptions in the IMP where it duplicates SOW material. Additionally, as identified above, there are overlaps in the content of the IMP and many of the stand-alone plans. In these cases, the narrative details should reside in the stand-alone plans. Changes to the IMP, other than minor clarifications, usually require a contract change.		
EDS DESCRIPTION	Besides the description above, the EDS IMP will provide an overview of the following: ❑ EDS' Systems Life Cycle, Version 3 (SLC 3) software development methodology ❑ Project Management 2 (PM 2) methodology ❑ Global Applications Delivery Quality Management System (GAD QMS) EDS outlines the high-level steps for managing a DDI project so that the State and EDS will have common process expectations.		

TITLE	Project Management Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	With Proposal: see Proposal Section E—Project Management Plan
METHOD OF DELIVERY	Electronic and paper with proposal. Electronic thereafter, through iTRACE		
DESCRIPTION	This document will define how project activities are executed, monitored, and controlled. It will reflect how and when a project's objectives are to be achieved by showing the major products, milestones, activities, and resources required on the project. This document describes the processes for facilitating adherence to State, DHHS, and Offeror-established policies, standards, guidelines, and procedures. Significant portions of the Project Management Plan are contained in other data items described in the CDRL: These include the IMP, Integrated Master Schedule, Master Test and Quality Assurance Plan, Joint DDI Communications Plan, Risk and Issue Management Plan, and Change Management Plan. The Project Management Plan can reference these documents rather than duplicating the information. Besides these items, the minimum requirements for the Project Management Plan are as follows: ❑ Project management overview ❑ Objectives and priorities ❑ Project planning process ❑ Planning assumptions, constraints, and decisions ❑ Project Organization and Staffing Plan with roles and responsibilities ❑ Project deliverables and approval process ❑ Standards, tools, and techniques to be used ❑ Monitoring and control procedures for cost, schedule, scope, and staffing ❑ Performance metrics reporting process ❑ Metrics data quality process ❑ Financial reporting processes using an Earned Value Management System ❑ Electronic data-sharing system and process ❑ Project status reporting process ❑ Project management review process This document must describe the processes for evolution/updates to the PMP, along with version control.		
EDS DESCRIPTION	The project management plan is contained within the Integrated Master Plan.		

TITLE	Integrated Master Schedule (IMS)		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	At least monthly	1ST SUBMISSION DATE	With Proposal: see Proposal Section 50.2.5.2
METHOD OF DELIVERY	Electronic and paper with Proposal; electronic thereafter (MS Project)		
DESCRIPTION	This document establishes dates and dependencies for items from the IMP, along with the detailed tasks needed to complete the activities. For the Proposal, the IMS should be at a level of detail needed to demonstrate support of the IMP and convey a realistic approach. Additionally, at least the first three months of the project need to be in detail at the time of the Proposal submission (with dates relative to Contract award). During Contract execution, detailed portions of the IMS shall always be maintained three or more months in the future.		
EDS DESCRIPTION	Besides the description above, EDS will provide the following in the Integrated Master Schedule: ❑ **Key milestone dates—**These dates include completion of the project planning phases, business and technical design phases, comprehensive testing plans, development of the new system, and user acceptance testing. ❑ **Initiation and start-up activities—**These are tasks needed to set up and establish the facility, infrastructure, project team, and the project kickoff. ❑ **Project planning—**Activities conducted during project planning include a risk management plan, communication management plan, project schedule, personnel management plan, and quality management plan. ❑ **Project execution—**This phase contains the following: development, documentation, and milestone approval tasks for requirements validation; business and technical designs; training plans; testing plans; scenarios; unit, volume, and performance testing; interChange system notification of completion; system documentation; user and provider training and manuals; and acceptance testing. ❑ **Project control—**These are tasks and activities that are integrated in all project management activities related to the project. ❑ **Project closedown—**This phase includes tasks for our project closedown, such as lessons learned across this phase and the Implementation Planning Phase.		

TITLE	Integrated Master Schedule (IMS) – Post Requirements Validation (RV)		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	NA	1ST SUBMISSION DATE	05/11/2009
METHOD OF DELIVERY	Electronic—Microsoft Project		
EDS DESCRIPTION	Though EDS will present an updated IMS as a part of regular status reports, EDS expects significant changes to the IMS after the team achieves certain project milestones.		

TITLE	Integrated Master Schedule (IMS) – Post Detailed System Design (DSD)		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	NA	1ST SUBMISSION DATE	11/06/2009
METHOD OF DELIVERY	Electronic—Microsoft Project		
EDS DESCRIPTION	Though EDS will present an updated IMS as a part of regular status reports, EDS expects significant changes to the IMS after the team achieves certain project milestones.		

TITLE	Integrated Master Schedule (IMS) – Post Construction		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	NA	1ST SUBMISSION DATE	01/27/2010
METHOD OF DELIVERY	Electronic—Microsoft Project		
EDS DESCRIPTION	EDS will use this version of the IMS as an input into project reviews after completion of the DDI phase. The final IMS also will serve as an input into planning for future projects.		

TITLE	Earned Value Management System (EVMS) Reports		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	Monthly	1ST SUBMISSION DATE	One (1) month after contract award
DELIVERY	Electronic—iTRACE		
DESCRIPTION	This report shall describe the project status based on the Vendor's EVMS using the Vendor's format. At a minimum, this report shall provide earned value data for the current period (month), cumulative information to date for the project, estimates at complete, and explanations and projections for both the current period and cumulative to date variances.		

TITLE	Cost and Budget Estimates		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	11/06/2008
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document will serve as an input into the EVMS reports. EDS will baseline costs and budget estimates at the beginning of implementation.		

TITLE	Joint DDI Communications Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	One (1) month after Contract award
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document will define the methodology for sharing project-specific communications among project stakeholders during the DDI Phase. It will describe the processes to facilitate timely and appropriate generation, collection, dissemination, storage, and ultimate disposition of project information. It must include, but is not limited to: ❑ Information communications ❑ Information communication requirements/needs ❑ How, where, and when communications will occur ❑ Who will provide/receive the communication ❑ Meeting protocol procedures-noting when minutes are taken, and so on ❑ Provider communications approach—to include interactions among the State, Vendor, and providers; the Vendor's approach to provider awareness following Contract award; and the facilitation of ongoing project status communications ❑ Incident reporting and escalation—to include reporting of security incidents The State and Vendor will develop a mutually acceptable Joint DDI Communications Plan after Contract award. Updates or changes to the Joint DDI Communication Plan, as mutually agreed, will occur as needed.		

TITLE	Stakeholder Analysis		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	06/13/2008
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document is a subsection of the EDS Communications plan. EDS will detail State and EDS stakeholders and document their role in the DDI and Operations phases for the Replacement MMIS project. The analysis will allow project team leaders to determine security levels, communication types and frequency, Change Control Board participation, escalation paths, and more.		

TITLE	Staffing Management Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	11/21/2008
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document will detail EDS' staff management approach and describe the DDI organization for the Replacement MMIS. At a minimum, this document will include the following information: ❑ DDI Organizational Chart ❑ Description of DDI Organization ❑ Proposed Key DDI Personnel ❑ Job Descriptions and Resumes for Key DDI Personnel		

TITLE	Risk and Issue Management Plan (RIMP)		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	With Proposal: see proposal section 50.2.5.6
METHOD OF DELIVERY	Electronic and paper with Proposal; electronic (iTRACE) thereafter		
DESCRIPTION	The RIMP documents the general process for risk and issue management to include activities such as identification, evaluation, mitigation, and reporting, along with process cycle times. While the activities may differ in urgency and reporting to a certain extent, this plan shall integrate management of risks and issues to allow the earliest practical identification and mitigation to minimize impacts. The plan shall also cover the application of the general process to this specific project in terms of major activities and roles and responsibilities. This plan shall include processes for corrective action plans used when significant deviations from the IMP, IMS, requirements, or the Contract occur that would require greater explanation and documentation than a typical issue would need. Note: Specific risks and issues are not part of the plan. For the Proposals, they will be identified in the Initial Risk Assessment section. Vendors shall identify data item descriptions for the risks and issues being managed during Contract execution and add them to the CDRL.		
EDS DESCRIPTION	The plan includes procedures to manage risk throughout the project, including identifying risks, monitoring risk triggers and metrics, performing risk analyses, and executing a contingency plan if a risk event occurs. The risk management process includes the following activities: ❑ Critical success factors redefinition ❑ Risk categorization ❑ Risk probability and impact evaluation ❑ Risk prioritization ❑ Action plan Based on the outcome of the risk review, the project manager will assign personnel to assess, prioritize, and respond to the risks or simply update the risk documentation. Risk information will be brought to the attention of the State as necessary. The entire risk management process and plan is described in detail in section 50.2.5.6 Risk and Issue Management Plan.		

TITLE	Identification, Analysis & Response Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	10/28/2008
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document details the results of risk analysis activities. The Replacement MMIS team will determine the following for each identified risk: ❑ Probability of occurrence ❑ Impact of occurrence ❑ Mitigation response		

TITLE	Change/Configuration Management Plan (CMP)		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	10/10/2008
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document describes the process, roles, responsibilities, and documentation required to manage change within the project and subsequent operations. The plan should describe the operation of the Change Control Board both during the DDI and Operations phases. Changes managed with this process include both those that result in contract changes and those that do not require contract changes. The process described in this plan should manage changes to any baselined artifact. A baselined artifact is one that has been completed or signed off in its current version (that is, it is complete for its current use even if the Vendor or State plans to change it again in the future for a different purpose). Artifacts can include plans, software, data, or any other items over which management control is necessary. The CMP also shall contain information describing configuration management information necessary for the Vendor's daily artifact control that is at a level of detail lower than needs to be managed by the joint State/Vendor team (for example, source code management during construction). The Vendor's entire configuration management process is not required in this document.		

TITLE	Software Development and Systems Engineering Methodology		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS:	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	With Proposal: see proposal section 50.2.4.1.2
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document describes the Vendor's processes used for requirements analysis, design, construction, testing, deployment, documentation, quality assurance, and integration of the software and hardware for the system. It also should include the relationships of the methodology to risk and issue management, as well as overall quality management. The document should discuss development and deployment strategies, as well as any tools used for development or to improve efficiency and effectiveness. Software development and systems engineering planning and execution methods must be discussed in this document, along with how technical and quality metrics are used to control and improve the process and products. The IMP will identify key events, accomplishments, and criteria for project-specific activities that are supported by this methodology.		

TITLE	Security Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	02/04/2009
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document describes the DDI and operations processes and the system features that will make certain that the Vendor meets the Contract requirements for security. The plan shall describe how the Fiscal Agent intends to use current industry, State, and federal standards during the DDI Phase and within the Operations Phase to address the following: ❑ Security features inherent in the system design and operation ❑ Entity-wide security program planning and management, including risk management, data protection assurance, staff responsibilities, performance assessment and audit, and reporting ❑ Access controls for the system and the facility and assurance of system availability and performance ❑ Management of application development and change controls (with respect to security) ❑ Controls for protecting, managing, and monitoring the technical environment ❑ Controls for continuing services and access to information during and after minor to disastrous interruptions (by reference to the Business Continuity/Disaster Recover Plan) ❑ Responses to attacks on security and actual breaches of security		

TITLE	Training Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS:	State Material
FREQUENCY DUE	Annually or more frequently	1ST SUBMISSION DATE	11/16/2009
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document describes the Vendor's cohesive and responsive training program to make certain that users can be efficient and effective while using the system, including the Vendor's staff, State staff, and external users-such as the providers. It should reflect the relative lead-time for developing training materials before conducting training classes (including training testing participants and training before implementation); how users' skills will remain current throughout the operations phase; and how the Vendor will build and maintain the training environment. Additionally, it must specify the planned duration of the implementation training rollout, including development of Desk Procedures for use in the Operations Phase. The document will specify the delivery media to be used for each training activity and the accessibility of training materials and training news before, during, and after training. It should describe the process to identify and track training needs and to evaluate trainee feedback to improve course materials and methods. The Training Plan will be updated annually to address specific training activities for the upcoming year and shall be completed at least 90 days before the beginning of the contract year.		

TITLE	Deployment/Rollout Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	11/21/2008
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document will describe the detailed plan for implementing the Replacement MMIS (including any future integration with Reporting and Analytics or DHSR Division of Health Service Regulation (DHSR). It will include the processes and planning activities, roles and responsibilities, and schedule for activities related to cutover from the Legacy MMIS+ to the Replacement MMIS without impacting system processing. It will establish success criteria and provide for a Post-Implementation Evaluation, including metrics for measurement of successful implementation. Other considerations for inclusion are as follows: ❑ Communication of the plan ❑ Disaster recovery and backup procedures ❑ Training manuals ❑ System documentation ❑ Back-out plan ❑ Software support (help desk and break fix) ❑ Monitoring system performance		

TITLE	Business Continuity/Disaster Recovery Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	03/11/2009
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document describes the processes required to facilitate the continuation of critical business processes and the information systems and services supporting them if a disruption of the system itself, the loss of key personnel, or the loss of facilities housing the Fiscal Agent's operations occurs. Plans and processes documented in this plan shall be consistent with those identified in the requirements and its referenced documents: ❑ Roles and responsibilities of participants ❑ Processes that address preparation and planning ❑ Awareness and recognition training ❑ Business service and process relocation ❑ Notification and communication ❑ Testing and auditing processes for verifying the currency of the plan ❑ Response plans for epidemiological disasters that may result in prolonged work force absence from the Fiscal Agency location ❑ This document shall also describe additional processes associated with disaster recovery to include: ❑ Recovery priority for critical resources, including the recovery point objective (RPO) and recovery time objective (RTO) ❑ Processes for data relocation and recovery		

TITLE	Turnover Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	No later than one month after State's notification
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document describes the activities needed to facilitate an uninterrupted and transparent turnover to a new Fiscal Agent at the completion of the Vendor's contract. This plan shall describe the activities performed to make certain that required system and operational knowledge will be transferred to the new Fiscal Agent. This includes the conversion and migration of all pertinent information and work in progress, leases, and so on. Additionally, the plan shall discuss roles and responsibilities of the organizations and the workflow between the Vendor and new Fiscal Agent. High-level time lines and contingency plans should be included.		

TITLE	Data Accession List (DAL)		
VENDOR	EDS		
TYPE OF DATA	Other	DATA RIGHTS	State Material
FREQUENCY DUE	Monthly	1ST SUBMISSION DATE	One month after Contract award
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document shall list the data (to include software) and documents that are not part of the CDR that are created under this Contract. The DAL will include the data or document title, a reasonable description, the in-house release date, and the data rights associated with the item. Note: Any data required for proper operation and maintenance of the system and for proper conduct of the Fiscal Agent operations shall be identified in the CDRL rather than the DAL.		

Technical Design

TITLE	General Technical Requirement Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	06/18/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document will detail the logical design of the interChange MMIS including hardware, system interfaces, networks, operating systems, databases, and storage.		

TITLE	System-wide Architecture Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	05/29/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document will detail the technical design of the interChange MMIS hardware, system interfaces, networks, operating systems, databases, and storage.		

TITLE	Recipient Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	04/30/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the interChange Recipient feature for the State, which comprises the following: ❑ Interface with other systems to receive and store recipient data and allow direct entry of recipient and entitlement data from authorized staff or departments ❑ Apply appropriate business rules to accurately merge the data from the distinct systems in accordance with State policy ❑ Set rules for benefit plans for enrolling recipients ❑ Enroll recipients in the appropriate benefit plans ❑ Support accurate buy-in processing of dual eligibles ❑ Support Medicare data exchanges, including beneficiary data exchange (BENDEX), the Medicare Modernization Act (MMA), and eligibility database (EDB) files ❑ Support lock-in and lock-out control of recipient service utilization ❑ Support recipient linking and unlinking activities and reporting ❑ Enable recipient premium payment, refund processing and invoicing activities, and reporting ❑ Support cost-sharing activities ❑ Generate Certificate of Credible Coverage (COCC) letters, as appropriate ❑ Inform, initiate, and track follow-up of early and periodic screening, diagnosis, and treatment (EPSDT) eligibles ❑ Provide access to the same Health Insurance Portability and Accountability Act (HIPAA)-compliant recipient information across multiple channels, including the Web, automated voice response system (AVRS), and electronic data interchange (EDI) ❑ Provide a contact center for identification (ID) card requests, notices, and recipient communication This document is the result of Requirements Validation (RV) sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow		

	❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation

TITLE	Eligibility Verification System (EVS) Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	08/03/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the interChange EVS capability for the State. Besides the verification of individual recipient's eligibility, the interChange EVS also will comprise the following features: ❑ Multipayer capability ❑ Access to real-time information through multiple access channels ❑ Automatic validity, format, and consistency edits before allowing a transaction to update interChange ❑ Tracking, reporting, and status of interfaces This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Benefit Administration Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	07/22/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the interChange Benefit Administration capability for the State. Benefit Administration is a broad set functional capability that includes, but is not limited to, the following features: ❑ Benefit package assignment ❑ Benefit package processing ❑ Unlimited pricing and eligibility segments ❑ Online access to historical data ❑ Integrated rules allowing users to change benefit eligibility criteria ❑ System flexibility allowing users to customize benefit package reference data, such as audit limitations, service authorizations, and rates ❑ Consolidation of redundant systems ❑ Direct methods of claims processing for different payers and benefit plans ❑ True multipayer functions capable of supporting State plans outside Medicaid ❑ Service and coverage limitations ❑ Level of care required ❑ Assistance category ❑ Waiver program enrollment ❑ Provider restriction This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Provider Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	05/02/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the interChange Provider functions for the Replacement MMIS. The interChange Provider module will offer the following features that will be customized for the State: ❑ Provider enrollment ❑ Provider maintenance and management ❑ Provider access by mail, telephone, and Web portal ❑ Workflow ❑ Data organized in tables using a relational database structure so that an update automatically populates the appropriate fields when a user accesses a new page for the same provider This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Claims/Point of Sale Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	06/17/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the interChange Claims module that will allow North Carolina to perform the following functions: ❑ Capture ❑ Process ❑ Control ❑ Editing ❑ Auditing ❑ Final disposition This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Third-Party Liability (TPL) Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	05/26/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document details the Third-Party Liability (TPL) functions of interChange. The TPL module provides the following capabilities to make certain that Medicaid is the payer of last resort: ❑ Private health ❑ Medicare ❑ Other third-party resources This includes the flexibility to configure and optimize third-party coverage data through easy-to-use browser pages, real-time access to information, and the automation of tasks including the following: ❑ Policy maintenance ❑ Accounts receivable (A/R) posting ❑ Rebilling, recovery notices ❑ Non-covered services bypass logic This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Prior Approval (PA) Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	05/20/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document details the technical design of the PA functions within interChange. The PA module will provide the following capabilities: ❑ Process the PA request by validating member eligibility, provider eligibility, and service coverage based on predefined rules ❑ Generate PA records for pharmacy-related claims that meet customized rules related to the recipient ❑ Receive and process PA transactions from multiple input sources ❑ Allow providers to initiate PA requests through the Internet and inquire on PA requests to learn the decision status and the authorized units or dollar amounts ❑ Generate provider and recipient notification letters using combinations of fixed, variable, and free-text formats that are automatically triggered ❑ Treat letters containing protected health information (PHI) as secure documents ❑ Use Web pages to give authorized users various levels of access depending on their security levels ❑ Enable changes because of administrative review or appeals This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Automated Voice Response System Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	06/05/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the technical design of the interChange AVRS that will provide North Carolina with the following capabilities: ❑ Provider toll-free telephone number to access the MMIS ❑ Automated access to the MMIS data This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Managed Care Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	Technical	1ST SUBMISSION DATE	06/26/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the technical design of the interChange Managed Care module that will provide the State with capabilities that include, but are not limited to, the following: ❑ Online access to all recipient, provider, claims, and reference data related to Managed Care ❑ Process financial transactions regarding managed care ❑ Apply edit and audits to managed care cases ❑ Case notes tracking ❑ Track Managed Care statistics ❑ Auto-generate notices This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Management and Administrative Reporting System (MARS) Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	06/30/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the technical design of the interChange Managed Care module that will provide the State with capabilities that include, but are not limited to, the following: ❑ Extract data monthly from other functions of the MMIS and create extract files used to produce the monthly, quarterly, and annual MAR reports ❑ Summarize and maintain information from other functions for reporting data for current and historical time periods ❑ Run batch report jobs to create State and Centers for Medicare & Medicaid Services (CMS) reports ❑ Verify the accuracy of MAR reports through balancing processes ❑ Offer flexible desktop inquiry and reporting through parameter-driven Web pages This document is the result of Requirements Validation sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for North Carolina: Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Data Entry Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	08/03/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the technical design for managing data in the Replacement MMIS that includes, but is not limited to, the following capabilities: ❑ Capture ❑ Categorization ❑ Storage and retrieval ❑ Tracking ❑ Linking ❑ Printing and faxing This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Reference Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	06/26/2009
METHOD OF DELIVERY	Electronic - iTRACE		
EDS DESCRIPTION	This document describes the design of the interChange Reference Data Maintenance System. This capability allows maintenance of data used by the MMIS to execute the following functions: ❑ Claims and adjustment processing ❑ Service ❑ PA ❑ TPL processing ❑ Reporting The Reference Data Maintenance System maintains the following logical data groupings: ❑ Benefit plan ❑ Diagnosis ❑ Drug ❑ Edit/Audit Criteria ❑ ICD-9-CM Procedure ❑ Modifier ❑ Procedure This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Financial Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	07/27/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the technical design of the interChange Financial modules that will provide the Replacement MMIS with the following capabilities: ❑ Funding Sources ❑ State Program Funding ❑ Payment Estimation Reporting ❑ Payment Holds ❑ Provider Payments ❑ Remittance Advice ❑ Liens/Levies ❑ Accounts Receivable (A/R) ❑ Returned Checks and Provider Refunds ❑ Financial Transactions ❑ Financial Cycle Balancing This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Health Check – Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	08/17/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the Health Check functions for the Replacement MMIS. This feature provides the following capabilities: ❑ Maintain the Health Check periodicity schedule ❑ Maintain online inquiry to all Health Check data with access by recipient ID and provider number ❑ Maintain each Health Check-eligible recipient, the current and historical screening results, referral, diagnosis and treatment, and immunizations, including the provider numbers and dates ❑ Identify paid and denied screening claims ❑ Identify abnormal conditions by screening date and whether the condition was treated or referred for treatment ❑ Update recipient Health Check data with screening results and dates and referral information ❑ Provide online, updateable letter templates for Health Check monthly notifications, standardized letters, and inserts ❑ Generate automatic monthly notifications to case heads for next screenings, screenings missed, and abnormal conditions not treated based on State criteria ❑ Maintain all notices sent, identifying case and recipient and date the notice was sent ❑ Maintain an online audit trail of all updates to Health Check data ❑ Web-based Health Check application that allows for the creation, update, and management of: Health Check information notifications, Monthly Accounting Activities Reports (MAAR) information, County Options Change Request (COCR) information, full-time equivalency (FTE) information, and Health Check recipient data ❑ Maintain an online audit trail of updates to Health Check data ❑ Perform the following functions using the Web-based application: search recipient data, enter comments, update notification suppression, send standardized notifications ❑ Calculate and system-generate Health Check Coordinator management fees ❑ Generate a monthly FTE report based on information received on the MAAR and COCR This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State:		

	❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation

TITLE	Drug Rebate Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	05/21/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the interChange Drug Rebate feature for the Replacement MMIS. This feature allows the State to maximize collections and create a flexible and effective process through the following features: ❑ Process CMS quarterly drug rebate tape and produce drug rebate invoices ❑ Maintain manufacturer contact information ❑ Post drug rebate payments ❑ Perform drug rebate dispute resolution ❑ Provide drug rebate reporting, collections, and follow-up ❑ Access drug rebate accounting and interest This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Drug Utilization Review (DUR) Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	08/24/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the interChange Drug Utilization Review function for the Replacement MMIS. This feature provides the State with the following capabilities: ❑ Base information ❑ Grandfathering ❑ Age ❑ Primary diagnosis ❑ Secondary diagnosis ❑ Full taxonomy/specialty ❑ First/second line drug therapy ❑ Co-morbid diagnosis ❑ Linking This document is the result of RV sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for the State: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

TITLE	Enterprise Integration Services (EIS) Technical Design		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	08/24/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document describes the design of the enterprise integration services that will be necessary to deliver a smooth user experience for the Replacement MMIS. EDS will use the BizTalk Server 2006 because of its ability to support various protocols and message formats. BizTalk Server 2006 provides the following adapters: ❑ Simple Object Access Protocol (SOAP) adapter ❑ BizTalk Message Queuing adapter ❑ File adapter ❑ HTTP adapter ❑ Simple Mail Transfer Protocol (SMTP) adapter ❑ Structured query language (SQL) adapter ❑ Base electronic data interchange (EDI) adapter ❑ FTP adapter This document is the result of Requirements Validation sessions with stakeholders. The technical design will include the following information that will be used to customize the interChange MMIS for NC: ❑ Subsystem Narrative Overview ❑ Subsystem Description ❑ Data Model ❑ Data Tables ❑ System Flow ❑ Subsystem Logic: Job Scripts, Programs, Browser Pages, Reports, Letters ❑ Internal and External Interfaces ❑ Requirements Matrix ❑ Change Orders ❑ Data element Dictionary ❑ Supplemental Documentation		

Transition

TITLE	MMIS System Documentation		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS:	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	01/26/2010
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	These documents detail the specifications for each of the interChange modules including, but not limited to, recipient, eligibility verification, provider, claims, PA, Health Check, and more.		

TITLE	Training Materials/Manuals		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS:	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	04/22/2010
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	Most training materials will be in the form of computer-based training (CBT) that will be managed within the interChange product itself.		

TITLE	Provider Documentation		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS:	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	11/03/2009
METHOD OF DELIVERY	Electronic – Web Portal		
EDS DESCRIPTION	Provider documentation will be available through a provider Web portal. This documentation will provide guidance for interChange functions including, but not limited to, the following: ❑ Provider Enrollment ❑ Provider Maintenance and Management ❑ Claims Management		

TITLE	MMIS Certification Documentation and Presentation Materials		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	03/20/2011
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	EDS will lead generation, consolidation, and production of the documents and presentation materials necessary to obtain CMS certification for the Replacement MMIS.		

TITLE	Operations Management Plan (OMP)		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	10/31/2008
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	The Operations Management Plan strategically describes how the Fiscal Agent will successfully deliver and support operational services. The plan should clearly document the Vendor's approach to operations and communicate an understanding of how it operates a Medicaid Fiscal Agent Contract. Roles and responsibilities of the Fiscal Agent and the State should be clearly delineated. The following areas should be included in an Operations Management Plan, either by incorporating the topic in the document or referring to other standalone documents (duplication of information is not necessary): ❑ Strategic Plan for Operations ❑ Process Improvement ❑ Quality Management ❑ Performance Metrics ❑ Operations Management Reviews ❑ Change and Configuration Management ❑ Risk and Issue Management Plan ❑ Resource Management ❑ Security Plan ❑ Disaster Recover/Continuity of Operations Plan ❑ Training Plan ❑ Communications Process and Procedures (between Fiscal Agent, the State, providers, and citizens)		

TITLE	Operations Manuals		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS:	State Material
FREQUENCY DUE	Annually or more frequently	1ST SUBMISSION DATE	04/08/2010
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document details the regularly scheduled operational processes, escalation procedures, and contact information for partners and vendors. The document comprises the following sections: ❑ **Systems Operating Procedures Manual Overview—**Provides a brief overview of the System Operating Procedures manual and includes a description of the intended audience for this manual ❑ **Processing Schedules—**Provides details on the daily, weekly, quarterly and monthly processing schedule ❑ **Operational Processes—**Explains the regular operational processes, including EDI, cycle balancing, and cycle reports ❑ **Problem Escalation Procedures—**Explains incident and emergency response procedures ❑ **Trading Partners List—**Lists trading partners working with EDS on the Replacement MMIS project ❑ **Vendor Interface Connection Listing—**Lists vendor interfaces for the Replacement MMIS		

TITLE	Special Contingency Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	12/03/2009
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	Given the extensive system, user acceptance, parallel, and operation readiness testing that interChange has undergone, the probability of systems issues serious enough to require a reversion to the Legacy system are extremely small. Close attention will be paid to production interChange results by comparing them to expectations established during the "Large Parallel" testing. If interChange operates within these tolerances, any minor systems issues will be addressed in the interChange environment. In the unlikely event that North Carolina decides to revert to the Legacy MMIS+, this deliverable documents the steps required to execute this contingency. The action items for each of the following MMIS components are detailed: ❑ Communications ❑ Mainframe ❑ Paper claims ❑ Member ❑ Provider ❑ Claims ❑ BBS ❑ Prior Authorization (PA) ❑ Interim Decision Support System (DSS) ❑ EDS ❑ Desktop PC As a part of the special contingency plan, a Microsoft Project schedule estimates the level of effort required for each task.		

Testing

TITLE	Master Test and Quality Assurance Plan (MTQAP)		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	11/04/2008
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This plan applies the processes for testing and quality assurance from the Software Development and Systems Engineering Methodology to this project to include specific test and quality assurance activities and results required for success. The plan should identify key events and their objectives, along with roles, responsibilities, and resources needed for these events to be successful. The MTQAP adds detail to items in the IMP related to testing and quality assurance.		

TITLE	Integrated Structured Testing (IST) Results		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	09/28/2010
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document summarizes and details the results of integrated system tests run against the systems within the Replacement MMIS.		

TITLE	Parallel Test Results		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	10/26/2010
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document summarizes and details the results of parallel system tests run against the Legacy MMIS+ and Replacement MMIS.		

TITLE	Volume/Stress Test Results		
VENDOR	EDS		
TYPE OF DATA	Technical	DATA RIGHTS	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	10/07/2010
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document summarizes and details the results of volume stress tests run against the Replacement MMIS. For example, this test will run many claims against the Replacement MMIS to determine its performance.		

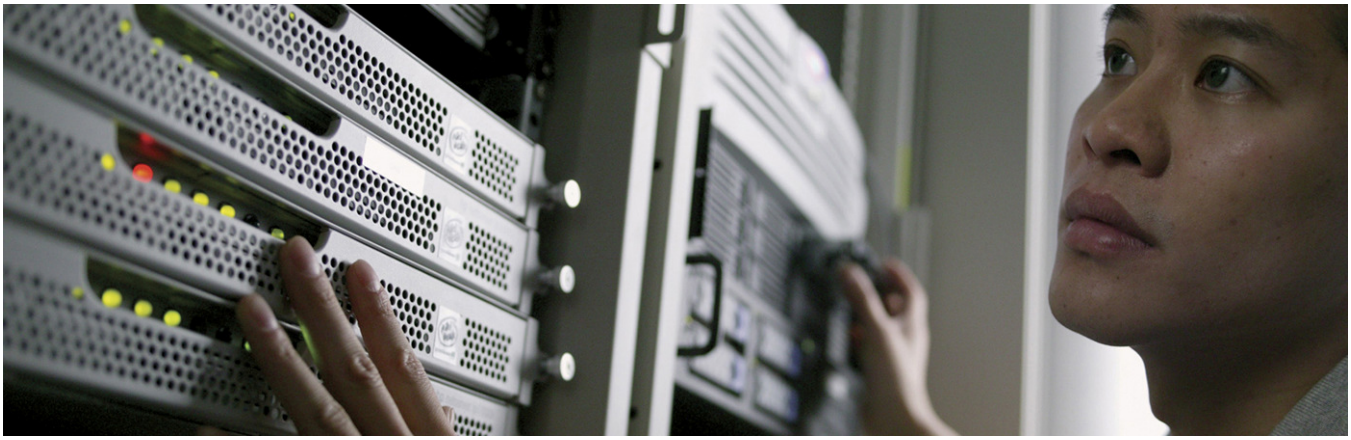
Conversion

TITLE	Data Conversion and Migration Plan		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	12/12/2008
METHOD OF DELIVERY	Electronic—iTRACE		
DESCRIPTION	This document describes a comprehensive plan to convert and migrate all required data from the Legacy MMIS+ to the Replacement MMIS. It must include strategies and activities required to support development, testing, certification, and long-term operations. The plan must document processes and activities to include analysis of the conversion and migration requirements; design and construction of solutions; testing of these solutions; identification of documentation required to support conversion and migration activities; and the processes that will actually be used to convert and migrate the data. The plan must clearly identify the data to be converted, the specific methods to be applied to these data (both automatic and manual), data cleansing and validation, data security, and the strategy to make certain that the data are converted and migrated in a timely fashion to support testing and implementation. Additionally, the plan shall describe the roles and responsibilities of the parties involved in these activities. The IMP shall identify key events, accomplishments, and criteria for data conversion and migration that are supported by this plan.		
EDS DESCRIPTION	This document will outline the procedures and standards that will apply to conversion data. The Global Conversion Plan will comprise the following information: ❑ Conversion objectives ❑ Roles and responsibilities ❑ Description of the conversion process, including process and environment diagrams ❑ Status reporting standards ❑ Statistical and error-reporting standards ❑ Procedures for notification, tracking, and correcting conversion problems ❑ Conversion preparation task outline ❑ Procedures for verifying the integrity and accuracy of the converted files, including quality control and sampling verifications ❑ A narrative and plan for the management of the conversion effort, including strategies for dealing with delays, a backup plan, backup personnel, and any significant issues ❑ Conversion support requirements, including use of the system, policy issues, and hardware		

	❑ List of conversion tools ❑ Procedures to handle manual conversion and data-cleanup activities ❑ Conversion data volume considerations, including the size of the database and the amount of data to be converted ❑ Development schedule ❑ User work and delivery schedules and time frame for reports ❑ Conversion deliverable outlines

TITLE	Preliminary Conversion Test Results		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When changed	1ST SUBMISSION DATE	11/11/2010
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	After creating a detailed conversion plan, EDS tests the plan on non-production data and analyzes the results. The detailed conversion plan will be updated as necessary. The Preliminary Conversion Test Results is comprised of the following: **Overall Findings and Recommendations:** ❑ Summary of the conversion plan results and status of the conversion software ❑ Identification of any significant outstanding deficiencies or limitations ❑ Effect of any outstanding deficiency on the remainder of the conversion schedule and recommended solutions for correcting the deficiency ❑ Assessment of how the test environment may differ from the operational environment and how this may affect the test results ❑ Recommendations for improving the design, operation, or testing of conversion software **Detailed Test Results** ❑ Results of the conversion testing formatted as defined in the conversion plan and approved by the State ❑ Completion status of each test case of the testing plan ❑ Identification of test cases where the result was not as expected, an explanation of the problem that occurred, and the procedure in which the problem occurred ❑ Chronological record of the testing covered by the conversion test results report, including dates, times, and locations of testing ❑ Identification of the hardware and software configurations used for testing ❑ Log of dates and times of testing activity, including the individual performing the testing Before final conversion, the State will approve conversion for each functional area. State sign-off will indicate that the test plan and preliminary conversion for a specific functional area are complete and accurate. This will be documented in the sign-off section of the status report.		

TITLE	Final Conversion Test Results		
VENDOR	EDS		
TYPE OF DATA	Planning/Execution	DATA RIGHTS	State Material
FREQUENCY DUE	When Changed	1ST SUBMISSION DATE	12/13/2010
METHOD OF DELIVERY	Electronic—iTRACE		
EDS DESCRIPTION	This document will provide the following information post-conversion: **Detailed Test Results** ❑ Results of the conversion formatted as defined in the conversion plan and approved by the State ❑ Completion status of each conversion case of the conversion plan ❑ Identification of conversion cases where the result was not as expected, an explanation of the problem that occurred, and the procedure in which the problem occurred ❑ Chronological record of the conversion results report, including dates, times, and locations of conversion ❑ Identification of the hardware and software configurations used for conversion ❑ Log of dates and times of conversion activity		



50.2.8 Section H—Security Approach

RFP Reference: 50.2.8 Section H—Security Approach, Page 281; 10.9 Software and Systems Engineering Objectives, Paragraph 8, Page 10; Security Plan CDRL, Pages 261-262

Our security approach is a foundational element in our Replacement MMIS' operation and reflects our years of experience in this arena and our recognition that security is an ongoing pursuit, not a one-time task.

The security approach described in this section will be codified in our security plan, which will be submitted in the early stages of the implementation. This plan will meet the requirements identified in the RFP's Security Plan CDRL.

Principles of Our Security Approach

EDS is committed to preserving the confidentiality, integrity, and availability of the sensitive information we manage for our clients. The North Carolina Department of Health and Human Services (the State) requires a secure MMIS that protects data from anticipated threats and hazards and limits its availability to appropriate staff members and other designated individuals and organizations using standardized system applications and data security capabilities. To meet your requirements for security and confidentiality, we will apply EDS' fundamental values and our team's personal diligence in working with sensitive State information every day.

We practice and apply our values at every level of the organization. These same values are directly reflected in the EDS Code of Business Conduct, which states the following:

> "We must maintain the confidentiality of confidential information entrusted to us by the company or our customers, except when disclosure

> is authorized or legally mandated. Confidential information includes all nonpublic information that might be … harmful to EDS or its customers, if disclosed.
>
> "A critical element in our relationship with customers is our promise to keep our knowledge of their private business affairs in strict confidence. When using and managing confidential customer information, we must follow the specific rules and obligations as set forth in the written agreement we reach with our customers."

Every year, EDS employees must certify that they have read and will adhere to this code of conduct.

As a provider of MMIS solutions across the United States, EDS also recognizes the additional responsibility for managing confidential protected health information (PHI), as well as other State data. The EDS Health Insurance Portability and Accountability Act (HIPAA) Security Policy states the following:

> "To be compliant to the HIPAA regulations, both security and privacy solutions must be considered. EDS shall implement standards in accordance with the Security Rule to ensure: confidentiality, integrity, and availability of electronic health information with effective administrative, physical, and technical safeguards. [EDS will implement] security solutions to address the organization's infrastructure requirements to ensure secure and private communication and storage of confidential electronic PHI."

Our security structure is an integral part of our interChange solution. Using our industry-leading framework and the secure, HIPAA-ready nature of interChange, we provide security solutions that protect the data managed within the system against threats and hazards. We understand the North Carolina Office of Information Technology Services is responsible for setting policies, standards, and guidelines for technology in North Carolina state government. EDS will work with the State to meet information and communication processing security as spelled out in the State's policies and standards and will be an active participant in a joint security management team.

As one of the first steps in the DDI Phase, we will implement system security processes that will include the following measures:

- Physical site security and protection
- System access security
- Data security
- Application security
- Compliance with HIPAA security standards

With a variety of mechanisms designed to maximize the safety and reliability of the systems and data under its control, the Replacement MMIS will provide the State with a benefit that goes beyond the purely technical details—the peace of mind that comes with knowing the Replacement MMIS data is well protected.

Given the interrelated nature of the RFP's security requirements and procedures, to improve clarity and reduce redundancy we have included next to each section of our response the CDRL items corresponding with it, as follows:

- Security Officer Role (CDRL Bullet 2)
- Security Policies, Processes, and Standards Approach (CDRL Bullet 2 and Bullet 7)
- Physical Security (CDRL Bullets 1-3)
- Application Security (CDRL Bullets 1-4)
- Network and Data Security (CDRL Bullets 1-4)
- Security Monitoring, Reporting, and Awareness Measures (CDRL Bullets 2, 3, 5, and 7)
- Penetration Testing (CDRL Bullets 2, 3, 5, and 7)
- Security Plan Delivery (CDRL Bullet 2)
- Disaster Recovery (CDRL Bullet 6)

Security Officer Role

EDS will provide an experienced security leader with a background in healthcare, HIPAA, and CMS security requirements to serve as the Replacement MMIS security officer through Operations. This individual will serve a critical role, given the need to balance the user community's desire for ease of use and access to the system versus the need to prevent access by unauthorized entities. The security officer will be responsible for the following:

- Developing, reviewing, and maintaining security policies and procedures
- Implementing and educating EDS staff on the security policies and procedures
- Serving as security liaison with the State
- Coordinating assessments of security vulnerabilities, penetration testing, and so forth, as directed by the State
- Investigating, documenting, and reporting security incidents
- Participating in the development, testing, and maintenance of the disaster recovery and business continuity plans, providing security perspective and input

- Developing and maintaining the security plan, with input from the State
- Participating in security-related workgroups and organizations

Security Policies, Processes, and Standards Approach

EDS has developed comprehensive policies, procedures, and standards necessary for complying with security and privacy requirements to maintain confidentiality. The EDS Enterprise Security Policies and Standards (ESPS) framework is used as a guide. As discussed in greater detail below, ESPS is maintained by the EDS Security and Privacy Office and combines privacy and security best practices and expertise from around the globe to deliver the policies, requirements, control standards, and implementation procedures necessary for a complete privacy and security solution. The basics of this security structure already have been incorporated into interChange. Specific implementation details will be reviewed with the State as part of the system security procedures. These procedures will be put into place as part of the Design and Development Phase of the contract.

EDS understands that we must also comply with the applicable North Carolina Office of Information Technology Services (ITS) policies and standards in addition to federal regulations such as HIPAA, and we will work with the State to address any disparities.

EDS Chief Security & Privacy Office

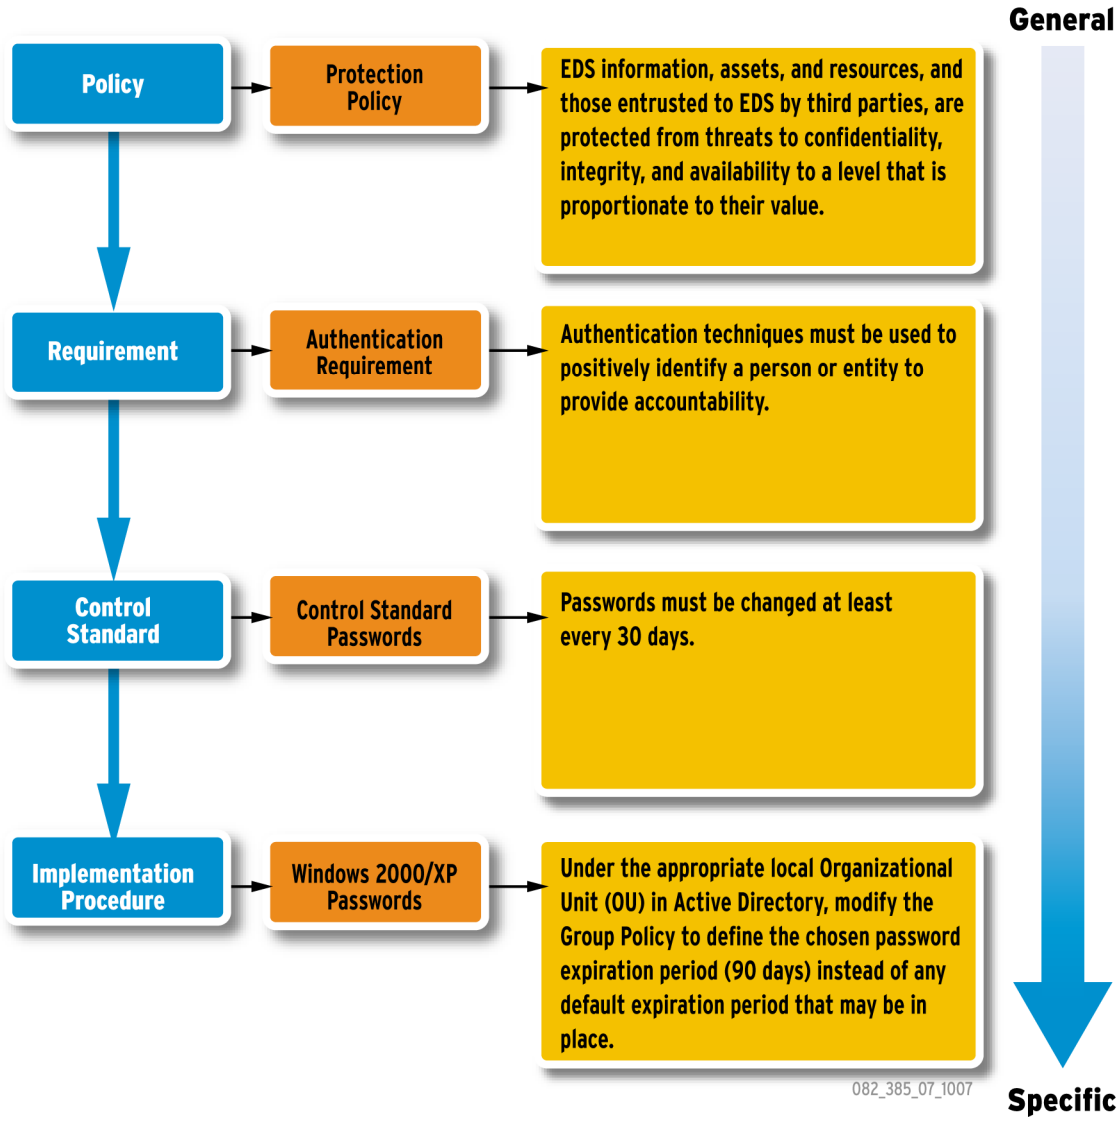
In keeping with EDS' commitment to data protection, the EDS Chief Security & Privacy Office (CSPO) was established for the purpose of development, communication, and governance of EDS' enterprise security and privacy policies, strategy and direction. This team interacts with organizations and contacts across EDS to minimize information security risk by providing a single point of coordination for expertise that blends regulatory insight, security knowledge, and experience. CSPO is a valuable resource to local accounts, providing information from a proactive and preventive perspective, as well as serving as a focused knowledge resource in the event a need arises to react to a particular security situation.

EDS Enterprise Security Policies and Standards

EDS has developed extensive system security processes for the Replacement MMIS using the EDS Enterprise Security Policies and Standards (ESPS) framework as a guide. ESPS is a comprehensive set of security policies and

standards maintained in a hierarchical structure, as shown in the following exhibit, EDS Enterprise Policies and Standards Hierarchy.

EDS Enterprise Policies and Standards Hierarchy



ESPS is a comprehensive set of security policies and standards maintained in a hierarchical structure.

Policies

An ESPS policy is comprised of a statement of a business principle, governing decisions, and courses of action. Our corporate enterprise security plan includes a number of policies, including the following:

- Acceptance policy
- Access policy
- Assessment policy
- Awareness policy

- Legal/regulatory compliance policy
- Protection policy
- Responsibility policy

Requirements

At the next level, a requirement is a statement of a specific, high-level security need. Requirements are statements of what must happen for the policy to be implemented. For example, one of the requirements that supports the protection policy is the following authentication requirement: "Authentication techniques must be used to positively identify a person or entity in order to provide accountability."

Control Standards

Each requirement is supported by one or more control standards that map to one or more policies. A control standard is a statement that defines a value, set of values, or procedure to be used to measure compliance with a requirement. EDS has more than 300 detailed control standards, and each control standard is linked to at least one requirement. The following are examples of ESPS control standards:

- "Password changes for user identifiers must be forced automatically at least every 30 days."
- "Security incident procedures must be followed immediately on detection or suspicion of a security incident and reviewed annually to check that the procedures are current and accurate."
- "Malicious code detection software and signature files must be maintained at the latest vendor levels."
- "Sensitive and critical equipment must be placed in a secure location and protected to reduce the risks from environmental threats and unauthorized access."

Where applicable, each standard has associated with it a security profile detailing the levels of confidentiality, integrity, and availability (high, medium, or low) to which the standard applies. Control standards are representative of industry best practices.

Implementation Procedures

Each control standard is supported by one or more implementation procedures that allow the control standard to be accomplished. An implementation procedure occupies the lowest level of the security hierarchy and describes how a control standard is achieved on a specific technology.

An example of an implementation procedure that supports the password change control standard is as follows: "Under the appropriate local Organizational Unit (OU) in Active Directory, modify the Group Policy to define the chosen password expiration period (30 days), instead of any default expiration period that may be in place."

HIPAA Considerations

To enhance HIPAA security compliance, EDS has integrated the HIPAA security rule standards into established EDS security standards. This integration is accomplished through the Enterprise Security Information System (ESIS), an automated Web-based tool that maintains corporate policies, requirements, and control standards. Each HIPAA standard has been mapped to relevant EDS corporate policies and applicable requirements and control standards. The ESIS tool provides the framework for establishing procedures that support existing EDS policies and other relevant federal and state security requirements, including HIPAA.

Compliance With State and Federal Regulations

We understand that state Medicaid departments face many challenges in their efforts to comply with HIPAA regulations. EDS has a thorough understanding of the final HIPAA requirements for transactions, code sets, privacy, security, and provider identifiers. Through our involvement in standard-setting organizations and other industry groups, we are often able to anticipate future changes to HIPAA requirements. We have assisted more than 24 states and other healthcare organizations in analyzing the impact of HIPAA on their systems and operations and developing and implementing appropriate compliance solutions that meet their strategic needs.

The Replacement MMIS is able to receive and process HIPAA-mandated electronic transactions in the versions approved for use by the State. EDS closely monitors pending HIPAA legislation and will continually provide feedback on this legislation and the potential impact to the State and the Replacement MMIS.

When a new version of a required HIPAA transaction has been or is likely to be promulgated by the federal government, we will take the following actions, upon direction by the State:

- **Prepare a formal gap analysis, plan, and proposed schedule for implementing the new version—**EDS will carefully review the legislation and identify the systematic and operational impacts. Based on these impacts, we will develop detailed implementation plans that prepare the State, the system, and other stakeholders (such as providers) for the change. The analysis and planning related to new transaction sets is not

new to EDS. We have successfully worked through large system remediation efforts such as Year 2000 and HIPAA, and we will use that experience for the State's benefit.

- **Prepare the system requirements and technical design documents for approval by the State—**Using our Systems Life Cycle, Version 3 (SLC 3) process, EDS will formalize the requirements and develop formal business and technical design documents. The requirements and technical design documents will be reviewed with the appropriate State staff members to receive final approval.
- **Implement the new version—**As approved by the State, EDS will execute the implementation plan, including system changes and any required training. We will develop a detailed test plan for approval by the State and execute test cases for that plan. We will review the test results with the State. When the change is fully tested, it will be promoted to the production environment.
- **Continue to receive the previously authorized version—**EDS, through our previous system remediations, understands that providers may be allowed a grace period to adopt new standards. As part of the gap analysis and implementation plan, we will document the grace period and account for it during system modifications. When the changes are promoted to production, we will accept older versions of the transaction through the State-approved date.

Throughout the implementation and operation period, EDS will continue to participate in industry organizations that track HIPAA and will keep the State informed of new developments as they occur. EDS will work with the State to develop cost-effective strategies to comply with current and future regulations to protect the health information of the State's healthcare recipients. Enhancement work will be performed by the Modernization team.

Physical Security

The following subsections describe our approach to the security of work sites, data centers, communications switches and network components, and storage areas.

Safe and Secure Work Site

With employees worldwide, EDS understands that security measures are vital to providing a safe work environment for our staff. The issuance of card-keys for physical access to the Raleigh facility and the Herndon, Va., backup site will be controlled through a request and approval process. Requests for card-keys for EDS and State staff will be submitted to a physical access coordinator, specifying access zones with specific justification. The appropriate authorizing manager

must grant approval for each zone requested. After approvals are obtained, EDS Security can issue the access card-key. Security personnel will issue access cards for new employees based on manager requests. Approvals must be obtained from the appropriate zone managers through electronic user ID stamp or signature before the request can be validated and the access card issued.

Entry doors into the facilities, with the exception of the main lobby, are protected by security card-key readers. EDS staff members in the North Carolina Replacement MMIS facility will be issued proximity-based ID badges to gain entrance. An additional four-digit security code must be used to gain entrance after business hours. Every visitor to the facilities is required to sign in, wear a visitor's badge, be escorted within the building throughout the duration of the visit, and sign out and return the visitor's badge at the end of the visit. The Herndon backup facility also uses security guards to patrol the premises.

On employee termination, access cards will be turned in and automatically deactivated. Quarterly reviews of access levels, including temporary passes, will be performed to make sure terminations and separations have been properly removed.

Data Center Security

EDS takes several precautions to protect its data centers, including our local MMIS facilities. As noted above, all staff members must use ID badges to gain entrance to the facility. Access to the Raleigh data center itself requires a higher security clearance, granted through approval by the data center manager, to only those staff members requiring direct access to the data center equipment.

The Raleigh data center will use the following additional protective measures:

- Raised floor
- Dual Liebert air conditioning units to maintain appropriate temperature
- Uninterrupted power supply (UPS)
- Diesel generator
- Sprinklers, smoke alarms, fire alarms, and fire extinguishers
- Server room is located within the inner core of the facility to protect against unauthorized electronic surveillance

The Herndon backup facility uses the following additional protective measures:

- 18-inch raised floors
- Dual redundant diesel generators
- Dual diverse commercial power links
- Automatic HFC-227 fire suppression system

- Uninterrupted power supply (UPS)
- 24x7 security, live facility surveillance, and compliance with Government Trusted Access Clearance Requirements
- Server room located within the inner core of the facility to protect against unauthorized electronic surveillance

Access to Communications Switches and Network Components

EDS understands the necessity of protecting the communication switches and network components for the State, which is why these switches and components will reside in the physically and environmentally controlled data center on site in the Raleigh office. The Raleigh facility will have security staff that is responsible for processing physical security access requests and producing the proximity badges for preapproved EDS staff members.

Gaining access to the local data center for maintenance, for example, will require the preapproved vendor representative to follow the visitor guidelines mentioned in the previous section for signing in and gaining a visitor badge. The vendor representative will be escorted and monitored during the repair process and then escorted back to the main lobby for the sign-out process.

Access to the local data center will require additional card-key control and can only be issued to a list of staff members preapproved by the State or EDS. Our computer and control rooms house computer equipment, operational documentation, master control consoles, peripherals, and communications equipment. The wiring closets, telecommunications rooms, uninterruptible power supply (UPS) systems, and battery backups are located within separate key-locked areas.

The revalidation of a person's access authority for a restricted space is an ongoing and auditable responsibility of EDS employees serving as authorizers for a restricted space. Where any individual is determined to no longer have the business need for access to the restricted space, the authorizer will advise EDS Security to revoke that individual's access immediately. The revalidation process is a check-and-balance to the perpetual responsibility of sponsors and authorizers to immediately revoke the access of any personnel whose business need to access the restricted space ceases.

Secure Climate-Controlled Area for Storage

Climate-controlled storage will maintain the condition of archived paper files received by EDS. The documents will be stored at the Raleigh facility in accordance with applicable retention periods.

Application Security

The following subsections describe how we will maintain strict security for the Replacement MMIS applications.

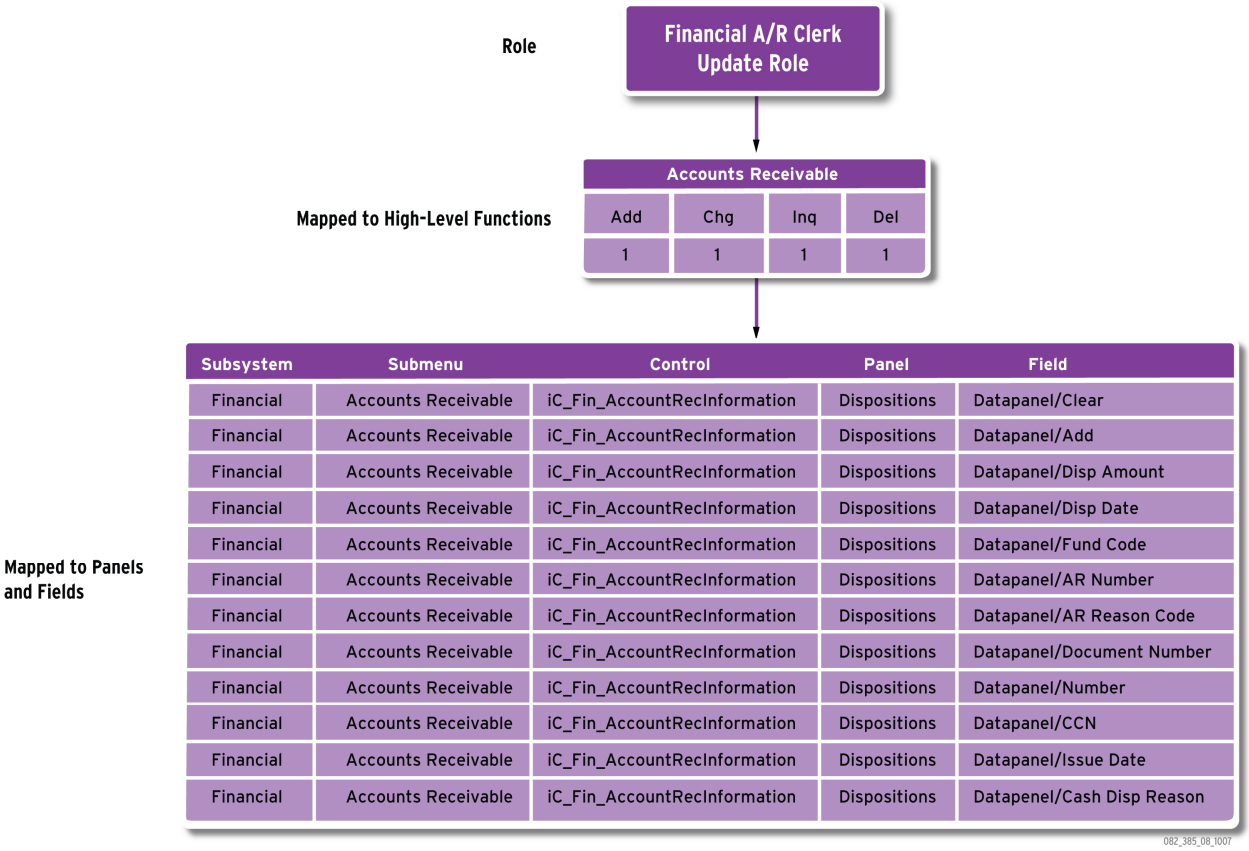
Table-Driven Field-Level and Role-Based Security

The Replacement MMIS will provide table-driven field-level and role-based multi-level security that allows only authorized users to see the information necessary to perform their jobs efficiently and effectively. This granular role-based security will allow security to be applied to a specific State program or job category for an individual or group of individuals. The role-based security is controlled through a federated directory service.

The Replacement MMIS will allow us to build profiles that allow users to have a combination of inquiry and update capability dependent on the data they will need to work. For example, financial clerks may need to inquire on claims payment information but only need to be able to update specific fields as per their job role.

User- and role-based security will be assigned according to minimum necessary standards as defined by HIPAA. User- and role-based security also will be assigned for specific applications and data, including access restrictions to protected and confidential information, in accordance with HIPAA privacy and security requirements. These roles will be defined during the implementation process and mapped within the system. An example of this mapping process is shown in the following exhibit, Example Role Mapping.

Example Role Mapping



User- and role-based security will be assigned for specific applications and data, including access restrictions to protected and confidential information.

Each user will have a unique logon ID to access the system. Users will receive their IDs after EDS receives appropriate authorization from designated State management staff. The individual user will be allowed to access applications on the system only after entry of a password that matches the user's ID. At regular and configurable intervals, passwords for users will expire and users will be prompted to create new passwords that meet the minimum password criteria as required by the State. The default expiration period will be set to 30 days but can be customized to meet the State's requirements.

Designated systems administrators, authorized by the project or account manager, may remove individual access as needed. The systems administrators will take these actions only when authorized by appropriate management personnel.

Restrictions will exist for each application and function within an application to specific logon IDs. System security features will allow the systems administrators to specify the applications or functions that are accessible by users.

Because the Replacement MMIS will be a technologically advanced system based on Internet protocols and the interChange provider and recipient Web portals will be accessible from any location connected to the Internet, other appropriate auditing data will be captured in the Web logs, such as IP address and other identifying information.

The Replacement MMIS will allow users to inquire, add, change, and delete transactions with the appropriate security levels assigned to each user at the menu, module, file, record, Web page, and field levels.

A role can specify the following permissions:

- **Grant and revoke access to menu items—**The access for a menu item is edit, read-only, or none.
- **Grant and revoke access to navigator items of a menu item—**The access for a navigator item is edit, read-only, invisible, or none.
- **Grant and revoke access to fields of a navigator item or menu item—**The access for a field is edit, read-only, invisible, or none.
- **Grant and revoke access to buttons on a navigator item or menu item—** The access for a button is enabled, disabled, or none.

Password Protection and Management Capability

EDS is offering the State a system and process that will provide strong password protection and password management capability. Prior to implementation, we will review with the State our procedures to maintain, add, change, delete, and modify user logon accounts, and profiles and reset passwords.

At regular intervals, passwords for users will expire and users will be prompted to create new passwords. The default expiration period is 30 days but can be adapted to meet the State's needs.

EDS uses Microsoft Active Directory Federated Services (ADFS) as the enabling technology. ADFS uses Active Directory for its user store; therefore, password protection will be configured to support strong password protection and password management capabilities. The creation or denial of a generic or shared password is an administrative task. EDS' policy is to not allow generic or shared passwords; therefore, we will solicit State approval for exceptions to this policy.

interChange Single Sign-On Solution

EDS uses our workflow-based interChange Single Sign-On solution to administer users, roles, and user IDs and passwords. interChange Single Sign-On will provide the flexibility and control necessary to administer access security to the State's data. This system, which also allows portions to be controlled by the State,

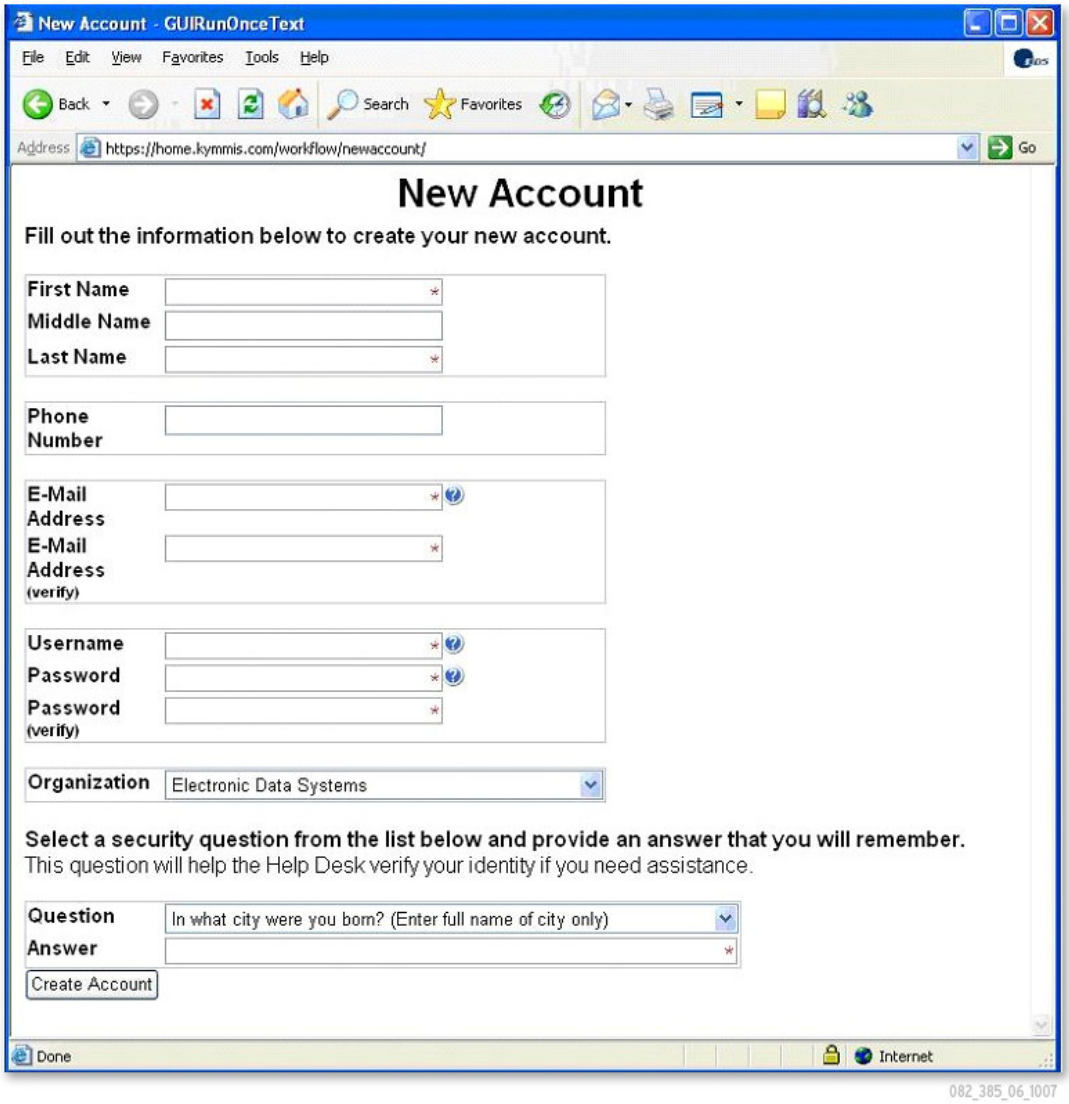
logs unauthorized attempts to access the MMIS and applications under its control.

interChange Single Sign-On will prompt users to accept the State's security policy before they can proceed into the portal. EDS will use the logon and security policy language dictated by the State, which will be used in the pop-up security acceptance panel. Users' responses are logged for audit purposes.

EDS will work with the State security staff to determine the rules for unsuccessful logon attempts, password timeouts, session timeouts, activity timeouts, and other security items as appropriate and implement the agreed-on parameters.

On registration in interChange Single Sign-On, users will be prompted to fill out a page like the one shown in the following exhibit, Sample User Registration Page. This kicks off the workflow through which a user can finalize the selection of access and receive final approval for the access.

Sample User Registration Page



Users are required to fill out a registration form when first accessing the system.

Users must complete the necessary information and create a password that conforms to the State's requirements, such as the following:

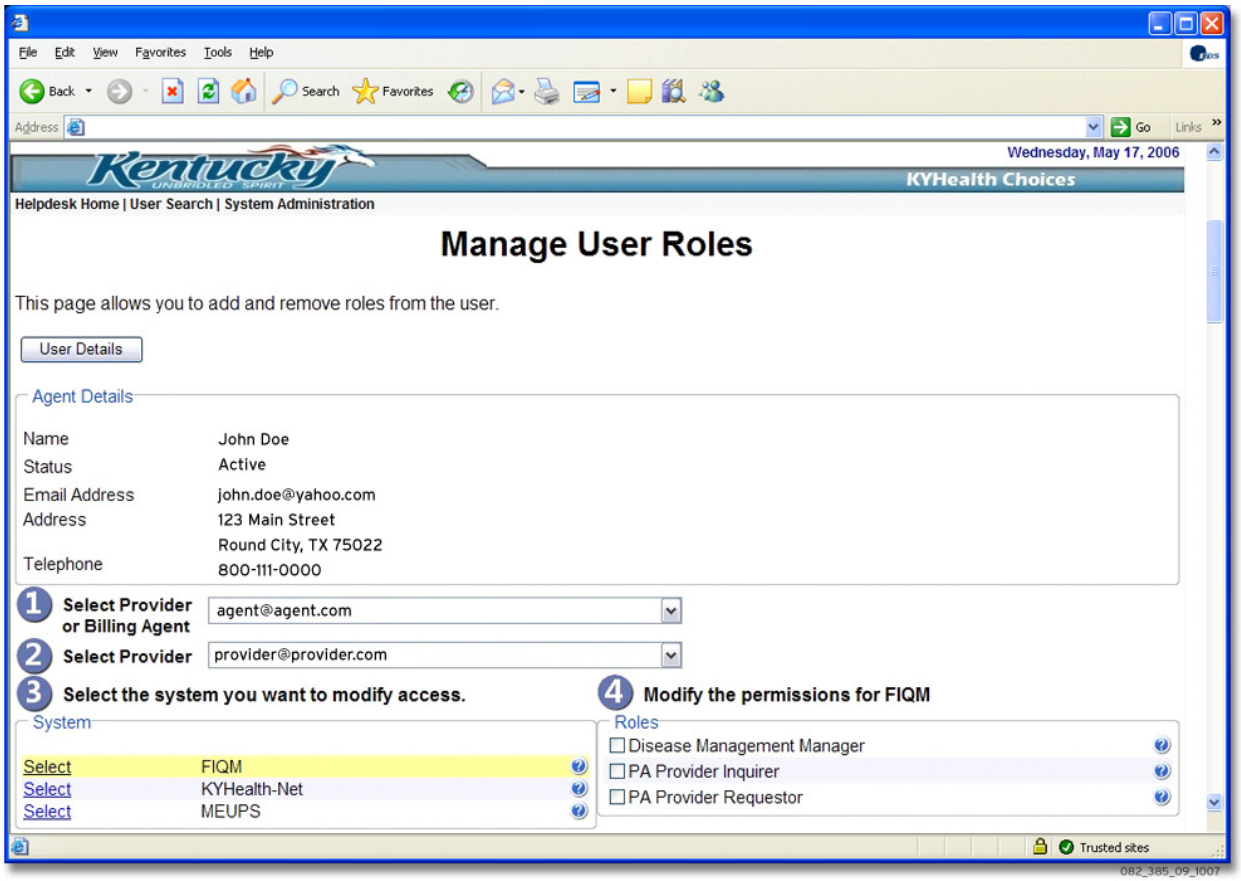
- Must be at least eight characters in length
- Must contain at least one upper- and one lowercase letter
- Must contain at least one number

Users may choose to answer one of five secret questions, which will be used to help identify the user, such as for automated password reset features. On successful creation of the account, users can manage their accounts in the following ways:

- Update basic user information, such as address, telephone number, and security question and answer
- Change password
- Request access to applications
- Access previously approved applications
- Sign out

After an account is created, the account is mapped to a role. The following exhibit, Sample User Mapping Page, shows a user mapped to a role within the system.

Sample User Mapping Page



Users are mapped to roles set up previously in the system.

Confidentiality of Passwords and IDs

interChange Single Sign-On stores passwords in encrypted form and does not display the password at any time. It is EDS' policy not to share user IDs or passwords. Incidents of suspected ID or password sharing that come to the

attention of systems administrators will be reported to the appropriate management for investigation and appropriate resolution.

User ID and Password Recovery

interChange Single Sign-On will provide password management and recovery capability to State users by providing a link for user verification and password resets. The system will interface with the NC ID process. From the primary logon page, a user can click the "Forgot Password" link, which will prompt the user for his or her user ID and e-mail address. When the user enters information that matches the information on file, our system will send the user an e-mail with a one-time-use link. After using this link, the user will be prompted to answer a security question to which only the user could know the answer. After correctly answering the security question, the user will be asked to enter a new password twice.

Security Administrative Rights

We will provide security administrative rights to designated State security administrators for the purpose of adding, updating, and deleting State staff security access. The State will have the authority to grant access to any system performing MMIS-related functions.

Access for New State and EDS Staff

EDS will follow the required security checks and protocols to process logon requests from the approved managers of new users so that new State and EDS staff members are provided with the appropriate access. After State authorization has been given for an individual, EDS will maintain the individual's access until notification and approval is given to terminate the access.

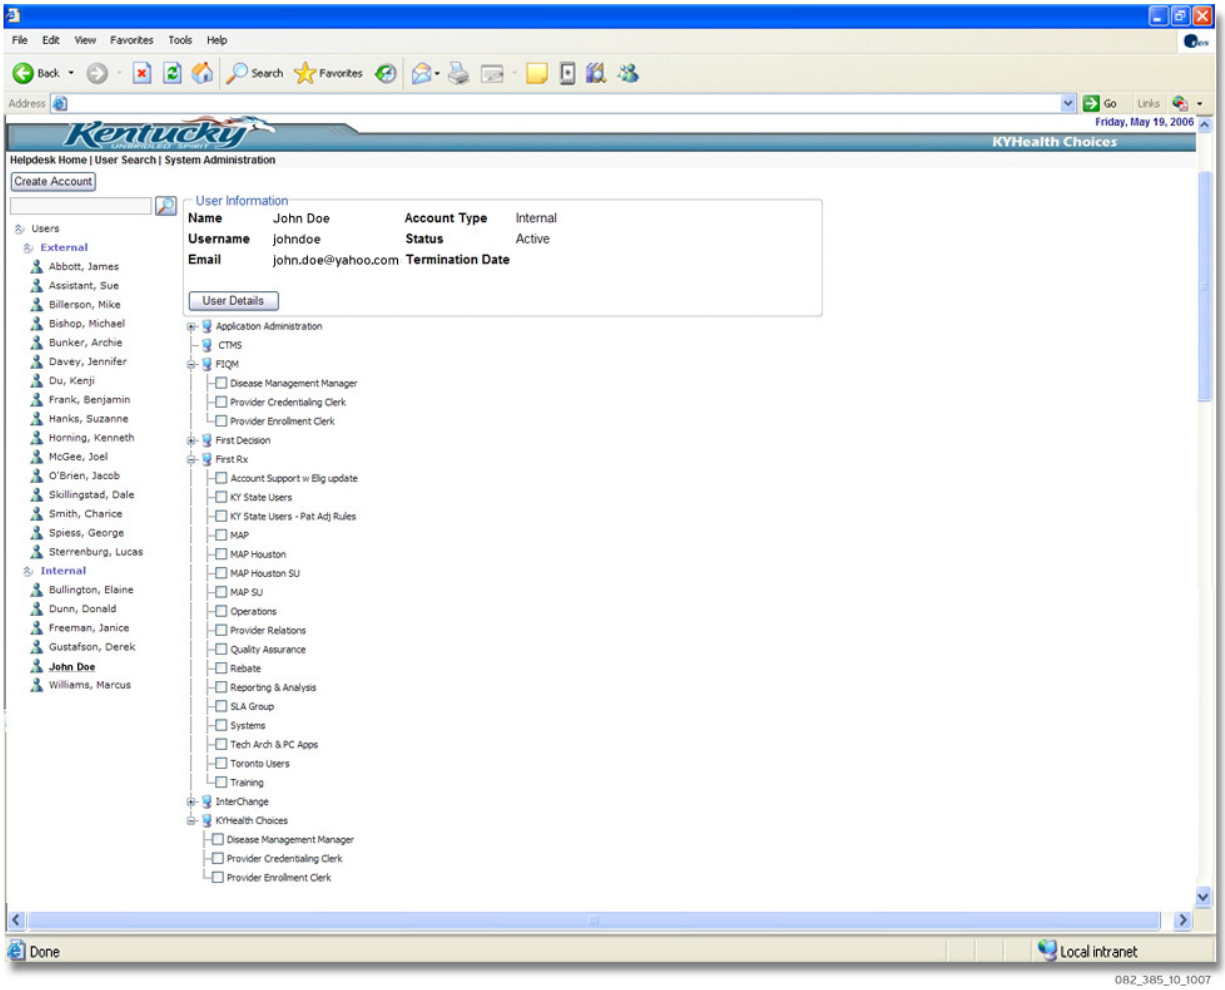
The method for accomplishing this task is through interChange Single Sign-On. New users will be able to access a Web page where they can request access to the systems and functions needed to perform their jobs. An authorized manager can also create this request on behalf of an individual. This request will be automatically forwarded through a predetermined approval process that is based on the user's department, organization, and the type of request. After the various approvers have confirmed their approval, the user is granted access and is automatically notified of the status of the request. Each step of this process will be tracked and archived for auditing purposes. The State approving authority will have the ability to electronically view and approve requests as necessary.

Terminating Access for Staff No Longer Supporting the State

Using interChange Single Sign-On, an authorized state employee may immediately remove access for a terminated or resigned staff member. This process is performed through a browser-based page. Notifications of termination and role removal will be sent to the appropriate individuals as determined in the interChange Single Sign-On workflows for the organization and affected applications. If the State requests from EDS to have an individual's access removed, EDS will do so by the end of the individual's last business day and within four hours of notification by the State for State-designated staff.

The following exhibit, Sample Authorization Manager Page, shows a sample of the administration of internal users.

Sample Authorization Manager Page



Authorization managers can control system access.

Automatic Termination of Users Who Have Not Accessed the System

Our solution can automatically terminate access to systems under its control within a configurable number of days. The Replacement MMIS also will terminate access to a specific application if that application has not been accessed through the security Web portal within a configurable time period that is unique for each system environment.

Management of Application Development and Change Controls

EDS recognizes the criticality of quality control and security protection with appropriate segregation of duties for enabling the smooth and traceable promotion of code and data management processes. We describe the procedures for this in proposal section 50.2.5.8 Change Management Approach.

Network and Data Security

The following subsections describe our approach to the security of claims transmission, e-mail, network links, desktop and laptop computers, and data.

Secure Transmission of Claims

For secure electronic transmission of claims, we will provide technical specifications and individualized support to the State and its business partners that will allow providers to process batch claim submissions, real-time eligibility verification transactions, and other related electronic transactions. Providers will be able to send HIPAA-formatted electronic batch claims or transactions through modem or Internet connections.

We will provide a secure Internet-based system for uploading and downloading information. This system will facilitate the access and exchange of information with a Web site that is secure and easy to use and can exchange information between multiple users.

Transactions can be submitted to the Replacement MMIS by uploading over the Web by a dedicated telecommunications link between the State and its business entities.

EDS will use Cisco's virtual private network (VPN) Advanced Integration Module (AIM) for Secure Socket Layer (SSL) on the wide area network (WAN). Files will be transmitted to the State using secure file transfer protocol (FTP).

Secure E-Mail for Staff

We will provide an e-mail security solution for EDS personnel supporting the Replacement MMIS who will be sending PHI or other sensitive correspondence using e-mail. This solution will not be dependent on the receiver having an encrypted e-mail solution. The receiver will only need to have e-mail and Internet access to reach the Web site to retrieve the secure e-mail.

Secure e-mail will maintain the safety of outbound e-mail communication and support compliance with HIPAA regulations.

Desktop and Laptop Protection

EDS employee and supporting staff desktops and laptops used for the Replacement MMIS business will be secured through the deployment of Pointsec Data Encryption software, CA eTrust antivirus, and Integrity Flex firewall applications. Pointsec security meets Common Criteria standards for the United States, Europe, and Australia, plus Federal Information Processing Standard (FIPS) 140-1 in the United States and Canada.

Security of State Data

EDS' Replacement MMIS and supporting systems will be dedicated to fulfilling the requirements of the State's business only. No other client will have access to the Replacement MMIS or the State's data and files, nor will the State have access to other EDS client data and files.

EDS will use a backup system written to StorageTek tape system library, using LT04 tape technology with built-in encryption.

The Replacement MMIS will support encryption and decryption of data while in transit and in a stored state. The system will be browser-based and will only require a Web browser that is protected by 128-bit SSL and ActiveX controls. Interfaces that access individual health information and related data will require appropriate authentication. We will provide secure transmission of batch and all other HIPAA-compliant or data content–compliant claims and encounters. Data transmissions will take place over secure hypertext transfer protocol (HTTPS) and secure file transfer protocol (SFTP) connections. SFTP requires EDS, the submitter, and the receiver to use encrypting routers.

We will provide further data protection by restricting access to the production data to authorized users through the application and tools required to maintain the database. We will not permit users to connect to the database with a Microsoft Open Database Connectivity (ODBC) or Java Database Connectivity (JDBC) driver. We will only allow authorized users within the server operating system to access the database.

Security Monitoring, Reporting, and Awareness Measures

The following subsections describe our approach to security monitoring, reporting, and awareness.

Traffic and Network Monitoring Software and Tools

EDS provides the following services for the traffic and network monitoring of the Replacement MMIS:

- Anti-Spam Services
- Intrusion-Detection Services
- Anti-Spyware Services
- Anti-Virus Services
- Traffic-Monitoring Services

Anti-Spam Services

Our anti-spam services consist of the detection, blocking, and labeling of unsolicited bulk, or "junk," e-mail before delivering to the e-mail system. This service incorporates the following attributes:

- Blocks to eliminate spam at the perimeter
- Content filtering of known spam tags
- Removal of e-mail identified as spam
- Tagging of e-mail identified as likely to be spam
- Individual control of user-level white-listing
- Corporate white-listing by IP address
- Ability to white-list senders

EDS uses multiple technologies to make sure most spam is caught. There is no silver bullet anti-spam technology, but EDS recognizes that different filters are effective against different types of spam. With multilayer solutions, spammers must avoid each layer.

Intrusion-Detection Services

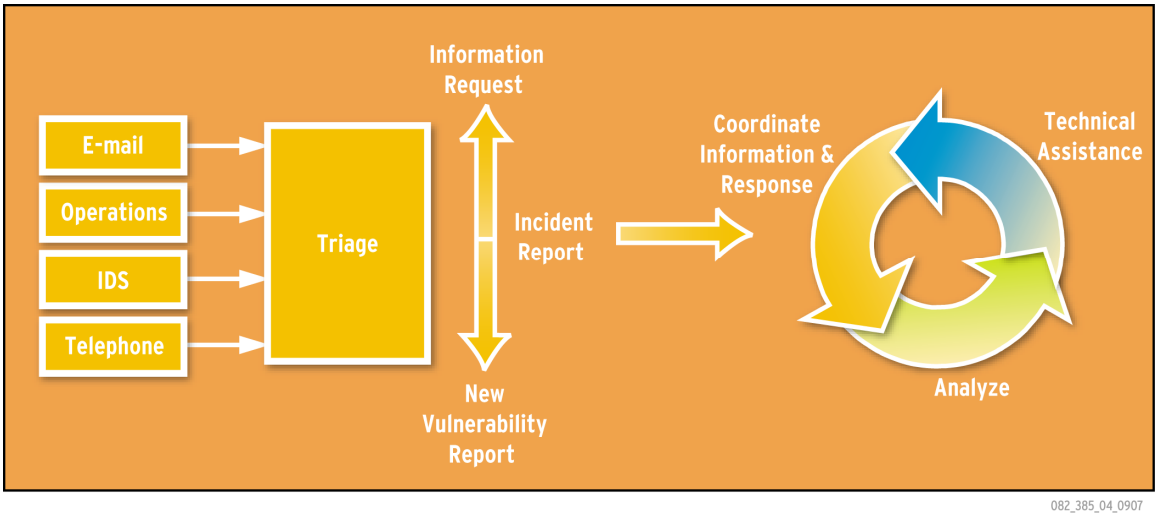
The EDS Threat and Vulnerability Management Group will provide our Intrusion-Detection Services (IDS) to make sure our networks and host systems are protected and remain operational. Our managed service capability includes host- and network-based solutions.

This team will provide a complete solution, which will include the following components:

- Design
- Installation and testing
- IDS fine-tuning process
- Monitoring of high alerts 24 hours a day, 7 days a week
- Alert analysis using CIRT resources
- Version control of IDS tools
- Steady state and production support operations

The Threat and Vulnerability Management Group and the Account Network team will use template processes and procedures for each of the above activities, as illustrated by the following exhibit, IDS Process Flow and Overview, to maintain the consistent delivery of our IDS capability.

IDS Process Flow and Overview



Our IDS service capability includes host- and network-based solutions.

Anti-Spyware Services

EDS will use standard monitoring tools to monitor the deployed anti-spyware protection service and receive alerts on events, errors, and services. The EDS solution will include the following anti-spyware protection services:

- Anti-spyware protection monitoring
- Anti-spyware protection fault management
- Anti-spyware protection configuration management
- Anti-spyware protection performance management
- General reporting capabilities

Anti-Virus Services

EDS will provide its staff with anti-virus software and support to filter infected e-mail from the e-mail server before posting to the e-mail users. EDS uses best-in-class software for virus detection and control. The software is configured to notify the recipient upon detection of an infected e-mail.

When a virus is detected, the anti-virus software will attempt to clean the message (removing the virus.) If this cannot be done, the virus file will be deleted and the recipient will receive the message with a notification that a virus has been detected and the attached file was deleted. If a virus is cleaned, no notification is provided to the recipient.

EDS' Consistent Office Environment Support provides access 24 hours a day, 7 days a week to malicious code professionals who will answer inquiries, resolve problems, and troubleshoot the supported anti-virus product for EDS-owned equipment. The support team applies knowledge of established procedures to research and resolve questions or request and assist in the resolution of moderately complex problems.

In the event of a catastrophic malicious code incident, EDS will provide the action plans and resources to mitigate the risk to environments while assisting in remediation of affected areas.

EDS release management teams will be responsible for creating and updating standardized builds for specific anti-virus applications. The standardized builds are designed to support Windows-based standard workstation and server platforms and EDS' leveraged exchange environment. The solution will allow for further local customization using packaged solution processes and anti-virus software policy management consoles.

Traffic-Monitoring Services

EDS will use a proactive approach to monitor bandwidth usage and to identify, report, and correct bottlenecks that impede performance. Using industry-standard monitoring thresholds, we will perform a root cause analysis of performance issues and use that information to correct any problems and avoid repeat performance issues.

Active, Ongoing Protection

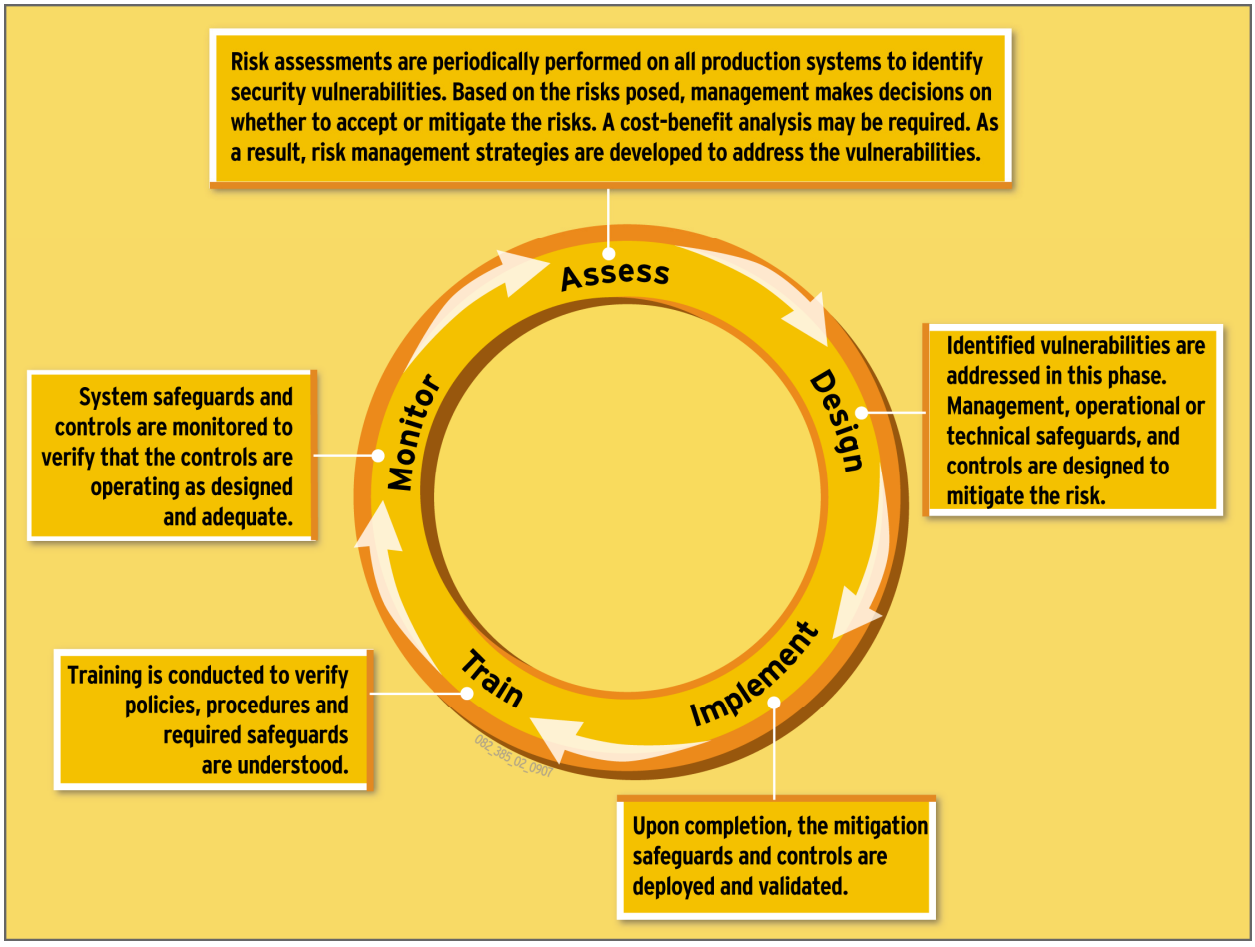
Besides the local monitoring provided by the intrusion detection tools of interChange, the State will benefit from the global EDS enterprise commitment to security and privacy. The EDS Security and Privacy Group sends timely vulnerability alert notification e-mails to systems administrators and privacy and security officers, listing known security issues in many common products. This notification lets security teams know about vulnerabilities of which they might not otherwise be aware, giving them a chance to address these issues before they

can be exploited against the systems we protect. In addition, special high-priority messages are sent to warn of new, high-profile, and especially serious vulnerabilities.

The EDS Government Office of Information Security also has established a privacy and security work group consisting of members from the EDS Medicaid, Medicare, and commercial healthcare accounts. The work group meets monthly to share information and discuss existing and emerging privacy and security issues. The group works under the tutelage of a privacy and security steering committee, whose charge is the development and dissemination of privacy and security best practices so that internal solutions can be shared across the EDS Medicaid accounts.

To support the State at the local account level, we will use EDS corporate resources to verify that privacy and security best practices are incorporated into the Replacement MMIS management and operation practices to support the contract requirements. We will work with the State to implement the five-step continuous improvement process shown in the following exhibit, Privacy and Security Management Model.

Privacy and Security Management Model



EDS uses a five-step continuous improvement business model.

Each of these five interrelated steps comprises a discrete set of activities and outputs that feed the next step in the process.

In consultation with the State's Privacy and Security team, we will identify which activities will be conducted and at what frequency. This will verify that our polices, procedures, and activities conform to the State's privacy and security policies and procedures.

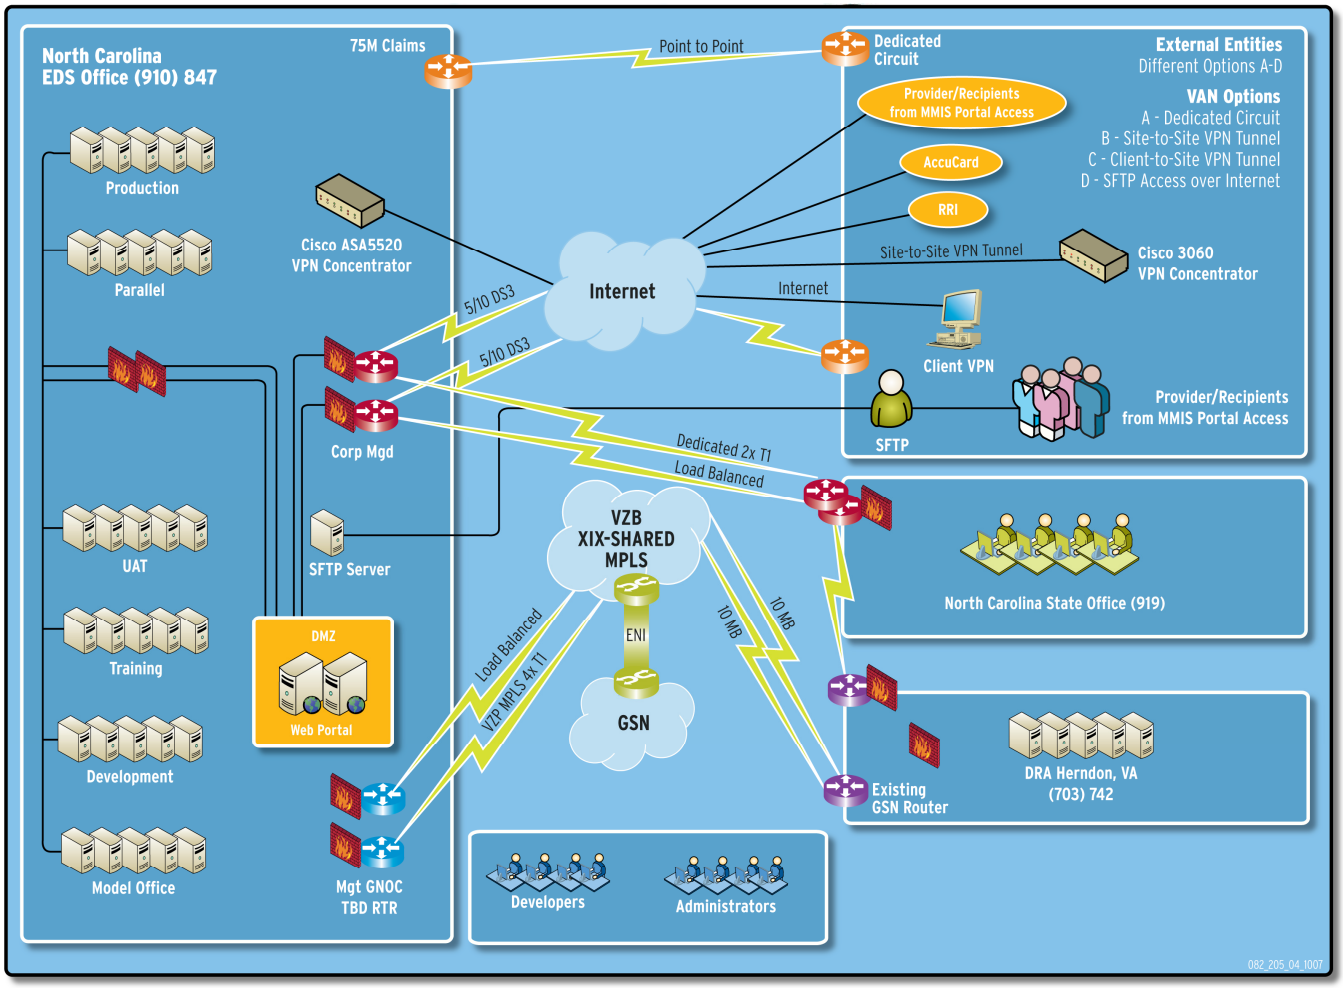
Security Over the Internet

Security over the Internet is foremost on the minds of Internet users today. With the sensitivity of the information that will be available through the secured Web portal for the Replacement MMIS, security architecture is our paramount design consideration.

The data contained within the enterprise is protected from unauthorized access with identity management and access management tools that handle user authentication, authorization, access control, data encryption, and SSL 3.0/TLS, which meets or exceeds HIPAA privacy and security regulations.

The following exhibit, Systems Communications and Connections Model, represents the various system connections and communication links, described in greater detail in proposal 50.2.4 Section D—Proposed Solution Details.

Systems Communications and Connections Model



EDS will work with the State to establish protocols for access to the State's non–public-accessible networks, systems, applications, databases, or devices that will meet the State's requirement to enable logical and physical access to the equipment, network connectivity, and availability of services.

Complete Control and Accounting of Data

As EDS accepts data, batch jobs will date and time stamp the event that accepted and processed the data. Results of these batch transactions will be stored in job logs, which control and account for the data received, stored, used, and transmitted.

Audit Reports

EDS can generate security audit reports from its SQL Server database for the purpose of tracking users and associated security groups, roles, settings, passwords, and duplicated IDs. Reports can be available by user ID and can show their defined permissions, history of changes to the account, and which applications were accessed from the primary security landing page.

Penetration Tests

EDS offers logical penetration testing that identifies known and potential network vulnerabilities using the most sophisticated techniques available. While some organizations understand the benefits of and request periodic testing and scanning services, they fail to recognize the importance of an ongoing effort that is scheduled at prescribed intervals. It is critical that organizations continually test their systems.

We will schedule annual logical and physical penetration tests and compare those to the overall costs for performing these tests. Some of these costs will vary when determining the complexity of the tests—potentially as complex as total environmental system shut-downs to trigger penetration events.

EDS offers its services 24 hours a day, 7 days a week, using automated tools and a team of professional security experts. EDS is prepared to meet the demands of assessing the State's systems and applications and providing insightful mitigation recommendations. External scanning is performed from one of EDS' Penetration Testing Labs.

Security Plan Delivery

Within six months of contract inception, the security officer will deliver a security plan to the State, addressing the following topics:

- Physical site security and protection
- System access security
- Data security
- Application security
- Compliance with HIPAA security standards
- Incident reporting and logging procedures

The security plan will be updated to reflect mutually agreed-on policy or procedural changes made by the State or EDS. As with other aspects of security monitoring and maintenance, we will review this plan at regular intervals to make sure it remains in compliance with HIPAA and other applicable regulations, and takes into account changing technologies.

Disaster Recovery

Access to the Replacement MMIS and related systems is vital to enable the State to continue to provide services to providers and recipients. We understand our key role in protecting and maintaining the availability of the systems, data, and processes that make up the Replacement MMIS solution. We describe our approach to and capabilities for disaster recovery and business continuity in proposal section 50.2.6.3 Business Continuity/Disaster Recovery Approach.

Additional Security and Confidentiality Capabilities

We have experience and knowledge in security management from our past implementations and years of Medicaid experience gained from North Carolina and other states, as well as from being a leader in the development of security and privacy applications across a broad range of industries, including the U.S. Homeland Security, U.S. Department of Defense, and military healthcare systems. As the security infrastructure is defined and technology emerges, EDS develops and provides enterprisewide security and privacy policies and standards to maintain the confidentiality, integrity, and availability of EDS assets and, where applicable, those entrusted to us by our clients. We are interested in discussing these technological advances with the State as they become available.

The following table, Key Security Features and Benefits, demonstrates how our security approach will benefit the State.

Key Security Features and Benefits

Feature	Benefit
EDS Enterprise Security Policies and Standards (ESPS)	A security framework in which HIPAA requirements have already been mapped to existing corporate security policies and standards
Communication of potential vulnerabilities throughout EDS, from global divisions to local teams	Enterprisewide commitment to security and communication
Established, proven security processes during implementation and operational phases	Minimal disruption to provider and recipient operations through a low-risk, high-value solution
An established system with HIPAA-ready security, with features such as encryption tools and role-based security	Flexible, efficient, and automated protection

50.2.9 Section I—Turnover Approach

RFP Reference: 50.2.9 Section I—Turnover Approach, Page 281; 40.15 Contract Data Requirements List, Page 254; 10.12.2 Deployment/Rollout and Turnover, Page 15, Turnover Plan CDRL, Page 263

With professional delivery, proven plans, and automated processes, our Replacement MMIS will be a well-documented system that will enable an incoming vendor to take over with less guidance. Our approach will provide timely delivery of services with minimal disruption to providers, recipients, and the North Carolina Department of Health and Human Services (the State).

The turnover approach described in our response to RFP section 50.2.9 is a vital component of our service to the State. We prepared this section using the RFP's Turnover Plan CDRL as a guide. This section addresses the following areas:

- Turnover Activities
- Turnover Roles and Responsibilities
- Workflow Between EDS and New Fiscal Agent
- High-Level Time Line for Turnover
- High-Level Contingency Plans
- Warranty Period

EDS looks forward to providing a high level of service and continuing our long relationship with the State. Along with the commitment to support the Replacement MMIS, we also are committed to serving the State in conducting a smooth transition to the successor fiscal agent if the State chooses to contract with another fiscal agent. We will strive diligently for the transition to be undetectable to system users, providers, and recipients. Recent experience demonstrates this dedication to the State, as shown during the transition to another fiscal agent, in which EDS' commitment to service and delivery for the

State remained unwavering. EDS strongly desires to maintain this solid reputation and leave the door open for future and further work with the State.

We will support an orderly, controlled turnover of contract operations by defining and communicating our activities, roles, and responsibilities. We will assist the State in preventing service disruption to the provider, recipient, and user communities and other stakeholders. We will facilitate continuous claims payment and related fiscal agent services for smooth operation of the State's programs until turnover is successfully completed.

Turnover Activities

Whether turning over the reins of a system to our own operations group, the client, or another vendor, EDS consistently follows a formal and documented approach. We have successfully planned, executed, monitored, and controlled system turnovers for a wide range of clients and technologies under myriad circumstances.

EDS has assumed and turned over operational responsibility from and to incumbent contractors, state departments, and successor vendors. This experience has enhanced our understanding of the perspective of the parties involved in turnovers. Our current methodology and processes build on lessons learned and proven practices in working with such parties.

EDS does not approach turnover as an afterthought. We regard it as paramount in importance to all other phases of the project life cycle—design, development, planning, and implementation—and in serving as the bridge to the Operations Phase. In the event of a turnover, our experienced team will provide proven plans, automated processes, and professional delivery.

For a successful turnover, it is critical that the Replacement MMIS be a well-documented, automated system. The cornerstone of our orderly approach to turnover and a key competitive advantage over other vendors lies in the information Tracking Repository And Collaboration Exchange (iTRACE), our browser-based project information repository. iTRACE is an online, real-time documentation and information management system with centralized, online storage. It is a robust and fully integrated tool that connects to each functional area within the interChange environment.

iTRACE takes advantage of its integration with interChange to produce and update required manuals, hard copies, online copies (soft copies), or help links. Through iTRACE, time-consuming, costly rework is minimized by the publication of quality, current software version documents. iTRACE conveniently links related information together, providing the user with a more comprehensive understanding of the requirements, modifications, testing, and current system status.

Working with knowledgeable members of our Operations team, led by Account Manager Melissa Robinson, using proven project management tools and standards established through our Program Management Office (PMO) throughout the life of the contract, and following a proven knowledge transfer process, we will coordinate the following turnover activities to meet the State's objectives:

- Planning turnover with the State
- Planning turnover with the successor
- Developing the turnover plan
- Executing and managing the turnover phase
- Communicating turnover activities
- Turning over materials
- Producing final turnover reports
- Reconciling financials

EDS and the State will jointly review and approve each of these turnover activities, which are discussed in further detail in this section.

Planning Turnover With the State

We acknowledge the State's responsibilities for providing the work breakdown structure (WBS) information to the Centers for Medicare & Medicaid Services (CMS) during general planning if there is a turnover. We will track State and EDS activities associated with the turnover in the Replacement MMIS Microsoft Project work plan.

During our planning with the State, we will focus on open communication and full access to project records and status information. We will verify the work that must be done, provide the necessary staff, and develop the appropriate schedule. We will conduct project status meetings with the State to discuss turnover activities and the status of deliverables, tasks, milestones, resources, project risks, action items, progress, and issues.

We will maintain access to our required staff for the continued support to meet performance levels provided throughout the Operations Phase. EDS will provide access to the EDS operational management staff as needed to provide turnover of both the business and technical aspects to the subsequent fiscal agent.

Planning Turnover With the Successor

Our reputation is built on the proven professionalism of our EDS team, which has provided support to the State for more than 30 years. Our commitment to providing service excellence to our clients throughout each contract phase, regardless of the phase, has been demonstrated. EDS considers the end of a contract just as critical to our service commitment as its beginning, and we will work closely with the State and the new fiscal agent during the planning for the

Turnover Phase to provide uninterrupted service to the provider, recipient, and user communities and other stakeholders.

During turnover, the State will require our full cooperation and assistance to achieve a smooth transition of system operations to the State or its designated agent. During the most recent State turnover activities, EDS' team was responsive to the State's needs and proactive in the coordination of turnover tasks. During this transition period, each deliverable met the turnover requirements.

Our schedule of activities will prioritize, sequence, and time fiscal agent turnover tasks to provide a basis of communication and activities among the State, EDS, and the incoming fiscal agent to prevent disruption during the Turnover Phase. The turnover account manager will collaborate with the State and the incoming fiscal agent to direct the development of the schedule of activities for the Turnover Phase.

We will provide a schedule for each identified turnover item within each business area, based on the State's and the incoming fiscal agent's implementation plan. For each business area, we will set logical start and completion dates given its priority in the turnover, interdependencies, and resource constraints.

During the Turnover Phase, we will present the incoming fiscal agent with an overview of the Replacement MMIS technical and operational environment. This overview will inform the new fiscal agent of Replacement MMIS personnel, hardware, software, data storage, cycle processing, and operations support services that must be accounted for in turnover planning.

As part of turnover, the state will receive the current interChange code, which had been placed in escrow for North Carolina. The timing of this code release will be defined during the initial phase of turnover. Additionally, planning for the database UNIX servers, associated SAN space, and the production application Windows servers turnover will be performed at this time. The incoming fiscal agent will be responsible for operating system licenses, COTS software licenses, and system utilities. The incoming fiscal agent also will be responsible for its own WAN and connections to the State's divisions, VANs, and associated healthcare support locations for the multi-payer MMIS solution.

Developing the Turnover Plan

We understand the activities, time, effort, and risks associated with the turnover of an MMIS. We will use our experience to develop a solid plan for turning over the State's business and technical operations to another fiscal agent. The plan will identify turnover tasks and activities, their scheduled start and completion dates, their status, the assigned resource, and the responsible party.

Our turnover plan will include system and operations tasks for each Replacement MMIS functional area. We will provide the State with a project plan that contains an extensive set of turnover tasks such as the following:

- Determine transition approach
- Produce work plan for State approval
- Identify facilities turnover activities
- Establish communication processes to be used with stakeholders, the new fiscal agent, interface agents, and the user community
- Provide inventory lists
- Transfer toll-free telephone numbers
- Transfer post office boxes
- Supply provider written inquiries and provider manuals
- Supply iTRACE electronic documentation
- Define process for cutover of financial activities
- Provide claim, adjustment, and financial data
- Provide imaging files

We will provide accurate, current information regarding system and operations tasks. For each functional area, we will identify the system files, paper and electronic documents, processes, and procedures that must be delivered for turnover to the new fiscal agent. As noted earlier, the Replacement MMIS will be a well-documented, automated system that facilitates ease of turnover.

Executing and Managing the Turnover Phase

Our turnover account manager, Melissa Robinson, and the supporting account team will collaborate with the State, the incoming fiscal agent, and appropriate interfacing organizations during the turnover process, from development of the plan through final delivery. Our plan will track deliverables, tasks, milestones, and resources and will be organized as needed by the State and EDS to facilitate requirements traceability and simplify State resource availability. EDS will schedule walkthroughs of the plan and make agreed-on updates as required.

Melissa Robinson will adhere to standard project management processes and practices during the Turnover Phase to identify risks, assumptions, and constraints that could become issues. iTRACE will be the tool for tracking the identified issues, assumptions, and constraints and will be readily accessible by the State for viewing current information on these items.

We realize that project risks have the potential to become issues. As each potential risk is identified, it will be documented according to the risk and issue management plan, as discussed in proposal section 50.2.5 Section E—Project Management Plan. Project managers, team members, or the State can identify potential risks and issues at any time. Logs will be reviewed at weekly status meetings with State and EDS management. Proactively identifying and managing potential problems will enable team members to take corrective actions that will impact the Turnover Phase in a positive way.

Communicating Turnover Activities

We will support clear communication with the parties affected by turnover activities, including the following:

- The State and its agencies
- Interfacing organizations
- The new fiscal agent
- Provider and user communities
- Provider associations

We will work with the State to determine the most efficient and appropriate methods to communicate turnover activities and status to the affected parties. Our communication of turnover activities will be coordinated and approved by the State to maintain consistency and accuracy.

Turning Over Materials

The turnover schedule will include the turnover of the Replacement MMIS production data, libraries, and documentation. For each functional area, we will identify the system files, paper and electronic documents, processes, and procedures that will be delivered for turnover as agreed to by the State and EDS to the new fiscal agent.

Our experience in other states reinforces the importance of handling provider, recipient, and health information sensitively. We will aid in turning over to the State or disposing of hardware, software, and data in a method compliant with HIPAA rules and as agreed to by the State and EDS.

Archived records will remain archived and will be turned over to the State or its designee on the agreed-on turnover date in their existing format. Records that are not archived will be included in the turnover inventory if they are required to support continued delivery of services to eligible recipients and payment to eligible providers, as agreed on with the State.

As part of turnover, the State will receive the current interChange MMIS code, which had been placed in escrow for North Carolina. Additionally, the database UNIX servers, associated SAN space, and the production application Windows servers will be turned over. The incoming fiscal agent also will be responsible for

renewing operating system licenses, COTS software licenses, and system utilities. The incoming fiscal agent will have to procure and set up all network connections for the Replacement MMIS.

Producing Final Turnover Reports

Within 30 days of the conclusion of the contract, Melissa Robinson, the turnover account manager, will deliver to the State the final report of turnover activities, which will include the following:

- Date on which each deliverable was transitioned
- Status of the deliverable
- Designated agent who accepted the deliverable
- Final fiscal agent financial reconciliation
- Turnover issues log
- Outstanding system design requests in place at time of turnover

Reconciling Financials

We understand that financial management accountability is critical for healthcare funds to be available to meet the needs of our clients. It is important that fiscal agent service reconciliations be completed routinely during operations, and it also is critical that a final accounting at closure of the contract confirms the integrity of the fiscal agent accounting records for the contract.

EDS will perform a final fiscal agent financial reconciliation. Our financial professionals bring extensive knowledge and experience to support accurate and timely financial reconciliation for the Replacement MMIS fiscal agent services supporting the State. The EDS Financial Operations team will continue to be responsible for the transaction recording, tracking, and reporting requirements related to performing fiscal agent duties for the State during the Turnover Phase when these responsibilities are held by EDS.

Timely and accurate reporting is essential for the State's confidence in the turnover of multiple agencies. We will use consistent procedures to guide our financial staff in final fiscal agent reconciliation of banking and fund management processes during the Turnover Phase.

The final financial reconciliation will include the following:

- **Replacement MMIS bank accounts for which EDS was responsible during the Operations Phase of the contract—**No later than three months after turnover, we will direct the bank to void any remaining outstanding checks, after which we will close the bank accounts and refund any residual balance to the State.
- **Outstanding financial transactions in the bank accounts—**The completion of the final Replacement MMIS financial cycle will conclude

our responsibility for provider payments. Subsequent payments to providers, whether claim-specific or non–claim-specific, will be the responsibility of the State or its designee. Any payments subsequently returned or voided will be returned to or funded by the State or its designee.

- **Accounts receivable management activities—**These activities include identifying overpayments, processing adjustment transactions, setting up and recouping receivables, imposing payment holds or other provider sanctions, and reporting. This final accounts receivable reconciliation will be generated through Replacement MMIS reports of claim and system activity as part of the final Replacement MMIS payment cycle. Available supporting documentation related to accounts receivable also will be turned over to the State or its designee as either archives or work-in-progress inventory.
- **1099 data—**EDS will issue a final set of 1099s on payments made through the Replacement MMIS. We will work with the State and successor fiscal agent to turn over final 1099 data. CP2100 notice and withholding activities will be handled with the successor fiscal agent and the State to resolve and appropriately act on backup withholding in the successor fiscal agent MMIS.
- **Financial balance reconciliation reports and tax activities—**EDS financial staff members will work with the State and new fiscal agent to turn over and finalize the financial balance reconciliation reports and tax activities.

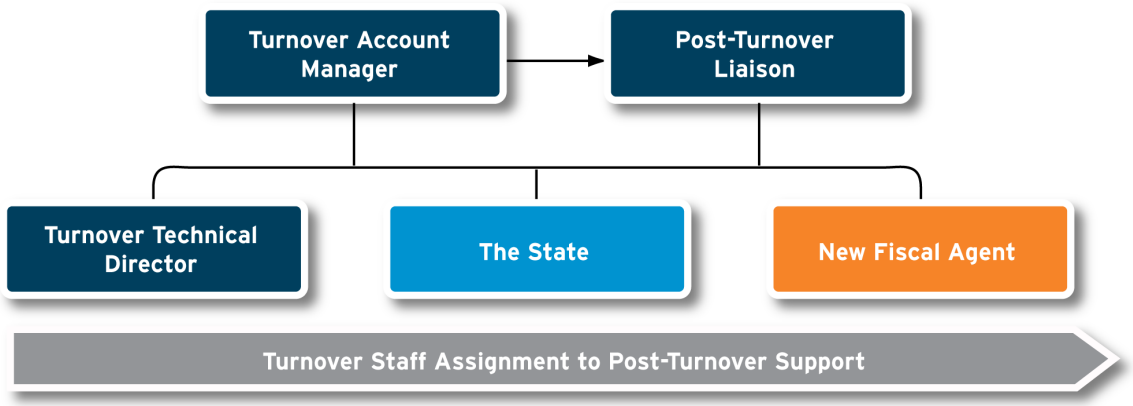
Turnover Roles and Responsibilities

Though the turnover process will involve every individual supporting the Replacement MMIS, EDS has identified the following three key leadership roles to work with the State and the new fiscal agent:

- Turnover account manager
- Turnover technical director
- Post-turnover liaison

The following exhibit, Turnover Roles, depicts the working relationship among the key turnover leadership roles. If the State decides to turn over the Replacement MMIS to a new fiscal agent, EDS' turnover account manager will initiate planning activities with the support of the turnover technical director and representatives of the State. As turnover comes to a close, the turnover account manager will transition responsibilities to a post-turnover liaison, who will continue to support the State and the new fiscal agent. Throughout the entire process, communication will be open and flow in every direction.

Turnover Roles



The turnover account manager, director, and post-turnover liaison will oversee the turnover process from beginning to beyond the contract end date.

Turnover Account Manager

We will provide experienced manager Melissa Robinson, with a background in healthcare and the Replacement MMIS, to serve as the turnover account manager. This is a critical role that will set a tone of professionalism, collaboration, and dedication to a smooth transition. The turnover account manager will be a key account member, and our staff assignment will demonstrate the importance we place in this role.

Melissa's responsibilities will include the following:

- Working with the State to develop the final turnover plan and schedule
- Establishing a communication plan with designated State or new fiscal agent personnel for the Turnover Phase
- Working with the State to confirm status reporting requirements for the Turnover Phase
- Overseeing turnover plan activities, as required
- Providing turnover status to the State or new fiscal agent
- Meeting with the State or the new fiscal agent
- Providing a smooth transition of system and operational responsibilities and deliverables to the State or successor fiscal agent to prevent disruption to the State, recipients, providers, users, and other stakeholders

Turnover Technical Director

We will provide experienced systems manager Tim Sullivan to serve as the turnover technical director. Tim will provide critical support and leadership in

the coordination of turnover activities. The turnover technical director will serve as liaison to the State, the new fiscal agent, and EDS operational teams to promote open and timely communication, effective status reporting, and the tracking of turnover tasks.

The responsibilities of the turnover technical director will include the following:

- Working with the State to develop the final turnover plan and schedule
- Monitoring progress on the delivery of turnover items according to project requirements
- Determining the turnover project approach and time line
- Serving as liaison for turnover activities between EDS and the State or the new fiscal agent
- Working with the State to establish priorities for operational resources
- Providing turnover status to the State or new fiscal agent
- Meeting with the State or the new fiscal agent
- Coordinating and maintaining the turnover plan in Microsoft Project
- Proposing a common naming convention for turnover deliverables

Post-Turnover Liaison

We will provide Anthony Perkins as the post-turnover liaison, with experience in leadership, healthcare, and the Replacement MMIS, to support the State for a period of time following the completion of the contract. Anthony will provide post-turnover support to the new fiscal agent for the period following the conclusion of turnover to address issues that might arise during this critical period and to minimize potential service disruptions.

The post-turnover support liaison will have access to EDS subject-matter experts and EDS North Carolina technical experts who are knowledgeable of the Replacement MMIS. Anthony will be responsible for escalating issues to these experts to answer questions from the State or the new fiscal agent.

Individual or Team From the State

We anticipate that an individual or team from the State will be designated to oversee turnover activities. We intend to closely coordinate the planning and execution of the turnover with this individual or team.

We look to the State to provide an individual or team to do the following:

- Serve as liaison between the current and incoming fiscal agents and other interfacing organizations, as appropriate
- Acknowledge, review, and approve the turnover tasks and deliverables

- Work with EDS regarding the development and finalization of the detailed turnover project plan
- Chair turnover status meetings
- Participate in turnover walkthroughs and delivery of turnover items
- Provide EDS with written notification of any turnover issues or risks that require action or correction by EDS

Workflow Between EDS and the New Fiscal Agent

We will cooperate with the new fiscal agent by providing the required turnover services as specified by the State in this RFP, including meeting with the new fiscal agent and devising work schedules that are agreeable to the State, EDS, and the new fiscal agent. As with every phase of our contract, it is EDS' desire to execute the Turnover Phase with quality. To enable clear communication and prioritization of activities, we will coordinate with the State regarding each turnover item to make sure it is delivered to the appropriate designated individual or team.

It is our experience that the involvement of the State in the exchange of turnover items is critical, as it allows the parties directly affected to remain aware of each item's current status. In support of this, we will plan to deliver turnover items directly to the State unless otherwise instructed by the State. If the State instructs us to deliver turnover items directly to the new fiscal agent, we will require the same delivery acknowledgment procedures that would be executed with the State. Such procedures will include a listing of the requirements for the turnover item, the deliverable contents, and signatures of both the delivering and receiving individuals.

Any issues or concerns with a turnover item must be communicated by the State to EDS as soon as possible to facilitate analysis and correction or clarification, as appropriate. Issues identified will be addressed promptly and documented using the issue management processes described in proposal section 50.2.5 Section E—Project Management Plan.

On review and acceptance of each turnover item, the State will provide EDS with sign-off of completion for that turnover task.

High-Level Time Line for Turnover

To enable the preparation of an effective turnover plan and supporting material, the State will notify EDS prior to the end of the current contract (or contract extension) of the State's intent to initiate turnover activities. We will commence the planning activities described above, resulting in the delivery of the EDS

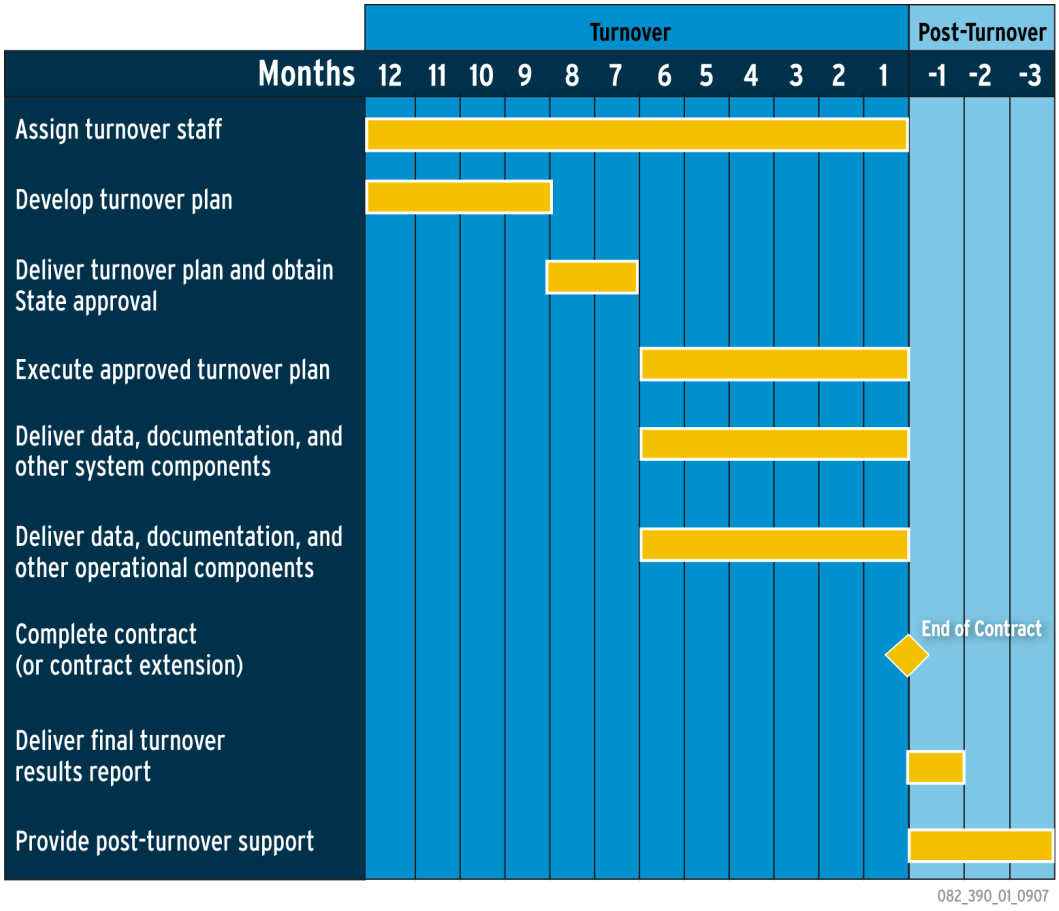
turnover project plan to the State no later than four months after the date of notification of the State's intent to initiate turnover activities.

We will review this plan with the State and other affected interfacing organizations to reach a mutually acceptable plan. We will execute that plan and complete turnover activities according to the requirements and schedule to meet the State's needs and EDS' operational obligations.

We will deliver a turnover results report presenting the final completion status and results of turnover to the State within 30 days of the completion of the contract. Turnover will be considered complete 10 days after the report is delivered, unless communication to the contrary is received from the State.

The time line illustrated in the following exhibit, Turnover Time Line Example, provides a representation of the timing of key turnover deliverables, activities, and milestones that will take place after the State notifies EDS of the turnover. The specific time frames and durations, however, will be determined by mutual agreement between EDS and the State.

Turnover Time Line Example



Our turnover schedule will provide timely and orderly completion of turnover activities.

We understand the major components of a turnover plan and can use previously developed, detailed plans as a base that can be easily modified to meet the specific needs of the turnover of the Replacement MMIS. Following are some of the specific tasks that fall under the "Execute approved turnover plan activity" in the preceding exhibit, Turnover Time Line Example:

- Generate the communication process and meet with the State and new fiscal agent according to the turnover schedule
- Provide turnover status reports
- Provide a resource requirements plan
- Complete and turn over final financial reporting and reconciliations
- Generate final Replacement MMIS 1099s
- Provide inventory lists and turn over inventoried items to the State or new fiscal agent
- Turn over hardware on agreed-on schedule after the Replacement MMIS is shut down
- Turn over software retained in escrow as required by the contract
- Establish cut-over data for paper document receipts and financial receipts and execute that transfer to the new fiscal agent

High-Level Contingency Plans

We will work with the State to establish contingency plans to be used if the new fiscal agent or the State is unable to assume the fiscal agent responsibilities. Because of our desire to prevent disruption of service to the State and the need to procure or retain appropriate resources to do so, our experience encourages us to recommend six months' notice prior to the end of the contract that the State intends to invoke such a contingency.

Resource Requirements

We will provide to the State a resource requirements document. This document will outline the possible types and numbers of resources required to maintain operation of the Replacement MMIS and fiscal agent services, focusing on personnel, technology, and facilities.

Personnel Resources

The resource requirements document will include an estimate of the number and type of personnel required to perform the functions of the Replacement MMIS and its supporting fiscal agent operational departments.

Technology and Facilities Resources

This list of resources will detail the technology and facilities resources needed to operate the Replacement MMIS, and it will include the following:

- Data processing equipment
- System and special software
- Leveraged equipment needs
- Other equipment
- Telecommunications circuits, hardware, and software
- Office space

We will base our resource requirements list on the inventory maintained in our system and on our experience in the operation of the Replacement MMIS. We will provide a detailed list of the interface and hardware requirements necessary to support the State's Medicaid services at that time.

Warranty Period

By the time we are conducting a turnover of the Replacement MMIS, the system will have been thoroughly tested and operating effectively for many years. Based on EDS' experience, we have established a 90-day period for turnover activities from the contract end date. This turnover period is sufficient because the Replacement MMIS will be fully documented, and the documentation will be readily available to the State and the new fiscal agent through the use of iTRACE.

Authorized State and EDS staff will be able to easily review requested system changes, the status of these change requests, and notes relating to the implementation of these changes. This information will provide the basis for understanding for the turnover to the new fiscal agent. Additionally, with State notification six months prior to contract end, EDS will work with the State and the new fiscal agent to implement based on the State's new MMIS implementation schedule. EDS will have inventory lists, hardware, and software in escrow and, based on the agreed-on schedule with the State, EDS will turn over all items necessary and within the established time frame. EDS will have expert staff on call to respond to questions or address issues for this turnover period following the end of the contract and will work to support the State.

Summary

Throughout turnover, your EDS team will provide the same level of professional service that you've come to know and expect. The turnover plan and approach will schedule all events required to turn over fiscal agent operations, and the Turnover team will make sure activities run smoothly. The remainder of the EDS team will perform contract tasks through the last day of operations—a further indication of our commitment to an efficient, professional turnover.

50.2.10 Section J—Corporate Capabilities

RFP Reference: 50.2.10 Section J—Corporate Capabilities, Pages 281-284

Corporate capabilities will be a critical factor in selecting the Replacement Medicaid Management Information System (MMIS) vendor. The value the North Carolina Department of Health and Human Services (the State) places on past performance, experience, and corporate capabilities is demonstrated in the proposal evaluation, where 25 percent of the score is focused on the capabilities described in the offeror's response to Section J. EDS brings a corporate commitment, an unmatched body of corporate capabilities, and relevant experience to this project. Demonstrated capabilities, proven systems and tools, and experienced personnel are the strongest promises of success that we offer the State.

Global Healthcare Organization

EDS has more than 250 healthcare clients in 21 countries, including government, private, and public organizations. To provide a sharper focus on our clients and their needs, EDS created the Global Healthcare Industry Group, combining our healthcare business, technical solutions and systems, and personnel from around the world into a single organization to deliver targeted services worldwide through industry-leading services and people. EDS clinical and administrative applications support 38.4 million patient visits per year, and our people and systems perform 2.4 billion healthcare transactions annually, including 1 billion in healthcare claims.

More than 9,000 EDS professionals are dedicated to supporting our healthcare clients around the world.

Proven interChange Baseline MMIS

interChange is already operating in five states and being implemented in seven more. This endorsement from your peers across the country is a powerful indicator of interChange's capabilities. EDS designed interChange specifically to meet the evolving needs of state Medicaid programs. We have a dedicated team of 244 people supporting the baseline interChange across the country.

Experience in North Carolina

With 30 years of experience with North Carolina state government, Medicaid policies, and the program's providers, knowledge transfer will not be an issue, learning the program will not be a problem, and getting to know each other will not be a challenge. Together, we—the State and EDS—have accomplished these tasks during three decades of serving North Carolina's Division of Medical Assistance (DMA) and Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH) populations.

We understand that adding the Division of Public Health (DPH) and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC) creates new tasks, but we are already working with DPH on the immunization registry project and are looking forward to further supporting that division and the Migrant Health Program.

Proven Approaches, Strategies, and Plans

The benefits of a stable installed baseline system include a comprehensive set of baseline documentation, including system designs, training plans, work plans, and implementation plans. This documentation will be available to the State and will provide a solid foundation for the project's documentation and project management requirements.

In the following subsections, we illustrate our ability to collaborate with the State to meet your Replacement MMIS objectives, as set forth in the RFP:

- 50.2.10.1 Relevant Experience
- 50.2.10.2 Summary Information Listing the Offeror's Corporate Relevant Experience
- 50.2.10.3 Financial Stability
- 50.2.10.4 Replacement MMIS Account's Place in the Corporate Structure
- 50.2.10.5 Damages and Penalties Asserted

50.2.10.1 Relevant Experience

RFP Reference: 50.2.10.1 Relevant Experience, Page 281

Relevant experience with Medicaid programs across the country—including North Carolina—is the strongest indicator of success that we can offer to North Carolina.

EDS brings a demonstrated, long-term commitment to Medicaid and healthcare in the United States. This commitment began in the 1960s, not long after EDS was founded, and continues stronger than ever today. The following qualifications describe our achievement in Medicaid program support:

- Have provided Medicaid IT services to programs in 31 states
- Serve as the MMIS provider in 21 states, including fiscal agent contracts in 17 states
- Process more than 1 billion healthcare claims annually, receiving more than 85 percent of those claims electronically

We are the MMIS provider in 21 states and fiscal agent in 17, processing more than 1 billion healthcare claims annually. However, our most relevant experience comes from 30 years of service to North Carolina's Medicaid program and seven years of service to the Mental Health program, providing program and technology services that support the State.

State of North Carolina

For Medicaid programs across the nation, we have implemented leading-edge, Web-based capabilities to support claims processing, eligibility verification, claim status inquiries, prior approval (PA) requests, and fraud detection and prevention. In our response to Section 50.2.10.1, we describe the Medicaid and other healthcare experience—government, commercial, and in North Carolina—which is our most distinctive qualification.

On-the-Job Experience in North Carolina

The most relevant experience we bring is our 30 years of service to North Carolina. We have been your Division of Medical Assistance (DMA) Medicaid fiscal agent since 1977 and Division of Mental Health, Developmental Disabilities, and Substance Abuse Services (DMH) contractor since 2001, providing program and technology services that have supported the programs' evolution. The Highlights of 30 Years in North Carolina table summarizes some of the key events in this history, when EDS was there to help make it a success.

Medicaid

As your long-term Medicaid fiscal agent, we have become a major employer in the Raleigh area. As can be seen in the Highlights of 30 Years in North Carolina table, we have provided technical and operations support for every step in the

Medicaid program's evolution. In doing so, our DMA and DMH fiscal agent operational team of more than 290 have become experts in program policy, procedures, and history. Our most dedicated personnel, many of whom have more than 15 years with EDS' North Carolina Medicaid office, are people recognized throughout DMA and DMH for their understanding of every aspect of program operations and procedures. Bringing this experience as well as established contacts with DMA, DMH, the provider community, healthcare associations, and other State stakeholders to the new contract eliminates the need for knowledge transfer of operating procedures and policy and the learning curve that a new vendor would have to face.

Mental Health

As previously mentioned, we successfully modified the Legacy MMIS+ to support the State's highly specialized definition of a multi-payer system. This experience with the North Carolina approach to multi-payer technology provides an understanding that comes only through supporting this additional project for seven years.

We worked with the State to develop and support the Legacy MMIS+ multi-payer system. The system processes Medicaid claims for DMA as well as non-Medicaid claims for DMH, a mental health payer. In 2001, we implemented the multi-payer functional capability in the MMIS for DMA. Later in the same year, we implemented the IPRS, and DMH became the second financial payer using the North Carolina system.

The multi-payer capability in North Carolina provides a single point of entry for claims, enabling the system to determine the best payer for each submitted service. Claims are routed to the appropriate financial payer based on criteria defined by the State. After claims are identified with a financial payer, they process separately, but largely through the same set of programs. Because system file structures and programs are shared, the reference and criteria files are set up for flexibility and to allow claim edits and audits to be similar or unique between payers. These and other key milestones in our work with the State are shown in the following table, Highlights of 30 Years in North Carolina.

Highlights of 30 Years in North Carolina

Year	Milestone
1978	The DMA is created. The DMA continues to have full responsibility for the State Medicaid program.
1984	EDS assumes responsibility for the Medicaid Pharmacy Program.
1990	DMA and EDS introduce the automated voice response system (AVRS) that allows providers to check recipient eligibility, checkwrite information, drug coverage information, procedure code pricing, and prior approval 24 hours a day. In 2001, this popular feature supported more than 1 million transactions.
1991	The drug rebate program begins. After April 1, the program covers drugs for only those manufacturers that had signed a rebate agreement. To date, North Carolina's Drug Rebate program has invoiced $2.86 billion and recovered all but 0.25 percent of that amount.

Year	Milestone
1991	Managed care comes to North Carolina Medicaid when DMA announces creation of Carolina ACCESS. This program, where recipients are assigned a primary care provider, was implemented in 12 counties over a two-year period.
1993	The Drug Utilization Review Program is implemented.
1994	The Vaccines for Children (VFC) program provides vaccines to public and private providers for eligible children from birth through 18 years of age.
1998	The North Carolina MMIS becomes Year 2000 (Y2K)—compliant. Providers are allowed to continue non—Y2K-compliant submissions through transition period.
1999	Optical scanning technology is implemented. Hurricane Floyd devastates North Carolina. EDS' Provider Relations team drives checks to the eastern parts of the State, where providers are especially hard hit by flooding.
2000	N'ABLE is implemented as a Web-based system giving users with multiple views of information easy navigation between various system components.
2001	EDS completes Integrated Payment and Reporting System (IPRS) modifications to the MMIS to support mental health claims processing.
2004	North Carolina Medicaid begins third-party cost avoidance with pharmacy claims for recipients who have other coverage for prescription drugs.
2004	Enhancements are made to the IPRS browser environment, allowing replication of similar attending provider records, decreasing time for LMEs to add attending providers, and increasing accuracy of enrollment data in IPRS.
2004	The MMIS is remediated for IPRS and Medicaid to be HIPAA-compliant, including modifications to process HIPAA-compliant transaction sets and elimination of local procedure codes while restructuring core processing to use a DB2 relational database.
2005	At DMA's request, EDS takes over, implements a system, and hires an Operations team to take over PASARR requirements within six weeks of start-up on December 1, 2005, with no disruption to the provider or recipient communities.
2006	Enhancements are made in IPRS to support new State Plan Amendment (SPA) consolidation for enhanced services and endorsed providers, which was approved by CMS in January 2006.
2006	Medicaid recipients with Medicare begin receiving their drugs through a prescription drug plan (PDP). Edit 2256 is created to deny claims for dual eligibles who are covered under Medicare Part D.
Future	The Replacement MMIS (interChange) revolutionizes the way work is performed by the DMA, DMH, Division of Public Health (DPH), and the Migrant Health Program in the Office of Rural Health and Community Care (ORHCC).

EDS created several additional programs specifically for IPRS to assist with the State's intricate requirements surrounding State budgets.

Because there is a significant amount of code shared by payers in North Carolina, the EDS teams that support each payer have developed an understanding of how actions made by one payer affect the other. This cross-functional knowledge has proven critical in the past so that modifications made for one payer can be used for the other, reducing costs and increasing efficiencies for the State.

Other State Programs

On December 1, 2005, the North Carolina team assumed responsibility for the pre-admission screening and annual resident reviews (PASARR). Within six

weeks, we achieved a smooth transition from the previous vendor. We review Level I preadmissions, Level II evaluations including annual resident reviews, and change of status reviews for mental illness, mental retardation and related conditions for nursing facility applicants and residents of Medicaid certified facilities.

For Level I reviews, healthcare providers submit the requisite Level I assessment form through ProviderLink to the EDS unit, where it is either approved and assigned a PASARR number or referred for a Level II review. If a Level II is required, we coordinate an on-site assessment of the recipient and complete a summary of findings.

The EDS PASARR staff continues to demonstrate knowledge and experience in the performance of PASARR reviews and is exceeding the client's service-level agreement. For example, Level II evaluations are conducted, and placement, treatment, and service recommendations for identified mental illnesses are forwarded to DMH within an average of two days—much faster than the contractual requirement of five State business days. We receive approximately 5,500 Level I requests each month and consistently provide the PASARR authorization or Level II referral within the required six hours.

A high priority for fiscal agent responsibilities is supporting cost containment. Since 1991, the EDS North Carolina Drug Rebate team has supported the State's drug rebate invoicing, collection, and dispute requirements. We have been recognized by the Centers for Medicare & Medicaid Services (CMS) and the Office of the Inspector General (OIG) for these outstanding efforts.

The North Carolina program received an Integrity Award in 1994 from OIG. In 2004, an audit of the 50 state Medicaid programs showed that North Carolina was one of only four states with no recommended changes in billing and collection of drug rebates. To date, EDS has invoiced $2.86 billion in drug rebate dollars, and we have collected more than 99.75 percent of those funds.

Experience with the Baseline System—interChange

Besides extensive experience with North Carolina, EDS also brings extensive experience with the baseline system—interChange—that we are proposing as the Replacement MMIS. Unlike other MMIS vendors, who may be supporting only one current Medicaid customer or who have not successfully implemented an MMIS in the past five years, EDS brings installation experience with the baseline system in 12 states! We have successfully implemented interChange in Kentucky, Kansas, Oklahoma, Pennsylvania, and Tennessee. We are in the process of implementing the system in Florida, Massachusetts, Oregon, Alabama, Connecticut, Ohio, and Wisconsin. Of these seven current implementations, six will be completed before the North Carolina DDI phase begins (the seventh implementation, in Ohio, is just getting started).

Why is this experience critical to North Carolina? The understanding and experience we bring with North Carolina and the intensive experience with the proposed baseline system means low risk and a high certainty of success.

A. MMIS Experience

EDS is here for the long term. We bring 40 years of commitment to Medicaid and to innovative MMIS technology. We are a consistent presence and a reliable collaborator in MMIS programs across the country.

EDS has 40 years of experience with MMIS solutions. In fact, we developed the first Medicaid system in the country in the late 1960s. Today, we operate or are implementing MMISs for 21 state Medicaid clients. We have proven to be a strong ally with states undergoing Medicaid reform. Our relationships with our state clients are part of the fiscal agent responsibility that goes above and beyond just providing information technology (IT) and operational services. With an array of government and healthcare clients and experiences, we are well positioned to add perspective and insights. Because we are not a provider, recipient, or legislator, we can provide a neutral viewpoint to the State.

Many of our clients have been with EDS more than 25 years, indicating our solid performance and relationship-building in those states, as demonstrated by the following table, EDS' Long-Term Continuous State Relationships.

EDS' Long-Term Continuous State Relationships

State	Start Date	Years
North Carolina	01/01/1977	30
Wisconsin	04/01/1977	30
Idaho	01/01/1978	29
Alabama	10/01/1979	28
Connecticut	06/24/1981	26
Vermont	07/01/1981	26
Arkansas	01/14/1985	22
New Hampshire	01/01/1985	22
California	10/01/1987	20
Delaware	11/01/1989	18
Indiana	03/01/1991	16
Pennsylvania	10/01/1992	15
Rhode Island	12/01/1992	15
Tennessee	09/10/1995	12

In the following exhibit, EDS MMIS Experience, we list the MMIS functional areas we support for our current, operational Medicaid clients.

999_02_MMIS_Experience_0907

* Service will be added with implementation of interChange (Expected completion–03/2008)

EDS offers an unmatched depth and breadth of MMIS and Medicaid operations experience.

B. Other Healthcare Claims Processing Experience

EDS has 40 years of Medicaid claims processing experience. However, we also bring extensive experience with claims processing for other government programs and commercial insurance, creating an unmatched body of claims processing expertise from government and industry.

Besides our many years of Medicaid experience, EDS also operates large claims and encounter processing systems for other healthcare clients, including clients in the Medicare industry as a contractor to the CMS and subcontractor to Part B

carriers, and to commercial insurance companies. We also developed, implemented, and operate one of the world's largest eligibility systems, the Defense Enrollment Eligibility Reporting System (DEERS), as one of our projects for the U. S. Department of Defense (DoD). Our experience in these areas is described in the following subsections.

Medicare Experience

Among the U.S. federal government programs we support is the claims and encounter function of the Medicare Program run by CMS. Our Medicare Operations group has direct contracts with CMS and works with other Medicare contractors as a subcontractor. The core competency of Medicare operations is our Medicare Part B physicians' claims and encounter processing expertise.

In November 2006, we were awarded the One Program Integrity task order supporting anti-fraud activities for CMS where we consolidate data warehousing and analytics for contractors and others responsible for detecting fraud and abuse related to CMS programs. As part of this effort, we developed and are implementing a data repository where we will load state Medicaid data; implement analytics solutions to present the data to users; and develop and implement a Web portal to allow users convenient and secure access to the data. Our Web portal and analytics also will support access to CMS' integrated data repository, which houses Medicare data.

Medicare Part B Standard System Maintenance

In 1997, the federal government awarded EDS a contract to provide the standard Medicare Part B system and the associated ongoing user support, production support, system maintenance, and special projects. With the award of this contract, EDS' Multi-Carrier System (MCS) became the standard system that carriers must use to process Medicare Part B workloads. EDS was tasked with transitioning any carrier to this system that was not among the Medicare carriers already using the system.

The Part B workloads were transitioned to the MCS platform in August 2005. EDS delivers 18,000 hours of system changes per quarter and provides production and user support for 14 carriers who process claims and encounters in 44 jurisdictions.

CMS Medicare Claims Data Center

On January 3, 2002, EDS was awarded a blanket purchasing agreement (BPA) from CMS to provide services under the General Services Administration (GSA) IT Schedule. In support of the Medicare Claims Data Center (MCDC2) contract, EDS operates the MCS for the chosen carrier, Palmetto GBA, to administer the Ohio and West Virginia workload, which includes more than 40 million claims and encounters annually.

Medicare Business Solutions

EDS Medicare Business Solutions (MBS) supports 11 independent subcontracts with Medicare contractors, provides the principal support to the EDS MCDC2 direct contract with CMS, and provides internal support to the EDS Medicare Program Safeguard Contract (PSC). EDS MBS operates under subcontracts to the following Medicare Part B carriers:

- **National Heritage Insurance Corporation (NHIC)—**Data center hosting, EDI general support, print and mail, and telecommunications. Additionally, NHIC provides general support for three Part B production environments processing five Medicare B workload jurisdictions or states.
- **HealthNow, Inc. (BCBS of Western New York)—**Data center hosting, EDI general support, print, telecommunications, and general support for one Part B production environment for one Medicare B workload jurisdiction. Additionally, EDS MBS provides general support, EDI general support, and print services for the HealthNow Durable Medical Equipment Regional Contract (DMERC). We support this contract in one production DMERC environment running in a non-EDS data center that includes the workload of 10 Medicare Part B DME jurisdictions or states.
- **Noridian Administrative Services (BCBS of North Dakota)—**Data center hosting and general support for two Part B production environments processing five Medicare B workload jurisdictions or states. Additionally, EDS MBS provides general support for two Noridian Part B production environments processing the workload of six Medicare Part B jurisdictions or states in a non-EDS data center.
- **Wisconsin Physicians Service—**Data center hosting, print and mail, telecommunications, and general support for three Part B production environments processing three Medicare B workload jurisdictions or states. Additionally, EDS MBS provides general support for one additional Part B production environment processing the workload of one additional Medicare Part B jurisdiction or state in a non-EDS data center.
- **First Coast Service Options (FCSO or Blue Cross Blue Shield of Florida)—**EDS provides general support for one Part B production environment processing the workload of one Medicare Part B jurisdiction or state in a non-EDS data center.
- **Empire, Inc (Blue Cross Blue Shield of New York)—**Empire, Inc. provides general support for a client/server application for one Part B production environment processing the workload of one Medicare Part B jurisdiction or state.

- **Verizon, Inc.—**As needed, provides general support for six Part B production environments processing the workload of six Medicare Part B jurisdictions or states.
- **Palmetto GBA (BCBS of South Carolina)—**Palmetto GBA provides general support for two Medicare Part B production environments processing the workload of three Medicare Part B jurisdictions or states. Additionally, EDS MBS provides general support for a separate Palmetto application that processes Office of Personnel Management claims and encounters.

Through these contracts, the EDS MBS team oversees the processing of approximately 200 million Medicare Part B claims annually in an EDS data center and provides support in processing an additional 40 million Part B Medicare claims annually that are processed in other facilities.

Experience With Commercial Accounts

We have specifically included Medicaid and Medicare client development projects to demonstrate our ability to handle large-scale development projects within the parameters typical of government projects.

EDS also provides systems for claims and encounter processing to several commercial healthcare insurance clients, including Blue Cross Blue Shield of Massachusetts (BCBSMA) and Blue Shield of California (BSC).

BCBSMA, an EDS client for more than 30 years, is the leading health insurer in Massachusetts with 2.4 million members. Members are either individual recipients, such as members enrolled in Medicare supplemental, or members of employer groups, such as the Federal Employees Health Benefit Plan and John Hancock Insurance.

Coverage offerings are provided in multiple product lines such as HMO and POS models. Since 1992, EDS has had a full facilities management services agreement with the combined Blue Cross Blue Shield plan and is under a renewal contract until December 2013. Under this contract, EDS provides Web development and hosting, desktop, mainframe, mid-range and wide area network (WAN) management services, application support, application development, and middleware and integration support.

EDS designed a secure, easy-to-use, customized Web-based portal to relieve doctors and medical staff of the administrative burden of claims and encounter management. EDS' solution integrated several systems into a single, user-friendly platform helping BCBSMA to improve healthcare service delivery to providers and members. The integration will significantly reduce the amount of time providers spend on claims and encounter management, allowing them to check patient eligibility, review claims status, view referral and authorization information while meeting Health Insurance Portability and Accountability Act

(HIPAA) requirements, and provide simplified and personalized access to content and information.

The portal supports a variety of provider processes such as medical policies and guidelines, administrative guidelines, fee schedules, Provider Reports (PIRS), downloadable forms, BCBSMA's newsletters, and other information. The portal directs healthcare provider e-mail communications to the proper BCBSMA area based on various criteria. Lastly, providers can use the portal to register for BCBSMA training and download training materials.

BSC has been an EDS client for more than 34 years. BSC is a market leader providing healthcare insurance services to more than 2.5 million Californians through HMO, POS, and PPO product offerings; direct purchase offerings to the self-employed or those not covered through their employer; and to the Medicare population through its supplemental offerings. EDS has had a full facilities management services agreement since 1969, renewed January 2001 for a 10-year period. Working with BSC's internal IT Direction team, EDS is responsible for BSC IT services.

EDS processes claims and encounters for numerous commercial insurance companies including the following in the United States:

- **Blue Cross/Blue Shield of Arizona—**EDS operates, maintains, and enhances multiple claims systems, plus provides on-site print center management, data warehousing, and support of some corporate system.
- **Blue Cross/Blue Shield of Massachusetts—**EDS provides core health insurance claims and membership systems, paying more than 34 million claims and encounters annually.
- **Blue Shield of California—**EDS supports integrated system and claim flow for claims and encounter adjudication, database administration, disaster recovery, and additional support for applications and platforms.
- **CIGNA Healthcare—**EDS provides claims and encounter processing systems and additional support since transferring the General Motors and Delphi mental health, substance abuse, and dental claims and encounters to our system.
- **National Account Services Company (NASCO)—**Under our facilities management contract with NASCO, EDS developed and operates a customized claims and eligibility system that consolidates and supports General Motors benefits plans.
- **Wellmark (Blue Cross Blue Shield of Iowa and South Dakota)—**Among our services to Wellmark are applications development and support services for core health systems, including claims and encounters, membership, and underwriting and actuarial.

C. Implementation and System Maintenance of Healthcare Transaction Replacement Systems

Implementing a complex healthcare transaction system, like an MMIS, requires 24 to 30 months of effort. Once implemented, these systems will require skilled maintenance to keep them running efficiently over the life of the contract. EDS technical and operational resources have risen to these dual challenges over and over again.

EDS holds the industry's best record of on-time implementation of new MMISs. Our clients in Delaware, Kansas, Oklahoma, Pennsylvania, Tennessee, and Kentucky have experienced EDS' ability to implement processes and procedures that mitigate risk and deliver an MMIS on time, without missing a checkwrite. Even where there have been issues or changes, EDS has never missed a claims payment. Besides these completed projects, EDS is implementing interChange MMIS for Alabama, Connecticut, Florida, Ohio, Massachusetts, Oregon, and Wisconsin.

Because we developed, implemented, and operationally maintain your current system, we are better positioned to minimize risk to stakeholders.

No other company can match EDS' MMIS implementation record over the past five years. We combine the talent and commitment of our people with best-in-class, repeatable DDI processes. Our carefully timed schedules of meetings, deliverables, plan submissions, and progress reports will help the State and EDS make certain that milestones are met on time and within budget. The Replacement MMIS project will be plan-driven, conforming to Institute of Electrical and Electronics Engineers (IEEE) Std 1058-1998, Standard for Software Project Management Plans (SPMP).

The processes, procedures, and templates used to manage each client's MMIS are designed using a standard set of organizational project management assets maintained by the EDS Global Health and Human Services Centre for Enabling Client Excellence (CECE) organization. We have used these project management tools successfully to create project plans for our existing MMIS projects, including the current implementations. Please refer to subsection H. Experience with Proposed Replacement System below for details on the implementation of the baseline MMIS in five states.

Once implemented, the systems must be maintained, which is a critical support factor during MMIS operations. We provide technical expertise to design, perform, and implement system maintenance and modification activities in response to changes resulting from new federal and state Medicaid policies as prioritized by our customers.

Each state has distinct needs and we provide operations and maintenance support accordingly. Because Medicaid experience is most relevant to this

procurement, we will provide case studies from two current Medicaid contracts, Pennsylvania and Tennessee, which are both using interChange.

For example, the Pennsylvania technical team supports both system maintenance and approximately 30,000 modification hours annually. The team that maintains the system and delivers the modification hours includes 66 people. This staff is primarily located on-site in our Camp Hill, Pa., location, with only 12 working remotely.

The Pennsylvania team monitors the system 24 hours a days to facilitate the timely completion of batch processes, tracking, and reporting on files submitted by managed care organizations. Additionally, they oversee the following key system processes:

- Weekly financial cycle and the monthly capitation cycle
- Software and hardware upgrades and expansions as necessary
- Data maintenance requests from the Department such as table updates that cannot be done using online Web pages or that are large in volume so systematic updates are more practical
- Monitoring of nearly 100 production hardware devices
- Tuning the system to facilitate optimal performance, problem resolution, and on-call support
- Supporting ongoing external auditor needs

Approximately 50 percent of the EDS technical team provides direct support to the Provider Reimbursement Operations Management Information System in electronic format (PROMIS*e*™) system, making certain that claims are processed accurately, and providers are paid on time.

Another example of our MMIS maintenance expertise is TennCare (Tennessee's Medicaid program), where a mix of on-site and off-site resources provide system maintenance. The majority—approximately 75 percent—of the staff is located on-site, with the rest at an EDS Solution Centre.

TennCare's maintenance tasks are mostly composed of research of state issues and questions, resolution of defects, minor system changes, ad hoc reporting, and file maintenance. The TennCare team provides 24 hours a day, 7 days a week cycle monitoring with a team of 54 systems engineers (SEs), 16 business administrators (BAs), and six people in production support.

Vice President East Region/Chief Operating Officer (COO) EDS Government Health and Human Services Kevin McFarling manages every MMIS implementation. He meets weekly with the delivery teams to discuss performance metrics and best practices, flag risks, and develop solutions.

D. Fiscal Agent Operations Experience

No other business model can adequately prepare an entity for the complex business model of a fiscal agent operation. Fiscal agent operations involve more than back office processing, more than system maintenance, and more than claims processing. Fiscal agent operations combine all these tasks and add many more to provide a comprehensive technological and operational solution. EDS brings extensive experience in fiscal agent operations that is directly relevant to the Replacement MMIS project. We bring a long history of fiscal agent experience and knowledge and are well versed in meeting the needs of the State's multi-payer fiscal agent operation.

A fiscal agent business operation is the most complex business model there is: combining automated business processes, manual procedures, interactive claims and adjustment processing performed and supported by experienced technical, professional, clinical, and clerical staff. Fiscal agent operations typically require training and outreach programs with a training and field representative staff to optimize the efficiencies and effectiveness of the state's MMIS

Fiscal agent services represent the operations side of Medicaid program functions. During the past year, as fiscal agent in 17 states, we have provided operational services to most of the functions listed in the following exhibit, EDS Fiscal Agent Experience. EDS employees serve as claims examiners, provider representatives, and clinicians. At our accounts, for example, we have more than 110 licensed clinicians—including registered and licensed practical nurses, dental hygienists, and pharmacists, medical doctors, and social workers.

EDS Fiscal Agent Experience

999_06_Fiscal_Agent_Experience_0907

Besides our extensive MMIS experience, EDS has widespread fiscal agent experience.

E. MMIS and Other Healthcare System Experience

The next required topic listed in RFP Section 50.2.10.1 Relevant Experience is "MMIS and other healthcare system experience," which we detail throughout this proposal section.

F. Multi-payer Claims Processing Experience

The State's definition of a multi-payer MMIS is clear. For the Replacement MMIS, multi-payer means an MMIS with multiple payment sources and multiple programs for services that cross various lines of State business and can be paid from one claim. No other MMIS in operation today meets this definition. However, EDS has modified the Legacy MMIS+ to meet this definition and also brings additional experience with meeting the requirements for multi-payer and multi-program systems in other states.

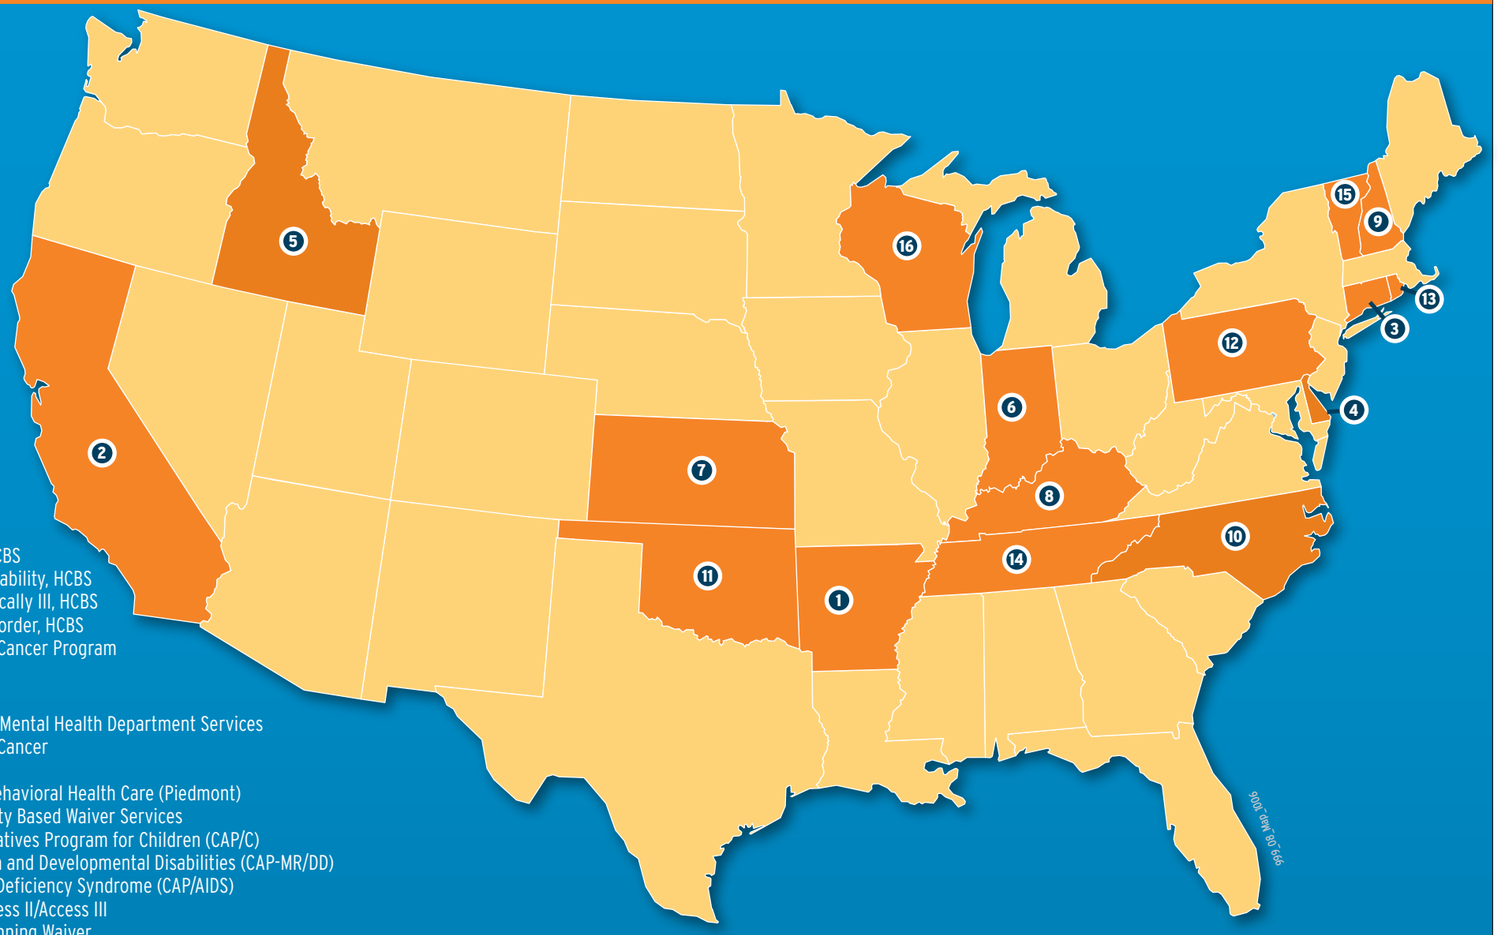
The State seeks a multi-payer capability that will support multiple services on one recipient's claim paid by various payers. EDS developed and supports the Legacy MMIS+ multi-payer system, and will customize interChange to meet the State's requirements.

We designed interChange to accommodate multi-payer claims processing and benefit packages. We have extensive experience supporting multiple program processing in areas such as waiver programs and mental health programs. These programs use different methods to contract with providers and plans, such as fee-for-service, primary care case management, and multiple capitated models. Our systems support multiple pricing capabilities and contractual differences and process claims and encounters for the same services under different benefit packages. Experience shows the expansion capabilities of this system are virtually unlimited in terms of multi-payer processing.

For example, in the Oklahoma interChange MMIS, the comprehensive multibenefit program structure allows the State to use the system to build combinations of programs, benefit packages, and funding sources that enable members to reimburse billers differently for the same services depending on the benefit package. Edits and audits can be created for each program, and providers can provide services to recipients in different programs with different benefit types, pricing indicators, and rate types.

The exhibit following this page, Multiprogram Participation, identifies the additional programs supported by our MMISs, affecting more than four million additional lives.

Multiprogram Participation



Arkansas (1)
- Tax Equity and Fiscal Responsibility Act (TEFRA)
- Children's Medical Services (CMS)
- DDS Arkansas—DDS Children's Services
- Arkansas BreastCare

California (2)
- Family Planning Access Care and Treatment
- Cancer Detection Program—Every Woman Counts
- Presumptive Eligibility
- Obstetrics
- Comprehensive Perinatal Services Program
- Breast and Cervical Cancer Treatment Program
- California Children Services
- Early Access to Primary Care
- Genetically Handicapped Persons Program
- Children's Health and Disability Program (CHDP)
- Local Education Agency (LEA)
- Adult Day Health and Counseling (ADHC)

Connecticut (3)
- ConnPACE
- CT AIDS Drug Assistance Program (CADAP)

Delaware (4)
- Delaware Cancer Treatment Program
- Delaware Prescription Assistance Program
- Chronic Renal Disease Program

Idaho (5)
- Children's Special Health Program (CSHP)

Indiana (6)
- Children's Health Insurance Program (CHIP)
- M.E.D. Works
- Hoosier RX
- First Steps Program
- Waiver programs

Kansas (7)
- Waiver programs: Home and Community Based Services (HCBS)
  - Frail Elderly, HCBS
  - Severely Emotionally Disturbed, HCBS
  - Head Injury, HCBS
  - Developmentally Disabled, HCBS
  - Physically Disabled, HCBS
  - Technology Assisted
- Presumptive Eligibility
- Presumptive Disability
- State Children's Health Insurance Program (SCHIP)
- Early Detection Works
- AIDS Drug Assistance Program (ADAP)
- Kansas General Assistance Program (MediKan)
- Tuberculosis Control Program
- Sixth Omnibus Reconciliation Act (SOBRA)
- Program of All Inclusive Care for the Elderly (PACE)
- Work Opportunities Reward Kansans (WORK) Program
- Non-Emergent Medical Transportation (NEMT) Program
- Enhanced Care Management (ECM)
- HealthWave Program
- Hospice Program

Kentucky (8)
- Consumer Directed Option (CDO)
- KCHIP
- Presumptive Eligibility
- Breast and Cervical
- Kentucky Patient Access Care (KenPAC)
- Family Planning

New Hampshire (9)
- Waiver Programs: HCBS
  - Developmental Disability, HCBS
  - Elderly and Chronically Ill, HCBS
  - Acquired Brain Disorder, HCBS
- Breast and Cervical Cancer Program
- CHIP

North Carolina (10)
- NC DDHS Division of Mental Health Department Services
- Breast and Cervical Cancer
- Drug Rebate
- Managed Care for Behavioral Health Care (Piedmont)
- Home and Community Based Waiver Services
  - Community Alternatives Program for Children (CAP/C)
  - Mental Retardation and Developmental Disabilities (CAP-MR/DD)
  - Acquired Immune Deficiency Syndrome (CAP/AIDS)
- Carolina Access/Access II/Access III
- Be Smart Family Planning Waiver

Oklahoma (11)
- Tax Equity and Fiscal Responsibility Act (TEFRA)
- SCHIPs
- Family Planning (Title V and Title XX)
- Oklahoma Cares—Breast and Cervical Cancer Treatment Program
- Oklahoma Employer Sponsored Insurance (O-EPIC) Program
- O-EPIC Individual Plan
- Homeward Bound Waiver

Pennsylvania (12)
- Waiver programs
  - Infants, Toddlers, and Families Waiver (Early Intervention)
  - Person/Family Directed Support Waiver (PFDS)
  - Consolidated Waiver
  - Office of Mental Retardation (OMR) Base Program
  - Early Intervention Base Services
  - Attendant Care Medicaid Waiver
  - Attendant Care State Funded Program (Act 150)
  - Community Care (COMMCARE) Waiver
  - Omnibus Budget Reconciliation Act (OBRA) Waiver
  - Independence Waiver
  - Michael Dallas Waiver
  - AIDS Waiver
  - Elwyn Waiver
  - Pennsylvania Department of Aging (PDA) Waiver
  - Bridge Program (PDA)
- Family Planning (Title V and Title XX)

Rhode Island (13)
- Pharmacy Management/Drug Rebate
- RI Pharmaceutical Assistance to the Elderly (RIPAE)
- RI AIDS Drug Assistance Program (RI ADAP)
- PA Program with Heritage
- Comprehensive, Evaluation, Diagnosis, Assessment, Referral, Re-evaluation (CEDARR)—Home Based Therapeutic Services
- Waiver Programs
- Connect CARRE (Disease Management)
- RIte Care/RIte Share Program
- Transportation Hot Line
- Transportation Bus Passes
- McKesson Claim Check
- Dental Benefit Management
- Drug Court
- Children with Special Health Care Needs
- GPA
- CHIP

Tennessee (14)
- Senior Services
- Commission for the Aged
- ADAPT
- Self-determination Waiver
- Mental Health Mental Retardation (MHMR) Waiver
- Statewide MR Waiver
- Arlington MR Waiver

Vermont (15)
- Long-Term Care (LTC) Waiver
- SCHIPs
- Breast and Cervical Cancer Treatment (BCCT)
- Ladies First
- HIV Drug Rebate
- General Assistance
- Community Residential Treatment (CRT)
- Primary Care Plus (PcPlus)

Wisconsin (16)
- Wisconsin Well Woman's Program
- Supplemental Security Income (SSI)
- Wisconsin Chronic Disease Program
- Immunization Registry

G. Other Relevant Projects

In addition to healthcare and claims processing projects, EDS also brings an extensive body of experience with human services systems and programs. These projects extend our commitment to state government beyond Medicaid and into related human services programs.

For state Medicaid programs and the Medicare program in the United States, we process more than 1 billion health claims annually. In fact, around the world EDS touches more than 200 million patient lives each day through our healthcare services and solutions. Few companies can deliver on large, complex government IT programs—EDS is a proven leader in this area.

We provide Medicaid services for 21 states. We process healthcare claims for Medicaid, Medicare, and commercial businesses. Due to strict page limits set forth in the RFP, we are not able to provide details of all of our relevant experience, but are providing a representative sample of our experience with the development and operations of large-scale data processing systems.

Defense Enrollment Eligibility Reporting System (DEERS)—Over the past 26 years, EDS has assisted the Defense Manpower Data Center (DMDC) in developing, operating, and fielding major automated information systems (AISs) that support individual members of the Department of Defense (DoD) and their families as well as other federal departments and agencies. The DEERS medical systems run at every military treatment facility throughout the world and verify the eligibility of DoD members.

Relevance to North Carolina: This project involves the design, development, and operation of a large-scale eligibility system for healthcare coverage, where we support more than 23 million military personnel records.

California Work Opportunity and Responsibility to Kids (CalWORKs) Information Network (CalWIN)—CalWIN is used to improve the way services are delivered to 40 percent of the social service caseload in California. More than one million individuals receiving assistance from human services programs, including Medicaid, food stamp, general assistance, and the California welfare-to-work program, are served by the positive benefits of updated technology.

Relevance to North Carolina: This project involves the design, development, and operation of a statewide human services and healthcare assistance system. CalWIN, the largest system of its kind in the country, replaced a 30-year-old legacy system that EDS had maintained since 1982. The new system verifies that benefits for 14 assistance programs are appropriately issued to more than 2 million California families. It supports the work of more than 31,000 county employees responsible for providing timely services to California's neediest citizens.

Pennsylvania Patient Safety Authority (PA-PSRS)—Within five months of its statewide deployment, PA-PSRS processed more than 50,000 reports of actual or potential patient harm.

Relevance to North Carolina: This project involves the design, development, and operation of a statewide healthcare utilization and reporting system. To date, more than 550,000 reports have been generated using the system's analytical tools to identify trends and patterns in the data.

Michigan Child Support Enforcement System application (MiCSES)—EDS' system linked the entire State to a single network while implementing a framework that enabled 14 separate vendor cultures to coexist.

Relevance to North Carolina: This project involves the design, development, and operation of a statewide human services system. The Michigan Department of Human Services works with almost 10 million residents to maintain the safety and security of every child.

H. Experience With Proposed Replacement System

EDS brings experience with the proposed Replacement MMIS in five states. CMS certification back to the first day of operations in four states (with the fifth state looking forward to the certification review and subsequent certification in 2008) is the best indicator of our success and our clients' satisfaction.

The State's expectation for vendor experience with its baseline MMIS is current or imminent (prior to contract award) deployment in at least one state. Some vendors may only have experience with one installation. Other vendors may be bidding personnel with no experience with the proposed Replacement MMIS. EDS, however, is proud to state that we have installed our proposed Replacement MMIS in five other states in recent years. interChange is currently operational in those five states, and we are implementing it in seven additional states.

Why is this successful base of installations important to North Carolina? We believe it is important for the following reasons:

- **Proven product—**The baseline MMIS we are proposing, interChange, is installed and working in other states, processing large volumes of claims and meeting client requirements.
- **Developed body of procedures, processes, and work plans—**During these installations, we have developed and fine-tuned processes and work plans that are proven to guide the implementations to successful conclusions.

- **Experienced people—**Our nationwide team of experienced technical personnel supports requirements validation, design, testing, and implementation.

The staffing plan for North Carolina provides a direct link with this recent history of interChange installations. Implementation Manager Dean Taunton and Senior Systems Architect Scott Lowry have just completed the installation of interChange for Kentucky, where they held equivalent positions.

Dean brings in-depth experience with North Carolina and with interChange implementations. He worked on the North Carolina Medicaid account for five years before supporting Kentucky's interChange implementation. He also supported the TennCare interChange implementation in 2003 and 2004.

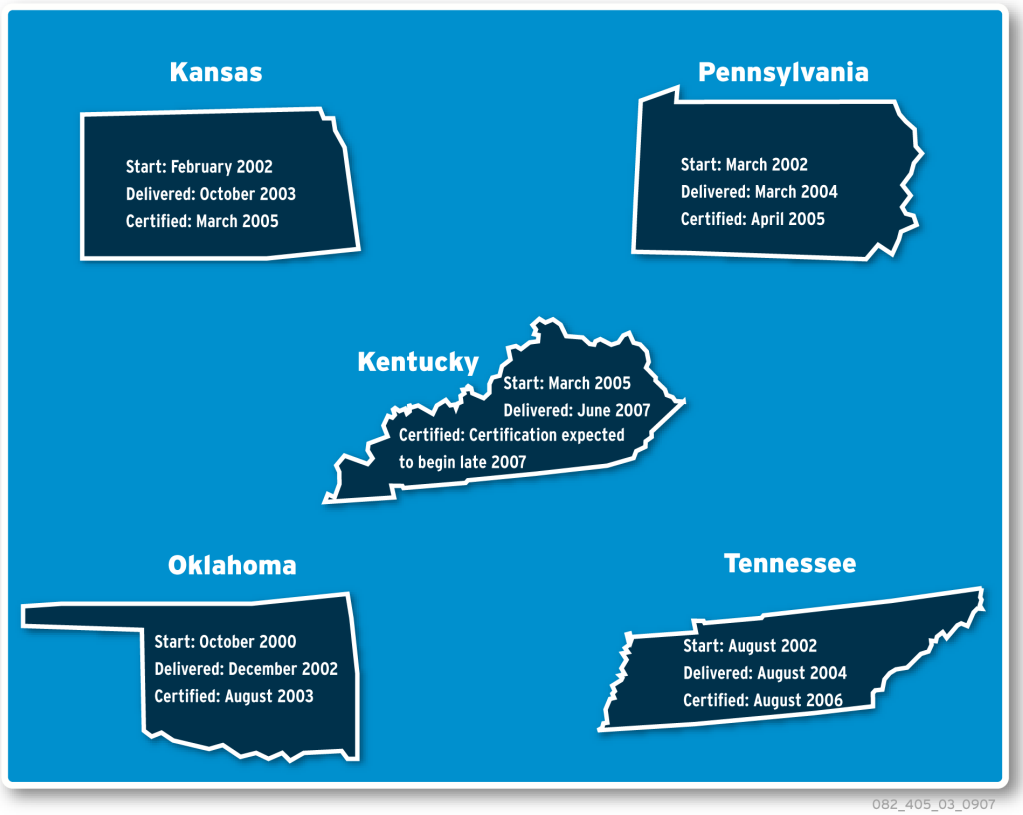
Dean and Scott will bring this experience and lessons learned to North Carolina. In fact, they were involved in the development of this proposal (including the system solution, work plan, and project management approaches) and are already contributing to a successful project.

In the following subsection, we illustrate our implementation and operations experience with interChange and business areas.

Implementation and Operations Experience With Replacement System and Business Areas

EDS has successfully completed interChange implementations for clients in Oklahoma, Kansas, Pennsylvania, Tennessee (TennCare), and most recently, Kentucky, as the following exhibit, interChange Clients, demonstrates.

interChange Clients



Peace of mind for the State: The baseline MMIS proposed by EDS is operational in five states.

Additionally, we are currently implementing interChange to update three current clients—Alabama, Connecticut, and Wisconsin—and four new clients—Florida, Massachusetts, Oregon, and our most recent MMIS contract in Ohio.

We are proud of our strong implementation record. Our newest interChange implementation, Kentucky, is expected to be certified in 2008. Our other four interChange states were certified retroactive to their initial "go-live" dates.

For our operating interChange systems, we have detailed our implementation experience in the following order, beginning with the most recent:

- Commonwealth of Kentucky Cabinet of Health and Family Services
- Tennessee Department of Finance and Administration, Bureau of TennCare
- Pennsylvania Department of Public Welfare
- Kansas Health Policy Authority
- Oklahoma Health Care Authority

Commonwealth of Kentucky Cabinet of Health and Family Services

In June 2007, EDS completed the interChange installation in Kentucky. The system allows real-time adjudication of claims and multiple benefit packages for eligibility categories. This is important because Kentucky recently received approval for a 1115 waiver from CMS. The waiver—known as the *KyHealth Choices*—allows the Commonwealth to provide different benefit packages according to the individual needs of the members. It was the first state to obtain such approval.

"It was a wonderful, wonderful transition. I really can't say enough about the team at EDS and the lengths they went to ensure the continuity. We literally flipped the switch."

—Shannon Turner, Commissioner of the Dept. for Medicaid Services within the Cabinet for Health and Family Services

We transitioned the existing Kentucky MMIS from the incumbent and operated it while implementing the new interChange MMIS. We supply a full suite of Medicaid fiscal agent services including mail room, data entry, provider training, financial services, system development and maintenance, decision support and data warehouse, and claims adjudication. We provide the Commonwealth with utilization review, PA support, provider education, user training, and quality management.

"We ran seven days' worth of claims (a little over 240,000) through interChange and we ran the same claims through our model office legacy system. The claims processed in a little over eight hours in interChange, so we were processing almost one day of claim volume per hour."

—Mark Noble, EDS Deputy Account Manager Commonwealth of Kentucky

The EDS Kentucky team completed more than 800 tasks during the transition project while meeting with the Kentucky Cabinet for Health and Family Services. We conducted weekly status meetings with the deputies and their team and daily meetings with their staff. We attended monthly status meetings with the secretary, and created and attended meetings with the scope control board—comprising EDS leaders and client executives—to discuss changes to the contract or additional project scope changes.

Kentucky expects to be the first to implement a comprehensive statewide waiver designed to create long-term stability for Medicaid, which will enable them to maintain its current coverage and benefit levels for its existing Medicaid population. Copayments and other program features will become more closely aligned with commercial plans, resulting in cost savings that will enable Kentucky to continue providing coverage for its most vulnerable citizens. We have provided more than 3,500 hours of training to 200 EDS staff members and more than 300 Commonwealth and other contractor users since November 1, 2005.

The *KyHealth Choices* program is part of Kentucky's Medicaid Modernization initiative, which has improved Medicaid's benefit and care management and technology infrastructure. *KyHealth Choices* is building on these new capacities

with the help of EDS. Kentucky expects to be the first state to implement a comprehensive, statewide waiver designed to create long-term stability for Medicaid.

Tennessee Department of Finance and Administration, Bureau of TennCare

In 2002, the Bureau of TennCare awarded EDS a contract to provide a replacement TennCare Management Information System (TCMIS). Tennessee's unique operating model required significant enhancements to the interChange system during the implementation. A smooth transition—with minimal disruption to provider and recipient communities—from the former TCMIS, which had operated for more than 30 years, to the replacement TCMIS was absolutely critical to the state and its constituents. In August 2004, the interChange system was implemented successfully. The 23-month implementation included the client's request for an addition of parallel testing and numerous change requests that were not part of the original RFP requirements.

EDS used the corporate change methodology of Systems Life Cycle, Version 3 (SLC 3) to support the integration of the system into Tennessee's TennCare program. During implementation, EDS facilitated requirements validation sessions (RVS), generated a detailed system design document, completed 191 project change requests (PCRs) that resulted in 1,651 change orders associated with the customization, tested nearly 20,000 test cases, and implemented the system successfully.

> "EDS has helped Tennessee implement new technology that not only supports our daily mission of providing and coordinating healthcare for our citizens, but also provides better access to the information needed to run our programs."
>
> *—Darin Gordon*
> *TennCare Deputy Commissioner*

Our SLC 3 methodology provides for extensive system testing on system changes. EDS performed validation testing on the system to verify that the software conformed to the agreed-on detailed system design. As part of SLC 3, a project test plan was developed. The test plan methodology included plans, schedules, and specifications for testing in unit test, systems or integration test, and user acceptance test (UAT). EDS executed more than 11,000 test cases during the project.

Extensive planning, consulting, and integration services were provided by EDS to successfully link the Medicaid program with the Department of Health and the Department of Human Services.

EDS created detailed system design (DSD) documents for each TennCare subsystem within interChange from the contract requirements, RVS, and input from the bureau. The DSDs were used as the "road map" for building the system to the user's specifications. The interChange system replaced paper forms with

Web entry forms—including multiple claim submission forms, eligibility verification, and claim status inquiries.

The EDS TennCare team processes fee-for-service (FFS) claims and encounters claims. Encounter claims account for 85 percent of the total claim volume, and processing is for capitated encounters and Admin Fee encounters. We perform capitation payments monthly with an average monthly payment of $14.4 million for MCOs and $35 million for BHOs.

Our alliance with Tennessee resulted in a successful, on-budget transition to the replacement TCMIS.

Pennsylvania Department of Public Welfare

EDS completed the interChange MMIS implementation for Pennsylvania in 2004. This MMIS was named the Provider Reimbursement Operations Management Information System in electronic format (PROMIS*e*) and replaced the Department of Public Welfare's (DPW's) 23-year-old legacy system, Medical Assistance Management Information System (MAMIS).

Using EDS' SLC 3 methodology processes and procedures, we performed a detailed application analysis and review of infrastructure components resulting in a more than 15,000-page comprehensive detailed design document for the new PROMIS*e* system.

"We have very good management on our EDS account. We have open lines of communication, and EDS has responded to the technical direction and approvals required by the Commonwealth."

—Sandra Patterson Bureau Director Bureau of Data & Claims Management, Office of Medical Assistance Programs, Pennsylvania DPW

As part of the information-gathering process, EDS met with multiple program offices within the DPW and the comptroller's office to validate how they used the prior MAMIS to accomplish daily work and understand any planned changes. We reviewed the functional specifications, design specifications, user requirements, and system documentation requirements for the new PROMIS*e* system.

We developed the new PROMIS*e* system based on the specifications approved in the detailed design document. Besides batch program development and creation or modification of more than 750 discrete online Web panels, the new PROMIS*e* system added a significant Web-based functional component for providers and users in the Commonwealth of Pennsylvania. Web functions include claim submission access for multiple claim types, claim status inquiry, recipient eligibility verification, self-service provider enrollment options, and direct access to user and provider Web-based training. These features are integrated with DPW's client information system, master provider index system, and the home and community services information systems.

We converted data from more than 300 separate source files to create the foundation for PROMIS*e* processing. This included seven years of claims history

totaling more than 512 million claim and encounter claim records. This also included more than 469,000 individual provider records.

EDS developed two comprehensive plans for training more than 67,000 medical service providers and more than 1,300 Commonwealth users of the new claims processing system. This approach combined statewide classroom-style training sessions, Web-based e-learning courses, teleconferences, and printed training aids.

PROMIS*e* went live on February 16, 2004, for the provider and reference areas; on February 19, 2004, for interactive pharmacy claims processing and eligibility verification; and on February 26, 2004 for PA and recipient lock-in. PROMIS*e* was fully live and in full production on March 1, 2004, the planned and scheduled implementation date.

Kansas Health Policy Authority (KHPA)

In 2002, KHPA awarded EDS the procurement for its HIPAA-compliant, replacement MMIS.

We used our proven project management approach and standard corporate methodologies, such as SLC 3 and PM 2. KHPA and EDS established a change control board to manage and document changes to requirements. Additionally, we formed an Integrated Testing team comprising state and EDS technical staff and subject-matter experts (SMEs).

In the month before implementing the new MMIS, Kansas experienced an unplanned development regarding the Medicare Intermediary and Carrier being HIPAA-compliant. The Medicare contractors were not ready to send HIPAA-compliant transactions. The technical ability of our team allowed for the development of a translator between the proprietary crossover format and the HIPAA-compliant format. While the new interChange MMIS began operation on time—in less than 90 days—the new MMIS could bring in the existing nonproprietary files to reduce the impact to providers. Based on the Oklahoma interChange, the new Kansas interChange MMIS includes the following:

- Enterprise workflow automation to improve efficiency and management
- Management reporting capabilities for prompt response to requests
- Imaging and document management providing electronic access to records to efficiently answer questions, solve problems, and manage system data

> "Kansas HPA is pleased to have collaborated with EDS in the development of a flexible system that will adapt to our rapidly changing needs. The ease of use for our staff and the improved access to data will be very beneficial to the management of our program."
>
> *—Christiane Swartz Administrator, Kansas Health Policy Authority*

- Interactive voice response system for providers to quickly obtain information using an automated telephone system, with fax-back capability for confirmation and documentation
- Enhanced claims bundling capability that increases benefit dollars, saving exponentially more than the previous mainframe MMIS
- Enhanced decision support system (DSS)
- Enhanced Internet application where providers can submit claims (interactively or in batch mode); inquire on eligibility and claims status; retrieve 835s; check coverage and allowed amounts on procedures, National Drug Codes, and revenue codes; and review bulletins and manuals

The Kansas implementation was on time and within the bid price. With the introduction of Kansas' interChange, program administration costs dropped from approximately 3 percent to 2 percent of benefit dollar expenditures, and claims processing occurred 85 percent faster than they did with the legacy system.

Oklahoma Health Care Authority

In 2000, the Oklahoma Health Care Authority (OHCA) awarded EDS a contract for the design, development, implementation, and operation of a new MMIS using our Indiana MMIS as the base system.

"EDS has worked with the state of Oklahoma to create a next generation MMIS that has become a model for system solutions within the Medicaid industry,"

—Mike Fogarty CEO of the Oklahoma Health Care Authority

We developed the new Oklahoma MMIS based on specifications approved in the detailed design document for each functional area. Besides batch program development and creation or modification of more than 700 online Web panels, the new Oklahoma MMIS added a Web-based functional component for the providers. Web functions include claim submission access for multiple claim types, claim status inquiry, recipient eligibility verification, PA submission and inquiry, and a function where providers can unload electronic data interchange (EDI) 837 transactions for processing.

Besides training users, EDS trained 3,493 providers at 11 different locations across the state. The curriculum was developed with seven different classes focused by claim type. The seven classes were Health Care Financing Administration (HCFA) 1500, transportation, UB92, long-term care, pharmacy, general, and dental.

Months before implementation, OHCA, EDS, and the previous contractor met to develop a transition plan. We held meetings to track the progress of each task. The transition plan established events such as the dates for when the previous contractor would execute the last financial cycle of the year, when EDS would take responsibility for the post office boxes for paper claims, and when the files needed for conversion would be available. Additionally, because the previous

contractor's information processing facility was in a state where weather delays might hamper the ability to deliver the final conversion files quickly, we developed a contingency plan.

Besides the collaborative plan with OHCA, EDS, and the previous contractor, we produced a detailed implementation plan listing the prerequisites to the implementation for each functional area, the production transition, and the final verification and post-implementation tasks. For each task in the plan, there was a scheduled start date, scheduled finish date, actual start date, actual finish date, assigned or responsible individual, activity or task description, responsible group, and contingency notes. An example of a task in the plan was "Create recipient cross-reference (Xref) conversion file for outside entities and transmit the file. The job to run is ELGJOC55."

The Oklahoma MMIS went live December 19, 2002, for pharmacy POS and eligibility verification processing. On December 23, 2002, the new Oklahoma MMIS online system was fully functional, and claim types were processed. The first financial cycle executed December 27, 2002.

DDI was expected to be completed December 31, 2002. However the implementation actually finished a couple weeks early, and claims processing began on December 19, 2002.

I. Lessons Learned

North Carolina is the beneficiary of all the experience described in our response to RFP Section 50.2.10.1. We have learned much from each of these implementations and will apply these lessons learned to the installation and operation of interChange in North Carolina.

The value of our experience is further demonstrated in lessons learned. EDS brings experience and lessons learned from our successful implementation and transition experience in Kansas, Oklahoma, Kentucky, and numerous other projects.

Lessons learned from recent interChange implementations include the following:

- **Apply sufficient resources to make sure you have correctly configured policy—**Configuration of policy is a major task. There should be a dedicated team of resources, business analysts (BAs) and systems engineers (SEs) under a benefit administration technical functional area lead that begins the policy research and documentation process as soon as the project starts. This will accomplish the following:
  - Start interaction with the client almost immediately
  - Facilitate the configuration of the system to prepare for the testing processes

The staffing plan and work plan we have developed for the Replacement MMIS recognize the complexity of configuring policy for not just Medicaid, but for the other three divisions as well.

- **Plan for efficient communications and connectivity from the beginning—**Providing rapid work space and connectivity using digital subscriber line (DSL) with virtual private network (VPN) and wireless networking can make temporary space productive almost immediately.
- **Supply the right numbers and types of personnel—**The State and EDS must plan for and provide the personnel who can complete and sign off on the early requirements validation (RV) sessions.
- **Use converted data in system testing—**The number of issues trying to use the user interface (UI) with converted data and run claims with converted data take significant time to troubleshoot and fix. Sufficient time must be included in the plan to correct data conversion issues and in preparing code for final conversion runs. Ideally, a time line would allow a pre-system test period for just testing the converted data through the user interface and initial claims processing.
- **Freeze system changes in the legacy system at the right time—**Last-minute policy changes and requests can cause too much flux during testing and go-live processes.

Because of our recent and ongoing interChange implementations, our cadre of implementation-focused experts share current, daily experiences—what works and what does not work. We will apply our lessons learned, along with our technical skill and program knowledge, to deliver the Replacement MMIS on time and within budget.

50.2.10.2 Summary Information Listing the Offeror's Corporate Relevant Experience

RFP Reference: 50.2.10.2 Summary Information Listing the Offeror's Corporate Relevant Experience, Pages 282-283

As a global corporation with healthcare clients in 21 countries, our proven experience is deep, with more than 40 years in this critical business area. We have focused the list of corporate relevant experience to highlight healthcare claims processing experience in the United States. In this section, we include an Appendix 50, Attachment E for the operational healthcare claims processing clients in the United States that we have served within the last five years. We have not included those that are new and in the very early stages of implementation. We present these clients in the order listed in the following table, EDS Healthcare Claims Processing Experience.

EDS Healthcare Claims Processing Experience

interChange MMIS States	Other MMIS States	Other Healthcare Claims Processing
• Kansas Health Policy Authority • Kentucky Cabinet of Health and Family Services • Oklahoma Health Care Authority • Pennsylvania Department of Public Welfare • Tennessee Department of Finance and Administration, Bureau of TennCare	• Alabama Medicaid Agency • Arkansas Department of Human Services Division of Medicaid Services • California Department of Health Services • Connecticut Department of Social Services • Delaware Health and Social Services • Florida Agency for Healthcare Administration • Georgia Department of Community Health • Idaho Department of Health and Welfare • Indiana Office of Medicaid Policy and Planning • Commonwealth of Massachusetts, Executive Office of Health and Human Services • New Hampshire Department of Health and Human Services • North Carolina Division of Medical Assistance • Oregon Department of Human Services • Rhode Island Department of Human Services • Texas Health and Human Services Commission • Office of Vermont Health Access • Wisconsin Division of Health Care Financing	• BCBS Arizona • BCBS Massachusetts • Blue Shield of California • Centers for Medicare & Medicaid Services (CMS), Medicare Part B and DME • CMS, MCDC2 • Coventry Health Care Inc. ("Coventry") and First Health Group Corp. • Wellmark

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer Kansas Health Policy Authority

Name of the Project Kansas Medicaid

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☐ Mental Health
- ☐ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☒ Prior approval services
- ☒ Drug rebate services
- ☒ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☐ Provider payment issuance and financial management
- ☒ Other

  During 2006, the EDS Kansas Medicaid team processed 19,413,845 fee-for-service claims, 2,268,398 encounters, and 1,994,644 managed

care capitation claims.

To better serve the state, beneficiaries, and providers, the team also:

- Supports bilingual (English and Spanish) beneficiaries' written and provider help desk inquiries
- Supports provider enrollment, outreach, and certification
- Supports provider relations and training
- Supports nonemergency travel for client
- Performs quality assurance
- Performs third-party liability recovery services
- Performs prior authorization services
- Supports data warehouse with history of 60 months
- Performs formulary management services
- Performs retrospective and prospective DUR
- Provides pharmacy benefits management
- Provides drug rebate services
- Performs audits related to retail pharmacies, prescriber, home infusion therapy, and durable medical equipment
- Produces and mails provider bulletins
- Performs managed care marketing and enrollment

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

First contract: 02/01/78 – 12/31/81
Second contract: 01/01/82 – 06/30/85
Third contract: 07/01/85 – 06/30/90
Fourth contract: 07/01/90 – 10/31/96
Fifth contract: 02/01/02 – 06/30/08
Option years: 07/01/08 – 06/30/09; 07/01/09 – 06/30/10; 07/01/10 – 06/30/11; 07/01/11 – 06/30/12; 07/01/12 – 06/30/13

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the EDS Kansas Medicaid team served 260,000 beneficiaries

Dollar amount of claims paid in 2006: $1,858,453,840

Total number of providers served by program

2006 providers served: 27,460

Did the Offeror's overall responsibilities on the referenced contract include:

- ☐ Design, development, and implementation of a system with COTS?
- ☐ Design, development, and implementation of a system with COTS with modifications?
- ☐ Design, development, and implementation of a system with ground-up development?
- ☐ Design, development, and implementation of a system with a transferred system?
- ☒ Design, development, and implementation of a system with a transferred system with modifications?
- ☒ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?

☒ Maintenance and modification of a system?

☒ Any responsibilities for system turnover at the end of the contract?

☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

☐ Yes

☒ No

Platform the system operates on

Hardware environment: Sun UNIX/Oracle backend. Windows with some Citrix front end, EDI

Software environment: PowerBuilder, C, ASP, .NET, MapMarker, Autosys, Sybase EDI

Programming languages: C, PowerBuilder, Oracle, ASP

Key technologies used in the implementation and/or operation of the system

The system uses the interactive technologies and transaction processing in a relational database environment to provide real-time claims processing and information retrieval. These technologies moved the client from a batch world into a truly real-time, interactive application.

Have damages or penalties been assessed during the last 5 years?

☐ Yes

☒ No

Customer reference (including name, address, and current telephone number of the responsible project administrator or manager who is familiar with the Offeror's performance)

Name	Ms. Christiane Swartz, Director, Medicaid Operations, Kansas Health Policy Authority
Address	900 SW Jackson, 9th Floor
	Topeka, KS 66612-1505
Telephone	1 785 368 6296

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer Commonwealth of Kentucky, Cabinet of Health and Family Services

Name of the Project Kentucky Medicaid

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☐ Mental Health
- ☐ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☒ Prior approval services
- ☐ Drug rebate services
- ☒ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☒ Provider payment issuance and financial management
- ☒ Other

  To best serve the Commonwealth, recipients,

and providers, EDS provides the following:

- Web claims submission
- System maintenance and modifications
- System and user documentation
- Automated eligibility verification
- Interactive voice response
- Provider call center
- User and provider training
- TPL
- SURS
- MARS
- EPSDT
- Case management
- Enhanced claims editing (ClaimCheck)
- Mail room
- Data entry
- DSS

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

03/28/2005 – 12/01/2010 (with two one-year option periods available)

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the EDS Kentucky Medicaid team served 650,000 beneficiaries.

2006 dollar amount of claims processed: $100,939,128

Total number of providers served by program

2006 providers served: approximately 35,000

Did the Offeror's overall responsibilities on the referenced contract include:

- ☐ Design, development, and implementation of a system with COTS?
- ☐ Design, development, and implementation of a system with COTS with modifications?
- ☐ Design, development, and implementation of a system with ground-up development?
- ☐ Design, development, and implementation of a system with a transferred system?
- ☒ Design, development, and implementation of a system with a transferred system with modifications?
- ☒ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer Pennsylvania Department of Public Welfare

Name of the Project Pennsylvania Medicaid

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☒ Mental Health
- ☐ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☐ Prior approval services
- ☒ Drug rebate services
- ☒ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☐ Provider payment issuance and financial management
- ☒ Other

EDS has been Pennsylvania's Medicaid system vendor since 1992. The replacement MMIS,

interChange, was certified in April 2005.

EDS transferred and modified the interChange MMIS from Oklahoma to Pennsylvania in March 2002. This MMIS was named the Provider Reimbursement Operations Management Information System in electronic format (PROMISe) and replaced the Department of Public Welfare's (DPW) 23-year old legacy system, Medical Assistance Management Information System (MAMIS).

EDS managed the 24-month implementation period, applying Project Management Methodology, Version 2 (PM 2) and Systems Life Cycle, Version 3 (SLC 3) operating principles. More than 420,000 hours of work, 3,927 discrete tasks, and 95 comprehensive deliverables were successfully delivered on time for a March 1, 2004 implementation date.

The current MMIS contract includes fiscal agent services; provider enrollment automation project (PEAP); Internet public portal for providers; Health Information Portability and Accountability Act (HIPAA) transactions; system maintenance, operation, modification, and enhancement; automated document management; automated eligibility; drug rebate; encounter claims; early and periodic screening, diagnosis, and treatment (EPSDT); financial processing; prior authorization (PA); reference; and Web-based technology.

In 2006, the EDS Pennsylvania team processed more than 38 million fee-for-service claims, totaling $6.6 billion in payouts to providers. Additionally, more than 68 million encounters were processed and $5.5 billion in capitation payments were made to managed care organizations.

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

First contract: (front-end claims processing only): 10/01/92 – 02/28/04

Current contract: (fiscal agent and MMIS): 03/01/04 – 10/31/07 with two option years exercised through 10/31/2009

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the Pennsylvania Medicaid program served 1.9 million beneficiaries. The EDS team processed more than 120 million claims and encounters or nearly four claims per second and paid more than $6.6 billion in provider payments and $5.5 billion in capitation payments.

Total number of providers served by program

2006 providers served: 122,535 (unique service locations)

Did the Offeror's overall responsibilities on the referenced contract include:

☒ Design, development, and implementation of a system with COTS?

☒ Design, development, and implementation of a system with COTS with modifications?

☒ Design, development, and implementation of a system with ground-up development?

☒ Design, development, and implementation of a system with a transferred system?

☒ Design, development, and implementation of a system with a transferred system with modifi-

cations?

☒ Design, development, and implementation of a system requiring CMS certification?

☒ Operations of a system?

☒ Maintenance and modification of a system?

☒ Any responsibilities for system turnover at the end of the contract?

☒ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

☐ Yes

☒ No

Platform the system operates on

Hardware environment: Sun 6900 Sunfire server, 15TB storage; Sun 4900 Sunfire, 9TB storage; Sun 440 Sunfire server; Unisys ES3040R and ES3020R servers; EMC CX300 arrays; Optical Jukebox; Dell 2850 servers and HP servers; Intervoice AVRS systems; Kodak scanners

Software environment: Sun Solaris 2.8, Microsoft Windows Server 2003, Microsoft Windows Server 2000, Nokia IPSO 3.7

Microsoft SQL Server 2000, Oracle 9.2

Programming languages: C; Microsoft Visual Studio and .NET; Sybase PowerBuilder

Key technologies used in the implementation and/or operation of the system

The interChange MMIS developed for Pennsylvania used the following key technologies and commercial of-the-shelf (COTS) packages:

- Web portal for claims submission and eligibility verification
- Optical character recognition/intelligent character recognition (OCR/ICR) technology for use with scanned documents
- ApertureOne from Impressions Technology, a Web-based image retrieval system from a third-party vendor
- Graphical user interface (GUI) developed with PowerBuilder
- BusinessObjects for fraud and abuse reporting
- UNIX, Solaris, and Windows operating systems

EDS supported application development, network architecture and infrastructure design and installation, automated document management integration, Web development, capacity and integration testing, and user transition support to bring the new system online for the client. Additionally, extensive planning, consulting, and integration services with all other departmentwide information technology (IT) projects were successfully provided through EDS' participation in cross-program IT project meetings.

EDS developed the new MMIS based on the specifications approved in the detailed design document. Besides batch program development and creation or modification of more than 750 discrete online windows, the new PROMISe system added a significant Web-based functional component for providers and users in the Commonwealth of Pennsylvania. Web functions include claim submission access for multiple claim types, claim status inquiry, recipient eligibility verification, self-service provider enrollment options, and direct access to user and provider Web-based training. This functional capability is integrated with the client's own client information system, master provider index system, and the home and community services information systems.

Have damages or penalties been assessed during the last 5 years?

☒ Yes

☐ No

Platform the system operates on

The TennCare Management Information System (TCMIS) is supported by three Sun Microsystems multiprocessor servers (SunFire 4800s). Two of these support production and user testing environments while the third supports development. Data is stored on a Hitachi 9980 SAN providing over 70TB of online storage. Backups are written to LTO2 tapes on a Sun L700 tape library.

The primary application which comprises TCMIS software environment is EDS' proprietary MIS platform for Medicaid, interChange The TCMIS implementation runs on Sun Solaris version 9 of UNIX. Various other pieces of software support monitoring and management of this environment. Client applications for TCMIS are supported on Microsoft Windows desktops. Access to the client software is performed through Citrix.

The primary programming language used for server applications and PowerBuilder for client apps is C.

Key technologies used in the implementation and/or operation of the system

Oracle Financial Application—AP/GL component fully integrated with replacement system

Call Center Infrastructure—Seibel/Filenet covering call management application and workflow management

Document management—Document storage, archival and retrieval

Imaging component—Recognition Research, Inc. system processing documentation for storage as well as OCR for claims processing

- ☒ Provider payment issuance and financial management
- ☒ Other

  In 2006, the EDS Alabama Medicaid team processed approximately 19,674,325 fee-for-service claims and 13,315 capitation payments.

To better serve the state, beneficiaries and providers, the team performs the following additional tasks:

- Maintained the Web site
- Maintained the automated voice response system (AVRS)
- Produced and mailed provider bulletins
- Supplied 224,119 plastic cards to beneficiaries
- Provided beneficiary training
- Enrolled 3,559 providers in 2002 through provider enrollment, outreach, and certification support
- Supported beneficiary and provider help desk and written inquiries
- Provided third-party liability recovery services recovering $106,054,618.24 in 2002
- Provided 600GB data warehouse containing 60 months of history

Did the referenced contract involve health care claims processing in a multi-payer environment?

- ☒ Yes
- ☐ No

In addition to the main Medicaid program, the MMIS also adjudicates and pays claims for these additional Medicaid and other healthcare programs:

- ConnectCare (managed care program)
- ARKids First (CHIP)
- Breast and Cervical Cancer Control Program

- Developmentally Disabled Services
- Children's Medical Services

Platform the system operates on

IBM Mainframe MVS/TSO, HP Tandem

System software: COBOL for MVS and CICS

Programming languages: COBOL, CICS, EZTrieve, Powe-Builder, .NET

Key technologies used in the implementation and/or operation of the system

EDS also provides claims imaging, imaging more than 600,000 claims in 2002. Claims are imaged by Recognition Research Inc.

Automated Eligibility Verification and Claims Submission (AEVCS) system is a statewide point-of-sale (POS) system used by providers to verify eligibility and submit medical; early and periodic screening, diagnosis, and treatment; dental; inpatient; outpatient; long-term care; and pharmacy claims. Providers are reimbursed more quickly as a result of the reduction in average processing time from 15 days to under three days. In 2002, the ConnectCare program, supported by AEVCS, was recognized by the National Health Care Purchasing Institute for using its purchasing power to protect patient safety and improve healthcare quality. It also received a 1997 "Top Ten" Innovation in American Government from the John F. Kennedy School of Government at Harvard University. AEVCS was also an award winner from the National Association of State Information Resource Executives in 1995.

EDS designed, developed, and implemented the Arkansas Medicaid DSS. The overall data warehouse size is 1.5 TB. The system supports more than 125 users and more than 3,000 queries per month. The software tools used include EDS*Navigator* for the user interface, BusinessObjects, MapInfo, and Johns Hopkins ACG, ETC, and DSS*Profiler* for

data analysis. The data stored includes provider, recipient, TPL, claims, financial, and reference data.

EDS maintains the Arkansas Medicaid Web site from which providers are able to enroll, submit claims, maintain demographic information, and access and download forms, provider manuals, official notices, AEBCXS specifications, HIPAA information, and EDS Provider Electronic Solutions Software.

Name of the Project California Medicaid Program (Medi-Cal)

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☒ Mental Health
- ☒ Other health care entity

  Public Health

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☒ Prior approval services
- ☒ Drug rebate services
- ☒ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☒ Provider payment issuance and financial management
- ☒ Other

  The EDS California Medicaid team processed

64,582,363 encounters and 228M fee-for-service claims in the fiscal year that ended 2006.

In addition to the above-mentioned tasks, functions provided by the EDS California Medicaid team include the following:

- Produce beneficiary plastic ID card production and distribution
- Support beneficiary and provider help desk and written inquiries in 11 languages, handling more than 700,000 agent calls and 4 million automated responses.
- Administer provider outreach, including instructor-led seminars, workshops, on-site visits, inclusion in focus groups, beta testing, and surveys and outreach through the call center and Web site
- Develop, publish, and distribute provider manuals and bulletins in hard copy and on the Web
- Enhance and maintain the Medi-Cal Web site, including transaction services (such as claims, eligibility, and authorization)
- Perform quality analysis and process review and improvement
- Performed approximately 1,600,000 prior authorizations in 2002
- Provide quality assurance and management
- Provide Medicare drug pricing
- Provide NCPDP response file downloads
- Provide Breast and Cervical Cancer Treatment Program (BCCTP) enrollment
- Perform provider liaison services
- Manage a cost-containment unit that reviews policy and investigates possible fraudulent activities
- Enhance and maintain the MMIS and its pe-

ripheral systems

- Perform pharmacy services, including real-time claims processing, formulary file management, drug utilization review (DUR), and drug rebate
- Support the Family Planning Access, Care, and Treatment (PACT) project

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

First contract: 10/1/87 – 5/31/93
Second contract: 6/1/93 – 6/30/97
Contract extensions: 7/1/97 – 6/30/98; 7/1/98 – 6/30/99; 7/1/99 – 6/30/00; 7/1/00 – 6/30/03
Third contract: 7/1/03 – 6/30/08
Option years: 7/1/08 – 6/30/09; 7/1/09 – 6/30/10

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the EDS California Medicaid team served 6,519,476 beneficiaries

2006 dollar amount of claims paid: $35,302,004,141

Total number of providers served by program

2006 providers served: 80,000

Did the Offeror's overall responsibilities on the referenced contract include:

- ☒ Design, development, and implementation of a system with COTS?
- ☒ Design, development, and implementation of a system with COTS with modifications?
- ☒ Design, development, and implementation of a system with ground-up development?
- ☒ Design, development, and implementation of a system with a transferred system?
- ☒ Design, development, and implementation of a system with a transferred system with modifications?
- ☒ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?
- ☒ Maintenance and modification of a system?
- ☒ Any responsibilities for system turnover at the end of the contract?
- ☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

- ☒ Yes
- ☐ No

Platform the system operates on

70% ZOS Mainframe, Sun/UNIX, Intel, CISCO, HDS SANs, Overland Tape Silos

Tivoli Storage Manager 1 Server handled all backup/recovery, archiving, disaster recovery/planning

Sun server V480

CPU 4 @ 900 MHz each

Memory 8192 MB

EIMS hardware:

Development:

SUN V480, 4 CPU, 8GB RAM for DB2 and OnDemand

SUN V120, 1 CPU, 1GB RAM for web server

SUN V120, 1 CPU, 1GB RAM for portal + LDAP server

Test:

2 x SUN Fire 4800 domain (each 1 board with 4 CPUs, 16GB RAM), Veritas Cluster Server (DB2 & OnDemand)

2 x V210, 2 CPU, 1 or 2GB RAM for webservers

2 x V210, 2 CPU, 1 or 2GB RAM for portal servers

2 x V210, 2 CPU, 1 or 2GB RAM for LDAP servers

1 x Cisco load balancer (model 11005 I believe)

Production:

2 x SUN Fire 6800 domain (each 2 boards with 8 CPUs, 16GB or 32GB RAM total), Veritas Cluster Server (DB2 & OnDemand)

2 x V240, 2 CPU, 2GB RAM for Webservers

2 x V240, 2 CPU, 2GB RAM for portal servers

2 x V240, 2 CPU, 2GB RAM for LDAP servers

1 x Cisco load balancer

System software:

Z-OS, Solaris, Unix, Linx, Windows 2000 & 2003 server, Oracle, Informatica, SQL, Blue Pumkin(Workflow Mgmt), NICE(Voice Recording), RRI, Avaya's CentreVu Supervisor Software, IBM's On-Demand Product

Programming languages: COBOL, CICS, Java, HTML, VB, Forte, USOFT, Business Objects, Crystal, C++

Key technologies used in the implementation and/or operation of the system

Claim form intelligent character recognition and imaging—This system is capable of scanning and converting claims from providers into the format needed to process the claims on the mainframe. The character recognition can read typed or hand-written claims from providers. Once scanned, claims are processed through the SunGard Workflow Solutions (SWS) system and verified. The system is run on Microsoft-based technologies using software from SunGard. The system processes the claims scanned in from Kodak I840 machines

Automated Eligibility Verification Submission (AEVS) —This system allows providers to verify a recipient's eligibility over the telephone. This system will verify the provider entered valid recipient information and speak back whether the recipient is eligible or not. The system runs on Microsoft-based technologies. The voice application is Promexus VB Voice.

Automated Remittance Data Services (ARDS) downloads—Providers who have signed up to receive a more detailed report of their claims that were paid or denied have access to a system that allows them to download their information electronically. This claim information is more detailed than the existing HIPAA 835 transaction. Providers can download this information from our Web site Monday mornings electronically instead of waiting until Thursday to receive it on paper. This is Web-based technology running on Microsoft-based technologies.

Supplemental Eligibility Verification System (SAEVS) — SAEVS is a voice system that is used by providers to assist them with how to set up POS devices, understand pharmacy reject codes, receive temporary PIN numbers, and use their temporary PIN numbers to obtain share of cost or eligibility information on a recipient. This system is run on Microsoft-based technologies. The voice application is Promexus VB Voice.

Third-Party Liability (TPL) Imaging System—This system contains images of documents and correspondence used to recover dollars from carriers for claims processed through Medi-Cal. As caseworkers from the state open new cases, all correspondence on the case is imaged and stored. The system uses software developed by Imanage running on

Microsoft-based technologies. This is now a state-owned system.

Rebate Accounting and Information System (RAIS) — This is an accounting system to recover drug rebate dollars for all pharmacy claims adjudicated through Medi-Cal. This system produces invoices to drug manufactures on a quarterly basis. It runs on a SUN server, with Oracle for the database, which houses 10 years of pharmacy data. The accounting system was developed by Unisys using USOFT.

Online, real-time eligibility determination—This allows providers to verify eligibility of recipients through a POS network using their own software to dial into our network using Verifone devices. We also have a system for providers to obtain the same information through our Web site, which runs on Microsoft-based technologies.

Real-Time Internet Pharmacy (RTIP) —This system allows providers to submit pharmacy claims on the Web through the Medi-Cal Web site. Providers who use this system will know whether the claim will be paid or denied and how much they will be reimbursed for the service. This is a Web-based system running on Microsoft-based technologies.

Customer Relations Management (CRM) —This enables our call center and other support staff to more effectively respond to inquiries from beneficiaries and providers. The CRM can centrally manage customer profiles, develop and maintain a knowledgebase of service-related support information, and disseminate that knowledge through multiple communication channels, including Web-based self-service, e-mail, and telephone support. Key elements of the CRM system and the call center operation include the following:

- Quality monitoring and management accomplished through voice and screen recording
- Data collection and management, including the entire contact history by provider or recipient.
- Reporting individual provider level, across provider types, by types of calls, resolution, and so forth to develop training and outreach and monitor SLAs

- Online claim correction, allowing agents to correct claims on behalf of a provider
- Knowledge tools, including a robust repository of scripts, procedure manuals, reference documents, and the Medi-Cal Web site
- Workforce management for statistical calls volumes and related metrics to manage staffing levels
- Call queue monitoring available at the supervisor desktop
- Call routing, a standard component using the Automated Call Distributor (ACD) to route incoming calls, by skill set, to the next available operator

Have damages or penalties been assessed during the last 5 years?

☐ Yes

☒ No

Customer reference (including name, address, and current telephone number of the responsible project administrator or manager who is familiar with the Offeror's performance)

Note: This client has advised us that they are unable to comment on EDS' performance at this time due to a current procurement.

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer State of Connecticut Department of Social Services

Name of the Project Connecticut Medicaid

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☐ Mental Health
- ☐ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☒ Prior approval services
- ☒ Drug rebate services
- ☒ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☒ Provider payment issuance and financial management
- ☒ Other

  The EDS Connecticut Medicaid team processed 17,028,648 claims in 2006.

  Other tasks performed by the team to enhance

service to providers and beneficiaries include:

- Supplied beneficiary cards to Connecticut Pharmacy Assistance Contract for the Elderly and Disabled (ConnPACE) clients
- Supported ConnPACE beneficiary and all provider help desk and written inquiries
- Supported provider enrollment, outreach, certification, and training
- Performed third-party liability recovery services
- Provided pharmacy claims administration

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

First contract: 06/24/81 – 09/30/87
Second contract: 12/23/86 – 12/31/95
Contract extension: 12/31/95 – 12/31/03
Contract extension: 01/01/04 – 3/31/04
Contract extension: 04/01/04 – 6/30/08
Third contract: 11/29/05 – 11/28/14 with three additional one-year options

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the EDS Connecticut Medicaid team served 381,890 beneficiaries.
2006 dollar amount of claims paid: $4,254,182,796

Total number of providers served by program

2006 providers served: 5,743

Did the Offeror's overall responsibilities on the referenced contract include:

- ☒ Design, development, and implementation of a system with COTS?
- ☒ Design, development, and implementation of a system with COTS with modifications?
- ☒ Design, development, and implementation of a system with ground-up development?
- ☒ Design, development, and implementation of a system with a transferred system?
- ☒ Design, development, and implementation of a system with a transferred system with modifications?
- ☒ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?
- ☒ Maintenance and modification of a system?
- ☒ Any responsibilities for system turnover at the end of the contract?
- ☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

- ☒ Yes
- ☐ No

Platform the system operates on

Hardware environment: IBM Mainframe

Software environment: MVS or Z/OS

Programming languages: COBOL, Assembler, CICS, Report Writer, Eztrieve, Synsort/Vision 80

Key technologies used in the implementation and/or operation of the system

- Automated Eligibility Verification System (AEVS)
- Automated Voice Response System (AVRS)
- Prospective drug utilization review (ProDUR)
- Web applications, such as the ability to locate a specific type of provider within the state and online report access
- Claims scanning using ICR/OCR

Have damages or penalties been assessed during the last 5 years?

☐ Yes

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer Delaware Health and Social Services

Name of the Project Delaware Medicaid

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☐ Mental Health
- ☐ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☒ Prior approval services
- ☒ Drug rebate services
- ☒ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☒ Provider payment issuance and financial management
- ☒ Other

  In 2006, the EDS Delaware Medicaid team processed 7,188,404 fee-for-service claims, 3,136,558 encounters, and 1,156,120 managed

care capitation payments.

To support the Delaware Medicaid program to the fullest, the team also performs the following tasks:

- Provides claims imaging using Optical Character Recognition (OCR)
- Produces and distributes plastic beneficiary cards
- Supports bilingual (English and Spanish) beneficiary and provider help desk and written inquiry responses
- Supports provider enrollment, outreach, certification, and training
- Performs quality assurance
- Collects premiums for the uninsured and CHIP population
- Supports Vaccines for Children program
- Supports Breast and Cervical Cancer program
- Provides enrollment broker services for the Diamond State Health Plan
- Provides member enrollment, education and outreach for the Delaware Healthy Children Program (DHCP) managed care program
- Provides member services in support of the Primary Care Case Management (PCCM) program
- Conducts application and enrollment processing for the Delaware Prescription Assistance Program

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

First Contract: 11/01/89 – 06/30/02
Second Contract: 07/01/00 – 06/30/12

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006 the EDS Delaware Medicaid team served 146,992 beneficiaries.
2006 dollar amount of claims paid: $616,811,574

Total number of providers served by program

2006 Delaware providers served: 6,232

Did the Offeror's overall responsibilities on the referenced contract include:

- ☐ Design, development, and implementation of a system with COTS?
- ☐ Design, development, and implementation of a system with COTS with modifications?
- ☐ Design, development, and implementation of a system with ground-up development?
- ☒ Design, development, and implementation of a system with a transferred system?
- ☒ Design, development, and implementation of a system with a transferred system with modifications?
- ☒ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?
- ☒ Maintenance and modification of a system?
- ☒ Any responsibilities for system turnover at the end of the contract?

☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

☒ Yes

☐ No

In addition to the main Medicaid program, the MMIS also adjudicates and pays claims for additional Medicaid and other health care programs including the following:

- Delaware Health Children Program (DHCP) managed care programs (CHIP)
- Delaware Prescription Assistance Program
- Vaccines for Children Program
- Breast and Cervical Cancer Program

Platform the system operates on

Hardware: UNIX mid-range, PCs (LAN with Windows 2003 operating system), point-of-sale (POS) terminals

Systems software: Solaris 10.0 and Windows XP workstation operating systems

Programming language(s): C/C++, COBOL

Key technologies used in the implementation and/or operation of the system *(see next page)*

- Fifty percent table-driven handling for provider payments
- Managed care pricing
- Encounter data processing and reporting
- Client enrollment and reporting system
- Automated file transfer capability between EDS and the state's system
- Web-based Clearing House Automated Payment (CHAP) - Delaware Healthy Children Program payments are accepted through EDS Pay
- Prior authorization
- National Drug Code (NDC) look up
- Online manuals, bulletins, and alerts

Have damages or penalties been assessed during the last 5 years?

☐ Yes

☒ No

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer State of Florida, Agency for Health Care Administration

Name of the Project Florida Medicaid (currently in the DDI Phase and scheduled to go live March 2008)

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☐ Mental Health
- ☐ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☐ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☐ Prior approval services
- ☐ Drug rebate services
- ☐ Point of sale processing and support services
- ☐ Electronic eligibility verification system processing and services
- ☐ Provider payment issuance and financial management
- ☒ Other

  To best serve the Florida Agency for Health Care Administration (AHCA), Florida's Medi-

caid recipients, and providers, EDS provides the following:

- Recipient call center
- Choice counseling

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

05/16/06 – 02/28/13

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the EDS Florida Medicaid team served 2.1 million recipients.
2006 dollar amount of claims processed: $2,509,650,249

Total number of providers served by program

2006 providers served: 90,000

Did the Offeror's overall responsibilities on the referenced contract include:

☐ Design, development, and implementation of a system with COTS?

☒ Design, development, and implementation of a system with COTS with modifications?

☐ Design, development, and implementation of a system with ground-up development?

☐ Design, development, and implementation of a system with a transferred system?

- ☐ Design, development, and implementation of a system with a transferred system with modifications?
- ☒ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?
- ☒ Maintenance and modification of a system?
- ☒ Any responsibilities for system turnover at the end of the contract?
- ☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

- ☐ Yes
- ☒ No

Platform the system operates on

Hardware environment: Sun E20K, Sun V40Z, and Dell servers

Software platform: UNIX Solaris 10, Windows 2003

Programming languages: Microsoft C# and ASP.NET utilizing Microsoft .NET 2.0 framework; C with standard embedded SQL; C shell and Korn shell; Oracle 10g; SQLServer 2005;BizTalk 2005;CA Autosys; Oracle SOA Suite

Key technologies used in the implementation and/or operation of the system

Service-oriented architecture (SOA) to include Web services, workflow, and rules engine capabilities; Web-based user interface; and business activity monitoring including custom dashboards

Have damages or penalties been assessed during the last 5 years?

☐ Yes

☒ No

Customer reference (including name, address, and current telephone number of the responsible project administrator or manager who is familiar with the Offeror's performance)

Name	Ms. Angela Ramsey, Implementation Lead
Address	1669 Mahan Center Boulevard

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer Georgia Department of Community Health

Name of the Project Georgia Medicaid

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☐ Mental Health
- ☐ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☒ Prior approval services
- ☐ Drug rebate services
- ☐ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☒ Provider payment issuance and financial management
- ☒ Other

  The EDS Georgia Medicaid team processed 61,767,129 claims in 2002 delivering payment to providers in 8.5 days on the average. The

team processed 11,154,060 capitation payments and 78,219,877 fee-for-service claim details.

Further tasks performed to enhance service to the state, beneficiaries and providers include the following:

- Supplied 8,640,000 paper cards to beneficiaries
- Supported beneficiary and provider help desk
- Supported provider enrollment, outreach and certification
- Supported provider relations and training
- Data entry with 98 percent accuracy, and electronic claim submission
- Identification and reporting of third-party liability (TPL)
- Security

- ☒ Provider payment issuance and financial management
- ☒ Other

  In 2006, the EDS Indiana Medicaid team processed 39,469,213 fee-for-service claims and 8,285,210 encounters/capitation payments.

Besides the tasks listed above, the team also performs the following:

- Supplies plastic NCPDP compliant beneficiary cards
- Supports multilingual (primarily English and Spanish, but can support up to 154 languages) beneficiary and provider help desk and written inquiries
- Supports provider enrollment, outreach and certification
- Supports provider relations and training
- Provides 360GB data warehouse with 36-month history
- Establishes managed models of health care for Medicaid recipients
- Manages disenrollment of clients or plans
- Develops and publishes newsletters and bulletins for providers and recipients

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

First contract: 03/91 – 06/94
Second contract: 05/93 – 12/98
Third contract: 01/99 – 12/03
Current contract: 01/04 – 12/07

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the EDS Indiana Medicaid team served 1,067,557 recipients.
2006 dollar amount of claims paid: $6,178,072,012

Total number of providers served by program

2006 providers served: 47,448

Did the Offeror's overall responsibilities on the referenced contract include:

- ☐ Design, development, and implementation of a system with COTS?
- ☐ Design, development, and implementation of a system with COTS with modifications?
- ☒ Design, development, and implementation of a system with ground-up development?
- ☐ Design, development, and implementation of a system with a transferred system?
- ☐ Design, development, and implementation of a system with a transferred system with modifications?
- ☒ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?
- ☒ Maintenance and modification of a system?
- ☒ Any responsibilities for system turnover at the end of the contract?
- ☒ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

- ☒ Yes
- ☐ No

Platform the system operates on

Hardware environment: Sun UNIX servers, Dell/Compaq Windows servers, EMC SAN, COE Desktops/Laptops

Software environment: AIM interChange for MMIS, PowerBuilder front-end, Solaris Unix, Windows 2003 Adv Servers, LBMS Data Model, Web interChange, Project Workbook

Programming languages: COBOL, C, C++, Java, HTML, ASP, .NET, PB

Key technologies used in the implementation and/or operation of the system

Document management system supports internal and external manuals and provider and recipient communications in a central system that maintains historical versions.

An interactive Web site is available to providers for eligibility verification and claims submission.

Have damages or penalties been assessed during the last 5 years?

☐ Yes

☒ No

Customer reference (including name, address, and current telephone number of the responsible project administrator or manager who is familiar with the Offeror's performance)

☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

☒ Yes

☐ No

Platform the system operates on

Hardware environment: SUN Microsystems Solaris and Dell Windows Servers

Software environment: UNIX, Windows, and Citrix

Programming languages: COBOL and C++

Key technologies used in the implementation and/or operation of the system

EDS provides Web development and hosting of the Rhode Island Department of Human Services (DHS) Web site, which contains online provider manuals, provider updates, provider representative information, forms for enrollment, and client information regarding Medicaid, Child Care, General Public Assistance, Food Stamps, Long Term Care, and other programs such as coordinated care services provided by CEDARR Centers.

Web development—EDS RI Title XIX established the RI DHS Web site in 1998. EDS hosts and manages the Web site and is responsible for such duties as enabling proper function of hardware and software, site design, creation and update of pages, replying to user feedback, site development, and monitoring traffic through the site. On receipt of appropriate approvals, new information is promoted to the Web site in minutes and hours rather than the days and weeks required to distribute a paper communication.

Smart PA—In November 2002, the SmartPA tool was installed to help manage pharmacy costs in Rhode Island. This tool, owned by Heritage Information Systems, Inc,

performs prior authorizations on drug prescriptions issued to the adult and disabled Medicaid population. The total savings for the 10 months between November 2002 and September 2003 has been just over $2 million.

TPL Data Match—EDS RI XIX staff, aware of the comprehensive third party liability (TPL) solution Health Management Systems implemented for the Delaware Medicaid program, suggested to DHS that they use this solution to enhance the existing manual TPL data match services we provide. DHS procured HMS' services, and in August 2003 realized approximately $290,000 in cost avoidance during the first month of operation.

Provider Electronic Solutions software—This software, developed and owned by EDS, is provided and installed free of charge to providers wanting to submit electronic claims. EDS RI XIX staff provide the installation, training, and ongoing support services.

Data mining tools—The EDS RI XIX account uses SUR reports, the EDS Scenario Engine, and BusinessObjects for accessing the various universes of data contained within the MMIS to identify waste, miscoding, upcoding, fraud, and abuse.

HIPAA compliance—HIPAA compliance work has resulted in the EDS RI XIX account using new enabling technologies such as Citrix software, which provides centralized support and control of the PC-based applications used to operate and maintain the MMIS and PowerBuilder, which is a Windows-based graphical user interface that has replaced Vision, the text-based screen application.

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer Office of Vermont Health Access

Name of the Project Vermont Medicaid

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☒ Mental Health
- ☒ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☒ Prior approval services
- ☒ Drug rebate services
- ☐ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☒ Provider payment issuance and financial management
- ☒ Other

  EDS does not process encounters; however, when Vermont's Managed Care organization went out of business, the state developed a

gate-keeper managed care program called PCPlus. EDS pays approximately $80,000 in gatekeeper fees to the providers each month. EDS paid $8,580,012 fee-for-service claims in 2006, including the managed care above. The gatekeepers are paid the capitated fee and then referred to other providers who bill straight claims (not managed care claims).

Other tasks:

- TPL
- Beneficiary identification cards
- MAR
- Drug rebate

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer Wisconsin Division of Health Care Financing

Name of the Project Wisconsin Medicaid

Did the project involve claims processing specifically for either or all of the following?

- ☒ Medicaid
- ☐ Medicare
- ☐ Mental Health
- ☒ Other health care entity

  Public Health

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☒ Provider relations services
- ☒ Prior approval services
- ☒ Drug rebate services
- ☒ Point of sale processing and support services
- ☒ Electronic eligibility verification system processing and services
- ☒ Provider payment issuance and financial management
- ☒ Other

  To best serve the state, recipients, and providers, EDS provides the following:

- Provider publications
- Preferred drug list support
- DSS and data warehouse
- Data analysis
- Senior pharmacy
- Recipient hotline
- HMO contract monitoring
- HMO ombudsman
- Health insurance premium payment support
- Client Web site support

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

First contract: 04/01/77 – 06/30/81
Second contract: 07/01/81 – 12/31/87
Third contract: 01/01/88 – 12/31/91
Fourth contract: 01/01/92 – 06/18/08
Fifth contract: 06/19/08 – 06/18/13

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the EDS Wisconsin Medicaid team served 450,000 beneficiaries.

2006 dollar amount of claims paid $4.1 billion

Total number of providers served by program

2006 providers served: 42,000

Did the Offeror's overall responsibilities on the referenced contract include:

- ☒ Design, development, and implementation of a system with COTS?
- ☒ Design, development, and implementation of a system with COTS with modifications?
- ☒ Design, development, and implementation of a system with ground-up development?
- ☒ Design, development, and implementation of a system with a transferred system?
- ☒ Design, development, and implementation of a system with a transferred system with modifications?
- ☒ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?
- ☒ Maintenance and modification of a system?
- ☐ Any responsibilities for system turnover at the end of the contract?
- ☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

- ☒ Yes

LISTING OF OFFEROR'S CORPORATE RELEVANT EXPERIENCE

Name of the Customer Blue Cross Blue Shield of Massachusetts (BCBS MA)

Name of the Project Blue Cross Blue Shield of Massachusetts

Did the project involve claims processing specifically for either or all of the following?

- ☐ Medicaid
- ☐ Medicare
- ☐ Mental Health
- ☒ Other health care entity

Did the Offeror perform any of the following tasks on the contract?

- ☒ Claim processing (include whether fee for service, capitation, and/or encounters)
- ☐ Provider relations services
- ☐ Prior approval services
- ☐ Drug rebate services
- ☐ Point of sale processing and support services
- ☐ Electronic eligibility verification system processing and services
- ☒ Provider payment issuance and financial management
- ☒ Other

  EDS processes 175,000 "new day" claims each day (Monday through Friday) for BCBS MA. In 2006, EDS processed 43 million claims, and

to date in 2007, 33 million claims.

Other tasks:

- Mainframe, midrange, and Web hosting
- Application development, maintenance/enhancement, and production support
- Print Center operations
- Desktop "break/fix"
- Help Desk services
- WAN management
- Project management

Indicate whether the role Offeror had on the referenced contract was as a prime or a subcontractor

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

8/1/99 – 7/31/06

Program size (number of beneficiaries and dollar amount of claims paid per year)

In 2006, the EDS BCBS MA team processed $10.6 billion in claims payments for 2.9 million members.

Total number of providers served by program

Approximately 30,000 active providers

Did the Offeror's overall responsibilities on the referenced contract include:

☒ Design, development, and implementation of a system with COTS?

- ☒ Design, development, and implementation of a system with COTS with modifications?
- ☒ Design, development, and implementation of a system with ground-up development?
- ☒ Design, development, and implementation of a system with a transferred system?
- ☒ Design, development, and implementation of a system with a transferred system with modifications?
- ☐ Design, development, and implementation of a system requiring CMS certification?
- ☒ Operations of a system?
- ☒ Maintenance and modification of a system?
- ☐ Any responsibilities for system turnover at the end of the contract?
- ☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

- ☒ Yes
- ☐ No

Platform the system operates on

Hardware: IBM, EMC, CICS, MVX, HP Unix, Pyramid

Systems software: ORACLE, SQL Informix, DB2, IMS, Windows NT/Novell, SUN Solaris

Key technologies used in the implementation and/or operation of the system

eCommerce Environment Development: LDAP, SiteMinder, SeeBeyond, MQ Series—LDAP and SiteMinder are a protocol and product, respectively, that enable security administration for Web-based application transactions; SeeBeyond and MQ are tools that enable Web applications to interface with non–Web-based legacy applications through message exchanges.

Interplan Teleprocessing System (ITS)—The BCBS Association's system enables multiple BCBS plans to share data and process members' claims as if they were one large organization.

Fraud and Abuse Detection System – VIPS STARS—This is a vendor product that analyzes claims data looking for potential instances of fraudulent claims submission (for example, too many services in one day for one provider).

Web hosting: Solaris, EMC, iPlanet, Netegrity—Solaris is a SUN Microsystems operating system, EMC sells enterprise storage solutions, and Netegrity markets Web security products.

WAN support: EDS*LINK—Wide area network (WAN) connectivity is provided over EDS' infrastructure between client site and Plano, Troy, Michigan, and Herndon.

Print Center: Pitney Bowes StreamWeaver postal automation tools—This vendor software manipulates the address information on large volumes of printed output to gain maximum postage discounts under USPS rules.

Security Services: RACF, ACF2, LDAP—RACF and ACF2 are two types of mainframe security protocol; Light Directory Access Protocol (LDAP) is an industry-standard Web-based security protocol.

Storage management: EMC—see above

Tape Library System and backup management: Tivoli—This software allows enterprisewide or server-by-server backup of client data.

Midrange management of on-site client data center—EDS provides management (systems administration and database administration) services for BCBS MA's data center–based servers (more than 100 devices) to maintain server availability, manage capacity, execute backups, and more.

☒ Prime

☐ Subcontractor

Time period of the project during which the Offeror participated

January 2002 – November 2008 (incl. options)

Program size (number of beneficiaries and dollar amount of claims paid per year)

This contract provides system maintenance and data center management processing/hosting services for claims processing of approximately 262 million Medicare Part B claims administered annually by HealthNow, Inc.; National Heritage Insurance Company (NHIC); Noridian Administrative Services; Wisconsin Physicians Service (WPS); and Palmetto GBA. This volume represents approximately 31 percent of all Medicare Part B claims nationwide, making EDS and the MCDC2 contract the largest single Medicare claims processing data center entity under direct CMS management. Because MCDC2 is a fixed-fee-per-claim contract, EDS does not track the number of beneficiaries or annual dollar amount of claims paid per year.

Total number of providers served by program

EDS provided claims processing services for five carriers, each of which serve hundreds of thousands of providers.

Did the Offeror's overall responsibilities on the referenced contract include:

☐ Design, development, and implementation of a system with COTS?

☐ Design, development, and implementation of a system with COTS with modifications?

☐ Design, development, and implementation of a system with ground-up development?

☐ Design, development, and implementation of a

system with a transferred system?

☐ Design, development, and implementation of a system with a transferred system with modifications?

☐ Design, development, and implementation of a system requiring CMS certification?

☒ Operations of a system? EDS processes Medicare claims in the MCDC2 using the MCS standard Part B Medicare Claims system provided by CMS.

☒ Maintenance and modification of a system? MCDC2 installs quarterly, off-quarter, special, and emergency releases provided by the system maintainer (EDS) to the MCS standard system at MCDC2.

☐ Any responsibilities for system turnover at the end of the contract?

☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

☐ Yes

☒ No

Platform the system operates on

IBM mainframe computer running the Z/OS 1.7 operating system

Key technologies used in the implementation and/or operation of the system

Data center mainframe outsourcing services using a CMS-provided CICS-based online system and batch processing system written in Cobol and Assembler.

Data center mainframe outsourcing services using a CMS-provided CICS-based online system and batch processing system written in Cobol and Assembler. EDS currently schedules, executes, and monitors approximately 3,000 production batch jobs nightly within COBOL and ALC environments that include 20 batch cycles and online environments. The EDS team also monitors, tracks, and reports on over 70 critical path jobs with more than 400 performance measurements and benchmarks for each cycle.

EDS provides support for CICS application and batch cycle processing directly to CMS for Medicare Part B workloads. Services include ongoing batch and online support for 20 CICS regions and 20 batch cycles for the carriers using the MCS as well as installation of MCS system releases received from the Medicare Part B SSC.

☒ Yes

☐ No

Platform the system operates on

Bill Review v4 is Web-based and operates on AIX, and it uses Websphere, DB2, and rule engine components from Fair Isaac (Blaze). The system operates on standard 8-way processors for high-availability applications.

Key technologies used in the implementation and/or operation of the system

IBM Websphere—Websphere is a transaction monitoring and Web services (HTML server) platform that provides interface between the browser and the services rendered by the Bill Review application and database servers.

IBM DB2—DB2 provides database services to the Bill Review application servers and report servers.

Blaze Advisor—This is a rule server used to store and retrieve business logic for the Bill Review process. Currently,

our application houses 100,000+ rules organized into roughly 800 separate rule bases. Blaze Advisor provides the capability to develop, store, and administer such rules in a production environment.

Data Junction (ETL)—This server is used to extract, transform, and load data from one format into another format. Bill Review translates many input formats into a common XML data stream for processing by the system. Likewise, output files are tailored to the requirements of receiving systems with data for bill review.

Actuate (reporting through Web)—This report server extracts data from the database server to provide several production reports and data extracts made available through a Web-based interface. Users can securely access information in printed form (reports) as PDF files or order extracts of data as either Microsoft Excel or Microsoft Access files for offline processing.

☐ Any responsibilities serving as the systems integrator?

Did the referenced contract involve health care claims processing in a multi-payer environment?

☐ Yes

☒ No

Platform the system operates on

The claims system hardware and software reside in an EDS Service Management Center (SMC) in Plano, Texas. Two mainframe central processing units support this system in the SMC environment. The operating system is MVS with CICS online communications. The file structure is predominantly VSAM. The claims system is written in COBOL with some ALC.

Key technologies used in the implementation and/or operation of the system

Wellmark core transaction systems are mainframe COBOL/CICS and VSAM/IMS. These systems provide data feeds to a data warehouse (UNIX/Sybase/SAS) that uses BusinessObjects for business intelligence reporting. Enterprise Internet and intranet applications front-end these two data sources. All are built in pure Microsoft technologies (ASP, COM, SQL Server, moving to .NET).

Have damages or penalties been assessed during the last 5 years?

☐ Yes

☒ No

50.2.10.3 Financial Stability

RFP Reference: 50.2.10.3 Financial Stability, Page 283

In compliance with RFP Section 50.2.10.3 Financial Stability, we provide the following information to the State:

- EDS Annual Reports
- Financial Organization Contact
- Disclosure of Judgments, Litigation, or Reversals

EDS Annual Reports

The EDS 2006 and 2005 Annual Reports have been attached at the end of this section.

Financial Organization Contact

We have provided the following two financial organization contacts for EDS:

Bank of America
PO Box 34893
Seattle, WA 98124-1893
Business Inquiry Desk
Telephone: 1 206 585 4444
Fax: 1 415 343 9301

Citibank, N.A.
388 Greenwich Street, 21st Floor
New York, NY 10013-2375
Mr. James Walsh, Managing Director
Telephone: 1 212 816 8747
Fax: 1 646 291 1796

Disclosure of Judgments, Litigation, or Reversals

As a multibillion-dollar company with a broad range of clients in a number of different countries, EDS is a party to various pending legal actions arising in the ordinary course of the conduct of its business. As permitted by the second paragraph of RFP Section 50.2.10.3, EDS is providing at the end of this section a copy of the company's most recent Annual Report, as filed with the Securities and Exchange Commission, in response to this requirement.

Information pertaining to EDS' disclosures of judgments, litigation, or reversals can be found on pages AR-19, AR-21, and AR-55 through AR-58 of our Annual Report.

50.2.10.4 Replacement MMIS Account's Place in the Corporate Structure

RFP Reference: 50.2.10.4 Replacement MMIS Account's Place in the Corporate Structure, Pages 283-284

The North Carolina Department of Health and Human Services (the State) will benefit from our structure—from the EDS staff members who work with you daily to the top corporate executives who are focused on your success.

With 30 years of dedicated service to North Carolina, we have a clear understanding of the Replacement MMIS project environment and the State's needs. We recognize that a project of this magnitude warrants direct access to EDS' executive leadership. Clear lines of communication and executive-level guidance are critical.

Each individual working on the Replacement MMIS project will take daily operational and functional direction from the account leadership team, which in turn has a direct line of accountability to the highest levels of the corporation. This accountability underscores the Replacement MMIS' importance to EDS.

State of North Carolina

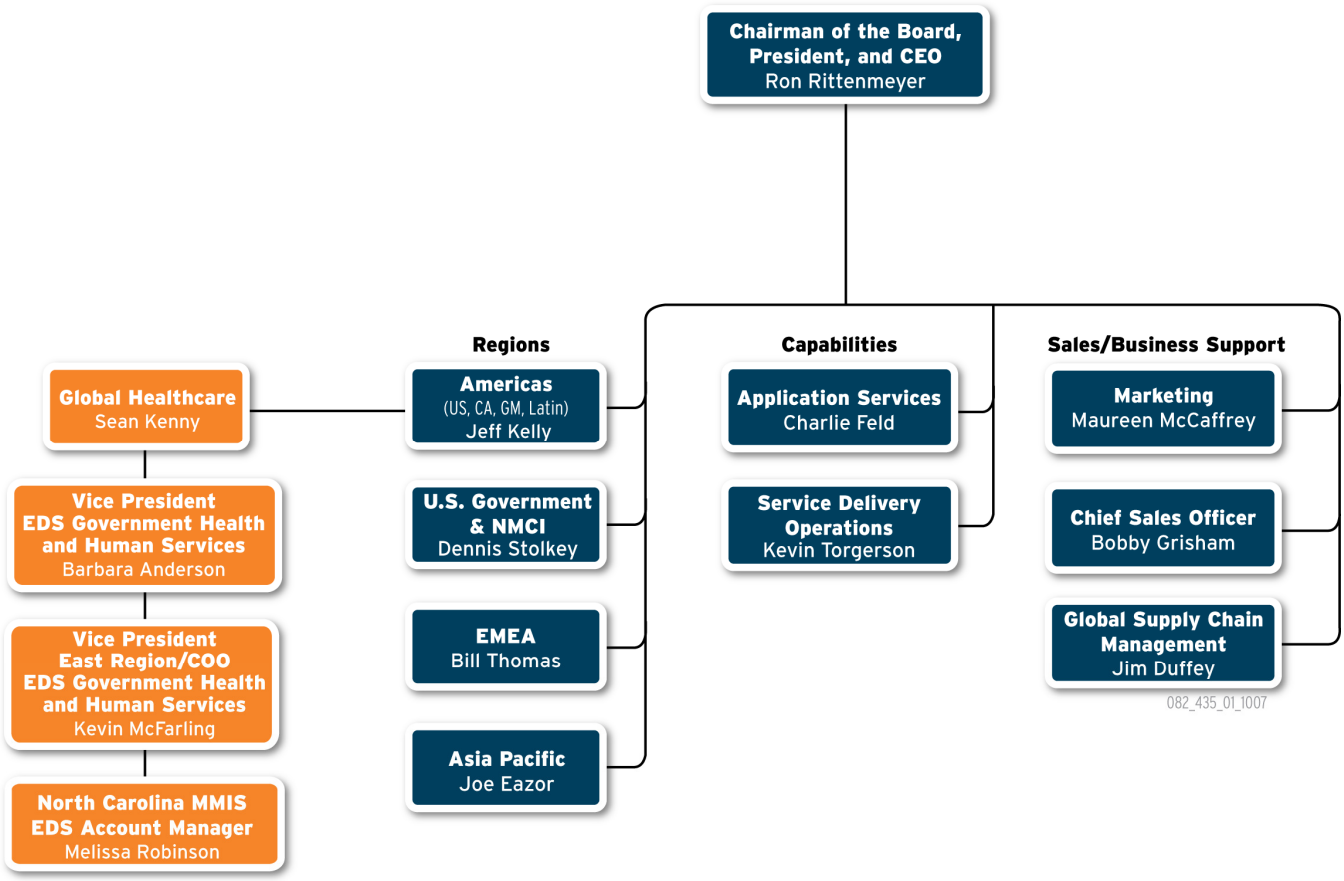
Global Healthcare Organization

As part of our ongoing effort to de-layer our operations, simplify lines of accountability, and move to a general management model, EDS announced the creation of the new Global Healthcare Industry segment in January 2007. This alignment enables the company's healthcare knowledge and support to be centralized in one team and leverages this knowledge to assist our healthcare clients.

Points of Contact and Accountability

To illustrate the Replacement MMIS account's valued place in our corporate structure, we have included the following exhibit, Points of Contact and Accountability Chart.

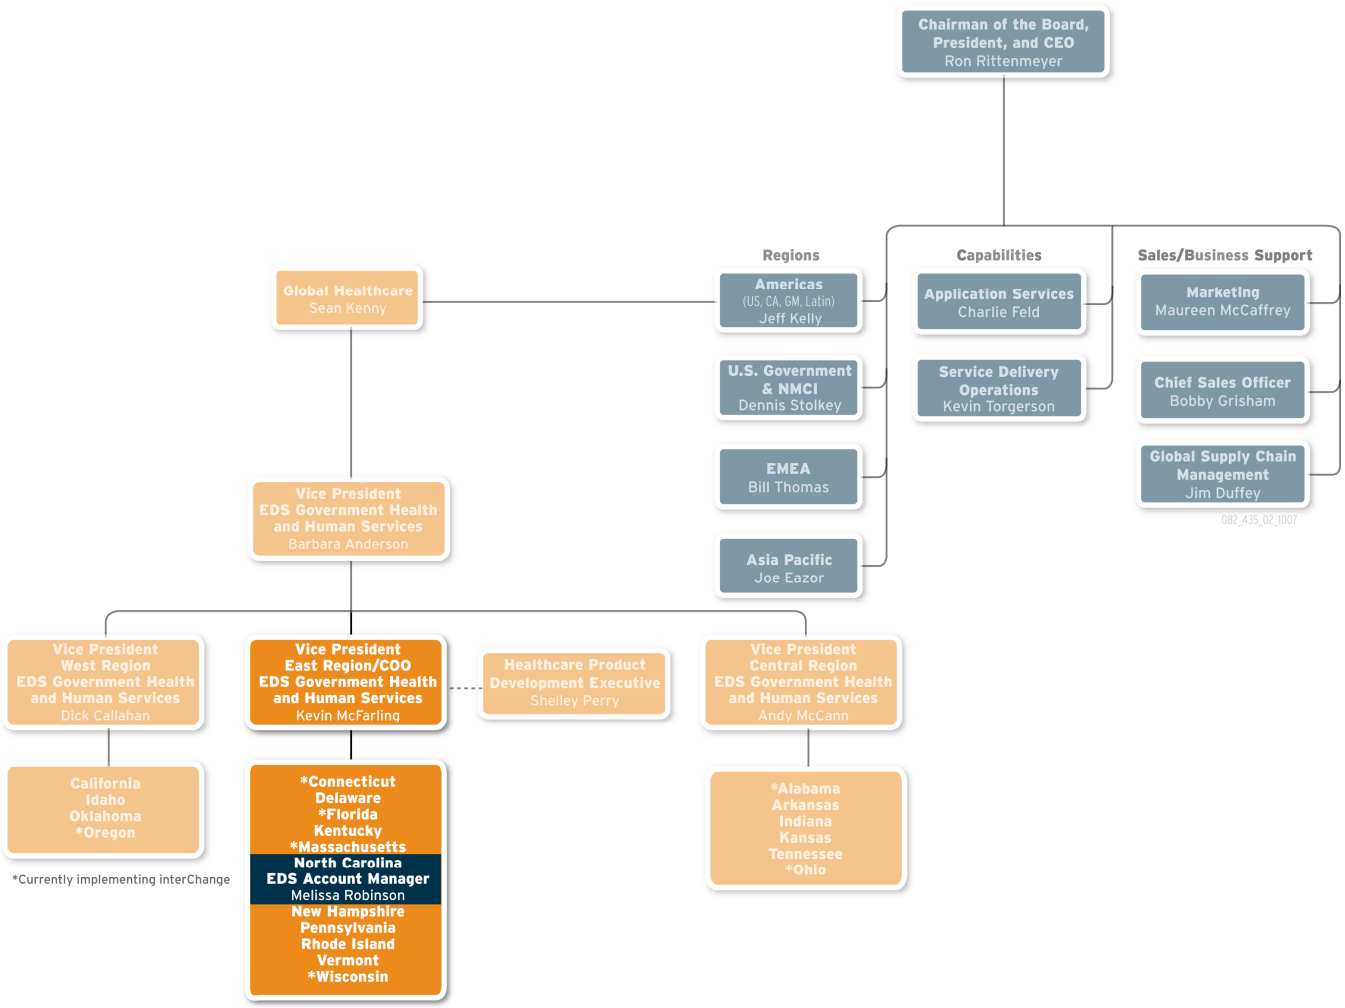
Points of Contact and Accountability Chart



Melissa Robinson will have ownership and oversight of the Implementation and Operations phases of the North Carolina Replacement MMIS, making sure they are run smoothly and successfully.

The following exhibit, North Carolina's Place in EDS Corporation, illustrates North Carolina's place within our corporation and among our state Medicaid accounts.

North Carolina's Place in EDS Corporation



Melissa Robinson and her North Carolina team will have upper-level management points of contact available for consultation and support.

Sean Kenny

In this improved model, Vice President, Global Healthcare Sean Kenny reports to Executive Vice President Jeff Kelly, who reports directly to EDS' Office of the Chairman and sits on the company's Executive Committee.

"EDS is excited about continuing our North Carolina hallmark account, and this excitement is felt throughout the whole EDS corporate leadership circle. EDS is always looking toward the future, and we see the importance of expanding our services for North Carolina. Our team has the technology, the people, and the strong support of EDS corporate leadership to provide North Carolina with a state-of-the-art Replacement MMIS that will meet the healthcare processing needs of DHHS and beyond."

—Sean Kenny

Sean brings more than 20 years of experience in the healthcare industry, supporting government health plans and organizations, commercial payers such as the Blue Cross and Blue Shield plans, and large provider and life sciences organizations.

During regularly scheduled status meetings throughout the Implementation and Operations phases, Sean will meet with Barbara Anderson and Kevin McFarling. If additional corporate resources are needed at any time during the Replacement MMIS implementation or operations, Sean will make sure those needs are prioritized and that the resources are quickly assigned to the State.

Barbara Anderson

Vice President, EDS Government Health and Human Services Barbara Anderson reports to Sean Kenny. Barbara was previously the vice president of the U.S. State and Local Government group. She has also served as enterprise client executive for U.S. Government Solutions, overseeing business relationships with the U.S. Departments of Education, State, Health and Human Services, Energy, Veterans Affairs, Social Security Administration, and State and Local government clients for 11 Midwestern states. In that role, she was also responsible for directing EDS' business efforts in the education market for all state and local governments.

> "Supporting the efforts of North Carolina DHHS is an integral part of EDS' Government Health and Human Services business. North Carolina is facing a challenging economic period with rising medical care and pressure to contain expenses. We will help you meet these challenges by delivering a multi-payer system that will not only process the four divisions of DHHS, but also will be ready to add future divisions. From my 24 years in healthcare, I understand the ever-changing needs of providers and recipients, as well as state and federal requirements, and we have dedicated the best people to meet these needs. We are committed to the MMIS market, as evidenced by our implementing interChange in 12 states, and we are committed to providing the same resources and dedication to your Replacement MMIS."
>
> *—Barbara Anderson*

Barbara has been with EDS for 24 years and in 2007 received EDS' top award—the Chairman's Award—for her contributions to the success of the healthcare clients we serve.

Barbara has ultimate authority for monitoring our performance on the North Carolina Replacement MMIS project and can commit EDS to all necessary courses of action to accomplish superior performance and service.

Kevin McFarling

Vice President East Region/Chief Operating Officer (COO) EDS Government Health and Human Services Kevin McFarling reports to Barbara Anderson. Kevin was a key architect of EDS' ongoing U.S. Government business transformation initiatives and multi-year Medicaid Management Information System (MMIS) technology deployment and product and service strategy. His

efforts have been critical to the continued success of the EDS government healthcare business, which directly contributed to recent Medicaid wins in Florida, Kentucky, Wisconsin, Rhode Island, Massachusetts, and Oregon. He has been with EDS since 1985.

"North Carolina is the cornerstone account within EDS and our growing state and local healthcare business. We are pleased to have this opportunity to submit this proposal. We believe the combination of our proven technologically advanced solution, interChange, our experienced North Carolina account staff, and our experienced interChange delivery team will provide **the lowest risk solution for DHSS to gain the full benefit of a true multi-payer system**. Our solution will support DMA, DMH, DPH, and ORHCC as well as future divisions of DHHS. EDS looks forward to extending our business with North Carolina and thank you for this opportunity."

—Kevin McFarling

The State can be confident that the necessary DDI resources will be available because Kevin manages every MMIS implementation and will closely monitor the Replacement MMIS project. He meets weekly with the delivery teams to discuss performance metrics and best practices, flag risks, and develop solutions.

Kevin also has ultimate authority regarding our performance on the Replacement MMIS project and can commit EDS to all necessary courses of action to secure superior performance and service.

Melissa Robinson

As the North Carolina Replacement MMIS EDS account manager, Melissa Robinson will report directly to Kevin McFarling. Melissa brings more than 14 years of experience in the delivery of services to North Carolina Medicaid, with 16 years in supervisory or management roles, including six years managing account sites.

As the current deputy account manager, Melissa directs six operational departments with six managers, eight supervisors, and 209 staff. Her duties include coordinating the development and finalization of contract amendments and administrative change orders. Under her direction, more than 10 amendments have been executed and finalized for expanded MMIS operations and system enhancement services and two contract extensions. This effort exemplifies her ability to work with the State and align EDS services in support of State initiatives and program needs. Since 2001, she has served as the liaison between the DMA Contract Monitor staff and has overseen all EDS internal North Carolina financials, customer invoice issuance, and collections.

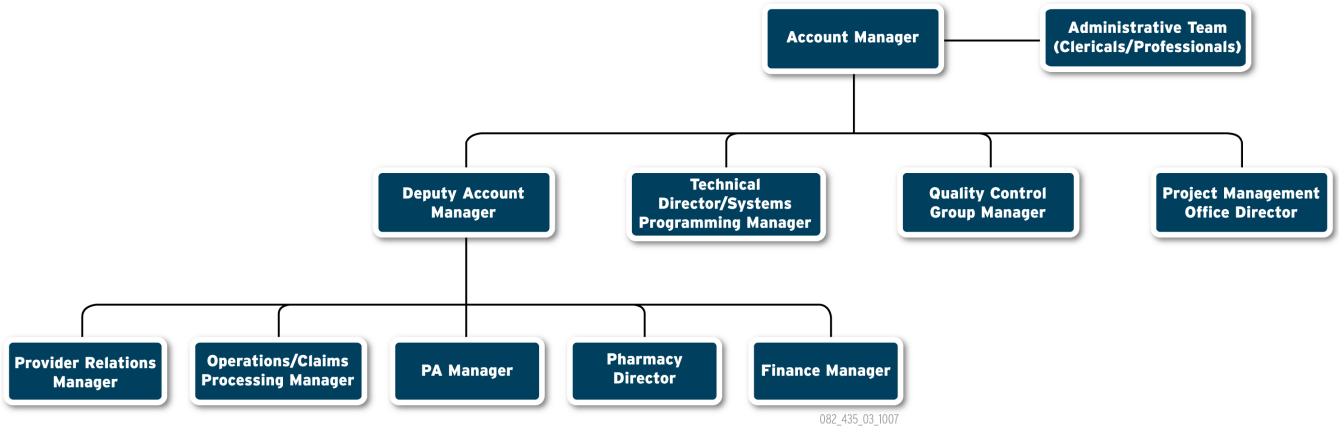
In North Carolina, Melissa has demonstrated an ongoing commitment to improving services, first as the financial supervisor and then as manager for financial, pharmacy, drug rebate, and buy-in.

Continuity of Leadership

With the exception of Ohio, all of the ongoing implementations shown in the previous chart will be completed before September 2008.

To provide unbroken continuity from the DDI Phase into the Operations Phase, many of the core leadership team members will retain their positions and continue to provide guidance and leadership in our healthcare operations for a successful implementation and support throughout the operational years. Melissa Robinson and the Replacement MMIS leadership team will be the points of contact and accountability to the State. They will provide communication to the State and direction to EDS organizations. The following exhibit, North Carolina EDS Account Team, presents a high-level view of Melissa's organization.

North Carolina EDS Account Team



Each team member will take his or her Replacement MMIS responsibilities directly from the account leadership.

For a more in-depth description of the North Carolina EDS account team, please see proposal section 50.2.5.4 Staffing Approach.

As indicated in the proposal, each individual working on the Replacement MMIS project will take daily operational and functional direction from the account leadership team. In the case of individuals working at other EDS locations, such as the Plano and Sacramento Service Management Centres (SMCs), the EDS-designed daily operational processes and procedures will be used to perform the work necessary to fulfill EDS' responsibilities under the Replacement MMIS project, with direction on project and client needs given directly from the account team.

50.2.10.5 Damages and Penalties Asserted

RFP Reference: 50.2.10.5 Damages and Penalties Asserted, Page 284

Like all of our valued clients, the State and the Replacement MMIS stakeholders deserve the very best. Our Service Excellence program underpins our service quality and incorporates open, candid, and collaborative client relationships to have a successful DDI and operations. Our primary objectives are to obtain the highest level of client satisfaction and thus retain our client base.

Even though our primary goal is 100 percent client satisfaction and retention, we have been assessed damages or penalties arising from the ordinary course of conducting EDS' healthcare business. The following tables detail the damages and penalties that have been assessed against us by all contracts listed in response to section 50.2.10.2 Summary Information Listing the Offeror's Corporate Relevant Experience in this proposal.

EDS

EXPERTISE. ANSWERS. RESULTS.

5400 Legacy Drive
Plano, Texas 75024

To Our Shareholders,

This annual report marks the fourth since we began the revitalization of EDS. Our progress continues to be sure and steady – with a strong finish to a good year in 2006. This momentum reflects a clear strategy well executed by our employees – all committed to our clients' success.

We are winning in the marketplace and increasing client satisfaction through a relentless focus on quality, cost and operational excellence. As a result, your company is delivering improved financial performance – accelerating growth and improving operating margins.

EDS increased market share as our technology vision and customer-focused service culture resonated with clients. We deployed cash more effectively while investing heavily in our capabilities and cost competitiveness. Strategic acquisitions filled gaps in our business, expanding EDS' global reach and expertise.

Accountability became a watchword throughout the company. We adopted a zero-outages delivery mindset. We believe this highly disciplined approach already is differentiating us in the marketplace.

In sum, we set a foundation for sustainable and profitable growth. In 2006, EDS:

Gained market share. We reached our highest total contract value for new business signings since 2001. Total contract value increased 32 percent from a year ago to $26.5 billion. Business sold to "new logo" accounts represented $4.2 billion – up nearly 70 percent. These clients included Kraft Foods and global telecommunications giant Vodafone. We gained ground in the applications space, seeing total contract value rise by almost 50 percent. EDS also won several important "recompetes," contract modifications and extensions, deepening relationships with existing clients, including General Motors, the U.S. Department of the Navy and the U.K. government.

Improved operational excellence. We completed our Global Services Network, the backbone of our Global Delivery System. Unique to EDS, this system enhances business continuity, security and service flexibility for clients. Our service delivery standardization and automation initiatives increased both productivity and service quality – and ultimately moved the needle higher on client satisfaction. At the same time, we continued to enhance the skills of our people, providing employees with almost 3 million hours of training.

Expanded Best Shore℠ presence. We continued to realign our work force with strong offshore capabilities, making us more price competitive and responsive to client needs. We more than doubled our presence in high-quality, lower-cost locations to 32,000 employees. While India was the primary beneficiary, we also are migrating our work force to other regions such as Latin America, China, Hungary and Poland.

Filled important capability gaps. We invested in applications and business process outsourcing (BPO) capabilities, including the acquisition of a majority stake in MphasiS. MphasiS enhances our global delivery model, adding top applications, BPO and financial industry skills to our portfolio, while more than tripling our presence in India. Our acquisition of GEMS increased our ability to provide solutions in SAP enterprise management and customer relationship management.

Strengthened our management team. We promoted Ron Rittenmeyer to president and chief operating officer, recognizing his many contributions to EDS in a short time. Ron's commitment to instill accountability and quality at every level is improving our operations worldwide. We leveraged account management and delivery through regional hubs and Global Service Centers to maximize our expertise and concentrate our skills base. EDS also recommitted to a strong industry focus. We put in place a team of proven leaders to engage clients across key industries and address their business needs.

Further strengthened our financial foundation. In 2006, we doubled our net income and significantly increased our operating margin, putting us on the pathway to our long-term goals. We also drove a more than 40 percent increase in free cash flow through improved operating performance and growth. At the same time, our net debt stayed essentially flat while we continued to invest in products, tools and cost competitiveness.

As we look back over the last four years, EDS has improved across the board:

- We have transitioned from significant operating losses to earnings of nearly a dollar per share from continuing operations.
- EDS' free cash flow, a good measure of a company's health, has increased fourfold.
- Our net debt is now essentially zero.
- Total contract value has nearly doubled.

With a solid foundation in place, we believe we are better positioned than ever to deliver on our commitments to clients and drive strategic value.

The Flat New World

A few years ago, we outlined a set of beliefs on the direction of the global marketplace and the role of rapidly changing technologies. Today, these beliefs are a reality. Globalization continues to accelerate. Wireless technologies and extended supply chains have widened the scale and scope of global networks.

The world has truly flattened, changing the nature of when, how and where work gets done. Business ecosystems now dominate. And, information security and privacy have become paramount in a world where international boundaries yield to millions of electronic transactions daily.

As a technology services leader, we recognize the increasing demands placed on governments and businesses today. We see the issues our clients face. They need our help to deliver increased productivity, practical innovation, profitable growth and never-fail security – all underpinned by outstanding service quality.

For them, this means:

- Reaching their customers with the right products and services – whenever and however they want them.
- Supporting customer interactions – in person and online – with back-end processes that are responsive and always on.
- Having a clear line-of-sight into their entire operations to make intelligent decisions about where the business is going.

EDS is uniquely qualified to help our clients navigate this new environment and compete more effectively.

Two Major Thrusts Going Forward

Our strategy in 2007 is two pronged. First, we will continue to drive improvements in our base business and broaden our core capabilities. Second, we must reposition our business and emphasize development of attractive market segments, where EDS has strong intellectual property, processes and solutions.

Improve our base, broaden core capabilities

We have made significant investments to build a market-leading information technology outsourcing (ITO) platform. This platform gives us a strong base to compete with and build on. It distinguishes EDS and sets the benchmark for providers hoping to serve the needs of truly global enterprises.

Unlike the offshore "pure play" approach, EDS' Global Delivery System – enabled by our Global Services Network – allows clients to readily access our complete portfolio of services wherever they choose to do business.

This network gives us the upper hand to pursue both traditional ITO business – as well as less capital-intensive infrastructure management services – from Best Shore locations such as Malaysia, Hungary, Brazil and India. These activities include the remote monitoring and management of servers and desktops, providing end-to-end visibility for enterprise operations.

We will continue using our infrastructure as a base to add higher-value services. This means adding to our skills base in applications development and legacy modernization. Modernization services are important because many enterprises are hampered by outdated legacy systems that cannot handle today's business demands – much less tomorrow's.

We will exploit our technology vision, coupled with our focus on execution, to address the issues facing our clients. Toward that end, we will partner with businesses and governments to transform their organizations into modern, agile enterprises.

Reposition our business, develop attractive segments

The changes we've made in the last few years make us a more competitive and client-focused company. Now, we need to better position these capabilities to be more visible and valuable for our clients – and to bring greater growth to our company.

We have identified several foundations for EDS' growth, including key industries and capabilities. Each one has an established client base and more than $1 billion in existing business to build from.

Our recommitment to an industry-based approach opens up more opportunities worldwide. We invested heavily in the best data centers around the globe – all linked by our secure global network. This is a winning combination, especially for governments, healthcare and financial services industries, where information security is critical.

Creating industry-enabled solutions that combine applications expertise, BPO capabilities and IT infrastructure will enable EDS to bring more value to our clients. This means delivering solutions that hit their business issues head-on. For EDS, we expect these solutions to bring growth with higher margins in return for more valuable services.

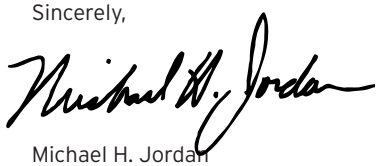
Delivering Results Now

Talent wins games, but teamwork and intelligence win championships. EDS is in it for the long haul. Our goal is to become a valued part of the client management team, rather than just a vendor.

To do this for every client, we rely on our people to build deep and lasting relationships – some of which today span more than a decade. We count on their expertise to provide answers so our clients can perform well and serve their customers better.

Simply put, EDS delivers results now – for our clients and shareholders. It's why we're in business.

Sincerely,



Michael H. Jordan
Chairman and Chief Executive Officer

ELECTRONIC DATA SYSTEMS CORPORATION

NOTICE OF ANNUAL MEETING OF SHAREHOLDERS TO BE HELD ON APRIL 17, 2007

The Annual Meeting of Shareholders of Electronic Data Systems Corporation ("EDS") will be held on Tuesday, April 17, 2007, at 1:00 p.m. local time, at the offices of EDS, 5400 Legacy Drive, Plano, Texas 75024. The purpose of the meeting is to:

- elect 11 directors to hold office until the next annual shareholders' meeting or until their respective successors have been elected or appointed;
- ratify the appointment of KPMG LLP as our independent auditors for the current year;
- consider and vote upon two shareholder proposals, if presented at the meeting; and
- act upon such other matters as may be properly presented at the meeting.

The proxy statement fully describes these items. We have not received notice of other matters that may be properly presented at the meeting.

Only EDS shareholders of record at the close of business on February 16, 2007, will be entitled to vote at the meeting.

To ensure that your vote is recorded promptly, please vote as soon as possible, even if you plan to attend the meeting. Most shareholders have three options for submitting their votes prior to the meeting: (1) via the Internet; (2) by phone; or (3) by mail. If you have Internet access, **we encourage you to record your vote on the Internet.** It is convenient and saves our company significant postage and processing costs. Your completed proxy, or your telephone or Internet vote, will not prevent you from attending the meeting and voting in person should you so choose.

Please let us know if you plan to attend the meeting by marking the appropriate box on the enclosed proxy card or, if you vote by telephone or Internet, indicating your plans when prompted. If you are a shareholder of record, please bring the top portion of the proxy card to the meeting as your admission ticket. If your shares are held in street name (by a bank or broker, for example), you may bring a recent account statement to the meeting in lieu of the admission ticket.

By order of the Board of Directors,

Storrow Gordon

Storrow M. Gordon
Secretary

March 1, 2007

Table of Contents — 2007 Proxy Statement ///

PROXY STATEMENT
FOR THE ANNUAL MEETING OF SHAREHOLDERS
TO BE HELD APRIL 17, 2007

The Board of Directors of EDS is soliciting proxies to be used at the 2007 Annual Meeting of Shareholders. Distribution of this Proxy Statement and a proxy form is scheduled to begin on March 9, 2007. The mailing address of EDS' principal executive offices is 5400 Legacy Drive, Plano, Texas 75024.

About the Meeting

Record Date and Share Ownership

Only holders of record of our common stock at the close of business on February 16, 2007, may vote at the meeting. On that date, 515,965,298 shares of common stock were outstanding. Each share is entitled to cast one vote. The majority of the shares of common stock outstanding on the record date must be present in person or by proxy to have a quorum for the transaction of business at the meeting.

Submitting and Revoking Your Proxy

If you complete and submit your proxy before the meeting, the persons named as proxies will vote the shares represented by your proxy in accordance with your instructions. If you submit a proxy card but do not fill out the voting instructions on the proxy card, your shares will be voted FOR the election of the director nominees set forth in Proposal 1, FOR the ratification of the independent auditors set forth in Proposal 2, and AGAINST the shareholder proposals set forth in Proposals 3 and 4.

To ensure that your vote is recorded promptly, please vote as soon as possible, even if you plan to attend the meeting in person. Most shareholders have three options for submitting their votes prior to the meeting: (1) via the Internet; (2) by phone; or (3) by mail. If you have Internet access, **we encourage you to record your vote on the Internet.** It is convenient and saves significant postage and processing costs. If you attend the meeting and are a registered holder (that is, your shares are not held through a bank or brokerage firm and you appear on our stock register as having shares issued in your name), you may also submit your vote in person, and any previous votes that you submitted, whether by Internet, phone or mail, will be superseded by the vote that you cast at the meeting. At this year's meeting, the polls will close at 2:00 p.m. Central time; any further votes will not be accepted after that time. We intend to announce preliminary results at the meeting and publish final results on our Investor Relations Web site at *www.eds.com/investor* shortly after the meeting and also in our Quarterly Report on Form 10-Q for the second quarter of 2007.

If you are a registered holder, you may revoke your proxy at any time prior to the close of the polls by: (1) submitting a later-dated vote in person at the meeting, via the Internet, by telephone or by mail or (2) delivering instructions to our Corporate Secretary prior to the meeting by fax to (972) 605-5613 or by mail to 5400 Legacy Drive, MS H3-3A-05, Plano, TX 75024. If you hold shares through a bank or brokerage firm, you must contact that firm to revoke any prior voting instructions.

If you participate in the EDS common stock fund through our 401(k) Plan or hold shares through the EDS Stock Purchase Plan or a dividend reinvestment program, you may receive one proxy card for all shares registered in the same name. Generally, shares in these plans cannot be voted unless the proxy card is signed and returned, although shares held in the 401(k) Plan may be voted in the discretion of the plan trustee.

Vote Required to Adopt Proposals

Each share of our common stock outstanding on the record date will be entitled to one vote on each of the 11 director nominees and one vote on each other matter. Directors receiving the majority of votes cast (number of shares voted "for" a director must exceed the number of shares voted "against" that director) will be elected as a director. For each other proposal, the affirmative vote of the majority of the common stock represented in person or by proxy will be required for approval.

For the election of directors, each director must receive the majority of the votes cast with respect to that director. Shares not present at the meeting and shares voting "abstain" have no effect on the election of directors. For each other proposal, abstentions are treated as shares present or represented and voting, so an abstention will have the effect of a vote against the proposal.

If your broker holds your shares in its name, the broker is permitted to vote your shares on the election of directors and the ratification of our independent auditors even if it does not receive voting instructions from you. However, your broker may not be permitted to exercise voting discretion with respect to some of the matters to be acted upon. Thus, if you do not give your broker specific instructions, your shares may not be voted on those matters and will not be counted in determining the number of shares necessary for approval. When a broker votes a client's shares on some but not all proposals, the missing votes are referred to as "broker non-votes." Those shares will be included in determining the presence of a quorum at the meeting but would not be considered "present" for purposes of voting on a non-discretionary proposal. EDS understands that pursuant to New York Stock Exchange ("NYSE") rules, Proposals 3 and 4 are non-discretionary proposals for which your broker may not exercise voting discretion.

Other Matters to be Acted Upon at the Meeting

We do not know of any other matters to be validly presented or acted upon at the meeting. Under our Bylaws, no business besides that stated in the meeting notice may be transacted at any meeting of shareholders. If any other matter is presented at the meeting on which a vote may properly be taken, the shares represented by proxies will be voted in accordance with the judgment of the person or persons voting those shares.

Expenses of Solicitation

EDS is making this solicitation and will pay the entire cost of preparing, assembling, printing, mailing and distributing these proxy materials and soliciting votes. If you choose to access the proxy materials and/or vote over the Internet, you are responsible for any Internet access charges you may incur. Our officers and employees may, but without compensation other than their regular compensation, solicit proxies by further mailing or personal conversations, or by telephone, facsimile, e-mail or otherwise. We will, upon request, reimburse brokerage firms and others for their reasonable expenses in forwarding proxy materials to beneficial owners of our common stock.

Shareholders with Multiple Accounts

Shareholders who previously have elected not to receive an annual report for a specific account may request EDS to promptly mail its 2006 Annual Report to that account by writing EDS Investor Relations, 5400 Legacy Drive, Mail Stop H1-2D-05, Plano, Texas 75024, or by calling (888) 610-1122 or (972) 605-6661.

Multiple Shareholders Sharing the Same Address

We have adopted a procedure approved by the Securities and Exchange Commission ("SEC") called "householding," which reduces our printing costs and postage fees. Under this procedure, shareholders of record who have the same address and last name and do not participate in electronic delivery of proxy materials will receive only one copy of our annual report and proxy statement unless one or more of these shareholders notify us that they wish to continue receiving individual copies. Shareholders who participate in householding will continue to receive separate proxy cards.

If a shareholder of record residing at such an address wishes to receive a separate document in the future, he or she may contact our transfer agent at 1-800-250-5016 or write to The Bank of New York Shareholder Relations, PO Box 11258, New York, NY 10286-1258. Shareholders of record receiving multiple copies of our annual report and proxy statement may request householding by contacting us in the same manner. If you own your shares through a bank, broker or other nominee, you can request householding by contacting the nominee.

Corporate Governance and Board Matters

Board of Directors

The Board of Directors is elected by and accountable to the shareholders and is responsible for the strategic direction, oversight and control of EDS. Regular meetings of the Board are generally held five times per year and special meetings are scheduled when necessary. The Board held nine meetings in 2006. All directors attended at least 85% of the meetings of the Board and the Board committees of which they were members during 2006.

Corporate Governance Guidelines

The Board has adopted the EDS Corporate Governance Guidelines to assist it in the performance of its duties and the exercise of its responsibilities and in accordance with the listing requirements of the NYSE. The Governance Committee of the Board is responsible for overseeing the Guidelines and periodically reviews them and makes recommendations to the Board concerning corporate governance matters. The Guidelines are posted on our website at *www.EDS.com/investor/governance/guidelines.aspx*. The Guidelines cover the following principal subjects:

- *Expectations of individual directors,* including understanding EDS' businesses and markets, review and understanding of materials provided to the Board, objective and constructive participation in meetings and strategic decision-making processes, regular attendance at Board and Board committee meetings, and attendance at annual shareholder meetings.
- *Board selection and composition*, including Board size, independence of directors, process for determining director independence, number of independent directors, nomination and selection of directors, service on other boards, director retirement, separation of the Chairman and Chief Executive Officer (CEO) positions, director orientation and a mandatory continuing director education program.
- *Board operations,* including number of meetings, requirement for executive sessions of non-management directors, the duties of the Presiding Director, Board access to management, annual CEO evaluation, annual Board and Committee evaluation, management development and succession planning, retention of independent advisors and operation and composition of Board committees.
- *Other matters,* including director compensation, prohibition on consulting agreements with directors, restrictions on charitable contributions to director-affiliated organizations, procedures implementing the majority vote requirement for the election of directors described below, procedures for avoidance or minimization of conflicts of interest, including the related party transaction approval policy described under "Related Party Transactions" below, and the rights plan policy described below.

Executive Sessions. The Guidelines require the non-employee directors to meet in executive session without management present from time to time, and at least twice per year. Executive sessions are a normal part of the Board's deliberations and activities. One of these meetings is devoted to the evaluation of the CEO and the recommendations of the Compensation and Benefits Committee regarding the CEO's compensation.

Rights Plan Policy. The Board of Directors redeemed EDS' shareholder rights plan, sometimes referred to as a "poison pill," in February 2005. The Board also adopted a policy to obtain shareholder approval prior to adopting any rights plan in the future unless the Board, in the exercise of its fiduciary duties and through a committee comprised of all independent Directors, determines that, under the circumstances then existing, it would be in the best interest of EDS and its shareholders to adopt a rights plan without prior shareholder approval. This policy further provides that if a rights plan is adopted by the Board without prior shareholder approval, the plan must provide that it shall expire within one year of adoption unless ratified by shareholders.

Presiding Director. The Board has an independent Presiding Director who serves as chair of the regularly conducted executive sessions of the Board and all other sessions at which the Chairman is not present. The Presiding Director facilitates communication with the Board and, at the request of any independent director, serves as the liaison between the Chairman and the independent directors. When requested by any independent director or when the Presiding Director deems it appropriate, the Presiding Director can call meetings of the independent directors. The Presiding Director reviews and approves the agenda for each Board meeting and the nature and type of materials to be sent to the Board for each meeting based on that agenda. At least annually, the independent Directors evaluate the Board's plan for agendas for each meeting in the upcoming year and the information provided at and in advance of meetings and discuss recommendations for any changes to that plan and information in executive session with the Presiding Director, who will communicate those recommendations to the Chairman.

The Presiding Director position is rotated on an annual basis among the Chairpersons of the Board's three standing Committees. The Chairman of the Audit Committee, Ray J. Groves, currently serves as the Presiding Director through the date of the 2007 Annual Meeting of Shareholders, and the Chairman of the Compensation and Benefits Committee, Ellen M. Hancock, will serve as the Presiding Director thereafter until the 2008 Annual Meeting. The Corporate Governance Guidelines provide that if the position of Chairman is held by an independent director, all duties and responsibilities assigned to the Presiding Director shall be performed by that independent Chairman.

Majority Vote for Election of Directors. In February 2007, the Board amended our Bylaws to provide that in an uncontested election of directors (i.e., where the nominees for director equals the number of directors to be elected), a nominee must receive more votes for than against his or her election to be elected to the Board. The Board expects a director to tender his or her resignation if he or she fails to receive the required number of votes. The Governance Guidelines provide that the Board shall nominate as director only candidates who agree to tender, prior to nomination, irrevocable resignations that will be effective upon (i) the failure to receive the required vote and (ii) the Board's acceptance of such resignation. Similarly, the Board will fill director resignations and new directorships only with candidates who agree to tender the same form of resignation prior to any subsequent nomination.

The Guidelines further provide that if an incumbent director fails to receive the required vote for election, the Governance Committee will promptly consider whether to accept or reject that director's previously tendered resignation. The Governance Committee will consider all factors deemed relevant including, without limitation, the stated reasons why shareholders voted against the election of the director, the length of service and qualifications of the director whose resignation has been tendered, the director's contributions to EDS, and the impact of the resignation on any contractual and regulatory requirements. The Board will act on the Governance Committee's recommendation no later than 90 days following the date of the shareholders' meeting when the election occurred. In considering the Governance Committee's recommendation, the Board will review the factors considered by the Governance Committee and such additional information and factors the Board believes to be relevant. Absent a compelling reason for the director to remain on the Board, it is the Board's intention to accept the resignation. We will promptly publicly disclose the Board's decision, together with an explanation of the process by which the decision was reached and, if applicable, the reasons for rejecting the tendered resignation.

Any director who tenders his or her resignation pursuant to this provision is expected to not participate in the Governance Committee recommendation or Board consideration regarding whether or not to accept the tendered resignation. If a majority of the members of the Governance Committee are not duly elected under the Bylaws at the same election, then the independent directors who are elected will designate a group amongst themselves to recommend to the remaining elected independent Directors whether to accept or reject the tendered resignations.

Director Independence

The Board assesses the independence of each non-employee director not less frequently than annually in accordance with the Corporate Governance Guidelines. Under the Guidelines for Assessing Independence of EDS' Directors, a director cannot be independent unless the Board affirmatively determines that he or she has no material relationship with EDS, either directly or as a partner, shareholder or officer of an organization that has a relationship with EDS, and has none of the other relationships listed in the guidelines that would disqualify the director from being independent under the rules of the NYSE. As contemplated by the NYSE rules, the Board also adopted categorical standards to assist in determining whether any material relationship with EDS exists. Directors who have any of the relationships outlined in such categorical standards are considered to have relationships that require a "full facts and circumstances review" by the Board in order to determine whether it constitutes a material relationship with EDS for purposes of his or her independence. The Independence Guidelines, including such categorical standards, are posted on our website at *www.EDS.com/investor/governance/independence.aspx*.

In February 2007, the Board assessed the independence of each non-employee director under the Independence Guidelines. The Board determined, after careful review, that all non-employee directors (Mr. Dunbar, Mr. Enrico, Mr. Faga, Dr. Gillis, Mr. Groves, Ms. Hancock, Mr. Hunt, Mr. Kangas, Mr. Sims, and Mr. Yost) are independent. There were no relationships outlined in the categorical standards with any non-employee director that required a "full facts and circumstances review" by the Board. The Board also determined that each member of the Audit Committee meets the additional independence standards of the NYSE and SEC applicable to Audit Committee members. Such standards require that the director not be an affiliate of EDS and cannot accept from EDS, directly or indirectly, any consulting, advisory or other compensatory fee, other than fees for serving as a director.

Communications with the Board

Individuals may communicate with the Presiding Director by e-mail to BoardCommunications@eds.com or in writing to Presiding Director, c/o Corporate Secretary, 5400 Legacy Drive, MS H3-3A-05, Plano, Texas 75024.

Communications intended for any other non-management director should also be sent to the above address. Further information regarding the procedures for communications with the Presiding Director is posted on our website at *www.EDS.com/investor/governance/communication.aspx.*

EDS Code of Business Conduct

EDS is committed to conducting its business ethically and with integrity. We believe that integrity is the sum of the ethical performance of the people of EDS and fosters successful long-term relationships with clients, a better overall work environment and a culture of compliance with both the letter and spirit of the law that ultimately brings value to our shareholders. The EDS Code of Business Conduct, first adopted over a decade ago, has been continually updated to reflect the values we expect of the directors, officers and employees of the entire EDS family of companies. The Code of Business Conduct meets the standards for a "code of ethics" applicable to our principal executive officer, principal financial officer, and principal accounting officer or controller for purposes of applicable SEC rules and satisfies the requirements of the NYSE for a code of business conduct applicable to all directors, officers and employees. The EDS Code of Business Conduct is posted on our website at *www.EDS.com/investor/governance/code.aspx.* You may also request a copy of the Code of Business Conduct by writing EDS Investor Relations at 5400 Legacy Drive, MS H1-2D-05, Plano, TX 75024, or by calling (888) 610-1122 or (972) 605-6661. We will disclose any amendment or waiver of a provision of the Code of Business Conduct that applies to our principal executive officer, principal financial officer, principal accounting officer or controller, or that relates to any element of the definition of a "code of ethics" under applicable SEC rules, as well as any amendment or waiver of the Code for any of our directors or any executive officer, on our website at *www.EDS.com/investor/governance/code.aspx* not later than five business days after the amendment or waiver.

Committees of the Board

The Board has established three Committees to assist it in discharging its responsibilities: the Audit Committee; the Compensation and Benefits Committee; and the Governance Committee. Each committee is composed entirely of independent directors. The Board has adopted a written charter for each committee. Copies of these charters are posted on our website at *www.EDS.com/investor/governance/*committee.aspx. Shareholders may also request a copy of any committee charter by contacting EDS Investor Relations at the above address or phone number.

Audit Committee. The Audit Committee, which met nine times in 2006, is composed of Ray J. Groves (Chair), W. Roy Dunbar, S. Malcolm Gillis and Edward A. Kangas. The Board of Directors has determined that Messrs. Groves and Kangas are audit committee financial experts within the meaning of SEC regulations, and that all members of the Audit Committee are independent within the meaning of the NYSE's listing standards. The Audit Committee assists the Board in fulfilling its responsibilities for oversight of the integrity of EDS' financial statements, EDS' compliance with legal and regulatory requirements, the independent auditors' qualifications and independence, and the performance of EDS' internal audit function and independent auditors. Among other things, the Audit Committee appoints and determines the compensation of EDS' independent auditors; reviews and evaluates the performance and independence of the independent auditors; reviews the scope and plans for the external and internal audits; reviews and discusses reports from the independent auditors regarding critical accounting policies, alternative treatments of financial information and other matters; reviews significant changes in the selection or application of accounting principles; reviews the internal control report of management, any issues regarding the adequacy of internal controls and any remediation efforts; reviews legal matters that could materially impact EDS' financial statements; reviews the EDS Code of Business Conduct to determine whether it complies with applicable law and discusses reports from the Office of Ethics and Business Conduct concerning compliance with the Code of Business Conduct; and reviews EDS' guidelines and policies with respect to risk assessment and risk management. The Audit Committee also reviews with management and the independent auditors EDS' quarterly and annual financial statements and other public financial disclosures prior to their release. The report of the Audit Committee is included below.

Compensation and Benefits Committee. The Compensation and Benefits Committee ("CBC"), which met seven times in 2006, is composed of Ellen M. Hancock (Chair), Martin C. Faga, James K. Sims and R. David Yost. Messrs. Faga and Sims were appointed to the CBC in October 2006, at which time Roger A. Enrico resigned from the committee. The CBC reviews and approves annual goals and objectives relevant to the CEO's compensation

and evaluates the CEO's performance against such goals and objectives. The CBC approves all salary and other compensation for our other executive officers and the performance goals for our performance-based executive plans. It also reviews and approves all new benefit and equity compensation plans and programs, as well as amendments to existing plans and programs, and reviews and makes recommendations to the Board regarding director compensation. Each member of the CBC is an independent director, and no former employee of EDS serves on the CBC.

Governance Committee. The Governance Committee, which met five times in 2006, is composed of Roger A. Enrico (Chair), Ellen M. Hancock and Ray L. Hunt. The Governance Committee develops, and makes recommendations to the Board for approval of, our policies and practices related to corporate governance, including the EDS Corporate Governance Guidelines. In addition, the committee develops the criteria for the qualification and selection of candidates for election to the Board, including the standards and processes for determining director independence, and makes recommendation to the Board regarding such candidates as well as the appointment of directors to serve on Board committees. The committee is also responsible for the development and oversight of the company's director orientation and education programs. The committee recommends to the Board the election of the Chairman and the CEO, reviews the CEO's recommendations regarding the election of other principal officers, reviews and develops with the CEO management succession plans, and makes recommendations regarding shareholder proposals. The procedures for submission by a shareholder of a director nominee or other proposal are described under "Shareholder Proposals and Nomination of Directors" below.

Director Qualifications

The Governance Committee will select nominees for director on the basis of their integrity, experience, achievements, judgment, intelligence, personal character, ability to make independent analytical inquiries, willingness to devote adequate time to Board duties, and the likelihood that they will be able to serve on the Board for a sustained period. To be recommended by the Governance Committee for election to the Board, a nominee must also meet the expectations for individual directors set forth in the EDS Corporate Governance Guidelines, including understanding EDS' businesses and the marketplaces in which it operates. In addition, a nominee must not have conflicts or commitments that would impair his or her ability to attend scheduled Board meetings or annual shareholders meetings, not hold positions that would result in a violation of legal requirements, and meet any applicable legal or regulatory requirements for directors of government contractors. In selecting nominees, the Governance Committee will also consider the nominee's global experience, experience as a director of a large public company and knowledge of particular industries.

Identification and Evaluation of Director Candidates

The Governance Committee uses a variety of means for identifying nominees for director, including third-party search firms and recommendations from current Board members and shareholders. In determining whether to nominate a candidate, the Governance Committee considers the current composition and capabilities of serving Board members, as well as additional capabilities considered necessary or desirable in light of existing needs, and then assesses the need for new or additional members to provide those capabilities. In most instances, all members of the Governance Committee, as well as one or more other directors, will interview a prospective candidate. The Governance Committee will also contact any other sources, including persons serving on another board with the candidate, it deems appropriate to develop a well-rounded view of the candidate. Reports from the interview with the candidate and/or Governance Committee members with personal knowledge and experience with the candidate, information provided by other contacts, the candidate's resume, and any other information deemed relevant by the Governance Committee will be considered in determining whether a candidate should be nominated.

In evaluating whether to nominate a director for re-election, the Governance Committee will consider the following: the director's attendance at Board and Board Committee meetings; the director's review and understanding of the materials provided in advance of meetings and other materials provided to the Board from time to time; whether the director actively, objectively and constructively participated in such meetings and in the company's strategic decision-making process in general; the director's compliance with the Corporate Governance Guidelines; and whether the director continues to possess the qualities and capabilities expected of Board members discussed above. The Governance Committee will also consider input from other Board members concerning the performance and independence of that director. Generally, the manner in which the Governance Committee evaluates nominees for director recommended by a shareholder will be the same as that for nominees from other sources. However, the Governance Committee will also seek and consider information concerning the relationship between a shareholder's nominee and that shareholder to determine whether the nominee can effectively represent the interests of all shareholders.

Shareholder Proposals and Nomination of Directors

Shareholders may submit proposals, including director nominations, for consideration at future shareholder meetings.

Shareholder Proposals. For a shareholder proposal to be considered for inclusion in our proxy statement for an annual shareholders' meeting, the written proposal must comply with the requirements of SEC Rule 14a-8 regarding the inclusion of shareholder proposals in company-sponsored proxy materials. Proposals should be addressed to:

Corporate Secretary, Electronic Data Systems Corporation
5400 Legacy Drive, Mail Stop H3-3A-05
Plano, Texas 75024
Fax: (972) 605-5610

Our 2008 Annual Meeting of Shareholders is currently scheduled for April 15, 2008. Under SEC rules, shareholder proposals to be considered for inclusion in our proxy statement for that meeting must be received by the Corporate Secretary not later than November 9, 2007. See "By-law Procedures" below for a description of procedures that shareholders must follow to introduce an item of business at an annual meeting in addition to the SEC Rule 14a-8 requirements to have the proposal included in our proxy statement.

Nomination of Director Candidates. The Governance Committee will consider candidates recommended by shareholders who beneficially own not less than 1% of the outstanding Common Stock. Eligible shareholders wishing to make such recommendations to the Governance Committee for its consideration may do so by submitting a completed "Shareholder Recommendation of Candidate for Director" form to the Secretary of the Governance Committee by e-mail to DirectorNominations@eds.com or by mail to 5400 Legacy Drive, Mail Stop H3-3A-05, Plano, TX 75024. This form is posted on our website at *www.EDS.com/investor/governance/nominations.aspx.* A copy of the form may also be requested from the Secretary of the Governance Committee. Eligible shareholders who wish to recommend a nominee for election as director at the 2008 annual meeting should submit a completed form not earlier than October 1, 2007, and not later than November 9, 2007. Generally, candidates recommended by an eligible shareholder will be evaluated by the Governance Committee under the same process described above. However, the Governance Committee will not evaluate a shareholder-recommended candidate unless and until the potential candidate has indicated a willingness to serve as a director, comply with the expectations and requirements for Board service described above and provide all information required to conduct an evaluation.

Shareholders who wish to nominate a person for election as a director at the next annual meeting may do so in accordance with the By-law procedures described below, either in addition to or in lieu of making a recommendation to the Governance Committee.

By-law Procedures. Our By-laws set forth procedures that shareholders must follow to introduce an item of business at an annual meeting or nominate persons for election as a director. These requirements are separate from and in addition to the SEC Rule 14a-8 requirements that a shareholder must satisfy to have a shareholder proposal included in our proxy statement. These requirements are also separate from the procedures described above that a shareholder must follow to recommend a director candidate to the Governance Committee. Generally, our By-laws require that a shareholder notify the Corporate Secretary of a proposal not less than 90 days nor more than 270 days before the scheduled meeting date. The notice must include the name and address of the shareholder and of any other shareholders known by such shareholder to be in favor of the proposal, as well as a description of the proposed business and reason for conducting the proposed business at the annual meeting. If the notice relates to a nomination for director, it must also set forth the name, age, principal occupation and business and residence address of any nominee(s), the number of shares of common stock beneficially owned by the nominee(s) and such other information regarding each nominee as would have been required to be included in a proxy statement under the SEC's proxy rules. Our By-laws are posted on our website at *www.EDS.com/investor/governance.* Shareholders may also contact the Corporate Secretary at the above address for a copy of the relevant By-law provisions.

Compensation and Benefits Committee Interlocks and Insider Participation

None of the members of the Compensation and Benefits Committee are current or former officers or employees of EDS. No interlocking relationship exists between the members of our Board of Directors or our Compensation and Benefits Committee and the board of directors or compensation committee of any other company, nor has any such interlocking relationship existed in the past.

PROPOSALS TO BE VOTED ON

PROPOSAL 1: ELECTION OF DIRECTORS

Our Board of Directors currently has 12 members. Roger A. Enrico will resign as a director immediately following the Annual Meeting and is not standing for re-election. All other current directors are standing for re-election, to hold office until the next Annual Meeting of Shareholders or until their successors are elected and qualified. All nominees were previously elected by shareholders at the 2006 Annual Meeting, other than Messrs. Faga and Sims who were appointed to the Board in September 2006. Mr. Faga had been recommended to the Governance Committee by a non-management director. Mr. Sims had been recommended to the Governance Committee by the Chairman and CEO. If a director nominee becomes unavailable for election, the Board may substitute another person for the nominee, in which event your shares will be voted for that other person.

Pursuant to an amendment to our Bylaws approved by the Board in February 2007, each director nominee must receive more votes "for" than "against" his or her election in order to be elected.

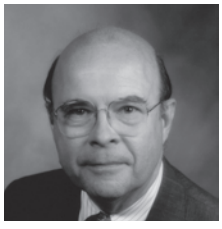
The information below regarding the director nominees is as of February 26, 2007.

The Board of Directors recommends a vote FOR each director nominee.

W. ROY DUNBAR, 45, has been a director of EDS since 2004. He has been President Global Technology and Operations of Master Card International since September 2004. Mr. Dunbar had been president, intercontinental operations of Eli Lilly and Company, responsible for its Asia, Africa/Middle East, Latin America and the Confederation of Independent States operations from January 2004 to September 2004, and was a member of Eli Lilly's senior management forum. He had served as vice president of information technology and chief information officer of Eli Lilly since 1999. Mr. Dunbar joined Eli Lilly in 1990. He is also a director of Humana Inc.

MARTIN C. FAGA, 65, has been a director of EDS since 2006. He served as the President and Chief Executive Officer of The MITRE Corporation, a non-profit organization providing engineering, research and development services to the U.S. Federal government, from May 2000 to June 2006 and is a current member of its Board of Trustees. He was Vice President at MITRE from 1993-2000. Mr. Faga served as the United States Department of Defense, Assistant Secretary of the Air Force for Space and Director, National Reconnaissance Office, from 1989 to 1993.

S. MALCOLM GILLIS, 66, has been a director of EDS since 2005. He has served as Zingler Professor of Economics and University Professor at Rice University since June 2004. Dr. Gillis was President of Rice University from 1993 to June 2004. He is also a director of Halliburton Company, Service Corporation International and Introgen Therapeutics, Inc.



RAY J. GROVES, 71, has been a director of EDS since 1996. He served as Senior Advisor of Marsh Inc., the insurance brokerage and risk management subsidiary of Marsh & McLennan Companies, Inc., from October 2004 to July 2005, Chairman and Chief Executive Officer from July 2003 to October 2004, President and Chief Executive Officer from January 2003 to June 2003, and President and Chief Operating Officer from October 2001 to January 2003. Mr. Groves was Chairman of Legg Mason Merchant Banking, Inc. from March 1995 to September 2001. He retired as Chairman and Chief Executive Officer of Ernst & Young LLP in September 1994, which position he held since 1977. Mr. Groves is also a director of Boston Scientific Corporation and Overstock.com, Inc.

ELLEN M. HANCOCK, 63, has been a director of EDS since 2004. She has been President and Chief Operating Officer of Jazz Technologies, Inc. and its predecessor Acquicor Technology Inc., since August 2005. Prior to its merger with Jazz Semiconductor, Inc., a wafer foundry, in February 2007, Jazz Technologies (then known as Acquicor) was a blank check company formed for the purpose of acquiring businesses in the technology, multimedia and networking sector. Ms. Hancock was Chairman of Exodus Communications, Inc., a computer network and internet systems company, from June 2000 to September 2001, Chief Executive Officer from September 1998 to September 2001 and President from March 1998 to June 2000. She was Executive Vice President, Research and Development, Chief Technology Officer of Apple Computer Inc. from July 1996 to July 1997. Ms. Hancock previously was Executive Vice President and Chief Operating Officer of National Semiconductor and a Senior Vice President and Group Executive of International Business Machines Corporation. She is also a director of Jazz Technologies, Inc., Aetna Inc. and Colgate-Palmolive Company.

JEFFREY M. HELLER, 67, rejoined EDS in March 2003. He has served as Vice Chairman of EDS since December 2006 and a director since 2003. He was President of EDS from March 2003 to December 2006 and Chief Operating Officer from March 2003 to October 2005. Mr. Heller retired from EDS in February 2002 as Vice Chairman, a position he had held since November 2000. He served as President and Chief Operating Officer of EDS from 1996 to 2000 and Senior Vice President from 1984 to 1996. Mr. Heller joined EDS in 1968 and has served in numerous technical and management capacities. He is also a director of Temple Inland Corp. and Mutual of Omaha.

RAY L. HUNT, 63, has been a director of EDS since 1996. Mr. Hunt has been Chairman of the Board, President and Chief Executive Officer of Hunt Consolidated Inc. and Chief Executive Officer of Hunt Oil Company for more than five years. He is a director of Halliburton Company, PepsiCo, Inc., Bessemer Securities LLC, Bessemer Securities Corporation and King Ranch, Inc. and a manager of Verde Group.

MICHAEL H. JORDAN, 70, has been Chairman and Chief Executive Officer of EDS since March 2003. He was Chairman and Chief Executive Officer of CBS Corporation (formerly Westinghouse Electric Corporation) from July 1993 until December 1998. Prior to joining Westinghouse, Mr. Jordan was a principal with the investment firm of Clayton, Dubilier and Rice from September 1992 through June 1993, Chairman of PepsiCo International from December 1990 through July 1992 and Chairman of PepsiCo World-Wide Foods from December 1986 to December 1990. Mr. Jordan has been chairman of the board of directors of eOriginal, Inc. (electronic document services) since June 1999. He is also a director of Aetna Inc.

EDWARD A. KANGAS, 62, has been a director of EDS since 2004. He was Chairman and Chief Executive Officer of Deloitte Touche Tohmatsu from 1989 to 2000 and Managing Partner of Deloitte & Touche (USA) from 1989 to 1994. Mr. Kangas began his career as a staff accountant at Touche Ross in 1967, where he became a partner in 1975. After his retirement from Deloitte in 2000, Mr. Kangas served as a consultant to Deloitte until 2004. He is also the Chairman of the National Multiple Sclerosis Society and a director of Eclipsys Corporation, Hovnanian Enterprises Inc., Oncology Therapeutics Networks and Tenet Healthcare Corporation (for which he has served as non-executive Chairman since July 2003).

JAMES K. SIMS, 60, has been a director of EDS since 2006. He was Chairman of the Board of RSA Security Inc., a provider of online identity and digital asset security services, from June 2003 to September 2006 and Vice Chairman from October 2002 to June 2003. He has served as Chairman and Chief Executive Officer of GEN3 Partners, Inc., a consulting company that specializes in science-based technology development, since September 1999, and as General Partner of its affiliated private equity investment fund, GEN3 Capital I, LP, since July 2005. Mr. Sims has also served as Chairman and Chief Executive Officer of Airgain, Inc., a developer of wireless antenna technology, since November 2004, Chairman of Groxis, Inc., an enterprise search management software firm, since November 2004 and Chairman of American EPS, Inc., a provider of online payroll and attendance solutions, since February 2005. He was a director of Enterasys Networks, Inc., a provider of infrastructure solutions, from June 2004 to March 2005, and Chief Executive Officer, President and director of Cambridge Technology Partners (Massachusetts), Inc., a consulting and systems integration firm, from 1991 to 1999.

R. DAVID YOST, 59, has been a director of EDS since 2005. He has been a director and Chief Executive Officer of AmerisourceBergen Corporation, a pharmaceutical services company, since August 2001 and President of AmerisourceBergen from August 2001 to October 2002. Mr. Yost served as Chairman and Chief Executive Officer of AmeriSource Health Corporation from December 2000 to August 2001 and President and Chief Executive Officer of AmeriSource Health Corporation from May 1997 to December 2000. He held a variety of other positions with AmeriSource Health Corporation and its predecessors since 1974, including Executive Vice President – Operations of AmeriSource Health Corporation from 1995 to 1997.

PROPOSAL 2: RATIFICATION OF APPOINTMENT OF AUDITORS

The Audit Committee has appointed KPMG LLP ("KPMG") as EDS' independent auditors for the year ending December 31, 2007. That firm has been EDS' auditors since 1984. The Board of Directors is submitting the appointment of that firm for ratification by shareholders. A representative of KPMG is expected to be present at the meeting, will be available to respond to appropriate questions and will have the opportunity to make a statement, should he or she so desire.

The Board of Directors recommends a vote FOR the ratification of the appointment of KPMG as independent auditors for 2007.

Audit and Non-Audit Fees to Independent Auditor

The following table shows the dollar amount (in millions) of the fees paid or accrued by EDS for audit and other services provided by KPMG in 2006 and 2005.

	2006	2005
Audit Fees	$18.7	$19.0
Audit-Related Fees	1.3	1.0
Tax Fees	.3	.4
All Other Fees	--	--
Total	$20.3	$20.4

Audit fees represent fees for services provided in connection with the audit of our consolidated financial statements, audit of our internal control over financial reporting, review of our interim consolidated financial statements, local statutory audits, accounting consultations and SEC registration statement reviews. Audit-related fees consist primarily of fees for audits of employee benefit plans and service organizations. Tax fees include fees for domestic and international tax consultations, and international tax return preparation. Other services principally include fees for ISO 9000/14000 compliance assessments and were less than $50,000 in both 2006 and 2005. KPMG rendered no professional services to EDS in 2006 or 2005 with respect to financial information systems design and implementation.

Policy on Pre-Approval of Audit and Non-Audit Services

All audit services, audit-related services, tax services and other services were pre-approved by the Audit Committee, which concluded that the provision of such services by KPMG was compatible with the maintenance of that firm's independence in the conduct of its auditing functions. The Audit Committee charter provides for pre-approval of any audit or non-audit services provided to EDS by its independent auditors. However, pre-approval is not necessary for non-audit services if: (i) the aggregate amount of all such non-audit services provided to EDS constitutes not more than five percent of the total fees paid by EDS to its independent auditors during the fiscal year in which the non-audit services are provided; (ii) such services were not recognized by EDS at the time of the engagement to be non-audit services; and (iii) such services are promptly brought to the attention of the Audit Committee and approved prior to the completion of the audit by the Audit Committee. The Audit Committee may delegate to one or more of its members pre-approval authority with respect to all permitted audit and non-audit services, provided that any services pre-approved pursuant to such delegated authority shall be presented to the full Audit Committee at its next regular meeting.

Report of the Audit Committee

The Audit Committee reviewed and discussed with management of the company and KPMG LLP, independent auditors for the company, the audited financial statements to be included in the Annual Report on Form 10-K for the year ended December 31, 2006.

The Audit Committee discussed with KPMG LLP the matters required to be discussed by Statement on Auditing Standards No. 61, "Communications with Audit Committees", as amended.

The Audit Committee received the written disclosures and the letter from KPMG LLP required by Independence Board Standard No. 1, "Independence Discussions With Audit Committees", and has discussed with KPMG LLP its independence from the company.

In reliance on the reviews and discussions with management of the company and KPMG LLP referred to above, the Audit Committee has recommended to the Board of Directors that the audited financial statements be included in the company's Annual Report on Form 10-K for the year ended December 31, 2006, for filing with the Securities and Exchange Commission.

The Audit Committee reviewed management's process to assess the adequacy of the company's system of internal control over financial reporting and management's conclusions on the effectiveness of the company's internal control over financial reporting. The Audit Committee also discussed with KPMG LLP the company's internal control assessment process, management's assessment with respect thereto and KPMG LLP's evaluation of the company's system of internal control over financial reporting.

It is the responsibility of the company's management to plan and conduct audits and determine that the company's financial statements are complete and accurate and in accordance with generally accepted accounting principles. In giving its recommendation to the Board of Directors, the Audit Committee has relied on management's representation that such financial statements have been prepared in conformity with generally accepted accounting principles, and the reports of the company's independent accountants with respect to such financial statements.

Audit Committee
Ray J. Groves, Chair
W. Roy Dunbar
S. Malcolm Gillis
Edward A. Kangas

SHAREHOLDER PROPOSALS

We expect Proposals 3 and 4 to be presented by a shareholder at the Annual Meeting. The proposals may contain assertions that we believe are incorrect. We have not attempted to refute any inaccuracy. However, the Board has recommended a vote against these proposals for the broader policy reasons set forth following each proposal.

Proposal 3: Shareholder Proposal Relating To Performance-Based Stock Options

John Chevedden, as proxy for William Steiner, has advised us that he intends to present the following resolution at the Annual Meeting:

Resolved, Shareholders request that our Board of Directors adopt a policy whereby at least 75% of future equity compensation (stock options and restricted stock) awarded to senior executives shall be performance-based, and the performance criteria adopted by the Board disclosed to shareowners.

"Performance-based" equity compensation is defined here as:
(a) Indexed stock options, the exercise price of which is linked to an industry index;
(b) Premium-priced stock options, the exercise price of which is substantially above the market price on the grant date; or
(c) Performance-vesting options or restricted stock, which vest only when the market price of the stock exceeds a specific target for a substantial period.

This is not intended to unlawfully interfere with existing employment contracts. However, if there is a conflict with any existing employment contract, our Compensation Committee is urged for the good of our company to negotiate revised contracts that are consistent with this proposal.

As a long-term shareholder, I support compensation policies for senior executives that provide challenging performance objectives that motivate executives to achieve long-term shareowner value. I believe that a greater reliance on performance-based equity grants is particularly warranted at EDS given at least one major example of runaway executive pay.

When EDS showed its Chairman/CEO Dick Brown the door in 2003 it was later revealed that Brown was to receive $30 million in severance. His golden parachute angered investors, who saw the value of their shares tumble roughly 65% in the last year of Brown's reign, while contracts went awry and rivals narrowed the gap between their companies and his.

Many leading investors criticize standard options as inappropriately rewarding mediocre performance. Warren Buffett has characterized standard stock options as "a royalty on the passage of time" and has spoken in favor of indexed options.

In contrast, peer-indexed options reward executives for outperforming their direct competitors and discourage re-pricing. Premium-priced options reward executives who enhance overall shareholder value. Performance-vesting equity grants tie compensation more closely to key measures of shareholder value, such as share appreciation and net operating income, thereby encouraging executives to set and meet performance targets.

Performance Based Stock Options
Yes on 3

THE BOARD OF DIRECTORS RECOMMENDS
A VOTE AGAINST THIS PROPOSAL FOR THE FOLLOWING REASONS:

The Board of Directors and its Compensation and Benefits Committee ("CBC") agree that a substantial portion of long-term incentive compensation should be performance-based and have already modified our long-term incentive compensation strategy to achieve that goal.

In 2004, the CBC launched a project to redesign our long-term incentive compensation strategy and considered alternatives which would, among other things, focus executives on long-term metrics that create sustained shareholder value. The CBC sought the input of many of our largest shareholders in connection with this project. As a result, in 2005 the CBC modified our long-term incentive compensation strategy for senior executives to grant an

equivalent value of performance-based restricted stock units ("P-RSUs") and stock options. The number of P-RSUs that vest under the 2005 and 2006 grants, if any, will be based on EDS' performance as measured by operating margin, net asset utilization and organic revenue growth over a three-year performance period. These metrics were chosen because of their relevance to our corporate strategy and objectives for the respective performance periods at the time of grant, the ability of executive officers to impact achievement of the performance goals and our belief that achieving or exceeding these goals should result in sustained increases to shareholder value over the longer-term. P-RSU vesting for senior executives can range from 0 to 200% of the "target" award. Stock options also vest three years following the grant date, and any options exercised in the 12 month period after vesting must be exercised for shares only and must be held for 12 months from the exercise date. This provision was implemented to hold senior executives accountable for company performance and stock price even after the stock options vest.

We believe that the narrow definition of "performance-based" in this proposal has significant practical limitations and would not reward the type of performance we are seeking to motivate. Under this proposal, a restricted stock award is not considered "performance-based" unless it provides for vesting when the stock price exceeds a specified target for a substantial period. We believe such a requirement could result in short vesting periods and the loss of the retentive value of the award when the stock price target is achieved. This would not necessarily promote the achievement of sustainable long-term stock price appreciation. By comparison, our P-RSUs, which provide for vesting only if we achieve specified financial performance objectives over a three-year performance period, promote the achievement of results over a sustained period of time that we believe drive long-term stock-price performance. If we do not meet the minimum performance targets required for vesting, the P-RSUs will have no value to our executives.

Similarly, the stock option component of our long-term incentive award is inherently performance-based because it provides no economic benefit unless the trading price for our stock exceeds the exercise price after the vesting requirement has been met. The three-year vesting requirement promotes a long-term focus and sustainable performance. The requirement in this proposal that stock options be "premium-priced" or "indexed" to be performance-based is currently not market competitive and the use of premium-priced options would increase share utilization since we would likely grant additional options to achieve market competitive compensation levels.

Additionally, the narrow definition of "performance-based" compensation in this proposal would not provide the CBC with flexibility to design an effective long-term incentive compensation strategy that takes into account changes in strategic goals, changing economic and industry conditions, modifications in tax laws and accounting requirements, competitive compensation practices, and other relevant factors.

For the foregoing reasons, we believe our long-term compensation strategy more effectively achieves the goal of tying our long-term incentive compensation to our company's performance than the approach required by this proposal.

Accordingly, the Board unanimously recommends a vote AGAINST this proposal.

Proposal 4: Shareholder Proposal Relating To Special Shareholder Meetings

John Chevedden, as proxy for Nick Rossi, has advised us that he intends to present the following resolution at the Annual Meeting:

RESOLVED, shareholders ask our board of directors to amend our bylaws to give holders of at least 10% to 25% of the outstanding common stock the power to call a special shareholder meeting.

Shareholders should have the ability, within reasonable limits, to call a special meeting when they think a matter is sufficiently important to merit expeditious consideration. Shareholder control over timing is especially important in the context of a major acquisition or restructuring, when events unfold quickly and issues may become moot by the next annual meeting.

Thus this proposal asks our board to amend our bylaws to establish a process by which holders of 10% to 25% of our outstanding common shares may demand that a special meeting be called. The corporate laws of many states (though not Delaware, where our company is incorporated) provide that holders of only 10% of shares may call a special meeting, absent a contrary provision in the charter or bylaws. Accordingly, a 10% to 25% threshold strikes a reasonable balance between enhancing shareholder rights and avoiding excessive distraction at our company.

Prominent institutional investors and organizations support a shareholder right to call a special meeting. Fidelity, Vanguard, American Century and Massachusetts Financial Services are among the mutual fund companies supporting a shareholder right to call a special meeting. The proxy voting guidelines of many public employee pension funds, including the Connecticut Retirement Plans, the New York City Employees Retirement System and the Los Angeles County Employees Retirement Association, also favor preserving this right. Governance ratings services, such as The Corporate Library and Governance Metrics International, take special meeting rights into account when assigning company ratings.

This topic also won 65% support of JPMorgan Chase & Co. (JPM) shareholders at the 2006 JPM annual meeting.

Special Shareholder Meetings
Yes on 4

THE BOARD OF DIRECTORS RECOMMENDS
A VOTE AGAINST THIS PROPOSAL FOR THE FOLLOWING REASONS:

Under our Certificate of Incorporation and Bylaws, a special meeting of shareholders may be called at any time by a majority of the Board of Directors or by the Chairman of the Board. A special meeting of shareholders is an expensive and time-consuming event because of the costs in preparing and distributing required disclosure documents and the time commitment required of the Board and management to prepare for and conduct the meeting. We believe that the calling of a special meetings of shareholders should occur only when either fiduciary obligations or strategic concerns require that the matters to be addressed cannot wait until the next annual meeting of shareholders. We believe our existing governance mechanisms are appropriate for a public company of our size and afford management and the Board the opportunity to respond to shareholder proposals and concerns while allowing directors, consistent with their fiduciary duties, to determine when it is in the interests of the company to hold a special meeting of shareholders. The Board believes that enabling a small minority of shareholders to call an unlimited number of special meetings, particularly in the current environment in which hedge funds and others now "borrow" shares from other shareholders solely for voting purposes to advance their own interests, could be disruptive to our business, require significant attention from our management and employees and impose substantial administrative and financial burdens on our company.

Accordingly, the Board unanimously recommends a vote AGAINST this proposal.

Stock Ownership of Management and Certain Beneficial Owners

Stock Ownership of Directors and Executive Officers. The following table sets forth the number of shares of our Common Stock beneficially owned as of January 31, 2007, by (a) each director of EDS; (b) each current and former executive officer named in the Summary Compensation Table below; and (c) all current directors and executive officers as a group. Each of the individuals/groups listed below is the owner of less than one percent of our outstanding Common Stock.

Name	Amount and Nature of Beneficial Ownership
W. Roy Dunbar	9,642 (b)(c)
Roger A. Enrico	75,210 (a)(b)
Martin C. Faga	2,154 (b)
S. Malcolm Gillis	5,091 (b)(c)
Ray J. Groves	89,656 (a)(b)
Ellen M. Hancock	32,744 (a)(b)(c)
Ray L. Hunt	147,705 (a)(b)
Edward A. Kangas	15,447 (b)
James K. Sims	4,307 (b)
R. David Yost	18,189 (b)
Michael H. Jordan	1,185,920 (a)(c)(d)(e)
Jeffrey M. Heller	1,552,246 (a)(c)(d)(e)
Ronald A. Rittenmeyer	2,186 (c)(d)(e)
Charles S. Feld	360,514 (a)(c)(d)(e)
Ronald P. Vargo	28,997 (a)(c)(d)(e)
Thomas A. Haubenstricker	30,388 (a)(c)-(f)
Directors and executive officers as a group (20 persons)	4,012,928 (a)-(e)
Stephen F. Schuckenbrock	212,821 (g)
Robert H. Swan	148,406 (h)

(a) Includes shares of Common Stock which may be acquired on or before April 1, 2007, through the exercise of stock options as follows: Mr. Enrico—26,463 shares; Mr. Groves—29,882 shares; Ms. Hancock—13,468 shares; Mr. Hunt—36,116 shares; Mr. Jordan—1,033,336 shares; Mr. Heller—1,061,668 shares; Mr. Feld—319,838 shares; Mr. Vargo—20,000 shares; Mr. Haubenstricker—22,953 shares; and all directors and executive officers as a group—2,960,455 shares. Does not include shares subject to options vesting after April 1, 2007, regardless of whether such options may vest prior to that date if the share price appreciates to specified levels.

(b) Includes compensation deferrals treated as phantom stock under the Non-Employee Director Deferred Compensation Plan as follows: Mr. Dunbar—8,684 shares; Mr. Enrico—8,581 shares; Mr. Faga— 2,154; Dr. Gillis—5,091 shares; Mr. Groves—57,514 shares; Ms. Hancock—17,388 shares; Mr. Hunt—47,501 shares; Mr. Kangas—15,447 shares; Mr. Sims—4,307 shares, and Mr. Yost—13,189 shares.

(c) Excludes unvested restricted stock units granted under the 2003 Amended and Restated Incentive Plan (the "Incentive Plan") as follows: Mr. Dunbar—12,719 units; Dr. Gillis—3,993 units; Ms. Hancock—8,217 units; Mr. Jordan—460,000 units; Mr. Heller—328,000 units; Mr. Rittenmeyer—91,000 units; Mr. Feld—218,895 units; Mr. Vargo—86,331 units; Mr. Haubenstricker—45,400 units; and all directors and executive officers as a group—1,619,487 units. The units will vest (subject to earlier vesting based on EDS' achievement of performance goals) during the period from 2007 through the earlier of normal retirement or 2010, subject to earlier vesting under the terms of agreements with certain executives described below.

(d) Includes vested compensation deferrals treated as invested in Common Stock under the Executive Deferral Plan as follows: Mr. Jordan—6,763 shares; Mr. Heller—61,346 shares; Mr. Rittenmeyer—197 shares; Mr. Feld—6,117 shares; Mr. Vargo—1,263 shares; Mr. Haubenstricker—5,468 shares; and all executive officers as a group—93,678 shares.

(e) Includes vested compensation deferrals treated as invested in Common Stock under the 401(k) Plan as follows: Mr. Jordan—496 shares; Mr. Heller—574 shares; Mr. Rittenmeyer—one share; Mr. Feld—396 shares; Mr. Vargo—444 shares; Mr. Haubenstricker—604 shares; and all executive officers as a group—6,909 shares.

(f) Mr. Haubenstricker served as interim co-chief financial officer from March 15, 2006, to August 22, 2006. His share ownership is not included in the amounts reported above for all executive officers as a group as of January 31, 2007.

(g) Mr. Schuckenbrock was separated from EDS effective May 31, 2006. The total amount reported for him includes 212,379 shares of Common Stock which may be acquired on or before April 1, 2007, through the exercise of stock options and excludes 26,001 unvested restricted stock units granted under the Incentive Plan.

(h) Mr. Swan resigned as Executive Vice President and Chief Financial Officer on March 15, 2006. The total amount reported for him includes 105,767 vested compensation deferrals treated as invested in Common Stock under the Executive Deferral Plan and 285 vested compensation deferrals treated as invested in Common Stock under the 401(k) Plan.

Stock Ownership of Certain Beneficial Owners. Based on a review of filings with the SEC, we are aware of the following beneficial owners of more than 5% of the outstanding Common Stock at December 31, 2006:

Name and Address of Beneficial Owner	**Number of Shares Beneficially Owned**	**Percentage of Common Stock Outstanding**
Dodge & Cox 555 California St., 40th Floor San Francisco, CA 94104	65,269,806 (a)	12.6%
Hotchkiss and Wiley Capital Management, LLC 725 S. Figueroa St, 39th Floor Los Angeles, CA 90017	58,986,010 (b)	11.4%
AXA Financial, Inc. (c) 1290 Avenue of the Americas New York, NY 10104	60,781,871 (c)	11.8%
State Street Bank and Trust Company 225 Franklin Street Boston, MA 02110	29,880,508 (d)	5.8%

(a) Dodge & Cox reported sole voting power over 61,085,906 shares, shared voting power over 651,800 shares, and sole dispositive power over all shares beneficially owned.

(b) Hotchkiss and Wiley reported sole voting power over 43,843,910 shares and sole dispositive power over all shares beneficially owned.

(c) A group comprised of AXA Financial, Inc. (including its subsidiaries Alliance Capital Management L.P. and AXA Equitable Life Insurance Company) and certain affiliated entities located in Paris, France, reported sole voting power over 46,482,732 shares, shared voting power over 4,092,933 shares, sole dispositive power over 60,763,940 shares and shared dispositive power over 17,931 shares.

(d) State Street reported sole voting power over 14,356,921 shares, shared voting power over 15,523,587 shares, and shared dispositive power over all shares beneficially owned.

Section 16(a) Beneficial Ownership Reporting Compliance

Our directors and executive officers are required under the Exchange Act to file with the SEC reports of ownership and changes in ownership in their holdings of Common Stock. We assist such persons with these filings. Based on an examination of these reports and on written representations provided to us, we believe that all such reports were timely filed in 2006, other than the final Form 4 filing for Stephen F. Schuckenbrock on June 5, 2006.

Non-Employee Director Compensation

Our compensation program for non-employee directors is designed to attract and retain qualified directors by offering compensation that is competitive with other large, global companies and recognizes the time, expertise and accountability required by Board service. Each year, the CBC reviews the current compensation program as well as director compensation data prepared by an external consulting firm. Based upon this review, the CBC recommends to the full Board of Directors what changes, if any, should be made to the director compensation program. The Board must approve any changes to the director compensation program.

Non-employee directors receive an annual cash retainer of $200,000 and an additional $15,000 for serving as chairperson of one of the Board's three standing committees. No additional fees are paid for attending Board or Board committee meetings. Directors are also reimbursed for travel and out-of-pocket expenses incurred in connection with their service. We do not provide retirement benefits, perquisites or other benefits to non-employee directors. Director compensation is paid at the commencement of each annual director compensation period, which begins at the Annual Meeting of Shareholders in April.

Directors may elect to receive their annual compensation in one or a combination of the following three forms:

- deferral to an interest bearing account and/or a "phantom" EDS stock unit account;
- restricted stock; or
- cash.

Compensation deferred into the interest bearing account earns interest at an annual rate equal to 120% of the applicable federal long-term rate published by the Internal Revenue Service ("IRS"). The number of units/shares granted is determined by dividing 110% of the elected compensation amount by the fair market value (average of the high and low trading prices) of EDS common stock on the date of grant. Compensation deferred into EDS stock units or granted as restricted stock receives a 10% premium to encourage directors to elect EDS equity as a form of compensation. Compensation elected in the form of deferred compensation vests immediately while restricted stock vests ratably over three years. With respect to both stock units and restricted stock, dividend equivalents are awarded at the same time and at the same rate as paid to EDS shareholders. If a director's service terminates prior to completing 24 months of service (except due to death or disability), a pro-rata portion of cash, deferred compensation and/or restricted stock paid in respect of the compensation year in which the director's service ended (based on months of service) will be forfeited, or, with respect to cash compensation, returned to EDS. If the director's service terminated due to death or disability, compensation will not be pro-rated and any restricted stock will vest immediately.

A director's deferred account balance is distributed in cash following separation from the Board. At the director's election, the account balance can be distributed in a lump sum or annually in either three or five installments beginning on a director's last day of service. The value of a director's stock unit account for purposes of distribution is based on the fair market value of EDS common stock on the last day of Board service. This amount is converted to the interest bearing account if a director elects the installment option.

Directors are subject to stock ownership guidelines under which they will be expected to hold EDS equity valued at not less than $400,000 by the later to occur of (i) our Annual Meeting of Shareholders in 2009 or (ii) five years from their election to the Board.

The following table sets forth the compensation paid to non-employee directors in 2006. The amounts reported represent compensation for the 2006/2007 director compensation year and were paid at the commencement of such period or, for directors appointed thereafter, on a pro-rated basis following their appointment.

Non-Employee Director Summary Compensation Table

Name	Fees Earned or Paid in Cash	Stock Awards (c)	All Other Compensation	Total
W. Roy Dunbar	$0	$105,996	$0	$105,996
Roger A. Enrico	107,500	123,455	0	230,955
Martin C. Faga (a)	71,978	55,004	0	126,982
S. Malcolm Gillis	80,000	46,458	0	126,458
Ray J. Groves	0	241,700	0	241,700
Ellen M. Hancock (b)	0	229,970	0	229,970
Ray L. Hunt	0	225,197	0	225,197
Edward A. Kangas	100,000	110,007	0	210,007
James K. Sims (a)	21,978	110,007	0	131,985
R. David Yost	0	220,014	0	220,014

(a) Compensation for Messrs. Faga and Sims was prorated based on their service commencement date of September 7, 2006.

(b) Compensation for Ms. Hancock reflects a prorated chairperson fee paid in 2006 of $7,458 for the 2005/2006 director compensation year. Ms. Hancock was appointed CBC Chair on October 21, 2005.

(c) Reflects the dollar amount recognized for financial statement reporting purposes for the fiscal year ended December 31, 2006, in accordance with Statement of Financial Accounting Standards ("SFAS") No. 123(R), and thus includes amounts from awards granted in and prior to 2006. During 2006, each director was granted the following stock awards: Mr. Dunbar – 7,986 restricted stock units with a fair value of $220,014; Mr. Enrico – 4,293 phantom stock units with a fair value of $118,272; Mr. Faga – 2,149 phantom stock units with a fair value of $55,004; Mr. Gillis – 3,993 restricted stock units with a fair value of $110,007 and 799 phantom stock units with a fair value of $22,012; Mr. Groves – 8,585 phantom stock units with a fair value of $236,517; Ms. Hancock – 4,442 restricted stock units with a fair value of $122,377 and 4,442 phantom stock units with a fair value of $122,377; Mr. Hunt – 7,986 phantom stock units with a fair value of $220,014; Mr. Kangas – 3,993 phantom stock units with a fair value of $110,007; Mr. Sims – 4,298 phantom stock units with a fair value of $110,007; and Mr. Yost – 7,986 phantom stock units with a fair value of $220,014.

As of December 31, 2006, each director had the following number of options, restricted stock units and phantom stock units outstanding: Mr. Dunbar – no options, 12,719 restricted stock units and 8,684 phantom stock units; Mr. Enrico – 26,463 options, no restricted stock units and 8,581 phantom stock units; Mr. Faga – no options, no restricted stock units and 2,154 phantom stock units; Mr. Gillis – no options, 3,993 restricted stock units and 5,091 phantom stock units; Mr. Groves – 29,882 options, no restricted stock units and 57,514 phantom stock units; Ms. Hancock – 19,662 options, 8,217 restricted stock units and 17,388 phantom stock units; Mr. Hunt – 36,116 options, no restricted stock units and 47,501 phantom stock units; Mr. Kangas – no options, no restricted stock units and 15,447 phantom stock units; Mr. Sims – no options, no restricted stock units and 4,307 phantom stock units; and Mr. Yost – no options, no restricted stock units and 13,189 phantom stock units.

Executive Compensation

Compensation Discussion and Analysis

Executive Compensation Program Objectives

The primary objectives of our executive compensation program are to attract and retain accomplished and high-potential executives and to motivate those executives to achieve short- and long-term goals with the ultimate objective of creating sustainable improvements in shareholder value. Consistent with that objective, our executive compensation program includes both annual incentive and stock based-compensation that rewards performance as measured against the achievement of short-and long-term goals designed to align executives' interest with those of our shareholders.

We seek to attract and retain executives by offering total compensation competitive with the market in which we compete for executive talent. We believe that the market is broader than the information technology ("IT") industry in which we operate. Accordingly, the Compensation and Benefits Committee ("CBC") reviews survey data from two comparator groups prepared by an external consulting firm. One group consists of large global corporations similar in revenue and/or market capitalization to EDS, most of which are outside the IT industry, with a sector weighting similar to the composition of the S&P 500. This group consists of 29 companies with median 2006 annual revenues of approximately $26 billion. The second group consists of 21 companies in the IT and related industries with median 2006 annual revenues of approximately $21 billion. The CBC reviews these comparator groups annually to ensure they are a representative cross-section of the businesses with which we compete for executive talent, and approves any changes to the companies that comprise each comparator group.

To motivate our executives to achieve short- and long-term goals designed to create sustainable shareholder value, we structure our annual bonus and long-term incentive programs to pay above the 50th percentile of the comparator groups when EDS exceeds such goals and below the 50th percentile when these goals are not achieved.

Our annual bonus program is designed to motivate executives to achieve short-term goals established by the CBC by linking the payment of an annual cash bonus to achievement of these goals. For our named executive officers, in 2006 the short-term goals related to earnings per share, free cash flow and revenue. We refer you to the discussion of "Annual Bonus" under "Elements of Compensation" below for a description of the performance goals established for each metric, the relative weightings assigned to each metric, the factors considered by the CBC in establishing such goals for 2006 and why we believe the achievement of such goals helps create sustainable shareholder value.

Our long-term incentive compensation program is designed to motivate executives to achieve long-term goals through the grant of stock options as well as performance-based restricted stock units ("P-RSUs"), the vesting of which is dependent on our achievement of three-year goals approved by the CBC. For the "named executive officers" in the Summary Compensation Table below, the long-term metrics for the 2006 P-RSU grant related to average annual operating margin, net asset utilization and organic revenue growth for the three-year period that began on January 1, 2006. We refer you to the discussion of "Long-Term Incentive Compensation" under "Elements of Compensation" below for a description of the relative weighting assigned to each metric, the factors considered by the CBC in establishing such goals for the three-year performance period and why we believe the achievement of such goals helps create sustainable shareholder value.

The combination of annual and long-term incentive programs is designed to provide a balanced total incentive opportunity that rewards executives for the quality of both their short- and long-term performance and decisions.

Role of the CBC and Management in Executive Compensation

The CBC determines the total compensation of our CEO and all other executive officers and oversees the design and administration of compensation and benefit plans for all EDS employees. The CBC is responsible for the review, establishment and approval of:

- executive compensation and benefits strategy, programs and policies;
- goals and objectives related to CEO performance, evaluating the CEO's performance relative to such goals and objectives and approving the CEO's total compensation based on such performance;

- salary, annual bonus, equity-based compensation and other remuneration for executive officers;
- performance metrics and goals for any performance-based cash or equity incentive compensation plan in which executive officers participate;
- design of all compensation plans that include EDS equity as a component of the plan;
- severance agreements for executive officers and change-of-control agreements for any EDS employee;
- changes to employee benefit plans; and
- making recommendations to the full Board regarding non-employee director compensation.

During CBC meetings, our internal human resources personnel present topical issues for discussion and education as well as specific recommendations for review. Certain executive officers, including the Chairman and CEO and the Senior Executive Vice President and Chief Administrative Officer attend a portion of most regularly scheduled CBC meetings, excluding executive sessions. The CBC also obtains input from our legal, finance and tax functions, as appropriate, as well as one or more executive compensation consulting firms regarding matters under consideration. The CBC has delegated to management certain responsibilities related to employee benefit matters. The CBC has formed three management committees that (i) oversee the investment of U.S. retirement plan assets and savings plan investment funds, (ii) approve the design/redesign of any employee benefit plan that does not result in a cost greater than $10 million in net present value over five years, and (iii) administer benefit plans for U.S. employees and former employees, their families and beneficiaries. These three committees are made up of EDS employees and report to the CBC on an annual basis. Additionally, the CBC has delegated to management the ability to periodically grant equity compensation to non-executive officers. These grants are generally for new hires, transitions and promotions and cannot exceed certain levels established by the CBC. All such grants are reported to the CBC at its next regularly scheduled meeting following the grant date.

The CBC utilizes two consulting firms for executive compensation matters. Mercer Human Resource Consulting has been retained by the CBC for periodic advice and projects as well as an annual review of the CEO's compensation. Towers Perrin, which has been retained by management, provides market data to the CBC and management on competitive pay practices for executives at and above the Vice President level.

Elements of Executive Compensation

In addition to health/welfare benefit plans and programs generally available to all employees, our executive compensation program comprises the following principal elements:

- base salary
- annual bonus
- long-term incentive compensation
- perquisites
- deferred compensation/retirement
- executive severance and change-of-control agreements

In allocating between cash and non-cash compensation, and current and long-term compensation, we utilize the 50th percentile of the comparator groups described above as a guideline, while seeking to maintain total compensation at the 50th percentile of the relevant position in the comparator groups. To consider all elements of compensation in total rather than each element in isolation, management has prepared total compensation "tally sheets" for executive officers for annual review by the CBC since 2005. These tally sheets summarize the value of each compensation element (including base salary, annual bonus, long-term incentive awards, deferred compensation, benefits and perquisites) plus the potential cost to us and benefit to the executive officers of change-of-control and severance payments. The information provided in the tally sheets is generally the same as the information reported, or to be reported, in our proxy statements.

Base Salary

We utilize the 50th percentile base salary for each comparator group (adjusted using regression analysis to minimize differences in revenues) for comparable positions as a guideline to establish base salaries for executive officers. However, the CBC may establish an executive officer's base salary higher or lower than the 50th percentile based on a number of factors, including individual performance, relevant experience, job responsibility, time interval since the last salary adjustment, the weight placed on base salary versus long-term incentive compensation and the executive officer's salary as compared internally. For example, the CBC established 2006 base salary for Mr. Jordan below the 50th percentile for his position in order to place more weight on long-term incentive compensation. Mr. Jordan's base salary will be increased effective April 1, 2007, to $1,400,000 per year to more closely approximate the 50th percentile for his position. This is the first increase in his base salary since joining EDS in March 2003.

Base salaries are generally reviewed annually during the first quarter and at other times if an executive officer's responsibilities have materially changed. For example, Mr. Vargo's base salary was reviewed and increased in

connection with his August 2006 appointment as Executive Vice President and Chief Financial Officer, and Mr. Rittenmeyer's and Mr. Feld's base salaries were increased upon their appointments as President and Chief Operating Officer and Senior Executive Vice President, Applications Services, respectively, in December 2006.

While we recognize performance-based compensation, such as annual bonus and long-term incentive compensation, more effectively motivates executive officers to achieve corporate goals, we believe the base salary element of total compensation is critical to attract and retain executive talent.

Annual Bonus

Executive officers and other senior leaders are eligible for an annual cash bonus under the Corporate Bonus Plan ("CBP"). The primary purpose of the CBP is to motivate participants to enable the company to achieve short-term financial goals designed to create sustainable shareholder value and reward them to the extent they achieve such goals. The CBP reflects our strategy that a significant portion of total compensation be contingent upon both company performance during the year and the executive's contribution to that performance. As such, each executive officer is assigned an annual target bonus opportunity (expressed as a percentage of base salary) based on his or her level. For 2006, target bonus opportunity was 120% for the CEO, 110% for the Vice Chairman, 100% for the President and Chief Operating Officer, 85% for other Executive Vice Presidents, 65% for Vice President/General Managers, and 55% for Vice Presidents (Level 3). We seek to establish the targeted bonus opportunity at the 50th percentile for similar positions at companies in the comparator groups.

CBP funding for 2006 could have ranged from 0 to 200% of target bonus opportunity and was based on financial metrics and goals for corporate, regional and account performance, depending on a participant's role during the year. Funding for the named executive officers was based 100% on corporate performance as measured by earnings per share ("EPS") (40% weight), free cash flow (40% weight) and revenue (20% weight). These metrics and weights were chosen because we believe executive officers directly impact these metrics, the combination of these metrics are the best indicator of EDS' performance during a fiscal year, and these goals, if achieved, should result in sustained increases to shareholder value. The table below sets forth the performance goals established by the CBC for the named executive officers under the 2006 CBP.

		Performance Goals			**Total Award Eligibility**		
Metric	*Weight*	*Minimum*	*Target Range*	*Maximum*	*Minimum*	*Target*	*Maximum*
Free Cash Flow	40%	$0.52B	$0.80B - $1.00B	$1.35B	0%	40%	80%
EPS	40%	$0.68	$1.05 - $1.15	$1.55	0%	40%	80%
Revenue	20%	$17.8B	$19.8B - $20.8B	$22.9B	0%	20%	40%
	100%				0%	100%	200%

We define free cash flow as net cash provided by operating activities, less capital expenditures. Free cash flow is a non-GAAP measure and should be viewed together with our consolidated statement of cash flows. We refer you to the discussion of "Non-GAAP Financial Measures" in our Annual Report on Form 10-K for the year ended December 31, 2006 ("2006 Form 10-K").

The CBC may reduce any bonus by up to 50% of the funded amount based on its assessment of individual performance against specific objectives. In determining funding for the CBP, the CBC can adjust actual results to exclude the impact of certain extraordinary items or events to more accurately reflect the overall performance of the management team. Free cash flow for purposes of our annual CBP target is automatically adjusted to exclude the impact of any client contract signed after the establishment of such target if the contract incurs negative free cash flow of more than $100 million during that year. Earnings per share is automatically adjusted to exclude the impact of any accounting changes, the impact of any new contract that results in more than $100 million in negative free cash flow during the year, the impact of expensing long-term incentive compensation, a significant gain or loss on divestiture of business units or assets, and the planned impact of significant acquisitions (with deviations to plan not excluded). Revenue is automatically adjusted to exclude the impact of any new contract that results in more than $100 million in negative free cash flow during the year, acquisitions or divestitures not contemplated in the annual financial plan and the impact of exchange rate deviations from plan rates.

In addition to the payment of an annual bonus under the CBP, the CBC may approve an additional discretionary bonus outside the CBP if an executive's performance significantly exceeds his or her individual goals. For 2006, the CBC approved an additional discretionary bonus to Messrs. Jordan, Heller, Rittenmeyer, Feld and Vargo to recognize their contributions toward achieving extraordinary results during the year and the progress they made individually toward the company's turnaround. The amount of such discretionary bonus is reported in the Summary Compensation Table under the "Bonus" column.

For 2006, the CBP funded in aggregate at 119% of the targeted payout for each named executive officer. This is based on results of $0.887 billion of free cash flow (100% of the target payout for free cash flow), $20.9 billion in annual revenue (105% of the target payout for revenue) and EPS of $1.33 (145% of the target payout for EPS). In determining the 2006 results for funding purposes, in addition to the automatic adjustment to the actual results described above, the CBC excluded from EPS (i.e., adjusted EPS upward) $0.12 per share, representing severance expense incurred in excess of the amount planned at the beginning of the year as a result of the acceleration of planned severance actions into 2006. This adjustment was made so participants would not be financially penalized for actions taken during the year to accelerate the implementation of the company's multi-year plan. The CBP payment to each named executive officer for 2006 is reported in the Summary Compensation Table under the "Non-Equity Incentive Plan Compensation" column.

Long-Term Incentive Compensation

The primary purpose of our long-term incentive compensation program is to motivate executives to achieve long-term goals designed to create sustainable shareholder value and reward them to the extent they achieve such goals. Long-term incentive compensation is delivered through stock-based awards made under the Amended and Restated 2003 Incentive Plan (the "Incentive Plan"), which authorizes awards of stock options, stock appreciation rights, restricted stock and other stock-based awards, and the EDS Executive Deferral Plan (the "EDP").

Since 2005, our long-term incentive compensation program for executive officers has focused on annual stock-based grants in the form of non-qualified stock options and performance-based restricted stock units ("P-RSUs"), with each grant having approximately the same economic value and accounting cost to the company. This strategy was implemented to balance the CBC's interest in (i) focusing executive officers on long-term metrics that create sustained shareholder value, (ii) addressing shareholder concerns regarding the exclusive use of stock options and shareholder dilution, (iii) more efficiently aligning long-term incentive costs with perceived value, (iv) attracting and retaining talent globally and (v) remaining competitive with market changes and compensation practices.

Stock options vest 100% in three years from the date of grant while P-RSU vesting is variable based on our results during the three-year performance period. The performance metrics for P-RSU grants in 2005 and 2006 were operating margin (50% weight), net asset utilization (25% weight) and organic revenue growth (25% weight). Performance goals for each metric are established by the CBC in the first quarter of the three-year performance period and will be adjusted at the end of the performance period to exclude the impact of expensing long-term incentive compensation, changes in accounting principles during the performance period, and significant gains or losses on the divestiture (greater than $100 million) of business units or assets. P-RSU vesting can range from 0 to 200% of the target award. These metrics were chosen because of their relevance to our corporate strategy and objectives for the respective performance periods at the time of grant, the ability of executive officers to impact achievement of the performance goals and our belief that achieving or exceeding these goals should result in sustained increases to shareholder value over the longer-term. For the 2007 P-RSU grants, we changed the performance metrics to free cash flow per share, return on net assets and revenue because of the relevance of these metrics to our corporate strategy and objectives for the three-year performance period beginning on January 1, 2007.

We establish the specific performance targets for each financial metric with the intent that (i) the likelihood of a payout at the targeted amount is greater than 50%, (ii) it is likely we will achieve the minimum performance levels required for any payout and (iii) it is unlikely we will achieve the performance levels required for the maximum payout. We also generally establish the performance targets at levels requiring year-over-year financial improvement. Consistent with the foregoing approach, we believe there is a high probability that we will achieve performance over the three-year periods beginning on January 1, 2005 (for the 2005 P-RSU grant) and January 1, 2006 (for the 2006 P-RSU grant) to allow vesting of approximately 90-100% of the target award.

We may periodically grant supplemental time or performance-vesting restricted/deferred stock units to executive officers. These grants are typically made to attract new executives or as a retention device for current executives. Such awards typically vest over three or four years. For example, in 2006 we granted 300,000 deferred stock units (DSUs) to President and Chief Operating Officer Ronald A. Rittenmeyer. The award, in the form of additional discretionary credits issued under the EDP, comprises 150,000 time-vesting DSUs and a target award of 150,000 performance-vesting DSUs. We also granted 41,331 time-vesting restricted stock units to Mr. Vargo upon his promotion to Executive Vice President and Chief Financial Officer and 129,895 time-vesting restricted share units to Mr. Feld upon his promotion to Senior Executive Vice President, Applications Services. We refer you to the description of such awards under the Grants of Plan-Based Awards table below.

Dividend equivalents are not paid on unvested P-RSUs but are paid prior to vesting on time-vesting RSUs and DSUs since they are intended to put the executive in the same economic position as a shareholder from the time of grant.

We consider several factors when establishing the size of long-term incentive compensation grants to executive officers, including long-term incentive compensation awarded within the IT industry comparator group, the number of unvested stock-based awards held by the executive, the executive's performance during the prior year and the executive's expected contribution to our long-term performance. Based on these factors, the CBC may decide to increase or decrease an executive's award relative to the 50th percentile of the IT comparator group. For example, if the value of an executive's unvested stock-based awards are lower than his or her peers and the executive has performed well during the prior year, the CBC may decide to grant a larger long-term incentive award to help motivate and retain the executive. We also consider the expected shareholder dilution and accounting cost attributable to our long-term incentive programs in establishing the total number of shares/units of common stock we make available through stock-based awards.

It has been our practice to grant stock-based awards to executive officers on an annual basis. Award levels and grant dates are approved by the CBC, and grants are made on or following the date of the CBC's approval. The CBC will also approve any option grants in connection with the hiring or promotion of an executive officer.

The CBC, together with the Audit Committee, has approved the recommendation of management to continue to grant annual stock-based awards to executive officers on March 15 of each year (or, if that date is not a trading day, the immediately preceding day), with CBC approval of such awards to occur at its regularly scheduled meeting in February. The annual stock option grants have an exercise price equal to the average of the high and low trading prices of our common stock on the date of grant. This date was selected to allow time to complete individual performance assessments for the prior year and to provide for a grant date following filing of our Annual Report on Form 10-K. Annual grants to non-U.S. employees may occur on a date other than March 15 for tax or regulatory reasons. Grants outside of the annual award process, such as grants to a newly hired or promoted executive officer, generally occur on the first trading day of the month following the date of the hiring or promotion. Stock option grants outside of the annual award process also have an exercise price equal to the average of the high and low trading prices of our common stock on the date of grant.

Deferred Compensation

The EDP, a non-qualified deferred compensation plan, provides executive officers and other eligible employees the ability to defer base salary and annual bonus compensation into deferred stock units or a fixed income accumulation account. The purpose of this plan is to allow executives the opportunity to accumulate additional ownership of EDS equity, provide a tax-efficient way to defer compensation to future years, and make up for any company match not made in respect of the executive's 401(k) plan contributions due to IRS limitations.

Retirement

The named executive officers, all of whom reside in the U.S., participate in the same tax-qualified defined benefit retirement plan, the Amended and Restated EDS Retirement Plan ("Retirement Plan"), as other U.S. employees. They also participate in the EDS Benefit Restoration Plan (the "Restoration Plan"), a non-qualified and unfunded retirement plan intended to pay benefits to employees whose benefits under the Retirement Plan are reduced due to certain IRS limitations. We believe these benefits are competitive with comparator company practices and allow us to attract and retain executive talent.

We also provide a Supplemental Executive Retirement Plan ("SERP") to certain named executive officers, excluding the CEO and Chief Financial Officer, and a small group of other executives. The SERP, a non-qualified, unfunded retirement plan, is intended to provide a target retirement income based on final average earnings (base salary plus bonus) during a 60 consecutive month period prior to retirement, offset by benefits under the Retirement Plan and Restoration Plan. The SERP was established several years ago to provide competitive retirement income benefits and to retain certain executives. In 2005, in response to changes in comparator company practices, the CBC approved a policy under which no new participants could be added to the SERP without its approval. The CBC also expressed its intent to not approve new SERP participants except in extraordinary new-hire or retention situations.

The CBC may approve the award of additional years of service to an executive officer for the calculation of benefits and vesting purposes under the SERP. For example, we agreed to provide to Mr. Rittenmeyer an enhanced benefit as an inducement of employment and to make up for retirement benefits and economic value forfeited as a result of his joining the company. We refer you to the discussion of this agreement under "Pension Benefits" below.

Perquisites

We make available four primary perquisites for executive officers: personal use of aircraft; for the CEO, a car and driver for transportation in the Dallas area; financial counseling and tax preparation services; and annual physicals. The CBC has approved the use of corporate aircraft by the CEO for all personal air travel and the use of a company

provided car and driver for ground travel in the Dallas area to facilitate his personal travel in as safe a manner as possible and with the most efficient use of his time. The CBC has delegated to the CEO the authority to approve all requests for personal air travel for other executive officers. We offer an Executive Physical Program that reimburses executive officers for the cost of an annual physical, up to $1,500. This benefit is provided to encourage executives to focus on their physical health and well-being. We also offer an Executive Financial Counseling Program which provides an annual allowance of up to $13,000 in the first year and $7,500 in subsequent years for financial counseling, plus reimbursement for tax preparation services. This program is intended to maximize the value of compensation provided by EDS and minimize an executive's time spent managing personal affairs. Executives do not receive a "gross-up" payment for any taxes associated with perquisites.

With the exception of personal use of aircraft, the value of which is highly dependent on an executive officer's usage, perquisites are intended to be competitive with comparator company practices. The CBC considers the total value of perquisites when establishing the amounts of other forms of compensation.

Executive Severance and Change-of-Control Agreements

We have entered into an Executive Severance Benefit Agreement with each named executive officer other than Messrs. Jordan, Heller and Haubenstricker, and a Change-of-Control Employment Agreement with each named executive officer other than Mr. Haubenstricker. An executive entitled to receive benefits following a termination of employment under an Executive Severance Benefit Agreement or a Change-of-Control Employment Agreement may elect to receive benefits under either agreement, but not both. We believe these agreements enable us to retain executive officers during times of unforeseen events when the executive's future is uncertain but continued employment of the executive may be necessary for the company. We also believe it is beneficial to have agreements in place that specify the exact terms and benefits an executive receives if we elect to separate an executive officer involuntarily from the company.

The agreements with named executive officers include an expiration or "sunset" date which may not be extended without CBC approval. Benefits payable under these agreements are benchmarked periodically, including prior to any extension, relative to comparator company practices. During 2006, we reviewed the prevalence of severance and change-of-control agreements among our comparator groups' executives as well as the provisions of such agreements to benchmark the competitiveness of EDS' agreements. Specifically, we reviewed the cash severance multiplier, equity vesting provisions, benefit continuation practices, excise tax gross-up prevalence, and the length of the protection period in the event of a change-of-control. Based upon our review, we believe our agreements are generally consistent with those of our comparator groups.

The CBC has established a policy requiring shareholder approval before we can agree to provide a separation benefit to an executive officer that exceeds 2.99 times annual base salary plus target bonus. This limitation applies to cash severance and the present value of retirement/fringe benefits in excess of what would normally be provided under the terms of the relevant plans. The value of continued or accelerated vesting of stock-based awards is not subject to this limit.

Additional information regarding the terms of the Executive Severance Benefit and Change-of-Control Employment Agreements with the named executive officers, including estimates of the amounts payable under such agreements assuming termination of employment as of December 31, 2006, is set forth under the heading "Agreements Related to Potential Payments Upon Termination or Change-of-Control" below.

Stock Ownership Guidelines

Executive officers are subject to stock ownership guidelines under which they will be expected to hold EDS equity valued at not less than the following amount (expressed as a multiple of annual base salary) by the later of (i) December 31, 2008, or (ii) five years from an executive's change of level.

Executive Level	Stock Ownership Guideline
Office of the Chairman	5x annual base salary
Senior Executive Vice President/Executive Vice President	3x annual base salary
Senior Vice President/ Vice President & General Manager	2x annual base salary
Vice President (Level 3)	1x annual base salary

All forms of direct and indirect ownership are included in determining stock ownership, including shares held outright, unvested restricted stock units, vested and unvested deferred stock units, and units held in a 401(k) account. As of December 31, 2006, all named executive officers had sufficient ownership to achieve the relevant stock ownership multiple.

Policy on Stock Trading and Hedging

We have in place a pre-clearance process for all trades in EDS securities which all executive officers must follow. Executive officers and other insiders are also prohibited from engaging in any transaction involving a put, call or other option on EDS securities (other than exercises of an option granted under an EDS incentive plan) at any time.

Recovery of Incentive Compensation in the Event of a Financial Restatement

The CBC does not have a policy that would recover cash or equity compensation received by an executive officer if the company's performance upon which the payments were based is adjusted or restated and the adjusted performance would have resulted in reduced compensation. However, the CBC would consider any such event when making future compensation decisions for executive officers who continue to be employed by the company.

Section 162(m) Compliance

We generally seek to grant stock options and establish performance goals under our bonus and long-term incentive compensation plans in a manner that qualifies as "performance-based" under Section 162(m) of the Internal Revenue Code, which provides that we may not deduct compensation of more than $1,000,000 paid to certain individuals. However, certain forms and amounts of compensation may not be performance-based and may result in our exceeding the $1 million deduction limitation from year to year, including time-vesting RSUs, any cash bonus outside of the CBP, and base salary in excess of $1 million.

The $1 million performance-based level was exceeded in 2006 with respect to each of the CEO, the Vice Chairman, the President and Chief Operating Officer, and the Senior Executive Vice President, Applications Services principally as a result of (i) the additional discretionary bonus paid outside the CBP described above, (ii) for the CEO and the Vice Chairman, the vesting of restricted stock units granted in 2003 (see "Stock Option Exercises and Restricted Stock Vesting" table below) and (iii) for the Senior Executive Vice President, Applications Services, the two retention payments made in 2006 related to EDS' acquisition of The Feld Group.

Report of the Compensation and Benefits Committee

The Compensation and Benefits Committee reviewed and discussed with management of EDS the foregoing Compensation Discussion and Analysis. Based on such review and discussion, the Compensation and Benefits Committee has recommended to the Board of Directors that the Compensation Discussion and Analysis be included in this proxy statement and in EDS' Annual Report on Form 10-K for the year ended December 31, 2006.

Compensation and Benefits Committee
Ellen M. Hancock, Chair
Martin C. Faga
James K. Sims
R. David Yost

Notwithstanding any statement in any of our filings with the SEC that might incorporate part or all of any future filings with the SEC by reference, including this Proxy Statement, the foregoing Report of the Compensation and Benefits Committee is not incorporated by reference into any such filings.

Summary Compensation Table

The following table sets forth information with respect to the compensation for 2006 of our Chief Executive Officer, each individual who served as Chief Financial Officer during 2006, our three other most highly compensated executive officers as of the end of 2006, and one former executive officer (the "named executive officers").

Name and Principal Position (a)	Year	Salary ($)	Bonus ($) (b)	Stock Awards ($) (c)	Option Awards ($) (d)	Non-Equity Incentive Plan Compensation ($) (e)	Change in Pension Value & Nonqualified Deferred Compensation Earnings ($) (f)	All Other Compensation ($) (g)	Total ($)
Michael H. Jordan *Chairman and CEO*	2006	$1,000,000	$572,000	$3,215,263	$6,770,495	$1,428,000	$365,428	$288,525	$13,639,711
Jeffrey M. Heller *Vice Chairman*	2006	850,000	87,350	1,205,791	2,190,061	1,112,650	0	46,767	5,492,619
Ronald A. Rittenmeyer *President and Chief Operating Officer*	2006	770,833	310,000	1,373,374	1,169,566	1,190,000	451,274	134,480	5,399,527
Charles S. Feld *Senior Executive Vice President, Applications Services*	2006	727,083	538,337	1,724,120	1,988,542	834,488	478,392	10,800	6,301,762
Ronald P. Vargo *Executive Vice President and Chief Financial Officer*	2006	390,833	263,250	460,649	122,392	386,750	77,632	35,031	1,736,537
Thomas A. Haubenstricker *Vice President and Former Interim Co-Chief Financial Officer*	2006	305,000	200,000	314,691	227,827	225,000	82,350	2,900	1,357,768
Stephen F. Schuckenbrock *Former Co-Chief Operating Officer*	2006	312,500	354,618	1,054,413	1,400,260	0	278,767	3,221,348	6,621,906
Robert H. Swan *Former Executive Vice President and Chief Financial Officer*	2006	135,417	0	-94,955	115,898	0	0	9,035	165,395

(a) Messrs. Vargo and Haubenstricker served as interim co-chief financial officers from March 15, 2006, to August 22, 2006. Mr. Vargo was appointed Executive Vice President and Chief Financial Officer on August 22, 2006. Mr. Swan resigned from EDS effective March 15, 2006, and Mr. Schuckenbrock separated from EDS effective May 31, 2006.

(b) Amounts in this column include the following discretionary bonus payments outside of the Corporate Bonus Plan: Mr. Jordan - $572,000; Mr. Heller - $87,350; Mr. Rittenmeyer - $310,000; Mr. Feld - $65,512; and Mr. Vargo - $63,250.

For Messrs. Vargo and Haubenstricker: Also includes a $200,000 bonus awarded pursuant to agreements with these executives related to their service as interim co-chief financial officers from March 15, 2006, to August 22, 2006, paid one-half in August 2006 and one-half in February 2007.

For Messrs. Feld and Schuckenbrock: Also includes the following retention payments related to EDS' acquisition of The Feld Group: Mr. Feld – two payments of $236,412; and Mr. Schuckenbrock, two payments of $177,309.

(c) Amounts reported reflect the dollar amount recognized for financial statement reporting purposes for the fiscal year ended December 31, 2006, calculated in accordance with SFAS No. 123R. We refer you to the discussion of the assumptions used in such valuation in Note 11 of Notes to Consolidated Financial Statements in our 2006 Form 10-K. Includes P-RSU grants (target award), performance-vesting deferred stock unit grants (target award), and time-vesting restricted stock awards granted in and prior to 2006.

For Mr. Schuckenbrock: Amounts reported include the accelerated vesting of 25,622 restricted shares granted on December 30, 2003, with a grant price of $23.503.

For Mr. Swan: Amounts reported reflect the forfeiture of 33,000 P-RSUs (target award) granted in March 2005 (value forfeited $157,495).

(d) Amounts reported reflect the dollar amount required to be recognized for financial statement reporting purposes in 2006 for stock option awards granted in and prior to 2006 calculated in accordance with SFAS No. 123R (includes $3,740,333 recognized in 2005). We refer you to the discussion of the assumptions used in such valuation in Note 11 of Notes to Consolidated Financial Statements in our 2006 Form 10-K.

For Mr. Schuckenbrock: Amounts reported include the accelerated vesting of 60,714 stock options granted on January 9, 2004, with an exercise price of $23.955 and 50,000 stock options granted on March 24, 2004, with an exercise price of $19.175.

For Mr. Swan: Amounts reported reflect the forfeiture of 100,000 stock options granted in March 2004 (value forfeited $378,583) and 75,000 stock options granted in March 2005 (value forfeited $206,164).

(e) Represents awards paid in February 2007 under the Corporate Bonus Plan for 2006 performance.

(f) Represents the change in pension value under the Retirement Plan, the Restoration Plan and the SERP.

For Mr. Heller: Mr. Heller originally retired from EDS in 2002 and continues to draw monthly benefits. While he is eligible for increased benefit payments as a result of his current employment, it is unlikely his retirement income benefit will increase as a result of his subsequent retirement.

For Mr. Swan: Due to Mr. Swan's resignation on March 15, 2006, he forfeited his retirement benefits. Therefore, the change in his pension value for 2006 was negative $272,573.

(g) Amounts reported include the following executive perquisites, employer 401(k) Plan contributions and, for Mr. Schuckenbrock, payments as a result of his termination of employment:

For Mr. Jordan: $141,971 for personal use of corporate aircraft; $38,569 for reimbursement of financial planning and tax return preparation expenses; $104,585 for a car and driver provided by EDS for ground transportation in the Dallas area (includes driver's salary, vehicle lease cost, fuel expense and other variable costs); and matching award under the 401(k) Plan of $3,400. We estimate the personal use of such car and driver at 25% of total usage; however, the amount reported above reflects 100% of the total cost to EDS.

For Mr. Heller: $36,013 for personal use of corporate aircraft; $7,500 for reimbursement of financial planning and tax return preparation expenses; and matching award under the 401(k) Plan of $3,254.

For Mr. Rittenmeyer: $108,855 for personal use of corporate aircraft; $22,026 for reimbursement of financial planning and tax return preparation expenses; $1,039 for catering related to personal use of a company stadium suite (no other incremental cost is attributable to such use); and matching award under the 401(k) Plan of $2,560.

For Mr. Feld: $7,500 for reimbursement of financial planning and tax return preparation expenses; and matching award under the 401(k) Plan of $3,300.

For Mr. Vargo: $24,898 for personal use of corporate aircraft; $6,833 for reimbursement of financial planning and tax return preparation expenses; and matching award under the 401(k) Plan of $3,300.

For Mr. Haubenstricker: Matching award under the 401(k) Plan of $2,900.

For Mr. Schuckenbrock: $18,251 for personal use of corporate aircraft; matching award under the 401(k) Plan of $1,406; $7,500 for reimbursement of financial planning and tax return preparation expenses; and $1,592 for reimbursement of executive physical expenses. Also includes the following severance payments: two times base salary and target bonus ($3,000,000 total); payment of the 3rd installment of a retention award in connection with EDS' acquisition of The Feld Group ($177,309); continuation of financial counseling for one year ($7,500); and COBRA coverage ($7,790).

For Mr. Swan: $1,875 for reimbursement of financial planning and tax return preparation expenses; matching award under the 401(k) Plan of $3,400; and a commemorative gift upon his resignation from EDS valued at $3,760 (including related tax gross-up).

Valuation of Personal Use of Corporate Aircraft: The value of personal aircraft usage reported above is based on EDS' direct operating cost per flight hour. This methodology calculates incremental cost based on the weighted average cost of fuel, on-board catering, aircraft maintenance, landing fees, trip-related hangar and parking costs, and smaller variable costs. Since the corporate aircraft are used primarily for business travel, the methodology excludes fixed costs which do not change based on usage, such as pilots' and other employees' salaries, purchase costs of the aircraft and non-trip-related hangar expenses. Flight hours for personal aircraft usage reflected in the amounts reported above do not include hours for any related "deadhead" positioning of aircraft. On certain occasions, an executive's spouse or other guest may accompany the executive on a flight. No additional direct operating cost is incurred in such situations. A portion of the incremental costs for personal aircraft usage reported above is not deductible by the company for U.S. federal income tax purposes.

Grants of Plan-Based Awards

Name	Committee Approval Date	Grant Date	Estimated Future Payouts Under Non-Equity Incentive Plan Awards (a)			Estimated Future Payouts Under Equity Incentive Plan Awards (b)			All Other Stock Awards: Number of Shares of Stock or Units (c)	All Other Option Awards: Number of Securities Underlying Options (d)	Exercise Price of Options Awards ($/Share)	Closing Market Price on Grant Date	Grant Date Fair Value of Stock and Option Awards
			Threshold	Target	Maximum	Threshold	Target	Maximum

(a) Amounts shown represent the threshold, target and maximum awards that could be earned by the named executive officer under the CBP for 2006. Funding is based 100% on corporate performance as measured by earnings per share, free cash flow, and revenue. Actual bonuses paid for 2006 are shown in the Summary Compensation Table in the "Non-Equity Incentive Plan Compensation" column.

(b) Represents P-RSUs granted under the Incentive Plan and, for Mr. Rittenmeyer, a performance-vesting DSU award on September 1, 2006, under the EDP. P-RSUs are restricted stock units that vest approximately three years from the date of grant based on EDS' performance as measured by Operating Margin (50% weight), Net Asset Utilization (25% weight), and Organic Revenue Growth (25% weight). The performance period for the 2006 grant is the three-year period commencing on January 1, 2006. Following vesting of any P-RSUs, a participant will be prohibited from selling 50% of the vested shares for 12 months following the vesting date. Dividends or dividend equivalents are not paid or accrued on P-RSUs. The 2006 P-RSU grant minimum vesting for Messrs. Vargo and Haubenstricker is 50% of the target award since neither was an executive officer at the time of grant. For all other named executive officers, the 2006 P-RSU grant minimum vesting is 0% of the target award. Mr. Rittenmeyer's DSU award will vest on September 1, 2009, subject to the achievement of pre-established three-year average productivity yield (50% weight) and organic revenue growth (50% weight) targets. Vesting can range from 0 to 200% of the target award. Dividend equivalents will be credited on the vesting date and will be retroactively calculated as though periodically credited at the same time as on EDS common stock.

(c) *For Mr. Rittenmeyer*: Represents a time-vesting DSU award on September 1, 2006, pursuant to the EDP. The award will vest on September 1, 2009. Dividend equivalents will be credited at the same time dividends are paid on EDS common stock.

For Mr. Feld: Represents a grant of 129,895 time-vesting restricted stock units on December 4, 2006, upon his promotion to Senior Executive Vice President, Applications Services. The award will vest on November 30, 2009. The fair value of the award is $26.945 per stock unit (the fair market value of the EDS common stock on

the grant date). Dividend equivalents will be paid in cash at the same rate and time as dividends are paid on EDS common stock.

For Mr. Vargo: Represents a time-vesting restricted stock unit award granted on September 1, 2006, pursuant to the Incentive Plan upon his appointment as Executive Vice President and Chief Financial Officer. The award will vest in 25% increments on September 4, 2007, September 2, 2008, September 1, 2009, and September 1, 2010. Dividend equivalents will be credited at the same time dividends are paid on EDS common stock.

(d) Stock options were granted pursuant to the Incentive Plan on March 15, 2006, with an exercise price of $27.475, the average of high/low trading prices on the date of grant, which is the "fair market value" of the common stock on such date under the terms of that plan. The closing price of the common stock on that date was $27.50. Stock options vest on February 27, 2009, and have a seven-year term. Stock options issued to executive officers exercised within 12 months of vesting can only be exercised for shares and must be held for 12 months following the exercise date.

Outstanding Equity Awards as of December 31, 2006:

(a) These stock options were exercised on January 30, 2007, at a weighted average exercise price of $26.112 per share.

(b) Amounts shown reflect target P-RSU award levels.

(c) Represents unvested dividend equivalents credited to Mr. Rittenmeyer pursuant to his September 1, 2006, DSU award.

Stock Option Exercises and Restricted Stock Vesting

The following table contains information about stock options exercised by the named executive officers and the vesting of stock awards held by the named executive officers in 2006.

Name	Option Awards		Stock Awards	
	Number of Shares Acquired on Exercise	Value Realized on Exercise	Number of Shares Acquired on Vesting	Value Realized on Vesting
M. H. Jordan[(a)]	40,500	$404,328	150,000	$4,164,000
J.M. Heller	-	-	25,000	684,875
	-	-	50,000	1,388,000
R.A. Rittenmeyer	-	-	-	-
C.S. Feld	-	-	34,163	850,659
	-	-	7,666	185,556
R.P. Vargo	-	-	3,333	82,408
T.A. Haubenstricker[(b)]	30,000	237,414	400	10,958
S.F. Schuckenbrock [(c)]	134,000	812,070	25,622	631,582
R.H. Swan [(d)]	393,000	4,041,804	23,141	593,335

(a) Value based on 40,500 options with an exercise price of $15.58 and exercised at $25.5634.

(b) Value based on 15,000 options with an exercise price of $16.205 and exercised at $25.5822 and 15,000 options with an exercise price of $19.175 and exercised at $25.6254.

(c) Upon Mr. Schuckenbrock's separation, 25,622 restricted shares vested at $24.65. In addition, his 2005 and 2006 target P-RSU awards were prorated based on months of service as follows: 17,945 P-RSUs granted in 2005 were earned upon separation but will vest based on EDS' performance as determined in February 2008; and 8,058 P-RSUs granted in 2006 were earned upon separation but will vest based on EDS' performance as determined in February 2009. Value of stock options is based on 100,000 options with an exercise price of $19.175 and exercised at $25.6008 and 34,000 options with an exercise price of $20.665 and exercised at $25.65.

(d) Includes the following stock options exercised by Mr. Swan following his resignation: (1) 275,000 options granted at $16.205 and exercised at $27.2399; (2) 18,000 options granted at $16.205 and exercised at $27.3237; and (3) 100,000 options granted at $19.175 and exercised at $27.2457.

Pension Benefits

The table below shows the present value of accumulated benefits payable to each named executive officer, including the number of years of service credited, as of October 31, 2006, under each of the Retirement Plan, the Restoration Plan and the SERP determined using the assumptions set forth in Note 13 of the Notes to Consolidated Financial Statements in our 2006 Form 10-K.

Name	Plan Name	Number of Years Credited Service (a)	Present Value of Accumulated Benefit	Payments During Last Fiscal Year
M.H. Jordan	Retirement Plan	3	$107,224	$0
	Restoration Plan	3	886,615	0
	SERP	n/a	n/a	n/a
J.M. Heller (b)	Retirement Plan	37	1,395,717	118,839
	Restoration Plan	37	5,905,055	502,785
	SERP	37	6,459,085	549,955
R.A. Rittenmeyer	Retirement Plan	3	51,940	0
	Restoration Plan	3	197,928	0
	SERP	3	237,079	0
C.S. Feld	Retirement Plan	14	86,873	0
	Restoration Plan	14	401,498	0
	SERP	14	2,410,434	0
R.P. Vargo	Retirement Plan	2	55,826	0
	Restoration Plan	2	95,081	0
	SERP	n/a	n/a	n/a
T.A. Haubenstricker	Retirement Plan	22	214,132	0
	Restoration Plan	22	196,421	0
	SERP	n/a	n/a	n/a
S.F. Schuckenbrock	Retirement Plan	8	56,492	0
	Restoration Plan	8	247,425	0
	SERP	8	433,664	0
R.H. Swan	Retirement Plan	3	0	0
	Restoration Plan	3	0	0
	SERP	3	0	0

(a) Under the terms of his employment agreement, Mr. Rittenmeyer will be awarded an additional one and one-half (1.5) years of credited service (a total of 2.5 years of credited service) under the SERP for each full year of service completed during his first four years of employment, and two (2) additional years of credited service (a total of 3 years credited service) for each full year of employment completed during the following three years. Pursuant to this agreement, his SERP benefit will fully vest on the five-year anniversary of his employment, or earlier if he is involuntarily terminated without cause. These additional years of credited service are used to calculate his SERP benefit if he becomes vested under the plan but are not used to determine vesting. Without the extra service credit in the SERP, Mr. Rittenmeyer would not have an accrued benefit under the SERP (the value of the Retirement and Restoration plan benefit values are not impacted by the extra service grant). In addition, Mr. Swan had been awarded an additional nine years of service for purposes of the SERP that would have become effective for vesting and benefit calculation purposes when he attained age 55. However, because he resigned from EDS prior to the five-year vesting applicable to all retirement plans at that time, he will not receive any retirement benefits from EDS.

(b) Mr. Heller, who originally retired from EDS in 2002, continues to draw monthly benefits from the Retirement Plan, the Restoration Plan, and the SERP of $9,903.25, $41,898.75 and $45,829.60 respectively, all payable as a 75% joint and survivor annuity. While he is eligible for increased benefit payments as a result of his current employment, it is unlikely his retirement income benefit will increase as a result of his subsequent retirement. Mr. Heller's employment agreement provides that his service will not result in a decrease in the retirement benefit he had been entitled to receive at the time he rejoined the company.

Benefits under the Retirement Plan provide for accruals, which are expressed as monthly credits added to participants' "personal pension accounts," or PPA. The Restoration Plan provides for a supplemental benefit to employees equal to the amount they would have received under the Retirement Plan if compensation and annual accruals were not limited under the Internal Revenue Code. Under the Restoration Plan, EDS maintains a "restoration account," or RA, reflecting benefit and interest credits made on behalf of a participant. Monthly credits are based on a participant's credited years of service together with age, divided by 12. The resulting quotient is the monthly allocation percentage, which is multiplied by the participant's monthly earnings to determine the monthly amount credited to the PPA and RA. Participants receive additional credits (i) if annual compensation exceeded $94,200 (Social Security wage base) and (ii) generally if the participant was hired or rehired by EDS after age 35.

The annual benefit payable under the SERP for normal retirement will generally equal (i) 55% of the average of the participant's total compensation (based on the highest five consecutive years within the last 10 years of employment) less (ii) the maximum covered compensation offset allowance, then prorated downward for service less than 30 years and reduced for commencement date beginning prior to age 62. The resulting benefit is then offset by any benefit accrued under the Retirement Plan and the Restoration Plan. The normal form of payment under the SERP is a single life annuity but the plan provides several actuarial equivalent forms of payment.

The final average compensation as defined under the SERP for the highest five consecutive years over the last 10-year period was as follows: Mr. Rittenmeyer, $1,343,750; Mr. Feld, $1,093,118; and Mr. Schuckenbrock, $1,160,186. Messrs. Jordan, Vargo and Haubenstricker do not participate in the SERP but do participate in the Retirement Plan and the Restoration Plan. Compensation under the retirement plans refers to total annual cash compensation plus any contributions to the EDS 401(k) Plan and EDS Flexible Benefits Plan, but excludes stock-based compensation under the Incentive Plan (except stock options granted in 2003 under the annual bonus plan and subsequently exercised) and extraordinary compensation (such as moving allowances and retention bonuses). For the Retirement Plan, compensation is limited to $220,000 for 2006 by the Internal Revenue Code.

Calculations are based on the 1994 group annuity mortality table, a 6% annual discount rate and 5.50% interest crediting rate. Mr. Jordan's calculations assume that he is currently eligible to retire. Mr. Rittenmeyer's calculations assume an age 64 plus one month retirement, which is the age he is eligible for unreduced benefits. Messrs. Vargo and Haubenstricker's calculations are based on an age 65 retirement assumption. Although Mr. Schuckenbrock is no longer employed by EDS, he remains eligible to receive unreduced benefits at age 62.

Mr. Feld is eligible for an early retirement benefit from the Retirement Plan, the Restoration Plan, and the SERP. Had he retired January 1, 2007, Mr. Feld's annual retirement benefits (paid for his life only without cost of living adjustment) would have been $8,490 from the Retirement Plan, $41,201 from the Restoration Plan and $221,460 from the SERP. Employees are eligible for early retirement if they are age 55, have five years of service, and their age plus service is greater than or equal to 70. Benefits under the Retirement and Restoration plans are determined based on the participant's cash balance converted to an annuity. SERP benefits are based on average pay, the maximum covered compensation offset allowance and service at retirement, offset by Retirement and Restoration Plan benefits. SERP benefits are unreduced at age 62.

Non-Qualified Deferred Compensation

Under the EDP, named executive officers may defer up to 50% of base salary and 100% of any bonus in 1% increments. The executive must decide to defer in the year prior to the year in which the compensation is payable. Executives can allocate their account balance between two recordkeeping accounts. The fixed income account provides a rate of interest equal to the return on 30-year U.S. treasury securities in effect as of the first business day in September of the prior year plus 50 basis points. The other account is deferred stock units under which executives do not have voting rights but receive dividend equivalents in the form of additional deferred stock units. The plan also provides a 401(k) make-up contribution in the form of additional deferred stock units. We provide a 1.5% match on the amount of compensation that exceeds the federal compensation limits on the 401(k) plan ($220,000 for 2006) if the executive defers an amount in deferred stock units under the EDP at least equal to the matching contribution. For 2006, Mr. Vargo was the only named executive officer to receive the 401(k) make-up contribution.

The following table summarizes contributions, earnings and withdrawals/distributions in 2006 for the EDP and the aggregate account balance as of December 31, 2006, for each named executive officer.

Name	Executive Contributions in 2006	Registrant Contributions in 2006	Aggregate Earnings in 2006	Aggregate Withdrawals/ Distributions	Aggregate Balance at 12/31/2006
M.H. Jordan	$0	$0	$24,448	$0	$185,122
J.M. Heller (a)	0	0	267,115	1,079,507	1,687,018
R.A. Rittenmeyer (b)	0	7,258,500	1,007,555	0	8,270,774
C.S. Feld	0	0	22,217	0	168,233
R.P. Vargo (c)	19,542	8,343	3,133	0	44,736
T.A. Haubenstricker	0	0	19,857	0	150,361
S.F. Schuckenbrock	0	0	1,902	15,974	0
R.H. Swan (d)	0	0	475,834	691,446	3,004,903

(a) Mr. Heller retired in 2002 and was rehired in 2003. As a result, he has two EDP accounts. The account balances are as follows: active account balance of $494,237 and account balance in payout status of $1,192,691.

(b) Represents the value of Time-vesting DSUs (150,000 units) and Performance DSUs (150,000 target DSUs) granted to Mr. Rittenmeyer on September 1, 2006. This award is also shown in the Grants of Plan-Based Awards table above.

(c) Represents base salary deferred by Mr. Vargo during 2006 and matching contributions by EDS. The amount contributed by Mr. Vargo is also reported as compensation in the Summary Compensation Table.

(d) Represents the unvested portion of Mr. Swan's account forfeited upon his resignation on March 15, 2006.

Agreements Related to Potential Payments Upon Termination of Employment

We have entered into Executive Severance Benefit Agreements ("Severance Agreements") and other agreements with the named executive officers providing for the payment of amounts and/or vesting of equity-based awards in connection with a termination of their employment upon specified events. We have also entered into Change-of–Control Employment Agreements ("CoC Agreements") with each named executive officer, other than Mr. Haubenstricker, providing for the payment of amounts and vesting of equity-based awards in connection with a termination of their employment upon specified events following a change of control of EDS (as such term is defined below). A description of these agreements is set forth below. If an executive would be entitled to receive benefits under a Severance Agreement or CoC Agreement following a termination of employment, the executive may elect to receive benefits under either agreement but not both.

Severance and Other Agreements

Severance Agreements with Messrs. Rittenmeyer, Feld and Vargo. Under the terms of these agreements, if the executive is involuntarily terminated without cause or resigns for good reason on or before December 31, 2010, he would be entitled to receive a payment equal to two times the sum of his final annual base salary and annual bonus target for the year in which the termination occurred. In addition, a prorated portion (based on the number of months elapsed through the performance period) of any unvested P-RSUs awarded to the executive on or after January 1, 2005, would vest on the scheduled vesting date, as provided in the P-RSU grant agreement, and be subject to the restrictions on sale or transfer specified in the grant agreement. A prorated portion (based on the number of months elapsed through the vesting period) of any restricted stock units and stock options awarded to the executive after January 1, 2005 (other than the options awarded to Mr. Rittenmeyer when he joined EDS, which will immediately vest and be exercisable for one year from the date of termination, the restricted stock units granted to Mr. Vargo in January 2004 and September 2006, the restricted stock units granted to Mr. Feld in December 2006, which will immediately vest on the date of termination, and the DSUs awarded to Mr. Rittenmeyer in September 2006, the disposition of which would be governed by that award agreement) that remain unvested on the date of termination shall immediately vest, be free of any restrictions on sale or transfer and, with regard to stock options, be exercisable for one year from the date of termination. All other then unvested equity-based awards granted prior to 2005 will immediately vest, be free of any restrictions on sale or transfer and, with regard to stock options, be exercisable for one year from the date of termination (other than options awarded to Mr. Feld as part of EDS' acquisition of The

Feld Group, which would be exercisable for the period provided for in that award agreement). These agreements also provide for the payment of $7,500 as equivalent to the annual amount for financial planning/counseling services currently provided to the executive and a payment equal to the estimated cost of 18 months of health care premiums.

In addition, with respect to Mr. Rittenmeyer, if he is involuntarily terminated without cause or resigns for good reason prior to his five-year anniversary of employment (excluding an involuntary termination following a change of control), his SERP benefit will immediately vest but will be limited to 99% of his then current base salary plus annual target bonus. Mr. Rittenmeyer is provided an enhanced benefit under the SERP described under "Pension Benefits" above.

For purposes of these Severance Agreements, "good reason" means a reduction in the executive's base salary or annual target bonus (other than a reduction in which he is treated no less favorably than similarly situated executives). "Cause" means the executive has: (a) been convicted of, or pleaded guilty to, a felony involving theft or moral turpitude; (b) willfully and materially failed to follow EDS' lawful and appropriate policies, directives or orders applicable to employees holding comparable positions that resulted in significant harm to EDS; (c) willfully and intentionally destroyed or stolen EDS property or falsified EDS documents; (d) willfully and materially violated the EDS Code of Business Conduct that resulted in significant harm to EDS; or (e) engaged in conduct that constitutes willful gross neglect with respect to employment duties that resulted in significant harm to EDS.

Employment Agreements with Messrs. Jordan and Heller. Under the terms of our employment agreements with each of Mr. Jordan and Mr. Heller, if we terminate the executive's employment without cause, or if he voluntarily terminates his employment after Mr. Jordan's replacement as CEO is appointed or the executive becomes subject to total disability or dies, the executive would be entitled to a payment equal to the pro rata portion (through his termination date) of any bonus payable under the CBP if and when payment is made to other executives. For purposes of these agreements, "cause" has the same meaning as in the Severance Agreements described above.

Employment Agreement with Mr. Feld. Mr. Feld joined EDS in connection with the acquisition of The Feld Group in January 2004. Under the terms of our employment agreement with Mr. Feld, he was entitled to receive a retention payment of $709,237, two-thirds of which has already been paid and the remaining one-third of which is to be paid when the closing trading price of EDS common stock exceeds $28.3808, contingent on his remaining employed at that time (unless his employment is terminated by us without cause or by him for good reason or due to death or disability). In connection with that acquisition, Mr. Feld received 113,875 shares of restricted common stock and options to purchase 269,838 shares of common stock with an exercise price of $23.96 per share. The restricted stock vested 40% on January 9, 2005, 30% on January 9, 2006, and 30% on January 9, 2007. The options had a five-year term and vested 8% on January 9, 2004, 32% on January 9, 2005, 30% on January 9, 2006, and 30% on January 9, 2007. If his employment is terminated for any reason other than termination by us without cause, termination by him for good reason or his death or disability, then he will forfeit all restricted stock and options that have not yet vested as of the date of termination. If his employment is terminated by us without cause, or by him for good reason, any then unvested restricted stock or options will immediately vest.

Change of Control Employment Agreements

Pursuant to the CoC Agreement with each named executive officer, in the event of the occurrence of a "change of control" of EDS, the executive's employment will be continued for a period of two years and, in the case of Messrs. Jordan, Heller and Rittenmeyer, all then unvested equity-based awards would immediately vest (with P-RSUs and DSUs vesting at the targeted amount), be free of any restrictions on sale or transfer and, with respect to stock options, be exercisable for one year. Throughout the two-year employment period, the executive will continue to receive at least the same base salary and target bonus he was receiving immediately prior to the change of control and will remain eligible to participate in all incentive and benefit plans generally available to peer executives until the end of the employment period. If during the employment period the executive's employment is terminated other than for "cause" or disability, or by the executive for "good reason," he would receive his unpaid salary through the date of termination and a lump sum payment equal to 2.99 times the sum of his final annual base salary and annual performance bonus target for the year in which he is terminated. In addition (except for Messrs. Jordan, Heller and Rittenmeyer, whose equity-based awards will have vested at the time of the change of control as noted above), all equity-based awards held by the executive on the date of termination will vest (with P-RSUs vesting at the targeted amount), be free of any restrictions on sale or transfer and, with regard to stock options, be exercisable for one year from the date of termination (other than those awarded to Mr. Feld as part of EDS' acquisition of The Feld Group, which would be exercisable for the period provided for in the award). If the executive's employment is terminated for cause or he voluntarily terminates his employment other than for good reason during the employment period, he

will receive all accrued but unpaid salary through the date of termination and be entitled to no other severance under the CoC Agreement. If any payment under the CoC Agreement is subject to federal excise taxes imposed on excess parachute payments, the executive will receive an additional amount to cover any such tax payable by him as well as a gross-up payment on all taxes due. The CoC Agreements have a termination date of December 31, 2010.

For purposes of the CoC Agreements, a "change of control" of EDS includes the following: (i) any person, other than exempt persons, becomes a beneficial owner of more than 50% of EDS' voting stock; (ii) a change in a majority of the Board of Directors, unless approved by a majority of the incumbent board members; or (iii) consummation of a reorganization, merger or sale of all or substantially all of EDS' assets, unless following the transaction (x) the EDS shareholders prior to the transaction own more than 50% of the common stock and voting stock of the resulting entity, (y) no person owns 40% or more of the common stock or voting stock of the resulting entity and (z) at least a majority of the board of the resulting entity were members of the EDS Board prior to the transaction. "Good Reason" means: (i) a reduction in the executive's base salary or annual target bonus opportunity; (ii) requiring the executive to be based at a location more than 50 miles from his principal work location preceding the change of control; or (iii) a reduction in the executive's title, position, authority, duties or responsibilities inconsistent with his role prior to the change of control. "Cause" shall have the same meaning as in the Severance Agreements described above.

Potential Payments Upon Termination or Change of Control

The following table sets forth the payments required to be made to each named executive officer in connection with the termination of their employment upon specified events assuming a $27.55 per share price for our common stock (the closing price on December 29, 2006). The amounts shown also assume that the termination was effective December 31, 2006, and thus include amounts earned through such time and are estimates of the amounts which would be paid out to the executives upon their termination. The actual amounts paid can only be determined at the time of the termination of the executive's employment.

Executive Benefits and Payments Upon Termination	Voluntary Termination (a)	Involuntary Not for Cause Termination (non-Change of Control) (a)(b)	For Cause Termination	Involuntary or Good Reason Termination (Change of Control)	Death or Disability (c)
Base Salary and Target Bonus

(a) *For Mr. Jordan.*

Assumes for purposes of his 2004 stock option agreements that a successor CEO has been named and he voluntarily terminates his employment/retires or involuntarily separates, in which event such options will immediately vest, be free of any restrictions on sale and be exercisable for the remaining term. If a successor

CEO has not been named and Mr. Jordan voluntarily terminates his employment, then such options are forfeited.

Assumes for purposes of his 2005 equity agreements that a successor CEO has been named and he voluntarily terminates his employment/retires or involuntarily separates with Board consent, in which event his 2005 P-RSU target award will be earned (with vesting based on actual results during the performance period) and his 2005 stock option award will immediately vest, with one-third exercisable on the vesting date and one-third exercisable on the one- and two-year anniversaries thereof. If a successor CEO has not been named and Mr. Jordan voluntarily terminates his employment/retires or involuntarily separates with Board consent, a prorated portion of his 2005 P-RSU target award will be earned (with vesting based on actual results during the performance period) and a prorated portion of his 2005 stock option award will immediately vest, be free of any restrictions on sale, and be exercisable for two years.

Assumes for purposes of his 2006 equity agreements that he voluntarily terminates his employment/retires with Board consent, in which event his 2006 P-RSU target award will be earned (with vesting based on actual results during the performance period), and his 2006 stock option award will vest on the scheduled vesting date and be exercisable for the remaining term. If Mr. Jordan is involuntarily separated, a prorated portion of his 2006 P-RSU target award will be earned (with vesting based on actual results during the performance period) and a prorated portion of his 2006 stock option award will immediately vest, be free of any restrictions on sale, and be exercisable for two years.

For Mr. Heller.

Assumes for purposes of his 2004 stock option agreements that a successor CEO has been named and he voluntarily terminates his employment/retires or involuntarily separates, in which event such options will immediately vest, be free of any restrictions on sale, and be exercisable for the remaining term. If a successor CEO has not been named and Mr. Heller voluntarily terminates his employment, then such options are forfeited.

Assumes for purposes of his 2005 equity agreements that a successor CEO has been named and he voluntarily terminates his employment/retires or involuntarily separates with Board consent, in which event his 2005 P-RSU target award will be earned (with vesting based on actual results during the performance period) and his 2005 stock option award will immediately vest, with one-third exercisable on the vesting date and one-third exercisable on the one- and two-year anniversaries thereof. If a successor CEO has not been named and Mr. Heller voluntarily terminates his employment/retires or involuntarily separates with Board consent, a prorated portion of his 2005 P-RSU target award will be earned (with vesting based on actual results during the performance period) and a prorated portion of his 2005 stock option award will immediately vest, be free of any restrictions on sale, and be exercisable for two years.

Assumes for purposes of his 2006 equity agreements that he voluntarily terminates his employment/retires with Board consent, his 2006 P-RSU target award will be earned (with vesting based on actual results during the performance period) and his 2006 stock option award will vest as scheduled and be exercisable for the remaining term. If He is involuntarily separated, a prorated portion of his 2006 P-RSU target award will be earned (with vesting based on actual results during the performance period) and a prorated portion of his 2006 stock option award will immediately vest, be free of any restrictions on sale and be exercisable for two years.

For Mr. Feld.

Assumes that any unvested P-RSU, and/or stock option awards granted to Mr. Feld in 2005 and 2006 will be prorated based on completed months of service and will immediately vest and be free of any restrictions regarding their sale or transfer.

(b) For Mr. Rittenmeyer.

Assumes that, under the terms of his 2006 DSU award agreements, his 2006 DSU awards will be forfeited if he voluntarily terminates his employment prior to vesting, other than for good reason or for any reason prior to the six-month anniversary of a new CEO, other than Mr. Rittenmeyer, being hired. If he voluntarily terminates his employment for good reason or six months after a new CEO is hired, his 2006 time-vesting DSUs will immediately vest (value of $4,132,500 based on the closing price of the common stock on December 31, 2006). If he voluntarily terminates his employment for good reason or six months after a new CEO is hired, his 2006 performance DSUs will immediately be earned based on actual EDS results during a portion of the performance period. The earned/vested portion of DSU awards will be distributed in shares of common stock on the later to occur of (i) January 31 in the year following the date of his separation or (ii) the first day of the month

following six completed calendar months after the date of such separation. All other unvested equity awards are forfeited upon voluntary termination.

Incremental non-qualified pension value shown represents value of additional years of credited service under SERP as of December 31, 2006, pursuant to the agreement with Mr. Rittenmeyer described in note (a) under "Pension Benefits" above. If Mr. Rittenmeyer is involuntarily terminated without cause or resigns for good reason prior to the five-year anniversary of his employment (excluding an involuntary termination following a change of control), his SERP benefit will immediately vest but will be limited to 99% of his then current base salary plus annual target bonus.

For Mr. Feld.

Base salary and target bonus amounts include $236,412 for the third installment of Mr. Feld's retention award related to EDS' acquisition of The Feld Group.

For Mr. Haubenstricker.

Pursuant to the EDS Severance Program, in the event of involuntarily separation he would be entitled to a payment equal to two weeks of base salary for each year of service, not to exceed a total of 20 weeks and a payment equal to one month of COBRA benefits.

(c) *For Mr. Jordan:*

Reflects immediate vesting of his 2004 equity awards and a prorated vesting of his 2005/2006 P-RSU target awards and stock option awards.

For Mr. Heller:

Assumes immediate vesting of his 2004 equity awards and a prorated vesting of his 2005/2006 P-RSU target awards and stock option awards.

For Mr. Rittenmeyer:

Reflects prorated vesting of DSUs and RSUs, performance DSUs and P-RSUs, and stock options. Pursuant to the terms of his time-vesting and performance DSUs, a minimum of 50% of the target award is assumed vested.

For Mr. Feld:

Base salary and target bonus amounts include $236,412 for the third installment of Mr. Feld's retention award related to EDS' acquisition of The Feld Group.

Assumes that any unvested DSU, RSU and/or stock option awards granted as part of the acquisition of The Feld Group will immediately vest and be free of any restrictions regarding their sale or transfer.

Assumes that any unvested DSU, RSU, P-RSU, and/or stock option awards granted that are not part of the acquisition of The Feld Group will be prorated based on completed months of service and will immediately vest and be free of any restrictions regarding their sale or transfer.

For Mr. Vargo:

Base salary and target bonus amounts include $100,000 for the second installment of a special cash retention award related to his appointment as interim co-chief financial officer.

Reflects immediate vesting of RSU and stock option awards and prorated vesting of P-RSUs and DSUs.

For Mr. Haubenstricker:

Base salary and target bonus amounts include $100,000 for the second installment of a special cash retention award related to his appointment as interim co-chief financial officer.

Reflects immediate vesting of RSU and stock option awards and prorated vesting of P-RSUs and DSUs.

Related Party Transactions

Related Party Transaction Approval Policy

The Board recognizes that related party transactions can present conflicts of interest and questions as to whether the transactions are in the best interest of EDS. Accordingly, effective as of January 1, 2007, the Board amended the Corporate Governance Guidelines to incorporate a policy and procedures for the review, approval and ratification of such transactions. For purposes of this policy, a "related party transaction" is a transaction or relationship involving a director, executive officer or 5% shareholder or their immediate family members that is reportable under the SEC's rules regarding such transactions.

Under this policy, a related party transaction should be approved or ratified based upon a determination that the transaction is in, or not opposed to, the best interest of EDS. The policy provides for the Governance Committee to review and approve a transaction involving a director, the CEO or 5% shareholder, and for the CEO to review and approve a transaction involving any executive officer (other than the CEO and any executive who is also a director). Notice of a decision by the CEO to approve a related party transaction should be sent to the Governance Committee prior to finalizing the transaction, which may seek more information or call a meeting to review the transaction in greater detail. If a director or executive officer becomes aware of a transaction that should have been but was not approved in advance under this policy, he or she should report the transaction to whomever would have approved the transaction had it been submitted for advance approval. If the transaction is ongoing and revocable, it should be reviewed to determine whether ratification or other action should be taken. If the transaction is completed and not revocable, it should be evaluated to determine if any mitigation or other action should be taken.

The employment of an immediate family member of an executive officer (other than the CEO) does not need to be reported to the Governance Committee prior to approval unless the employee is "pay-banded" under EDS' compensation structure or his or her compensation is reasonably expected to exceed $200,000 per year. In all other circumstances, the hiring should be approved in accordance with the process described above.

Management is expected to report to the Governance Committee any transaction with a related party that is not covered by this policy because it is not reportable under the SEC rules or that involves employment of an immediate family member not reported to the Governance Committee in advance as described above.

Certain Relationships and Related Party Transactions

In 2005 we retained Navigator Systems, Inc. to provide staff augmentation services related to our development of a Business Intelligence team to support our corporate metrics, analytics and dashboards initiatives. This engagement, which was entered into prior to the adoption of the related party transaction approval policy described above, followed a competitive bid process conducted by our purchasing organization. The project was expanded to include our ExcellerateHRO business in 2006. Jon Feld, a son of Senior Executive Vice President Charles Feld, is a co-founder, director, Chief Executive Officer and approximately 20% shareholder of Navigator. In February 2006, substantially all of the business and assets of Navigator were sold to Hitachi Consulting Corporation. Following that transaction, Jon Feld became a Vice President of Hitachi Consulting and, in his capacity as a shareholder of Navigator, will have an economic interest through 2007 in revenues of Hitachi Consulting attributable to the former Navigator business. In 2006, we retained Hitachi Consulting for services related to the strategy and planning of a new and expanded knowledge management program following a competitive bid process. We paid or will pay Navigator and Hitachi Consulting approximately $506,125 and $7,070,062, respectively, in respect of services provided in 2006 and expect to pay additional amounts to Hitachi Consulting in 2007.

Senior Executive Vice President Charles Feld's son, Kenny Feld, is an employee of EDS. Kenny Feld and Charles Feld joined EDS in connection with our purchase of The Feld Group in January 2004. Kenny Feld received a salary of $300,000 in 2006 and a bonus of $160,700 in respect of 2006 performance. He was awarded 8,000 PRSUs in connection with our 2006 long-term incentive grant. Charles Feld disclaims any interest in his son's compensation.

President and Chief Operating Officer Ronald Rittenmeyer's son, Chris Rittenmeyer, has been employed by EDS since 2001, prior to Ronald Rittenmeyer's joining the company in July 2005. Chris Rittenmeyer received a salary of $125,000 in 2006 and a bonus of $47,600 in respect of 2006 performance. Ronald Rittenmeyer disclaims any interest in his son's compensation.

Table of Contents – 2006 Annual Report ///

2006 Annual Report

This Annual Report contains an overview of our business and information regarding our operations during 2006 and other information that our shareholders may find useful.

BUSINESS

Overview

Electronic Data Systems Corporation, or EDS, is a leading global technology services company that delivers business solutions. EDS founded the information technology outsourcing industry more than 40 years ago. Today, we deliver a broad portfolio of information technology and business process outsourcing services to clients in the manufacturing, financial services, healthcare, communications, energy, transportation, and consumer and retail industries and to governments around the world.

As of January 31, 2007, EDS and its subsidiaries employed approximately 131,000 persons in the United States and 63 other countries around the world. Our principal executive offices are located at 5400 Legacy Drive, Plano, Texas 75024, telephone number: (972) 604-6000.

We make available free of charge on our Web site at *www.eds.com/investor* our Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and all amendments to those reports as soon as reasonably practicable after such material is electronically filed with the Securities and Exchange Commission, or SEC. We also make available on our Web site other reports filed with, or furnished to, the SEC under the Securities Exchange Act of 1934, including our proxy statements and reports filed by officers and directors under Section 16(a) of that Act. We do not intend for information contained on our Web site to be part of our Form 10-K or this Annual Report.

EDS Services

Infrastructure Services. EDS Infrastructure Services delivers hosting, workplace (desktop), storage, security and privacy, and communications services that enable clients to drive down their total cost of ownership and increase the productivity of their information technology (IT) environment across the globe. Infrastructure Services include:

- *Data Center Services.* EDS Data Center Services address the business and technology needs of our clients for hosting and storage services. These services establish the client's infrastructure using a set of highly modular, standard components that can be provisioned quickly and easily, serving as the integrated base platform to support business processes and applications. Data Center Services is composed of 6 principal offerings:
  - *Managed Server.* This service delivers secure midrange hosting within an EDS or client data center. EDS provides high-valued managed services by leveraging standardization, increased automation and virtualization. Services are provided in a fixed rate or a variable rate utility model.
  - *Enterprise Application Hosting Services.* EDS' Application Hosting Services provides data center services including managed servers, storage, network and support for mission-critical, packaged enterprise applications. This service extends EDS' full continuum of application support, providing our clients' application infrastructure and enabling security, privacy, and compliancy.
  - *Web Hosting Services.* This service includes the operational management and infrastructure for Web-enabled environments including managed servers, storage, network, and support. EDS Web Hosting Services offers clients base and uplift services provided in EDS leveraged data centers as well as in client data centers.
  - *Managed Mainframe.* These services include migration to a leveraged EDS service management center with processing environments for dedicated or shared logical partitions. Higher value services include the z/OS platform which provides the client standardization and increased automation in a utility model.
  - *Data Center Modernization.* These transformational services rationalize, consolidate, automate and virtualize the client's IT infrastructure and applications environment for reduced cost, increased quality of service and greater flexibility.

- *Storage Management Services.* We provide a fully managed suite of enterprise-wide services for storage management, information protection (backup and recovery) and information optimization (archival services) from the data center to the desktop.

- *EDS Workplace Services.* EDS Workplace Services delivers expert management and support of the end user's work environment from the software applications that support the client's business practices to the supporting network communications infrastructure. Workplace Services include:
  - *Workplace Management Services.* We offer comprehensive management of a client's total desktop environment, from acquisition to retirement, including infrastructure technology, software and support for all end user devices.
  - *Mobile Workplace Services*. EDS Mobile Workplace Services provide an end-to-end managed mobility solution that delivers voice and enterprise data regardless of a user's locality, device, network or application.
  - *Workplace Messaging and Collaboration Services*. Messaging solutions provide mailbox service as a base service to users through a hosted, locally or remotely managed messaging system. This service includes Antivirus and Security, and also includes migrating to more current releases and/or consolidating e-mail systems. Collaboration Services secure Instant Messaging and virtual team workspace to enable an organization to improve collaboration.
  - *Workplace Support Services*. EDS' Workplace Support Services provide a single point of contact for resolving IT issues in the desktop environment. Service Desk services may be accessed by various channels including telephone, the Web, e-mail and facsimile. Site support is provided for local, on-site technical assistance and troubleshooting when incidents cannot be resolved using remote diagnostic tools or through Service Desk support.

- *Security and Privacy Services.* We offer defined security, privacy and business continuity features embedded at the onset in every EDS offering. These features are the people, tools, processes and controls used by EDS across all portfolio offerings to meet clients' expectations and industry-specific standards and regulations for security, privacy, business continuity management and risk management.

- *EDS Networking Services*. EDS Networking Services help organizations manage the growing complexities of aligning their communications and network needs with their overall IT outsourcing strategies. Our capabilities include a global managed services environment targeting a joint compute/network space. This allows our clients to control the risk curve associated with transformation as we use the full breadth of service management to move them to a utility core.
  - *Network Management Services.* EDS' Network Management Services delivers scalable solutions, from design and deployment to monitoring and management, to simplify network operations and improve network performance. Our Enterprise Networking Services provide the management of multi-carrier wide area networks.
  - *IP Communications Services.* Our solutions enable secure, integrated enterprise-wide convergence of voice, data and communications applications and reduce the complexity of enterprise communications. Services include project management, site assessment, engineering, call plan development, migration planning, implementation to operation, asset and operating system management, hardware and software upgrades and ongoing support services with focus on device management.
  - *EDS Global Services Network.* This managed, end-to-end connection links EDS facilities to each other or to client sites and helps us deliver services reliably and securely to clients. The Global Services Network includes the local network within each EDS facility, the mesh of circuits connecting these facilities and the point where EDS assets interconnect with a carrier partner for final delivery to the client site.

Applications Services. EDS Applications Services helps organizations plan, develop, integrate and manage custom applications, packaged software and industry-specific solutions. We offer applications development and management services on an outsourced or project basis. Services range from outsourcing of all applications development and systems integration to the management and implementation of EDS-owned or third-party industry applications. Benefits to clients for these services can include reduced costs, extended value of technology investments, information sharing and enhanced ability to adapt to market changes. Our Applications Services include the following:

- *Applications Development Services.* We create new applications, providing full lifecycle support through delivery. We define the application requirements, analyze application characteristics, implement to a production environment and monitor performance for a warranted time. Services include custom application development, application testing, mobile applications, workforce enhancement, and enterprise application integration.

- *Application Management Services.* We offer outsourcing support for specific applications or entire applications portfolios, both custom and packaged, including services for enterprise applications and support for SAP®, Oracle® and PeopleSoft® software. We assess the specified applications, plan the transition and provide ongoing management to improve client productivity and operating efficiency. We also provide applications rationalization, content management integration and legacy application migration services.

- *Integrated Applications Services.* We engineer offerings such as Business Intelligence Services, Portals and Dashboards Services, Web Services and Enterprise Applications Integration Services to support the overall integration of the client's architecture or our own Agile Application Architecture. These services integrate and extend existing packaged and legacy applications.
- *Industry-Specific Application Solutions.* These solutions are designed to support industry-specific needs. Our industry solutions span eight vertical industry segments: communications, energy, financial, government, healthcare, manufacturing, retail and transportation.

Applications Services offerings and capabilities are available via the EDS Global Delivery Model, including the EDS Best Shore[SM] delivery approach which offers clients the ability to develop and manage applications in one or more of our Solution Centres strategically located in cost-effective countries. The delivery of our services offers a lifecycle approach to on-shore, near-shore and offshore applications development and management with globally integrated, consistent work processes and tools and project-sharing at multiple facilities on a 24 hours a day, seven days a week basis.

Business Process Outsourcing Services. Business Process Outsourcing (BPO) services help clients to achieve economies of scale and improve business performance. By leveraging a shared-services operating model, clients can reduce operational risk and control costs while improving control effectiveness and standardization.

Enterprise Services are or will be sold across multiple industries and include Customer Relationship Management (CRM), Human Resources (HR), and Finance and Accounting services. For each of these services, EDS manages all components from technology, administration and customer service to business intelligence and third-party relationships. Our integrated solutions combine best-practice business processes, leading technologies and experienced professionals along with skilled domain partners.

EDS also delivers industry-specific offerings and provides industry experts to assist clients in key process improvement redesign. One example is our suite of Government BPO Services. For more than 40 years EDS has provided Medicare and Medicaid claims processing to the U.S. federal and state governments helping to lower program costs while increasing efficiency and performance. EDS' offerings to governments also include fiscal agent services; decision support services; fraud, waste and abuse protection services; integrated pharmacy services; Health Insurance Portability and Accountability Act (HIPAA) compliance services; immunization registry and tracking services; and case management services. We also offer Internet-based enrollment and eligibility inquiry capabilities. Other industries supported by our industry-specific BPO offerings include financial services, manufacturing, healthcare, transportation, communications, energy and consumer/retail.

Many BPO services are supported by our reusable, multi-client utility platform. This platform is comprised of key components of the BPO portfolio, including CRM and call center services; financial process services such as credit services and insurance services, payment and settlement, card processing and billing and clearing transactions and content management services.

ExcellerateHRO LLP, our 85% owned joint venture with Towers Perrin, offers a comprehensive set of HR outsourcing solutions on a global basis across the core areas of benefits administration, compensation administration, payroll, recruitment and staffing, relocation, work force administration and work force development.

EDS Agile Enterprise

A key component of our multi-year operating plan is the development of the EDS Agile Enterprise technology platform, a network-based utility architecture intended to create a more flexible, open and cost-effective technology foundation for the delivery of a significant portion of our infrastructure outsourcing, applications, and BPO services. As part of this strategy, we have established alliance relationships with a number of leading technology companies to develop the Agile Enterprise technology platform. We refer to this "federation" of technology companies as the EDS Agility Alliance. In addition to the development of the Agile Enterprise Platform, we are integrating our alliance members' products and services into the EDS portfolio. We also jointly go to market by engaging in operational business planning and other initiatives related to new and existing clients with Agility Alliance members and others. See "Risk Factors" below for a discussion of certain risks relating to our multi-year operating plan.

TRADING PRICES OF COMMON STOCK AND RELATED SHAREHOLDER MATTERS

Our common stock is listed on the New York Stock Exchange (the "NYSE") under the symbol "EDS." The table below shows the range of reported per share sales prices on the NYSE Composite Tape for the common stock for the periods indicated.

Calendar Year	High	Low
2005		
First Quarter	$ 23.35	$ 19.59
Second Quarter	21.11	18.59
Third Quarter	23.95	19.00
Fourth Quarter	24.82	21.16
2006		
First Quarter	$ 28.09	$ 23.83
Second Quarter	27.86	23.31
Third Quarter	24.59	22.42
Fourth Quarter	27.93	23.80

The last reported sale price of the common stock on the NYSE on February 21, 2007 was $29.32 per share. As of that date, there were approximately 103,531 record holders of common stock.

We declared quarterly dividends on our common stock at the rate of $0.05 per share in 2005 and 2006.

The following graph compares the cumulative total shareholder return on EDS Common Stock, including reinvestment of dividends, for the last five fiscal years with the cumulative total return of the Standard & Poor's 500 Stock Index and the Goldman Sachs Technology Services Index assuming an investment of $100 on January 1, 2002. **This graph is presented in accordance with SEC requirements. You are cautioned against drawing any conclusions from this information, as past results are not necessarily indicative of future performance. This graph in no way reflects a forecast of future financial performance.**

(1) We adopted a new method of accounting for share-based payments as of January 1, 2005. This change in accounting resulted in the recognition of pre-tax compensation expense of $123 million ($83 million net of tax) and $160 million ($110 million net of tax) for the years ended December 31, 2006 and 2005, respectively.

(2) Operating results for each of the years in the three year period ended December 31, 2004 have been restated to conform to the current presentation to reflect certain activities as discontinued operations during 2005.

(3) We adopted a new method of accounting for revenue recognition on long-term contracts effective January 1, 2003. Amounts for prior years are reported in accordance with our previous method of accounting for revenue recognition. Revenues for the year ended December 31, 2002 were $18,311 million on a comparable pro forma basis as if the aforementioned accounting change had been applied to all contracts at inception. Net income for the year ended December 31, 2002 was $460 million on a comparable pro forma basis as if the aforementioned accounting change had been applied to all contracts at inception.

(4) Other income (expense) includes net investment gains (losses) in the pre-tax amounts of $17 million, $(41) million, $6 million, $6 million and $(119) million for the years ended December 31, 2006, 2005, 2004, 2003 and 2002, respectively.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion should be read in conjunction with the consolidated financial statements and related notes that appear elsewhere in this document.

Overview

We are a leading provider of IT infrastructure, applications development and business process outsourcing services to corporate and government clients around the world. This section provides an overview of the principal factors and events that impacted our 2006 financial results and may impact our future financial results.

Results. We reported revenues of $21.3 billion in 2006, an increase of 8% over 2005 revenues of $19.8 billion. Revenues in 2006 increased 7% on an organic basis which excludes the impact of currency fluctuations, acquisitions and divestitures. Income from continuing operations increased $213 million in 2006 to $499 million compared with $286 million in 2005. Net income increased $320 million in 2006 to $470 million compared with $150 million in 2005.

The improvement in our results in 2006 is primarily due to the success of our initiatives outlined at the beginning of the year to achieve profitable growth through continued focus on cost competitiveness and service quality. Refer to "Results of Operations" below for additional information about our results for 2006, 2005 and 2004.

Investments in Infrastructure and Workforce Alignment. We continued to invest significant amounts in our infrastructure and workforce alignment initiatives in 2006. These investments represented approximately $0.80 per share of expenses during the year ended December 31, 2006, compared to approximately $0.44 per share during the year ended December 31, 2005.

The principal focus of our infrastructure investments in 2006 continued to be the development of our "Agile Enterprise" platform, a network-based utility architecture designed to create a flexible, open and cost-effective technology foundation for the delivery of a significant portion of our IT outsourcing and BPO services, and investments in automation and monitoring tools and products to improve productivity. This initiative includes investments to drive standardization and automation in our service delivery platforms. We migrated certain large clients to our new service delivery platforms in 2006 and expect to migrate additional clients in 2007. Our infrastructure investments also included the build-out of our global services network, which was substantially completed in 2006. Our infrastructure investments represented approximately $0.46 per share of expenses in 2006.

Our workforce alignment investments are focused on increasing our capabilities in lower-cost, Best Shore[SM] geographies, including India, Latin America, Hungary and China. These investments, which were principally comprised of severance payments, reflected the reduction in force of approximately 5,000 employees in higher cost geographies in 2006. We more than doubled the number of employees in Best Shore[SM] locations in 2006 from approximately 14,000 to 32,000 persons, including approximately 18,000 in India. Our Indian workforce includes approximately 13,000 employees of MphasiS Limited ("MphasiS"). We acquired a majority equity interest in MphasiS in June 2006. Our initiatives to increase capabilities in Best Shore[SM] locations also include the transfer of certain internal administrative functions, which are a principal component of our efforts to reduce our selling, general and administrative ("SG&A") expenses as a percentage of revenue while allowing for additional focus on sales resources. Our labor cost management initiatives in 2006 also benefited from increased productivity and our investments in automation and monitoring described above. These investments in workforce alignment represented approximately $0.34 per share of expenses in 2006.

Total Contract Value of New Contract Signings. A significant portion of our revenue is generated by long-term IT services contracts. Accordingly, the total contract value, or TCV, of new business signings is a key metric used by management to monitor new business activity. We refer you to the discussion of our calculation of TCV under the heading "Non-GAAP Financial Measures" below. The TCV of our new contract signings in 2006 was approximately $26.5 billion, compared to approximately $20.1 billion and $14.0 billion in 2005 and 2004, respectively. The increase for 2006 was driven by the $3.6 billion TCV related to our new contract with GM and the $3.9 billion TCV related to the extension of our NMCI contract, each discussed below. It also reflects an increase in "new logos" as a percentage of overall TCV in 2006 compared to 2005. See "2007 Priorities and Expectations" below for our expectations regarding the TCV of new contract signings in 2007.

Following is a quarterly summary of the TCV of contract signings (excluding contracts related to discontinued operations), for each of the last five years (in billions):

	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Year
2002	$ 6.7	$ 5.6	$ 2.6	$ 7.6	$ 22.5
2003	2.6	3.0	3.1	3.9	12.6
2004	3.6	3.8	2.9	3.7	14.0
2005	6.9	2.6	5.3	5.3	20.1
2006	10.0	5.4	3.5	7.6	26.5

The TCV of contract signings can fluctuate significantly from year to year depending on a number of factors, including the number and timing of significant new and renewal contracts (sometimes referred to as "mega-deals") and the length of those contracts.

Acquisition of Majority Equity Interest in MphasiS. In June 2006, we acquired a majority interest (approximately 51%) in MphasiS, an applications and business process outsourcing services company based in Bangalore, India. The cash purchase price of the controlling interest, net of cash acquired, was $352 million. The acquisition of MphasiS enhances our delivery capabilities in priority growth areas of applications development and business process outsourcing services. We refer you to Note 16 in the accompanying Notes to Consolidated Financial Statements. Subsequent to the acquisition of MphasiS, the MphasiS board of directors and the board of directors of our wholly-owned Indian subsidiary approved the merger of that subsidiary into MphasiS, pending applicable approvals. If approved, the merger will enable us to consolidate our operations in India. The operational integration of the two entities is expected to be completed in the first quarter of 2007. The proposal is subject to approval of the stock exchanges in India, shareholders of both companies and court approval. Based on an independent valuation of the two entities, the merger would result in increasing our stake in MphasiS to approximately 62% from approximately 51% at present. In October 2006, we announced an open offer to acquire additional MphasiS common shares, which we expect to be completed in the first quarter of 2007. However, because the offer price is lower than the current trading price for such shares, we do not expect to acquire a significant number of additional shares pursuant to this offer.

General Motors Recompete. GM is our largest single client. Our 10-year Master Service Agreement, or MSA, with GM expired in June 2006. The MSA served as a framework for the negotiation and operation of service agreements representing a substantial majority of our revenues from GM. Following a recompete process, in February 2006 we were awarded approximately 70% of the contracts we bid on with a total contract value then estimated at approximately $3.6 billion over five years. Revenues from GM, which include revenues under the MSA through June 7, 2006, were approximately $1.7 billion, or 8% of our total revenues, in 2006. We expect annualized revenue from GM of approximately $1.3 billion to $1.5 billion over the remaining term of the new agreement, including the business awarded in the recompete and additional business not part of the recompete. Due to improvements in our cost structure already achieved and expected to be achieved in part through the implementation of our multi-year plan, we do not expect a significant change over the term of the new agreement in our operating margins attributable to this client compared to recent historical results.

NMCI Contract. We provide end-to-end IT infrastructure on a seat management basis to the Department of Navy (the "DoN"), which includes the U.S. Navy and Marine Corps, under a contract that has been extended through September 2010. Prior to 2006, this contract had a significant adverse impact on our operating results. In 2003, we incurred operating losses of $389 million, excluding a deferred contract cost write off of $559 million, and reported free cash flow usage of $824 million associated with this contract. In 2004, we incurred operating losses of $487 million, exclusive of a $375 million non-cash impairment charge to write down long-lived assets to estimated fair value, and reported free cash flow usage of $423 million (excluding the $522 million cash payment for the purchase of financial assets associated with a securitization facility referred to below) associated with this contract. In 2005, we incurred operating losses of $75 million and reported free cash flow of $125 million associated with this contract.

On March 24, 2006, we entered into a contract modification with the DoN pursuant to which the DoN exercised its option to extend this contract by three years through September 2010. The contract was also amended to, among other things, incorporate pricing for legacy support, restructure client satisfaction incentive methods to allow for objective metrics, extend the refresh period for a majority of desktop seats, establish the economic lives and valuation methodology for equipment and related infrastructure payable in the event of the DoN's election to purchase such equipment at contract termination, increase the DoN's minimum purchase requirements by an aggregate of $500 million over program years 2006 through 2010, provide for the payment to EDS of $100 million in cash (which was received in the second quarter of 2006), and provide for the release by EDS of certain claims related to the contract. The $100 million cash payment was allocated to future services and will be recognized as revenue on a straight-line basis over the remaining term of the contract. As a result of the contract modification, in compliance with Emerging Issues Task Force 01-8, *Determining Whether an Arrangement Contains a Lease*, we recognized sales-type capital lease revenue of $116 million in the first quarter of 2006 associated with certain assets previously accounted for as operating leases, and certain assets previously accounted for as capital leases with an aggregate net investment balance of $113 million are now accounted for as operating leases based on revised estimates of economic lives as agreed in the contract modification (20 years). We expect to recover a significant portion of our investment in this contract through the sale of NMCI infrastructure and desktop assets to the client at the end of the contract term, including amounts in excess of the expected carrying amounts of contract assets. Long-lived assets and lease receivables associated with the contract totaled approximately $278 million and $295 million, respectively, at December 31, 2006. As a result of the activity on the contract during the first quarter of 2006, including the sales-type capital lease revenue resulting from the contract modification, we recognized net non-recurring income of $0.02 per share during the first quarter. Operating profit for the contract during 2006 improved significantly over prior years as a result of higher levels of seat deployment and service delivery improvements. As part of the March 24, 2006 contract modification, we also became eligible to be compensated for certain communications costs when required to supplement the Government communications network, and we received orders of $40 million from the DoN related to the fourth quarter of 2005 through the third quarter of 2006. This amount is included in revenues in our consolidated statement of operations for the year ended December 31, 2006.

U.K. Ministry of Defence Contract. In March 2005, a consortium led by us was awarded a 10-year contract for the first increment of the U.K. Ministry of Defence (MoD) project to consolidate numerous existing information networks into a single next-generation infrastructure (the Defence Information Infrastructure Future project). The total contract value of the initial contract

was approximately $3.9 billion over 10 years. In December 2006, the contract was amended to include the second increment of such project, increasing the total contract value by approximately $1.27 billion over the remaining eight years of the contract. Our upfront expenditure and capital investment requirements for this contract have adversely impacted our free cash flow and earnings during certain fiscal periods since inception of the contract and may continue to do so in the future. Many of the services and service delivery challenges required by this contract are similar to those required by the NMCI contract discussed above, and accordingly, many of the risks are the same. We have applied lessons learned from our experience with the NMCI contract to this contract, including contract terms with clearly defined client and EDS accountability and improved program management. There have occurred and may occur in the future program changes and inabilities to achieve certain related dependencies that extend the initial development timeline. This contract provides for adjustments to be made to reflect the financial impact to EDS of certain program changes and any inability to achieve dependencies. During 2006, we reached a mutually satisfactory agreement with the client regarding some initial billing adjustments under the contract to reflect part of the financial impact to us of an extended initial development timeline. We will continue in the ongoing course of this contract to work with the client to agree upon any future appropriate adjustments under the contract which may be necessary. If we are unable to reach agreement with the client regarding such adjustments, our revenues, earnings and free cash flow for this contract, or the timing of the recognition thereof, could be adversely impacted.

Verizon. We provided IT services to MCI, Inc. pursuant to an IT services agreement that included minimum annual purchase obligations through January 2008. We also procured network telecommunications services from MCI pursuant to an agreement that included minimum annual purchase obligations through 2010. MCI was acquired by Verizon Communications, Inc. in January 2006. In December 2006, Verizon in-sourced most of the IT services we had been providing to MCI. We received a $90 million payment from Verizon in the fourth quarter of 2006 for assets and transition services. We also received a payment of $225 million in the first quarter of 2007 related to the termination of these services. As a result of this payment and certain services we will continue to provide and bill for in 2007, we do not expect that our free cash flow or income for this contract for the 2007 fiscal year will be significantly different from the results we would have experienced had the contract continued unchanged through January 2008. However, we do not expect to recognize any significant revenue or earnings from this client after 2007. Although the $225 million payment will be reflected in our first quarter 2007 free cash flow, the payment is expected to be reflected in our revenue and earnings for the first and third quarters of 2007 due to certain contingencies in our agreement with this client. In addition to the changes to our IT services agreement, the agreement pursuant to which we procure telecommunications network services was also amended to, among other things, reduce our minimum annual spend commitment by approximately 50% and provide additional flexibility in our ability to meet that commitment.

Divestiture of Global Field Services. On November 15, 2006, we completed the sale of Global Field Services, our desktop support services business located in Europe. As a result of this disposition, we incurred a pre-tax loss in the fourth quarter of 2006 of $23 million.

Divestiture of A. T. Kearney. We completed the sale of our A.T. Kearney management consulting subsidiary to the firm's management effective January 20, 2006. That subsidiary is classified as "held for sale" at December 31, 2005 and its results are included in income (loss) from discontinued operations. A.T. Kearney's results for the year ended December 31, 2005 include a pre-tax impairment charge of $118 million to write-down the carrying value of its long-lived assets, including tradename intangible, to estimated fair value less cost to sell. The estimated fair value was determined based on the terms of the sale. The impairment charge was partially offset by the recognition of $8 million previously unrecognized tax assets that were expected to be realized as a result of the sale. Income (loss) from discontinued operations also includes the net results of the maintenance, repair and operations (MRO) management services business which was transferred by A.T. Kearney to us prior to the divestiture of A.T. Kearney in January 2006. We refer you to Note 17 in the accompanying Notes to Consolidated Financial Statements.

Share Count. The weighted-average number of shares used to compute basic and diluted earnings per share were 519 million and 529 million, respectively, for the year ended December 31, 2006. On February 21, 2006, we announced that the Board of Directors had authorized a $1 billion share repurchase program over 18 months. Through December 31, 2006, we had purchased 26.2 million shares at a cost of $683 million under this repurchase program, including the shares purchased under a $400 million accelerated share repurchase ("ASR") agreement entered into in February 2006 (see Note 1 in the accompanying Notes to Consolidated Financial Statements). Our share count reflects the share repurchases referred to above, as well as shares issued under our employee stock-based compensation programs. Factors that could affect basic and dilutive share counts in the future include the share price and additional repurchases of shares under the authorization referred to above, offset by the dilutive effects of all our employee stock-based compensation plans and our contingently convertible senior notes. We are evaluating a "share neutral" approach, the objective of which would be to repurchase sufficient additional shares to approximately offset the dilutive effects of our employee stock-based compensation plans. Assuming we adopt such an approach, we expect the weighted-average number of shares used to compute diluted earnings per share to be approximately 545 million shares (which includes the dilutive impact of our contingently convertible senior notes).

Accounting Change. We adopted Statement of Financial Accounting Standards ("SFAS") No. 158 in 2006. We refer you to Note 1 in the accompanying Notes to Consolidated Financial Statements for additional information about this accounting change.

2007 Priorities and Expectations

In 2007, we will continue our initiatives to achieve profitable growth through focus on cost competitiveness and service quality. We expect to show continued improvement in our financial results as we benefit from our prior investments in infrastructure and workforce realignment, a reduction in the level of those investments compared to 2006 and our initiatives to further improve productivity and performance at the account level, leverage service delivery and reduce selling, general and administrative expense as a percent of revenues. In addition, we will continue our focus on improving service quality, client satisfaction and client innovation.

We currently expect 2007 revenues of approximately $22.0 billion to $22.5 billion, which would represent an increase in organic revenues of approximately 4% from 2006, driven principally by the increased level of contract signings in 2006.

We currently expect 2007 adjusted earnings per share of approximately $1.60, which excludes the impact of discontinued operations, gains and losses from divestitures, reversals of previously recognized restructuring expense and other identified items that management believes are not reflective of our core operating business. We refer you to the discussion of adjusted net income and adjusted earnings per share under "Non-GAAP Financial Measures" below. The expected increase in 2007 adjusted earnings per share reflects an anticipated improvement in operating margins.

We currently expect to generate free cash flow of $1.0 billion to $1.1 billion in 2007, an improvement from 2006 driven principally by the forecasted improvement in our operating margins. Refer to "Non-GAAP Financial Measures" below for a definition and discussion of free cash flow.

We currently expect the TCV of new contract signings in 2007 to be approximately $23 billion. We refer you to the discussion of the calculation of TCV under the heading "Non-GAAP Financial Measures" below.

The estimates for 2007 financial performance set forth in this Management's Discussion and Analysis of Financial Condition and Results of Operations rely on management's current assumptions, including assumptions concerning future events, and are subject to a number of uncertainties and other factors, many of which are outside the control of management, that could cause actual results to differ materially from such estimates. For a discussion of certain of these factors, we refer you to the discussion under "Risk Factors" below.

Non-GAAP Financial Measures

In addition to generally accepted accounting principles, or GAAP, results, we disclose the non-GAAP measures of adjusted net income, adjusted earnings per share (EPS), and free cash flow. Adjusted net income and adjusted earnings per share exclude the impact of certain special amounts, specifically earnings/losses from discontinued operations net of taxes, gains and losses from divestitures, reversals of previously recognized restructuring expense and other identified items that management believes are not reflective of our core operating business. Such amounts may have a material impact on our net income and earnings per share. We define free cash flow as net cash provided by operating activities, less capital expenditures. Capital expenditures is the sum of (i) net cash used in investing activities, excluding proceeds from sales of marketable securities, proceeds related to divested assets and non-marketable equity investments, payments for acquisitions, net of cash acquired, and non-marketable equity investments, and payments for purchases of marketable securities, and (ii) payments on capital leases. Free cash flow excludes items that are actual expenditures that impact cash available to EDS for other uses and should not be considered a measure of liquidity or an alternative to the cash flow measurements required by GAAP, such as net cash provided by operating activities or net increase/decrease in cash and cash equivalents. Refer to "Liquidity and Capital Resources" below for a reconciliation of free cash flow to the net increase (decrease) in cash and cash equivalents for the years ended December 31, 2006, 2005 and 2004. Management considers these non-GAAP measures an important measure of EDS' performance. Management uses these measures to evaluate EDS' core operating performance period over period, analyze underlying trends in EDS' business and establish operational goals and forecasts, including targets for performance-based compensation. EDS may not define adjusted net income, adjusted earnings per share or free cash flow in the same manner as other companies and, accordingly, the amounts reported by EDS for such measures may not be comparable to similarly titled measures reported by other companies.

We also disclose the total contract value, or TCV, of new business signings. Management considers TCV to be an important metric to monitor new business activity. There are no third-party standards or requirements governing the calculation of TCV. The TCV of a client contract represents our estimate at contract signing of the total revenue expected over the term of that contract. Contract signings include contracts with new clients and renewals, extensions and add-on business with existing clients. TCV does not include potential revenues that could be earned from a client relationship as a result of future expansion of service offerings to that client, nor does it reflect option years under non-governmental contracts that are subject to client discretion. TCV reflects a number of management estimates and judgments regarding the contract, including assumptions regarding demand-driven usage, scope of work and client requirements. In addition, our contracts may be subject to currency fluctuations and, for contracts with the U.S. federal government, annual funding constraints and indefinite delivery/indefinite quantity characteristics. Accordingly, the TCV we report should not be considered firm orders or predictive of future operating results.

Non-GAAP measures are a supplement to, and not a replacement for, GAAP financial measures. To gain a complete picture of our performance, management does (and investors should) rely on our GAAP financial statements.

Results of Operations

Revenues. As-reported growth percentages are calculated using revenues reported in the consolidated statements of operations. Organic growth percentages are calculated by removing from current year as-reported revenues the impact of the change in exchange rates between the local currency and the U.S. dollar from the current period and the comparable prior period. It further excludes revenue growth due to acquisitions in the period presented if the comparable prior period had no revenue from the same acquisition, and revenue decreases due to businesses divested in the period presented or the comparable prior period. Segment revenues for non-U.S. operations are measured using fixed currency exchange rates. Differences between the fixed and actual exchange rates are included in the "all other" category.

Following is a summary of revenues for the years ended December 31, 2006 and 2005 (in millions):

Consolidated revenues:	2006	2005	As-Reported Growth %	Organic Growth %
Revenues	$ 21,268	$ 19,757	8%	7%

Segment revenues:	2006	2005	% Increase (Decrease)
Americas	$ 9,588	$ 9,239	4%
EMEA	6,448	5,935	9%
Asia Pacific	1,479	1,377	7%
U.S. Government	3,350	2,842	18%
Other	23	22	–
Total Outsourcing	20,888	19,415	8%
All other	380	342	
Total	$ 21,268	$ 19,757	8%

Revenue growth in the Americas was primarily attributable to contracts with new clients in our retail, energy and transportation industry groups, add-on business with existing clients in our financial services industry group and in Latin America, and our ExcellerateHRO business which began operations in March 2005. Americas revenues in 2006 includes the recognition of a $90 million payment for assets and transition services related to the in-sourcing of services by Verizon described above. Revenue growth in EMEA was primarily attributable to increased revenues from the U.K. MoD contract and clients in North and South EMEA, partially offset by a decline in revenues from clients in Central EMEA and the U.K. Revenue growth in Asia Pacific was primarily attributable to our acquisition of MphasiS in the second quarter of 2006, partially offset by a decline in revenues from a client in the financial services industry in Australia. Revenue growth in U.S. Government was primarily attributable to the NMCI contract and several state Medicaid contracts, partially offset by the impact of the completion of a large federal contract in 2005. Refer to the "Overview" section above for a further discussion of the U.K. MoD, NMCI and Verizon contracts and of our acquisition of MphasiS.

Following is a summary of revenues for the years ended December 31, 2005 and 2004 (in millions):

Consolidated revenues:	2005	2004	As-Reported Growth %	Organic Growth %
Revenues	$ 19,757	$ 19,863	(1)%	(3)%

Segment revenues:	2005	2004	% Increase (Decrease)
Americas	$ 9,239	$ 9,251	–
EMEA	5,935	6,247	(5)%
Asia Pacific	1,377	1,289	7%
U.S. Government	2,842	2,893	(2)%
Other	22	24	–
Total Outsourcing	19,415	19,704	(1)%
All other	342	159	
Total	$ 19,757	$ 19,863	(1)%

The decrease in revenues in the Americas was primarily due to the termination of a significant commercial contract in August 2004 (see Note 3 in the accompanying Notes to Consolidated Financial Statements). The decrease in revenues in EMEA was

primarily due to the termination of our contract with the U.K. Government's Inland Revenue department effective June 2004, offset by an increase in revenue from other government and commercial clients, including our contract with the U.K. MoD. Revenue growth in Asia Pacific was primarily due to an increase in revenues from a client in the financial services industry in Australia. The decrease in the U.S. Government was primarily attributable to the completion of a large federal contract in early 2005, partially offset by an increase in revenue from our NMCI contract.

Gross margin. Our gross margin percentages [(revenues less cost of revenues)/revenues] were 12.6%, 11.8% and 8.3% in 2006, 2005 and 2004, respectively. The increase in our gross margin percentage in 2006 was primarily attributable to our enterprise-wide productivity initiatives, including improved performance on significant contracts, better sourcing and other cost structure improvements (240 basis points) and a pension obligation settlement loss associated with the termination of the Inland Revenue contract in 2005 (40 basis points), partially offset by incremental costs related to investments in our infrastructure, new service offerings and severance (190 basis points). Contracts with improved performance in 2006 include, among others, the NMCI contract (140 basis points), which includes the impact of the contract modification discussed above, and the Verizon contract (35 basis points), which includes the impact of the $90 million payment for assets and transition assistance services discussed above. The increase in our gross margin percentage in 2005 was primarily attributable to an improvement in the performance of the NMCI contract which had operating losses of $75 million in 2005 compared with operating losses of $487 million and an asset impairment charge of $375 million in 2004. Refer to Note 3 in the accompanying Notes to Consolidated Financial Statements. The NMCI contract had a 480 basis point negative impact on our 2004 gross margin percentage compared to a 90 basis point negative impact in 2005. Other items affecting our 2005 gross margin include a pension obligation settlement loss associated with the termination of the Inland Revenue contract (40 basis points), an increase in compensation expense attributable to the change in accounting for share-based payments (50 basis points), a deferred cost impairment charge associated with a large IT commercial contract (20 basis points) and litigation costs (20 basis points). These items were partially offset by favorable resolution of certain customer contract matters that permitted recognition of previously deferred revenue (40 basis points). Our gross margin in 2005 was also adversely affected by investments in our infrastructure and new service offerings and a decrease in revenues, including the termination of our contract with the U.K. Government's Inland Revenue department. An additional item affecting our 2004 gross margin was operating losses and other charges on our "other commercial contract" (150 basis points).

Selling, general and administrative. SG&A expenses as a percentage of revenues were 8.7%, 9.2% and 7.9% in 2006, 2005 and 2004, respectively. The decrease in our SG&A percentage in 2006 was primarily attributable to an increase in revenues (70 basis points) and a decrease in legal costs (20 basis points), including costs associated with the settlement of a consolidated securities action in 2005, partially offset by an increase in selling costs associated with increasing TCV of new business signings (10 basis points). The increase in our SG&A percentage in 2005 was primarily attributable to an increase in compensation expense resulting from the change in accounting for share-based payments, and performance-based RSUs (30 basis points) and incremental legal and regulatory costs (20 basis points), including costs associated with the settlement of a consolidated securities action. Our SG&A expense in 2005 was also impacted by higher sales and marketing costs, including commissions associated with increasing TCV of new business signings (40 basis points), and by certain investment initiatives (10 basis points).

We expect our operating margin [(revenues less costs and expenses)/revenues] to improve in 2007 driven by the benefits of our key productivity initiatives, the performance of significant contracts and a reduction in the level of spending on our investment initiatives.

Other operating (income) expense. Following is a summary of other operating (income) expense for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Other operating (income) expense:			
Restructuring costs, net of reversals	$ (7)	$ 68	$ 226
Early retirement offer	–	–	50
Pre-tax loss (gain) on disposal of businesses:			
Global Field Services	23	–	–
European wireless clearing	–	(93)	–
U.S. wireless clearing	(1)	–	(35)
Automotive Retail Group	–	–	(66)
Credit Union Industry Group	–	–	(4)
Other	–	(1)	(1)
Total	$ 15	$ (26)	$ 170

We refer you to Note 19 in the accompanying Notes to Consolidated Financial Statements for a further discussion of the components of other operating (income) expense.

Other income (expense). Other income (expense) includes interest expense, interest and dividend income, investment gains and losses, minority interest expense, and foreign currency transaction gains and losses. Following is a summary of other income (expense) for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Other income (expense):			
Interest expense	$ (239)	$ (241)	$ (321)
Interest income and other, net	179	138	49
Total	$ (60)	$ (103)	$ (272)

Interest income and other in 2006 includes net investment gains of $17 million compared to net investment losses of $41 million in 2005, including a write-down of $35 million relating to our leveraged lease investments. Interest income and other in 2006 compared with 2005 reflects an increase in interest and dividend income of $22 million, offset by an increase in net foreign currency transaction losses of $24 million. The increase in interest income and other in 2005 was primarily due to interest income on increased levels of cash and marketable securities, and foreign currency transaction gains. Interest income and other in 2004 includes net investment losses of $28 million, including a write-down of $34 million relating to our leveraged lease investments. The decrease in interest expense in 2005 was primarily due to the extinguishment of debt resulting from our debt exchange offer completed in 2004 and other scheduled debt repayments. See "Financial Position" and "Liquidity and Capital Resources" for a further discussion of our outstanding debt balance. Interest expense in 2004 includes $36 million in expenses resulting from our debt exchange offer. See Note 8 in the accompanying Notes to Consolidated Financial Statements for a further discussion of the exchange offer.

Income taxes. Our effective income tax rates on income from continuing operations were 34.0%, 34.9% and 27.5% for the years ended December 31, 2006, 2005 and 2004, respectively. The effective tax rate for 2006 was impacted by (i) the passage of a new Texas tax system requiring a $19 million write-off of net deferred tax assets, (ii) the recognition of additional valuation allowances of $44 million for losses incurred in certain foreign tax jurisdictions due to underperforming operations, and (iii) favorable changes to the liabilities for tax contingencies of $48 million, including settlements with the U.S. Internal Revenue Service ("IRS"). The effective tax rate in 2005 was impacted by (i) recognition of additional valuation allowances of $115 million for losses incurred in certain foreign tax jurisdictions due to underperforming operations, and (ii) reversal of certain tax contingency accruals of $40 million due to progress made in jurisdictional tax audits. Our effective tax rate could fluctuate periodically as a result of our adoption of SFAS No. 123R. As we record expense under SFAS No. 123R, a deferred tax asset is recorded. The realization of that asset is dependent upon the intrinsic value of an option on the date of exercise. Any unrealized deferred tax asset is charged to tax expense in the period of exercise or expiration and, accordingly, would result in a higher effective tax rate in such period. See "Application of Critical Accounting Policies" for a discussion of factors affecting income tax expense.

In June 2006, we agreed with the IRS on a settlement related to the R&D tax credit for years 1996-2002 and the closure of the audit of our 1996-1998 federal income tax returns. We had previously estimated the amount of the R&D credit that would be disallowed for each year and recorded a tax liability for such amount. Our analysis included the fact that the IRS had proposed disallowances of the entire R&D credit for tax years 1996-1998 and a portion of the R&D credit for tax years 1999-2002. The settlement resulted in a $50 million reduction of such liability in the second quarter of 2006.

Discontinued operations. Income (loss) from discontinued operations is comprised primarily of the net results of A.T. Kearney which was sold in 2006 and UGS PLM Solutions which was sold in 2005. Refer to Note 17 in the accompanying Notes to Consolidated Financial Statements for additional information related to discontinued operations.

Segment information. Refer to Note 12 in the accompanying Notes to Consolidated Financial Statements for a summary of certain financial information related to our reportable segments for 2006, 2005 and 2004, as well as certain financial information related to our operations by geographic region and by service line for such years.

Financial Position

At December 31, 2006, we held cash and marketable securities of $3.0 billion, had working capital of $3.0 billion, and had a current ratio (current assets/current liabilities) of 1.58-to-1. This compares to cash and marketable securities of $3.2 billion, working capital of $3.5 billion, and a current ratio of 1.68-to-1 at December 31, 2005. Approximately 5% of our cash and cash equivalents and marketable securities at December 31, 2006 were not available for debt repayment due to various commercial limitations on the use of these assets.

Days sales outstanding for trade receivables were 56 days at December 31, 2006 compared to 58 days at December 31, 2005. Days payable outstanding were 21 days at December 31, 2006 compared to 19 days at December 31, 2005.

Total debt was $3.1 billion at December 31, 2006 versus $3.3 billion at December 31, 2005. Total debt consists of notes payable and capital leases. The total debt-to-capital ratio (which includes total debt and minority interests as components of capital) was 28% at December 31, 2006 and 30% at December 31, 2005.

Off-Balance Sheet Arrangements and Contractual Obligations

In connection with certain service contracts, we may arrange a client supported financing transaction ("CSFT") with our client and an independent third-party financial institution or its designee. The use of these transactions enables us to offer clients more favorable financing terms. These transactions also enable the preservation of our capital and allow us to avoid client credit risk relating to the repayment of the financed amounts. Under these transactions, the independent third-party financial institution finances the purchase of certain IT-related assets and simultaneously leases those assets for use in connection with the service contract. The use of a CSFT on a service contract results in lower contract revenue and expense to EDS over the contract term.

In CSFTs, client payments are made directly to the financial institution providing the financing. If the client does not make the required payments under the service contract, under no circumstances do we have an ultimate obligation to acquire the underlying assets unless our nonperformance under the service contract would permit its termination, or we fail to comply with certain customary terms under the financing agreements, including, for example, covenants we have undertaken regarding the use of the assets for their intended purpose. We consider the possibility of our failure to comply with any of these terms to be remote.

The aggregate dollar values of assets purchased under our CSFT arrangements were $16 million, $8 million and $65 million during 2006, 2005 and 2004, respectively. No future asset purchases are expected to be financed under existing arrangements. As of December 31, 2006, there were outstanding an aggregate of $136 million under CSFTs yet to be paid by our clients. In the event a client contract is terminated due to nonperformance, we would be required to acquire only those assets associated with the outstanding amounts for that contract. Net of repayments, the estimated future maximum amount outstanding under existing financing arrangements is not expected to exceed $150 million. We believe we have sufficient alternative sources of capital to directly finance the purchase of capital assets to be used for our current and future client contracts without the use of these arrangements.

Performance guarantees. In the normal course of business, we may provide certain clients, principally governmental entities, with financial performance guarantees, which are generally backed by standby letters of credit or surety bonds. In general, we would be liable for the amounts of these guarantees in the event our nonperformance permits termination of the related contract by our client, the likelihood of which we believe is remote. We believe we are in compliance with our performance obligations under all service contracts for which there is a performance guarantee.

Following is a summary of the estimated expiration of financial guarantees outstanding as of December 31, 2006 (in millions):

		Estimated Expiration Per Period			
	Total	2007	2008	2009	Thereafter
Performance guarantees:					
CSFT transactions	$ 136	$ 107	$ 20	$ 7	$ 2
Standby letters of credit, surety bonds and other	574	276	25	14	259
Other guarantees	19	13	6	–	–
Total	$ 729	$ 396	$ 51	$ 21	$ 261

Contractual obligations. Following is a summary of payments due in specified periods related to our contractual obligations as of December 31, 2006 (in millions):

		Payments Due by Period			
	Total	2007	2008-2009	2010-2011	After 2011
Long-term debt, including current portion and interest[1]	$ 4,638	$ 336	$ 1,252	$ 979	$ 2,071
Operating lease obligations	1,516	343	517	288	368
Purchase obligations[2]	2,599	1,318	981	298	2
Total[3]	$ 8,753	$ 1,997	$ 2,750	$ 1,565	$ 2,441

(1) Amounts represent the expected cash payments (principal and interest) of our long-term debt and do not include any fair value adjustments or bond premiums or discounts. Amounts also include capital lease payments (principal and interest).

(2) Purchase obligations include material agreements to purchase goods or services, principally software and telecommunications services, that are enforceable and legally binding on EDS and that specify all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum or variable price provisions; and the approximate timing of the transaction. Purchase obligations exclude agreements that are cancelable without penalty. Purchase obligations also exclude our obligation to repurchase minority interests in joint ventures, including our obligation to repurchase Towers Perrin's minority interest in ExcellerateHRO. See Note 16 of the accompanying consolidated financial statements.

(3) We contributed $240 million and $346 million to our qualified and nonqualified pension plans in 2006 and 2005, respectively, and we expect to contribute approximately $100 million to these plans in 2007, including discretionary and statutory contributions. Our U.S. funding policy is to contribute amounts that fall within the range of deductible contributions for U.S. federal income tax purposes. See Note 13 of the accompanying consolidated financial statements for additional information about our retirement plans.

Liquidity and Capital Resources

Following is a summary of our cash flows for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Cash flows:			
Net cash provided by operating activities	$ 1,933	$ 1,296	$ 1,278
Net cash used in investing activities	(33)	(797)	(758)
Net cash used in financing activities	(834)	(681)	(663)
Free cash flow	887	619	304

Operating activities. The increase in cash provided by operating activities in 2006 compared to 2005 was due to a $48 million increase in cash provided by earnings (i.e., net income less non-cash operating items) and a $589 million change in operating assets and liabilities. The change in operating assets and liabilities resulted primarily from an improvement in receivable collections and lower vendor and tax payments, partially offset by an increase in contract costs and vendor prepayments and a decrease in customer prepayments. The change in operating liabilities was also impacted by various severance accruals recognized in 2006 that will be paid in 2007, and certain significant vendor payments in 2005 that had been recognized as expense in 2004. The increase in net cash provided by operating activities in 2005 compared to 2004 was due to a $150 million increase in earnings, adjusted to exclude non-cash operating items, offset by a $132 million change in operating assets and liabilities. The change in operating assets and liabilities resulted primarily from a decrease in receivables collections and an increase in tax payments, offset by an increase in deferred revenue.

Investing activities. The change in net cash used in investing activities in 2006 compared to 2005 was primarily due to an increase in net proceeds from sales of marketable securities, partially offset by a decrease in net proceeds from investments and real estate and an increase in payments for software. Payments for acquisitions relate primarily to the purchases of MphasiS in 2006 and the Towers Perrin pension, health and welfare administration services business in 2005. Refer to Note 16 in the accompanying Notes to Consolidated Financial Statements for additional information related to our acquisitions. Net proceeds from real estate sales resulted from the sales of real estate properties and land held for development. Refer to Notes 3 and 5 in the accompanying Notes to Consolidated Financial Statements for additional information related to our real estate sales. The change in net cash used in investing activities in 2005 compared to 2004 was primarily due to a decrease in proceeds from divestitures in 2005, and an increase in acquisition payments related to 2005 acquisitions (see Notes 16, 17 and 19 in the accompanying Notes to Consolidated Financial Statements). In addition, we realized net proceeds of $178 million in 2005 resulting from sales of real estate. Net cash used in investing activities in 2004 includes the proceeds from the divestitures of our U.S. wireless clearing business, UGS PLM Solutions and Automotive Retail Group ("ARG"). Divestiture proceeds were somewhat offset by net purchases of marketable securities. Net cash used in investing activities in 2004 also includes a $522 million cash payment related to the purchase of financial assets associated with the NMCI securitization facility.

Financing activities. The increase in net cash used in financing activities in 2006 was primarily due to purchases of treasury stock, partially offset by a reduction in debt payments and an increase in cash provided by employee stock transactions. Refer to the "Overview" section above and Note 1 in the accompanying Notes to Consolidated Financial Statements for additional information about our share repurchase authorization. Refer to "Off-Balance Sheet Arrangements and Contractual Obligations" above for a summary of expected payments related to our outstanding debt at December 31, 2006. The increase in net cash used in financing activities in 2005 compared to 2004 was primarily due to proceeds from our common stock issuance associated with a debt exchange in 2004. The increase in net cash used in financing activities in 2004 was primarily due to an increase in net payments on long-term debt and capital lease obligations, partially offset by proceeds from our common stock issuance associated with a debt exchange and by a reduction in dividend payments.

Free cash flow. We define free cash flow as net cash provided by operating activities, less capital expenditures. Capital expenditures is the sum of (i) net cash used in investing activities, excluding proceeds from sales of marketable securities, proceeds related to divested assets and non-marketable equity investments, payments related to acquisitions, net of cash acquired, and non-marketable equity investments, and payments for purchases of marketable securities, and (ii) capital lease payments. During 2004, we sold our UGS PLM Solutions subsidiary and repurchased financial assets outstanding under the NMCI contract securitization facility. Due to the significance of these transactions, the calculation of free cash flow for 2004 was adjusted to exclude $14 million in transaction fees paid during 2004 related to the UGS PLM Solutions disposition, and the $522 million cash payment related to the repurchase of financial assets associated with the NMCI securitization facility. The calculation of free cash flow for 2004 was also adjusted to include $85 million in cash generated through utilization of operating tax credits, predominantly related to 2004, to offset income tax associated with the UGS PLM Solutions disposition (such tax credits would otherwise have been available to offset future taxable income generated by operations). Free cash flow is a non-GAAP measure and should be viewed together with our consolidated statements of cash flows.

Following is a reconciliation of free cash flow to the net change in cash and cash equivalents for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Net cash provided by operating activities	$ 1,933	$ 1,296	$ 1,278
Capital expenditures:			
Proceeds from investments and other assets	264	310	68
Net proceeds from real estate sales	49	178	–
Payments for purchases of property and equipment	(729)	(718)	(666)
Payments for investments and other assets	(94)	(27)	(556)
Payments for purchases of software and other intangibles	(427)	(300)	(302)
Other investing activities	35	29	28
Capital lease payments	(144)	(149)	(167)
Total net capital expenditures	(1,046)	(677)	(1,595)
Adjustments:			
Utilization of tax credits related to the UGS PLM Solutions disposition	–	–	85
Transaction fees related to the UGS PLM Solutions disposition	–	–	14
Payment related to the repurchase of financial assets associated with the NMCI securitization facility	–	–	522
Free cash flow	887	619	304
Other investing and financing activities:			
Proceeds from sales of marketable securities	2,793	1,434	956
Net proceeds (payments) from divested assets and non-marketable equity securities	(49)	160	2,129
Payments for acquisitions, net of cash acquired, and non-marketable equity securities	(361)	(552)	(78)
Payments for purchases of marketable securities	(1,514)	(1,311)	(2,337)
Proceeds from long-term debt	–	5	6
Payments on long-term debt	(213)	(560)	(561)
Proceeds from issuance of common stock	–	–	198
Purchase of treasury stock	(667)	–	–
Employee stock transactions	285	107	76
Dividends paid	(104)	(105)	(200)
Other financing activities	9	21	(15)
Effect of exchange rate changes on cash and cash equivalents	7	(21)	48
Adjustments:			
Utilization of tax credits related to the UGS PLM Solutions disposition	–	–	(85)
Transaction fees related to the UGS PLM Solutions disposition	–	–	(14)
Payment related to the repurchase of financial assets associated with the NMCI securitization facility	–	–	(522)
Net increase (decrease) in cash and cash equivalents	$ 1,073	$ (203)	$ (95)

Our gross capital requirement was approximately $1.5 billion in 2006, including equipment and real estate leases and the use of CSFTs. We expect net capital expenditures of 5.0% to 5.5% of revenues in 2007, slightly higher than our 5.0% historical average due to the capital requirements associated with recent contract signings. Refer to the "Overview" section above for our current expectations regarding 2007 free cash flow.

Credit facilities. On June 30, 2006, we entered into a $1 billion Five Year Credit Agreement (the "Credit Agreement") with a bank group including Citibank, N.A., as Administrative Agent for the lenders, and Bank of America, N.A., as Syndication Agent. The Credit Agreement replaced our $550 million Three-and-One-Half Year Multi Currency Revolving Credit Agreement entered into in September 2004 and our $450 million Three-Year Multi Currency Revolving Credit Agreement entered into in September 2003. The Credit Agreement may be used for general corporate borrowing purposes and issuance of letters of credit, with a $500 million sub-limit for letters of credit. The Credit Agreement contains certain financial and other restrictive covenants which would allow any amounts outstanding thereunder to be accelerated, or restrict our ability to borrow thereunder, in the event of our noncompliance. Following is a summary of such covenants and the calculated ratios at December 31, 2006:

	Covenant	Actual
Leverage ratio	≤ 3.00	1.22
Interest coverage ratio	≥ 3.00	10.49

At December 31, 2006, there were no amounts outstanding under the Credit Agreement. We anticipate utilizing the Credit Agreement principally for the issuance of letters of credit, including the replacement of letters of credit issued under the replaced facilities which aggregated $171 million at December 31, 2006. The issuance of letters of credit under the Credit Agreement utilizes availability under the Credit Agreement, as was the case with the replaced facilities.

Credit ratings. Following is a summary of our senior long-term debt credit ratings by Moody's Investor Services, Inc. ("Moody's"), Standard & Poor's Rating Services ("S&P") and Fitch Ratings ("Fitch") at February 23, 2007:

	Moody's	S&P	Fitch
Senior long-term debt	Ba1	BBB–	BBB–
Outlook	Positive	Stable	Positive

On February 8, 2007, S&P revised our rating outlook from negative to stable. On November 21, 2006, Fitch revised our rating outlook to positive from stable. On November 14, 2006, Moody's revised our rating outlook to positive from stable. At December 31, 2006, we had no recognized or contingent material liabilities that would be subject to accelerated payment due to a ratings downgrade. We do not believe a negative change in our credit rating would have a material adverse impact on us under the terms of our existing client agreements.

Liquidity. At December 31, 2006, we had total liquidity of $3.7 billion, comprised of unrestricted cash and marketable securities of $2.9 billion and availability under our unsecured credit facilities of $829 million. Management currently intends to maintain unrestricted cash and marketable securities in an amount equal to at least 12 months of forecasted capital expenditures (as defined under "Free Cash Flow" above), interest payments, debt maturities and dividend payments.

Change in dividend rate. On July 27, 2004, our Board of Directors reduced the quarterly dividend on our common stock from $0.15 to $0.05 per share.

New Accounting Pronouncements

In September 2006, the Financial Accounting Standards Board ("FASB") issued Statement No. 157, *Fair Value Measurements*. This new standard defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles, and expands disclosures about fair value measurements. The new standard is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those years. The provisions of the new standard are to be applied prospectively for most financial instruments and retrospectively for others as of the beginning of the fiscal year in which the standard is initially applied. We will be required to adopt this new standard in the first quarter of 2008. We are currently evaluating the requirements of Statement No. 157 and have not yet determined the impact on our consolidated financial statements.

In July 2006, the FASB issued Interpretation No. ("FIN") 48, *Accounting for Uncertainty in Income Taxes – an interpretation of FASB Statement No. 109*. This interpretation clarifies the accounting for uncertainty in income taxes recognized in an entity's financial statements in accordance with SFAS No. 109, *Accounting for Income Taxes*. It prescribes a recognition threshold and measurement attribute for financial statement disclosure of tax positions taken or expected to be taken on a tax return. This interpretation is effective for fiscal years beginning after December 15, 2006. We will be required to adopt this interpretation in the first quarter of 2007. We are currently evaluating the requirements of FIN 48 and have not yet determined the impact on our consolidated financial statements.

We adopted SFAS No. 158 in 2006. We refer you to Note 1 in the accompanying Notes to Consolidated Financial Statements for additional information about these accounting changes.

Application of Critical Accounting Policies

The preparation of our financial statements in conformity with generally accepted accounting principles in the United States ("GAAP") requires us to make estimates, judgments and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Our estimates, judgments and assumptions are continually evaluated based on available information and experience. Because of the use of estimates inherent in the financial reporting process, actual results could differ from those estimates. Areas in which significant judgments and estimates are used include, but are not limited to, revenue recognition, accounts receivable collectibility, accounting for long-lived assets, deferred income taxes, retirement plans, performance guarantees and litigation.

Revenue recognition and associated cost deferral. We provide IT and business process outsourcing services under time-and-material, unit-price and fixed-price contracts, which may extend up to 10 or more years. Services provided over the term of these

arrangements may include one or more of the following: IT infrastructure support and management; IT system and software maintenance; application hosting; the design, development, or construction of software and systems ("Construct Service"); transaction processing; and business process management.

If a contract involves the provision of a single element, revenue is generally recognized when the product or service is provided and the amount earned is not contingent upon any future event. If the service is provided evenly during the contract term but service billings are irregular, revenue is recognized on a straight-line basis over the contract term. However, if the single service is a Construct Service, revenue is recognized under the percentage-of-completion method using a zero-profit methodology. Under this method, costs are deferred until contractual milestones are met, at which time the milestone billing is recognized as revenue and an amount of deferred costs is recognized as expense so that cumulative profit equals zero. If the milestone billing exceeds deferred costs, then the excess is recorded as deferred revenue. When the Construct Service is completed and the final milestone met, all unrecognized costs, milestone billings and profit are recognized in full. If the contract does not contain contractual milestones, costs are expensed as incurred and revenue is recognized in an amount equal to costs incurred until completion of the Construct Service, at which time any profit would be recognized in full. If total costs are estimated to exceed revenue for the Construct Service, then a provision for the estimated loss is made in the period in which the loss first becomes apparent.

If a contract involves the provision of multiple service elements, total estimated contract revenue is allocated to each element based on the relative fair value of each element. The amount of revenue allocated to each element is limited to the amount that is not contingent upon the delivery of another element in the future. Revenue is then recognized for each element as described above for single-element contracts, except revenue recognized on a straight-line basis for a non-Construct Service will not exceed amounts currently billable unless the excess revenue is recoverable from the client upon any contract termination event. If the amount of revenue allocated to a Construct Service is less than its relative fair value, costs to deliver such service equal to the difference between allocated revenue and the relative fair value are deferred and amortized over the contract term. If total Construct Service costs are estimated to exceed the relative fair value for the Construct Service contained in a multiple-element arrangement, then a provision for the estimated loss is made in the period in which the loss first becomes apparent.

In the rare event that fair value is not determinable for each service element of a multiple-element contract, the contract is considered one accounting unit, and revenue is recognized using the proportional performance method. Under this method, contract revenue is recognized for each service element based on the proportional performance of each service element to the total expected performance of each service element over the life of the contract.

We also defer and subsequently amortize certain set-up costs related to activities that enable the provision of contracted services to the client. Such activities include the relocation of transitioned employees, the migration of client systems or processes, and the exit of client facilities. Deferred contract costs, including set-up costs, are amortized on a straight-line basis over the remaining original contract term unless billing patterns indicate a more accelerated method is appropriate. The recoverability of deferred contract costs associated with a particular contract is analyzed whenever events or circumstances indicate that their carrying value may not be recoverable using the undiscounted estimated cash flows of the whole contract over its remaining contract term. If such undiscounted cash flows are insufficient to recover the long-lived assets and deferred contract costs, including contract concessions paid to the client, the deferred contract costs and contract concessions are written down by the amount of the cash flow deficiency. If a cash flow deficiency remains after reducing the balance of the deferred contract costs and contract concessions to zero, any remaining long-lived assets are evaluated for impairment. Any such impairment recognized would equal the amount by which the carrying value of the long-lived assets exceeds the fair value of those assets.

Accounts receivable. Reserves for uncollectible trade receivables are established when collection of amounts due from clients is deemed improbable. Indicators of improbable collection include client bankruptcy, client litigation, industry downturns, client cash flow difficulties or ongoing service or billing disputes. Receivables more than 180 days past due are automatically reserved unless persuasive evidence of probable collection exists. Our allowances for doubtful accounts as a percentage of total gross trade receivables were 1.9% and 2.0% at December 31, 2006 and 2005, respectively.

Long-lived assets. Our property and equipment, software and definite-lived intangible asset policies require the amortization or depreciation of assets over their estimated useful lives. An asset's useful life is the period over which the asset is expected to contribute directly or indirectly to our future cash flows. The useful lives of property and equipment are limited to the standard depreciable lives or, for certain assets dedicated to client contracts, the related contract term. The useful lives of capitalized software are limited to the shorter of the license period or the related contract term. The estimated useful lives of definite-lived intangible assets are based on the expected use of the asset and factors that may limit the use of the asset. We may utilize the assistance of a third-party appraiser in the assessment of the useful life of an intangible asset.

Goodwill is not amortized, but instead tested for impairment at least annually. The goodwill impairment test requires us to identify our reporting units, obtain estimates of the fair values of those units as of the testing date and compare the estimated fair value of each unit to its carrying value. Our reporting units are identified based on a review of our internal reporting structure and are

comprised of the components of our operating segments that share similar economic characteristics. The fair value of a reporting unit is the amount at which the unit as a whole could be bought or sold in a current transaction between willing parties. We estimate the fair values of our reporting units using discounted cash flow valuation models. Those models require estimates of future revenues, profits, capital expenditures and working capital for each unit. We estimate these amounts by evaluating historical trends, current budgets, operating plans and industry data. We utilize our weighted-average cost of capital to discount the estimated expected future cash flows of each unit. We conducted our annual goodwill impairment test for 2006 as of December 1, 2006. The estimated fair value of each of our reporting units exceeded its respective carrying value in 2006 indicating the underlying goodwill of each unit was not impaired.

We plan to conduct our annual impairment test as of December 1st of each year when our budgets and operating plans for the forthcoming year are expected to be finalized. The timing and frequency of additional goodwill impairment tests are based on an ongoing assessment of events and circumstances that would more than likely reduce the fair value of a reporting unit below its carrying value. We will continue to monitor our goodwill balance for impairment and conduct formal tests when impairment indicators are present. A decline in the fair value of any of our reporting units below its carrying value is an indicator that the underlying goodwill of the unit is potentially impaired. This situation would require the second step of the goodwill impairment test to determine whether the unit's goodwill is impaired. The second step of the goodwill impairment test is a comparison of the implied fair value of a reporting unit's goodwill to its carrying value. An impairment loss is required for the amount which the carrying value of a reporting unit's goodwill exceeds its implied fair value. The implied fair value of the reporting unit's goodwill would become the new cost basis of the unit's goodwill.

Deferred income taxes. We must make certain estimates and judgments in determining income tax expense for financial statement purposes. These estimates and judgments occur in the calculation of certain tax assets and liabilities, which arise from differences in the timing of recognition of revenue and expense for tax and financial statement purposes. We must assess the likelihood that we will be able to recover our deferred tax assets. In assessing the realizability of deferred tax assets, we consider whether it is more likely than not that some portion or all of the deferred tax assets will not be realized and adjust the valuation allowances accordingly. Factors considered in making this determination include the period of expiration of the tax asset, planned use of the tax asset, tax planning strategies and historical and projected taxable income as well as tax liabilities for the tax jurisdiction in which the tax asset is located. Valuation allowances will be subject to change in each future reporting period as a result of changes in one or more of these factors. A majority of the tax assets are associated with tax jurisdictions in which we have a large scale of operations and long history of generating taxable income, thereby reducing the estimation risk associated with recoverability analysis. However, in smaller tax jurisdictions in which we have less historical experience or smaller scale of operations, the assessment of recoverability of tax assets is largely based on projections of taxable income over the expiration period of the tax asset and is subject to greater estimation risk. Accordingly, it is reasonably possible the recoverability of tax assets in these smaller jurisdictions could be impaired as a result of poor operating performance over extended periods of time or a future decision to reduce or eliminate operating activity in such jurisdictions. Such an impairment would result in an increase in our effective tax rate and related tax expense in the period of impairment.

Liabilities for tax contingencies. We have recorded liabilities for tax contingencies related to positions we have taken that could be challenged by taxing authorities. These potential exposures result from the uncertainties in application of statutes, rules, regulations and interpretations. We recognize liabilities for anticipated tax audit issues in the U.S. and other tax jurisdictions based on our estimate of whether and the extent to which additional taxes will be due. Our estimate of the ultimate tax liability contains assumptions based on past experiences, judgments about potential actions by taxing jurisdictions as well as judgments about the likely outcome of issues that have been raised by taxing jurisdictions. Although we believe our reserves for tax contingencies are reasonable, they may change in the future due to new developments with each issue. We record an additional charge or benefit in our provision for taxes in the period in which we determine that the recorded tax liability is more or less than we expect the ultimate assessment to be.

Retirement plans. We offer pension and other postretirement benefits to our employees through multiple global pension plans. Our largest pension plans are funded through our cash contributions and earnings on plan assets. We use the actuarial models required by SFAS No. 87, *Employers' Accounting for Pensions*, to account for our pension plans. Two of the most significant actuarial assumptions used to calculate the net periodic pension benefit expense and the related pension benefit obligation for our defined pension benefit plans are the expected long-term rate of return on plan assets and the discount rate assumptions.

SFAS No. 87 requires the use of an expected long-term rate of return that, over time, will approximate the actual long-term returns earned on pension plan assets. We base this assumption on historical actual returns as well as anticipated future returns based on our investment mix. Given our relatively young workforce, we are able to take a long-term view of our pension investment strategy. Accordingly, plan assets are weighted heavily towards equity investments. Equity investments are susceptible to significant short-term fluctuations but have historically outperformed most other investment alternatives on a long-term basis. At December 31, 2006, 85% of pension assets were invested in public and private equity and real estate investments with the remaining assets being invested in fixed income securities. Such mix is consistent with that assumed in determining the expected

long-term rate of return on plan assets. Rebalancing our actual asset allocations to our planned allocations based on actual performance has not been a significant issue.

An 8.4% and 8.6% weighted-average expected long-term rate of return on plan assets assumption was used for the pension plan actuarial valuations in 2006 and 2005, respectively. A 100 basis point increase or decrease in this assumption results in an estimated pension expense decrease or increase, respectively, of $79 million in the subsequent year's pension expense (based on the most recent pension valuation and assuming all other variables are constant).

An assumed discount rate is required to be used in each pension plan actuarial valuation. This rate reflects the underlying rate determined on the measurement date at which the pension benefits could effectively be settled. High-quality bond yields on our measurement date, October 31, 2006, with maturities consistent with expected pension payment periods are used to determine the appropriate discount rate assumption. For the countries with the largest pension plans, actual participant data is used by our actuaries to determine the maturity of the benefit obligation which is matched to bonds available at the measurement date. In other countries, we use the average age of the participants to determine the maturity of the benefit obligation. A 5.4% weighted-average discount rate assumption was used for the 2006 pension plan actuarial valuations. The methodology used to determine the appropriate discount rate assumption has been consistently applied. A 100 basis point increase in the discount rate assumption will result in an estimated decrease of approximately $121 million in the subsequent year's pension expense, and a 100 basis point decrease in the discount rate assumption will result in an estimated increase of approximately $221 million in the subsequent year's pension expense (based on the most recent pension valuation and assuming all other variables are constant).

Our long-standing policy of making consistent cash pension plan contributions provided some protection against negative short-term market returns. In addition, positive investment returns from 2003 to 2006 resulted in our actual pension plan asset returns exceeding expected returns reflected in our assumptions. However, the impact of contributions and positive returns has been offset by declining discount rates in some recent years. Our pension plans' funded status, as of October 31, 2006 reflected total plan assets of $7.9 billion and total projected benefit obligations under all plans of $9.4 billion. As a result, under the requirements of SFAS No. 158, we have pension liabilities of $1.4 billion at December 31, 2006 with a corresponding reduction, net of tax, in the accumulated other comprehensive loss component of shareholders' equity of $684 million.

Our weighted-average long-term rate of return assumption for plan assets as of January 1, 2007 is 8.5%. Our 2007 net periodic benefit cost is expected to decrease from 2006 due to additional cash contributions made in recent years, returns on plan assets in excess of expectations and small increases in the discount rates of certain countries. Our required minimum amount of 2007 contributions will not exceed actual contributions made in 2006.

Stock-based compensation. We estimate the fair value of stock options using a Black-Scholes-Merton pricing model. The outstanding term of an option is estimated based on the vesting term and contractual term of the option, as well as expected exercise behavior of the employee who receives the option. Expected volatility during the estimated outstanding term of the option is based on historical volatility during a period equivalent to the estimated outstanding term of the option and implied volatility as determined based on observed market prices of our publicly traded options. Expected dividends during the estimated outstanding term of the option are based on recent dividend activity. Risk-free interest rates are based on the U.S. Treasury yield in effect at the time of the grant. We estimate the fair value of restricted stock units based on the market value of our stock on the date of grant, adjusted for any restrictive provisions affecting fair value, such as required holding periods after the date of vesting. Compensation expense for share-based payment is charged to operations over the vesting period of the award, and includes an estimate for the number of awards expected to vest. The initial estimate is based on historical results, and compensation expense is adjusted for actual results. If vesting of such an award is conditioned upon the achievement of performance goals, compensation expense during the performance period is estimated using the most probable outcome of the performance goals, and adjusted as the expected outcome changes.

Other liabilities. In the normal course of business, we may provide certain clients, principally governmental entities, with financial performance guarantees, which are generally backed by standby letters of credit or surety bonds. In general, we would only be liable for the amounts of these guarantees in the event that our nonperformance permits termination of the related contract by our client, the likelihood of which we believe is remote. We believe we are in compliance with our performance obligations under all service contracts for which there is a performance guarantee.

There are various claims and pending actions against EDS arising in the ordinary course of our business. See Note 15 in the accompanying Notes to Consolidated Financial Statements for a discussion of certain current litigation. Certain of these actions seek damages in significant amounts. In determining whether a loss accrual or disclosure in our consolidated financial statements is required, we consider, among other things, the degree to which we can make a reasonable estimate of the loss, the degree of probability of an unfavorable outcome, and the applicability of insurance coverage for a loss. The degree of probability and the loss related to a particular claim are typically estimated with the assistance of legal counsel.

QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are exposed to market risk from changes in interest rates and foreign currency exchange rates. We enter into various hedging transactions to manage this risk. We do not hold or issue derivative financial instruments for trading purposes. A discussion of our accounting policies for financial instruments, and further disclosure relating to financial instruments, are included in the notes to the consolidated financial statements.

Interest rate risk. Interest rate risk is managed through our debt portfolio of fixed- and variable-rate instruments including interest rate swaps. Risk can be estimated by measuring the impact of a near-term adverse movement of 10% in short-term market interest rates. If these rates average 10% more in 2007 than in 2006, there would be no material adverse impact on our results of operations or financial position. During 2006, had short-term market interest rates averaged 10% more than in 2005, there would have been no material adverse impact on our results of operations or financial position.

Foreign exchange risk. We conduct business in the United States and around the world. Our most significant foreign currency transaction exposures relate to Canada, Mexico, the United Kingdom, Western European countries that use the euro as a common currency, Australia, India and Switzerland. The primary purpose of our foreign currency hedging activities is to protect against foreign currency exchange risk from intercompany financing and trading transactions. We enter into foreign currency forward contracts and may enter into currency options with durations of generally less than 30 days to hedge such transactions. We have not entered into foreign currency forward contracts for speculative or trading purposes.

Generally, foreign currency forward contracts are not designated as hedges for accounting purposes and changes in the fair value of these instruments are recognized immediately in earnings. In addition, since we enter into forward contracts only as an economic hedge, any change in currency rates would not result in any material gain or loss, as any gain or loss on the underlying foreign-denominated balance would be offset by the loss or gain on the forward contract. Risk can be estimated by measuring the impact of a near-term adverse movement of 10% in foreign currency rates against the U.S. dollar. If these rates average 10% more in 2007 than in 2006, there would be no material adverse impact on our results of operations or financial position. During 2006, had foreign currency rates averaged 10% more than in 2005, there would have been no material adverse impact on our results of operations or financial position.

RISK FACTORS

Because of the followin factors, as well as other variables affecting our operating results, past financial performance may not be a reliable indicator of future performance, and historical trends should not be used to anticipate results or trends in future periods.

Our engagements with clients may not be profitable. The pricing and other terms of our client contracts, particularly our long-term IT outsourcing agreements, require us to make estimates and assumptions at the time we enter into these contracts that could differ from actual results. These estimates reflect our best judgments regarding the nature of the engagement and our expected costs to provide the contracted services. Any increased or unexpected costs or unanticipated delays in connection with the performance of these engagements, including delays caused by factors outside our control, could make these contracts less profitable or unprofitable, which would have an adverse affect on our profit margin. Our exposure to this risk increases generally in proportion to the scope of the client contract and is higher in the early stages of such contract. In addition, a majority of our IT outsourcing contracts contain some fixed-price, incentive-based or other pricing terms that condition our fee on our ability to meet defined goals. Our failure to meet a client's expectations in any type of contract may result in an unprofitable engagement.

Our ability to recover significant capital investments in certain construct contracts is subject to risks. Some of our client contracts require significant investment, including asset purchases and operating losses, in the early stages which is recovered through billings over the life of the respective contract. These contracts often involve the construction of new computer systems and communications networks and the development and deployment of new technologies. Substantial performance risk exists in each contract with these characteristics, and some or all elements of service delivery under these contracts are dependent upon successful completion of the development, construction and deployment phases. At December 31, 2006, we had net deferred contract and set-up costs of $807 million, of which $487 million related to 20 contracts with active construct activities. These active construct contracts had other assets, including receivables, prepaid expenses, equipment and software, of $574 million at December 31, 2006. Some of these contracts have experienced delays in their development and construction phases, and certain milestones have been missed. It is reasonably possible that deferred costs associated with one or more of these contracts could become impaired due to changes in estimates of future contract cash flows.

Our exposure to certain industries and financially troubled customers may adversely affect our financial results. Our exposure to certain industries and financially troubled customers has had, and could in the future have, a material adverse affect on our

financial position and our results of operations. For example, we are a leading provider of IT outsourcing services to the United States automobile and airline industries, which sectors have been experiencing significant financial difficulties.

A decline in revenues from or loss of significant clients could reduce our revenues and profitability. Our success is to a significant degree dependent on our ability to retain our significant clients and maintain or increase the level of revenues from these clients, including in particular revenues from certain "mega-deal" long-term IT outsourcing agreements. We may lose clients due to their merger or acquisition, business failure, contract expiration or their conversion to a competing service provider or decision to in-source services. We may not be able to retain or renew relationships with our significant clients in the future. As a result of business downturns or for other business reasons, we are also vulnerable to reduced processing volumes from our clients, which can reduce the scope of services provided and the prices for those services. We may not be able to replace the revenue and earnings from any such lost client or reduction in services in the short or long-term. In addition, our contracts may allow a client to terminate the contract for convenience. In these cases we seek, through the terms of the contract, to recover our investment in the contract. There is no assurance we will be able to fully recover our investments in such circumstances.

Impact of rating agency downgrades. Any adverse action by Moody's, S&P or Fitch with respect to our long-term credit ratings could materially adversely impact our ability to compete for new business, our cost of capital and our ability to access capital.

Some of our contracts contain benchmarking provisions that could decrease our revenues and profitability. Some of our IT outsourcing agreements contain pricing provisions that permit a client to request a benchmark study by a mutually acceptable third-party benchmarker. Typically, benchmarking may not be conducted during the initial years of the contract term but may be requested by a client periodically thereafter, subject to restrictions which limit benchmarking to certain groupings of services and limit the number of times benchmarking may be conducted during the term of the contract. Generally, the benchmarking compares the contractual price of our services against the price of similar services offered by other specified providers in a peer comparison group, subject to agreed upon adjustment and normalization factors. Generally, if the benchmarking study shows that our pricing has a difference outside a specified range, and the difference is not due to the unique requirements of the client, then the parties will negotiate in good faith any appropriate adjustments to the pricing. This may result in the reduction of our rates for the benchmarked services. Due to the enhanced focus of our clients on reducing their technology costs, as well as the uncertainties and complexities inherent in benchmarking comparisons, our clients may increasingly attempt to obtain additional price reductions beyond those already embedded in our contract rates through the exercise of benchmarking provisions. Also, if we can not agree with our client on post-benchmarking pricing adjustments, the contract may permit the client to exercise an early termination right, which may or may not involve payment of a termination fee. Such activities could negatively impact our results of operations or cash flow in 2007 or thereafter to a greater extent than has been our prior experience.

Pending litigation could have a material adverse affect on our liquidity and financial condition. We are defendants in various claims and pending actions arising in the ordinary course of business or otherwise. We refer you to the discussion of "Pending Litigation and Proceedings" under Note 15 of the notes to the accompanying consolidated financial statements for a description of certain of these matters. We are not able to predict the ultimate impact of these matters on us or our consolidated financial statements. However, we may be required to pay judgments or settlements and incur expenses in aggregate amounts that could have a material adverse affect on our liquidity and earnings.

The markets in which we operate are highly competitive, and we may not be able to compete effectively. The markets in which we operate include a large number of participants and are highly competitive. Our primary competitors are IT service providers, large accounting, consulting and other professional service firms, application service providers, telecommunications companies, packaged software vendors and resellers and service groups of computer equipment companies. We also experience competition from numerous smaller, niche-oriented and regionalized service providers. Our business is experiencing rapid changes in its competitive landscape. We increasingly see our competitors moving operations offshore to reduce their costs as well as increasing direct competition from niche offshore providers, primarily India-based competitors. The competition from India-based companies is growing in intensity due to the abundance of highly skilled workers in the country, a pro-business regulatory environment and significantly lower costs of labor, which may allow these competitors to offer lower prices than we are able to offer. Any of these factors may impose additional pricing pressure on us, which could have an adverse affect on our revenues and profit margin.

Market changes may result in decreased profitability. The IT outsourcing market is commoditizing, which is shrinking margins on many of our core offerings. In addition, that market has experienced slower growth and lower margins in recent years. We are continuing to invest in new service offerings in the higher-margin segments such as BPO and applications development. However, if we are unable to implement our strategies to more effectively compete in such markets, our margins and profitability could be adversely affected.

We may not achieve the benefits we expect from our multi-year plan. We have implemented a multi-year plan designed to make significant changes in the way we do business. This plan includes the development of a new technology platform for the delivery of our services which we refer to as the "Agile Enterprise" as well as other initiatives intended to substantially reduce our cost structure. We have invested significant capital in the implementation of the multi-year plan and will invest additional capital in 2007. Although we believe this plan will enable us to achieve sustainable, profitable growth over the longer term, there can be no assurance as to the acceptance of our technology initiatives in the marketplace or our ability to recognize a return on our investment. Our ability to achieve the anticipated cost savings and other benefits from these initiatives on a timely basis is subject to many estimates and assumptions, including assumptions regarding the costs and timing of activities in connection with these initiatives. These estimates and assumptions are subject to significant economic, competitive and other uncertainties some of which are beyond our control. In addition, service pricing contained in certain of our contracts, including our contracts with GM and the U.K. Government's Department of Works and Pension, assume successful completion of our EDS Agile Enterprise initiatives on a timely basis. If these assumptions are not realized and we experience delays beyond those already experienced with respect to certain segments of these initiatives, or if other unforeseen events occur, our business and results of operations could be adversely affected and there could be a material adverse affect on the price of our securities.

Unanticipated changes in our tax provisions or exposure to additional tax liabilities could affect our profitability. We are subject to income taxes in the United States and numerous foreign jurisdictions. We are subject to ongoing tax audits in various jurisdictions. Tax authorities may disagree with our intercompany charges or other matters and assess additional taxes. Our provision for income taxes and cash tax liability in the future could be adversely affected by numerous factors including, but not limited to, income before taxes being lower than anticipated in countries with accumulated tax losses and higher than anticipated in countries with higher statutory tax rates, changes in the valuation of deferred tax assets and liabilities, changes in tax laws, regulations, accounting principles or interpretations thereof, and the discovery of new information in the course of our tax return preparation process, which could adversely impact our results of operations and financial condition in future periods. In particular, the carrying value of deferred tax assets is dependent on our ability to generate future taxable income over the expiration period of the tax asset. An impairment of deferred tax assets would result in an increase in our effective tax rate and related tax expense in the period of impairment and could affect our profitability.

Risks associated with our international operations could negatively affect our earnings. International operations accounted for approximately one-half of our revenues in 2006 and will continue to represent a significant opportunity for growth in the IT industry. Our results of operations are affected by our ability to manage risks inherent in doing business abroad. These risks include exchange rate fluctuation, regulatory concerns, terrorist activity, restrictions with respect to the movement of currency, access to highly skilled workers, political and economic instability and our ability to protect our intellectual property. Any of these risks could impede our ability to increase our presence in certain jurisdictions or enter new jurisdictions. In addition, these risks could result in increased costs which could materially adversely affect our results of operations.

In June 2006, we acquired a majority interest (approximately 51%) in MphasiS Limited ("MphasiS"), a publicly traded applications and business process outsourcing services company based in Bangalore, India. In connection with this investment, we are exposed to additional international risks, including being subject to Indian securities laws and regulations. If we fail to comply with the requirements of the Stock Exchange Board of India, the stock exchanges upon which MphasiS is listed or any of the other applicable Indian regulatory authorities, our investment in MphasiS could be materially adversely affected, and such violation could result in significant legal consequences to us.

Our services or products may infringe upon the intellectual property rights of others. We cannot be sure that our services and products, or the products of others that we offer to our clients, do not infringe on the intellectual property rights of third parties, and we may have infringement claims asserted against us. These claims may harm our reputation, cost us money and prevent us from offering some services or products. We generally agree in our contracts to indemnify our clients for any expenses or liabilities they may incur resulting from claimed infringements of the intellectual property rights of third parties. In some instances, the amount of these indemnities may be greater than the revenues we receive from the client. Any claims or litigation in this area, whether we ultimately win or lose, could be time-consuming and costly, injure our reputation or require us to enter into royalty or licensing arrangements. We may, in limited cases, be required to forego rights to the use of intellectual property we help create, which limits our ability to also provide that intellectual property to other clients. Any limitation on our ability to provide a service or product could cause us to lose revenue-generating opportunities and require us to incur additional expenses to develop new or modified solutions for future projects.

A material weakness in our internal controls could have a material adverse affect on us. Effective internal controls are necessary for us to provide reasonable assurance with respect to our financial reports and to effectively prevent fraud. If we cannot provide reasonable assurance with respect to our financial reports and effectively prevent fraud, our reputation and operating results could be harmed. Pursuant to the Sarbanes-Oxley Act of 2002, we are required to furnish a report by management on internal control over financial reporting, including management's assessment of the effectiveness of such control. Internal control over financial

reporting may not prevent or detect misstatements because of its inherent limitations, including the possibility of human error, the circumvention or overriding of controls, or fraud. Therefore, even effective internal controls can provide only reasonable assurance with respect to the preparation and fair presentation of financial statements. In addition, projections of any evaluation of effectiveness of internal control over financial reporting to future periods are subject to the risk that the control may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. If we fail to maintain the adequacy of our internal controls, including any failure to implement required new or improved controls, or if we experience difficulties in their implementation, our business and operating results could be adversely impacted, we could fail to meet our reporting obligations, and our business and stock price could be adversely affected.

In connection with our efforts to improve the processing efficiency of our general accounting functions, we implemented the SAP accounting system in the United States effective as of January 1, 2007, requiring changes in the processing of general ledger transactions, including journal entries, as of that date. We expect this implementation to be complete during the first quarter of 2007. With limited exceptions, our other accounting operations had already been using this system. We expect to implement other SAP systems in the United States, including for procurement, accounts payable and asset management, in the future. In addition, commencing in the first quarter of 2007, we will transition certain transaction and journal entry processing and preparation of general ledger account reconciliations from the existing accounting workforce to a newly hired workforce in lower cost Best Shore[SM] locations. We expect these actions will improve our internal controls over financial reporting by enabling us to conform general ledger processing to a single, global standard and operate a more centralized accounting function. We have taken steps to mitigate the control risks created by these actions, including establishment of monitoring controls and workforce management and training programs. However, if we are unable to timely and effectively complete these actions, our ability to maintain adequate internal control over financial reporting could be adversely impacted, we could fail to meet our reporting obligations, and our business and stock price could be adversely affected.

Cautionary Statement Regarding Forward-Looking Statements

The statements in this Report that are not historical statements are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements include statements regarding estimated revenues, earnings, free cash flow, total contract value ("TCV") of new contract signings, operating margins and other forward-looking financial information. In addition, we have made in the past and may make in the future other written or oral forward-looking statements, including statements regarding future financial and operating performance, short- and long-term revenue, future cost savings, earnings and free cash flow, the timing of the revenue, earnings and free cash flow impact of new and existing contracts, liquidity, estimated future revenues from existing clients, the TCV of new contract signings, business pipeline, industry growth rates and our performance relative thereto, the impact of acquisitions and divestitures, and the impact of client bankruptcies. Any forward-looking statement may rely on a number of assumptions concerning future events and be subject to a number of uncertainties and other factors, many of which are outside our control, that could cause actual results to differ materially from such statements. In addition to the factors outlined above, these factors include, but are not limited to, the following: the performance of current and future client contracts in accordance with our cost, revenue and cash flow estimates, including our ability to achieve any operational efficiencies in our estimates; for contracts with U.S. federal government clients, including our NMCI contract, the government's ability to cancel the contract or impose additional terms and conditions due to changes in government funding, deployment schedules, military action or otherwise; our ability to access the capital markets, including our ability to obtain capital leases, surety bonds and letters of credit; the impact of third-party benchmarking provisions in certain client contracts; the impact on a historical and prospective basis of accounting rules and pronouncements; the impact of claims, litigation and governmental investigations; the success of our multi-year plan and cost-cutting initiatives and the timing and amount of any resulting benefits; the impact of acquisitions and divestitures; a reduction in the carrying value of our assets; the impact of a bankruptcy or financial difficulty of a significant client on the financial and other terms of our agreements with that client; with respect to the funding of pension plan obligations, the performance of our investments relative to our assumed rate of return; changes in tax laws and interpretations and failure to obtain treaty relief from double taxation; failure to obtain or protect intellectual property rights; fluctuations in foreign currency, exchange rates and interest rates; the impact of competition on pricing, revenues and margins; and the degree to which third parties continue to outsource IT and business processes.

We disclaim any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as may be required by law.

MANAGEMENT REPORT

MANAGEMENT RESPONSIBILITY FOR FINANCIAL INFORMATION

Responsibility for the objectivity, integrity, and presentation of the accompanying financial statements and other financial information presented in this report rests with EDS management. The accompanying financial statements have been prepared in accordance with accounting principles generally accepted in the United States. The financial statements include amounts that are based on estimates and judgments which management believes are reasonable under the circumstances.

KPMG LLP, independent auditors, is retained to audit EDS' consolidated financial statements and management's assessment of the effectiveness of the company's internal control over financial reporting. Its accompanying report is based on audits conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States).

The Audit Committee of the Board of Directors is composed solely of independent, non-employee directors, and is responsible for recommending to the Board the independent auditing firm to be retained for the coming year. The Audit Committee meets regularly and privately with the independent auditors, with the company's internal auditors, and with management to review accounting, auditing, internal control and financial reporting matters.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management of EDS is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rule 13a-15(f) or 15d-15(f) promulgated under the Securities Exchange Act of 1934. Those rules define internal control over financial reporting as a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America. EDS' internal control over financial reporting includes those policies and procedures that:

- pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of EDS;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with accounting principles generally accepted in the United States of America;
- provide reasonable assurance that receipts and expenditures of EDS are being made only in accordance with authorization of management and directors of EDS; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of EDS' assets that could have a material effect on the consolidated financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

EDS management assessed the effectiveness of EDS' internal control over financial reporting as of December 31, 2006. In making this assessment, management used the criteria described in "*Internal Control – Integrated Framework*" issued by the Committee of Sponsoring Organizations of the Treadway Commission. Management's assessment included an evaluation of the design of EDS' internal control over financial reporting and testing of the operational effectiveness of its internal control over financial reporting. Management reviewed the results of its assessment with the Audit Committee of our Board of Directors.

Based on this assessment and those criteria, management believes that EDS maintained, in all material respects, effective internal control over financial reporting as of December 31, 2006.

KPMG LLP, independent registered public accounting firm, who audited and reported on EDS' consolidated financial statements included in this report, has issued an attestation report on management's assessment of internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors
Electronic Data Systems Corporation:

We have audited management's assessment, included in the accompanying Management's Report on Internal Control Over Financial Reporting, that Electronic Data Systems Corporation and subsidiaries (the "Company") maintained effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, management's assessment that the Company maintained effective internal control over financial reporting as of December 31, 2006, is fairly stated, in all material respects, based on criteria established in *Internal Control – Integrated Framework* issued by COSO. Also, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control – Integrated Framework* issued by COSO.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Electronic Data Systems Corporation and subsidiaries as of December 31, 2006 and 2005, and the related consolidated statements of operations, shareholders' equity and comprehensive income (loss), and cash flows for each of the years in the three-year period ended December 31, 2006, and the related financial statement schedule, and our report dated March 1, 2007 expressed an unqualified opinion on those consolidated financial statements and schedule.

KPMG LLP
Dallas, Texas
March 1, 2007

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors
Electronic Data Systems Corporation:

We have audited the accompanying consolidated balance sheets of Electronic Data Systems Corporation and subsidiaries as of December 31, 2006 and 2005, and the related consolidated statements of operations, shareholders' equity and comprehensive income (loss), and cash flows for each of the years in the three-year period ended December 31, 2006. In connection with our audits of the consolidated financial statements, we have also audited the related financial statement schedule. These consolidated financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Electronic Data Systems Corporation and subsidiaries as of December 31, 2006 and 2005, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2006, in conformity with U.S. generally accepted accounting principles. Also in our opinion, the related financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 1 to the consolidated financial statements, during 2006, the Company adopted Statement of Financial Accounting Standards ("SFAS") No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans – An Amendment of FASB Statements No. 87, 88, 106, and 132R*, and during 2005, the Company adopted SFAS No. 123R, *Share-Based Payment*.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of Electronic Data Systems Corporation and subsidiaries' internal control over financial reporting as of December 31, 2006, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated March 1, 2007 expressed an unqualified opinion on management's assessment of, and the effective operation of, internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Description of Business

Electronic Data Systems Corporation is a professional services firm that offers its clients a portfolio of related services worldwide within the broad categories of infrastructure, applications and business process outsourcing services. The Company also provided management consulting services through its A.T. Kearney subsidiary which was sold in January 2006 (see Note 17). Services include the design, construction or management of computer networks, information systems, information processing facilities and business processes. As used herein, the terms "EDS" and the "Company" refer to Electronic Data Systems Corporation and its consolidated subsidiaries.

Principles of Consolidation

The consolidated financial statements include the accounts of EDS and its controlled subsidiaries. The Company defines control as a non-shared, non-temporary ability to make decisions that enable it to guide the ongoing activities of a subsidiary and the ability to use that power to increase the benefits or limit the losses from the activities of that subsidiary. Subsidiaries in which other shareholders effectively participate in significant operating decisions through voting or contractual rights are not considered controlled subsidiaries. The Company's investments in entities it does not control, but in which it has the ability to exercise significant influence over operating and financial policies, are accounted for under the equity method. Under such method, the Company recognizes its share of the subsidiaries' income (loss) in other income (expense). If the Company is the primary beneficiary of variable interest entities, the consolidated financial statements include the accounts of such entities. No variable interest entities were consolidated during the periods presented.

Earnings Per Share

Basic earnings per share of common stock is computed using the weighted-average number of common shares outstanding during the period. Diluted earnings per share amounts reflect the incremental increase in common shares outstanding assuming the exercise of all employee stock options and stock purchase contracts and the issuance of shares in respect of restricted stock units that would have had a dilutive effect on earnings per share. Diluted earnings per share also assumes that any dilutive convertible debt outstanding was converted at the later of the date of issuance or the beginning of the period, with related interest and outstanding common shares adjusted accordingly. Following is a reconciliation of the number of shares used in the calculation of basic and diluted earnings per share for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Basic earnings per share of common stock:			
Weighted-average common shares outstanding	519	519	501
Effect of dilutive securities (Note 11):			
Restricted stock units	2	2	–
Stock options	8	5	–
Diluted earnings per share of common stock:			
Weighted-average common and common equivalent shares outstanding	529	526	501

All common stock options, restricted stock units, the assumed conversion of convertible debt and the effect of forward purchase contracts were excluded from the computation of diluted earnings per share for 2004 because their inclusion would have been antidilutive.

Securities that were outstanding but were not included in the computation of diluted earnings per share because their effect was antidilutive are as follows for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Common stock options and warrants	15	42	75
Restricted stock units	–	–	7
Convertible debt and forward purchase contracts	20	20	28

Accounting Changes

The Company adopted Statement of Financial Accounting Standards ("SFAS") No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans – An Amendment of FASB Statements No. 87, 88, 106, and 132R*, effective December 31, 2006. This Statement requires recognition of the funded status of a defined benefit plan in the statement of financial position as an asset or liability if the plan is overfunded or underfunded, respectively. Changes in the funded status of a plan are required to be recognized in the year in which the changes occur, and reported in comprehensive income as a separate component of stockholders' equity. Further, certain gains and losses that were not previously recognized in the financial statements are required to be reported in comprehensive income, and certain disclosure requirements were changed. These changes are effective for fiscal years ending after December 15, 2006, with no retroactive restatement of prior periods. SFAS No. 158 also requires companies to measure a plan's assets and obligations that determine its funded status as of the end of the employer's fiscal year instead of the October 31 early measurement date the Company currently uses. This change is effective for fiscal years ending after December 15, 2008. The Company has not yet determined the impact of this change. Adoption of this standard did not impact the Company's compliance with financial debt covenants.

Following is the incremental impact of applying SFAS No. 158 on individual line items in the consolidated balance sheet at December 31, 2006 (in millions):

	Before Application of SFAS 158	Adjustments	After Application of SFAS 158
Investments and other assets	$ 872	$ (236)	$ 636
Deferred income taxes	706	255	961
Total assets	17,935	19	17,954
Accrued liabilities	2,653	36	2,689
Total current liabilities	5,198	36	5,234
Pension benefit liability	855	549	1,404
Accumulated other comprehensive income (loss)	384	(566)	(182)
Total shareholders' equity	8,462	(566)	7,896
Total liabilities and shareholders' equity	17,935	19	17,954

The Company adopted SFAS No. 123R, *Share-Based Payment*, as of January 1, 2005, using the modified prospective application method. This statement requires the recognition of compensation expense when an entity obtains employee services in stock-based payment transactions. This change in accounting resulted in the recognition of compensation expense of $123 million ($83 million net of tax) and $160 million ($110 million net of tax), respectively, for the years ended December 31, 2006 and 2005. Compensation expense presented in the 2006 consolidated statement of operations includes $75 million in cost of revenues, $32 million in selling, general and administrative, and $16 million in income (loss) from discontinued operations. Compensation expense presented in the 2005 consolidated statement of operations includes $94 million in cost of revenues, $40 million in selling, general and administrative, and $26 million in income (loss) from discontinued operations.

Prior to January 1, 2005, the Company recognized compensation cost associated with stock-based awards under the recognition and measurement principles of Accounting Principles Board ("APB") Opinion No. 25, *Accounting for Stock Issued to Employees*, and related interpretations. Under APB No. 25, the difference between the quoted market price as of the date of the grant and the contractual purchase price of shares was charged to operations over the vesting period on a straight-line basis. No compensation cost was recognized for fixed stock options with exercise prices equal to the market price of the stock on the dates of grant and shares acquired by employees under the EDS Stock Purchase Plan or Nonqualified Stock Purchase Plan.

Pro forma net income and earnings per share disclosures as if the Company recorded compensation expense based on fair value for stock-based awards have been presented in accordance with the provisions of SFAS No. 148, *Accounting for Stock-Based Compensation – Transition and Disclosure*, and are as follows for the year ended December 31, 2004 (in millions, except per share amounts):

	2004
Net income:	
As reported	$ 158
Stock-based compensation costs included in reported net income, net of related tax effects	27
Total stock-based employee compensation expense determined under fair value-based method for all awards, net of related tax effects	(165)
Pro forma	$ 20
Basic earnings per share of common stock:	
As reported	$ 0.32
Pro forma	0.04
Diluted earnings per share of common stock:	
As reported	$ 0.32
Pro forma	0.04

Accounts Receivable

Reserves for uncollectible trade receivables are established when collection of amounts due from clients is deemed improbable. Indicators of improbable collection include client bankruptcy, client litigation, industry downturns, client cash flow difficulties, or ongoing service or billing disputes. Receivables more than 180 days past due are automatically reserved unless persuasive evidence of probable collection exists. Accounts receivable are shown net of allowances of $71 million and $69 million at December 31, 2006 and 2005, respectively.

Marketable Securities

Marketable securities consist of government and agency obligations, corporate debt and corporate equity securities. The Company classifies all of its debt and marketable equity securities as trading or available-for-sale. All such investments are recorded at fair value. Changes in net unrealized holding gains (losses) on trading securities are recognized in income, whereas changes in net unrealized holding gains (losses) on available-for-sale securities are reported as a component of accumulated other comprehensive loss, net of tax, in shareholders' equity until realized.

Investments in marketable securities are monitored for impairment and written down to fair value with a charge to earnings if a decline in fair value is judged to be other than temporary. The Company considers several factors to determine whether a decline in the fair value of an equity security is other than temporary, including the length of time and the extent to which the fair value has been less than carrying value, the financial condition of the investee, and the intent and ability of the Company to retain the investment for a period of time sufficient to allow a recovery in value.

Property and Equipment

Property and equipment are carried at cost. Depreciation of property and equipment is calculated using the straight-line method over the shorter of the asset's estimated useful life or the term of the lease in the case of leasehold improvements. The ranges of estimated useful lives are as follows:

	Years
Buildings	40-50
Facilities	5-20
Computer equipment	3-5
Other equipment and furniture	5-20

The Company reviews its property and equipment for impairment whenever events or changes in circumstances indicate the carrying values of such assets may not be recoverable. For property and equipment to be held and used, impairment is determined by a comparison of the carrying value of the asset to the future undiscounted net cash flows expected to be generated by the asset. If such assets are determined to be impaired, the impairment recognized is the amount by which the carrying value of the assets exceeds the fair value of the assets. Property and equipment to be disposed of by sale is carried at the lower of then current carrying value or fair value less cost to sell.

Investments and Other Assets

Investments in non-marketable equity securities are monitored for impairment and written down to fair value with a charge to earnings if a decline in fair value is judged to be other than temporary. The fair values of non-marketable equity securities are determined based on quoted market prices. If quoted market prices are not available, fair values are estimated based on an evaluation of numerous indicators including, but not limited to, offering prices of recent issuances of the same or similar equity instruments, quoted market prices for similar companies and comparisons of recent financial information, operating plans, budgets, market studies and client information to the information used to support the initial valuation of the investment. The Company considers several factors to determine whether a decline in the fair value of a non-marketable equity security is other than temporary, including the length of time and the extent to which the fair value has been less than carrying value, the financial condition of the investee, and the intent and ability of the Company to retain the investment for a period of time sufficient to allow a recovery in value.

Goodwill and Other Intangibles

The cost of acquired companies is allocated to the assets acquired and liabilities assumed based on estimated fair values at the date of acquisition. Costs allocated to identifiable intangible assets with finite lives, other than purchased software, are generally amortized on a straight-line basis over the remaining estimated useful lives of the assets, as determined by underlying contract terms or appraisals. Such lives range from one to 14 years. Identifiable intangible assets with indefinite useful lives are not amortized but instead tested for impairment annually, or more frequently if events or changes in circumstances indicate that the asset might be impaired. Intangible assets with indefinite useful lives are impaired when the carrying value of the asset exceeds their fair value.

The excess of the cost of acquired companies over the net amounts assigned to assets acquired and liabilities assumed is recorded as goodwill. Goodwill is not amortized but instead tested for impairment at least annually. The first step of the impairment test is a comparison of the fair value of a reporting unit to its carrying value. Reporting units are the geographic components of its reportable segments that share similar economic characteristics. The fair value of a reporting unit is estimated using the Company's projections of discounted future operating cash flows of the unit. Goodwill allocated to a reporting unit whose fair value is equal to or greater than its carrying value is not impaired and no further testing is required. A reporting unit whose fair value is less than its carrying value requires a second step to determine whether the goodwill allocated to the unit is impaired. The second step of the goodwill impairment test is a comparison of the implied fair value of a reporting unit's goodwill to its carrying value. The implied fair value of a reporting unit's goodwill is determined by allocating the fair value of the entire reporting unit to the assets and liabilities of that unit, including any unrecognized intangible assets, based on fair value. The excess of the fair value of the entire reporting unit over the amounts allocated to the identifiable assets and liabilities of the unit is the implied fair value of the reporting unit's goodwill. Goodwill of a reporting unit is impaired when its carrying value exceeds its implied fair value. Impaired goodwill is written down to its implied fair value with a charge to expense in the period the impairment is identified. As this impairment test is based on the Company's assessment of the fair value of its reporting units, future changes to these estimates could also cause an impairment of a portion of the Company's goodwill balance.

The Company conducts an annual impairment test for goodwill as of December 1st. The Company determines the timing and frequency of additional goodwill impairment tests based on an ongoing assessment of events and circumstances that would more than likely reduce the fair value of a reporting unit below its carrying value. Events or circumstances that might require the need for more frequent tests include, but are not limited to: the loss of a number of significant clients, the identification of other impaired assets within a reporting unit, the disposition of a significant portion of a reporting unit, or a significant adverse change in business climate or regulations. The Company also considers the amount by which the fair value of a particular reporting unit exceeded its carrying value in the most recent goodwill impairment test to determine whether more frequent tests are necessary.

Purchased or licensed software not subject to a subscription agreement is capitalized and amortized on a straight-line basis, generally over two to five years. Costs of developing and maintaining software systems incurred primarily in connection with client contracts are considered contract costs. Purchased software and certain development costs for computer software sold, leased or otherwise marketed as a separate product or as part of a product or process are capitalized and amortized on a product-by-product basis over their remaining estimated useful lives at the greater of straight-line or the ratio that current gross revenues for a product bear to the total of current and anticipated future gross revenues for that product. Estimated useful lives of software products to be sold, leased or otherwise marketed range from three to seven years. Software development costs incurred to meet the Company's internal needs are capitalized and amortized on a straight-line basis over three to five years. Software under subscription arrangements, whereby the software provider makes available current software products as well as products developed or acquired during the term of the arrangement, are executory contracts and expensed ratably over the subscription term.

Sales of Financial Assets

The Company accounts for the sale of financial assets when control over the financial asset is relinquished. The Company sold $51 million of financial assets, primarily lease receivables, during 2004. In most cases, the Company sold lease receivables to a legally isolated securitization trust. If a trust is not used, the receivables are sold to an independent substantive financial institution. None of these transactions resulted in any significant gain or loss, or servicing asset or servicing liability. No financial assets were sold by the Company during 2006 and 2005.

Revenue Recognition and Deferred Contract Costs

The Company provides IT and business process outsourcing services under time-and-material, unit-price and fixed-price contracts, which may extend up to 10 or more years. Services provided over the term of these arrangements may include one or more of the following: IT infrastructure support and management; IT system and software maintenance; application hosting; the design, development, and/or construction of software and systems ("Construct Service"); transaction processing; business process management and consulting services.

If a contract involves the provision of a single element, revenue is generally recognized when the product or service is provided and the amount earned is not contingent upon any future event. If the service is provided evenly during the contract term but service billings are irregular, revenue is recognized on a straight-line basis over the contract term. However, if the single service is a Construct Service, revenue is recognized under the percentage-of-completion method using a zero-profit methodology. Under this method, costs are deferred until contractual milestones are met, at which time the milestone billing is recognized as revenue and an amount of deferred costs is recognized as expense so that cumulative profit equals zero. If the milestone billing exceeds deferred costs, then the excess is recorded as deferred revenue. When the Construct Service is completed and the final milestone met, all unrecognized costs, milestone billings, and profit are recognized in full. If the contract does not contain contractual milestones, costs are expensed as incurred and revenue is recognized in an amount equal to costs incurred until completion of the Construct Service, at which time any profit would be recognized in full. If total costs are estimated to exceed revenue for the Construct Service, then a provision for the estimated loss is made in the period in which the loss first becomes apparent.

If a contract involves the provision of multiple service elements, total estimated contract revenue is allocated to each element based on the relative fair value of each element. The amount of revenue allocated to each element is limited to the amount that is not contingent upon the delivery of another element in the future. Revenue is then recognized for each element as described above for single-element contracts, except revenue recognized on a straight-line basis for a non-Construct Service will not exceed amounts currently billable unless the excess revenue is recoverable from the client upon any contract termination event. If the amount of revenue allocated to a Construct Service is less than its relative fair value, costs to deliver such service equal to the difference between allocated revenue and the relative fair value are deferred and amortized over the contract term. If total Construct Service costs are estimated to exceed the relative fair value for the Construct Service contained in a multiple-element arrangement, then a provision for the estimated loss is made in the period in which the loss first becomes apparent. If fair value is not determinable for all elements, the contract is treated as one accounting unit and revenue is recognized using the proportional performance method.

The Company also defers and subsequently amortizes certain set-up costs related to activities that enable the provision of contracted services to the client. Such activities include the relocation of transitioned employees, the migration of client systems or processes, and the exit of client facilities acquired upon entering into the client contract. Deferred contract costs, including set-up costs, are amortized on a straight-line basis over the remaining original contract term unless billing patterns indicate a more accelerated method is appropriate. The recoverability of deferred contract costs associated with a particular contract is analyzed on a periodic basis using the undiscounted estimated cash flows of the whole contract over its remaining contract term. If such undiscounted cash flows are insufficient to recover the long-lived assets and deferred contract costs, including contract concessions paid to the client, the deferred contract costs and contract concessions are written down by the amount of the cash flow deficiency. If a cash flow deficiency remains after reducing the balance of the deferred contract costs and contract concessions to zero, any remaining long-lived assets are evaluated for impairment. Any such impairment recognized would equal the amount by which the carrying value of the long-lived assets exceeds the fair value of those assets.

The Company's software licensing arrangements typically include multiple elements, such as software products, post-contract customer support, consulting and training. The aggregate arrangement fee is allocated to each of the undelivered elements in an amount equal to its fair value, with the residual of the arrangement fee allocated to the delivered elements. Fair values are based upon vendor-specific objective evidence. Fees allocated to each software element of the arrangement are recognized as revenue when the following criteria have been met: a) a written contract for the license of software has been executed, b) the Company has delivered the product to the customer, c) the license fee is fixed or determinable, and d) collectibility of the resulting receivable is deemed probable. If evidence of fair value of the undelivered elements of the arrangement does not exist, all revenue from the arrangement is deferred until such time evidence of fair value does exist, or until all elements of the arrangement are delivered.

Fees allocated to post-contract customer support are recognized as revenue ratably over the support period. Fees allocated to other services are recognized as revenue as the service is performed.

Deferred revenue of $1,669 million and $1,329 million at December 31, 2006 and 2005, respectively, represented billings in excess of amounts earned on certain contracts.

Currency Translation

Assets and liabilities of non-U.S. subsidiaries whose functional currency is not the U.S. dollar are translated at current exchange rates. Revenue and expense accounts are translated using an average rate for the period. Translation gains and losses are reflected in the accumulated other comprehensive loss component of shareholders' equity net of income taxes. Cumulative currency translation adjustment gains included in shareholders' equity were $502 million, $189 million and $482 million at December 31, 2006, 2005 and 2004, respectively. Net currency transaction gains (losses) are reflected in other income (expense) in the consolidated statements of operations and were $(18) million, $6 million and $(20) million, respectively, for the years ended December 31, 2006, 2005 and 2004.

Financial Instruments and Risk Management

Following is a summary of the carrying amounts and fair values of the Company's significant financial instruments at December 31, 2006 and 2005 (in millions):

	2006		2005	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Available-for-sale marketable securities (Note 2)	$ 45	$ 45	$ 1,321	$ 1,321
Investments in securities, joint ventures and partnerships, excluding equity method investments (Note 5)	10	10	23	23
Long-term debt (Note 8)	(3,092)	(3,196)	(3,253)	(3,351)
Foreign currency forward contracts, net asset (liability)	29	29	(5)	(5)
Interest rate swap agreements, net liability	(97)	(97)	(98)	(98)

Current marketable securities are carried at their estimated fair value based on current market quotes. The fair values of certain long-term investments are estimated based on quoted market prices for these or similar investments. For other investments, various methods are used to estimate fair value, including external valuations and discounted cash flows. The fair value of long-term debt is estimated based on the quoted market prices for the same or similar issues or based on the current rates offered to the Company for instruments with similar terms, degree of risk and remaining maturities. The fair value of foreign currency forward and interest rate swap contracts represents the estimated amount required to settle the contracts using current market exchange or interest rates. The carrying values of other financial instruments, such as cash equivalents, accounts and notes receivable, and accounts payable, approximate their fair value.

The Company makes investments, receives revenues and incurs expenses in many countries and has exposure to market risks arising from changes in interest rates, foreign exchange rates and equity prices. The Company has also invested in start-up companies to gain access to technology and marketplaces in which the Company intended to grow its business. The Company's ability to sell these investments may be constrained by market or other factors. Derivative financial instruments are used to hedge against these risks by creating offsetting market positions. The Company does not hold or issue derivative financial instruments for trading purposes.

The notional amounts of derivative contracts, summarized below as part of the description of the instruments utilized, do not necessarily represent the amounts exchanged by the parties and thus are not necessarily a measure of the exposure of the Company resulting from its use of derivatives. The amounts exchanged by the parties are normally calculated on the basis of the notional amounts and the other terms of the derivatives.

Foreign Currency Risk

The Company has significant international sales and purchase transactions in foreign currencies. The Company enters into foreign currency forward contracts and may enter into currency options with durations of generally less than 30 days to hedge such transactions. These derivative instruments are employed to eliminate or minimize certain foreign currency exposures that can be confidently identified and quantified. Generally, these instruments are not designated as hedges for accounting purposes, and changes in the fair value of these instruments are recognized immediately in other income (expense). The Company's currency hedging activities are focused on exchange rate movements, primarily in Canada, Mexico, the United Kingdom, Western European

countries that use the euro as a common currency, Australia, India, Israel and Switzerland. At December 31, 2006 and 2005, the Company had forward exchange contracts to purchase various foreign currencies in the amount of $1.9 billion and $1.9 billion, respectively, and to sell various foreign currencies in the amount of $1.0 billion and $1.2 billion, respectively.

Interest Rate Risk

The Company enters into interest rate swap agreements that convert fixed-rate instruments to variable-rate instruments to manage interest rate risk. The derivative financial instruments are designated and documented as fair value hedges at the inception of the contract. Changes in fair value of derivative financial instruments are recognized in earnings as an offset to changes in fair value of the underlying exposure which are also recognized in other income (expense). The impact on earnings from recognizing the fair value of these instruments depends on their intended use, their hedge designation, and their effectiveness in offsetting the underlying exposure they are designed to hedge.

The Company had interest rate swap fair value hedges outstanding in the notional amount of $1.8 billion in connection with its long-term notes payable at December 31, 2006 and 2005 (see Note 8). Under the swaps, the Company receives fixed rates ranging from 6.0% to 7.125% and pays floating rates tied to the London Interbank Offering Rate ("LIBOR"). The weighted-average floating rates were 7.64% and 6.39% at December 31, 2006 and 2005, respectively. At December 31, 2006 and 2005, respectively, the Company had $700 million of swaps and related debt which contained the same critical terms. Accordingly, no gain or loss relating to the change in fair value of the swap and related hedged item was recognized in earnings. At December 31, 2006 and 2005, $1.1 billion of the interest rate swaps contained different terms than the related underlying debt. Accordingly, the Company recognized in earnings the change in fair value of the interest rate swap and underlying debt which amounted to gains (losses) of $2.8 million and $(5.5) million during 2006 and 2005, respectively. Such gains are included in other income (expense) in the accompanying consolidated statements of operations.

Comprehensive Income (Loss) and Shareholders' Equity

Comprehensive income (loss) includes all changes in equity during a period, except those resulting from investments by and distributions to owners. For the years ended December 31, 2006, 2005 and 2004, reclassifications from accumulated other comprehensive loss to net income of net gains (losses) recognized on marketable security transactions were $(7) million, $(3) million and $1 million, net of the related tax expense (benefit) of $(4) million, $(1) million and $0.4 million, respectively.

Following is a summary of changes within each classification of accumulated other comprehensive loss for the years ended December 31, 2006 and 2005 (in millions):

	Cumulative Translation Adjustments	Unrealized Gains (Losses) on Securities	Defined Benefit Pension Plans	Accumulated Other Comprehensive Loss
Balance at December 31, 2004	$ 482	$ (3)	$ (538)	$ (59)
Change	(293)	(1)	(14)	(308)
Balance at December 31, 2005	189	(4)	(552)	(367)
Change	313	4	(132)	185
Balance at December 31, 2006	$ 502	$ –	$ (684)	$ (182)

In connection with its employee stock incentive plans, the Company issued 11.4 million, 4.5 million and 7.6 million shares of treasury stock at a cost of $332 million, $252 million and $458 million during 2006, 2005 and 2004, respectively. The difference between the cost and fair value at the date of issuance of such shares has been recognized as a charge to retained earnings of $107 million, $166 million and $278 million in the consolidated statements of shareholders' equity and comprehensive income (loss) during 2006, 2005 and 2004, respectively.

On February 21, 2006, the Company announced that its Board of Directors had authorized the Company to repurchase up to $1 billion of its outstanding common stock over the next 18 months in open market purchases or privately negotiated transactions. In connection with the share repurchase authorization, on February 23, 2006, the Company entered into a $400 million accelerated share repurchase agreement with a financial institution pursuant to which the Company expected to repurchase approximately 15.0 million shares of its common stock at a price of $26.61 per share. Under the final settlement of the agreement, the financial institution repurchased 15.3 million shares of common stock in the open market during the repurchase period which ended on May 31, 2006. The final amount paid under the arrangement was $26.16 per share, excluding fees and commissions. The Company also repurchased 10.9 million shares in the open market at a cost of $283 million, before commissions, during the year ended December 31, 2006.

During 2006, cumulative translation adjustments of approximately $40 million were transferred from accumulated other comprehensive loss to net income due to the divestitures of certain non-U.S. investments (see Notes 17 and 19).

Income Taxes

The Company provides for deferred taxes under the asset and liability method. Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be reversed. The deferral method is used to account for investment tax credits. Valuation allowances are recorded to reduce deferred tax assets to an amount whose realization is more likely than not. Income tax liabilities are recorded whenever there is a difference between amounts reported by the Company in its tax returns and the amounts the Company believes it would likely pay in the event of an examination by taxing authorities. The Company accrues interest on such amounts and includes the associated expense in provision (benefit) for income taxes in the accompanying consolidated statements of operations. Income taxes payable are classified in the accompanying consolidated balance sheets based on their estimated payment date.

Statements of Cash Flows

The Company considers the following asset classes with original maturities of three months or less to be cash equivalents: certificates of deposit, commercial paper, repurchase agreements and money market funds.

Use of Estimates

The preparation of the consolidated financial statements in conformity with generally accepted accounting principles in the United States requires management to make estimates, judgments and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Because of the use of estimates inherent in the financial reporting process, actual results could differ from those estimates. Areas in which significant judgments and estimates are used include, but are not limited to, cost estimation for Construct Service elements, projected cash flows associated with recoverability of deferred contract costs, contract concessions and long-lived assets, liabilities associated with pensions and performance guarantees, receivables collectibility, and loss accruals for litigation, exclusive of legal fees which are expensed as services are received. It is reasonably possible that events and circumstances could occur in the near term that would cause such estimates to change in a manner that would be material to the consolidated financial statements.

Concentration of Credit Risk

Accounts receivable, net, from General Motors ("GM") and its affiliates totaled $342 million and $256 million as of December 31, 2006 and 2005, respectively. In addition, the Company has several large contracts with major U.S. and foreign corporations, each of which may result in the Company carrying a receivable balance between $50 million and $300 million at any point in time. At December 31, 2006 and 2005, the Company had net operating receivables of $137 million and $169 million, respectively, and investments in leveraged leases of $28 million and $55 million, respectively, associated with travel-related industry clients, primarily airlines. Other than operating receivables from GM and aforementioned contracts, concentrations of credit risk with respect to accounts receivable are generally limited due to the large number of clients forming the Company's client base and their dispersion across different industries and geographic areas.

The Company is exposed to credit risk in the event of nonperformance by counterparties to derivative contracts. Because the Company deals only with major commercial banks with high-quality credit ratings, the Company believes the risk of nonperformance by any of these counterparties is remote.

Reclassifications

Certain reclassifications have been made to the 2005 and 2004 consolidated financial statements to conform to the 2006 presentation.

NOTE 2: MARKETABLE SECURITIES

Following is a summary of current available-for-sale marketable securities at December 31, 2006 and 2005 (in millions):

	2006			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value
Equity securities	$ 45	$ 1	$ (1)	$ 45
Total current available-for-sale securities	$ 45	$ 1	$ (1)	$ 45

	2005			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value
Government and agency obligations	$ 192	$ –	$ (1)	$ 191
Obligations of states and political subdivisions	19	–	–	19
Corporate debt securities	319	–	(2)	317
Mortgage-backed securities	306	–	(4)	302
Asset-backed securities	454	–	(4)	450
Total debt securities	1,290	–	(11)	1,279
Equity securities	43	–	(1)	42
Total current available-for-sale securities	$ 1,333	$ –	$ (12)	$ 1,321

Following is a summary of sales of available-for-sale securities for the years ended December 31, 2006, 2005 and 2004 (in millions). Specific identification was used to determine cost in computing realized gain or loss.

	2006	2005	2004
Proceeds from sales	$ 2,793	$ 1,434	$ 956
Gross realized gains	10	1	3
Gross realized losses	(12)	(8)	(4)

NOTE 3: PROPERTY AND EQUIPMENT

Following is a summary of property and equipment, net, at December 31, 2006 and 2005 (in millions):

	2006	2005
Land	$ 89	$ 86
Buildings and facilities	1,460	1,599
Computer equipment	4,586	4,620
Other equipment and furniture	429	424
Subtotal	6,564	6,729
Less accumulated depreciation	(4,385)	(4,762)
Total	$ 2,179	$ 1,967

During 2005, the Company sold sixteen domestic and international real estate properties in connection with its efforts to improve its cost competitiveness and enhance workplace capacity usage. Net proceeds from the sale were $178 million. Fourteen properties involved in the sale have been leased back by the Company for various extended periods. A deferred net gain of $14 million has been allocated to the various leased properties and will be recognized by the Company over the respective term of each lease. The Company recognized a net gain of $3 million on the sale of the remaining properties which is included in other income in the 2005 consolidated statement of operations.

The Company recorded a non-cash impairment charge of $375 million in 2004 to write-down long-lived assets used on the Company's Navy Marine Corps Intranet ("NMCI") contract to estimated fair value. The impairment charge is reported as a component of cost of revenues in the consolidated statement of operations and is reflected in the results of the U.S. Government segment. Fair value was measured by probability weighting future contract pre-tax cash flows discounted at a pre-tax risk free discount rate. The decline in the fair value of these assets is primarily a result of lower estimates of future revenues as a result of several events occurring during 2004. Such events include the failure to meet seat cutover schedules, a revision of the timeline for meeting performance service levels contained in a contract amendment signed September 30, 2004, a deceleration in customer satisfaction improvement rates, and delays in signing certain anticipated contract modifications and additions. Remaining long-lived assets and lease receivables associated with the contract totaled approximately $278 million and $295 million, respectively, at December 31, 2006.

The Company had a significant commercial contract under which it provided various IT services using the legacy IT systems acquired from the client while developing and deploying a new IT system dedicated to that client. This contract experienced delays in its development and construction phases, and milestones in the contract had been missed. Throughout the contract period, the Company negotiated with the client to resolve critical issues, including those associated with the pricing and technical specifications for the new IT system. In July 2004, the Company and the client reached an agreement to terminate the existing contract effective as of August 1, 2004, provide transition services for a limited period thereafter and settle each party's outstanding claims. During 2004, the Company recognized impairment charges of $128 million to write-down certain assets to fair value. In addition, the Company recognized $14 million of shutdown costs during 2004 to record contract-related vendor commitments and employee severance obligations associated with the contract. All of the aforementioned amounts associated with this contract are included in cost of revenues in the consolidated statements of operations and are reflected in the results of the Americas segment.

NOTE 4: DEFERRED CONTRACT COSTS

The Company defers certain costs relating to construction and set-up activities on client contracts. Following is a summary of deferred costs for the years ended December 31, 2006 and 2005 (in millions):

	Gross Carrying Amount	Accumulated Amortization	Total
Balance at December 31, 2004	$ 1,594	$ (886)	$ 708
Net Change	(50)	(20)	(70)
Balance at December 31, 2005	1,544	(906)	638
Net Change	367	(198)	169
Balance at December 31, 2006	$ 1,911	$ (1,104)	$ 807

During 2005, the Company identified deterioration in the projected performance of one of its commercial contracts based on, among other things, a change in management's judgment regarding the amount and likelihood of achieving anticipated benefits from contract-specific productivity initiatives, primarily related to the length of time necessary to achieve cost savings from planned infrastructure optimization initiatives. The Company determined that the estimated undiscounted cash flows of the contract over its remaining term were insufficient to recover the contract's deferred contract costs. As a result, the Company recognized a non-cash impairment charge of $37 million in the second quarter of 2005 to write-off the contract's deferred contract costs. The impairment charge is reported as a component of cost of revenues in the 2005 consolidated statement of operations and is included in the results of the Americas segment. Remaining long-lived assets associated with this contract totaled $168 million at December 31, 2006. The current estimate of cash flows includes cost reductions resulting from the expected optimization of the contract's service delivery infrastructure based on project plans and anticipated vendor rate reductions based on historical and industry trends. Some of the project plans have near-term milestones that are critical to meeting overall cost reduction goals. It is reasonably possible that these milestones may not be met or actual cost savings from these and other planned initiatives may not materialize in the near-term and, as a result, remaining long-lived assets associated with this contract will become fully impaired. The Company continues to pursue several opportunities to improve the financial performance of this contract, including leveraging the infrastructure through the addition of new business opportunities with the client.

Estimated amortization expense related to deferred costs at December 31, 2006 for each of the years in the five-year period ending December 31, 2011 and thereafter is (in millions): 2007 – $215; 2008 – $164; 2009 – $153; 2010 – $113; 2011 – $60; and thereafter – $102.

NOTE 5: INVESTMENTS AND OTHER ASSETS

Following is a summary of investments and other assets at December 31, 2006 and 2005 (in millions):

	2006	2005
Lease contracts receivable (net of principal and interest on non-recourse debt)	$ 45	$ 52
Estimated residual values of leased assets (not guaranteed)	22	22
Unearned income, including deferred investment tax credits	(20)	(25)
Total investment in leveraged leases (excluding deferred taxes of $17 million at December 31, 2006 and $18 million at December 31, 2005)	47	49
Leveraged lease partnership investment	28	55
Investments in equipment for lease	142	182
Investments in joint ventures and partnerships	44	58
Deferred pension costs	92	72
Other	283	268
Total	$ 636	$ 684

The Company holds interests in various equipment leases financed with non-recourse borrowings at lease inception accounted for as leveraged leases. The Company's investment in leveraged leases is comprised of a fiber optic equipment leveraged lease with a subsidiary of Verizon signed in 1988. For U.S. federal income tax purposes, the Company receives the investment tax credit (if available) at lease inception and has the benefit of tax deductions for depreciation on the leased asset and for interest on the non-recourse debt. All non-recourse borrowings have been satisfied in relation to these leases.

The Company holds an equity interest in a partnership which holds leveraged aircraft lease investments. The Company accounts for its interest in the partnership under the equity method. The carrying amounts of the Company's remaining equity interest in the partnership were $28 million and $55 million, respectively, at December 31, 2006 and 2005. The decrease in the carrying amount in 2006 was due to the sale of certain lease investments in the partnership and a related cash distribution to the Company. During 2005, the Company recorded write-downs of its investment in the partnership due to uncertainties regarding the recoverability of the partnership's investments in aircraft leased to Delta Air Lines which filed for bankruptcy on September 14, 2005, and the proposed sale of certain lease investments in the partnership. These write-downs were partially offset by the accelerated recognition of previously deferred investment tax credits associated with the investment. These write-downs totaled $35 million and are reflected in other income (expense) in the Company's 2005 consolidated statement of operations. During 2004, the Company recorded a write-down of $34 million of its investment in the partnership due to a reduction in the expected cash flows from the partnership. This reduction included a renegotiation of leases with a U.S. airline. These write-downs are reflected in other income (expense) in the Company's 2004 consolidated statement of operations. The partnership's remaining leveraged lease investments include leases with American Airlines and one non-U.S. airline. The Company's ability to recover its remaining investment in the partnership is dependent upon the continued payment of rentals by the lessees and the realization of expected future aircraft values. In the event such lessees are relieved from their obligation to pay such rentals as a result of bankruptcy, the investment in the partnership would be partially or wholly impaired.

Investments in securities, joint ventures and partnerships includes investments accounted for under the equity method of $34 million and $35 million at December 31, 2006 and 2005, respectively. The Company recognized impairment losses totaling $1 million in 2005 and 2004 due to other than temporary declines in the fair values of certain non-marketable equity securities. No impairment losses were recognized in 2006. These losses are reflected in other income (expense) in the Company's consolidated statements of operations.

Investments in equipment for lease is comprised of equipment to be leased to clients under long-term IT contracts and net investment in leased equipment associated with such contracts. On March 24, 2006, the Company and the Department of the Navy reached an agreement on the modification of the NMCI contract which, among other things, extended the contract term from 2007 to 2010 and defined the economic lives of certain desktop and infrastructure assets. As a result of the contract modification which changed lease payment terms, the Company recognized sales-type capital lease revenue of $116 million associated with certain assets previously accounted for as operating leases, and certain assets previously accounted for as capital leases with an aggregate net investment balance of $113 million are now being accounted for as operating leases. The net investment in leased equipment associated with the NMCI contract was $295 million and $408 million at December 31, 2006 and 2005, respectively. Future minimum lease payments to be received under the NMCI contract were $314 million and $358 million at December 31, 2006 and 2005, respectively. The unguaranteed residual values accruing to the Company were $3 million and $78 million, and unearned interest income related to these leases was $22 million and $28 million at December 31, 2006 and 2005, respectively. The net lease receivable balance is classified as components of prepaids and other and investments and other assets in the consolidated balance

sheets. Future minimum lease payments to be received were as follows: 2007 – $171 million; 2008 – $101 million; 2009 – $32 million; 2010 – $10 million.

During 2006, the Company sold land held for development to a real estate joint venture for cash and a minority equity interest in the joint venture. Net proceeds from the sale were $49 million. The Company recognized a net gain of $8 million on the sale which is included in other income (expense) in the consolidated statement of operations for the year ended December 31, 2006.

NOTE 6: GOODWILL AND OTHER INTANGIBLE ASSETS

Following is a summary of changes in the carrying amount of goodwill by segment for the years ended December 31, 2006 and 2005 (in millions):

	Americas	EMEA	Asia Pacific	Total
Balance at December 31, 2004	$ 1,965	$ 1,595	$ 75	$ 3,635
Additions	368	48	–	416
Deletions	–	(45)	–	(45)
Other	32	(199)	(7)	(174)
Balance at December 31, 2005	2,365	1,399	68	3,832
Additions	18	–	352	370
Deletions	(1)	–	–	(1)
Other	1	153	10	164
Balance at December 31, 2006	$ 2,383	$ 1,552	$ 430	$ 4,365

Goodwill additions resulted from acquisitions completed in 2006 and 2005 and include adjustments to the preliminary purchase price allocations (see Note 16). Goodwill deletions resulted from divestitures completed in 2005 (see Notes 17 and 19). Other changes to the carrying amount of goodwill were primarily due to foreign currency translation adjustments. The Company conducted its annual goodwill impairment tests as of December 1, 2006 and 2005. No impairment losses were identified as a result of these tests.

Intangible assets with definite useful lives are amortized over their respective estimated useful lives to their estimated residual values. Intangible assets with indefinite useful lives are not amortized but instead tested for impairment at least annually. Following is a summary of intangible assets at December 31, 2006 and 2005 (in millions):

	2006		
	Gross Carrying Amount	Accumulated Amortization	Total
Definite Useful Lives			
Software	$ 2,322	$ (1,771)	$ 551
Customer accounts	179	(100)	79
Other	354	(235)	119
Total	$ 2,855	$ (2,106)	$ 749

	2005		
	Gross Carrying Amount	Accumulated Amortization	Total
Definite Useful Lives			
Software	$ 2,101	$ (1,665)	$ 436
Customer accounts	192	(90)	102
Other	393	(291)	102
Total	$ 2,686	$ (2,046)	$ 640

Amortization expense related to intangible assets, including amounts pertaining to discontinued operations, was $394 million and $373 million for the years ended December 31, 2006 and 2005, respectively. Estimated amortization expense related to intangible assets subject to amortization at December 31, 2006 for each of the years in the five-year period ending December 31, 2011 and thereafter is (in millions): 2007 – $366; 2008 – $214; 2009 – $94; 2010 – $23; 2011 – $15; and thereafter – $37.

NOTE 7: ACCRUED LIABILITIES

Following is a summary of accrued liabilities at December 31, 2006 and 2005 (in millions):

	2006	2005
Accrued liabilities relating to:		
Contracts	$ 674	$ 609
Payroll	815	694
Restructuring activities	5	66
Property, sales and franchise taxes	333	266
Other	862	795
Total	$ 2,689	$ 2,430

NOTE 8: LONG-TERM DEBT

Following is a summary of long-term debt at December 31, 2006 and 2005 (in millions):

	2006		2005	
	Amount	Weighted-Average Rate	Amount	Weighted-Average Rate
Senior notes due 2013	$ 1,089	6.50%	$ 1,087	6.50%
Senior notes due 2009	700	7.12%	700	7.12%
Convertible notes due 2023	690	3.88%	690	3.88%
Senior notes due 2006 to 2029	299	7.45%	497	7.01%
Other, including capital lease obligations	314	–	279	–
Total	3,092		3,253	
Less current portion of long-term debt	(127)		(314)	
Long-term debt	$ 2,965		$ 2,939	

The Company had $1.1 billion aggregate principal amount of 6.0% unsecured Senior Notes due 2013 outstanding at December 31, 2006. Interest on the notes is payable semiannually. In the event the credit ratings assigned to the notes are below the Baa3 rating of Moody's or the rating BBB– of S&P, the interest rate payable on the notes will be 6.5%. On July 15, 2004, Moody's lowered the Company's long-term credit rating to Ba1 from Baa3. As a result of Moody's rating action, the interest rate payable on $1.1 billion of the Company's senior unsecured debt was increased from 6.0% to 6.5%. Further downgrades in the Company's credit rating will not affect this rate. However, in the event the Company's credit rating is subsequently increased to Baa3 or above by Moody's and its S&P credit rating remains at or above BBB–, this rate will return to 6.0%. The Company may redeem some or all of the notes at any time prior to maturity. In conjunction with the issuance of the Senior Notes, the Company entered into interest rate swaps with a notional amount of $1.1 billion under which the Company receives fixed rates of 6.0% and pays floating rates equal to the six-month LIBOR (5.37% at December 31, 2006) plus 2.275% to 2.494%. These interest rate swaps are accounted for as fair value hedges (see Note 1).

The Company had $690 million aggregate principal amount of 3.875% unsecured Convertible Senior Notes due 2023 outstanding at December 31, 2006. Interest on the notes is payable semiannually. Contingent interest is payable during any six-month period beginning July 2010 in which the average trading price of a note for the applicable five trading day reference period equals or exceeds 120% of the principal amount of the note as of the day immediately preceding the first day of the applicable six-month period. The five trading day reference period means the five trading days ending on the second trading day immediately preceding the relevant six-month interest period. The notes are convertible by holders into shares of the Company's common stock at an initial conversion rate of 29.2912 shares of common stock per $1,000 principal amount, representing an initial conversion price of $34.14 per share of common stock, under the following circumstances: a) during any calendar quarter, if the last reported sale price of EDS common stock for at least 20 trading days during the period of 30 consecutive trading days ending on the last trading day of the previous calendar quarter is greater than or equal to 120% or, following July 15, 2010, 110% of the conversion price per

share of EDS common stock on such last trading day; b) if the notes have been called for redemption; c) during any period in which the credit ratings assigned to the notes by either Moody's or S&P is lower than Ba2 or BB, respectively, or the notes are no longer rated by at least one of these rating services or their successors; or d) upon the occurrence of specified corporate transactions. The Company may redeem for cash some or all of the notes at any time on or after July 15, 2010. Holders have the right to require the Company to purchase the notes at a price equal to 100% of the principal amount of the notes plus accrued interest, including contingent interest and additional amounts, if any, on July 15, 2010, July 15, 2013 and July 15, 2018, or upon a fundamental change in the Company's ownership, control or the marketability of the Company's common stock prior to July 15, 2010.

In June 2001, the Company completed the public offering of 32.2 million units of a security, initially referred to as Income PRIDES, each with a stated price of $50 before underwriting discount. Each unit initially consisted of $50 principal amount of EDS senior notes due August 2006 and a purchase contract which obligated the investor to purchase $50 of EDS common stock no later than August 17, 2004 at a price ranging from $59.31 to $71.47 per share. On May 12, 2004, the Company completed an offer to exchange 0.843 shares of EDS common stock plus $1.58 in cash for each validly tendered and accepted Income PRIDES. The Company accepted all of the 28.2 million Income PRIDES tendered pursuant to the offer and issued 23.8 million shares plus $45 million in cash to the holders. The notes relating to the 4.0 million units not tendered totaling $198 million were remarketed on May 12, 2004 at an interest rate of 6.334% per annum and matured on August 17, 2006. Investors who did not tender their Income PRIDES in the exchange offer were obligated to purchase EDS common stock on August 17, 2004. On that date, the Company issued 3.3 million shares of common stock for consideration of $198 million.

As a result of the exchange, the Company increased shareholders' equity by $1,403 million in 2004 for the fair value of the purchase contracts and the fair value of the common stock issued. The remaining consideration was accounted for as an extinguishment of debt. Accordingly, the Company decreased liabilities by $1,418 million for the carrying value of the notes exchanged and the unpaid portion of contract adjustment payments that were recorded when the units were originally issued. In addition, the Company paid cash of $50 million and recognized a loss on debt extinguishment of $36 million in interest expense as a result of the exchange in 2004.

During 1999, the Company completed the public offering of senior notes in the principal amount of $1.5 billion. These notes included $500 million of 6.85% notes that matured on October 15, 2004, $700 million of 7.125% notes that mature in 2009, and $300 million of 7.45% notes that mature in 2029. The balance of the 7.45% notes was $299 million at December 31, 2006.

On June 30, 2006, the Company entered into a $1 billion Five Year Credit Agreement (the "Credit Agreement") with a bank group including Citibank, N.A., as Administrative Agent for the lenders, and Bank of America, N.A., as Syndication Agent. The Credit Agreement replaced the Company's $550 million Three-and-One-Half Year Multi Currency Revolving Credit Agreement entered into in September 2004 and its $450 million Three-Year Multi Currency Revolving Credit Agreement entered into in September 2003. The Credit Agreement may be used for general corporate borrowing purposes and issuance of letters of credit, with a $500 million sub-limit for letters of credit. The Credit Agreement contains certain financial and other restrictive covenants with which non-compliance would allow any amounts outstanding to be accelerated and would prohibit further borrowings. The Company pays an annual facility fee based on a percentage of the $1 billion commitment (0.125% at December 31, 2006). No amounts were outstanding under the Credit Agreement or the facilities it replaced at December 31, 2006 and 2005. The Company anticipates utilizing the Credit Agreement principally for the issuance of letters of credit which aggregated approximately $171 million at December 31, 2006. The issuance of letters of credit under the Credit Agreement utilizes availability under the Credit Agreement, as was the case with the replaced facilities.

The Company's Credit Agreement and the indentures governing its long-term notes contain certain financial and other restrictive covenants that would allow any amounts outstanding under the facilities to be accelerated, or restrict the Company's ability to borrow thereunder, in the event of noncompliance. The Company was in compliance with all covenants at December 31, 2006.

In addition to compliance with these financial covenants, it is a condition to the Company's ability to borrow under its Credit Agreement that certain of its representations and warranties under that agreement be true and correct as of the date of the borrowing. The Company's Credit Agreement, the indentures governing its long-term notes and certain other debt instruments also contain cross-default provisions with respect to a default in any payment under, or events resulting in or permitting the acceleration of, indebtedness greater than $50 million.

Expected maturities of long-term debt for years subsequent to December 31, 2006 are as follows (in millions):

2007	$ 127
2008	95
2009	768
2010	718
2011	8
Thereafter	1,376
Total	$ 3,092

NOTE 9: MINORITY INTERESTS AND OTHER LONG-TERM LIABILITIES

Other long-term liabilities were $305 million and $337 million at December 31, 2006 and 2005, respectively. Other long-term liabilities include liabilities related to the Company's purchased or licensed software, tax liabilities and interest rate swap agreements. Minority interests were $150 million and $78 million at December 31, 2006 and 2005, respectively. The increase in minority interests in 2006 was primarily due to the Company's purchase of a controlling interest in an Indian subsidiary (see Note 16).

NOTE 10: INCOME TAXES

Following is a summary of income tax expense for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Income (loss) from continuing operations	$ 257	$ 153	$ (103)
Income (loss) from discontinued operations	(26)	(38)	329
Shareholders' equity	34	(101)	(20)
Total	$ 265	$ 14	$ 206

Following is a summary of the provision (benefit) for income taxes on income (loss) from continuing operations for the years ended December 31, 2006, 2005 and 2004 (in millions):

	United States			
	Federal	State	Non-U.S.	Total
2006				
Current	$ 91	$ 22	$ 226	$ 339
Deferred	(116)	(9)	43	(82)
Total	$ (25)	$ 13	$ 269	$ 257
2005				
Current	$ 127	$ 13	$ 87	$ 227
Deferred	(233)	(29)	188	(74)
Total	$ (106)	$ (16)	$ 275	$ 153
2004				
Current	$ (377)	$ 2	$ 145	$ (230)
Deferred	31	(7)	103	127
Total	$ (346)	$ (5)	$ 248	$ (103)

Following is a summary of the components of income (loss) from continuing operations before income taxes for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
U.S. income	$ 75	$ (170)	$ (814)
Non-U.S. income	681	609	440
Total	$ 756	$ 439	$ (374)

Following is a reconciliation of income tax expense using the statutory U.S. federal income tax rate of 35.0% to actual income tax expense for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Statutory federal income tax	$ 265	$ 154	$ (131)
State income tax, net	8	(10)	(17)
Foreign losses	50	75	64
Research tax credits	(29)	(54)	(45)
Tax reserves	(48)	(7)	31
Other	11	(5)	(5)
Total	$ 257	$ 153	$ (103)
Effective income tax rate	34.0%	34.9%	27.5%

Following is a summary of the tax effects of significant types of temporary differences and carryforwards which result in deferred tax assets and liabilities as of December 31, 2006 and 2005 (in millions):

	2006		2005	
	Assets	Liabilities	Assets	Liabilities
Leasing basis differences	$ –	$ 111	$ –	$ 178
Other accrual accounting differences	429	10	429	21
Employee benefit plans	352	31	337	18
Depreciation/amortization differences	385	391	337	257
Net operating loss and tax credit carryforwards	1,432	–	996	–
Employee-related compensation	312	3	233	–
Other	176	476	294	269
Subtotal	3,086	1,022	2,626	743
Less valuation allowances	(376)	–	(281)	–
Total deferred taxes	$ 2,710	$ 1,022	$ 2,345	$ 743

The net changes in the valuation allowances for the years ended December 31, 2006 and 2005 were increases of $95 million and $48 million, respectively. Of the net change in 2006, $40 million was an increase in valuation allowances for losses incurred in certain foreign tax jurisdictions, which increased current year income tax expense from continuing operations. The remaining change in the valuation allowance in 2006 was primarily due to the sale of A.T. Kearney in January 2006 (see Note 17) and foreign currency translation adjustments. Approximately three-fourths of the Company's net operating loss and tax carryforwards expire over various periods from 2007 through 2026, and the remainder are unlimited.

In assessing the realizability of deferred tax assets, the Company considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized and adjusts the valuation allowance accordingly. Factors considered in making this determination include the period of expiration of the tax asset, planned use of the tax asset, tax planning strategies and historical and projected taxable income as well as tax liabilities for the tax jurisdiction in which the tax asset is located. The ultimate realization of deferred tax assets is dependent on the generation of future taxable income during the periods in which those temporary differences become deductible. Based on tax planning strategies, the level of historical taxable income and projections for future taxable income over the periods in which the deferred tax assets are deductible, the Company believes it is more likely than not it will realize the benefits of the deductible differences, net of existing valuation allowances at December 31, 2006. The amount of the deferred tax asset considered realizable, however, could be reduced in the near term if estimates of future taxable income during the carryforward period are reduced.

U.S. income taxes have not been provided for on $697 million of undistributed earnings of certain foreign subsidiaries, as such earnings have been permanently reinvested in the business. As of December 31, 2006, the unrecognized deferred tax liability associated with these earnings amounted to approximately $101 million.

NOTE 11: STOCK PURCHASE AND INCENTIVE PLANS

Stock Purchase Plan

Under the Stock Purchase Plan, eligible employees may purchase EDS common stock at the end of each fiscal quarter at a purchase price equal to 85% of the lower of the market price on the first or last trading day of the quarter, through payroll deductions of up to 10% of their compensation, not to exceed $25,000 per year in market value. Shares of EDS common stock purchased under the plan may not be sold or transferred within one year of the date of purchase. The number of shares originally authorized for issuance under this plan is 57.5 million. Total compensation expense recognized under this plan was $6 million and $6 million, respectively, during the years ended December 31, 2006 and 2005. See Note 1 for pro forma expense associated with stock-based incentive compensation for the year ended December 31, 2004.

PerformanceShare and EDS Global Share Plans

PerformanceShare and Global Share are "broad-based" plans that permit the grant of stock options to any eligible employee of EDS or its participating subsidiaries other than executive officers. As of December 31, 2006, options for 16.0 million shares had been granted under PerformanceShare (principally in a broad-based grant in May 1997) and options for 25.9 million shares had been granted under Global Share (principally in two broad-based grants in July 2000 and February 2002). The number of shares originally authorized for issuance under PerformanceShare and Global Share is 20 million and 27 million, respectively. As of December 31, 2006, no shares were available for future issuance under these plans.

Incentive Plan

The Incentive Plan is authorized to issue up to 136.5 million shares of common stock. The Incentive Plan permits the granting of stock-based awards in the form of stock grants, restricted shares, restricted stock units, stock options or stock appreciation rights to eligible employees and non-employee directors. A restricted stock unit is the right to receive shares. The exercise price for stock options granted under this plan must be equal to or greater than the fair market value on the date of the grant.

Transition Incentive Plan

The Transition Incentive Plan permits the grant of nonqualified stock options to eligible employees. This plan was intended to be used exclusively for the grant of stock options to former employees of Structural Dynamics Research Corporation ("SDRC"), which was acquired in August 2001, and UGS PLM Solutions Inc., which became a wholly owned subsidiary in September 2001, and was used exclusively for that purpose. UGS PLM Solutions (which was the successor by merger to SDRC) was sold by the Company in May 2004. Such options have an exercise price equal to the fair market value per share of common stock on the grant date, vested in May 2004 in connection with the sale of UGS PLM Solutions, and were exercisable for two years from the date of such sale. The number of options originally authorized for issuance under this plan is 3.7 million.

Transition Inducement Plan

The Transition Inducement Plan permits awards in the form of nonqualified stock options, stock appreciation rights, restricted stock units, restricted stock awards or stock grants to eligible employees. This plan was adopted in October 2002 in anticipation of then proposed New York Stock Exchange rules which provide that awards issued to induce new employment or in exchange for awards under an "acquired" plan are not subject to shareholder approval. All options granted under this plan must have an exercise price not less than the fair market value per share of common stock on the grant date. The maximum number of shares that can be issued under this plan is 7.0 million, of which not more than 2.0 million are available for awards other than in the form of stock options.

Stock Options

The fair value of each stock option award is estimated on the date of grant using the Black-Scholes-Merton valuation model that uses the assumptions noted below. Estimates of fair value are not intended to predict actual future events or the value ultimately realized by employees who receive equity awards, and subsequent events are not indicative of the reasonableness of the original estimates of fair value made by the Company under SFAS No. 123R. The outstanding term of an option is estimated based on the vesting term and contractual term of the option, as well as expected exercise behavior of the employee who receives the option. Expected volatility during the estimated outstanding term of the option is based on historical volatility during a period equivalent to the estimated outstanding term of the option and implied volatility as determined based on observed market prices of the Company's publicly traded options. Expected dividends during the estimated outstanding term of the option are based on recent dividend activity. Risk-free interest rates are based on the U.S. Treasury yield in effect at the time of the grant. The weighted-average fair values of options granted were $8.87, $10.46 and $8.60 for the years ended December 31, 2006, 2005 and 2004,

respectively. The fair value of each option was estimated at the date of grant, with the following weighted-average assumptions for the years ended December 31, 2006, 2005 and 2004, respectively: dividend yields of 0.7%, 1.0% and 2.9%; expected volatility of 35.0%, 60.3% and 61.7%; risk-free interest rate of 4.7%, 4.1% and 2.7%; and expected lives of 5.0 years, 5.0 years and 4.8 years. The total intrinsic value of options exercised during the years ended December 31, 2006, 2005 and 2004 were $115 million, $23 million and $13 million, respectively, resulting in tax deductions of $40 million, $8 million and $5 million, respectively. During 2005, the Company issued new shares and utilized treasury shares to satisfy share option exercises and the vesting of restricted share awards. The Company plans to utilize treasury shares acquired under the repurchase program authorized in February 2006 to satisfy future share option exercises and the vesting of restricted share awards (see Note 1).

Following is a summary of options activity under the Company's various stock-based incentive compensation plans during the years ended December 31, 2006, 2005 and 2004:

	Shares (millions)	Weighted-Average Exercise Price
Fixed options:		
Outstanding at December 31, 2003	50.3	$ 38
Granted	33.7	20
Exercised	(2.9)	16
Forfeited and expired	(10.2)	34
Outstanding at December 31, 2004	70.9	31
Granted	1.5	20
Exercised	(4.7)	17
Forfeited and expired	(15.8)	51
Outstanding at December 31, 2005	51.9	26
Granted	1.8	27
Exercised	(14.5)	18
Forfeited and expired	(4.2)	37
Outstanding at December 31, 2006	35.0	28
Exercisable	23.0	30

At December 31, 2006, the weighted-average remaining contractual terms of outstanding and exercisable options were 4.6 years and 3.9 years, respectively, and the aggregate intrinsic values of these options were $200 million and $135 million, respectively. Total compensation expense recognized for stock options was $117 million and $154 million during the years ended December 31, 2006 and 2005, respectively. See Note 1 for pro forma expense associated with stock-based incentive compensation, including stock options for the year ended December 31, 2004. As of December 31, 2006, there was approximately $29 million of unrecognized compensation cost related to nonvested options, which is expected to be recognized over a weighted-average period of 1.5 years.

The Company receives a tax deduction equal to the intrinsic value of a stock option on the date of exercise. Cash retained as a result of this tax deductibility is reported as other cash flows from financing activities in the consolidated statements of cash flows.

Certain stock option grants contain market conditions that accelerate vesting if the Company's stock reaches target prices. At December 31, 2006, approximately 3.7 million options were outstanding that will become exercisable if the price of the Company's stock at the close of the trading day is above $28.76 per share for 10 consecutive trading days. This would result in acceleration of unamortized compensation expense of approximately $10 million as of December 31, 2006. During 2006, approximately 7.6 million outstanding stock options became exercisable when the Company's stock reached certain target prices, accelerating the recognition of compensation expense of approximately $25 million.

Restricted Stock Units

The Company began using restricted stock units as its primary stock-based incentive compensation in March 2005. Prior to such time, stock options were primarily used for stock-based incentive compensation. Restricted stock units granted are generally scheduled to vest over periods of three to ten years. The March 31, 2006 and 2005 grants consisted of performance-vesting restricted stock units. The number of awards that vest is dependent upon the Company's performance over a three-year period with vesting thereafter.

The fair value of each restricted stock unit is generally the market price of the Company's stock on the date of grant. However, if the shares have a mandatory holding period after the date of vesting, a discount is provided based on the length of the holding period. A discount was applied in determining the fair value of all restricted stock unit awards to adjust for the present value of foregone dividends during the period the award is outstanding and unvested. An additional discount of 10% and 15% was applied during 2006 and 2005, respectively, in determining the fair value of all units subject to transfer restrictions for a one-year period following vesting. This transferability discount was derived based on the value of a one-year average-strike lookback put option.

Following is a summary of the status of the Company's nonvested restricted stock units as of December 31, 2006, and changes during the years ended December 31, 2006, 2005 and 2004:

	Shares (millions)	Weighted-Average Grant Date Fair Value
Nonvested restricted stock units:		
Nonvested at December 31, 2003	4.8	$ 38
Granted	1.2	22
Vested	(2.1)	38
Forfeited	(0.4)	41
Nonvested at December 31, 2004	3.5	33
Granted	7.3	19
Vested	(1.5)	34
Forfeited	(0.4)	18
Nonvested at December 31, 2005	8.9	22
Granted	7.1	25
Vested	(1.2)	30
Forfeited	(1.4)	22
Nonvested at December 31, 2006	13.4	23

As of December 31, 2006, there was approximately $169 million of total unrecognized compensation cost related to nonvested restricted stock units. Such cost is expected to be recognized over a weighted-average period of 1.9 years. Total compensation expense for restricted stock units was $86 million ($59 million net of tax), $64 million ($42 million net of tax) and $42 million ($27 million net of tax), respectively, for the years ended December 31, 2006, 2005 and 2004. The aggregate fair value of shares vested during the years ended December 31, 2006, 2005 and 2004 were $33 million, $33 million and $41 million, respectively, at the date of vesting, resulting in tax deductions to realize benefits of $10 million, $12 million and $14 million, respectively, as compared to aggregate fair values of $38 million, $52 million and $80 million, respectively, on the dates of their grants.

Executive Deferral Plan

The Executive Deferral Plan is a nonqualified deferred compensation plan established for a select group of management and highly compensated employees which allows participants to contribute a percentage of their cash compensation and restricted stock units into the plan and defer income taxes until the time of distribution. The plan is a nonqualified plan for U.S. federal income tax purposes and as such, its assets are part of the Company's general assets. The Company makes matching contributions on a portion of amounts deferred by plan participants that are invested in EDS stock units. Matching contributions vest upon contribution. The fair market price of common stock on the date of matching contributions is charged to operations in the period made. The Company also makes discretionary contributions that vest over periods up to five years as determined by the Board of Directors. The fair market price of common stock on the date of discretionary contributions is charged to operations over the vesting period. During the years ended December 31, 2006, 2005 and 2004, employer contributions to the plan were 4 thousand, 31 thousand and 37 thousand shares, respectively, with a weighted-average fair value of $24.06, $23.13 and $23.10, respectively.

During September 2006, the Company granted 150 thousand time-vesting deferred stock units and 150 thousand performance-based deferred stock units to an employee each with a grant date fair value of $22.97 per unit. The grant date fair value of deferred stock units is determined using the same method as restricted stock units. The time-vesting units and performance-based units are scheduled to vest in September 2009. The number of performance-based deferred stock units that will vest will be from 0-200% of the number of units granted, and is dependent upon the Company's achievement of certain financial performance metrics over a three-year performance period and the employee's continued employment. The Company estimates the number of units that will vest based on the Company's financial performance since inception of the performance period and current expectations of the Company's future financial performance over the remainder of the performance period. Compensation expense for units is recorded on a straight-line basis over the vesting period. Cumulative compensation expense for each grant is adjusted in the period

in which there is a change in the estimated number of units that will vest. As of December 31, 2006, there was approximately $6 million of total unrecognized compensation cost related to the 300 thousand nonvested deferred stock units. Such cost is expected to be recognized over a period of 2.7 years. Total compensation expense for deferred stock units was $766 thousand ($498 thousand net of tax) for the year ended December 31, 2006.

NOTE 12: SEGMENT INFORMATION

The Company uses operating income (loss) to measure segment profit or loss. Segment information for non-U.S. operations is measured using fixed currency exchange rates in all periods presented. The Company adjusts its fixed currency exchange rates if and when the statutory rate differs significantly from the fixed rate to better align the two rates. Prior period segment information presented below has been restated to reflect a change in the fixed exchange rates of certain non-U.S. currencies and other segment attribute changes in 2006. The Asia Pacific segment includes the operations of MphasiS Limited, of which the Company acquired a controlling interest (approximately 51%) on June 20, 2006, and the Company's other EDS India operations which collectively represented $139 million in revenues and $20 million in operating income for the year ended December 31, 2006. The "all other" category is primarily comprised of corporate expenses, including stock-based compensation, and also includes differences between fixed and actual exchange rates. Operating segments that have similar economic and other characteristics have been aggregated to form the Company's reportable segments. The accompanying segment information excludes the net results of A.T. Kearney which are included in discontinued operations in the consolidated statements of operations (see Note 17). The results of the NMCI contract are included in the U.S. Government segment.

Following is a summary of certain financial information by reportable segment as of and for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006		
	Revenues	Operating Income (Loss)	Total Assets
Americas	$ 9,588	$ 1,509	$ 4,351
EMEA	6,448	945	3,335
Asia Pacific	1,479	173	1,000
U.S. Government	3,350	618	1,350
Other	23	(642)	2,070
Total Outsourcing	20,888	2,603	12,106
All other	380	(1,787)	5,848
Total	$ 21,268	$ 816	$ 17,954

	2005		
	Revenues	Operating Income (Loss)	Total Assets
Americas	$ 9,239	$ 1,353	$ 4,261
EMEA	5,935	818	3,569
Asia Pacific	1,377	103	529
U.S. Government	2,842	305	1,441
Other	22	(533)	1,993
Total Outsourcing	19,415	2,046	11,793
All other	342	(1,504)	5,294
Total	$ 19,757	$ 542	$ 17,087

	2004		
	Revenues	Operating Income (Loss)	Total Assets
Americas	$ 9,251	$ 973	$ 3,770
EMEA	6,247	870	3,399
Asia Pacific	1,289	107	533
U.S. Government	2,893	(485)	1,617
Other	24	(335)	1,736
Total Outsourcing	19,704	1,130	11,055
All other	159	(1,232)	6,689
Total	$ 19,863	$ (102)	$ 17,744

Following is a summary of depreciation and amortization and deferred cost charges included in the calculation of operating income (loss) above for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Americas	$ 392	$ 429	$ 613
EMEA	390	366	616
Asia Pacific	108	107	138
U.S. Government	179	138	222
Other	179	149	113
Total Outsourcing	1,248	1,189	1,702
All other	89	183	148
Total	$ 1,337	$ 1,372	$ 1,850

Following is a summary of revenues and property and equipment by country as of and for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006		2005		2004	
	Revenues	Property and Equipment	Revenues	Property and Equipment	Revenues	Property and Equipment
United States	$ 11,148	$ 1,223	$ 10,349	$ 1,153	$ 10,258	$ 1,186
United Kingdom	4,213	322	3,696	325	3,983	339
All other	5,907	634	5,712	489	5,622	656
Total	$ 21,268	$ 2,179	$ 19,757	$ 1,967	$ 19,863	$ 2,181

Revenues and property and equipment of non-U.S. operations are measured using fixed currency exchange rates in all periods presented. Differences between fixed and actual exchange rates are included in the “all other” category.

Following is a summary of the Company’s revenues by service line for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Infrastructure services	$ 11,992	$ 11,048	$ 11,500
Applications services	5,888	5,572	5,623
Business process outsourcing services	2,967	2,810	2,613
All other	421	327	127
Total	$ 21,268	$ 19,757	$ 19,863

Revenues of non-U.S. operations are measured using fixed currency exchange rates in all periods presented. Differences between fixed and actual exchange rates are included in the “all other” category.

For the years ended December 31, 2006, 2005 and 2004, revenues from contracts with GM and its affiliates totaled $1.7 billion, $1.8 billion and $2.0 billion, respectively. Revenues from contracts with GM were reported in the Company’s Americas segment.

NOTE 13: RETIREMENT PLANS

The Company has several qualified and nonqualified pension plans (the "Plans") covering substantially all its employees. The majority of the Plans are noncontributory. In general, employees become fully vested upon attaining two to five years of service, and benefits are based on years of service and earnings. The actuarial cost method currently used is the projected unit credit cost method. The Company's U.S. funding policy is to contribute amounts that fall within the range of deductible contributions for U.S. federal income tax purposes.

Following is a reconciliation of the changes in the Plans' benefit obligations and fair value of assets (using October 31, 2006 and 2005 measurement dates), and a statement of the funded status as of December 31, 2006 and 2005 (in millions):

	2006	2005
Reconciliation of Benefit Obligation:		
Benefit obligation at beginning of year	$ 8,310	$ 7,837
Service cost	354	344
Interest cost	471	456
Employee contributions	25	33
Actuarial loss	81	532
Curtailments and settlements	(69)	(280)
Plan amendments	(57)	–
Business divestitures	(46)	–
Foreign currency exchange rate changes	500	(441)
Benefit payments	(237)	(223)
Special termination benefit	–	15
Other	28	37
Benefit obligation at end of year	9,360	8,310
Reconciliation of Fair Value of Plan Assets:		
Fair value of plan assets at beginning of year	6,404	5,895
Actual return on plan assets	1,185	912
Foreign currency exchange rate changes	355	(289)
Employer contributions	248	324
Employee contributions	25	33
Benefit payments	(237)	(223)
Business divestitures	(66)	–
Settlements	(18)	(270)
Other	14	22
Fair value of plan assets at end of year	7,910	6,404
Funded status at end of year	(1,450)	(1,906)
Unrecognized transition obligation	–	9
Unrecognized prior service cost	–	(185)
Unrecognized net actuarial loss	–	1,686
Adjustments from October 31 to December 31	112	120
	$ (1,338)	$ (276)

Following is a summary of the amounts reflected on the Company's consolidated balance sheets for pension benefits as of December 31, 2006 and 2005 (in millions):

	2006	2005
Prepaid benefit cost	$ 86	$ 53
Intangible asset	–	19
Current liability	(36)	–
Long-term liability	(1,388)	(1,183)
Minimum pension liability	–	835
	$ (1,338)	$ (276)

Following is a summary of amounts in accumulated other comprehensive loss as of December 31, 2006 and 2005 that have not yet been recognized in the consolidated statements of operations as components of net periodic benefit cost (in millions):

	2006	2005
Net actuarial loss	$ 1,199	$ –
Prior service credit	(213)	–
Transition obligation	7	–
Minimum pension liability	–	835
	$ 993	$ 835

The tables above include plans that transitioned to A.T. Kearney in January 2006 (see Note 17). The pension benefit liabilities related to these plans are presented in the consolidated balance sheets as "held for sale" and was $26 million at December 31, 2005. Settlement gains of $23 million were recognized in 2006 for these plans. The projected benefit obligation, accumulated benefit obligation, and fair value of plan assets for these plans were $63 million, $54 million and $61 million, respectively, at December 31, 2005. Net periodic benefit cost for these plans was $8 million and $7 million, respectively, for the years ended December 31, 2005 and 2004.

The Company has additional defined benefit retirement plans outside the U.S. not included in the tables above due to their individual insignificance. These plans collectively represent an additional pension benefit liability of approximately $16 million and plan assets of approximately $4 million.

The accumulated benefit obligation for all defined benefit pension plans was $8,513 million and $7,542 million at October 31, 2006 and 2005, respectively. The projected benefit obligation and fair value of plan assets for pension plans with projected benefit obligations in excess of plan assets were $8,713 million and $7,251 million, respectively, at December 31, 2006, and $7,933 million and $5,971 million, respectively, at December 31, 2005. The projected benefit obligation, accumulated benefit obligation, and fair value of plan assets for pension plans with accumulated benefit obligations in excess of plan assets were $3,326 million, $2,795 million and $1,995 million, respectively, at December 31, 2006, and $7,624 million, $6,963 million and $5,721 million, respectively, at December 31, 2005.

Following is a summary of the components of net periodic benefit cost recognized in the consolidated statements of operations for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Service cost	$ 354	$ 344	$ 321
Interest cost	471	456	413
Expected return on plan assets	(555)	(522)	(440)
Amortization of transition obligation	2	2	2
Amortization of prior-service cost	(36)	(32)	(32)
Amortization of net actuarial loss	83	55	66
Net periodic benefit cost	319	303	330
Curtailment (gain) loss	(5)	1	3
Special termination benefit	–	15	48
Settlement (gain) loss	(57)	71	2
Net periodic benefit cost after curtailments and settlements	$ 257	$ 390	$ 383

Prior-service costs are amortized on a straight-line basis over the average remaining service period of active participants. Gains or losses in excess of 10% of the greater of the benefit obligation and the market-related value of assets are amortized over the average remaining service period of active participants.

The estimated net actuarial loss, prior service credit and transition obligation for defined benefit plans that will be amortized from accumulated other comprehensive income into net periodic benefit cost over the next fiscal year are $33 million, $37 million and $2 million, respectively.

As a result of the termination of the Company's service contract with the U.K. Government's Inland Revenue department, the contract's workforce transitioned to the new IT provider in July 2004. Most of the pension liability associated with this workforce also transitioned to the new provider, resulting in the recognition of a settlement loss of $77 million in 2005. The Company recorded special termination benefits of $15 million during 2005 related to reductions in force in the U.K., and $48 million during 2004 related to an early retirement offer in the U.S. These charges are included in restructuring and other in the consolidated statements of operations (see Note 19).

At December 31, 2006 and 2005, the plan assets consisted primarily of equity securities and, to a lesser extent, government obligations and other fixed income securities. The plan assets include EDS common stock with a market value of approximately $15 million at October 31, 2006. The U.S. pension plan is a cash balance plan that uses a benefit formula based on years of service, age and earnings. Employees are allocated the current value of their retirement benefit in a hypothetical account. Monthly credits based upon age, years of service, compensation and interest are added to the account. Upon retirement, the value of the account balance is converted to an annuity. The Company allows employees to elect to direct up to 33% of their monthly credits to the EDS 401(k) Plan. The Company contributed $3 million, $4 million and $3 million to the EDS 401(k) Plan related to these elections during the years ended December 31, 2006, 2005 and 2004, respectively. These amounts are not included in net periodic benefit cost shown in the table above.

Following is a summary of the weighted-average assumptions used in the determination of the Company's benefit obligation for the years ended December 31, 2006, 2005 and 2004:

	2006	2005	2004
Discount rate at October 31	5.4%	5.4%	5.7%
Rate increase in compensation levels at October 31	3.2%	3.2%	3.4%

Following is a summary of the weighted-average assumptions used in the determination of the Company's net periodic benefit cost for the years ended December 31, 2006, 2005 and 2004:

	2006	2005	2004
Discount rate at October 31	5.4%	6.0%	6.0%
Rate increase in compensation levels at October 31	3.2%	3.4%	3.3%
Long-term rate of return on assets at January 1	8.4%	8.6%	8.6%

Following is a summary of the weighted-average asset allocation of all plan assets at December 31, 2006 and 2005, by asset category:

	2006	2005
Equity securities	78%	77%
Debt securities	14%	15%
Cash and cash equivalents	1%	1%
Real estate	1%	1%
Other	6%	6%
Total	100%	100%

In determining net periodic benefit cost recognized in its consolidated statements of operations, the Company utilizes an expected long-term rate of return that, over time, should approximate the actual long-term returns earned on pension plan assets. The Company derives the assumed long-term rate of return on assets based upon the historical return of actual plan assets and the historical long-term return on similar asset classes as well as anticipated future returns based upon the types of invested assets. The type and mix of invested assets are determined by the pension investment strategy, which considers the average age of the Company's workforce and associated average periods until retirement. Since the average age of the Company's workforce is relatively low and average periods until retirement exceed 15 years, plan assets are weighted heavily towards equity investments.

Equity investments, while susceptible to significant short-term fluctuations, have historically outperformed most other investment alternatives on a long-term basis. The Company utilizes an active management strategy through third-party investment managers to maximize asset returns. As of December 31, 2006, the weighted-average target asset allocation for all plans was 78% equity; 15% fixed income; 1% real estate; and 6% other. The Company expects to contribute approximately $100 million to its pension plans during fiscal year 2007, including discretionary and statutory contributions.

Estimated benefit payments, which include amounts to be earned by active plan employees through expected future service for all pension plans over the next 10 years are: 2007 – $257 million; 2008 – $222 million; 2009 – $241 million; 2010 – $262 million; 2011 – $328 million; and 2012 through 2016 – $1,934 million.

In addition to the plans described above, the EDS 401(k) Plan provides a long-term savings program for participants. The EDS 401(k) Plan allows eligible employees to contribute a percentage of their compensation to a savings program and to defer income taxes until the time of distribution. Participants may invest their contributions in various publicly traded investment funds or EDS common stock. The EDS 401(k) Plan also provides for employer-matching contributions. Until December 31, 2006, employer contributions were made in the form of EDS common stock, which participants could elect to transfer to another investment option within the EDS 401(k) Plan after two years from the date of contribution. Participants were 40% vested in the employer-matching contributions after two years of service, vested another 20% per year of service thereafter, and were fully vested after five years of service. Beginning January 1, 2007, participants' employer-matching contributions follow the investment allocation of their salary deferrals. Participants will be 40% vested after two years of service, and 100% vested after three years of service. Participants with more than three but less than five years of service at January 1, 2007 will be fully vested at that date. Participants with more than two but less than three years of service at January 1, 2007 will fully vest after three years of service. Participants hired after January 1, 2007 will fully vest after three years of service. During the years ended December 31, 2006, 2005 and 2004, employer-matching contributions totaled $40 million, $37 million and $40 million, respectively.

NOTE 14: COMMITMENTS AND RENTAL EXPENSE

Total rentals under cancelable and non-cancelable leases of tangible property and equipment included in costs and charged to expenses were $557 million, $552 million and $580 million for the years ended December 31, 2006, 2005 and 2004, respectively. Commitments for rental payments under non-cancelable operating leases of tangible property and equipment net of sublease rental income are: 2007 – $343 million; 2008 – $300 million; 2009 – $217 million; 2010 – $166 million; 2011 – $122 million; and all years thereafter – $368 million.

The Company has signed certain service agreements with terms of up to ten years with certain vendors to obtain favorable pricing and commercial terms for services that are necessary for the ongoing operation of its business. These agreements relate to software and telecommunications services. Under the terms of these agreements, the Company has committed to contractually specified minimums over the contractual periods. The contractual minimums are: 2007 – $1,318 million; 2008 – $609 million; 2009 – $372 million; 2010 – $251 million; 2011 – $47 million; and all years thereafter – $2 million. Amounts paid under these agreements were $1,452 million, $991 million and $821 million during the years ended December 31, 2006, 2005 and 2004, respectively. To the extent that the Company does not purchase the contractual minimum amount of services, the Company must pay the vendors the shortfall. The Company believes that it will meet the contractual minimums through the normal course of business.

NOTE 15: CONTINGENCIES

In connection with certain service contracts, the Company may arrange a client supported financing transaction ("CSFT") with a client and an independent third-party financial institution or its designee. Under CSFT arrangements, the financial institution finances the purchase of certain IT-related assets and simultaneously leases those assets for use in connection with the service contract.

In a CSFT, all client contract payments are made directly to the financial institution providing the financing. After the predetermined monthly obligations to the financial institution are met, the remaining portion of the customer payment is made available to the Company. If the client does not make the required payments under the service contract, under no circumstances does the Company have any obligation to acquire the underlying assets unless nonperformance under the service contract would permit its termination, or the Company fails to comply with certain customary terms under the financing agreements, including, for example, covenants the Company has undertaken regarding the use of the assets for their intended purpose. The Company considers the likelihood of its failure to comply with any of these terms to be remote. In the event of nonperformance under applicable contracts which would permit their termination, the Company would have no additional or incremental performance risk with respect to the ownership of the assets, because it would have owned or leased the same or substantially equivalent assets in order to fulfill its obligations under its service contracts. Performance under the Company's service contracts is generally measured by contract terms relating to project deadlines, IT system deliverables or level-of-effort measurements.

As of December 31, 2006, an aggregate of $136 million was outstanding under CSFTs yet to be paid by the Company's clients. The Company believes it is in compliance with performance obligations under all service contracts for which there is a related CSFT and the ultimate liability, if any, incurred in connection with such financings will not have a material adverse affect on its consolidated results of operations or financial position.

In the normal course of business, the Company may provide certain clients, principally governmental entities, with financial performance guarantees, which are generally backed by standby letters of credit or surety bonds. In general, the Company would only be liable for the amounts of these guarantees in the event that nonperformance by the Company permits termination of the related contract by the Company's client, which the Company believes is remote. At December 31, 2006, the Company had $574 million outstanding standby letters of credit and surety bonds relating to these performance guarantees. The Company believes it is in compliance with its performance obligations under all service contracts for which there is a financial performance guarantee, and the ultimate liability, if any, incurred in connection with these guarantees will not have a material adverse affect on its consolidated results of operations or financial position. In addition, the Company had $19 million of other financial guarantees outstanding at December 31, 2006 relating to indebtedness of others.

At December 31, 2006, the Company had net deferred contract and set-up costs of $807 million, of which $487 million related to 20 contracts with active construct activities. These active construct contracts had other assets, including receivables, prepaid expenses, equipment and software, of $574 million at December 31, 2006. Some of the Company's client contracts require significant investment in the early stages which is expected to be recovered through billings over the life of the respective contracts. These contracts often involve the construction of new computer systems and communications networks and the development and deployment of new technologies. Substantial performance risk exists in each contract with these characteristics, and some or all elements of service delivery under these contracts are dependent upon successful completion of the development, construction and deployment phases. Some of these contracts have experienced delays in their development and construction phases, and certain milestones have been missed. It is reasonably possible that deferred costs associated with one or more of these contracts could become impaired due to changes in estimates of future contract cash flows.

The Company provides IT services to Delphi Corporation ("Delphi") through a long-term agreement. On October 8, 2005, Delphi filed for protection under Chapter 11 of the United States Bankruptcy Code. Due to uncertainties regarding the recoverability of certain pre-bankruptcy receivables associated with the Delphi contract, the Company recorded receivable reserves of $17 million during the year ended December 31, 2005. This amount is reflected in cost of revenues in the Company's 2005 consolidated statements of operations. The Company recognized revenues of approximately $150 million under the Delphi services agreement during the year ended December 31, 2006. Total receivables outstanding under the Delphi agreement were $43 million at December 31, 2006. In addition, the Company had equipment and other assets with a net book value of approximately $18 million at December 31, 2006 deployed on the Delphi agreement. The assets associated with the Company's agreement with Delphi are expected to be recovered through collection or future operations.

The Company has received tax assessments from various taxing authorities and is currently at varying stages of appeals regarding these matters. The Company has provided for the amounts it believes will ultimately result from those proceedings. In June 2006, the Company agreed with the U.S. Internal Revenue Services ("IRS") on a settlement related to research tax credits for years 1996-2002 and the closure of the audit of its 1996-1998 federal income tax returns. In February 2007, the Company reached a tentative agreement with the Appeals Office of the IRS for all outstanding issues for the period 1999-2002 consistent with the Company's tax reserves as of December 31, 2006.

Pending Litigation and Proceedings

The Company and certain of its former officers are defendants in numerous shareholder class action suits filed from September through December 2002 in response to its September 18, 2002 earnings pre-announcement, publicity about certain equity hedging transactions that it had entered into, and the drop in the price of EDS common stock. The cases allege violations of various federal securities laws and common law fraud based upon purported misstatements or omissions of material facts regarding the Company's financial condition. In addition, five class action suits were filed on behalf of participants in the EDS 401(k) Plan against the Company, certain of its current and former officers and, in some cases, its directors, alleging the defendants breached their fiduciary duties under the Employee Retirement Income Security Act ("ERISA") and made misrepresentations to the class regarding the value of EDS shares. All of the foregoing cases have been centralized in the U.S. District Court for the Eastern District of Texas (the "District Court"). In addition, representatives of two committees responsible for administering the EDS 401(k) Plan notified the Company of their demand for payment of amounts they believe are owing to plan participants under Section 12(a)(1) of the Securities Act of 1933 (the "Securities Act") as a result of an alleged failure to register certain shares of EDS common stock sold pursuant to the plan during a period of approximately one year ending on November 18, 2002.

On July 7, 2003, the lead plaintiff in the consolidated securities action and the lead plaintiffs in the consolidated ERISA action each filed a consolidated class action complaint. The amended consolidated complaint in the securities action alleges violations of Section 10(b) of the Securities Exchange Act of 1934 (the "Exchange Act"), Rule 10b-5 thereunder and Section 20(a) of the Exchange Act. The plaintiffs allege that the Company and certain of its former officers made false and misleading statements about the financial condition of EDS, particularly with respect to the NMCI contract and the accounting for that contract. The consolidated complaint in the ERISA action alleges violation of fiduciary duties under ERISA by some or all of the defendants and violation of Section 12(a)(1) of the Securities Act by selling unregistered EDS shares to plan participants. The defendants in the ERISA claims are EDS, certain current and former officers of EDS, members of the Compensation and Benefits Committee of its Board of Directors, and certain current and former members of the two committees responsible for administering the plan.

On November 1, 2005, the Company entered into a memorandum of understanding with the lead plaintiff and class representative to settle the consolidated securities action, subject to final approval of the settlement by the District Court. The District Court approved that settlement on March 7, 2006. The terms of the settlement provide for a cash payment of $137.5 million, substantially all of which was paid during the first quarter of 2006. The amount paid by the Company aggregated $77.5 million, with the remainder paid by its insurers (in addition to amounts paid by such insurers in respect of legal fees related to this action). The Company recorded incremental reserves of $24 million in 2005 in connection with this settlement. The remaining cost of the settlement was recognized in the Company's financial statements prior to 2004. Two appeals have been filed with respect to the District Court's approval of this settlement. One appeal challenges the amount of attorneys fees awarded to the counsel for plaintiffs. The other appeal challenges the approval of the settlement on the grounds that there is a subclass who receives no economic benefit, the release is overbroad, and the claims form was overly burdensome.

On November 8, 2004, the District Court certified a class in the ERISA action on certain of the allegations of breach of fiduciary duty, of all participants in the EDS 401(k) Plan and their beneficiaries, excluding the defendants, for whose accounts the plan made or maintained investments in EDS stock through the EDS Stock Fund between September 7, 1999 and October 9, 2002. Also on that date the court certified a class in the ERISA action on the allegations of violation of Section 12(a)(1) of the Securities Act of all participants in the Plan and their beneficiaries, excluding the defendants, for whose accounts the Plan purchased EDS stock through the EDS Stock Fund between October 20, 2001 and November 18, 2002. On December 29, 2004, the Fifth Circuit Court of Appeal granted the Company's petition to appeal the class certification order from the District Court, and oral arguments were heard on the appeal on April 5, 2005. On January 18, 2007, the Fifth Circuit Court of Appeal issued its decision vacating the district court's class certification decision and remanding the matter to the district court to re-evaluate whether the action may be maintained as a class certification in light of the Fifth Circuit's opinion and instructions. The Company intends to defend this action vigorously.

In addition, there are three derivative complaints filed by shareholders in the District Court of Collin County, Texas against certain current and former Company directors and officers and naming EDS as a nominal defendant. The actions allege breach of fiduciary duties, abuse of control and gross mismanagement based upon purported misstatements or omissions of material facts regarding the Company's financial condition similar to those raised in the class actions described above. These cases have been consolidated into a single action. This action will be defended vigorously.

On February 25, 2004, a derivative complaint was filed by a shareholder against certain current and former directors and officers of the Company in the District Court. The plaintiff relies upon substantially the same factual allegations as the consolidated securities action discussed above. However, the plaintiff brings the suit on behalf of the Company against the named defendants claiming that they breached their fiduciary duties by failing in their oversight responsibilities and by making and/or permitting material, false and misleading statements to be made concerning the Company's business prospects, financial condition and expected financial results which artificially inflated its stock and resulted in numerous class action suits. Plaintiff seeks contribution and indemnification for the claims and litigation resulting from the defendants' alleged breach of their fiduciary duties. This action had been stayed pending the outcome of the consolidated securities action. On March 13, 2006, the District Court filed an order lifting the stay in this action based upon that court's final approval of the settlement of the consolidated securities action. This action will be defended vigorously.

In October 2004, two derivative complaints were filed in the District Court by shareholders against certain current and former directors and officers of the Company. The allegations against the Company include breach of fiduciary duties, abuse of control, gross mismanagement, constructive fraud, waste and unjust enrichment based upon purported misstatements or omissions of material facts regarding the Company's financial condition similar to those raised in the class actions described above. Plaintiffs seek damages, disgorgement by individual defendants, governance reforms, and punitive damages. The actions had also been stayed pending resolution of the above referenced securities action. On March 13, 2006, the District Court filed an order lifting the stay in this action based upon that court's final approval of the settlement of the consolidated securities action. These actions will be defended vigorously.

The Company does not expect these actions to have a material adverse impact on its consolidated results of operations or financial position.

The SEC staff is conducting a formal investigation of matters relating to the Company's derivatives contracts in connection with its program to manage the future stock issuance requirements of its employee stock incentive plans, the Company's NMCI contract, a contract with a client of the Company that contained a prepayment provision, and the Company's guidance and other events leading up to its third quarter 2002 earnings announcement. The SEC has deposed current and former members of the Company's management and the NMCI account team as well as other witnesses regarding these issues. The SEC staff is also investigating allegations that a former employee working in India for a branch of a former subsidiary of the Company made questionable payments allegedly to further that entity's business in India, a matter which the Company self-reported to the SEC staff and other relevant governmental authorities. In 2004, the Company voluntarily reported to the SEC staff a matter regarding payments made and credits given by the Company to Delphi during 2000 and 2001 and certain payments made by Delphi to the Company for services in 2002 and in early 2003. In October 2006, the SEC filed a lawsuit against Delphi, former Delphi personnel and other persons not employed by Delphi, including one current and two former employees of the Company, alleging violations of securities laws related to these and other matters. The lawsuit was simultaneously settled by Delphi and certain of the other persons charged by the SEC, including the two former employees of the Company. The Company was not charged in this lawsuit.

In February 2007, the Company reached an agreement with the Division of Enforcement of the SEC (the "Division") as to the terms of a proposed settlement that the Division has agreed to recommend to other SEC staff offices and to the Commissioners of the SEC for their approval. The proposed settlement would resolve all matters under investigation by the SEC related to the Company. Such settlement, if approved by the SEC, would not have a material adverse impact upon the Company. However the Division has no authority to bind the Commission to any settlement. The Commissioners of the SEC are not obligated to accept the recommendation of the Division and may approve or disapprove this settlement. Accordingly, the Company is unable to predict the ultimate outcome of the investigation or any action the SEC might ultimately take.

On December 19, 2003, Sky Subscribers Services Limited ("SSSL") and British Sky Broadcasting Limited ("BSkyB"), a former client of the Company, served a draft pleading seeking redress for the Company's alleged failure to perform pursuant to a contract between the parties. Under applicable legal procedures, the Company responded to the allegations. Despite the response, on August 17, 2004, SSSL and BSkyB issued and served upon the Company a pleading alleging the following damages, each presented as an alternative cause of action: (1) pre-contract deceit in 2000 in the amount of £320 million (approximately $630 million); (2) pre-contract negligent misrepresentation in 2000 in the amount of £127 million (approximately $250 million); (3) deceit inducing the Letter of Agreement in July 2001 in the amount of £261 million (approximately $510 million); (4) negligent misrepresentation inducing the Letter of Agreement in July 2001 in the amount of £116 million (approximately $230 million); and, (5) breach of contract from 2000 through 2002 in the amount of £101 million (approximately $200 million). On November 12, 2004, the Company filed its defense and counterclaim denying the claims and seeking damages in the amount of £4.7 million (approximately $9.2 million). On December 21, 2005, SSSL and BSkyB filed a Re-Amended Particulars of Claim alleging the following damages, still as alternative causes of action: (1) pre-contract deceit in the amount of £480 million (approximately $940 million); (2) pre-contract negligent misrepresentation in the amount of £480 million (approximately $940 million); (3) deceit inducing the Letter of Agreement and negligent misrepresentation inducing the Letter of Agreement of £415 million (approximately $810 million); (4) breach of contract in the amount of £179 million (approximately $350 million). The principal stated reason for the increases in amount of damages is that the claimants have now taken the opportunity to re-assess their alleged lost profits and increased costs to deliver the project in light of the extended timetable they now require. Claimants say they will further re-assess these alleged losses prior to trial. The dispute surrounds a contract the Company entered into with BSkyB in November 2000, which was terminated by the Company in January 2003 for BSkyB's failure to pay its invoices. The contract had an initial total contract value of approximately £61 million. The Company intends to defend against these allegations vigorously. Discovery is ongoing in this matter and trial is scheduled for October 2007. Although there can be no assurance as to the outcome of this matter, the Company does not believe it will have a material adverse impact on its consolidated results or financial position.

There are other various claims and pending actions against the Company arising in the ordinary course of its business. Certain of these actions seek damages in significant amounts. The amount of the Company's liability for such claims and pending actions at December 31, 2006 was not determinable. However, in the opinion of management, the ultimate liability, if any, resulting from such claims and pending actions will not have a material adverse affect on the Company's consolidated results of operations or financial position.

NOTE 16: ACQUISITIONS

On June 20, 2006, the Company acquired a controlling interest (approximately 51%) in MphasiS Limited, an applications and business process outsourcing services company based in Bangalore, India. The cash purchase price of the controlling interest, net of cash acquired, was $352 million. The acquisition of MphasiS enhances the Company's capabilities in priority growth areas of applications development and business process outsourcing services. The consolidated statements of operations include the results of the acquired business since the date of acquisition. The preliminary purchase price allocation is as follows: accounts receivable – $45 million; other current assets – $14 million; property and equipment – $27 million; goodwill – $352 million; other intangibles – $47 million; current liabilities – $34 million; deferred tax liabilities – $29 million and minority interest – $70 million. Factors contributing to a purchase price that resulted in recognition of goodwill included the Company's and MphasiS management's projections of operating results of the acquired business, and the ability to accelerate the Company's growth in the applications and business process outsourcing services markets. Had the Company completed the acquisition as of the earliest date presented, results of operations on a pro forma basis would not have been materially different from actual historical results.

On May 19, 2005, the Company purchased the outstanding minority interest in its Australian subsidiary for a cash purchase price of approximately $135 million. The transaction was accounted for as an acquisition by the Company, and the excess carrying value of the minority interest liability over the purchase price paid was allocated as a reduction to property and equipment – $(19) million; deferred contract costs – $(2) million; and other intangible assets – $(3) million.

On March 1, 2005, the Company and Towers Perrin entered into a joint venture whereby Towers Perrin contributed cash and its pension, health and welfare administration services business and the Company contributed cash and its payroll and related human resources ("HR") outsourcing business to a new company, known as ExcellerateHRO LLP. Upon closing of the transaction, Towers Perrin received $417 million in cash and a 15% minority interest, representing total consideration paid by the Company to Towers Perrin, and the Company received an 85% interest in the new company. The acquisition enabled the Company to offer a comprehensive set of HR outsourcing solutions across the core areas of benefits, payroll, compensation management, workforce administration and relocation, recruitment and staffing, and workforce development. The consolidated statements of operations include the results of the acquired business since the date of acquisition. The transaction was accounted for as an acquisition by the Company with the purchase price being allocated as follows: property and equipment – $19 million; other intangibles – $41 million; goodwill – $423 million; other assets – $5 million; accrued expenses – $4 million; and minority interest – $67 million. Factors contributing to a purchase price that resulted in recognition of goodwill included the Company's and its advisors' projections of operating results of the new company, the ability to accelerate the Company's growth in the HR outsourcing market and the competitive differentiation offered by the relationship with Towers Perrin. Towers Perrin may require the Company to purchase its minority interest in the joint venture at any time after March 1, 2010, or prior to that date upon the occurrence of certain events (including the breach by the Company of certain transaction related agreements, the failure of the joint venture to achieve certain financial results or certain events related to the Company), at a price based on the fair market value of such interest, with a minimum purchase price based on the joint venture's annual revenue. In addition, the Company may require Towers Perrin to sell its minority interest in the joint venture to the Company at any time after March 1, 2012, or prior to that date upon the occurrence of certain events (including the breach by Towers Perrin of certain transaction related agreements or certain events related to Towers Perrin), at a price based on the fair market value of such interest, with a minimum purchase price based on the joint venture's annual revenue. Had the Company completed the acquisition as of the earliest date presented, results of operations on a pro forma basis would not have been materially different from actual historical results.

On January 9, 2004, the Company acquired The Feld Group, a privately held technology management firm that specialized in reorganizing and realigning technology organizations to better meet the needs of their enterprises. The acquisition enhanced the Company's offerings and expertise in the transformational business process outsourcing/business transformation services market and enabled the Company to finalize appointments to its executive management team. The aggregate purchase price of The Feld Group was $53 million, comprised of $50 million in cash payments and warrants with a fair value of $3 million. In addition, the Company issued contingent warrants with a fair value of $4 million in connection with the acquisition. The aggregate purchase price of The Feld Group was adjusted by $2.3 million in 2006 when the contingencies associated with a portion of these warrants were resolved. The excess of the aggregate purchase price over the fair value of acquired assets and assumed liabilities of $47 million was allocated to goodwill in the Americas segment in 2004. An additional $2.3 million of goodwill was recorded in 2006 when a portion of the contingent warrants became exercisable as discussed above, and another $1.3 million of goodwill was recorded in 2007 when the last of the contingent warrants became exercisable. The Company also issued restricted stock awards and options to acquire EDS common stock with an aggregate fair value of $40 million to certain employee shareholders of The Feld Group who became employees of the Company. Such awards and options vest over three years and are contingent upon the continuing employment of these individuals.

NOTE 17: DISCONTINUED OPERATIONS

Income (loss) from discontinued operations includes the results of the Company's A.T. Kearney subsidiary which was sold in 2006, and the Company's UGS PLM Solutions subsidiary and its Soft Solution business which were sold in 2004. The net assets of A.T. Kearney are classified as "held for sale" at December 31, 2005. A.T. Kearney and UGS PLM Solutions were previously reported as separate segments by the Company. The Soft Solution business was previously included in the Company's Outsourcing segment. No interest expense has been allocated to discontinued operations for any of the periods presented.

Income (loss) from discontinued operations also includes the net results of the maintenance, repair and operations (MRO) management services business which was transferred by A.T. Kearney to the Company prior to the Company's divestiture of A.T. Kearney in January 2006. The Company expects to complete the sale of the MRO business in the first quarter of 2007. Under the terms of the proposed sale and related customer contract amendments, the Company will retain accounts receivable and certain other assets of the business but will transfer the tangible assets related to the MRO business to the buyer. The Company will continue to provide the buyer and a major customer with certain services during a transition period which may extend until the end of the 2007 calendar year. Upon completion of this transition period, the Company will have no continuing involvement in operations of the MRO management services business.

Following is a summary of assets and liabilities at December 31, 2006 and 2005 which are reflected in the consolidated balance sheets as "held for sale" (in millions):

	2006	2005
Marketable securities	$ –	$ 23
Accounts receivable, net	–	217
Prepaids and other	–	34
Deferred income taxes	–	14
Property and equipment, net	–	26
Investments and other assets	–	3
Goodwill	–	–
Other intangibles, net	–	28
Assets held for sale	$ –	$ 345
Accounts payable	–	105
Accrued liabilities	–	138
Deferred revenue	–	–
Pension benefit liability	–	26
Minority interest and other long-term liabilities	–	6
Liabilities held for sale	$ –	$ 275

Following is a summary of income (loss) from discontinued operations for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Revenues	$ 69	$ 780	$ 1,171
Costs and expenses	123	846	1,144
Operating income (loss)	(54)	(66)	27
Other income (expense)	–	2	(8)
Gains (losses), net	(1)	(110)	739
Income (loss) from discontinued operations before income taxes	(55)	(174)	758
Income tax benefit (expense)	26	38	(329)
Income (loss) from discontinued operations, net of income taxes	$ (29)	$ (136)	$ 429

A.T. Kearney's results for the year ended December 31, 2005 include a pre-tax impairment charge of $118 million to write-down the carrying value of its long-lived assets, including tradename intangible, to estimated fair value less cost to sell. The impairment charge is partially offset by the recognition of $8 million previously unrecognized tax assets that were expected to be realized as a result of the sale.

Income (loss) from discontinued operations for the years ended December 31, 2006 and 2005 includes after-tax net gains of $8 million and $18 million, respectively, related to the settlement of contingencies associated with sales of certain businesses classified as discontinued operations in prior years.

NOTE 18: SUPPLEMENTARY FINANCIAL INFORMATION

Following is supplemental financial information for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Property and equipment depreciation (including capital leases)	$ 761	$ 831	$ 1,058
Intangible asset and other amortization	401	378	540
Deferred cost amortization and charges	175	175	298
Cash paid for:			
Income taxes, net of refunds	442	378	343
Interest	235	232	328

The Company acquired $185 million, $160 million and $112 million of equipment utilizing capital leases in 2006, 2005 and 2004, respectively.

NOTE 19: OTHER OPERATING (INCOME) EXPENSE

Following is a summary of other operating (income) expense for the years ended December 31, 2006, 2005 and 2004 (in millions):

	2006	2005	2004
Restructuring costs, net of reversals	$ (7)	$ 68	$ 226
Early retirement offer	–	–	50
Pre-tax loss (gain) on disposal of businesses:			
Global Field Services	23	–	–
European wireless clearing	–	(93)	–
U.S. wireless clearing	(1)	–	(35)
Automotive Retail Group	–	–	(66)
Credit Union Industry Group	–	–	(4)
Other	–	(1)	(1)
Total	$ 15	$ (26)	$ 170

The following table summarizes accruals associated with restructuring and other employee reduction programs for the years ended December 31, 2006, 2005 and 2004 (in millions):

	Employee Separations	Exit Costs	Other Employee Reductions	Total
Balance at December 31, 2003	$ 165	$ 9	$ –	$ 174
2003 Plan charges	146	–	–	146
Amounts utilized	(240)	(2)	–	(242)
Other employee reductions programs	–	–	80	80
Balance at December 31, 2004	71	7	80	158
Amounts incurred	–	–	100	100
Amounts utilized	(47)	(3)	(103)	(153)
Reversal of prior years' accruals	(8)	(4)	(20)	(32)
Balance at December 31, 2005	16	–	57	73
Amounts utilized	(8)	–	(53)	(61)
Reversal of prior years' accruals	(6)	–	(1)	(7)
Balance at December 31, 2006	$ 2	$ –	$ 3	$ 5

Restructuring actions contemplated under prior restructuring plans are essentially complete as of December 31, 2006 with remaining accruals of $2 million comprised primarily of future severance-related payments to terminated employees.

During 2006, the Company sold its Global Field Services ("GFS") business in Europe which resulted in a pre-tax loss of $23 million. During 2005, the Company sold its European wireless clearing business which resulted in a pre-tax gain of $93 million. In connection with the sale, the Company recognized a $32 million valuation allowance related to deferred tax assets in certain European countries that may no longer be recoverable as a result of the sale. Net assets of the business included goodwill of $45 million. During 2004, the Company sold its U.S. wireless clearing business and its Automotive Retail Group ("ARG") which

resulted in pre-tax gains of $101 million. The net results of GFS, the European wireless clearing business, the U.S. wireless clearing business, and ARG are not included in discontinued operations due to the Company's level of continuing involvement with the businesses.

NOTE 20: QUARTERLY FINANCIAL DATA (UNAUDITED)

(in millions, except per share amounts)

	Year Ended December 31, 2006[1]				
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Year
Revenues	$ 5,078	$ 5,194	$ 5,292	$ 5,704	$ 21,268

Net income	0.01	0.05	0.02	0.21	0.28
Cash dividends per share of common stock	0.05	0.05	0.05	0.05	0.20

(1) Approximately 20 million shares were added to weighted-average shares outstanding and approximately $5 million of tax-effected interest was added to income from continuing operations and net income in the computation of diluted earnings per share in the third and fourth quarters of 2006 due to the dilutive effect of the Company's contingently convertible debt during those periods. Such debt was antidilutive in the first and second quarters and for the year ended December 31, 2006, as well as in each quarter and for the year ended December 31, 2005.

(2) Includes a pre-tax charge of $77 million recognized in the second quarter associated with the settlement of pension obligations for employees transitioned to a third party in connection with the termination of the Company's services contract with U.K. Inland Revenue as of June 2004.

(3) Includes a pre-tax charge of $37 million recognized in the second quarter for the impairment of deferred costs associated with a large IT commercial contract.

(4) Includes a pre-tax charge of $24 million recognized in the third quarter related to reserves established for shareholder litigation.

2005 **ANNUAL REPORT**

A Message From Michael H. Jordan • 2006 Annual Meeting Notice • Proxy Statement • 2005 Financial Information

5400 Legacy Drive
Plano, Texas 75024

To Our Shareholders,

By all accounts, 2005 was a successful year for EDS. Your company broke into stride, establishing a strong and competitive position in the marketplace. We reignited our sales engine, met key financial targets and continued deployment of our Agile Enterprise Platform with clients.

Last year's results marked a culmination of our "stabilize, fix and invest-to-grow" strategy. During the last few years, we moved EDS from a confederation of accounts to a more globally integrated company centered on its core business.

While EDS today is a force to contend with, we've only begun to demonstrate the power behind our technology vision and delivery capabilities – all underpinned by the steadfast commitment of EDS people to our clients' success. We will build on 2005's momentum, strengthening our ability to achieve market leadership.

Business Highlights

Our investment strategy has begun to pay off. In 2005, we:

- **Reignited our sales engine.** Total contract value of new business signings of $20.1 billion reflected almost a doubling of our win rate over the prior year. We added nine $100-million-plus, new-logo accounts, all contributing new revenue to the company. Existing and new clients clearly saw the value EDS delivers.
- **Strengthened our core operations.** We reduced operational complexity by increasing our use of standardized processes and building a consistent operating environment. Our standards-driven approach enabled us to develop and deliver high-quality services more consistently and efficiently.
- **Developed an advanced technology platform.** Our secure global service network, service delivery automation and legacy modernization help make our clients more competitive in a shifting world economy. EDS' Agility Alliance partners played a key role in driving innovative technology into our core offerings. Last year, we opened two Agility Alliance Development Centers in the United States to further that effort.
- **Further aligned our employees' skills to the marketplace.** EDS has embarked on a bold training and development initiative. More than 50,000 EDS employees upgraded their skills in 2005, completing nearly 2 million training hours. This action gives us a well-skilled, competitive work force to keep pace with changing market demands.
- **Solidified our relationship with General Motors (GM).** We transformed this important, 21-year client relationship by meeting challenging service targets and bringing compelling innovation to the table. These efforts paved the way to a $3.8 billion contract win in 2006 that will further incorporate components of our Agile Enterprise foundation.

- **Continued momentum with the Navy.** The historic Navy Marine Corps Intranet (NMCI) account demonstrated improved operational and financial performance. The NMCI account has moved from a user of cash to a source of cash.
- **Extended our leadership in Medicaid.** EDS won new or add-on Medicaid business for a combined contract value of nearly $800 million, including wins in six out of eight states. These wins brought our total state Medicaid contracts to 19.

We accomplished a lot last year – and in the previous two years – since we began transforming EDS. Our employees believe in EDS and what we can achieve. We gained renewed respect from clients, industry analysts and our competitors. Even with all this progress, we know we must move from being a good, respectable company to a great market leader.

Return to Growth

Our goal is to lead the industry we invented, delivering technology services that make our clients more competitive.

Our objectives are threefold: 1) Grow our infrastructure outsourcing business faster than the market rate; 2) Accelerate growth in our higher-margin business process outsourcing (BPO) and applications businesses; 3) Get back to the streamlined, disciplined approach that made EDS a powerhouse from the beginning.

EDS created the outsourcing services industry. It's what we're known for. While we've been successful at it, we can be more profitable. We're investing in technology to make our infrastructure outsourcing business less capital intensive and to give our clients real-time control over every aspect of their businesses.

The applications market is growing and is projected to accelerate in the next two years. EDS will build on its significant delivery capabilities in this area and move toward higher-end modernization and transformation projects. To this end, we are engaging a new global delivery model that aligns the best of our industry and functional expertise and more aggressively leverages offshore capabilities. Our objective is to develop globally linked centers of expertise and transform our clients' legacy systems so they can respond quickly and efficiently to changing market conditions.

We continue to expand our BPO capabilities since forming ExcellerateHRO early last year. We plan to grow the BPO portion of our portfolio to become a greater percentage of our business mix and focus our energies on turning a strong pipeline into a market-leading position.

We are consolidating our applications, vertical industry and business process expertise into one central resource. This move will accelerate our growth in the higher-end business performance services market. We will use this combined expertise to help our clients improve their overall performance and serve their customers better.

We also realigned our management structure to drive change throughout our business operations. The Office of the Chief Operating Officer links our Sales and Delivery teams to provide the best client solutions through a more streamlined, disciplined organization. Our goal is to harness the collective capabilities of a fully unified EDS.

Signs of Greatness

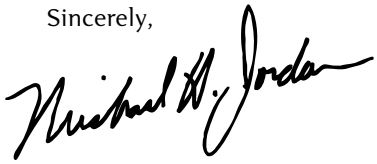
Last year signaled EDS was back in the game. In 2006, we will step up our efforts to grow the business.

Already, we've kicked off 2006 with some very important strategic wins. Most notable among them – and a telling symbol of the new EDS – was our multibillion-dollar contract with GM. We garnered approximately 70 percent of the GM business we pursued, with a total contract value of about $3.8 billion over five years. When added to the business that was not part of this recompete, we can expect $1.2 billion to $1.4 billion in annualized revenue from GM over the next five years.

The GM win is a strong endorsement of our technology strategy and our commitment to the highest levels of quality service. Based on EDS' Agile Enterprise foundation, we designed an innovative approach to support GM's vision for a new IT sourcing model. Our work with GM to establish global standardized processes will help reduce costs and continue to improve GM's world-class capabilities. What's more, these investments can be leveraged across EDS, positioning us well with other large global clients.

Our technology vision is gaining real traction. EDS is truly reinventing itself and – we believe – the industry we created. The new EDS will be a more dynamic company capable of delivering sustained value to its clients and shareholders.

Sincerely,



Michael H. Jordan
Chairman and Chief Executive Officer

ELECTRONIC DATA SYSTEMS CORPORATION

NOTICE OF ANNUAL MEETING OF SHAREHOLDERS TO BE HELD ON APRIL 18, 2006

The Annual Meeting of Shareholders of Electronic Data Systems Corporation ("EDS") will be held on Tuesday, April 18, 2006, at 1:00 p.m. local time, at the offices of EDS, 5400 Legacy Drive, Plano, Texas 75024. The purpose of the meeting is to:

- elect the Board of Directors for the next year;
- ratify the appointment of KPMG LLP as independent auditors;
- consider and vote upon two shareholder proposals, if presented at the meeting; and
- act upon such other matters as may properly be presented at the meeting.

Only EDS shareholders of record at the close of business on February 24, 2006, will be entitled to vote at the meeting.

Your vote is important. Whether or not you plan to attend the meeting, please complete and return the enclosed proxy card in the accompanying envelope or vote through the telephone or Internet voting procedures described on the proxy card. Your completed proxy, or your telephone or Internet vote, will not prevent you from attending the meeting and voting in person should you so choose.

Please let us know if you plan to attend the meeting by marking the appropriate box on the enclosed proxy card or, if you vote by telephone or Internet, indicating your plans when prompted. If you are a shareholder of record, please bring the top portion of the proxy card to the meeting as your admission ticket. If your shares are held in street name (by a bank or broker, for example), you may bring a recent account statement to the meeting in lieu of the admission ticket.

By order of the Board of Directors,

Storrow M. Gordon
Secretary

March 10, 2006

2006 Proxy Statement

PROXY STATEMENT
FOR THE ANNUAL MEETING OF SHAREHOLDERS
TO BE HELD APRIL 18, 2006

The Board of Directors of EDS is soliciting proxies to be used at the 2006 Annual Meeting of Shareholders (the "Meeting"). Distribution of this Proxy Statement and a proxy form is scheduled to begin on March 21, 2006. The mailing address of EDS' principal executive offices is 5400 Legacy Drive, Plano, Texas 75024.

About the Meeting

Who Can Vote

Record holders of EDS Common Stock at the close of business on February 24, 2006, may vote at the Meeting. On that date, 529,795,449 shares of Common Stock were outstanding. Each share is entitled to cast one vote.

How You Can Vote

If you return your signed proxy, or vote by telephone or the Internet, before the Meeting, we will vote your shares as you direct. You can specify whether your shares should be voted for all, some or none of the nominees for director. You can also specify whether you approve, disapprove or abstain from each of the other proposals. Proposals 1 and 2 will be presented at the Meeting by management. Proposals 3 and 4 may be presented by shareholders.

If a proxy is executed and returned but no instructions are given, the shares will be voted according to the recommendations of the Board of Directors. The Board of Directors recommends a vote FOR Proposals 1 and 2 and AGAINST Proposals 3 and 4.

If you participate in the EDS Stock Purchase Plan, the Common Stock fund under the EDS 401(k) Plan, the 2003 EDS Incentive Plan or a dividend reinvestment program, you may receive one proxy card for all shares registered in the same name. If your accounts are not registered in the same name, you will receive a separate proxy card for your individual plan shares. Generally, shares in these plans cannot be voted unless the proxy card is signed and returned, although shares held in the 401(k) Plan may be voted in the discretion of the plan trustee.

Revocation of Proxies

You can revoke your proxy at any time before it is exercised by: (1) delivering a written notice of revocation to the Corporate Secretary; (2) delivering another proxy that is dated later than the original proxy; or (3) attending the Meeting and voting by ballot.

Vote Required

The holders of a majority of the shares entitled to vote who are either present in person or represented by proxy at the Meeting will constitute a quorum for the transaction of business at the Meeting.

A plurality of the votes cast is required for the election of directors. This means that the director nominee with the most votes for a particular slot is elected to that slot. A proxy that has properly withheld authority with respect to the election of one or more directors will not be voted with respect to the director or directors indicated, although it will be counted for purposes of determining whether there is a quorum. Under an amendment to our

Corporate Governance Guidelines approved by the Board in February 2006, a director nominee who receives a greater number of "withheld" votes than votes "for" his or her election must promptly tender his or her resignation to the Board. We refer you to a discussion of this policy under the heading "Director Resignation Policy" below.

For each other proposal, the affirmative vote of the holders of a majority of the Common Stock represented in person or by proxy and entitled to vote on the proposal will be required for approval. An abstention with respect to such proposal will not be voted, although it will be counted for purposes of determining whether there is a quorum. Accordingly, an abstention will have the effect of a vote against such proposal.

If your broker holds your shares in its name, the broker is permitted to vote your shares on the election of directors and on Proposal 2 even if it does not receive voting instructions from you. However, your broker may not be permitted to exercise voting discretion with respect to some of the matters to be acted upon. Thus, if you do not give your broker specific instructions, your shares may not be voted on those matters and will not be counted in determining the number of shares necessary for approval. When a broker votes a client's shares on some but not all proposals at the Meeting, the missing votes are referred to as "broker non-votes." Those shares will be included in determining the presence of a quorum at the Meeting but would not be considered "present" for purposes of voting on a non-discretionary proposal. EDS understands that pursuant to New York Stock Exchange ("NYSE") rules, Proposals 3 and 4 are non-discretionary proposals for which your broker may not exercise voting discretion.

Other Matters to be Acted Upon at the Meeting

We do not know of any other matters to be validly presented or acted upon at the Meeting. Under our Bylaws, no business besides that stated in the meeting notice may be transacted at any meeting of shareholders. If any other matter is presented at the Meeting on which a vote may properly be taken, the shares represented by proxies will be voted in accordance with the judgment of the person or persons voting those shares.

Expenses of Solicitation

EDS is making this solicitation and will pay the entire cost of preparing, assembling, printing, mailing and distributing these proxy materials and soliciting votes. If you choose to access the proxy materials and/or vote over the Internet, you are responsible for any Internet access charges you may incur. Our officers and employees may, but without compensation other than their regular compensation, solicit proxies by further mailing or personal conversations, or by telephone, facsimile or e-mail. We will, upon request, reimburse brokerage firms and others for their reasonable expenses in forwarding proxy materials to beneficial owners of Common Stock.

Shareholders with Multiple Accounts

Shareholders who previously have elected not to receive an annual report for a specific account may request EDS to promptly mail its 2005 Annual Report to that account by writing EDS Investor Relations, 5400 Legacy Drive, Mail Stop H1-2D-05, Plano, Texas 75024, or by calling (888) 610-1122 or (972) 605-6661.

Multiple Shareholders Sharing the Same Address

We have adopted a procedure approved by the Securities and Exchange Commission ("SEC") called "householding," which reduces our printing costs and postage fees. Under this procedure, shareholders of record who have the same address and last name and do not participate in electronic delivery of proxy materials will receive only one copy of our annual report and proxy statement unless one or more of these shareholders notify us that they wish to continue receiving individual copies. Shareholders who participate in householding will continue to receive separate proxy cards.

If a shareholder of record residing at such an address wishes to receive a separate document in the future, he or she may contact our transfer agent at 1-800-937-5449 or write to American Stock Transfer & Trust Company, 59 Maiden Lane - Plaza Level, New York, NY 10038. Shareholders of record receiving multiple copies of our annual report and proxy statement may request householding by contacting us in the same manner. If you own your shares through a bank, broker or other nominee, you can request householding by contacting the nominee.

Corporate Governance and Board Matters

Board of Directors

The Board of Directors is elected by and accountable to the shareholders and is responsible for the strategic direction, oversight and control of EDS. Regular meetings of the Board are generally held five or six times per year and special meetings are scheduled when necessary. The Board held seven meetings in 2005. All directors continuing in office following the Meeting attended at least 85% of the meetings of the Board and the Board committees of which they were members during 2005.

Corporate Governance Guidelines

The EDS Corporate Governance Guidelines have been adopted by the Board of Directors to assist it in the performance of its duties and the exercise of its responsibilities and in accordance with the listing requirements of the NYSE. The Guidelines reflect the Board's current views with respect to corporate governance issues and are periodically reviewed and updated. The Guidelines cover the following principal subjects:

- *Expectations of individual directors,* including understanding EDS' businesses and markets, review and understanding of materials provided to the Board, objective and constructive participation in meetings and strategic decision-making processes, regular attendance at Board and Board committee meetings, and attendance at annual shareholder meetings.
- *Board selection and composition*, including Board size, independence of directors, process for determination of director independence, number of independent directors, nomination and selection of directors, service on other boards, director retirement, separation of the Chairman and Chief Executive Officer positions, director orientation and a mandatory continuing director education program.
- *Board operations,* including number of meetings, requirement for executive sessions of non-management directors, the duties of the Presiding Director, Board access to management, annual Chief Executive Officer evaluation, annual Board and Committee evaluation, management development and succession planning, retention of independent advisors and operation and composition of Board committees.
- *Other matters,* including director compensation and stock ownership, prohibition on consulting agreements with directors, restrictions on charitable contributions to director-affiliated organizations, procedures for avoidance or minimization of conflicts of interest, director resignation policies and the Board's policy regarding shareholder rights plans described below.

The Guidelines are posted on our website at *www.EDS.com/investor/governance/guidelines.aspx*. Shareholders may also request a copy of the Guidelines by writing EDS Investor Relations, 5400 Legacy Drive, Mail Stop H1-2D-05, Plano, Texas 75024, or by calling (888) 610-1122 or (972) 605-6661.

Rights Plan Policy

The Board of Directors redeemed EDS' shareholder rights plan, sometimes referred to as a "poison pill," in February 2005. The Board also adopted a policy to obtain shareholder approval prior to adopting any rights plan in the future unless the Board in the exercise of its fiduciary duties determines that, under the circumstances then existing, it would be in the best interest of EDS and its shareholders to adopt a rights plan without prior shareholder approval. The Board's policy further provides that if a rights plan is adopted by the Board without prior shareholder approval, the plan must provide that it shall expire within one year of adoption unless ratified by shareholders. This policy was supplemented in 2006 to provide that any determination by the Board to adopt a rights plan without prior shareholder approval shall be made by a committee comprised of all independent Directors.

Executive Sessions

The Corporate Governance Guidelines require the non-employee directors to meet in executive session without management present from time to time, and at least twice per year. Executive sessions are a normal part of the Board's deliberations and activities. One of these meetings is devoted to the evaluation of the Chief Executive Officer and the recommendations of the Compensation and Benefits Committee regarding his compensation.

Presiding Director

The Board has an independent Presiding Director who serves as chair of the regularly conducted executive sessions of the Board and all other sessions at which the Chairman is not present. The Corporate Governance Guidelines were amended in 2006 to expand the responsibilities of the Presiding Director. The Presiding Director facilitates communication with the Board and, at the request of any independent director, serves as the liaison between the Chairman and the independent directors. When requested by any independent director or when the Presiding Director deems it appropriate, the Presiding Director can call meetings of the independent directors. The Presiding Director reviews and approves the agenda for each Board meeting and the nature and type of materials to be sent to the Board for each meeting based on that agenda. At least annually, the independent Directors shall evaluate the Board's plan for agendas for each meeting in the upcoming year and the information provided at and in advance of meetings and shall discuss recommendations for any changes to that plan and information in executive session with the Presiding Director, who will communicate those recommendations to the Chairman.

The Presiding Director position is rotated on an annual basis among the Chairpersons of the Board's three standing Committees. The Chairman of the Audit Committee, Ray J. Groves, filled the Presiding Director position vacated by C. Robert Kidder in October 2005 and will continue to serve as the Presiding Director through the date of the Annual Meeting of Shareholders in 2007, and the Chairman of the Compensation and Benefits Committee, Ellen M. Hancock, will serve as the Presiding Director thereafter until the 2008 Annual Meeting of Shareholders. The EDS Corporate Governance Guidelines provide that if the position of Chairman is held by an independent director, all duties and responsibilities assigned to the Presiding Director shall be performed by that independent Chairman.

Communications with the Board

Individuals may communicate with the Presiding Director by submitting an e-mail to BoardCommunications@eds.com or sending a written communication to the following address:

Presiding Director of the EDS Board
c/o Corporate Secretary
5400 Legacy Drive, Mail Stop H3-3A-05
Plano, Texas 75024

Communications intended for any other non-management director should also be sent to the above address. Further information regarding the procedures for communications with the Presiding Director is posted on our website at *www.EDS.com/investor/governance/communication.aspx*.

Director Resignation Policy

In February 2006 the Board amended the Corporate Governance Guidelines to provide that a nominee for director in an uncontested election who receives a greater number of votes "withheld" from his or her election than "for" his or her election will promptly tender his or her resignation to the Chairman of the Board. The Governance Committee will promptly consider such resignation and recommend to the Board whether to accept or reject it. In considering whether to accept or reject the tendered resignation, the Governance Committee will consider all factors deemed relevant by its members, including the stated reasons why shareholders "withheld" votes for election from such director, the length of service and qualifications of such director and the director's contributions to EDS. The Board will act on the Governance Committee's recommendation no later than 90 days following the date of the shareholders' meeting when the election occurred. In considering such recommendation, the Board will review the factors considered by the Governance Committee and such additional information and factors the Board believes to be relevant. EDS will promptly publicly disclose the Board's decision together with a full explanation of the process by which the decision was reached and, if applicable, the reasons for rejecting the tendered resignation.

Any director who tenders his or her resignation pursuant to this provision will not participate in the Governance Committee recommendation or Board consideration regarding whether or not to accept the tendered resignation. If a majority of the members of the Governance Committee received a greater number of votes "withheld" than votes "for" their election at the same meeting, then the other independent directors will appoint a Board committee consisting of all or some of such other independent directors solely for the purpose of considering the tendered resignations and will recommend to the Board whether to accept or reject them.

Director Independence

The Board assesses the independence of each non-employee director not less frequently than annually in accordance with the EDS Corporate Governance Guidelines. Under the Guidelines for Assessing Independence of EDS' Directors (the "Independence Guidelines"), a director cannot be independent unless the Board affirmatively determines that he or she has no material relationship with EDS, either directly or as a partner, shareholder or officer of an organization that has a relationship with EDS, and has none of the other relationships listed in the guidelines that would disqualify the director from being independent under the rules of the NYSE. As contemplated by the NYSE rules, the Board also adopted categorical standards to assist in determining whether any material relationship with EDS exists. Directors who have any of the relationships outlined in such categorical standards are considered to have relationships that require a "full facts and circumstances review" by the Board in order to determine whether it constitutes a material relationship with EDS for purposes of his or her independence. The Independence Guidelines, including such categorical standards, are posted on our website at *www.EDS.com/investor/governance/independence.aspx*.

In February 2006, the Board assessed the independence of each non-employee director under the Independence Guidelines. The Board determined, after careful review, that all non-employee directors (Mr. Dunbar, Mr. Enrico, Dr. Gillis, Mr. Groves, Ms. Hancock, Mr. Hunt, Mr. Kangas, and Mr. Yost) are independent. There were no relationships outlined in the categorical standards with any non-employee director that required a "full facts and circumstances review" by the Board.

In connection with its assessment of the independence of each non-employee director, the Board also determined that each member of the Audit Committee meets the additional independence standards of the NYSE and SEC applicable to Audit Committee members. Such standards require that the director not be an affiliate of EDS and cannot accept from EDS, directly or indirectly, any consulting, advisory or other compensatory fee, other than fees for serving as a director.

EDS Code of Business Conduct

EDS is committed to conducting its business ethically and with integrity. We believe that integrity is the sum of the ethical performance of the people of EDS and fosters successful long-term relationships with clients, a better overall work environment and a culture of compliance with both the letter and spirit of the law that ultimately brings value to our shareholders. The EDS Code of Business Conduct, first adopted over a decade ago, has been continually updated to reflect the values we expect of the directors, officers and employees of the entire EDS family of companies. Today the EDS Code of Business Conduct meets the standards for a "code of ethics" applicable to our principal executive officer, principal financial officer, and principal accounting officer or controller for purposes of the rules adopted by the SEC, and satisfies the requirements of the NYSE for a code of business conduct applicable to all directors, officers and employees. The EDS Code of Business Conduct is posted on our website at *www.EDS.com/investor/governance/code.aspx*. Shareholders may also request a copy of the Code of Business Conduct by writing EDS Investor Relations, 5400 Legacy Drive, Mail Stop H1-2D-05, Plano, Texas 75024, or by calling (888) 610-1122 or (972) 605-6661. We will disclose any amendment or waiver of a provision of the Code of Business Conduct that applies to our principal executive officer, principal financial officer, principal accounting officer or controller, or that relates to any element of the definition of a "code of ethics" under applicable SEC rules, as well as any amendment or waiver of the Code for any of our directors or any other executive officer, on our website at *www.EDS.com/investor/governance/code.aspx* not later than five business days following the date of the amendment or waiver.

Committees of the Board

The Board of Directors has established three Committees to assist it in discharging its responsibilities: the Audit Committee; the Compensation and Benefits Committee; and the Governance Committee. Each committee is composed entirely of independent directors. The Board has adopted a written charter for each committee. Copies of these charters are posted on our website at *www.EDS.com/investor/governance/*committee.aspx. Shareholders may also request a copy of any committee charter by writing EDS Investor Relations, 5400 Legacy Drive, Mail Stop H1-2D-05, Plano, Texas 75024, or by calling (888) 610-1122 or (972) 605-6661.

Audit Committee. The Audit Committee, which met 15 times in 2005, is composed of Ray J. Groves (Chair), W. Roy Dunbar, S. Malcolm Gillis and Edward A. Kangas. Mr. Dunbar was appointed to this committee in January 2005 and Dr. Gillis was appointed to this committee in October 2005. The Board of Directors has determined that Messrs. Groves and Kangas are audit committee financial experts within the meaning of SEC

regulations, and that all members of the Audit Committee are independent within the meaning of the NYSE's listing standards. The Audit Committee assists the Board in fulfilling its responsibilities for oversight of the integrity of EDS' financial statements, EDS' compliance with legal and regulatory requirements, the independent auditors' qualifications and independence, and the performance of EDS' internal audit function and independent auditors. Among other things, the Audit Committee appoints and determines the compensation of EDS' independent auditors; reviews and evaluates the performance and independence of the independent auditors; reviews the scope and plans for the external and internal audits; reviews and discusses reports from the independent auditors regarding critical accounting policies, alternative treatments of financial information and other matters; reviews significant changes in the selection or application of accounting principles; reviews the internal control report of management, any issues regarding the adequacy of internal controls and any remediation efforts; reviews legal matters that could materially impact EDS' financial statements; reviews the EDS Code of Business Conduct to determine whether it complies with applicable law and discusses reports from the Office of Ethics and Business Conduct concerning compliance with the Code of Business Conduct; and reviews EDS' guidelines and policies with respect to risk assessment and risk management. The Committee also reviews with management and the independent auditors EDS' quarterly and annual financial statements and other public financial disclosures prior to their public release. The report of the Audit Committee is included below.

Compensation and Benefits Committee. The Compensation and Benefits Committee, which met 11 times in 2005, is composed of Ellen M. Hancock (Chair), Roger A. Enrico and R. David Yost. Mr. Enrico was appointed to this committee in February 2005 and Mr. Yost was appointed to this committee in October 2005. This committee reviews and approves annual goals and objectives relevant to the Chief Executive Officer's compensation and evaluates the Chief Executive Officer's performance against such goals and objectives. The committee also approves all salary and other compensation of our other executive officers and approves performance goals for all performance-based executive plans. It also reviews and approves all new benefit and equity compensation plans and programs, as well as amendments to existing plans and programs, and reviews and makes recommendations to the Board regarding director compensation.

Governance Committee. The Governance Committee, which met five times in 2005, is composed of Roger A. Enrico (Chair), Ellen M. Hancock and Ray L. Hunt. Mr. Hunt was appointed to this committee in February 2005. The Governance Committee develops, and makes recommendations to the Board for approval of, our policies and practices related to corporate governance, including the EDS Corporate Governance Guidelines. In addition, the committee develops the criteria for the qualification and selection of candidates for election to the Board, including the standards and processes for determining director independence, and makes recommendation to the Board regarding such candidates as well as the appointment of directors to serve on Board committees. The committee is also responsible for the development and oversight of the company's director orientation and education programs. The committee recommends to the Board the election of the Chairman and the Chief Executive Officer, reviews the Chief Executive Officer's recommendations regarding the election of other principal officers, reviews and develops with the Chief Executive Officer management succession plans, and makes recommendations regarding shareholder proposals. The procedures for submission by a shareholder of a director nominee or other proposal are described under "Shareholder Proposals and Nomination of Directors" below.

Director Qualifications

The Governance Committee will select nominees for director on the basis of their integrity, experience, achievements, judgment, intelligence, personal character, ability to make independent analytical inquiries, willingness to devote adequate time to Board duties, and the likelihood that they will be able to serve on the Board for a sustained period. To be recommended by the Governance Committee for election to the Board, a nominee must also meet the expectations for individual directors set forth in the EDS Corporate Governance Guidelines, including understanding EDS' businesses and the marketplaces in which it operates. In addition, a nominee must not have conflicts or commitments that would impair his or her ability to attend scheduled Board meetings or annual shareholders meetings, not hold positions that would result in a violation of legal requirements, and meet any applicable legal or regulatory requirements for directors of government contractors. In selecting nominees, the Governance Committee will also consider the nominee's global experience, experience as a director of a large public company and knowledge of particular industries.

Identification and Evaluation of Director Candidates

The Governance Committee uses a variety of means for identifying nominees for director, including third-party search firms and recommendations from current Board members and shareholders. In determining whether to nominate a candidate, the Governance Committee considers the current composition and capabilities of serving Board members, as well as additional capabilities considered necessary or desirable in light of existing needs, and then assesses the need for new or additional members to provide those capabilities. In most instances, all members of the Governance Committee, as well as one or more other directors, will interview a prospective candidate. The Governance Committee will also contact any other sources, including persons serving on another board with the candidate, it deems appropriate to develop a well-rounded view of the candidate. Reports from the interview with the candidate and/or Governance Committee members with personal knowledge and experience with the candidate, information provided by other contacts, the candidate's resume, and any other information deemed relevant by the Governance Committee will be considered in determining whether a candidate should be nominated.

In evaluating whether to nominate a director for re-election, the Governance Committee will consider the following: the director's attendance at Board and Board Committee meetings; the director's review and understanding of the materials provided in advance of meetings and other materials provided to the Board from time to time; whether the director actively, objectively and constructively participated in such meetings and in the company's strategic decision-making process in general; the director's compliance with the EDS Corporate Governance Guidelines; and whether the director continues to possess the qualities and capabilities expected of Board members discussed above. The Governance Committee will also consider input from other Board members concerning the performance and independence of that director. Generally, the manner in which the Governance Committee evaluates nominees for director recommended by a shareholder will be the same as that for nominees from other sources. However, the Governance Committee will also seek and consider information concerning the relationship between a shareholder's nominee and that shareholder to determine whether the nominee can effectively represent the interests of all shareholders.

There are three nominees this year who had not previously been elected to the Board by shareholders. Edward A. Kangas was appointed to the Board in 2004. At the time of his appointment, the Board was divided into three classes, the terms of which expired alternately over a three-year period. The term of Mr. Kangas' class was to expire in 2006. S. Malcolm Gillis and R. David Yost were appointed by the Board as directors in July 2005 and October 2005, respectively. Messrs. Kangas, Gillis and Yost were each appointed to the Board upon recommendation of the Governance Committee. Messrs. Kangas and Yost had been recommended to the Governance Committee by a third-party search firm. Dr. Gillis had been recommended to the Governance Committee by a non-management director.

Shareholder Proposals and Nomination of Directors

Shareholders may submit proposals, including director nominations, for consideration at future shareholder meetings.

Shareholder Proposals. For a shareholder proposal to be considered for inclusion in EDS' proxy statement for the 2007 Annual Meeting of Shareholders, the written proposal must comply with the requirements of SEC Rule 14a-8 regarding the inclusion of shareholder proposals in company-sponsored proxy materials. Proposals should be addressed to:

Corporate Secretary
Electronic Data Systems Corporation
5400 Legacy Drive, Mail Stop H3-3A-05
Plano, Texas 75024
Fax: (972) 605-5610

Our 2007 Annual Meeting of Shareholders is currently scheduled for April 17, 2007. Under SEC rules, shareholder proposals to be considered for inclusion in EDS' proxy statement for the 2007 Annual Meeting of Shareholders must be received by the Corporate Secretary not later than November 21, 2006.

Our By-laws provide for certain procedures that shareholders must follow to introduce an item of business at an annual meeting. These provisions, which are described under "By-law Procedures" below, are separate from and in addition to the SEC Rule 14a-8 requirements that a shareholder must satisfy to have a shareholder proposal included in our proxy statement.

Nomination of Director Candidates. The Governance Committee will consider candidates recommended by shareholders who beneficially own not less than 1% of the outstanding Common Stock. Eligible shareholders wishing to make such recommendations to the Governance Committee for its consideration may do so by submitting a completed "Shareholder Recommendation of Candidate for Director" form to the Secretary of the Governance Committee by e-mail to DirectorNominations@eds.com or by mail to the following address:

Secretary of the Governance Committee
Electronic Data Systems Corporation
5400 Legacy Drive, Mail Stop H3-3A-05
Plano, Texas 75024

This form is posted on our website at *www.EDS.com/investor/governance/nominations.aspx.* A copy of the form may also be requested from the Secretary of the Governance Committee. Eligible shareholders who wish to recommend a nominee for election as director at the 2007 annual meeting should submit a completed form not earlier than October 1, 2006, and not later than November 21, 2006. Generally, candidates recommended by an eligible shareholder will be evaluated by the Governance Committee under the same process described above. However, the Governance Committee will not evaluate a shareholder-recommended candidate unless and until the potential candidate has indicated a willingness to serve as a director, comply with the expectations and requirements for Board service described above and provide all information required to conduct an evaluation.

Shareholders who wish to nominate a person for election as a director at the next annual meeting may do so in accordance with the By-law procedures described below, either in addition to or in lieu of making a recommendation to the Governance Committee.

By-law Procedures. Our By-laws provide for certain procedures that shareholders must follow to introduce an item of business at an annual meeting or nominate persons for election as a director. These requirements are separate from and in addition to the SEC Rule 14a-8 requirements that a shareholder must satisfy to have a shareholder proposal included in our proxy statement. These requirements are also separate from the procedures described above that a shareholder must follow to recommend a director candidate to the Governance Committee. Generally, our By-laws require that a shareholder notify the Corporate Secretary of a proposal not less than 90 days nor more than 270 days before the scheduled meeting date. The notice must include the name and address of the shareholder and of any other shareholders known by such shareholder to be in favor of the proposal, as well as a description of the proposed business and reason for conducting the proposed business at the annual meeting. If the notice relates to a nomination for director, it must also set forth the name, age, principal occupation and business and residence address of any nominee(s), the number of shares of Common Stock beneficially owned by the nominee(s) and such other information regarding each nominee as would have been required to be included in a proxy statement filed pursuant to the SEC's proxy rules.

Our By-laws are posted on our website at *www.EDS.com/investor/governance.* Shareholders may also contact the Corporate Secretary at the above address for a copy of the relevant By-law provisions.

Compensation of Non-employee Directors

Non-employee directors receive an annual cash retainer of $200,000 and an additional $15,000 for serving as chairperson of one of the Board's three standing committees. No additional fees are paid for attending Board or Board committee meetings. Non-employee directors are also reimbursed for actual travel and out-of-pocket expenses incurred in connection with their service. Director compensation is paid in advance at the commencement of each annual director compensation period, which generally begins at the Annual Meeting of Shareholders in April. If a director's Board service terminates prior to the end of the director compensation period, EDS does not seek to recover any portion of the cash retainer or additional chairperson fee paid in advance.

The Board believes it is important to align the interests of directors with those of shareholders and for directors to hold equity ownership positions in EDS that are meaningful in their individual circumstances. Accordingly, the Board strongly encourages all non-employee directors to elect to take a significant portion of their compensation in the form of EDS equity, and has adopted director stock ownership guidelines requiring directors to hold EDS equity valued at not less than $400,000 following a designated period.

Non-employee directors may elect to receive restricted stock in lieu of all or part of their annual cash retainer. Prior to the 2005/2006 director compensation year, directors had been able to elect to receive stock options

and/or restricted stock in lieu of any part of their cash retainer, which awards would vest over future service periods. Under the 2003 Incentive Plan, awards that had not vested at the time of a non-employee director's resignation are not forfeited if the Board has consented to such resignation. In 2005, the Board consented to the resignations of Richard Fisher, C. Robert Kidder and Solomon Trujillo and to Judith Rodin's not seeking re-election to the Board, and the vesting of the following awards held by such persons was accelerated: *Mr. Fisher* – options to purchase 18,944 shares of Common Stock at $16.145 per share, one-third of which had been scheduled to vest on June 1, 2005, 2006 and 2007; *Mr. Kidder* – options to purchase 4,668 shares of Common Stock at $20.99 per share scheduled to vest on June 2, 2006, and 10,970 restricted stock awards scheduled to vest from May 2006 to May 2008; *Mr. Trujillo* – options to purchase 4,194 shares of Common Stock at $21.115 per share, one-third of which had been scheduled to vest on March 1, 2006, 2007 and 2008; and *Dr. Rodin* – options to purchase 1,333 shares of Common Stock at $54.19 per share, scheduled to vest on May 2, 2005, and options to purchase 2,666 shares of Common Stock at $20.99 per share, one-half of which had been scheduled to vest on June 2, 2005 and 2006.

Directors may defer, in a cash account or phantom stock account, all or a portion of their annual cash retainer until up to five years after separation from the Board pursuant to the Deferred Compensation Plan for Non-employee Directors. Compensation deferred to the cash account earns interest at a rate equal to 120% of the applicable federal long-term rate published by the IRS. Compensation deferred to the phantom stock account is deemed to have purchased shares of Common Stock on the effective date of the deferral at the then fair market value of the stock. EDS contributes to the director's phantom stock account an additional 10% of the number of shares of Common Stock deemed to have been purchased. The number of shares credited to the phantom stock account is adjusted periodically to reflect the payment and reinvestment of dividends on the Common Stock.

EDS does not provide retirement benefits to non-employee directors. Upon conclusion of their Board service, charter members of the Board (who have served on the Board since 1996) receive a commemorative gift valued at approximately $3,500. Such gifts were furnished to Mr. Kidder and Dr. Rodin in 2005.

Report of the Audit Committee

The Audit Committee reviewed and discussed with management of the company and KPMG LLP, independent auditors for the company, the audited financial statements to be included in the Annual Report on Form 10-K for the year ended December 31, 2005.

The Audit Committee discussed with KPMG LLP the matters required to be discussed by Statement on Auditing Standards No. 61, "Communications with Audit Committees", as amended.

The Audit Committee received the written disclosures and the letter from KPMG LLP required by Independence Board Standard No. 1, "Independence Discussions With Audit Committees", and has discussed with KPMG LLP its independence from the company.

In reliance on the reviews and discussions with management of the company and KPMG LLP referred to above, the Audit Committee has recommended to the Board of Directors that the audited financial statements be included in the company's Annual Report on Form 10-K for the year ended December 31, 2005, for filing with the Securities and Exchange Commission.

The Audit Committee reviewed management's process to assess the adequacy of the company's system of internal control over financial reporting and management's conclusions on the effectiveness of the company's internal control over financial reporting. The Audit Committee also discussed with KPMG LLP the company's internal control assessment process, management's assessment with respect thereto and KPMG LLP's evaluation of the company's system of internal control over financial reporting.

It is the responsibility of the company's management to plan and conduct audits and determine that the company's financial statements are complete and accurate and in accordance with generally accepted accounting principles. In giving its recommendation to the Board of Directors, the Audit Committee has relied on management's representation that such financial statements have been prepared in conformity with generally accepted accounting principles, and the reports of the company's independent accountants with respect to such financial statements.

Audit Committee
Ray J. Groves, Chair
W. Roy Dunbar
S. Malcolm Gillis
Edward A. Kangas

PROPOSAL 1: ELECTION OF DIRECTORS

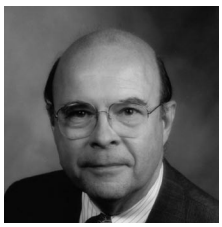
Commencing this year EDS' directors will be elected for a one-year term at each Annual Meeting of Shareholders. The Board of Directors proposes the ten nominees listed below for election as directors at the 2006 Annual Meeting. The directors will hold office from election until the next Annual Meeting of Shareholders or until their successors are elected and qualified. All director nominees, other than Dr. Gillis and Mr. Yost, have served as directors since the 2005 Annual Meeting. Dr. Gillis and Mr. Yost were appointed by the Board as directors in July 2005 and October 2005, respectively. If a director nominee becomes unavailable for election, the Board may substitute another person for the nominee, in which event your shares will be voted for that other person. The information below regarding the director nominees is as of March 1, 2006.

The Board of Directors recommends a vote FOR each director nominee.

W. ROY DUNBAR, 44, has been a director of EDS since 2004. He has been President Global Technology and Operations of Master Card International since September 2004. Mr. Dunbar had been president, intercontinental operations of Eli Lilly and Company, responsible for its Asia, Africa/Middle East, Latin America and the Confederation of Independent States operations from January 2004 to September 2004, and was a member of Eli Lilly's senior management forum. He had served as vice president of information technology and chief information officer of Eli Lilly since 1999. Mr. Dunbar joined Eli Lilly in 1990. He is also a director of Humana Inc.

ROGER A. ENRICO, 61, has been a director of EDS since 2000. He has been Chairman of the Board of DreamWorks Animation SKG, Inc. since October 2004 and is a former Chairman and Chief Executive Officer of PepsiCo, Inc. As Chairman of DreamWorks, he is involved in its investor relations, corporate strategic planning, marketing and promotional strategy, succession planning and employee development and oversees matters related to its corporate governance and Sarbanes-Oxley compliance. Mr. Enrico was Chief Executive Officer of PepsiCo, Inc. from April 1996 to April 2001, Chairman of the Board from November 1996 to April 2001, and Vice Chairman from April 2001 to March 2002. He joined PepsiCo, Inc. in 1971, became President & CEO of Pepsi-Cola USA in 1983, President & CEO of PepsiCo Worldwide Beverages in 1986, Chairman & CEO of Frito-Lay, Inc. in 1991 and Chairman & CEO of PepsiCo Worldwide Foods in 1992. Mr. Enrico was Chairman and CEO, PepsiCo Worldwide Restaurants, from 1994 to 1997. He is also a director of Belo Corporation, DreamWorks Animation SKG, Inc. and The National Geographic Society.

S. MALCOLM GILLIS, 65, has been a director of EDS since 2005. He has served as Zingler Professor of Economics and University Professor at Rice University since June 2004. Dr. Gillis was President of Rice University from 1993 to June 2004. He is also a director of Halliburton Company, Service Corporation International and Introgen Therapeutics, Inc.

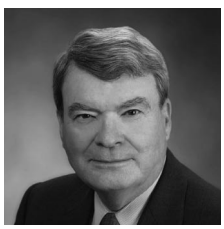


RAY J. GROVES, 70, has been a director of EDS since 1996. He served as Senior Advisor of Marsh Inc., the insurance brokerage and risk management subsidiary of Marsh & McLennan Companies, Inc., from October 2004 to October 2005, Chairman and Chief Executive Officer from July 2003 to October 2004, President and Chief Executive Officer from January 2003 to June 2003, and President and Chief Operating Officer from October 2001 to January 2003. Mr. Groves was Chairman of Legg Mason Merchant Banking, Inc. from March 1995 to September 2001. He retired as Chairman and Chief Executive Officer of Ernst & Young LLP in September 1994, which position he held since 1977. Mr. Groves is also a director of Boston Scientific Corporation and Overstock.com, Inc.

ELLEN M. HANCOCK, 62, has been a director of EDS since 2004. She was Chairman of Exodus Communications, Inc., a computer network and internet systems company, from June 2000 to September 2001, Chief Executive Officer from September 1998 to September 2001 and President from March 1998 to June 2000. Exodus filed a voluntary petition under Chapter 11 of the federal bankruptcy laws in September 2001. Ms. Hancock was Executive Vice President, Research and Development, Chief Technology Officer of Apple Computer Inc. from July 1996 to July 1997. She previously was Executive Vice President and Chief Operating Officer of National Semiconductor and a Senior Vice President and Group Executive of International Business Machines Corporation. Ms. Hancock is also a director of Aetna Inc., Colgate-Palmolive Company and Watchguard Technologies, Inc.

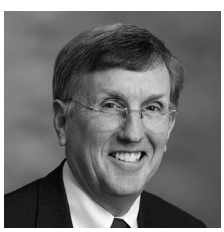
JEFFREY M. HELLER, 66, rejoined EDS in March 2003 as President and Chief Operating Officer and a director. He retired from EDS in February 2002 as Vice Chairman, a position he had held since November 2000. Mr. Heller served as President and Chief Operating Officer of EDS from 1996 to November 2000, Senior Vice President from 1984 to 1996, and Chairman of Unigraphics Solutions Inc. (then a subsidiary of EDS) from January 1999 to February 2001. He joined EDS in 1968 and has served in numerous technical and management capacities. Mr. Heller is also a director of Trammell Crow Company, Temple Inland Corp. and Mutual of Omaha.

RAY L. HUNT, 62, has been a director of EDS since 1996. Mr. Hunt has been Chairman of the Board and Chief Executive Officer of Hunt Consolidated Inc. and Chairman of Hunt Oil Company for more than five years. He is a director of Halliburton Company and PepsiCo, Inc., a manager of Verde Group, LLC and Chairman of the Board of Directors of the Federal Reserve Bank of Dallas.



MICHAEL H. JORDAN, 69, has been Chairman and Chief Executive Officer of EDS since March 2003. He was Chairman and Chief Executive Officer of CBS Corporation (formerly Westinghouse Electric Corporation) from July 1993 until December 1998. Prior to joining Westinghouse, Mr. Jordan was a principal with the investment firm of Clayton, Dubilier and Rice from September 1992 through June 1993, Chairman of PepsiCo International from December 1990 through July 1992 and Chairman of PepsiCo World-Wide Foods from December 1986 to December 1990. Mr. Jordan has been chairman of the board of directors of eOriginal, Inc. (electronic document services) since June 1999. He is also a director of Aetna Inc.

EDWARD A. KANGAS, 61, has been a director of EDS since 2004. He was Chairman and Chief Executive Officer of Deloitte Touche Tohmatsu from 1989 to 2000 and Managing Partner of Deloitte & Touche (USA) from 1989 to 1994. Mr. Kangas began his career as a staff accountant at Touche Ross in 1967, where he became a partner in 1975. After his retirement from Deloitte in 2000, Mr. Kangas served as a consultant to Deloitte until 2004. He is also the Chairman of the National Multiple Sclerosis Society and a director of Eclipsys Corporation, Hovnanian Enterprises Inc., Oncology Therapeutics Networks and Tenet Healthcare Corporation (for which he has served as non-executive Chairman since July 2003).



R. DAVID YOST, 58, has been a director of EDS since 2005. He has been a director and Chief Executive Officer of AmerisourceBergen Corporation, a pharmaceutical services company, since August 2001 and President of AmerisourceBergen from August 2001 to October 2002. Mr. Yost served as Chairman and Chief Executive Officer of AmeriSource Health Corporation from December 2000 to August 2001 and President and Chief Executive Officer of AmeriSource Health Corporation from May 1997 to December 2000. He held a variety of other positions with AmeriSource Health Corporation and its predecessors since 1974, including Executive Vice President – Operations of AmeriSource Health Corporation from 1995 to 1997.

Stock Ownership of Management and Certain Beneficial Owners

Stock Ownership of Directors and Executive Officers. The following table sets forth certain information regarding the beneficial ownership of Common Stock as of February 15, 2006, by each director and nominee for director, the Chief Executive Officer, the executive officers named in the Summary Compensation Table in this Proxy Statement, and all current directors and executive officers as a group. Each of the individuals/groups listed below is the owner of less than one percent of the outstanding Common Stock.

Name	Amount and Nature of Beneficial Ownership
W. Roy Dunbar	9,573 (b)(c)
Roger A. Enrico	69,523 (a)(b)
S. Malcolm Gillis	4,252 (b)
Ray J. Groves	80,789 (a)(b)
Ellen M. Hancock	19,730 (a)(b)(c)
Ray L. Hunt	139,323 (a)(b)
Edward A. Kangas	11,339 (b)
R. David Yost	10,112 (b)
Michael H. Jordan	430,957 (a)(c)(d)(e)
Jeffrey M. Heller	1,075,200 (a)(c)(d)(e)
Charles S. Feld	336,278 (a)(c)(d)(e)
Stephen F. Schuckenbrock	252,320 (a)(c)(d)(e)
Robert H. Swan	540,732 (a)(c)(d)(e)
Directors and executive officers as a group (16 persons)	3,219,882 (a)-(e)

(a) Includes shares of Common Stock which may be acquired on or before April 14, 2006, through the exercise of stock options as follows: Mr. Enrico—25,130 shares; Mr. Groves—30,049 shares; Ms. Hancock—6,914 shares; Mr. Hunt—36,283 shares; Mr. Jordan—373,834 shares; Mr. Heller—584,204 shares; Mr. Feld—238,887 shares; Mr. Schuckenbrock—191,665 shares; Mr. Swan—393,000 shares; and all directors and executive officers as a group—2,084,518 shares. Does not include shares subject to options vesting after April 14, 2006, regardless of whether such options may vest prior to that date if the share price appreciates to specified levels.

(b) Includes compensation deferrals treated as phantom stock under the Non-Employee Director Deferred Compensation Plan as follows: Mr. Dunbar—8,614 shares; Mr. Enrico—4,227 shares; Dr. Gillis—4,252 shares; Mr. Groves—48,493 shares; Ms. Hancock—12,816 shares; Mr. Hunt—39,155 shares; Mr. Kangas—11,339 shares; and Mr. Yost—5,112 shares.

(c) Excludes unvested restricted stock units granted under the 2003 Incentive Plan as follows: Mr. Dunbar—7,579 units; Ms. Hancock—5,663 units; Mr. Jordan—400,000 units; Mr. Heller—313,000 units; Mr. Feld—85,828 units; Mr. Schuckenbrock—63,622 units; Mr. Swan—56,141 units; and all directors and executive officers as a group—1,037,050 units. The units will vest (subject to earlier vesting based on EDS' achievement of performance goals) during the period from 2005 through the earlier of normal retirement or 2009, subject to earlier vesting under the terms of agreements with certain executives described below.

(d) Includes vested compensation deferrals treated as invested in Common Stock under the Executive Deferral Plan as follows: Mr. Jordan—6,692 shares; Mr. Heller—60,984 shares; Mr. Feld—6,081 shares; Mr. Swan—105,144 shares; Mr. Schuckenbrock—586 shares; and all executive officers as a group—192,131 shares.

(e) Includes vested compensation deferrals treated as invested in Common Stock under the 401(k) Plan as follows: Mr. Jordan—431 shares; Mr. Heller—491 shares; Mr. Feld—319 shares; Mr. Schuckenbrock—285 shares; Mr. Swan—234 shares; and all executive officers as a group—5,586 shares.

Stock Ownership of Certain Beneficial Owners. Based on a review of filings with the SEC, we are aware of the following beneficial owners of more than 5% of the outstanding Common Stock at December 31, 2005:

Name and Address of Beneficial Owner	**Number of Shares Beneficially Owned**	**Percentage of Common Stock Outstanding**
Dodge & Cox 555 California St., 40th Floor San Francisco, CA 94104	66,666,548 (a)	12.8%
Hotchkiss and Wiley Capital Management, LLC 725 S. Figueroa St, 39th Floor Los Angeles, CA 90017	56,115,902 (b)	10.8%
AXA Financial, Inc. (c) 1290 Avenue of the Americas New York, NY 10104	35,122,629 (c)	6.7%
State Street Bank and Trust Company 225 Franklin Street Boston, MA 02110	29,462,002 (d)	5.7%
Franklin Resources, Inc. (e) One Franklin Parkway San Mateo, CA 94403	26,189,555 (e)	5.0%

(a) Dodge & Cox reported sole voting power over 62,589,048 shares, shared voting power over 659,000 shares, and sole dispositive power over all shares beneficially owned.

(b) Hotchkiss and Wiley reported sole voting power over 42,889,602 shares and sole dispositive power over all shares beneficially owned.

(c) A group comprised of AXA Financial, Inc. (including its subsidiaries Alliance Capital Management L.P. and AXA Equitable Life Insurance Company) and certain affiliated entities located in Paris, France, reported sole voting power over 19,765,796 shares, shared voting power over 3,670,367 shares, sole dispositive power over 35,093,621 shares and shared dispositive power over 29,008 shares.

(d) State Street reported sole voting power over 13,810,682 shares, shared voting power over 15,651,320 shares, and shared dispositive power over all shares beneficially owned.

(e) Investment advisory subsidiaries of Franklin Resources, Inc. (including Templeton Global Advisors Limited) and its principal shareholders Charles B. Johnson and Rupert H. Johnson, Jr. reported sole voting power over 24,839,622 shares, sole dispositve power over 26,139,653 shares, and shared dispositive power over 51,902 shares.

Compensation and Benefits Committee Report on Executive Compensation

The Compensation and Benefits Committee of the Board of Directors (the "Committee") determines the compensation of EDS' Chief Executive Officer ("CEO") and other executive officers and oversees the administration of the company's compensation and benefit plans for all employees of EDS. The Committee reviews and approves all salary, equity-based compensation and other remuneration or benefits for executive officers, including the performance goals for any performance-based incentive plans in which executive officers participate. In addition, the Committee annually reviews and approves corporate goals and objectives related to the CEO's compensation, evaluates the CEO's performance in light of such goals and objectives and sets the CEO's compensation based on such performance. Each member of the Committee is an independent director, and no former employees of EDS serve on the Committee. The Committee met eleven times in 2005 and routinely reported to the Board on its activities.

Executive Compensation Philosophy

We are committed to paying executive officers performance-oriented compensation competitive with the market in which EDS competes for talent. Our primary goal is to create sustainable shareholder value by attracting and retaining accomplished and high potential executives and motivating and rewarding those executives for achievement of our short- and long-term goals and objectives.

The market for EDS' executive talent is broader than the information technology ("IT") services industry. Accordingly, we review survey data for two distinct comparator groups prepared by an independent third-party consulting firm. One group consists of large global corporations similar in revenue and/or market capitalization to EDS, most of which are outside the IT services industry, with a sector weighting similar to the composition of the S&P 500 companies. The second group consists of companies in the IT services and related industries, without regard to revenue or market capitalization. The Committee periodically reviews these comparator groups to ensure they are a representative cross-section of the companies with which EDS competes for executive talent often with the use of an independent expert.

Our strategy is to ensure the overall level of our salary, annual bonus opportunity and long-term incentive compensation is competitive with the 50th percentile compensation at peer companies. Moreover, because we believe it is important to place a significant portion of each executive officer's total compensation at risk, we design our total compensation package to pay above the 50th percentile when EDS exceeds its goals and below the 50th percentile when EDS fails to meet its goals.

Components of Executive Compensation

In addition to benefit plans and programs generally available to all U.S. employees, the following are principal components of executive officer compensation:

- base salary
- annual bonus
- long-term incentives
- perquisites
- retirement and other executive arrangements

Base Salary. We target base salaries for executive officers at the 50th percentile paid for similar positions by companies in the comparator groups described above. We review and approve base salaries annually relative to market survey data, individual performance and the executive's contribution to EDS' overall performance. An executive's base salary may be higher or lower than the 50th percentile for his or her position depending on a combination of factors, including his or her performance, responsibilities and experience, and his or her annual bonus and long-term incentive opportunities as well as the value of any outstanding and unvested long-term incentive awards.

Annual Bonus. Annual bonus compensation reflects our philosophy that a significant portion of each executive's annual compensation be contingent upon EDS' performance during the year and the executive's contribution to that performance. Annual target bonus opportunity is expressed as a percentage of an executive's base salary. For 2005 performance, target bonus opportunity was 110 percent for the CEO, 100 percent for the President and 85 percent for Executive Vice Presidents. We establish the target bonus opportunity at the 50th percentile for similar positions by companies in the comparator groups described above. The amount of the actual bonus paid to an executive in respect of any year will vary from 0 to 200 percent of the target bonus based on company and individual performance.

The CEO and other executive officers were eligible for a bonus in respect of 2005 financial performance under a Corporate Bonus Plan ("CBP") established under the 2003 Incentive Plan. The CBP, which also covers senior leadership employees who are not executive officers, replaced several annual bonus plans used for executive officers and other leadership groups prior to 2004, and allows for a common design across the organization. Bonus funding for 2005 was based on metrics and cascaded performance targets for corporate and functional or regional performance, with funding for executive officers based 100 percent on corporate performance and funding for other participants generally based 50 percent on corporate performance and 50 percent on functional or regional performance. Individual bonuses for executive officers were established based on actual company results, which were then adjusted +/- 50 percent based on our assessment of individual performance against specific objectives and goals established at the beginning of the performance year. These goals and objectives varied among executive officers depending upon the executive's position and the operation or function for which he or she was responsible. The metrics and weights used for determining corporate performance were earnings per share (30%); free cash flow (40%); revenue (20%); and total contract value (TCV) of new business signings (10%). The metrics for regional performance included return on net assets (RONA), operating margin, revenue, TCV and customer loyalty.

In February 2006, we reviewed EDS' 2005 financial results relative to the financial criteria we previously established under the CBP for 2005 performance. In accordance with the terms of the CBP, in establishing 2005 financial results for plan purposes, we adjusted reported results to reflect certain events, including gains and losses from divestitures, earnings and losses from discontinued operations, gains from reversed restructuring charges, and the impact of the settlement of shareholder litigation. Our goal in approving such adjustments was to ensure that any CBP payout aligned with management's contribution to the ongoing operating performance of the company, and not penalize or reward them for extraordinary events. For 2005, the company's performance achieved the target we established for annual revenue and exceeded the target for earnings per share, free cash flow and TCV. As a result, the CBP funded in aggregate at 103% of the targeted payout for executive officers. Although the bonus is payable in March 2006, because it will be paid in respect of 2005 performance, it is reported as 2005 bonus in the Summary Compensation Table included in this Proxy Statement.

Long-Term Incentives. Long-term incentive opportunities are an important and significant element of the total compensation package for EDS executives. Most stock-based awards to executives are made under the 2003 Incentive Plan (which authorizes awards of stock options, stock appreciation rights, restricted stock and other stock-based awards). In granting stock-based awards, we consider the long-term incentive compensation awarded for similar executive positions by the comparator groups, the number of unvested equity-based awards held by the executive, and the executive's individual performance. The number of shares of common stock we make available through equity-based awards is also influenced by expected shareholder dilution attributable to our equity incentive programs.

The primary purpose of long-term incentive compensation is to encourage executives to improve the performance and value of the company and, ultimately, create shareholder wealth. Furthermore, we believe successful long-term incentive plans should require sustained performance in order for executives to be rewarded. These fundamental principles led us to reconsider the use of annual employee stock option grants. During 2004, the Committee launched a project with management to reconsider the company's long-term incentive compensation strategy and review specific alternatives that would:

- focus executives on long-term metrics that create sustained shareholder value;
- address shareholder concerns regarding the use of stock options and shareholder dilution;
- more efficiently align the program cost to EDS and perceived value of awards;
- recognize the impact of the Financial Accounting Standards Board's stock-based compensation expense recognition project;
- attract and retain top executive talent globally; and
- remain competitive with market changes in compensation practices.

As a result of this comprehensive review of our long-term incentive compensation strategy, beginning with the 2005 grant, executive officers were awarded one-half of their long-term incentive compensation in the form of nonqualified stock options that vest 100 percent three years from the grant date and one-half in the form of performance-vesting restricted stock units ("Performance RSUs"). For participants who are not executive officers, annual stock option grants were completely replaced with annual grants of Performance RSUs. Vesting of Performance RSUs for executive officers can range from 0 to 200 percent of their target Performance RSU award, while vesting for non-executive officer participants can range from 50 to 200 percent of their target award. Vesting of Performance RSUs for all participants will be tied to EDS' performance as measured and weighted by operating margin (50%), net asset utilization (25%), and organic revenue growth (25%) over a three-year performance period. The performance period for the 2005 grant was the three-year period commencing on January 1, 2005. For the 2006 grant, the performance period will be the three-year period commencing on January 1, 2006. Following vesting of any Performance RSUs, a participant will be prohibited from selling 50 percent of the vested shares for a period of 12 months following the vesting date. With respect to stock options issued to executive officers, any options exercised within 12 months of vesting can only be exercised for shares and must be held for 12 months following the exercise date.

Perquisites. The Committee's strategy is to limit the use of perquisites offered to executives. EDS provides two global executive perquisites: the Executive Physical Program designed to promote the executive's physical health and well-being; and the Executive Financial Counseling Program intended to maximize the value of remuneration provided by EDS and minimize an executive's time spent managing personal affairs.

Retirement and Other Executive Arrangements. EDS has generally entered into severance and change-in-control employment agreements with its executive officers. Such agreements have also been provided on a limited basis to senior executives who are not executive officers, either as approved by the Committee or within guidelines established by the Committee. Over the last two years, we have standardized the terms of new severance and change of control agreements, which now include a termination or "sunset" date which may not be extended without Committee approval. Additional information related to these and other arrangements with EDS' "named executive officers" is set forth under "Employment Agreements" below. The Committee has also established a policy requiring shareholder approval for any future executive severance arrangements that provide benefits of 2.99 times annual cash compensation (base salary plus target bonus) or greater.

EDS also provides a Supplemental Executive Retirement Plan, or SERP, to the named executive officers, excluding the Chairman and Chief Executive Officer, and a small group of other U.S. executives. In 2005, we implemented a requirement that no new participants may be added to the SERP without approval of the Committee. It is our intent to limit additional participation in the SERP to extraordinary new hire and retention situations.

Stock Ownership Guidelines

We encourage stock ownership for executive officers and other executives and have implemented stock ownership guidelines expressed as a multiple of annual base salary.

Executive Level	Stock Ownership Multiple
CEO/President	5 times annual salary
COO/Executive Vice President	3 times annual salary
Senior Vice President	2 times annual salary
Vice President & General Manager	2 times annual salary
Division Vice President	2 times annual salary
Vice President (Level 3)	1 times annual salary

The stock ownership multiple must be achieved by the later of December 31, 2008, or five years from an executive's change in status.

In addition to EDS' long-term incentive compensation program, the company provides executives with other programs to accumulate EDS stock. These include a qualified employee stock purchase plan and the U.S. Executive Deferral Plan, a non-qualified deferred compensation plan, that allows executives to defer base salary and annual bonus compensation into deferred EDS stock units. The plan also provides a 401(k) make-up matching contribution, in the form of deferred EDS stock units, with respect to certain cash compensation deferred under the plan. Also, the Committee has the ability to award additional deferred stock units to executives under the plan.

Chief Executive Officer Compensation

EDS appointed Michael H. Jordan as Chairman and Chief Executive Officer in March 2003. The principal terms of Mr. Jordan's employment arrangements are described under "Employment Agreements" below. To establish his compensation, we use the same principles as we do for other executive officers of the company, except as noted below, in addition to consideration of Section 162(m) of the Internal Revenue Code. We believe Mr. Jordan's total compensation for 2005 is consistent with the size and mix of total compensation provided to CEOs of the comparator group companies and appropriate for his contributions during the year.

Base Salary. Mr. Jordan has been paid an annual base salary of $1,000,000 since joining EDS, but is eligible for increases at the Committee's discretion. We have determined to continue Mr. Jordan's base salary at that same level through 2006. Although market data suggests increasing his base salary, we believe it is more appropriate to place a greater emphasis on the long-term incentive component of his compensation package rather than increasing his base salary.

Annual Bonus. For 2005, Mr. Jordan was awarded a cash bonus of $1,500,000. We determined this payment was appropriate in light of his contributions to EDS' achievements during 2005 in accordance with previously established criteria. These include the company's improved earnings, cash flow and TCV, strengthened balance sheet, improved performance associated with certain contracts, and more competitive cost structure.

Long-Term Incentive Compensation. In March 2005, the Committee granted Mr. Jordan 250,000 Performance RSUs and 550,000 nonqualified stock options. This grant was determined based on our assessment of his performance, the total compensation value provided to other Chief Executive Officers at the peer comparator groups and our intent to place greater emphasis on the long-term incentive component of his compensation rather than base salary as noted above.

Section 162(m)

Section 162(m) of the Internal Revenue Code generally limits the deductibility of compensation to the CEO and the four other most highly compensated officers in excess of $1 million per year, provided, however, that certain "performance-based" compensation may be excluded from such $1 million deduction limitation. Our goal is to structure annual bonus awards and long-term incentive compensation in a manner such that it qualifies as "performance-based" to the extent practicable. However, certain forms and amounts of compensation may exceed the $1 million deduction limitation from year to year. We anticipate the $1 million level will be exceeded with respect to the CEO and certain other executive officers.

The foregoing report on executive compensation is provided by the undersigned members of the Compensation and Benefits Committee of the Board of Directors.

Compensation and Benefits Committee
Ellen M. Hancock, Chair
Roger A. Enrico
R. David Yost

Summary Compensation Table

The following table sets forth information with respect to the compensation for the last three years of the Chief Executive Officer and each of the four other most highly compensated executive officers of EDS as of the end of 2005 (the "named executive officers").

Name and Principal Position During 2005	Year	Annual Compensation			Long-Term Compensation Awards		All Other Compensation (D)
		Salary	Bonus	Other Annual Compensation (A)	Restricted Stock Awards (B)	Number of Options (C)	
Michael H. Jordan	2005	$1,000,000	$1,500,000	$348,236	—	550,000	—
Chairman of the Board and	2004	1,000,000	1,100,000	192,871	—	1,100,000	$3,075
Chief Executive Officer	2003	780,768	540,000	160,184	$2,337,000	1,040,500	38,651
Jeffrey M. Heller	2005	808,333	876,000	96,312	—	188,000	—
President	2004	775,000	735,000	—	—	300,000	78,188
	2003	546,538	344,933	—	779,000	275,870	32,240
Charles S. Feld	2005	700,000	613,000	—	—	99,000	—
Executive Vice President,	2004	650,000	525,000	—	550,965	369,838	33,024
Portfolio Development	2003	5,000		942,071	2,791,076		—
Stephen F. Schuckenbrock	2005	666,667	750,000	—	—	85,000	—
Co-Chief Operating Officer and	2004	600,000	470,000	—	—	302,379	9,817
Executive Vice President,	2003	4,615		706,551	2,093,301		—
Global Sales & Client Solutions							
Robert H. Swan	2005	650,000	570,000	—	—	75,000	1,207
Executive Vice President and	2004	650,000	475,000	—	—	200,000	134,824
Chief Financial Officer *	2003	594,423	740,000	—	3,000,000	293,000	131,569

* Mr. Swan will resign from EDS effective March 15, 2006.

(A) Other Annual Compensation: Other Annual Compensation consists of the following:

For Mr. Jordan: $185,276, $62,842 and $36,893 for personal use of corporate aircraft in 2005, 2004 and 2003, respectively (see below for valuation methodology); $62,774, $28,032 and $33,532 for reimbursement of financial planning and tax return preparation expenses in 2005, 2004 and 2003, respectively; and $100,186, $101,997 and $89,759 in 2005, 2004 and 2003, respectively, for a car and driver provided by EDS for ground transportation in the Dallas area. EDS has estimated Mr. Jordan's personal use of such car and driver at 25% of total usage. However, the amount reported above reflects 100% of the total cost to EDS of such car and driver (including driver's salary, vehicle lease cost, fuel expense and smaller variable costs).

For Mr. Heller: $88,812 for personal use of corporate aircraft in 2005; and $7,500 for reimbursement of financial planning and tax return preparation expenses in 2005.

For Messrs. Feld and Schuckenbrock: cash payment to satisfy tax withholdings related to restricted stock grants on December 30, 2003, in connection with the sale of their interest in Feld Partners Investments, L.P. to EDS.

Valuation of Personal Use of Corporate Aircraft: During 2005 EDS owned and operated three airplanes and a helicopter to facilitate business travel of senior executives in as safe a manner as possible and with the best use of their time. Mr. Jordan uses corporate aircraft for all air travel. Certain other named executive officers (and other key executives) use the corporate aircraft for business travel and on a very limited basis for personal travel. The value of personal aircraft usage reported above is based on EDS' direct operating cost. This methodology calculates our incremental cost based on the average weighted cost of fuel, on-board catering, aircraft maintenance, landing fees, trip-related hangar and parking costs, and smaller variable costs. Since the corporate aircraft are used primarily for business travel, the methodology excludes fixed costs which do not change based on usage, such as pilots' and other employees' salaries, purchase costs of the aircraft and non-trip-related hangar expenses. On certain occasions, an executive's spouse or other family member may accompany the executive on a flight. No additional direct operating cost is incurred in such situations under the foregoing methodology. EDS does not pay its executive officers any amounts in respect of taxes on income imputed to them for personal aircraft usage or, with respect to Mr. Jordan, personal use of the car and driver referred to above.

(B) Restricted Stock Awards: The amount reported reflects the value of the following restricted stock awards, in each based on the closing price of the Common Stock on the grant date:

For Messrs. Jordan and Heller: 150,000 and 50,000 restricted stock units, respectively, awarded on March 20, 2003, upon commencement of their employment, which vest on the third anniversary of the grant date and may be sold in increments of one-third each on the vesting date and first and second anniversaries thereof.

For Messrs. Feld and Schuckenbrock: 113,875 and 85,406 shares of restricted stock, respectively, awarded on December 30, 2003, in connection with the sale of their interest in Feld Partners Investments, L.P. to EDS. See "Employment Agreements" below for the vesting terms for such restricted stock. For purposes of the acquisition agreement for such transaction, such awards were valued at $2,791,076 and $2,093,301, respectively.

For Mr. Swan: 92,564 restricted stock units and 92,564 deferred stock units, each granted on February 10, 2003, and vesting 25% annually on the first through fourth anniversaries of the grant date.

The restricted stock awards reported in this column do not include the Performance RSUs granted to the named executive officers in 2005 which are reported under "Long-Term Incentive Plan Awards in 2005" below. The following table sets forth the number and fair market value of unvested restricted stock, unvested Performance RSUs (based on target award) and deferred stock units held by the named executive officers as of December 31, 2005 (valued based on the $24.04 closing price of the Common Stock on December 30, 2005):

	Restricted Stock, Deferred Stock Units, and Performance Restricted Share Units Awarded By Year			Total Unvested Restricted Stock, Deferred Stock Units, and Performance Restricted Share Units Held as of 12/31/05	
Name	**2003**	**2004**	**2005**	**(#)**	**($)**
Michael H. Jordan.....	150,000	—	250,000	400,000	9,616,000
Jeffrey M. Heller.....	50,000	—	83,000	313,000	7,524,520
Charles S. Feld.....	113,875	23,000	44,000	85,828	2,063,305
Stephen F. Schuckenbrock..	85,406	—	38,000	63,622	1,529,473
Robert H. Swan.....	185,128	—	33,000	125,564	3,018,559

Dividends or dividend equivalents are paid on restricted and deferred stock units reported above in the amount and at the time dividends are paid on the Common Stock.

(C) Options: The grants to Messrs. Feld and Schuckenbrock reported in this column include 269,838 and 202,379, respectively, options issued on January 9, 2004, in connection with the sale of their interest in Feld Partners Investments, L.P. See "Employment Agreements" below for the vesting and other terms of such options:

(D) All Other Compensation: We provide the named executive officers with certain group insurance and other non-cash benefits generally available to all salaried employees, which are not reported in this column pursuant to SEC rules. The amounts reported in this column include the following:

For Mr. Jordan: matching award under the Executive Deferral Plan ("EDP") of $35,651 for 2003; and matching contributions under the 401(k) Plan of $3,075 for 2004 and $3,000 for 2003.

For Mr. Heller: matching awards under the EDP of $75,113 for 2004 and $29,240 for 2003; and matching contributions under the 401(k) Plan of $3,075 for 2004 and $3,000 for 2003.

For Mr. Feld: matching award under the EDP of $30,836 for 2004; and matching contributions under the 401(k) Plan of $2,188 for 2004.

For Mr. Schuckenbrock: matching awards under the EDP of $6,742 for 2004; and matching contributions under the 401(k) Plan of $3,075 for 2004.

For Mr. Swan: matching awards under the EDP of $56,656 for 2004 and $33,899 for 2003; matching contributions under the 401(k) Plan of $3,075 for 2004 and $1,642 for 2003; reimbursement of relocation expenses of $75,093 for 2004 and $75,279 for 2003; and $20,749 for installation of a home security system for 2003.

Option Grants in 2005

The following table contains information regarding awards of stock options to the named executive officers in 2005 and the potential realizable value of such options. The hypothetical value of the options as of their grant date has been calculated using the Black-Scholes option pricing model based on the assumptions identified below. This model is only one method of valuing options, and the use of this model should not be interpreted as an endorsement of its accuracy or a forecast of possible future appreciation, if any, in the price of the Common Stock. The actual value of the options may be significantly different, and the value actually realized, if any, will depend upon the excess of the market value of the Common Stock over the option exercise price at the time of exercise.

Name	Number of Securities Underlying Options Granted (a)	% of Total Stock Options Granted to Employees in 2005	Exercise or Base Price Per Share (b)	Expiration Date	Hypothetical Value at Grant Date (c)
Michael H. Jordan.....	550,000	37.54%	$20.665	03/31/12	$5,879,500
Jeffrey M. Heller.....	188,000	12.83%	20.665	03/31/12	2,009,720
Charles S. Feld.....	99,000	6.76%	20.665	03/31/12	1,058,310
Stephen F. Schuckenbrock..	85,000	5.80%	20.665	03/31/12	908,650
Robert H. Swan.....	75,000	5.12%	20.665	03/31/12	801,750

(a) These options were granted on March 31, 2005, and are scheduled to vest 100% on February 29, 2008. Exercise method limited to exercise for shares during the one-year period after vesting and, with respect to any shares issued upon exercise during the year following the vesting date, such exercised shares cannot be sold until the one-year anniversary of the exercise date.

(b) Equals the average of the high and low trading price of the Common Stock on the date of grant.

(c) Calculated using a variation of the Black-Scholes option pricing model based upon the following assumptions: estimated time until exercise of 5 years, volatility rate of 60.8%, risk-free interest rate of 4.2% and dividend yield of 1.0%.

Aggregated Option Exercises in 2005 and Option Values at December 31, 2005

The following table contains information about stock options exercised in 2005 by the named executive officers and the number and value of stock options held by such persons at December 31, 2005. In accordance with SEC rules, the value of unexercised options is calculated by subtracting the exercise price from $24.04, the closing price of the Common Stock on the New York Stock Exchange on December 30, 2005.

	Number of Shares Underlying Options		Number of Shares Underlying Unexercised Options		Value of Unexercised, In-the-Money Options	
Name	Exercised	Value Realized	Exercisable	Unexercisable	Exercisable	Unexercisable
Michael H. Jordan	—	—	40,500	2,650,000	$ 342,630	$ 10,665,000
Jeffrey M. Heller	—	—	500,870	1,238,000	218,860	2,895,000
Charles S. Feld	—	—	188,887	279,951	16,055	827,506
Stephen F. Schuckenbrock ..	—	—	141,665	245,714	12,042	778,536
Robert H. Swan	—	—	155,500	412,500	1,218,343	2,303,438

Long-Term Incentive Plan Awards in 2005

The following table contains information about Performance RSUs awarded to the named executive officers in 2005. Vesting of Performance RSUs can range from 0 to 200% of the named executive officer's target Performance RSU award and is tied to EDS' performance as measured and weighted by operating margin (50%), net asset utilization (25%), and organic revenue growth (25%) over a three-year performance period. The performance period for the Performance RSUs awarded in 2005 was the three-year period commencing on January 1, 2005. Following vesting of any Performance RSUs, the named executive officer will be prohibited from selling 50% of the vested shares for a period of 12 months following the vesting date. Performance RSUs are granted pursuant to the 2003 Incentive Plan.

Name	Number of Units Awarded	Performance Period	Estimated Future Payout Under Non-Stock Price-Based Plan		
			Threshold (# shares)	Target (# shares)	Maximum (# shares)
Michael H. Jordan	250,000	2005-2007	0	250,000	500,000
Jeffrey M. Heller	83,000	2005-2007	0	83,000	166,000
Charles S. Feld	44,000	2005-2007	0	44,000	88,000
Stephen F. Schuckenbrock ..	38,000	2005-2007	0	38,000	76,000
Robert H. Swan	33,000	2005-2007	0	33,000	66,000

Retirement Plans

The following table indicates the estimated annual benefits payable as a single life annuity to the named executive officers, other than Mr. Jordan, upon normal retirement for the specified compensation and years of service classifications under the combined formulas of the Amended and Restated EDS Retirement Plan (the "Retirement Plan"), the EDS Benefit Restoration Plan (the "Restoration Plan") and the EDS 1998 Supplemental Executive Retirement Plan (the "Supplemental Plan"). The Restoration Plan is a non-qualified, unfunded retirement plan intended to pay benefits to employees whose compensation and benefits under the Retirement Plan are limited under the Internal Revenue Code. The Supplemental Plan is also a non-qualified, unfunded retirement plan, intended to pay benefits to certain executive level employees whose benefits under the Retirement Plan are limited under the Internal Revenue Code. The Supplemental Plan benefit provides a target retirement income based on final average earnings (base salary plus bonus) during a 60 consecutive month period prior to retirement which is not affected by the statutory limits applicable to tax-qualified plans like the Retirement Plan. The amount of the target retirement benefit paid by the Supplemental Plan will be offset by the benefit payments received from the Retirement Plan and the Restoration Plan.

Estimated Annual Single Life Annuity Payable at Age 65

Final Average Earnings	Years of Service					
	5	10	15	20	25	30
$500,000	$44,000	$89,000	$133,000	$177,000	$222,000	$266,000
$750,000	$67,000	$134,000	$202,000	$269,000	$336,000	$403,000
$1,000,000	$90,000	$180,000	$271,000	$361,000	$451,000	$541,000
$1,250,000	$113,000	$226,000	$339,000	$452,000	$565,000	$678,000
$1,500,000	$136,000	$272,000	$408,000	$544,000	$680,000	$816,000
$1,750,000	$159,000	$318,000	$477,000	$635,000	$794,000	$953,000
$2,000,000	$182,000	$364,000	$546,000	$727,000	$909,000	$1,091,000
$2,250,000	$205,000	$409,000	$614,000	$819,000	$1,023,000	$1,228,000
$2,500,000	$228,000	$455,000	$683,000	$911,000	$1,138,000	$1,366,000
$3,000,000	$274,000	$547,000	$821,000	$1,094,000	$1,368,000	$1,641,000

As of December 31, 2005, the final average earnings for the highest five consecutive years over the last 10-year period and the eligible years of credited service for the named executive officers, other than Mr. Jordan, were as follows: Mr. Heller, $2,605,565—36 years; Mr. Feld, $940,000—13 years; Mr. Schuckenbrock, $870,641—7 years; and Mr. Swan, $1,050,550—2 years. The salary and bonus for the most recent year considered in the calculation of final average earnings is found in the Summary Compensation Table above. Under the terms of his employment agreement, Mr. Swan was awarded an additional nine years of service for purposes of the Supplemental Plan that would have become effective for vesting and benefit calculation purposes when he attains age 55. However, because Mr. Swan will resign from EDS prior to vesting in the Supplemental Plan, he will not receive any benefit under that plan. Mr. Heller, who originally retired from EDS in 2002, continues to draw monthly benefits from the Retirement Plan, the Restoration Plan, and the Supplemental Plan of $9,903, $41,899 and $45,830, respectively, all payable as a 75% joint and survivor annuity, and may be eligible for increased benefit payments upon his subsequent retirement.

"Compensation" under the Retirement Plan generally refers to total annual compensation (up to $210,000 for 2005 as limited by the Internal Revenue Code), together with any salary reduction contributions to the EDS 401(k) Plan and EDS Flexible Benefits Plan, and excludes benefits under the 2003 Incentive Plan and extraordinary compensation (such as moving allowances). Effective July 1, 1998, the Retirement Plan was converted to a "cash balance" plan eliminating the final average earnings formula and replacing it with a career-average earnings formula. The annual benefit payable under the Supplemental Plan for normal retirement will generally equal (i) 55%

of the average of the participant's total Compensation (based on the highest five consecutive years within the last 10 years of employment) less (ii) the maximum offset allowance that can be deducted from final average earnings. The resulting benefit is then offset by any benefit accrued under the Retirement Plan and the Restoration Plan. Supplemental Plan benefits are payable in the form of a single or joint survivor life annuity, unless otherwise elected, and can be reduced, suspended or eliminated at any time by the Compensation and Benefits Committee.

Mr. Jordan does not participate in the Supplemental Plan but does participate in the Retirement Plan and the Restoration Plan. Benefits under the Retirement Plan provide for accruals, which are expressed as monthly credits added to participants' "personal pension accounts," or PPA. The Restoration Plan provides for a supplemental benefit to employees equal to the amount they would have received under the Retirement Plan if compensation and annual accruals were not limited under the Internal Revenue Code. Under the Restoration Plan, EDS maintains a "restoration account," or RA, reflecting benefit and interest credits made on behalf of a participant. Monthly credits are based on a participant's credited years of service together with age, divided by 12. The resulting quotient is the monthly allocation percentage, which is multiplied by the participant's monthly earnings to determine the monthly amount credited to the PPA and RA. Participants receive additional credits (i) if annual compensation exceeded $90,000 (Social Security wage base) and generally (ii) if the participant was hired or rehired by EDS after age 35. The following table indicates the estimated annual benefits payable upon retirement to Mr. Jordan for the specified compensation and years of service classifications under the Retirement Plan and the Restoration Plan. The table below shows the total credits added to Mr. Jordan's PPA and RA in 2005, and the total PPA and RA credits as of December 31, 2005. The table also estimates the value of the December 31, 2005, PPA and RA balance converted to an annual single life annuity payable immediately. As of December 31, 2005, Mr. Jordan had two years of credited service for purposes of the Retirement Plan and Restoration Plan.

Name	Total PPA and RA Balance as of 12/31/04	Total PPA and RA Credits Added from 1/1/05 - 12/31/05	Total PPA and RA Balance as of 12/31/05	Total Estimated Annual Single Life Annuity as of 12/31/05
Michael H. Jordan	$312,156	$303,503	$615,659	$71,783

Employment Agreements

Michael H. Jordan. Mr. Jordan was appointed Chairman and Chief Executive Officer on March 20, 2003. Under the terms of his employment agreement now in effect, if his employment is involuntarily terminated without Cause (as defined), he voluntarily terminates his employment after his replacement as Chief Executive Officer is designated by the Board or becomes subject to Total Disability (as defined) or dies, he would be entitled, as his sole remedy, to a payment equal to the pro rata portion (through his termination date) of any cash bonus payable under EDS' bonus plan if and at such time as payment is made to other plan participants, and immediate vesting of the stock options and restricted stock granted upon commencement of his employment, subject to the restrictions on exercise and sale described in the Summary Compensation Table above. However, if at any time he is involuntarily terminated for Cause or voluntarily terminates his employment before his replacement as Chief Executive Officer is designated by the Board, Mr. Jordan will not be entitled to receive any of the foregoing payments and will immediately forfeit all then unvested stock options and restricted stock.

Jeffrey M. Heller. Mr. Heller rejoined EDS as President and Chief Operating Officer on March 20, 2003. Under the terms of Mr. Heller's employment agreement now in effect, if he is involuntarily terminated without Cause (as defined), voluntarily terminates his employment after Mr. Jordan's replacement as Chief Executive Officer is designated by the Board or becomes subject to Total Disability (as defined) or dies, he would be entitled, as his sole remedy, to a payment equal to the pro rata portion (through his termination date) of any cash bonus payable under EDS' bonus plan if and at such time as payment is made to other executives participating in that plan, and the immediate vesting of the stock options and restricted stock granted upon commencement of his employment, subject to the restrictions on exercise and sale described in the Summary Compensation Table above. However, if at any time Mr. Heller is involuntarily terminated for Cause or voluntarily terminates his employment before Mr. Jordan's replacement as Chief Executive Officer is designated by the Board, Mr. Heller will not be entitled to receive any of the foregoing payments and will immediately forfeit all then unvested stock options and restricted stock. Mr. Heller's agreement also provides that his service will not result in a decrease in the retirement benefit he had been entitled to receive from EDS at the time he rejoined the company.

Charles S. Feld and Stephen F. Schuckenbrock. Mr. Feld was appointed Executive Vice President - Portfolio Management and Mr. Schuckenbrock was appointed Executive Vice President – Global Sales & Client Solutions immediately following the purchase by EDS of The Feld Group, Inc. ("TFG") in January 2004. Pursuant to an agreement with each executive dated December 30, 2003, Mr. Feld received an initial base salary of $650,000

and had an annual bonus target of 70% of his base salary, with a minimum bonus for 2004 of $455,000, and Mr. Schuckenbrock received an initial base salary of $600,000 and had an annual bonus target of 70% of his base salary, with a minimum bonus for 2004 of $420,000. In addition, EDS agreed to grant to each executive options to purchase 100,000 shares of Common Stock in connection with the company's 2004 long-term incentive grant, which options would vest 100% in four years from the grant date with half eligible for vesting after 12 months and the other half after 24 months if the stock price increased from the grant price by 30% and 50% respectively. The agreements also provided for Messrs. Feld and Schuckenbrock to receive retention payments of $709,237 and $531,928, respectively, payable as follows: (i) one-third on the later to occur of the one-year anniversary of the executive's hire date or the first date thereafter on which the closing trading price of the Common Stock exceeds $25.7463 (which amount was paid in February 2006); (ii) one-third on the later to occur of the two-year anniversary of the executive's hire date or the first date thereafter on which the closing trading price of the Common Stock exceeds $27.0396 (which amount was also paid in February 2006); and (iii) one-third on the later to occur of the three-year anniversary of the executive's hire date or the first date thereafter on which the closing trading price of the Common Stock exceeds $28.3808. In each case, payment is contingent on the executive's remaining employed by EDS at the time of payment, unless his employment had been terminated by EDS without Cause or by him for Good Reason or due to death or Disability (as such terms are defined in the relevant award agreements).

Messrs. Feld and Schuckenbrock were limited partners of Feld Partners Investments, L.P., which held common stock and preferred stock of TFG. The purchase price for TFG included the following amounts paid or payable to Messrs. Feld and Schuckenbrock in respect of their interest in Feld Partners Investments, L.P.: (a) 113,875 and 85,406 shares, respectively, of restricted Common Stock, with a value of $2,791,076 and $2,093,301, respectively, as of the closing date, (b) options to purchase 269,838 and 202,379 shares of Common Stock, respectively, with an exercise price of $23.96 per share, (c) $578,301 and 433,726 in cash, respectively, and (d) $942,070 and $706,550 in cash, respectively, in respect of a portion of their federal income tax obligations arising out of the transaction. The restricted stock vests 40% on January 9, 2005, 30% on January 9, 2006, and 30% on January 9, 2007. The options have a five-year term and vest 8% on January 9, 2004, 32% on January 9, 2005, 30% on January 9, 2006, and 30% on January 9, 2007. If the executive's employment is terminated for any reason other than termination by EDS without Cause (as defined), termination by the executive for Good Reason (as defined) or the executive's death or disability, then the executive will forfeit all restricted stock and options that have not yet vested as of the date of termination. If the executive's employment is terminated by EDS without Cause, or by the executive for Good Reason, then any restricted stock or options that are unvested as of the date of termination shall immediately become vested. The restricted stock and options are also subject to forfeiture in connection with certain indemnification obligations under the agreement pursuant to which EDS acquired TFG.

Robert H. Swan. Mr. Swan was appointed Executive Vice President and Chief Financial Officer effective February 10, 2003. Under the terms of his employment agreement, Mr. Swan received a $500,000 sign-on bonus and deferred and restricted stock grants reported for 2003 in the Summary Compensation Table above, and EDS agreed to award him a grant of at least 200,000 options at the same time and under the same terms as the 2004 long-term incentive grant. On December 21, 2004, we entered into an Executive Severance Benefit Agreement with Mr. Swan (which agreement was later amended on October 6, 2005) which replaced a prior severance agreement that had been scheduled to expire on December 31, 2004. Under the terms of this agreement, as amended, if Mr. Swan is involuntarily terminated without "cause" or resigns for "good reason" (as such terms are defined in the agreement) on or before December 31, 2008, he would receive a payment equal to two times the sum of his final annual base salary and annual performance bonus target for the year in which the termination occurred. In addition, a portion of the "target award" of any unvested performance based restricted stock units awarded to him in 2005 or thereafter (prorated based on the number of months of the performance period elapsed through the termination date) would be eligible for vesting at the end of the performance period based on EDS' actual performance relative to pre-established targets. All other then outstanding equity-based awards will immediately vest and, with respect to options, become exercisable for one year following the date of termination. The agreement also provides for eligibility for up to $7,500 in financial counseling services for one year following the termination date and a waiver of premiums for health care coverage for up to 18 months.

Other Executives. EDS has also entered into Executive Severance Benefit Agreements with a limited number of other executives who are not "named executive officers." Such agreements have terms generally similar to the agreement with Mr. Swan described above, but with severance payments ranging from one to two times the sum of the executive's base salary and bonus target, depending on the executive. An officer entitled to receive benefits following a termination of employment under an Executive Severance Benefit Agreement or a Change of Control Employment Agreement described below may elect to receive benefits under either agreement, but not both.

Change of Control Employment Agreements

For purposes of the Change of Control Employment Agreements with the named executive officers described below, a "Change of Control" generally includes the occurrence of any of the following: (i) any person, other than exempt persons, becomes a beneficial owner of more than 50% of EDS' voting stock; (ii) a change in a majority of the Board, unless approved by a majority of the incumbent board members; (iii) the approval by shareholders of a reorganization, merger or consolidation in which (x) existing EDS shareholders would not own more than 50% of the common stock and voting stock of the resulting company, (y) a person would own 50% or more of the common or voting stock of the resulting company or (z) less than a majority of the board of the resulting company would consist of the then incumbent members of the EDS Board; or (iv) the approval by shareholders of a liquidation or dissolution of EDS, except as part of a plan involving a sale to a company of which following such transaction (x) more than 50% of the common stock and voting stock would be owned by existing EDS shareholders, (y) no person (other than exempt persons) would own more than 50% of the common stock or voting stock of such company and (z) at least a majority of its board of directors would consist of the then incumbent members of the EDS Board. For purposes of Mr. Swan's agreement**,** a "Potential Change of Control" generally includes: (i) the commencement of a tender or exchange offer that, if consummated, would result in a Change of Control; (ii) EDS entering into an agreement which, if consummated, would constitute a Change of Control; (iii) the commencement of an election contest subject to certain proxy rules; or (iv) the occurrence of any other event that the Board determines could result in a Change of Control.

In February 2004, at the request of the Compensation and Benefits Committee, Messrs. Jordan, Heller and Swan each agreed to amend the terms of their agreements to provide for the more restrictive definition of "Change of Control" described in the preceding paragraph. Prior to such amendments, a Change of Control would be deemed to have occurred for purposes of their agreements upon the acquisition by any person of more than 15% of EDS' voting stock, rather than 50% as in the amended agreements. The agreements entered into with Messrs. Feld and Schuckenbrock described below also have the more restrictive definition of Change of Control. Although there remain in effect Change of Control Agreements with a small number of non-executive officers that have the prior, less restrictive definition of the term, it is the intent of the Compensation and Benefits Committee that any future agreements reflect the more restrictive definition of that term.

Michael H. Jordan and Jeffrey M. Heller. EDS has entered into a limited Change of Control Agreement with each of Mr. Jordan and Mr. Heller. Under the terms of those agreements, as amended, upon the consummation of a Change of Control all outstanding deferred and restricted stock and stock options held by them would immediately vest and be free of any restrictions on sale (other than the restrictions on sale covering the restricted stock and options awarded upon the commencement of their employment, which would continue), and such awards shall be exercisable for a period of one year from the accelerated vesting (or any longer term set forth in the applicable award). The Change of Control Agreements with Messrs. Jordan and Heller do not provide for the payment of any salary or bonus with respect to the period following the Change of Control. The agreements provide that the executives would be entitled to receive a payment sufficient to pay the after-tax cost of any excise tax due as a result of the Change of Control.

Charles S. Feld and Stephen F. Schuckenbrock. EDS has entered into a Change of Control Employment Agreement dated September 30, 2005, with each of Mr. Feld and Mr. Schuckenbrock which replaced agreements that had been scheduled to terminate on December 31, 2005. Under these agreements, which terminate on December 31, 2008, in the event of the occurrence of a Change of Control, the executive's employment will be continued for an employment period of two years. Throughout the employment period, the executive will continue to receive the same base salary he was receiving immediately prior to the Change of Control and will remain eligible to receive bonuses and other short-term incentive compensation and participate in all long-term, stock-based and other incentive plans and welfare benefit plans generally available to peer executives until the end of the employment period. If during the employment period the executive's employment is terminated by EDS other than for Cause or Disability, or by the executive for Good Reason, the executive may receive his unpaid salary through the date of termination and a lump sum payment equal to 2.99 times the sum of the executive's final annual base salary and annual performance bonus target for the year in which he is terminated. In addition, all deferred and restricted EDS stock units and/or stock options awarded to the executive that are outstanding on the date of termination shall immediately vest, be free of any restrictions on sale or transfer and, with regard to all stock options (other than those awarded as part of the acquisition of TFG, which shall be exercisable for the period of time provided for in the applicable award) shall be exercisable for one year from the date of termination. See "Employment Agreements" above for a description of the terms of the options and restricted stock awarded as part of the acquisition of TFG. If the executive's employment is involuntarily terminated for Cause, death or disability during the employment period, or the executive voluntarily terminates his employment other than for Good Reason,

EDS shall pay all accrued but unpaid salary through the date of termination and shall have no other severance obligations to the executive under this agreement. If any payment under this agreement is subject to federal excise taxes imposed on golden parachute payments, EDS will pay the executive an additional amount to cover any such tax payable by him as well as the taxes on such gross-up payment.

The foregoing agreements reflect significant revisions from the terms of Change of Control Employment Agreements entered into with executives prior to 2004, including the agreement with Mr. Swan described below. The Compensation and Benefits Committee intends that these agreements serve as the model for any future Change of Control Employment Agreements. Specifically, the new "model" agreement does not provide for an "employment period" to commence upon a Potential Change of Control but rather only upon the occurrence of a Change of Control. In addition, it does not provide for a "window period" following the Change of Control during which the executive could terminate his employment and still be entitled to benefits under this agreement (unless the executive terminates for good reason, which includes a reduction in base salary of more than 25% or requiring the executive to be based at a location more than 50 miles from his location prior to the Change of Control).

Robert H. Swan. EDS has entered into a Change of Control Employment Agreement with Mr. Swan dated February 4, 2003. That agreement included terms similar to agreements that had been entered into with executive officers and certain other persons prior to that time. Under that agreement, upon the occurrence of certain events involving a "Potential Change of Control" or a "Change of Control," Mr. Swan's employment will be continued for an "employment period" of three years. Following a Potential Change of Control, the employment period may terminate (but the agreement will remain in full force and a new employment period will apply to any future Change of Control or Potential Change of Control) if the Board determines that a Change of Control is not likely or Mr. Swan elects to terminate his employment period as of any anniversary of the Potential Change of Control. Throughout the employment period, Mr. Swan's position, authority and responsibilities will not be diminished from the most significant held at any time during the 90-day period immediately prior to the commencement of the employment period, and his compensation will continue on a basis no less favorable than it had been during that period. The employment period may terminate (i) upon his death or after 180 days of continuing disability, (ii) at EDS' option if he is terminated for Cause (as defined) and (iii) at Mr. Swan's option for any reason during the 180-day period beginning 60 days after a Change of Control (a "window period") or at any time for Good Reason (as defined). If during the employment period Mr. Swan's employment is terminated by EDS other than for Cause or Disability, or by him for any reason during a window period or for Good Reason at any time, he may receive the following: (i) his then current salary and bonus throughout the remainder of the employment period; (ii) the cash value of his retirement and 401(k) benefits to the end of the employment period; (iii) under certain circumstances, a pro rata portion of the equity-based awards he would have received had his employment continued; and (iv) continued coverage under welfare benefit plans until the end of the employment period. In addition, all unvested equity-based awards will immediately vest and become exercisable, and their term will be extended for up to one year following termination of employment (or any longer exercise term set forth in the award). Mr. Swan may also elect to cash out equity-based awards at the highest price per share paid by specified persons during the employment period or the prior six months. In the event of Mr. Swan's death (other than during a window period), his legal representatives will receive his then current salary for one year from the date of death and the continuation of welfare benefits until the end of the employment period. In addition, all equity-based awards will immediately vest and become exercisable for up to one year following death (or any longer period set forth in the award). Mr. Swan's legal representatives may cash out equity-based awards at the highest price per share paid by specified persons during the employment period or the prior six months. Upon termination due to Disability, Mr. Swan would be entitled to receive the same amounts and benefits as would be provided upon death. If Mr. Swan's employment is terminated, other than during a window period, by EDS for Cause or by him other than for Good Reason, he will be entitled to receive only the compensation and benefits earned as of the date of termination.

Certain Transactions and Relationships

In 2005 EDS retained Navigator Systems, Inc. ("Navigator") to provide staff augmentation services related to EDS' development of a Business Intelligence team to support its corporate initiatives of corporate metrics, analytics and dashboards. Such services were furnished pursuant to a Statement of Work executed in May 2005 and governed by the Professional Services Agreement between EDS and Navigator dated October 1, 1998, and amended on May 11, 2005. EDS paid Navigator an aggregate of $3,835,250 for such services in 2005 and expects to pay additional amounts for such services in 2006. Jon Feld, a son of Charles Feld, is a co-founder, director and Chief Executive Officer of Navigator and in 2005 held an approximately 20% ownership interest in Navigator. EDS retained Navigator for these services following a competitive bid process conducted by EDS' purchasing organization that resulted in Navigator's selection as the most competitive bidder. Management of this work was

moved outside of Charles Feld's organization in November 2005. Navigator was acquired by Hitachi Consulting Corporation in February 2006.

Charles Feld's son, Kenny Feld, is an employee of EDS. Kenny Feld receives a base salary of $300,000 per year and received a bonus of $124,000 in respect of 2005 performance. In addition, he was awarded 10,000 Performance RSUs in connection with our 2005 long-term incentive grant. Charles Feld disclaims any interest in Kenny Feld's compensation.

Pursuant to the provisions of our Bylaws and indemnification agreements with current and former directors and executive officers, fees and other expenses incurred by such persons in connection with the consolidated securities action, consolidated ERISA action, derivative suits and SEC investigation described in our Annual Report on Form 10-K are being advanced by EDS. In 2005, we advanced an aggregate of $2,377,562 for legal fees and expenses related to such matters on behalf of current and former directors and executive officers.

Compensation and Benefits Committee Interlocks and Insider Participation

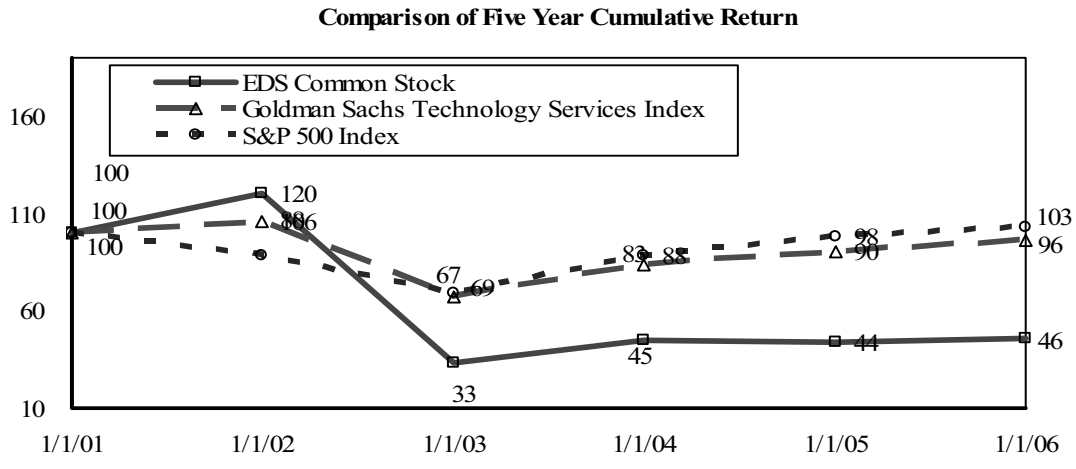
None of the members of the Compensation and Benefits Committee are current or former officers or employees of EDS. No interlocking relationship exists between the members of our Board of Directors or our Compensation and Benefits Committee and the board of directors or compensation committee of any other company, nor has any such interlocking relationship existed in the past.

Section 16(a) Beneficial Ownership Reporting Compliance

Our directors and executive officers are required under the Exchange Act to file with the SEC reports of ownership and changes in ownership in their holdings of Common Stock. We assist such persons with these filings. Based on an examination of these reports and on written representations provided to EDS, we believe that all such reports were timely filed in 2005, other than a Form 4 filed on April 4, 2005, reporting the issuance of 623 shares on March 15, 2005, to Scot McDonald in respect of the deferral of his cash bonus under the Executive Deferral Plan, which filing was late due to the failure of the plan administrator to include such shares on its report to EDS.

Performance Graph

The following graph compares the cumulative total shareholder return on Common Stock, including reinvestment of dividends, for the last five fiscal years with the cumulative total return of the Standard & Poor's 500 Stock Index and the Goldman Sachs Technology Services Index assuming an investment of $100 on January 1, 2001. **This graph is presented in accordance with SEC requirements. You are cautioned against drawing any conclusions from this information, as past results are not necessarily indicative of future performance. This graph in no way reflects a forecast of future financial performance.**



Notwithstanding any statement in any of our filings with the SEC that might incorporate part or all of any future filings with the SEC by reference, including this Proxy Statement, the foregoing Report of the Compensation and Benefits Committee on Executive Compensation and the above Performance Graph are not incorporated by reference into any such filings.

PROPOSAL 2: RATIFICATION OF APPOINTMENT OF AUDITORS

The Audit Committee has appointed KPMG LLP ("KPMG") as EDS' independent auditors for the year ending December 31, 2006. That firm has been EDS' auditors since 1984. The Board of Directors is submitting the appointment of that firm for ratification at the Meeting. A representative of KPMG is expected to be present at the Meeting, will be available to respond to appropriate questions and will have the opportunity to make a statement, should he or she so desire.

Fees Billed by Independent Auditor

The following table shows the dollar amount (in millions) of the fees paid or accrued by EDS for audit and other services provided by KPMG in 2004 and 2005.

	2005	2004
Audit Fees	$19.0	$19.7
Audit-Related Fees	1.0	.8
Tax Fees	.4	1.1
All Other Fees	--	--
Total	$20.4	$21.6

Audit fees represent fees for services provided in connection with the audit of our consolidated financial statements, audit of our internal control over financial reporting, review of our interim consolidated financial statements, local statutory audits, accounting consultations and SEC registration statement reviews. Audit-related fees consist primarily of fees for audits of employee benefit plans and service organizations. Tax fees include fees for domestic and international tax consultations, and international tax return preparation. Other services principally include fees for ISO 9000/14000 compliance assessments and were less than $50,000 in both 2005 and 2004. KPMG rendered no professional services to EDS in 2005 or 2004 with respect to financial information systems design and implementation.

All audit services, audit-related services, tax services and other services were pre-approved by the Audit Committee, which concluded that the provision of such services by KPMG was compatible with the maintenance of that firm's independence in the conduct of its auditing functions. The Audit Committee charter provides for pre-approval of any audit or non-audit services provided to EDS by its independent auditors. However, pre-approval is not necessary for non-audit services if: (i) the aggregate amount of all such non-audit services provided to EDS constitutes not more than 5 percent of the total fees paid by EDS to its independent auditors during the fiscal year in which the non-audit services are provided; (ii) such services were not recognized by EDS at the time of the engagement to be non-audit services; and (iii) such services are promptly brought to the attention of the Audit Committee and approved prior to the completion of the audit by the Audit Committee. The Audit Committee may delegate to one or more of its members pre-approval authority with respect to all permitted audit and non-audit services, provided that any services pre-approved pursuant to such delegated authority shall be presented to the full Audit Committee at its next regular meeting.

The Board of Directors recommends a vote FOR the ratification of the appointment of KPMG as independent auditors for 2006.

SHAREHOLDER PROPOSALS

Certain of the following shareholder proposals contain assertions regarding EDS that, in the judgment of the Board, are incorrect. Rather than refuting all of these inaccuracies, however, the Board has recommended a vote against these proposals for broader policy reasons as set forth following each proposal.

PROPOSAL 3: SHAREHOLDER PROPOSAL – DIRECTORS TO BE ELECTED BY MAJORITY VOTE

John Chevedden, as proxy for Ray T. Chevedden, has advised EDS that he intends to present the following resolution at the Meeting. The proposed resolution and supporting statement, for which EDS accepts no responsibility, are set forth below.

Resolved: Directors to be Elected by Majority Vote. Shareholders request that our Board of Directors initiate an appropriate process to amend our Company's governance documents (charter or bylaws) to provide that director nominees be elected or re-elected by the affirmative vote of the majority of votes cast at an annual shareholder meeting.

Ray T. Chevedden, 5965 S. Citrus Ave., Los Angeles, Calif. 90043 submitted this proposal.

This proposal requests that a majority vote standard replace our Company's current plurality vote. The new standard should provide that director nominees must receive a majority of the votes cast in order to be elected or re-elected to our Board.

To the fullest extent possible this proposal asks that our directors not make any provision to override our shareholder vote and keep a director entrenched who gets such a dismal vote on his or her performance or qualifications.

This proposal is not intended to unnecessarily limit our Board's judgment in crafting the requested governance change. For instance, our Board should address the status of incumbent directors who fail to receive a majority vote when standing for election under a majority vote standard and whether a plurality director election standard is appropriate in contested elections.

Fifty-four (54) shareholder proposals in 2005
Fifty-four (54) shareholder proposals on this topic won a significant 44% average yes-vote in 2005 through late-September – especially good since this is a new "first run" topic. The Council of Institutional Investors www.cii.org, whose members have $3 trillion invested, recommends adoption of this proposal topic. Additionally The Council is sending letters asking the 1,500 largest U.S. companies to comply with the Council's policy and adopt this topic.

Directors to be Elected by Majority Vote
Yes on 3

THE BOARD OF DIRECTORS RECOMMENDS
A VOTE AGAINST THIS PROPOSAL FOR THE FOLLOWING REASONS:

Active shareholder participation in a well-designed process for the election of directors is important to EDS, and the Board of Directors has taken several actions towards this goal. Last year the Board recommended and shareholders approved amendments to the company's Certificate of Incorporation and Bylaws to eliminate the classified Board structure. As a result, all directors are subject to election or re-election by the shareholders every year. The Governance Committee, which is composed solely of directors who are independent under EDS and NYSE guidelines, identifies and recommends to the full Board nominations of individuals for election as directors based on the specific criteria and qualifications contained in the EDS Corporate Governance Guidelines. Such Guidelines also provide for full and appropriate consideration by the Governance Committee of candidates for nomination suggested by shareholders.

The Board carefully considered the impetus behind the proposal and decided to adopt the director resignation policy described above under the heading "Corporate Governance and Board Matters – Director Resignation Policy." Under this policy, a director who receives more "withhold" votes than "yes" votes in an

uncontested election is required to tender his or her resignation for consideration by the Board. The Governance Committee will promptly consider such resignation and recommend to the Board whether to accept or reject it. In considering whether to accept or reject the tendered resignation, the Governance Committee will consider all factors deemed relevant by its members, including the stated reasons why shareholders "withheld" votes for election from such director, the length of service and qualifications of such director, and the director's contributions to EDS. The full Board must act on the Governance Committee's recommendation no later than 90 days following the date of the shareholder vote. This Board and Governance Committee process will be managed only by independent directors, and will exclude the director nominee at issue. EDS will promptly and publicly disclose the Board's decision, together with a full explanation of how the decision was reached.

The majority vote proposal advanced is not, in the Board's opinion, in the best interest of EDS and its shareholders because of the technical and practical difficulties it would create and because the proposal may not, in fact, achieve the proponent's goal of electing directors by a majority vote and removing those directors who do not receive a majority vote. For example, if a director failed to receive a majority vote, under Delaware law and EDS' governing documents the Board would have to decide whether to appoint a successor (which would not be elected by shareholder vote) or leave a vacancy, or, if the nominee were an existing director, permit the director to remain in office until the next annual shareholder meeting or expend the funds to hold a special meeting to elect a successor. In addition, this proposal could cause EDS to fail to be in compliance with NYSE listing requirements and SEC regulations regarding the independence of Audit Committee members if a director meeting the necessary qualifications does not receive sufficient votes to be elected or re-elected and there is not at that time another director meeting those qualifications.

The Board believes the director resignation policy, and the other measures outlined above, are responsive to concerns that shareholder views on directors could be overridden under certain circumstances, but also preserve flexibility for the Board to consider the facts and circumstances at the time of the election in considering whether to accept a director's tendered resignation. While the law and best practices are in a state of flux, this flexibility is important to ensure that the Board can continue to operate in compliance with applicable legal and regulatory requirements.

The Board recognizes that there is current discussion among shareholders, governance experts and others on whether requiring majority voting in the election of directors is a worthy and workable goal and on how to address the concerns raised by a majority vote standard. Therefore, the Board will continue to monitor developments in this discussion. However, the Board believes that EDS' current structure furthers the goal of promoting director accountability to shareholders while avoiding the "failed election" possibility and the possibility of non-compliance with SEC and NYSE requirements raised by the proposal.

Accordingly, the Board unanimously recommends a vote AGAINST this proposal.

PROPOSAL 4: SHAREHOLDER PROPOSAL - INDEPENDENT BOARD CHAIRMAN

John Chevedden, as proxy for William Steiner, has advised EDS that he intends to present the following resolution at the Meeting. The proposed resolution and supporting statement, for which EDS accepts no responsibility, are set forth below.

RESOLVED: Stockholders request that our Board of Directors change our governing documents (Charter or Bylaws if practicable) to require that the Chairman of our Board serve in that capacity only and have no management duties, titles, or responsibilities. This proposal gives our company an opportunity to cure our Chairman's loss of independence should it exist or occur once this proposal is adopted.

William Steiner, 112 Abbottsford Gate, Piermont, NY 10968 submitted this proposal.

The primary purpose of our Chairman and Board of Directors is to protect shareholders' interests by providing independent oversight of management, including the CEO. Separating the roles of Chairman and CEO can promote greater management accountability to shareholders and lead to a more objective evaluation of our CEO.

When one person acts as our Chairman and CEO, a vital separation of power is eliminated – and we as the owners of our company are deprived of both a crucial protection against conflicts of interest and also of a clear and direct channel of communication to our company through our Chairman.

54% Yes-Vote

Twenty (20) shareholder proposals on this topic won an impressive 54% average yes-vote in 2005. The Council of Institutional Investors www.cii.org, whose members have $3 trillion invested, recommends adoption of this proposal topic.

Progress Begins with One Step

It is important to take one step forward in our corporate governance and adopt the above RESOLVED statement since our 2005 governance standards were not impeccable. For instance in 2005 it was reported:

- The Corporate Library (TCL), an independent investment research firm in Portland, Maine rated our company:
  "F" in Shareholder Responsiveness (could be raised to a "D" or higher).
  "D" in Accounting.
- We had no Independent Chairman and not even a consistent Lead Director – Independent oversight concern.
- Cumulative voting was not allowed.
- Poison pill: Our board is still allowed to implement a poison pill, without shareholder approval, under vaguely described circumstances.
- Mr. Jordan was rated a "problem director" by the Corporate Library because he chaired the executive compensation committee at Aetna, Inc. Aetna received a CEO Compensation rating of "F" by TCL.

I believe these less-than-best practices at our company reinforce the reason to adopt the above RESOLVED statement to improve our governance and increase shareholder value.

Moreover

It is well to remember that at Enron, WorldCom, Tyco, and other legends of mis-management and/or corruption, the Chairman also served as CEO. When a Chairman runs a company as Chairman and CEO, the information given to directors may or may not be accurate. If a CEO wants to cover up improprieties and directors disagree, with whom do they lodge complaints? The Chairman?

Independent Board Chairman

Yes on 4

THE BOARD OF DIRECTORS RECOMMENDS
A VOTE AGAINST THIS PROPOSAL FOR THE FOLLOWING REASONS:

The Board, after extensively considering the issue, has determined not to require the positions of Chairman and CEO to be separate or combined on a permanent basis. Instead, the Board believes it is in the best interests of EDS and its shareholders for the Board to make this determination based on what it considers to be best for EDS at any given point in time. The positions of Chairman and CEO are currently held by the same person based on the Board's current view of the need for unified leadership and a single source of direction and strategy. The independent directors will continue to maintain appropriate checks and balances over the CEO, whether or not the positions of CEO and Chairman are combined. While the Board may separate the positions of Chairman and CEO in the future should circumstances change, it believes that implementing the proposal would deprive the Board of the flexibility to organize its functions and conduct its business in the most effective manner based on facts and circumstances existing from time to time.

As set forth in EDS Corporate Governance Guidelines, the Governance Committee and the Board will evaluate whether to combine the positions of Chairman and CEO when a new CEO is appointed and otherwise from time to time. Factors the Board will consider in determining whether to separate the two positions are based on the facts and circumstances existing at that time, including the need for a single source of direction and strategy, the availability of candidates among the independent directors with experience and characteristics to effectively serve as Chairman, the ability of senior executives to work effectively with multiple sources of authority, the relative benefits and detriments of such a separation for relations with EDS' clients, the Board's view of its ability to maintain appropriate checks and balances and the Board's view of the CEO's willingness to seek and accept direction and oversight by the Board.

The Board has considered the issue of whether to separate or combine the positions of CEO and Chairman several times. After considering the issue last year, the Board revised the Corporate Governance Guidelines to more clearly explain the policy not to separate the positions on a permanent basis and to provide significant detail regarding the responsibilities of the company's independent Presiding Director, as further outlined below. This year, after receiving this proposal, the Board amended the Corporate Governance Guidelines to further enhance the Presiding Director's duties. See "Corporate Governance and Board Matters – Presiding Director" above.

Currently, the Board has an independent Presiding Director who facilitates communication with the Board and presides over regularly conducted executive sessions or sessions where the Chairman is not present. The Presiding Director position is rotated annually among the Chairpersons of the Board's three standing Committees. At the request of any independent director, the Presiding Director serves as the liaison between the Chairman and the independent Directors. When requested by any independent director or when the Presiding Director deems it appropriate, the Presiding Director can call meetings of the independent directors. The Presiding Director reviews and approves agendas for Board meetings as well as a description of the nature and type of information to be sent to the Board in advance of a particular meeting based on the meeting's agenda. Each director is free to suggest items for the agenda and raise at any Board meeting subjects not on the agenda for that meeting. At least annually, the independent directors will evaluate the Board's plan for meeting agendas and materials in the upcoming year. They will discuss recommendations for any changes in executive session with the Presiding Director, who will then communicate those recommendations to the Chairman. In addition, because the Board believes that shareholders and other interested individuals should be able to communicate directly with the Presiding Director, EDS describes on its website a method for submitting any such communication.

Whether or not the positions of CEO and Chairman are separated at any given time, the Board believes that having a strong, independent group of directors is important to good corporate governance. Currently, eight of ten members of the Board, including each member of the Board's three standing committees, are "independent" under EDS and New York Stock Exchange guidelines. The independent directors hold regular and frequent executive sessions that take place without the Chairman or any other management director being present. In addition, the Board believes that the EDS Corporate Governance Guidelines ensure strong and independent directors will continue to provide effective strategic direction, oversight and control of EDS.

The Board believes that the company's governance structure, including an independent Presiding Director who can act as a liaison between the Chairman and independent directors and with the ability to provide input on Board agendas and other information, makes it unnecessary to have an absolute requirement that the Chairman and CEO positions should be separate at all times. The Board believes that adopting such a rule would eliminate the Board's flexibility to make this determination based on the circumstances at any particular point in time and therefore is not in the best interests of EDS and its shareholders.

Accordingly, the Board unanimously recommends a vote AGAINST this proposal.

Table of Contents

2005 Annual Report

2005 ANNUAL REPORT

This Annual Report contains an overview of EDS' business as well as information regarding EDS' operations during 2005 and other information that our shareholders may find useful.

BUSINESS

Overview

Electronic Data Systems Corporation, or EDS, is a leading global technology services company that delivers business solutions. EDS founded the information technology outsourcing industry more than 40 years ago. Today, we deliver a broad portfolio of information technology and business process outsourcing services to clients in the manufacturing, financial services, healthcare, communications, energy, transportation, and consumer and retail industries and to governments around the world.

As of February 28, 2006, we employed approximately 117,000 persons in the United States and 57 other countries around the world. Our principal executive offices are located at 5400 Legacy Drive, Plano, TX 75024, telephone number: (972) 604-6000.

We make available free of charge on our Web site at *www.eds.com/investor* our Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K and all amendments to those reports as soon as reasonably practicable after such material is electronically filed with the Securities and Exchange Commission, or SEC. We also make available on our Web site other reports filed with, or furnished to, the SEC under the Securities Exchange Act of 1934, including our proxy statements and reports filed by officers and directors under Section 16(a) of that Act.

EDS Services

Infrastructure Services. EDS Infrastructure Services delivers hosting, workplace (desktop), storage, security and privacy, and communications services that enable clients to drive down their total cost of ownership and increase the productivity of their information technology ("IT") environment across the globe. Infrastructure Services include:

- *Data Center Services.* EDS Data Center Services address the business and technology needs of our clients in the area of hosting and storage services. These services establish the client's infrastructure using a set of highly granular, standard components that can be provisioned quickly and easily, serving as the base to build an integrated business support model from business processes down to application and infrastructure. Data Center Services is composed of 4 principal offerings:
  - *Managed Server.* This service suite combines midrange hosting, application hosting and Web hosting into packaging that spans the data center. Managed Server Hosting offers multiple levels of packaging allowing a client to utilize its current technology within an EDS data center to advance the fundamentals of traditional IT by providing leveraged, high-value services such as standardization, increased automation and virtualization in a utility model.
  - *Managed Mainframe.* These entry level services include migration to a leveraged EDS Service Management center with processing environments for dedicated or shared logical partitions. Higher value services include the z/OS platform which provides the client standardization and increased automation in a utility model.
  - *Data Center Modernization.* These transformational state packages rationalize, consolidate, automate and virtualize IT infrastructure and the applications environment for maximum use through server consolidation, mainframe consolidation and migration services.
  - *Storage Services*. We provide a fully managed suite of enterprise-wide services for storage management, information protection (backup and recovery) and information optimization (archival services) from the data center to the desktop.

- *EDS Workplace Services.* EDS Workplace Services delivers expert management and support of the end user's work environment from the software applications that support the client's business practices to the supporting network communications infrastructure. Workplace services include:
  - *Workplace Management Services.* We offer comprehensive management of a client's total workplace environment. We support PCs, laptops and hand-held computing devices, as well as associated support services such as helpdesks, asset management of hardware and software, and administration of the servers and networks that tie it all together.
  - *Mobile Workplace Services*. EDS Mobile Workplace Services provide an end-to-end managed mobility solution that delivers voice and enterprise data regardless of a user's locality, device, network or application.
  - *Workplace Migration Services*. Provides an end-to-end solution for automating the deployment/version upgrades of desktop and server operating systems, including the associated packaging required to migrate a client's enterprise applications, to computers across an organization quickly and reliably.
  - *Workplace Messaging and Collaboration Services*. Messaging solutions provide mailbox service as a base service to users through a hosted, locally or remotely managed messaging system. This service includes Antivirus and Security, and also includes migrating to more current releases and/or consolidating e-mail systems. Collaboration Services secure Instant Messaging and virtual team workspace to enable an organization to improve collaboration.
  - *Workplace Support Services*. Provides the single point of contact for resolving IT issues in the desktop environment. Help desk services may be accessed by various channels including telephone, the Web, e-mail and facsimile.
- *Security and Privacy.* We offer defined security, privacy and business continuity features embedded at the onset in every EDS offering. These features are the people, tools, processes and controls used by EDS across all portfolio offerings to meet clients' expectations and industry-specific standards and regulations for security, privacy, business continuity management and risk management.
- *Communications Services.* EDS Communications Services delivers comprehensive, secure, flexible network services on a global basis ranging from network support to management of an entire client network. EDS designs, builds, deploys and manages a single seamless network that integrates voice, video and data; improves the effectiveness of data exchange in the supply chain; and delivers secure connectivity and smooth operations over a wired or wireless platform. These services are designed to help clients manage the complexities of aligning their communications and network needs with their overall IT outsourcing strategies.

Applications Services. EDS Applications Services helps organizations plan, develop, integrate and manage custom applications, packaged software and industry-specific solutions. We offer applications development and management services on an outsourced or project basis. Services range from outsourcing of all applications development and systems integration to the management and implementation of EDS-owned or third-party industry applications. Benefits to clients for these services can include reduced costs, extended value of technology investments, information sharing and enhanced ability to adapt to market changes. Our Applications Services include the following:

- *Applications Development Services.* We create new applications, providing full lifecycle support through delivery. We define the application requirements, analyze application characteristics, implement to a production environment and monitor performance for a warranted time. Services include custom application development, application testing, mobile applications, workforce enhancement, and enterprise application integration.
- *Application Management Services.* We offer outsourcing support for specific applications or entire applications portfolios, both custom and packaged, including services for enterprise applications and support for SAP®, Oracle® and PeopleSoft® software. We assess the specified applications, plan the transition and provide ongoing management to improve client productivity and operating efficiency. We also provide applications rationalization, content management integration and legacy application migration services.
- *Integrated Applications Services.* We engineer offerings such as Business Intelligence Services, Portals and Dashboards Services, Web Services and Enterprise Applications Integration Services to support the overall integration of the client's architecture or our own Agile Application Architecture. These services integrate and extend existing packaged and legacy applications.
- *Industry-Specific Application Solutions.* These solutions are designed to support industry-specific needs. Our industry solutions span eight vertical industry segments: communications, energy, financial, government, healthcare, manufacturing, retail and transportation.

Applications Services offerings and capabilities are available via the EDS Global Delivery Model, including the EDS Best Shore℠ delivery approach which offers clients the ability to develop and manage applications in one or more of our solution centres strategically located in cost-effective countries. The delivery of our services offers a lifecycle approach to on-shore, near-shore and offshore applications development and management with globally integrated, consistent work processes and tools and project-sharing at multiple facilities on a 24 hours a day, seven days a week basis.

Business Process Outsourcing Services. Business Process Outsourcing (BPO) continues to be one of the fastest growing market segments in the IT services industry and an important element of our strategy to enlarge our business services footprint and grow our revenue base. BPO services help clients to achieve economies of scale and improve business performance. By leveraging a shared-services operating model, clients reduce operational risk and control costs.

Enterprise Services are or will be sold across multiple industries and include Customer Relationship Management (CRM), Human Resources (HR), and Finance and Accounting services. For each of these services, EDS manages all components from technology, administration and customer service to business intelligence and third-party relationships. Our integrated solutions combine best-practice business processes, leading technologies and experienced professionals along with skilled domain partners.

EDS also delivers industry-specific offerings and provides industry experts to assist clients in key process improvement redesign. One example is our suite of Government BPO Services. For more than forty years EDS has provided Medicare and Medicaid claims processing to the U.S. federal and state governments helping to lower program costs while increasing efficiency and performance. EDS' offerings to governments also include: fiscal agent services; decision support services; fraud, waste and abuse protection services; integrated pharmacy services; Health Insurance Portability and Accountability Act (HIPAA) compliance services; immunization registry and tracking services; and case management services. We also offer Internet-based enrollment and eligibility inquiry capabilities.

Other industries supported by our industry-specific BPO offerings include financial services, manufacturing, healthcare, transportation, communications, energy and consumer/retail.

Many BPO services are supported by our reusable, multi-client utility platform. This platform is comprised of key components of the BPO portfolio, including: customer relationship management (CRM) and call center services; financial process services such as credit services and insurance services, payment and settlement, card processing and billing and clearing transactions and content management services.

ExcellerateHRO LLP, our 85% owned joint venture with Towers Perrin, offers a comprehensive set of HR outsourcing solutions on a global basis across the core areas of benefits administration, compensation administration, payroll, recruitment and staffing, relocation, work force administration and work force development.

EDS Agile Enterprise

A key component of our multi-year plan is the development of the EDS Agile Enterprise technology platform, a network-based utility architecture intended to create a more flexible, open and cost effective technology foundation for the delivery of a significant portion of our infrastructure outsourcing, applications, and BPO services. As part of this strategy, we have established alliance relationships with a number of leading technology companies to develop the Agile Enterprise technology platform. We refer to this "federation" of technology companies as the EDS Agility Alliance. EDS Agility Alliance members currently include Cisco Systems, Dell, EMC, Microsoft, Oracle, SAP, Sun Microsystems, Towers Perrin and Xerox. See "Risk Factors" below for a discussion of certain risks relating to our multi-year plan.

TRADING PRICES OF COMMON EQUITY AND RELATED STOCKHOLDER MATTERS

Our common stock is listed on the New York Stock Exchange (the "NYSE") under the symbol "EDS." The table below shows the range of reported per share sales prices on the NYSE Composite Tape for the common stock for the periods indicated.

Calendar Year	High	Low
2004		
First Quarter	$ 25.44	$ 18.30
Second Quarter	20.66	15.62
Third Quarter	20.43	16.43
Fourth Quarter	23.38	19.01
2005		
First Quarter	$ 23.35	$ 19.59
Second Quarter	21.11	18.59
Third Quarter	23.95	19.00
Fourth Quarter	24.82	21.16

The last reported sale price of the common stock on the NYSE on March 1, 2006 was $27.27 per share. As of that date, there were approximately 108,976 record holders of common stock.

EDS declared quarterly dividends on the common stock at the rate of $0.15 per share for the first and second quarters of 2004, and at the rate of $0.05 per share for the third and fourth quarters of 2004 and each quarter in 2005.

(1) We adopted a new method of accounting for share-based payments as of January 1, 2005. This change in accounting resulted in the recognition of pre-tax compensation expense of $160 million ($110 million net of tax) for the year ended December 31, 2005.

(2) Operating results for each of the years in the four year period ended December 31, 2004 have been restated to conform to the current presentation to reflect certain activities as discontinued operations during 2005.

(3) We adopted a new method of accounting for revenue recognition on long-term contracts effective January 1, 2003. Amounts for prior years are reported in accordance with our previous method of accounting for revenue recognition. Revenues for the years ended December 31, 2002 and 2001 were $18,311 million and $18,175 million, respectively, on a comparable pro forma basis as if the aforementioned accounting change had been applied to all contracts at inception. Net income for the years ended December 31, 2002 and 2001 were $460 million and $932 million, respectively, on a comparable pro forma basis as if the aforementioned accounting change had been applied to all contracts at inception.

(4) Effective January 1, 2002, we fully adopted Statement of Financial Accounting Standards ("SFAS") No. 142, Goodwill and Intangible Assets. SFAS No. 142 requires that goodwill and intangible assets with indefinite useful lives no longer be amortized. Operating results, including those related to discontinued operations, include goodwill amortization in the pre-tax amount of $173 million for the year ended December 31, 2001.

(5) Other income (expense) includes net investment gains (losses) in the pre-tax amounts of $(41) million, $6 million, $6 million, $(119) million, and $344 million for the years ended December 31, 2005, 2004, 2003, 2002 and 2001, respectively.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion should be read in conjunction with the consolidated financial statements and related notes that appear elsewhere in this document.

Overview

We are a leading provider of information technology ("IT") and business process outsourcing ("BPO") services to corporate and government clients around the world. This section provides an overview of the principal factors and events that impacted our 2005 results and the principal risks and opportunities that could impact our future.

2005 Highlights

Progress on Initiatives

At the beginning of 2005, we stated our priorities were to shift our focus from improving our core business and strengthening our balance sheet to a longer-term strategy, which contemplated significant new investments in our infrastructure and in new service offerings intended to improve our cost competitiveness and generate future growth. This discussion outlines our progress on these initiatives. Investments in these initiatives, including our upfront investment in the U.K. Ministry of Defence contract referred to below, reduced our earnings by approximately $0.36 per share during 2005.

Investments in Infrastructure. The principal focus of our investments in infrastructure during the year was the development of our "Agile Enterprise" platform, a network-based utility architecture designed to create a flexible, open and cost-effective technology foundation for the delivery of a significant portion of our IT outsourcing and BPO services. This platform includes the build-out of a global secure infrastructure, which is expected to be completed during 2006, as well as the modernization of legacy systems. As part of this strategy we have established alliance relationships with leading industry providers, which we refer to as the "EDS Agility Alliance." We believe the technology vision behind the Agile Enterprise platform represents a key market differentiator for EDS and contributed to our increased level of new business signings in 2005 and year-to-date in 2006.

Investments in New Service Offerings. Our 2005 investments included a significant expansion of our human resources ("HR") BPO capabilities, principally through the creation in the first quarter of ExcellerateHRO LLP, our 85% owned joint venture with Towers Perrin. ExcellerateHRO combines our payroll and related HR outsourcing business with the pension, health and welfare administration services business formerly operated by Towers Perrin as its Towers Perrin Administrative Services ("TPAS") business. The new company enables us to offer a comprehensive set of HR outsourcing solutions across the core areas of benefits, payroll, compensation management, workforce administration and relocation, recruitment and staffing, and workforce development. The $417 million in cash we paid at closing of the transaction (which principally represented the purchase price for the business and the right to use the Towers Perrin brand, net of Towers Perrin's interest in the new company and its share of the cash capital contribution (approximately $50 million) to the venture) was funded from cash on hand. We invested additional amounts in ExcellerateHRO and other BPO offerings during the year and will continue to focus on expanding our BPO offerings in 2006.

Cost Competitiveness. We continued to focus on improving our cost competitiveness in 2005 as part of our long-term goal to reduce our cost of revenue by approximately 20% over the four-year period commencing with 2005. During 2005, we reduced our cost of revenue by approximately $1 billion principally through the following:

- improvements in our supply chain, including increased usage of centralizing sourcing, competitive bidding, advanced sourcing tools and automation and improvements in demand planning, logistics and fulfillment;
- labor cost management through increased productivity, investment in automation and monitoring tools, and acceleration of our Best Shore[SM] initiatives by increasing our capabilities in lower cost geographies;
- enterprise process improvements, including greater standardization and consolidation, more regimented contract start-up processes and service delivery automation; and
- production process improvements, including automation and process redesign enabling improved utilization of data center capacity.

In addition, during 2005 we sold sixteen domestic and international real estate properties in connection with our efforts to improve our cost competitiveness and enhance workplace capacity usage. Net proceeds from the sale were $178 million. Fourteen properties involved in the sale have been leased back for various extended periods. A deferred net gain of $14 million has been allocated to various leased properties and will be recognized over the respective term of each lease. We recognized a net gain of $3 million on the sale of the remaining properties which is included in other income in the 2005 consolidated statement of operations.

General Motors Recompete

GM is our largest single client, accounting for approximately $1.8 billion, or 9.1%, of our total revenue in 2005. Our ten-year Master Service Agreement, or MSA, with GM expires in June 2006. The MSA serves as a framework for the negotiation and operation of service agreements for certain "in-scope" IT services (as defined in the MSA) we provide to GM on a worldwide basis. These "in-scope" services account for a substantial majority of our revenues from GM. In February 2006, GM announced the results of a recompete process which covered substantially all of the work we perform under the MSA, including applications maintenance, infrastructure operations and integration management. We were awarded approximately 70% of the contracts we bid on with a total contract value of approximately $3.8 billion over five years. See "Priorities and Expectations for 2006 and Beyond" below for a discussion of the financial impact of the GM recompete in 2006 and thereafter.

A.T. Kearney

During 2005, we approved a plan to proceed with a transaction to sell 100% of our ownership interest in our A.T. Kearney management consulting business. That subsidiary, the sale of which was completed on January 20, 2006, is classified as "held for sale" at December 31, 2005 and 2004 and its results for the years ended December 31, 2005, 2004 and 2003 are included in income (loss) from discontinued operations. A.T. Kearney's 2005 results include a pre-tax impairment charge of $118 million to write-down the carrying value of its long-lived assets, including tradename intangible, to estimated fair value less cost to sell. The estimated fair value was determined based on the terms of the sale. The impairment charge is partially offset by the recognition of $8 million previously unrecognized tax assets that will be realized as a result of the sale. We refer you to Notes 17 and 20 in the accompanying Notes to Consolidated Financial Statements.

Third-Party Bankruptcies

We provide IT services to Delphi Corporation ("Delphi") through a long-term agreement. On October 8, 2005, Delphi filed for protection under Chapter 11 of the United States Bankruptcy Code. Due to uncertainties regarding the recoverability of certain pre-bankruptcy receivables associated with the Delphi contract, we recorded receivable reserves of $17 million which is reflected in cost of revenues in our 2005 consolidated statement of operations. The remaining assets associated with our services agreement with Delphi are expected to be recovered through collection or future operations.

During 2005, we recorded write-downs of our investment in an aircraft leasing partnership due to uncertainties regarding the recoverability of the partnership's investments in aircraft leased by Delta Air Lines, which filed for bankruptcy on September 14, 2005, and the proposed sale of certain lease investments in the partnership. These write-downs were partially offset by the accelerated recognition of previously deferred investment tax credits associated with the investment. These write-downs totaled $35 million and are reflected in other expense in our 2005 consolidated statement of operations.

Client Contract Payment

During 2005, we reached an agreement with a government client to consolidate and extend our multiple IT services agreements with that client into a single extended agreement. As a result of this contract realignment, we received a non-refundable payment of $307 million from the client in the third quarter of 2005. A similar payment will be received from this client in the second quarter of 2006 which will be used to fund the incremental capital requirements in 2006 necessitated by the service delivery transformational requirements for this new contract. These payments will be recognized as revenue as we provide services over the five-year term of the new contract and resulted from the revision of contract pricing and delivery standards of numerous existing IT service contracts prior to their contractual end dates.

Accounting Change

We adopted Statement of Financial Accounting Standards ("SFAS") No. 123R, *Share-Based Payment*, as of January 1, 2005. This statement requires the recognition of compensation expense when an entity obtains employee services in share-based payment transactions. This change in accounting resulted in the recognition of compensation expense of $160 million ($110 million net of tax) in 2005. The effect of all share-based payments on earnings per share (both basic and dilutive) would have been $0.33 and $0.44, respectively, during the years ended December 31, 2004 and 2003 if we had applied the provisions of SFAS 123R. The effect of share-based payments (both basic and dilutive) on earnings per share during the year ended December 31, 2005 was $0.29. In addition, effective with our March 2005 long-term incentive award grant, we significantly limited the use of annual stock option grants and instead provided annual grants of performance-vesting restricted stock units ("Performance RSUs"). Although we continue to use stock options as a component of the long-term incentive compensation of our senior executives along with Performance RSUs, we have completely replaced the use of stock options in favor of Performance RSUs for all other incentive plan participants. The vesting of the Performance RSUs is tied to our performance as measured by operating margin, net asset utilization and organic revenue growth over multiple year periods.

Prior to January 1, 2005, we recognized compensation cost associated with stock-based awards under the recognition and measurement principles of Accounting Principles Board ("APB") Opinion No. 25, *Accounting for Stock Issued to Employees*, and related interpretations. Under APB No. 25, the difference between the quoted market price as of the date of the grant and the contractual purchase price of shares was charged to operations over the vesting period on a straight-line basis. No compensation cost was recognized for fixed stock options with exercise prices equal to the market price of the stock on the dates of grant and shares acquired by employees under the EDS Stock Purchase Plan or Nonqualified Stock Purchase Plan. The primary difference in the accounting under SFAS 123R is that compensation expense for share-based awards is now recognized when we obtain employee services. Using the fair value approach required by SFAS 123R, compensation expense is recognized based on the fair value of the award on the date of grant. Prior to January 1, 2005, pro forma compensation expense using the fair value approach was disclosed in the notes to the financial statements in accordance with SFAS 123. Beginning January 1, 2005, compensation expense for stock options was recognized using the same methodology used to determine pro forma expense for disclosure purposes under SFAS 123.

We record a tax benefit related to share-based payments, recognizing a deferred tax asset based on an effective tax rate of 35%. The excess of the market value of our stock over the exercise price at the date of exercise represents the tax deduction to be received. If this deduction is equal to the amount of compensation expense recorded for that option, the entire tax asset is realized. If the deduction is greater than the compensation expense recognized, we will record an increase in additional paid-in capital. However, if the deduction is less than the expense recognized, a portion of the deferred tax asset will not be realized, and the deficiency will be reported as deferred tax expense in the period that options expire, are exercised or forfeited. There are numerous factors that influence the portion of the deferred tax asset that will be realized, including exercise behavior of the employees, future market price of the stock, and the volatility used in calculating the fair value of options on the grant date. At this time, we cannot predict the actual realization of our deferred tax assets.

NMCI

We provide end-to-end IT infrastructure on a seat management basis to the Department of Navy (the "DoN"), which includes the U.S. Navy and Marine Corps, under a contract that has been extended through September 2007. Seats are ordered on a governmental fiscal year basis, which runs from October 1 through September 30. Amounts to be billed per seat are based on the type of seat ordered. In addition, certain milestones must be met before we can bill at a price equal to the full seat price included in the pricing schedule. According to that schedule, seats under management are generally billed at a price of 85% of the associated full seat price until certain service performance levels as defined in the contract are satisfied. Upon meeting such service levels, seats operating under the NMCI environment are billed at a price equal to 100% of the full seat price while those operating under the pre-existing, or "legacy", network environment continue to be billed at a price equal to 85% of the full seat price. At December 31, 2005, we had approximately 318,000 computer seats under management that were then billable, and approximately 81% of these seats were operating under the NMCI environment.

Long-lived assets and lease receivables associated with the contract totaled approximately $240 million and $408 million, respectively, at December 31, 2005. If we do not maintain or exceed current monthly seat cutover rates, or if we do not meet service performance and customer satisfaction levels in accordance with anticipated timelines, estimates of future contract cash flows will decline. We continue to pursue several opportunities to improve the financial performance of this contract, including efforts to increase the average seat price; qualify for performance and customer satisfaction incentives under the contract; improve productivity; extend the contract term through the DoN's optional three-year extension period; and seek additional business with this client. We also are seeking to obtain compensation for significant amounts related to services required by and provided to the client in addition to contractual requirements, including services related to legacy applications, and for amounts related to the minimum order obligations under the contract. In addition, we expect to recover a significant portion of our investment in this contract through the sale of NMCI infrastructure and desktop assets to the client at the end of the contract term.

We reported revenues of $817 million, operating losses of $(75) million and free cash flow of $125 million associated with the NMCI contract in 2005, compared with revenues of $761 million, operating losses of $(487) million and free cash flow usage of $(423) million in 2004. The 2004 results are exclusive of the $375 million asset impairment charge taken in the third quarter of 2004 and the $522 million repurchase of financial assets from a securitization trust in the fourth quarter of 2004. The securitization trust had been used to finance the purchase of capital assets for the contract. The increase in revenue in 2005 compared to 2004 is attributable to a greater number of seats under management and recognition of seats billed at 100% of the full seat price, offset in part by a decline in product sales. The decrease in operating losses in 2005 compared to 2004 is due to increased productivity, reduced depreciation and amortization expense as a result of the impairment of NMCI-related long lived assets in the third quarter of 2004, additional seats under management and recognition of seats billed at 100% of the full seat price. The increase in free cash flow in 2005 is due to the aforementioned operational improvements, as well as our repurchase in the fourth quarter of 2004 of assets associated with the NMCI securitization facility. See "Off Balance Sheet Arrangements and Contractual Obligations" below. Although we continue to have a number of opportunities to improve the performance of the NMCI contract over the longer-term, we also face a number of significant risks, including the factors that resulted in the impairment of assets in the third quarter of 2004.

U.K. Ministry of Defence

In March 2005, a consortium led by us was awarded a ten-year contract for the first increment of the U.K. Ministry of Defence (MoD) project to consolidate numerous existing information networks into a single next-generation infrastructure (the Defence Information Infrastructure Future project). The total contract value of this contract was approximately $3.9 billion over ten years. Billings under the contract are initially based upon the achievement of milestones during the initial development and subsequently on the number of seats deployed. Our upfront expenditure and capital investment requirements for this contract during 2005 adversely impacted our free cash flow and earnings for the year. Many of the services and service delivery challenges required by this contract are similar to those required by the NMCI contract discussed above, and accordingly, many of the risks are the same. We have applied lessons learned from our experience with the NMCI contract to this contract, including contract terms with clearly defined client and EDS accountability and improved program management. We have met client expectations regarding key deliverables under this contract despite program changes and inability to achieve certain related dependencies that have extended the initial development timeline. This contract provides for adjustments to reflect the financial impact to EDS of client driven program changes and inability to achieve dependencies. We are working with the client to agree upon the appropriate adjustments provided for under the contract. If we do not reach satisfactory resolution with respect to these matters or for any future delays in the development timeline or seat deployment schedule our revenues, earnings and free cash flow for this contract, or the timing of the recognition thereof, could be adversely impacted.

Settlement of Consolidated Securities Class Action

On November 1, 2005, we entered into a memorandum of understanding regarding a settlement of the consolidated securities class action filed in late 2002, subject to certain conditions, including final approval of the settlement by the U.S. District Court for the Eastern District of Texas. See Note 15 of Notes to our Consolidated Financial Statements. The terms of the settlement provide for a cash payment of $137.5 million. We estimate approximately one-half of such payment will be made by our insurers and have recognized the cost of our portion of the settlement in our financial statements as of December 31, 2005.

Other

On March 1, 2005, we launched ExcellerateHRO LLP, our 85% owned joint venture with Towers Perrin, to deliver a comprehensive range of HR BPO services. ExcellerateHRO combines EDS' payroll and related HR outsourcing business with the pension, health and welfare administration services business formerly operated by Towers Perrin as its TPAS business. The new company enables us to offer a comprehensive set of HR outsourcing solutions across the core areas of benefits, payroll, compensation management, workforce administration and relocation, recruitment and staffing, and workforce development. The $417 million in cash we paid at closing of the transaction was funded from cash on hand. This payment principally represented the purchase price for the acquisition by ExcellerateHRO of Towers Perrin's benefits administration business and the right to use the Towers Perrin brand name, net of Towers Perrin's interest in ExcellerateHRO and its share of the cash capital contribution (approximately $50 million) to the venture.

During 2005, we identified deterioration in the projected performance of one of our commercial contracts based, among other things, on a change in management's judgment regarding the amount and likelihood of achieving anticipated benefits from contract-specific productivity initiatives, primarily related to the length of time necessary to achieve cost savings from planned infrastructure optimization initiatives. We determined that the estimated undiscounted cash flows of the contract over its remaining term were insufficient to recover the contract's deferred contract costs. As a result, we recognized a non-cash impairment charge of $37 million in the second quarter of 2005 to write-off the contract's deferred contract costs. The impairment charge is reported as a component of cost of revenues in the 2005 consolidated statements of operations and is included in the results of the Outsourcing segment. Remaining long-lived assets associated with this contract totaled $143 million at December 31, 2005. The current estimate of cash flows includes cost reductions resulting from the expected optimization of the contract's service delivery infrastructure based on project plans and anticipated vendor rate reductions based on historical and industry trends. Some of the project plans have near-term milestones that are critical to meeting overall cost reduction goals. It is reasonably possible that these milestones may not be met or actual cost savings from these and other planned initiatives may not materialize in the near-term and, as a result, remaining long-lived assets associated with the contract will become fully impaired. We continue to pursue several opportunities to improve the financial performance of this contract, including leveraging the infrastructure through the addition of new business opportunities with the client.

Priorities and Expectations for 2006 and Beyond

We have substantially completed the transformation outlined in 2003 to "stabilize, fix and invest to grow" our business. Our priorities for 2006 and beyond are focused on achieving profitable growth through continued focus on cost competitiveness and service quality. We will continue initiatives to reduce our cost of revenues by approximately $1 billion in 2006 following a reduction of approximately $1 billion in each of the past two years. These initiatives include continued reengineering of our supply chain, labor cost management, enterprise process improvement and production process improvement. In addition, we will seek to build on our service excellence initiatives, which efforts resulted in increased client loyalty and innovation metrics in 2005.

We expect 2006 revenues of approximately $20.0-$20.5 billion, which would represent an increase in organic revenues of 2-4% from 2005. This reflects an anticipated increase in revenues from new business signed during 2005, including the U.K. MoD contract, offset by a decrease in GM revenues discussed above. We refer you to "Results of Operations" below for a definition of organic revenues.

We currently expect 2006 earnings per share of approximately $1.05-$1.15, excluding the impact of expensing stock options and Performance RSUs, and discontinued operations. Such forecasted increase in 2006 earnings is due to several factors, including the positive impact of the productivity initiatives described above, improvements in the performance of our NMCI and U.K. MoD contracts, revenue growth, and certain extraordinary items that adversely impacted 2005 earnings, such as the pension charge related to the termination of our U.K. Inland Revenue contract and litigation and settlement expenses. The incremental impact of such items on our 2006 earnings will be partially offset by the second-half impact of the expiration of our MSA with GM, additional investments in technology and infrastructure, increased sales costs associated with higher levels of new contract signings, and expenses associated with the acceleration of our offshore initiatives.

On February 21, 2006 we announced that the Board of Directors had authorized a $1 billion share repurchase program over 18 months. On February 23, 2006 we entered into a $400 million accelerated share repurchase agreement (see Note 20 in the accompanying Notes to Consolidated Financial Statements). Our expectations regarding 2006 earnings per share referred to above reflects the impact of the shares acquired through the accelerated share repurchase agreement and other shares that may be repurchased in 2006, which will be somewhat offset by the impact of anticipated issuances of additional shares upon option exercises and other compensation programs.

We expect free cash flow in 2006 of $800 million to $1 billion, compared to $619 million in 2005, with the forecasted improvement driven principally by our expected improvements in operating margins and improvements in working capital. Such improvements would be somewhat offset by an increase in net capital expenditures due to the benefit of our sale of real estate assets in 2005.

GM is our largest single client, accounting for approximately $1.8 billion, or 9.1%, of our total revenue in 2005. Our ten-year MSA with GM expires in June 2006. In February 2006, GM announced the results of a recompete process which covered substantially all of the work we perform under the MSA, including applications maintenance, infrastructure operations and integration management. We were awarded approximately 70% of the contracts we bid on with a total contract value of approximately $3.8 billion over five years (see "Total Contract Value of Contract Signings" below). We expect annualized revenue from GM of approximately $1.2-$1.4 billion over the next five years, including the business recently awarded as well as other GM business not part of the recompete. We expect 2006 revenue from GM, which will include the MSA through June 7, will be approximately $1.6 billion. We do not expect a significant change in our operating margins attributable to GM revenue compared to 2005. We refer you to the discussion in "Risk Factors" above of our exposure to certain industries, including the United States automobile industry, that have been experiencing financial difficulties. Such exposure has had, and could in the future have, a material adverse effect on our financial position and results of operations.

We continue to work with the DoN with respect to our efforts to improve the performance of our NMCI contract and expect that client to extend the contract term through its optional three-year extension period, which would run through September 30, 2010. We also expect continued improvement in the operational performance of the contract in 2006, which lost $75 million in 2005, through an increase in average seat prices as well as additional opportunities with this client. As a result of such operational improvement and anticipated extension of the contract term, we expect this contract, which has used approximately $3.2 billion of free cash flow since inception, to generate significant free cash flow during 2006 and thereafter, including free cash flow generated from the extended contract and through the expected sale of NMCI infrastructure and desktop assets to the client at the end of the contract term. We continue to face a number of risks under this contract, however, as described under "2005 Highlights" above.

See "Total Contract Value of Contract Signings" below for a discussion of our expectations for new contract signings for 2006.

The estimates for 2006 financial performance set forth in this Management's Discussion and Analysis of Financial Condition and Results of Operations rely on management's current assumptions, including assumptions concerning future events, and are subject to a number of uncertainties and other factors, many of which are outside the control of management, that could cause actual results to differ materially from such estimates. For a discussion of certain of these factors, we refer you to the discussion under "Risk Factors" in Item 1A of our Form 10-K as well as additional assumptions related to our 2006 financial guidance referred to under "Income Taxes" below.

Total Contract Value of Contract Signings

A key metric used by management to monitor new business activity is the total contract value, or TCV, of our contract signings. There are no third-party standards or requirements governing the calculation of TCV. The TCV of a client contract represents our estimate at contract signing of the total revenue expected over the term of that contract. Contract signings include contracts with new clients and renewals, extensions and add-on business with existing clients. TCV does not include potential revenues that could be earned from a client relationship as a result of future expansion of service offerings to that client, nor does it reflect option years under non-governmental contracts that are subject to client discretion. TCV reflects a number of management estimates and judgments regarding the contract, including assumptions regarding demand-driven usage, scope of work and client requirements. In addition, our contracts may be subject to currency fluctuations and, for contracts with the U.S. federal government, annual funding constraints and indefinite delivery/indefinite quantity characteristics. Accordingly, the TCV we report should not be considered firm orders or predictive of future operating results.

Following is a summary of the TCV of contract signings, excluding contracts signed by our former A.T. Kearney and UGS PLM Solutions subsidiaries, by quarter for the last five years (in billions):

	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Year
2001	$ 7.1	$ 6.6	$ 6.2	$ 9.7	$ 29.6
2002	6.7	5.6	2.6	7.6	22.5
2003	2.6	3.0	3.1	3.9	12.6
2004	3.6	3.8	2.9	3.7	14.0
2005	6.9	2.6	5.3	5.3	20.1

The TCV of contract signings can fluctuate significantly from year to year depending on a number of factors, including the timing of significant new and renewal contracts and the length of those contracts.

Our TCV of contract signings increased to $20.1 billion in 2005 compared to $14.0 billion in 2004, reflecting an increase in average contract size as well as a greater impact from new and add-on business compared to 2004. The significant decrease in 2003 and 2004 compared to the prior years has negatively impacted our revenues since 2003, as a significant portion of our revenue is generated by long-term IT services contracts. Our ability to achieve revenue growth in the future will be dependent on our ability to increase the TCV of contract signings to a level higher than that of recent years. We expect TCV of contract signings in 2006 to be in excess of $23 billion. We refer you to the discussion of revenues in "Results of Operations" below.

Results of Operations

Revenues. Following is a summary of revenues from contracts with base (non-GM) clients and revenues from GM, excluding revenues from our former A.T. Kearney and UGS PLM Solutions subsidiaries which are reported as discontinued operations, for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Revenues:			
Base	$ 17,952	$ 17,907	$ 17,589
GM	1,805	1,956	2,169
Total	$ 19,757	$ 19,863	$ 19,758

Following is a summary of our revenue growth percentages calculated using revenues reported in the consolidated statements of operations, and adjusted for the impact of foreign currency translation, acquisitions and those divestitures not accounted for as discontinued operations ("organic revenue growth"):

	Total		Base		GM	
	2005	2004	2005	2004	2005	2004
As reported revenue growth	(1)%	1%	–	2%	(8)%	(10)%
Impact of foreign currency changes	(1)%	(5)%	(1)%	(5)%	(1)%	(2)%
Fixed U.S. dollar revenue growth	(2)%	(4)%	(1)%	(3)%	(9)%	(12)%
Impact of acquisitions	(1)%	–	(1)%	–	–	–
Impact of divestitures	–	–	–	–	–	–
Organic revenue growth	(3)%	(4)%	(2)%	(3)%	(9)%	(12)%

Fixed U.S. dollar revenue growth is calculated by removing from as reported revenues the impact of the change in exchange rates between the local currency and the U.S. dollar from the current period and the comparable prior period. Organic revenue growth further excludes revenue growth due to acquisitions in the period presented if the comparable prior period had no revenues from the same acquisition, and revenue decreases due to businesses divested in the period presented or the comparable prior period.

2005 vs. 2004. The 2% decrease in base organic revenues in 2005 was primarily attributable to a $416 million, or 2%, decrease in our Outsourcing segment which excludes the results of our NMCI contract. The decrease in our Outsourcing segment was attributable to a $101 million, or 1%, decrease in the Americas unit, a $295 million, or 5%, decrease in Europe, Middle East and Africa (EMEA), and a $107 million, or 5%, decrease in the U.S. Government unit, offset by a $88 million, or 7%, increase in Asia Pacific. The decrease in revenues in EMEA was primarily due to the termination of our contract with the U.K. Government's Inland Revenue department effective June 30, 2004, offset by an increase in revenue from other government and commercial clients, including our contract with the U.K. Ministry of Defence. The decrease in the Americas was primarily due to the termination of our "other commercial contract" effective August 1, 2004 (see Note 3 in the accompanying Notes to Consolidated Financial Statements). The decrease in U.S. Government was primarily attributable to the completion of a large federal contract in early 2005.

2004 vs. 2003. The 3% decrease in base organic revenues in 2004 was primarily attributable to a $236 million, or 1%, decrease in our Outsourcing segment and a $256 million, or 25%, decrease in our NMCI segment. The decrease in the Outsourcing segment was attributable to a $288 million, or 4%, decrease in EMEA and a $35 million, or 2%, decrease in the U.S. Government unit, offset by a $71 million, or 1%, increase in the Americas and a $15 million, or 1%, increase in Asia Pacific. The decrease in revenues in the NMCI segment was associated with lower product sales which were partially offset by increased service revenue. The decrease in base organic revenues in EMEA in 2004 was primarily due to the termination of our contract with the U.K. Government's Inland Revenue department effective June 30, 2004, and was offset by an increase in revenues from financial services and other government clients. The U.S. Government business experienced reduced revenues in 2004 due to runoff from our state and local business, including the termination of the Medicaid contract with the State of Texas early in the first quarter of 2004. The decrease in revenues from our state and local business was offset by an increase in revenues from U.S. federal government contracts.

The decrease in organic revenues from GM in 2005 and 2004 was primarily attributable to reduced pricing under our MSA with GM, which expires in June 2006, as well as GM's move toward a multi-vendor strategy. We expect revenues from GM of approximately $1.6 billion in 2006 and annualized revenues of approximately $1.2 to $1.4 billion beginning in 2007. We refer you to "Overview" above for a discussion of the recent GM recompete.

Gross margin. Our gross margin percentages [(revenues less cost of revenues)/revenues] were 11.8%, 8.3% and 7.6% in 2005, 2004 and 2003, respectively. Our gross margins in all periods were adversely affected by the performance of the NMCI contract, including asset write-downs in 2004 and 2003. The NMCI contract had a 90 basis point, 480 basis point and 530 basis point negative impact on our gross margin percentages in 2005, 2004 and 2003, respectively. Other items affecting our 2005 gross margin include a pension obligation settlement loss associated with the termination of the Inland Revenue contract (40 basis points), an increase in compensation expense attributable to the change in accounting for share-based payments (50 basis points), a deferred cost impairment charge associated with a large IT commercial contract (20 basis points) and litigation costs (20 basis points). These items were partially offset by favorable resolution of certain customer contract matters that permitted recognition of previously deferred revenue (40 basis points). Our gross margins in 2005 were also adversely affected by the investments discussed in "2005 Highlights" above and the decrease in organic revenues discussed above, including the termination of our contract with the U.K. Government's Inland Revenue department. An additional item affecting our 2004 gross margin was operating losses and other charges on our "other commercial contract" (150 basis points). Other items affecting our 2003 gross

margin include operating losses on our "other commercial contract" (140 basis points) and a $98 million (50 basis point) reversal of MCI receivable reserves.

We expect our gross margin to improve in 2006 as a result of our continued cost competitiveness initiatives, improved execution on our client contracts, and decrease in the level of investments compared to 2005.

Selling, general and administrative. SG&A expenses as a percentage of revenues were 9.2%, 7.9% and 8.0% in 2005, 2004 and 2003, respectively. The increase in our SG&A percentage in 2005 was primarily attributable to an increase in compensation expense resulting from the change in accounting for share-based payments, and performance-based RSUs (30 basis points) and incremental legal and regulatory costs (20 basis points). Our SG&A expense in 2005 was also impacted by higher sales and marketing costs, including commissions associated with increasing TCV of new business signings (40 basis points), and by certain investment initiatives discussed in "2005 Highlights" above (10 basis points).

Restructuring and other. Following is a summary of restructuring and other for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Restructuring and other employee reduction activities:			
Employee separation, early retirement and exit costs, net	$ 68	$ 276	$ 232
Asset write-downs	–	–	36
CEO severance	–	–	48
Other activities:			
Pre-tax gain on disposal of businesses:			
European wireless clearing	(93)	–	–
U.S. wireless clearing	–	(35)	–
Automotive Retail Group	–	(66)	–
Credit Union Industry Group	–	–	(139)
Other	(1)	(5)	(2)
Total	$ (26)	$ 170	$ 175

We refer you to Note 19 in the accompanying Notes to Consolidated Financial Statements for a further discussion of the components of restructuring and other activities.

Other income (expense). Other income (expense) includes interest expense, interest and dividend income, investment gains and losses, minority interest expense, and foreign currency transaction gains and losses. Following is a summary of other income (expense) for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Other income (expense):			
Interest expense	$ (241)	$ (321)	$ (301)
Interest income and other, net	138	49	39
Total	$ (103)	$ (272)	$ (262)

The decrease in interest expense in 2005 was primarily due to the extinguishment of debt resulting from our debt exchange offer completed in 2004 and other scheduled debt repayments. See "Financial Position" and "Liquidity and Capital Resources" for a further discussion of our outstanding debt balance. Interest expense in 2004 includes $36 million in expenses resulting from our debt exchange offer. See Note 8 to our consolidated financial statements for a further discussion of the exchange offer. The increase in interest income and other in 2005 was primarily due to interest income on increased levels of cash and marketable securities, and foreign currency transaction gains. Interest income and other in 2005 includes net investment losses of $41 million, including a write-down of $35 million relating to our leveraged lease investments, and interest and other income of $171 million. Interest income and other in 2004 includes net investment losses of $28 million, including a write-down of $34 million relating to our leveraged lease investments, and interest and other income of $77 million. Interest income and other in 2003 includes net investment gains of $6 million and other income of $33 million.

Income taxes. Our effective tax rates on income (loss) from continuing operations were 34.9%, 27.5% and 39.7% for the years ended December 31, 2005, 2004 and 2003, respectively. The tax rate in 2005 was significantly impacted by (i) recognition of additional valuation allowances of $115 million for losses incurred in certain foreign tax jurisdictions due to underperforming operations, and (ii) reversal of certain tax contingency accruals of $40 million due to progress made in jurisdictional tax audits. Our effective tax rate will fluctuate also in the future as a result of our adoption of SFAS 123R as discussed in "Overview" above. As we record expense under SFAS 123R, a deferred tax asset is recorded. The realization of that asset is dependent upon the intrinsic value of an option on the date of exercise. Any unrealized deferred tax asset is charged to tax expense in the period of exercise or expiration and, accordingly, would result in a higher effective tax rate in such period. See "Application of Critical Accounting Policies" below for a discussion of factors affecting income tax expense.

The U.S. research and development tax credit expired as of December 31, 2005. A retroactive extension of the credit is contained in legislation that has been passed by both the House and Senate and is currently in reconciliation conference. The Company has determined its 2006 guidance on the basis that the credit will be extended with retroactive effect to January 1, 2006. In the event that the legislation is not passed in its current form, full year guidance could be impacted and in the event the legislation is not passed and signed by the President by March 31, 2006, quarterly results could be adversely impacted until the extension of the credit is signed and can be reflected in the full year effective tax rate.

On October 22, 2004, the President of the United States signed the American Jobs Creation Act of 2004. The Act created a temporary incentive for U.S. corporations to repatriate accumulated income earned abroad by providing an 85 percent dividends received deduction for certain dividends from controlled foreign corporations. Management determined that the incremental cost of the repatriation did not produce a corresponding economic benefit, and as a result, we did not make a repatriation under this provision.

Discontinued operations. Income (loss) from discontinued operations, net of income taxes, was $(136) million, $429 million and $46 million, respectively, for the years ended December 31, 2005, 2004 and 2003. Income (loss) from discontinued operations is comprised primarily of the net results of A.T. Kearney which is classified as "held for sale" at December 31, 2005, and UGS PLM Solutions which was sold during the second quarter of 2004. Discontinued operations also includes our European Technology Solutions and subscription fulfillment businesses sold during 2003. Income from discontinued operations includes net gains (losses) of $(92) million, $433 million and $(9) million, net of income taxes, in 2005, 2004 and 2003, respectively.

Net income (loss). Income (loss) from continuing operations was $286 million, or $0.55 per basic share and $0.54 per diluted share, in 2005 compared with $(271) million, or $(0.54) per basic and diluted share, in 2004 and $(312) million, or $(0.65) per basic and diluted share in 2003. Net income (loss) was $150 million in 2005 compared with $158 million in 2004 and $(1,698) million in 2003. Basic earnings (loss) per share was $0.29 in 2005 compared with $0.32 in 2004 and $(3.55) in 2003. Diluted earnings (loss) per share was $0.28 in 2005 compared with $0.32 in 2004 and $(3.55) in 2003.

During the third quarter of 2003, we adopted the provisions of Emerging Issues Task Force ("EITF") Issue No. 00-21, *Accounting for Revenue Arrangements with Multiple Deliverables*, on a cumulative basis as of January 1, 2003. The adoption of EITF 00-21 resulted in a non-cash adjustment of $1.42 billion, net of tax, resulting primarily from the reversal of unbilled revenue associated with our IT service contracts which we had been accounting for using the percentage-of-completion method of revenue recognition. The adjustment also reflects the deferral and subsequent amortization of system construction costs which were previously expensed as incurred and included in the percentage-of-completion model for the respective contracts.

In addition, we adopted SFAS No. 143, *Accounting for Asset Retirement Obligations*, effective January 1, 2003. SFAS No. 143 requires that the fair value of the liability for an asset retirement obligation be recognized in the period in which it is incurred if a reasonable estimate of fair value can be made. The associated asset retirement costs are capitalized as part of the carrying amount of the long-lived asset. The majority of our retirement obligations relate to leases which require the facilities be restored to original condition at the expiration of the leases. The adoption of SFAS No. 143 resulted in a reduction of income reported as a cumulative effect of a change in accounting principle of $25 million ($17 million after tax). Additionally, the fair value of the liability recorded on January 1, 2003 was $48 million.

Segment information. We refer you to Note 12 in the notes to our consolidated financial statements for a summary of certain financial information related to our reportable segments for 2005, 2004 and 2003, as well as certain financial information related to our operations by geographic region and by service line for such years.

Financial Position

At December 31, 2005, we held cash and marketable securities of $3.2 billion, had working capital of $3.5 billion, and had a current ratio (current assets/current liabilities) of 1.68-to-1. This compares to cash and marketable securities of $3.6 billion, working capital of $3.4 billion, and a current ratio of 1.64-to-1 at December 31, 2004. Approximately 6% of our cash and cash equivalents and marketable securities at December 31, 2005 were not available for debt repayment due to various commercial

limitations on the use of these assets. The decrease in cash and marketable securities in 2005 is due principally to cash payments of $417 million associated with the purchase of Towers Perrin's benefits administration business in the first quarter of 2005, $135 million associated with the purchase of the outstanding interest in our Australian subsidiary in the second quarter of 2005 and debt payments of $560 million in 2005, offset by free cash flow of $619 million (see "Liquidity and Capital Resources" below for the definition of free cash flow).

Days sales outstanding for trade receivables were 58 days at December 31, 2005 compared to 56 days at December 31, 2004. Days payable outstanding were 19 days at December 31, 2005 and 2004.

Total debt was $3.3 billion at December 31, 2005 versus $3.8 billion at December 31, 2004. Total debt consists of notes payable and capital leases. The total debt-to-capital ratio (which includes total debt and minority interests as components of capital) was 30% at December 31, 2005 compared to 33% at December 31, 2004.

Off-Balance Sheet Arrangements and Contractual Obligations

In connection with certain service contracts, we may arrange a client supported financing transaction ("CSFT") with our client and an independent third-party financial institution or its designee. The use of these transactions enables us to offer clients more favorable financing terms. These transactions also enable the preservation of our capital and allow us to avoid client credit risk relating to the repayment of the financed amounts. Under these transactions, the independent third-party financial institution finances the purchase of certain IT-related assets and simultaneously leases those assets for use in connection with the service contract. The use of a CSFT on a service contract results in lower contract revenue and expense to EDS over the contract term.

In CSFTs, client payments are made directly to the financial institution providing the financing. If the client does not make the required payments under the service contract, under no circumstances do we have an ultimate obligation to acquire the underlying assets unless our nonperformance under the service contract would permit its termination, or we fail to comply with certain customary terms under the financing agreements, including, for example, covenants we have undertaken regarding the use of the assets for their intended purpose. We consider the possibility of our failure to comply with any of these terms to be remote.

At December 31, 2005, the estimated future asset purchases to be financed under existing arrangements were $72 million. The aggregate dollar values of assets purchased under our CSFT arrangements were $8 million, $65 million and $72 million during 2005, 2004 and 2003, respectively. As of December 31, 2005, there were outstanding an aggregate of $241 million under CSFTs yet to be paid by our clients. In the event a client contract is terminated due to nonperformance, we would be required to acquire only those assets associated with the outstanding amounts for that contract. Net of repayments, the estimated future maximum amount outstanding under existing financing arrangements is not expected to exceed $250 million. We believe we have sufficient alternative sources of capital to directly finance the purchase of capital assets to be used for our current and future client contracts without the use of these arrangements.

During 2001, we established a securitization facility under which we financed the purchase of capital assets for our NMCI contract. Under the terms of the facility, we sold certain financial assets resulting from that contract to a trust ("Trust") classified as a qualifying special purpose entity for accounting purposes. During 2004, we completed agreements with the Trust's lenders to repurchase financial assets for $522 million in cash. Upon completion of the transaction, we recognized current lease receivables of $286 million and non-current lease receivables of $236 million associated with this purchase. Such receivables are being collected over the remaining term of the NMCI contract.

Performance guarantees. In the normal course of business, we may provide certain clients, principally governmental entities, with financial performance guarantees, which are generally backed by standby letters of credit or surety bonds. In general, we would be liable for the amounts of these guarantees in the event our nonperformance permits termination of the related contract by our client, the likelihood of which we believe is remote. We believe we are in compliance with our performance obligations under all service contracts for which there is a performance guarantee.

Following is a summary of the estimated expiration of financial guarantees outstanding as of December 31, 2005 (in millions):

		Estimated Expiration Per Period			
	Total	**2006**	**2007**	**2008**	**Thereafter**
Performance guarantees:					
CSFT transactions	$ 241	$ 88	$ 86	$ 37	$ 30
Standby letters of credit, surety bonds and other	521	282	21	18	200
Other guarantees	32	18	10	4	–
Total	$ 794	$ 388	$ 117	$ 59	$ 230

Contractual obligations. Following is a summary of payments due in specified periods related to our contractual obligations as of December 31, 2005 (in millions):

	Payments Due by Period				
	Total	**2006**	**2007-2008**	**2009-2010**	**After 2010**
Long-term debt, including current portion and interest[(1)]	$ 4,958	$ 525	$ 509	$ 1,748	$ 2,176
Operating lease obligations	1,370	316	453	236	365
Purchase obligations[(2)]	3,388	976	1,435	899	78
Total[(3)]	$ 9,716	$ 1,817	$ 2,397	$ 2,883	$ 2,619

(1) Amounts represent the expected cash payments (principal and interest) of our long-term debt and do not include any fair value adjustments or bond premiums or discounts. Amounts also include capital lease payments (principal and interest).

(2) Purchase obligations include material agreements to purchase goods or services, principally software and telecommunications services, that are enforceable and legally binding on EDS and that specify all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum or variable price provisions; and the approximate timing of the transaction. Purchase obligations exclude agreements that are cancelable without penalty. Purchase obligations also exclude our obligation to repurchase minority interests in joint ventures, including our obligation to repurchase Towers Perrin's minority interest in ExcellerateHRO. See Note 16 of the accompanying consolidated financial statements.

(3) Minimum pension funding requirements are not included as such amounts are zero for our U.S. pension plans and have not been determined for foreign pension plans. See Note 13 of the accompanying consolidated financial statements.

Liquidity and Capital Resources

Following is a summary of our cash flows for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	**2004**	**2003**
Cash flows:			
Net cash provided by operating activities	$ 1,296	$ 1,278	$ 1,495
Net cash used in investing activities	(797)	(758)	(809)
Net cash used in financing activities	(681)	(663)	(71)
Free cash flow	619	304	221

Operating activities. The increase in net cash provided by operating activities in 2005 compared to 2004 was due to a $150 million increase in earnings, adjusted to exclude non-cash operating items, offset by a $132 million change in operating assets and liabilities. The change in operating assets and liabilities resulted primarily from a decrease in receivables collections and an increase in tax payments, offset by an increase in deferred revenue (see "Client Contract Payment" in the "Overview" section above). The decrease in net cash provided by operating activities in 2004 compared to 2003 was due to a $393 million decrease in earnings, adjusted to exclude non-cash operating items, offset by a $176 million change in operating assets and liabilities. The change in operating assets and liabilities resulted primarily from a decrease in prepayments to vendors, a decrease in construction costs related to our active construct contracts and a reduction in tax payments, offset by restructuring payments, a decrease in accounts receivable collections and a one-time pension payment of $119 million associated with the termination of the Inland Revenue contract. Operating cash flows in 2005 were comprised of $1,211 million in cash provided by our core IT outsourcing and consulting businesses (excluding NMCI), and $85 million in cash provided by our NMCI contract. Operating cash flows in 2004 were comprised of $1,557 million in cash provided by our core IT outsourcing and consulting businesses offset by $279 million in cash used by our NMCI contract.

Investing activities. The change in net cash used in investing activities in 2005 compared to 2004 was primarily due to a decrease in proceeds from divestitures in 2005, and an increase in acquisition payments related to 2005 acquisitions (see Notes 16, 17 and 19 in the accompanying Notes to Consolidated Financial Statements). In addition, we realized net proceeds of $178 million in 2005 resulting from sales of real estate (see "Real Estate Initiatives" in the "Overview" section above). Net cash used in investing activities in 2004 includes the proceeds from the divestitures of our U.S. wireless clearing business, UGS PLM Solutions and ARG. Divestiture proceeds were somewhat offset by net purchases of marketable securities. Net cash used in investing activities in 2004 also includes a $522 million cash payment related to the purchase of financial assets associated with the NMCI securitization facility. Excluding this purchase, net proceeds from investments and other assets decreased in 2004 compared to 2003 due primarily to lower securitization proceeds and equipment purchases associated with the NMCI contract.

Financing activities. The increase in net cash used in financing activities in 2005 compared to 2004 was primarily due to proceeds from our common stock issuance associated with a debt exchange in 2004. The increase in net cash used in financing activities in 2004 was primarily due to an increase in net payments on long-term debt and capital lease obligations, partially offset by proceeds from our common stock issuance associated with a debt exchange and by a reduction in dividend payments.

Free cash flow. We define free cash flow as net cash provided by operating activities, less capital expenditures. Capital expenditures is the sum of (i) net cash used in investing activities, excluding proceeds from sales of marketable securities, proceeds related to divested assets and non-marketable equity investments, payments related to acquisitions, net of cash acquired, and non-marketable equity investments, and payments for purchases of marketable securities, and (ii) capital lease payments. During 2004, we sold our UGS PLM Solutions subsidiary and repurchased financial assets outstanding under the NMCI contract securitization facility. Due to the significance of these transactions, the calculation of free cash flow for 2004 was adjusted to exclude $14 million in transaction fees paid during 2004 related to the UGS PLM Solutions disposition, and the $522 million cash payment related to the repurchase of financial assets associated with the NMCI securitization facility. The calculation of free cash flow for 2004 was also adjusted to include $85 million in cash generated through utilization of operating tax credits, predominantly related to 2004, to offset income tax associated with the UGS PLM Solutions disposition (such tax credits would otherwise have been available to offset future taxable income generated by operations). Free cash flow is a non-GAAP measure and should be viewed together with our consolidated statements of cash flows.

Following is a reconciliation of free cash flow to the net change in cash and cash equivalents for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Net cash provided by operating activities	$ 1,296	$ 1,278	$ 1,495
Capital expenditures:			
Proceeds from investments and other assets	310	68	43
Net proceeds from real estate sales	178	–	–
Payments for purchases of property and equipment	(718)	(666)	(703)
Payments for investments and other assets	(27)	(556)	(25)
Payments for purchases of software and other intangibles	(300)	(302)	(494)
Other investing activities	29	28	25
Capital lease payments	(149)	(167)	(120)
Total capital expenditures	(677)	(1,595)	(1,274)
Adjustments:			
Utilization of tax credits related to the UGS PLM Solutions disposition	–	85	–
Transaction fees related to the UGS PLM Solutions disposition	–	14	–
Payment related to the repurchase of financial assets associated with the NMCI securitization facility	–	522	–
Free cash flow	619	304	221
Other investing and financing activities:			
Proceeds from sales of marketable securities	1,434	956	548
Net proceeds from divested assets and non-marketable equity securities	160	2,129	233
Payments for acquisitions, net of cash acquired, and non-marketable equity securities	(552)	(78)	11
Payments for purchases of marketable securities	(1,311)	(2,337)	(447)
Proceeds from long-term debt	5	6	1,869
Payments on long-term debt	(560)	(561)	(1,312)
Net decrease in borrowings with original maturities less than 90 days	–	–	(235)
Proceeds from issuance of common stock	–	198	–
Employee stock transactions	107	76	47
Dividends paid	(105)	(200)	(287)
Other financing activities	21	(15)	(33)
Effect of exchange rate changes on cash and cash equivalents	(21)	48	(60)
Adjustments:			
Utilization of tax credits	–	(85)	–
Transaction fees	–	(14)	–
Payment related to the repurchase of financial assets associated with the NMCI securitization facility	–	(522)	–
Net increase (decrease) in cash and cash equivalents	$ (203)	$ (95)	$ 555

Our gross capital requirement in 2005 was approximately $1.2 billion including equipment and real estate leases and the use of CSFTs. Free cash flow of $125 million for the NMCI contract for 2005 reflects net cash provided by operating activities of $85 million and a net cash inflow of capital expenditures of $40 million.

Credit facilities. During 2004, we entered into a $550 million Three-and-One-Half Year Multi Currency Revolving Credit Agreement with a bank group including Citibank, N.A., as Administrative Agent, and Bank of America, N.A., as Syndication Agent. The new facility replaced our five-year $550 million revolving credit facility, which expired in September 2004. The new facility may be used for general corporate borrowing purposes and the issuance of letters of credit. The aggregate availability under the new facility, together with our $450 million Three-Year Multi Currency Revolving Credit Agreement entered into in 2003, is $1.0 billion. As of December 31, 2005, there were no amounts outstanding under either of these facilities and we had issued letters of credit totaling $160 million under the $550 million Three-and-One-Half Year Multi Currency Revolving Credit Agreement, thereby reducing the availability under these facilities to $840 million at such date. The new facility includes financial and other covenants of the general nature contained in the facility it replaced and the $450 million Three-and-One-Half Year Multi Currency Revolving Credit Facility was amended and restated to include financial and other terms similar to the new facility.

Our unsecured credit facilities contain certain financial and other restrictive covenants and representations and warranties that would allow any amounts outstanding under the facilities to be accelerated, or restrict our ability to borrow thereunder, in the event of noncompliance. The financial covenants of our unsecured credit facilities were modified in September 2004 in connection with the replacement of our $550 million credit facility as discussed above, and include a minimum net worth covenant, a fixed charge coverage requirement and a leverage ratio requirement. The leverage ratio cannot exceed 2.25-to-1 through December 2005, and 2.00-to-1 thereafter. The fixed charge coverage covenant requires us to maintain a fixed charge ratio of no less than 1.15-to-1 through December 2005, and 1.25-to-1 thereafter. We were in compliance with all covenants at December 31, 2005.

Following is a summary of the financial covenant requirements under our unsecured credit facilities and the calculated amount or ratios at December 31, 2005 (dollars in millions):

	As of and for the Year Ended December 31, 2005	
	Covenant	**Actual**
Minimum net worth	$ 6,420	$ 7,512
Leverage ratio	2.25	1.67
Fixed charge coverage ratio	1.15	2.37

Credit ratings. Following is a summary of our senior long-term debt credit ratings by Moody's Investor Services, Inc. ("Moody's"), Standard & Poor's Rating Services ("S&P") and Fitch Ratings ("Fitch") at December 31, 2005:

	Moody's	**S&P**	**Fitch**
Senior long-term debt	Ba1	BBB–	BBB–
Outlook	Stable	Negative	Stable

On September 15, 2005, Moody's revised our rating outlook to stable from negative. On November 2, 2005, Fitch revised our rating outlook to stable from negative. At December 31, 2005, we had no recognized or contingent material liabilities that would be subject to accelerated payment due to a ratings downgrade. We do not believe a negative change in our credit rating would have a material adverse impact on us under the terms of our existing client agreements.

Liquidity. At December 31, 2005, we had total liquidity of $3.9 billion, comprised of unrestricted cash and marketable securities of $3.0 billion and availability under our unsecured credit facilities of $840 million. During 2005, we terminated our secured A/R facility, a revolving secured financing arrangement collateralized by certain trade receivables with availability of up to $400 million. We elected to terminate the facility in order to more closely align our liquidity with our minimum targeted levels referred to below. We have maintained in effect our unsecured credit agreements which provide for aggregate availability of $1.0 billion for issuances of letters of credit and general corporate borrowing.

Based on our improved free cash flow performance in 2005 and forecasted free cash flow improvements, we have moved our minimum targeted liquidity from 18 months of forecasted capital expenditures (as defined under "Free Cash Flow" above), interest payments, debt maturities and dividend payments to 12 months of forecasted capital expenditures, interest payments, debt maturities and dividend payments. Accordingly, in February 2006 our Board of Directors authorized us to repurchase up to $1 billion of our common shares in open market or other purchases over the next 18 months. We completed $400 million of such authorized repurchase through an Accelerated Share Repurchase arrangement in February 2006 (see Note 20 in the accompanying Notes to Consolidated Financial Statements).

Change in dividend rate. On July 27, 2004, our Board of Directors reduced the quarterly dividend on our common stock from $0.15 to $0.05 per share.

Application of Critical Accounting Policies

The preparation of our financial statements in conformity with generally accepted accounting principles in the United States ("GAAP") requires us to make estimates, judgments and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Our estimates, judgments and assumptions are continually evaluated based on available information and experience. Because of the use of estimates inherent in the financial reporting process, actual results could differ from those estimates. Areas in which significant judgments and estimates are used include, but are not limited to, revenue recognition, accounts receivable collectibility, accounting for long-lived assets, deferred income taxes, retirement plans, performance guarantees and litigation.

Revenue recognition and associated cost deferral. We provide IT and business process outsourcing services under time-and-material, unit-price and fixed-price contracts, which may extend up to 10 or more years. Services provided over the term of these arrangements may include one or more of the following: IT infrastructure support and management; IT system and software maintenance; application hosting; the design, development, or construction of software and systems ("Construct Service"); transaction processing; and business process management.

If a contract involves the provision of a single element, revenue is generally recognized when the product or service is provided and the amount earned is not contingent upon any future event. If the service is provided evenly during the contract term but service billings are irregular, revenue is recognized on a straight-line basis over the contract term. However, if the single service is a Construct Service, revenue is recognized under the percentage-of-completion method using a zero-profit methodology. Under this method, costs are deferred until contractual milestones are met, at which time the milestone billing is recognized as revenue and an amount of deferred costs is recognized as expense so that cumulative profit equals zero. If the milestone billing exceeds deferred costs, then the excess is recorded as deferred revenue. When the Construct Service is completed and the final milestone met, all unrecognized costs, milestone billings and profit are recognized in full. If the contract does not contain contractual milestones, costs are expensed as incurred and revenue is recognized in an amount equal to costs incurred until completion of the Construct Service, at which time any profit would be recognized in full. If total costs are estimated to exceed revenue for the Construct Service, then a provision for the estimated loss is made in the period in which the loss first becomes apparent.

If a contract involves the provision of multiple service elements, total estimated contract revenue is allocated to each element based on the relative fair value of each element. The amount of revenue allocated to each element is limited to the amount that is not contingent upon the delivery of another element in the future. Revenue is then recognized for each element as described above for single-element contracts, except revenue recognized on a straight-line basis for a non-Construct Service will not exceed amounts currently billable unless the excess revenue is recoverable from the client upon any contract termination event. If the amount of revenue allocated to a Construct Service is less than its relative fair value, costs to deliver such service equal to the difference between allocated revenue and the relative fair value are deferred and amortized over the contract term. If total Construct Service costs are estimated to exceed the relative fair value for the Construct Service contained in a multiple-element arrangement, then a provision for the estimated loss is made in the period in which the loss first becomes apparent.

In the rare event that fair value is not determinable for each service element of a multiple-element contract, the contract is considered one accounting unit, and revenue is recognized using the proportional performance method. Under this method, contract revenue is recognized for each service element based on the proportional performance of each service element to the total expected performance of each service element over the life of the contract.

We also defer and subsequently amortize certain set-up costs related to activities that enable the provision of contracted services to the client. Such activities include the relocation of transitioned employees, the migration of client systems or processes, and the exit of client facilities. Deferred contract costs, including set-up costs, are amortized on a straight-line basis over the remaining original contract term unless billing patterns indicate a more accelerated method is appropriate. The recoverability of deferred contract costs associated with a particular contract is analyzed whenever events or circumstances indicate that their carrying value may not be recoverable using the undiscounted estimated cash flows of the whole contract over its remaining contract term. If such undiscounted cash flows are insufficient to recover the long-lived assets and deferred contract costs, including contract concessions paid to the client, the deferred contract costs and contract concessions are written down by the amount of the cash flow deficiency. If a cash flow deficiency remains after reducing the balance of the deferred contract costs and contract concessions to zero, any remaining long-lived assets are evaluated for impairment. Any such impairment recognized would equal the amount by which the carrying value of the long-lived assets exceeds the fair value of those assets.

Accounts receivable. Reserves for uncollectible trade receivables are established when collection of amounts due from clients is deemed improbable. Indicators of improbable collection include client bankruptcy, client litigation, industry downturns, client cash flow difficulties or ongoing service or billing disputes. Receivables more than 180 days past due are automatically reserved unless persuasive evidence of probable collection exists. Our allowances for doubtful accounts as a percentage of total

gross trade receivables were 2.0%, and 3.5% at December 31, 2005 and 2004, respectively. The increase in the allowance in 2004 resulted primarily from the recognition of reserves in connection with the US Airways bankruptcy. Excluding those reserves, the allowance percentage was 2.7% at December 31, 2004.

Long-lived assets. Our property and equipment, software and definite-lived intangible asset policies require the amortization or depreciation of assets over their estimated useful lives. An asset's useful life is the period over which the asset is expected to contribute directly or indirectly to our future cash flows. The useful lives of property and equipment are limited to the standard depreciable lives or, for certain assets dedicated to client contracts, the related contract term. The useful lives of capitalized software are limited to the shorter of the license period or the related contract term. The estimated useful lives of definite-lived intangible assets are based on the expected use of the asset and factors that may limit the use of the asset. We may utilize the assistance of a third-party appraiser in the assessment of the useful life of an intangible asset.

Goodwill is not amortized, but instead tested for impairment at least annually. The first step of the goodwill impairment test is a comparison of the fair value of a reporting unit to its carrying value. The fair value of a reporting unit is the amount at which the unit as a whole could be bought or sold in a current transaction between willing parties. We conducted an annual goodwill impairment test as of December 1, 2005. The goodwill impairment test requires us to identify our reporting units and obtain estimates of the fair values of those units as of the testing date. Our reporting units are comprised of the geographic components of our operating segments that share similar economic characteristics. We estimate the fair values of our reporting units using discounted cash flow valuation models. Those models require estimates of future revenues, profits, capital expenditures and working capital for each unit. We estimate these amounts by evaluating historical trends, current budgets, operating plans and industry data. We utilize our weighted-average cost of capital to discount the estimated expected future cash flows of each unit. The estimated fair value of each of our reporting units exceeded its respective carrying value in 2005 indicating the underlying goodwill of each unit was not impaired.

We plan to conduct our annual impairment test as of December 1st of each year when our budgets and operating plans for the forthcoming year are expected to be finalized. The timing and frequency of additional goodwill impairment tests are based on an ongoing assessment of events and circumstances that would more than likely reduce the fair value of a reporting unit below its carrying value. We will continue to monitor our goodwill balance for impairment and conduct formal tests when impairment indicators are present. A decline in the fair value of any of our reporting units below its carrying value is an indicator that the underlying goodwill of the unit is potentially impaired. This situation would require the second step of the goodwill impairment test to determine whether the unit's goodwill is impaired. The second step of the goodwill impairment test is a comparison of the implied fair value of a reporting unit's goodwill to its carrying value. An impairment loss is required for the amount which the carrying value of a reporting unit's goodwill exceeds its implied fair value. The implied fair value of the reporting unit's goodwill would become the new cost basis of the unit's goodwill.

Deferred income taxes. We must make certain estimates and judgments in determining income tax expense for financial statement purposes. These estimates and judgments occur in the calculation of certain tax assets and liabilities, which arise from differences in the timing of recognition of revenue and expense for tax and financial statement purposes. We must assess the likelihood that we will be able to recover our deferred tax assets. In assessing the realizability of deferred tax assets, we consider whether it is more likely than not that some portion or all of the deferred tax assets will not be realized and adjust the valuation allowances accordingly. Factors considered in making this determination include the period of expiration of the tax asset, planned use of the tax asset, and historical and projected taxable income as well as tax liabilities for the tax jurisdiction in which the tax asset is located. Valuation allowances will be subject to change in each future reporting period as a result of changes in one or more of these factors. A majority of the tax assets are associated with tax jurisdictions in which we have a large scale of operations and long history of generating taxable income, thereby reducing the estimation risk associated with recoverability analysis. However, in smaller tax jurisdictions in which we have less historical experience or smaller scale of operations, the assessment of recoverability of tax assets is largely based on projections of taxable income over the expiration period of the tax asset and is subject to greater estimation risk. Accordingly, it is reasonably possible the recoverability of tax assets in these smaller jurisdictions could be impaired as a result of poor operating performance over extended periods of time or a future decision to reduce or eliminate operating activity in such jurisdictions. Such an impairment would result in an increase in our effective tax rate and related tax expense in the period of impairment.

Liabilities for tax contingencies. We have recorded liabilities for tax contingencies related to positions we have taken that could be challenged by taxing authorities. These potential exposures result from the uncertainties in application of statutes, rules, regulations and interpretations. We recognize liabilities for anticipated tax audit issues in the U.S. and other tax jurisdictions based on our estimate of whether and the extent to which additional taxes will be due. Our estimate of the ultimate tax liability contains assumptions based on past experiences, judgments about potential actions by taxing jurisdictions as well as judgments about the likely outcome of issues that have been raised by taxing jurisdictions. Although we believe our reserves for tax contingencies are reasonable, they may change in the future due to new developments with each issue. We record an additional charge or benefit in our provision for taxes in the period in which we determine that the recorded tax liability is more or less than we expect the ultimate assessment to be.

Retirement plans. We offer pension and other postretirement benefits to our employees through multiple global pension plans. Our largest pension plans are funded through our cash contributions and earnings on plan assets. We use the actuarial

models required by SFAS No. 87, *Employers' Accounting for Pensions*, to account for our pension plans. Two of the most significant actuarial assumptions used to calculate the net periodic pension benefit expense and the related pension benefit obligation for our defined pension benefit plans are the expected long-term rate of return on plan assets and the discount rate assumptions.

SFAS No. 87 requires the use of an expected long-term rate of return that, over time, will approximate the actual long-term returns earned on pension plan assets. We base this assumption on historical actual returns as well as anticipated future returns based on our investment mix. Given our relatively young workforce, we are able to take a long-term view of our pension investment strategy. Accordingly, plan assets are weighted heavily towards equity investments. Equity investments are susceptible to significant short-term fluctuations but have historically outperformed most other investment alternatives on a long-term basis. At December 31, 2005, 84% of pension assets were invested in public and private equity and real estate investments with the remaining assets being invested in fixed income securities. Such mix is consistent with that assumed in determining the expected long-term rate of return on plan assets. Rebalancing our actual asset allocations to our planned allocations based on actual performance has not been a significant issue.

An 8.6% weighted-average expected long-term rate of return on plan assets assumption was used for the pension plan actuarial valuations in 2005 and 2004. A 100 basis point increase or decrease in this assumption results in an estimated pension expense decrease or increase, respectively, of $64 million in the subsequent year's pension expense (based on the most recent pension valuation and assuming all other variables are constant).

An assumed discount rate is required to be used in each pension plan actuarial valuation. This rate reflects the underlying rate determined on the measurement date at which the pension benefits could effectively be settled. High-quality bond yields on our measurement date, October 31, 2005, with maturities consistent with expected pension payment periods are used to determine the appropriate discount rate assumption. For the countries with the largest pension plans, actual participant data is used by our actuaries to determine the maturity of the benefit obligation which is matched to bonds available at the measurement date. In other countries, we use the average age of the participants to determine the maturity of the benefit obligation. A 5.4% weighted-average discount rate assumption was used for the 2005 pension plan actuarial valuations. The methodology used to determine the appropriate discount rate assumption has been consistently applied. A 100 basis point increase in the discount rate assumption will result in an estimated decrease of approximately $156 million in the subsequent year's pension expense, and a 100 basis point decrease in the discount rate assumption will result in an estimated increase of approximately $222 million in the subsequent year's pension expense (based on the most recent pension valuation and assuming all other variables are constant).

Our long-standing policy of making consistent cash pension plan contributions provided some protection against negative short-term market returns. In addition, positive investment returns from 2003 to 2005 resulted in our actual pension plan asset returns exceeding expected returns reflected in our assumptions. However, the impact of contributions and positive returns has been offset by declining discount rates over the last several years. Our pension plans' funded status, as of October 31, 2005 reflected total plan assets of $6.4 billion and total accumulated benefit obligations under all plans of $7.5 billion. As a result, under the requirements of SFAS No. 87, we have an additional minimum pension plan liability of $855 million at December 31, 2005 with a corresponding reduction, net of tax, in the accumulated other comprehensive loss component of shareholders' equity of $552 million. Such liability is slightly higher than the liability at December 31, 2004.

Our weighted-average long-term rate of return assumption for plan assets as of January 1, 2006 is 8.5%. Our 2006 net periodic pension cost is expected to decrease from 2005 after excluding the impact in 2005 of the $77 million settlement loss related to the Inland Revenue contract discussed in "Results of Operations" above. Our required minimum amount of 2006 contributions will not exceed actual contributions made in 2005.

Stock-based compensation. We estimate the fair value of stock options using a Black-Scholes-Merton pricing model. The outstanding term of an option is estimated based on the vesting term and contractual term of the option, as well as expected exercise behavior of the employee who receives the option. Expected volatility during the estimated outstanding term of the option is based on historical volatility during a period equivalent to the estimated outstanding term of the option. Expected dividends during the estimated outstanding term of the option are based on recent dividend activity. Risk-free interest rates are based on the U.S. Treasury yield in effect at the time of the grant. We estimate the fair value of restricted stock units based on the market value of our stock on the date of grant, adjusted for any restrictive provisions affecting fair value, such as required holding periods after the date of vesting. Compensation expense for share-based payment is charged to operations over the vesting period of the award, and includes an estimate for the number of awards expected to vest. The initial estimate is based on historical results, and compensation expense is adjusted for actual results. If vesting of such an award is conditioned upon the achievement of performance goals, compensation expense during the performance period is estimated using the most probable outcome of the performance goals, and adjusted as the expected outcome changes.

Other liabilities. In the normal course of business, we may provide certain clients, principally governmental entities, with financial performance guarantees, which are generally backed by standby letters of credit or surety bonds. In general, we would only be liable for the amounts of these guarantees in the event that our nonperformance permits termination of the related contract by our client, the likelihood of which we believe is remote. At December 31, 2005, we had $521 million of outstanding standby letters of credit and surety bonds relating to these performance guarantees. In addition, we had $241 million outstanding under

CSFT and securitization transactions that are supported by performance guarantees. We believe we are in compliance with our performance obligations under all service contracts for which there is a performance guarantee. In addition, we had $32 million of other financial guarantees outstanding at December 31, 2005 relating to indebtedness of others.

There are various claims and pending actions against EDS arising in the ordinary course of our business. See Note 15 to the consolidated financial statements for a discussion of current litigation. Certain of these actions seek damages in significant amounts. In determining whether a loss accrual or disclosure in our consolidated financial statements is required, we consider, among other things, the degree to which we can make a reasonable estimate of the loss, the degree of probability of an unfavorable outcome, and the applicability of insurance coverage for a loss. The degree of probability and the loss related to a particular claim are typically estimated with the assistance of legal counsel.

QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are exposed to market risk from changes in interest rates, equity prices and foreign currency exchange rates. We enter into various hedging transactions to manage this risk. We do not hold or issue derivative financial instruments for trading purposes. A discussion of our accounting policies for financial instruments, and further disclosure relating to financial instruments, are included in the notes to the consolidated financial statements.

Interest rate risk. Interest rate risk is managed through our debt portfolio of fixed- and variable-rate instruments including interest rate swaps. Risk can be estimated by measuring the impact of a near-term adverse movement of 10% in short-term market interest rates. If these rates average 10% more in 2006 than in 2005, there would be no material adverse impact on our results of operations or financial position. During 2005, had short-term market interest rates averaged 10% more than in 2004, there would have been no material adverse impact on our results of operations or financial position.

Equity price sensitivity. Our financial position is affected by changes in equity prices as a result of certain investments. Risk can be estimated by measuring the impact of a near-term adverse movement of 10% in the value of our equity security investments. If the market price of our investments in equity securities in 2006 were to fall by 10% below the level at the end of 2005, there would be no material adverse impact on our results of operations or financial position. During 2005, declines in the market price of our equity securities did not have a material adverse impact on our results of operations or financial position.

Foreign exchange risk. We conduct business in the United States and around the world. Our most significant foreign currency transaction exposures relate to Canada, Mexico, the United Kingdom, Western European countries that use the euro as a common currency, Australia and New Zealand. The primary purpose of our foreign currency hedging activities is to protect against foreign currency exchange risk from intercompany financing and trading transactions. We enter into foreign currency forward contracts and currency options with durations of generally less than 30 days to hedge such transactions. We have not entered into foreign currency forward contracts for speculative or trading purposes.

Generally, foreign currency forward contracts are not designated as hedges for accounting purposes and changes in the fair value of these instruments are recognized immediately in earnings. In addition, since we enter into forward contracts only as an economic hedge, any change in currency rates would not result in any material gain or loss, as any gain or loss on the underlying foreign-denominated balance would be offset by the loss or gain on the forward contract. Risk can be estimated by measuring the impact of a near-term adverse movement of 10% in foreign currency rates against the U.S. dollar. If these rates average 10% more in 2006 than in 2005, there would be no material adverse impact on our results of operations or financial position. During 2005, had foreign currency rates averaged 10% more than in 2004, there would have been no material adverse impact on our results of operations or financial position.

Accelerated Stock Repurchase. Pursuant to an accelerated share repurchase agreement entered into in February 2006, we are subject to equity price risk due to the repurchase of common stock through that program (see Part II, Item 5). At the end of the program, we are required to receive or pay a price adjustment based on the difference between the average price paid by Credit Suisse for our stock over the life of the program and the initial purchase price of $26.61 per share for 15 million shares. At our election, any payments we are required to make pursuant to the settlement of the forward contract could either be in cash or in shares of our common stock. Changes in the fair value of our common stock will impact the final settlement of the program. Settlement is expected to occur in the second quarter of 2006, depending upon the timing and pace of purchases.

RISK FACTORS

Because of the following factors, as well as other variables affecting our operating results, past financial performance may not be a reliable indicator of future performance, and historical trends should not be used to anticipate results or trends in future periods.

Our engagements with clients may not be profitable. The pricing and other terms of our client contracts, particularly our long-term IT outsourcing agreements, require us to make estimates and assumptions at the time we enter into these contracts that could differ from actual results. These estimates reflect our best judgments regarding the nature of the engagement and our expected costs to provide the contracted services. Any increased or unexpected costs or unanticipated delays in connection with the performance of these engagements, including delays caused by factors outside our control, could make these contracts less

profitable or unprofitable, which would have an adverse effect on our profit margin. Our exposure to this risk increases generally in proportion to the scope of the client contract. In addition, a majority of our IT outsourcing contracts contain some fixed-price, incentive-based or other pricing terms that condition our fee on our ability to meet defined goals. Our failure to meet a client's expectations in any type of contract may result in an unprofitable engagement.

Our ability to recover significant capital investments in certain construct contracts is subject to risks. Some of our client contracts require significant investment, including asset purchases and operating losses, in the early stages which is recovered through billings over the life of the respective contract. These contracts often involve the construction of new computer systems and communications networks and the development and deployment of new technologies. Substantial performance risk exists in each contract with these characteristics, and some or all elements of service delivery under these contracts are dependent upon successful completion of the development, construction and deployment phases. Contracts with ongoing construct activities had assets, including receivables, prepaid expenses, deferred costs, equipment and software, of approximately $1.3 billion at December 31, 2005, including approximately $0.9 billion associated with the NMCI contract (net of impairment charges associated with this contract in previous years). Some of these contracts, including the NMCI contract, have experienced delays in their development and construction phases, and certain milestones have been missed. We refer you to the discussion of the NMCI contract under "Overview – 2005 Highlights" below for further information regarding our risks under such contracts. Remaining long-lived assets and lease receivables associated with the NMCI contract totaled $240 million and $408 million, respectively, at December 31, 2005. In addition, we refer you to the discussion under "Overview – 2005 Highlights" below for further information regarding our risks under a commercial contract for which we recognized a $37 million non-cash impairment charge in 2005.

Our exposure to certain industries and financially troubled customers has adversely affected our financial results. Our exposure to certain industries and financially troubled customers has had, and could in the future have, a material adverse effect on our financial position and our results of operations. For example, we are a leading provider of IT outsourcing services to the United States automobile industry, which sector has been experiencing significant financial difficulties. We refer you to the discussion under "Overview" below of our revenues from GM and reserves recorded in 2005 with respect to our receivables from Delphi, which filed for bankruptcy in October 2005. In addition, we are the leading IT outsourcing provider to the airline industry, which has also faced significant financial challenges. We have a long-term IT outsourcing agreement with American Airlines and recently entered into a long-term IT outsourcing agreement with United Airlines. We also provide IT services to US Airways, which filed for bankruptcy in September 2004. We refer you to the discussion in Note 5 of the notes to our consolidated financial statements below of the write-down of our investment in an aircraft leasing partnership due to uncertainties regarding the recoverability of the partnership's investments in aircraft leased to Delta Air Lines, which filed for bankruptcy in September 2005.

A decline in revenues from or loss of significant clients could reduce our revenues and profitability. Our success is to a significant degree dependent on our ability to retain our significant clients and maintain or increase the level of revenues from these clients, including in particular revenues from certain "mega-deal" long-term IT outsourcing agreements. We may lose clients due to their merger or acquisition, business failure, contract expiration, conversion to a competing service provider or conversion to an in-house data processing system. We may not be able to retain or renew relationships with our significant clients in the future. As a result of business downturns or for other business reasons, we are also vulnerable to reduced processing volumes from our clients, which can reduce the scope of services provided and the prices for those services.

Impact of Rating Agency downgrades. Any adverse action by Moody's, S&P or Fitch with respect to our long-term credit ratings could materially adversely impact our ability to compete for new business, our cost of capital and our ability to access capital.

Some of our contracts contain benchmarking provisions that could decrease our revenues and profitability. Some of our long-term IT outsourcing agreements contain pricing provisions that permit a client to request a benchmark study by a mutually acceptable third-party benchmarker. Typically, benchmarking may not be conducted during the initial years of the contract term but may be requested by a client periodically thereafter, subject to restrictions which limit benchmarking to certain groupings of services and limit the number of times benchmarking may be elected during the term of the contract. Generally, the benchmarking compares the contractual price of our services against the price of similar services offered by other specified providers in a peer comparison group, subject to agreed upon adjustment and normalization factors. Generally, if the benchmarking study shows that our pricing has a difference outside a specified range, and the difference is not due to the unique requirements of the client, then the parties will negotiate in good faith any appropriate adjustments to the pricing. This may result in the reduction of our rates for the benchmarked services. Due to the enhanced focus of our clients on reducing IT costs, as well as the uncertainties and complexities inherent in benchmarking comparisons, our clients may increasingly attempt to obtain additional price reductions beyond those already embedded in our contract rates through the exercise of benchmarking provisions. Such activities could negatively impact our results of operations or cash flow in 2006 or thereafter to a greater extent than has been our prior experience.

An ongoing SEC investigation could adversely affect us or the market value of our securities. The SEC staff is conducting a formal investigation of some of our activities and contracts. We refer you to the discussion of "Pending Litigation and Proceedings" under Note 15 of the notes to our consolidated financial statements below for a description of this investigation. The investigation is ongoing, and we will continue to cooperate with the SEC staff. We are unable to predict the outcome of the investigation, the scope of matters that the SEC may choose to investigate in the course of this investigation or in the future, the SEC's views of the issues being investigated, or any action that the SEC might take, including the imposition of fines, penalties, or

other available remedies. Any adverse development in connection with the investigation, including any expansion of the scope of the investigation, could have a material adverse effect on us, including diverting the efforts and attention of our management team from our business operations, and could negatively impact the market value of our securities.

Pending litigation could have a material adverse effect on our liquidity and financial condition. We are defendants in various claims and pending actions arising in the ordinary course of business or otherwise. We recently agreed upon the terms of a settlement regarding certain shareholder class action suits and remain a party to certain other litigation related to such matters. We refer you to the discussion of "Pending Litigation and Proceedings" under Note 15 of the notes to our consolidated financial statements below for a description of certain of these matters. We are not able to determine the actual impact of these matters on us or our consolidated financial statements. However, we may be required to pay judgments or settlements and incur expenses in aggregate amounts that could have a material adverse effect on our liquidity and financial condition.

The markets in which we operate are highly competitive, and we may not be able to compete effectively. The markets in which we operate include a large number of participants and are highly competitive. Our primary competitors are IT service providers, large accounting, consulting and other professional service firms, application service providers, telecommunications companies, packaged software vendors and resellers and service groups of computer equipment companies. We also experience competition from numerous smaller, niche-oriented and regionalized service providers. Our business is experiencing rapid changes in its competitive landscape. We increasingly see our competitors moving operations offshore to reduce their costs as well as increasing direct competition from niche offshore providers, primarily India-based competitors. The competition from India-based companies is growing in intensity due to the abundance of highly skilled workers in the country, a pro-business regulatory environment and significantly lower costs of labor, which may allow these competitors to offer lower prices than we are able to offer. In addition, negative publicity from our pending litigation or SEC staff investigation could have a negative effect on our competitive position. Any of these factors may impose additional pricing pressure on us, which could have an adverse effect on our revenues and profit margin.

Market changes may result in decreased profitability. The IT outsourcing market is commoditizing, which is shrinking margins on many of our core offerings. In addition, that market has experienced slower growth and lower margins in recent years. We are continuing to invest in new service offerings in the higher-margin segments such as Business Process Outsourcing and applications development. However, if we are unable to implement our strategies to more effectively compete in such markets, our margins and profitability could be adversely affected.

We may not achieve the benefits we expect from our multi-year plan. Management has implemented a multi-year plan designed to make significant changes in the way we do business. This plan includes the development of a new technology platform for the delivery of our services which we refer to as the "Agile Enterprise" as well as other initiatives intended to substantially reduce our cost structure. We invested significant capital in the implementation of the multi-year plan in 2005 and will invest additional capital in 2006. Although management believes this plan will enable us to achieve sustainable, profitable growth over the longer term, there can be no assurance as to the acceptance of our technology initiatives in the marketplace or our ability to recognize a return on our investment. Our ability to achieve the anticipated cost savings and other benefits from these initiatives on a timely basis is subject to many estimates and assumptions, including assumptions regarding the costs and timing of activities in connection with these initiatives. These estimates and assumptions are subject to significant economic, competitive and other uncertainties some of which are beyond our control. In addition, service pricing contained in certain contracts signed since early 2005, including our new contracts with GM and the U.K. Government's Department of Works and Pension, and other contracts expected to be signed in 2006, assume successful completion of our EDS Agile Enterprise initiatives on a timely basis. If these assumptions are not realized and we experience delays beyond those already experienced with respect to certain segments of these initiatives, or if other unforeseen events occur, our business and results of operations could be adversely affected and there could be a material adverse effect on the price of our securities.

Unanticipated changes in our tax provisions or exposure to additional tax liabilities could affect our profitability. We are subject to income taxes in the United States and numerous foreign jurisdictions. We are subject to ongoing tax audits in various jurisdictions. Tax authorities may disagree with our intercompany charges or other matters and assess additional taxes. Our provision for income taxes and cash tax liability in the future could be adversely affected by numerous factors including, but not limited to, income before taxes being lower than anticipated in countries with accumulated tax losses and higher than anticipated in countries with higher statutory tax rates, changes in the valuation of deferred tax assets and liabilities, changes in tax laws, regulations, accounting principles or interpretations thereof, and the discovery of new information in the course of our tax return preparation process, which could adversely impact our results of operations and financial condition in future periods. In particular, the carrying value of deferred tax assets is dependent on our ability to generate future taxable income over the expiration period of the tax asset. An impairment of deferred tax assets would result in an increase in our effective tax rate and related tax expense in the period of impairment and could affect our profitability.

Risks associated with our international operations could negatively affect our earnings. International operations accounted for approximately one-half of our revenues in 2005 and will continue to represent a significant opportunity for growth in the IT industry. Our results of operations are affected by our ability to manage risks inherent in doing business abroad. These risks include exchange rate fluctuation, regulatory concerns, terrorist activity, restrictions with respect to the movement of currency, access to highly skilled workers, political and economic instability and our ability to protect our intellectual property.

Any of these risks could impede our ability to increase our presence in certain jurisdictions or enter new jurisdictions. In addition, these risks could result in increased costs which could materially adversely affect our results of operations.

Our services or products may infringe upon the intellectual property rights of others. We cannot be sure that our services and products, or the products of others that we offer to our clients, do not infringe on the intellectual property rights of third parties, and we may have infringement claims asserted against us. These claims may harm our reputation, cost us money and prevent us from offering some services or products. We generally agree in our contracts to indemnify our clients for any expenses or liabilities they may incur resulting from claimed infringements of the intellectual property rights of third parties. In some instances, the amount of these indemnities may be greater than the revenues we receive from the client. Any claims or litigation in this area, whether we ultimately win or lose, could be time-consuming and costly, injure our reputation or require us to enter into royalty or licensing arrangements. We may, in limited cases, be required to forego rights to the use of intellectual property we help create, which limits our ability to also provide that intellectual property to other clients. Any limitation on our ability to provide a service or product could cause us to lose revenue-generating opportunities and require us to incur additional expenses to develop new or modified solutions for future projects.

A material weakness in our internal controls could have a material adverse effect on us. Effective internal controls are necessary for us to provide reasonable assurance with respect to our financial reports and to effectively prevent fraud. If we cannot provide reasonable assurance with respect to our financial reports and effectively prevent fraud, our reputation and operating results could be harmed. Pursuant to the Sarbanes-Oxley Act of 2002, we are required to furnish a report by management on internal control over financial reporting, including management's assessment of the effectiveness of such control. Internal control over financial reporting may not prevent or detect misstatements because of its inherent limitations, including the possibility of human error, the circumvention or overriding of controls, or fraud. Therefore, even effective internal controls can provide only reasonable assurance with respect to the preparation and fair presentation of financial statements. In addition, projections of any evaluation of effectiveness of internal control over financial reporting to future periods are subject to the risk that the control may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. If we fail to maintain the adequacy of our internal controls, including any failure to implement required new or improved controls, or if we experience difficulties in their implementation, our business and operating results could be adversely impacted, we could fail to meet our reporting obligations, and there could be a material adverse effect on our stock price. In connection with their review of our third quarter 2004 results and the ongoing procedures related to their audit of internal controls over financial reporting as of December 31, 2004, our independent auditors identified material weaknesses in our internal controls related to our NMCI contract and revenue recognition. Although such material weaknesses were corrected by December 31, 2004, we may identify one or more material weaknesses in our internal control over financial reporting from time to time in the future.

Cautionary Statement Regarding Forward-Looking Statements

The statements in this Report that are not historical statements are "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements include statements regarding estimated revenues, earnings, free cash flow, TCV of new contract signings, operating margins, cost savings and other forward-looking financial information. In addition, we have made in the past and may make in the future other written or oral forward-looking statements, including statements regarding future financial and operating performance, short- and long-term revenue, earnings and free cash flow, the timing of the revenue, earnings and free cash flow impact of new and existing contracts, liquidity, estimated future revenues from existing clients, the TCV of new contract signings, business pipeline, industry growth rates and our performance relative thereto, the impact of acquisitions and divestitures, and the impact of client bankruptcies. Any forward-looking statement may rely on a number of assumptions concerning future events and be subject to a number of uncertainties and other factors, many of which are outside our control, that could cause actual results to differ materially from such statements. In addition to the factors outlined above, these factors include, but are not limited to, the following: the performance of current and future client contracts in accordance with our cost, revenue and cash flow estimates, including our ability to achieve any operational efficiencies in our estimates; for contracts with U.S. Federal government clients, including our NMCI contract, the government's ability to cancel the contract or impose additional terms and conditions due to changes in government funding, deployment schedules, military action or otherwise; our ability to access the capital markets, including our ability to obtain capital leases, surety bonds and letters of credit; the impact of third-party benchmarking provisions in certain client contracts; the impact on a historical and prospective basis of accounting rules and pronouncements; the impact of claims, litigation and governmental investigations; the success of our multi-year plan and cost-cutting initiatives and the timing and amount of any resulting benefits; the impact of acquisitions and divestitures; a reduction in the carrying value of our assets; the impact of a bankruptcy or financial difficulty of a significant client on the financial and other terms of our agreements with that client; with respect to the funding of pension plan obligations, the performance of our investments relative to our assumed rate of return; changes in tax laws and interpretations and failure to obtain treaty relief from double taxation; failure to obtain or protect intellectual property rights; fluctuations in foreign currency, exchange rates and interest rates; the impact of competition on pricing, revenues and margins; and the degree to which third parties continue to outsource IT and business processes.

We disclaim any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as may be required by law.

FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

MANAGEMENT REPORT

MANAGEMENT RESPONSIBILITY FOR FINANCIAL INFORMATION

Responsibility for the objectivity, integrity, and presentation of the accompanying financial statements and other financial information presented in this report rests with EDS management. The accompanying financial statements have been prepared in accordance with accounting principles generally accepted in the United States. The financial statements include amounts that are based on estimates and judgments which management believes are reasonable under the circumstances.

KPMG LLP, independent auditors, is retained to audit EDS' consolidated financial statements and management's assessment of the effectiveness of the company's internal control over financial reporting. Its accompanying report is based on audits conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States).

The Audit Committee of the Board of Directors is composed solely of independent, non-employee directors, and is responsible for recommending to the Board the independent auditing firm to be retained for the coming year. The Audit Committee meets regularly and privately with the independent auditors, with the company's internal auditors, and with management to review accounting, auditing, internal control and financial reporting matters.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Management of EDS is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rule 13a-15(f) or 15d-15(f) promulgated under the Securities Exchange Act of 1934. Those rules define internal control over financial reporting as a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with accounting principles generally accepted in the United States of America. EDS' internal control over financial reporting includes those policies and procedures that:

- pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of EDS;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with accounting principles generally accepted in the United States of America;
- provide reasonable assurance that receipts and expenditures of EDS are being made only in accordance with authorization of management and directors of EDS; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of EDS' assets that could have a material effect on the consolidated financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

EDS management assessed the effectiveness of EDS' internal control over financial reporting as of December 31, 2005. In making this assessment, management used the criteria described in "*Internal Control – Integrated Framework*" issued by the Committee of Sponsoring Organizations of the Treadway Commission. Management's assessment included an evaluation of the design of EDS' internal control over financial reporting and testing of the operational effectiveness of its internal control over financial reporting. Management reviewed the results of its assessment with the Audit Committee of our Board of Directors.

Based on this assessment and those criteria, management believes that EDS maintained, in all material respects, effective internal control over financial reporting as of December 31, 2005.

KPMG LLP, independent registered public accounting firm, who audited and reported on EDS' consolidated financial statements included in this report, has issued an attestation report on management's assessment of internal control over financial reporting.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors
Electronic Data Systems Corporation:

We have audited management's assessment, included in the accompanying Management's Report on Internal Control Over Financial Reporting, that Electronic Data Systems Corporation and subsidiaries (the "Company") maintained effective internal control over financial reporting as of December 31, 2005, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, management's assessment that the Company maintained effective internal control over financial reporting as of December 31, 2005, is fairly stated, in all material respects, based on criteria established in *Internal Control – Integrated Framework* issued by COSO. Also, in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2005, based on criteria established in *Internal Control – Integrated Framework* issued by COSO.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Electronic Data Systems Corporation and subsidiaries as of December 31, 2005 and 2004, and the related consolidated statements of operations, shareholders' equity and comprehensive income (loss), and cash flows for each of the years in the three-year period ended December 31, 2005, and the related financial statement schedule, and our report dated March 8, 2006 expressed an unqualified opinion on those consolidated financial statements and schedule.

KPMG LLP
Dallas, Texas
March 8, 2006

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors
Electronic Data Systems Corporation:

We have audited the accompanying consolidated balance sheets of Electronic Data Systems Corporation and subsidiaries as of December 31, 2005 and 2004, and the related consolidated statements of operations, shareholders' equity and comprehensive income (loss), and cash flows for each of the years in the three-year period ended December 31, 2005. In connection with our audits of the consolidated financial statements, we have also audited the related financial statement schedule. These consolidated financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Electronic Data Systems Corporation and subsidiaries as of December 31, 2005 and 2004, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2005, in conformity with U.S. generally accepted accounting principles. Also in our opinion, the related financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 1 to the consolidated financial statements, during 2005, the Company adopted Statement of Financial Accounting Standards ("SFAS") No. 123R, *Share-Based Payment*, and, during 2003, the Company adopted the provisions of Emerging Issues Task Force Issue No. 00-21, *Accounting for Revenue Arrangements with Multiple Deliverables*, and SFAS No. 143, *Accounting for Asset Retirement Obligations*.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of Electronic Data Systems Corporation and subsidiaries' internal control over financial reporting as of December 31, 2005, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated March 8, 2006 expressed an unqualified opinion on management's assessment of, and the effective operation of, internal control over financial reporting.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Description of Business

Electronic Data Systems Corporation is a professional services firm that offers its clients a portfolio of related services worldwide within the broad categories of traditional information technology ("IT") outsourcing, business process outsourcing and solutions consulting services. The Company also provided management consulting services through its A.T. Kearney subsidiary which was sold in January 2006 (see Note 20). Services include the design, construction or management of computer networks, information systems, information processing facilities and business processes. As used herein, the terms "EDS" and the "Company" refer to Electronic Data Systems Corporation and its consolidated subsidiaries.

Principles of Consolidation

The consolidated financial statements include the accounts of EDS and its controlled subsidiaries. The Company defines control as a non-shared, non-temporary ability to make decisions that enable it to guide the ongoing activities of a subsidiary and the ability to use that power to increase the benefits or limit the losses from the activities of that subsidiary. Subsidiaries in which other shareholders effectively participate in significant operating decisions through voting or contractual rights are not considered controlled subsidiaries. The Company's investments in entities it does not control, but in which it has the ability to exercise significant influence over operating and financial policies, are accounted for under the equity method. Under such method, the Company recognizes its share of the subsidiaries' income (loss) in other income (expense). If EDS is the primary beneficiary of variable interest entities, the consolidated financial statements include the accounts of such entities. No variable interest entities were consolidated during the periods presented.

Earnings Per Share

Basic earnings per share of common stock is computed using the weighted-average number of common shares outstanding during the period. Diluted earnings per share amounts reflect the incremental increase in common shares outstanding assuming the exercise of all employee stock options and stock purchase contracts and the issuance of shares in respect of restricted stock units that would have had a dilutive effect on earnings per share. Diluted earnings per share also assumes that any dilutive convertible debt outstanding was converted at the later of the date of issuance or the beginning of the period, with related interest and outstanding common shares adjusted accordingly. Following is a reconciliation of the number of shares used in the calculation of basic and diluted earnings per share for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Basic earnings per share of common stock:			
Weighted-average common shares outstanding	519	501	479
Effect of dilutive securities (Note 11):			
Restricted stock units	2	–	–
Stock options	5	–	–
Diluted earnings per share of common stock:			
Weighted-average common and common equivalent shares outstanding	526	501	479

In the computation of diluted earnings per share for 2004 and 2003, all common stock options, restricted stock units, the assumed conversion of convertible debt and the effect of forward purchase contracts were excluded because their inclusion would have been antidilutive. Securities that were outstanding but were not included in the computation of diluted earnings per share because their effect was antidilutive are as follows for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Common stock options	42	75	58
Restricted stock units	–	7	2
Convertible debt and forward purchase contracts	20	28	36

Accounting Changes

The Company adopted Statement of Financial Accounting Standards ("SFAS") No. 123R, *Share-Based Payment*, as of January 1, 2005, using the modified prospective application method. This statement requires the recognition of compensation expense when an entity obtains employee services in stock-based payment transactions. This change in accounting resulted in the recognition of compensation expense of $160 million ($110 million net of tax) for the year ended December 31, 2005. Compensation expense presented in the 2005 consolidated statement of operations includes $94 million in cost of revenues, $40 million in selling, general and administrative, and $26 million in income (loss) from discontinued operations.

Prior to January 1, 2005, the Company recognized compensation cost associated with stock-based awards under the recognition and measurement principles of Accounting Principles Board ("APB") Opinion No. 25, *Accounting for Stock Issued to Employees*, and related interpretations. Under APB No. 25, the difference between the quoted market price as of the date of the grant and the contractual purchase price of shares was charged to operations over the vesting period on a straight-line basis. No compensation cost was recognized for fixed stock options with exercise prices equal to the market price of the stock on the dates of grant and shares acquired by employees under the EDS Stock Purchase Plan or Nonqualified Stock Purchase Plan.

Pro forma net loss and earnings per share disclosures as if the Company recorded compensation expense based on fair value for stock-based awards have been presented in accordance with the provisions of SFAS No. 148, *Accounting for Stock-Based Compensation – Transition and Disclosure*, and are as follows for the year ended December 31, 2005 (in millions, except per share amounts):

	2004	2003
Net income (loss):		
As reported	$ 158	$ (1,698)
Stock-based compensation costs included in reported net income (loss), net of related tax effects	27	40
Total stock-based employee compensation expense determined under fair value-based method for all awards, net of related tax effects	(165)	(209)
Pro forma	$ 20	$ (1,867)
Basic earnings per share of common stock:		
As reported	$ 0.32	$ (3.55)
Pro forma	0.04	(3.90)
Diluted earnings per share of common stock:		
As reported	$ 0.32	$ (3.55)
Pro forma	0.04	(3.90)

During the third quarter of 2003, the Company adopted the provisions of Emerging Issues Task Force ("EITF") Issue No. 00-21, *Accounting for Revenue Arrangements with Multiple Deliverables*, on a cumulative basis as of January 1, 2003. EITF 00-21 modified the application of existing contract accounting literature followed by the Company prior to January 1, 2003. EITF 00-21 governs how to identify whether goods or services, or both, that are to be delivered separately in a bundled sales arrangement should be accounted for separately. In most circumstances, EITF 00-21 also limits the recognition of revenue in excess of amounts billed (e.g., unbilled revenue) to the amount that would be received if the client contract was terminated for any reason. The adoption of EITF 00-21 resulted in a non-cash adjustment reported as a cumulative effect of a change in accounting principle of $1.42 billion ($2.24 billion before tax). The adjustment resulted primarily from the reversal of unbilled revenue associated with the Company's IT service contracts which had been accounted for as a single unit using the percentage-of-completion method of revenue recognition. Such reversal resulted from the fact that typical termination provisions of an IT service contract do not provide for the recovery of unbilled revenue in the event the contract is terminated for the Company's nonperformance. The adjustment also reflects the deferral and subsequent amortization of system construction costs. Such costs were previously expensed as incurred and included in the percentage-of-completion model for the respective contracts.

During the years ended December 31, 2005, 2004 and 2003, the Company recognized revenues of approximately $250 million, $360 million and $345 million, respectively, which had been recognized prior to January 1, 2003 and reversed in the cumulative effect adjustment recognized upon adoption of EITF 00-21. These amounts were estimated as the amount for which unbilled revenue would have been reduced in those periods for those contracts impacted by the cumulative adjustment based on the most recent percentage-of-completion models prepared for each contract during 2003. Such revenues have been offset by deferred cost amortization and charges recognized by the Company since January 1, 2003 associated with costs that had been recognized prior to January 1, 2003 and deferred in the cumulative effect adjustment.

The impact of the EITF 00-21 accounting change in 2003, excluding the effect of the cumulative accounting change, was to decrease the loss from continuing operations and net loss by $725 million ($1.51 per share). Because EDS' accounting records for the second half of 2003 were prepared under EITF 00-21, percentage-of-completion calculations for the period were not subject to EDS' percentage-of-completion accounting controls and procedures in place in previous periods. Accordingly, the impact of the accounting change referred to above is an estimate.

Effective January 1, 2003, the Company adopted SFAS No. 143, *Accounting for Asset Retirement Obligations*. SFAS No. 143 requires that the fair value of the liability for an asset retirement obligation be recognized in the period in which it is incurred if a reasonable estimate of fair value can be made. The associated asset retirement costs are capitalized as part of the carrying amount of the long-lived asset. The majority of the Company's retirement obligations relate to leases which require the facilities be restored to original condition at the expiration of the leases. The adoption of SFAS No. 143 resulted in a reduction of income reported as a cumulative effect of a change in accounting principle of $25 million ($17 million after tax). Additionally, the fair value of the liability recorded on January 1, 2003 was $48 million. Changes in the liability from the date of adoption of SFAS No. 143 and the pro forma impact of adoption on prior periods were not material.

Accounts Receivable

Reserves for uncollectible trade receivables are established when collection of amounts due from clients is deemed improbable. Indicators of improbable collection include client bankruptcy, client litigation, industry downturns, client cash flow difficulties, or ongoing service or billing disputes. Receivables more than 180 days past due are automatically reserved unless persuasive evidence of probable collection exists. Accounts receivable are shown net of allowances of $69 million and $114 million at December 31, 2005 and 2004, respectively.

Marketable Securities

Marketable securities at December 31, 2005 and 2004 consist of government and agency obligations, corporate debt and corporate equity securities. The Company classifies all of its debt and marketable equity securities as trading or available-for-sale. All such investments are recorded at fair value. Changes in net unrealized holding gains (losses) on trading securities are recognized in income, whereas changes in net unrealized holding gains (losses) on available-for-sale securities are reported as a component of other comprehensive income (loss), net of tax, in shareholders' equity until realized.

Investments in marketable securities are monitored for impairment and written down to fair value with a charge to earnings if a decline in fair value is judged to be other than temporary. The Company considers several factors to determine whether a decline in the fair value of an equity security is other than temporary, including the length of time and the extent to which the fair value has been less than carrying value, the financial condition of the investee, and the intent and ability of the Company to retain the investment for a period of time sufficient to allow a recovery in value.

Property and Equipment

Property and equipment are carried at cost. Depreciation of property and equipment is calculated using the straight-line method over the shorter of the asset's estimated useful life or the term of the lease in the case of leasehold improvements. The ranges of estimated useful lives are as follows:

	Years
Buildings	40-50
Facilities	5-20
Computer equipment	3-5
Other equipment and furniture	5-20

The Company reviews its property and equipment for impairment whenever events or changes in circumstances indicate the carrying values of such assets may not be recoverable. For property and equipment to be held and used, impairment is determined by a comparison of the carrying value of the asset to the future undiscounted net cash flows expected to be generated by the asset. If such assets are determined to be impaired, the impairment recognized is the amount by which the carrying value of the assets exceeds the fair value of the assets. Property and equipment to be disposed of by sale is carried at the lower of then current carrying value or fair value less cost to sell.

Investments and Other Assets

Investments in non-marketable equity securities are monitored for impairment and written down to fair value with a charge to earnings if a decline in fair value is judged to be other than temporary. The fair values of non-marketable equity securities are determined based on quoted market prices. If quoted market prices are not available, fair values are estimated based on an evaluation of numerous indicators including, but not limited to, offering prices of recent issuances of the same or similar

equity instruments, quoted market prices for similar companies and comparisons of recent financial information, operating plans, budgets, market studies and client information to the information used to support the initial valuation of the investment. The Company considers several factors to determine whether a decline in the fair value of a non-marketable equity security is other than temporary, including the length of time and the extent to which the fair value has been less than carrying value, the financial condition of the investee, and the intent and ability of the Company to retain the investment for a period of time sufficient to allow a recovery in value.

Goodwill and Other Intangibles

The cost of acquired companies is allocated to the assets acquired and liabilities assumed based on estimated fair values at the date of acquisition. Costs allocated to identifiable intangible assets with finite lives, other than purchased software, are generally amortized on a straight-line basis over the remaining estimated useful lives of the assets, as determined by underlying contract terms or appraisals. Such lives range from one to 14 years. Identifiable intangible assets with indefinite useful lives are not amortized but instead tested for impairment annually, or more frequently if events or changes in circumstances indicate that the asset might be impaired. Intangible assets with indefinite useful lives are impaired when the carrying value of the asset exceeds their fair value.

The excess of the cost of acquired companies over the net amounts assigned to assets acquired and liabilities assumed is recorded as goodwill. Goodwill is not amortized but instead tested for impairment at least annually. The first step of the impairment test is a comparison of the fair value of a reporting unit to its carrying value. Reporting units are the geographic components of its reportable segments that share similar economic characteristics. The fair value of a reporting unit is estimated using the Company's projections of discounted future operating cash flows of the unit. Goodwill allocated to a reporting unit whose fair value is equal to or greater than its carrying value is not impaired and no further testing is required. A reporting unit whose fair value is less than its carrying value requires a second step to determine whether the goodwill allocated to the unit is impaired. The second step of the goodwill impairment test is a comparison of the implied fair value of a reporting unit's goodwill to its carrying value. The implied fair value of a reporting unit's goodwill is determined by allocating the fair value of the entire reporting unit to the assets and liabilities of that unit, including any unrecognized intangible assets, based on fair value. The excess of the fair value of the entire reporting unit over the amounts allocated to the identifiable assets and liabilities of the unit is the implied fair value of the reporting unit's goodwill. Goodwill of a reporting unit is impaired when its carrying value exceeds its implied fair value. Impaired goodwill is written down to its implied fair value with a charge to expense in the period the impairment is identified. As this impairment test is based on the Company's assessment of the fair value of its reporting units, future changes to these estimates could also cause an impairment of a portion of the Company's goodwill balance.

The Company conducts an annual impairment test for goodwill as of December 1st. The Company determines the timing and frequency of additional goodwill impairment tests based on an ongoing assessment of events and circumstances that would more than likely reduce the fair value of a reporting unit below its carrying value. Events or circumstances that might require the need for more frequent tests include, but are not limited to: the loss of a number of significant clients, the identification of other impaired assets within a reporting unit, the disposition of a significant portion of a reporting unit, or a significant adverse change in business climate or regulations. The Company also considers the amount by which the fair value of a particular reporting unit exceeded its carrying value in the most recent goodwill impairment test to determine whether more frequent tests are necessary.

Purchased or licensed software not subject to a subscription agreement is capitalized and amortized on a straight-line basis, generally over two to five years. Costs of developing and maintaining software systems incurred primarily in connection with client contracts are considered contract costs. Purchased software and certain development costs for computer software sold, leased or otherwise marketed as a separate product or as part of a product or process are capitalized and amortized on a product-by-product basis over their remaining estimated useful lives at the greater of straight-line or the ratio that current gross revenues for a product bear to the total of current and anticipated future gross revenues for that product. Estimated useful lives of software products to be sold, leased or otherwise marketed range from three to seven years. Software development costs incurred to meet the Company's internal needs are capitalized and amortized on a straight-line basis over three to five years. Software under subscription arrangements, whereby the software provider makes available current software products as well as products developed or acquired during the term of the arrangement, are executory contracts and expensed ratably over the subscription term.

Sales of Financial Assets

The Company accounts for the sale of financial assets when control over the financial asset is relinquished. No financial assets were sold by the Company during 2005. The Company sold $51 million and $668 million of financial assets, primarily lease receivables, during 2004 and 2003, respectively. In most cases, the Company sold lease receivables to a legally isolated securitization trust. If a trust is not used, the receivables are sold to an independent substantive financial institution. None of these transactions resulted in any significant gain or loss, or servicing asset or servicing liability.

Revenue Recognition and Deferred Contract Costs

The Company provides IT and business process outsourcing services under time-and-material, unit-price and fixed-price contracts, which may extend up to 10 or more years. Services provided over the term of these arrangements may include one or more of the following: IT infrastructure support and management; IT system and software maintenance; application hosting; the design, development, and/or construction of software and systems ("Construct Service"); transaction processing; business process management and consulting services.

If a contract involves the provision of a single element, revenue is generally recognized when the product or service is provided and the amount earned is not contingent upon any future event. If the service is provided evenly during the contract term but service billings are irregular, revenue is recognized on a straight-line basis over the contract term. However, if the single service is a Construct Service, revenue is recognized under the percentage-of-completion method using a zero-profit methodology. Under this method, costs are deferred until contractual milestones are met, at which time the milestone billing is recognized as revenue and an amount of deferred costs is recognized as expense so that cumulative profit equals zero. If the milestone billing exceeds deferred costs, then the excess is recorded as deferred revenue. When the Construct Service is completed and the final milestone met, all unrecognized costs, milestone billings, and profit are recognized in full. If the contract does not contain contractual milestones, costs are expensed as incurred and revenue is recognized in an amount equal to costs incurred until completion of the Construct Service, at which time any profit would be recognized in full. If total costs are estimated to exceed revenue for the Construct Service, then a provision for the estimated loss is made in the period in which the loss first becomes apparent.

If a contract involves the provision of multiple service elements, total estimated contract revenue is allocated to each element based on the relative fair value of each element. The amount of revenue allocated to each element is limited to the amount that is not contingent upon the delivery of another element in the future. Revenue is then recognized for each element as described above for single-element contracts, except revenue recognized on a straight-line basis for a non-Construct Service will not exceed amounts currently billable unless the excess revenue is recoverable from the client upon any contract termination event. If the amount of revenue allocated to a Construct Service is less than its relative fair value, costs to deliver such service equal to the difference between allocated revenue and the relative fair value are deferred and amortized over the contract term. If total Construct Service costs are estimated to exceed the relative fair value for the Construct Service contained in a multiple-element arrangement, then a provision for the estimated loss is made in the period in which the loss first becomes apparent. If fair value is not determinable for all elements, the contract is treated as one accounting unit and revenue is recognized using the proportional performance method.

The Company also defers and subsequently amortizes certain set-up costs related to activities that enable the provision of contracted services to the client. Such activities include the relocation of transitioned employees, the migration of client systems or processes, and the exit of client facilities. Deferred contract costs, including set-up costs, are amortized on a straight-line basis over the remaining original contract term unless billing patterns indicate a more accelerated method is appropriate. The recoverability of deferred contract costs associated with a particular contract is analyzed on a periodic basis using the undiscounted estimated cash flows of the whole contract over its remaining contract term. If such undiscounted cash flows are insufficient to recover the long-lived assets and deferred contract costs, including contract concessions paid to the client, the deferred contract costs and contract concessions are written down by the amount of the cash flow deficiency. If a cash flow deficiency remains after reducing the balance of the deferred contract costs and contract concessions to zero, any remaining long-lived assets are evaluated for impairment. Any such impairment recognized would equal the amount by which the carrying value of the long-lived assets exceeds the fair value of those assets.

The Company's software licensing arrangements typically include multiple elements, such as software products, post-contract customer support, consulting and training. The aggregate arrangement fee is allocated to each of the undelivered elements in an amount equal to its fair value, with the residual of the arrangement fee allocated to the delivered elements. Fair values are based upon vendor-specific objective evidence. Fees allocated to each software element of the arrangement are recognized as revenue when the following criteria have been met: a) a written contract for the license of software has been executed, b) the Company has delivered the product to the customer, c) the license fee is fixed or determinable, and d) collectibility of the resulting receivable is deemed probable. If evidence of fair value of the undelivered elements of the arrangement does not exist, all revenue from the arrangement is deferred until such time evidence of fair value does exist, or until all elements of the arrangement are delivered. Fees allocated to post-contract customer support are recognized as revenue ratably over the support period. Fees allocated to other services are recognized as revenue as the service is performed.

Deferred revenue of $1,329 million and $1,061 million at December 31, 2005 and 2004, respectively, represented billings in excess of amounts earned on certain contracts.

Currency Translation

Assets and liabilities of non-U.S. subsidiaries whose functional currency is not the U.S. dollar are translated at current exchange rates. Revenue and expense accounts are translated using an average rate for the period. Translation gains and losses are not included in determining net income (loss), but are reflected in the comprehensive income (loss) component of shareholders' equity. Cumulative currency translation adjustment gains (losses) included in shareholders' equity were $189 million, $482 million (net of deferred tax of $75 million) and $226 million at December 31, 2005, 2004 and 2003, respectively. Net currency transaction gains (losses), net of income taxes, are included in determining net income (loss) and were $4 million, $(13) million and $(32) million, respectively, for the years ended December 31, 2005, 2004 and 2003.

Financial Instruments and Risk Management

Following is a summary of the carrying amounts and fair values of the Company's significant financial instruments at December 31, 2005 and 2004 (in millions):

	2005		2004	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Available-for-sale marketable securities (Note 2)	$ 1,321	$ 1,321	$ 1,453	$ 1,453
Investments in securities, joint ventures and partnerships, excluding equity method investments (Note 5)	23	23	15	15
Long-term debt (Note 8)	(3,253)	(3,351)	(3,826)	(4,025)
Foreign currency forward contracts, net liability	(5)	(5)	(19)	(19)
Interest rate swap agreements, net liability	(70)	(70)	(37)	(37)

Current marketable securities are carried at their estimated fair value based on current market quotes. The fair values of certain long-term investments are estimated based on quoted market prices for these or similar investments. For other investments, various methods are used to estimate fair value, including external valuations and discounted cash flows. The fair value of long-term debt is estimated based on the quoted market prices for the same or similar issues or based on the current rates offered to the Company for instruments with similar terms, degree of risk and remaining maturities. The fair value of foreign currency forward and interest rate swap contracts represents the estimated amount to settle the contracts using current market exchange or interest rates. The carrying values of other financial instruments, such as cash equivalents, accounts and notes receivable, and accounts payable, approximate their fair value.

The Company makes investments, receives revenues and incurs expenses in many countries and has exposure to market risks arising from changes in interest rates, foreign exchange rates and equity prices. The Company has also invested in start-up companies to gain access to technology and marketplaces in which the Company intended to grow its business. The Company's ability to sell these investments may be constrained by market or other factors. Derivative financial instruments are used to hedge against these risks by creating offsetting market positions. The Company does not hold or issue derivative financial instruments for trading purposes.

The notional amounts of derivative contracts, summarized below as part of the description of the instruments utilized, do not necessarily represent the amounts exchanged by the parties and thus are not necessarily a measure of the exposure of the Company resulting from its use of derivatives. The amounts exchanged by the parties are normally calculated on the basis of the notional amounts and the other terms of the derivatives.

Foreign Currency Risk

The Company has significant international sales and purchase transactions in foreign currencies. The Company hedges forecasted and actual foreign currency risk with purchased currency options and forward contracts that expire generally within 30 days. These derivative instruments are employed to eliminate or minimize certain foreign currency exposures that can be confidently identified and quantified. Generally, these instruments are not designated as hedges for accounting purposes, and changes in the fair value of these instruments are recognized immediately in other income (expense). The Company's currency hedging activities are focused on exchange rate movements, primarily in Canada, Mexico, the United Kingdom, Western European countries that use the euro as a common currency, Australia and New Zealand. At December 31, 2005 and 2004, the Company had forward exchange contracts to purchase various foreign currencies in the amount of $1.9 billion and $1.9 billion, respectively, and to sell various foreign currencies in the amount of $1.2 billion and $1.5 billion, respectively.

Securities Price Risk

The Company has used derivative instruments to eliminate or reduce market price risk associated with strategic equity investments. Securities selected for hedging are determined after considering market conditions, up-front hedging costs and other relevant factors. Once established, hedges are generally not removed until maturity. The Company was not party to any such instruments at December 31, 2005.

Interest Rate Risk

The Company enters into interest rate swap agreements that convert fixed-rate instruments to variable-rate instruments to manage interest rate risk. The derivative financial instruments are designated and documented as fair value hedges at the inception of the contract. Changes in fair value of derivative financial instruments are recognized in earnings as an offset to changes in fair value of the underlying exposure which are also recognized in other income (expense). The impact on earnings from recognizing the fair value of these instruments depends on their intended use, their hedge designation, and their effectiveness in offsetting the underlying exposure they are designed to hedge.

The Company had interest rate swap fair value hedges outstanding in the notional amount of $1.8 billion in connection with its long-term notes payable at December 31, 2005 and 2004 (see Note 8). Under the swaps, the Company receives fixed rates ranging from 6.0% to 7.125% and pays floating rates tied to the London Interbank Offering Rate ("LIBOR"). The weighted-average floating rates were 6.39% and 4.40% at December 31, 2005 and 2004, respectively. At December 31, 2005 and 2004, the Company had $700 million of swaps and related debt which contained the same critical terms. Accordingly, no gain or loss relating to the change in fair value of the swap and related hedged item was recognized in earnings. At December 31, 2005 and 2004, $1.1 billion of the interest rate swaps contained different terms than the related underlying debt. Accordingly, the Company recognized in earnings the change in fair value of the interest rate swap and underlying debt which amounted to gains of $5.5 million and $1.5 million during 2005 and 2004, respectively. Such gains are included in interest expense and other, net in the accompanying consolidated statements of operations.

Comprehensive Income (Loss) and Shareholders' Equity

Comprehensive income (loss) includes all changes in equity during a period, except those resulting from investments by and distributions to owners. For the years ended December 31, 2005, 2004 and 2003, reclassifications from accumulated other comprehensive loss to net income (loss) of net gains (losses) recognized on marketable security transactions were $(3) million, $1 million and $4 million, net of the related tax expense (benefit) of $(1) million, $0.4 million and $1 million, respectively.

Following is a summary of changes within each classification of accumulated other comprehensive loss for the years ended December 31, 2005 and 2004 (in millions):

	Cumulative Translation Adjustments	Unrealized Gains (Losses) on Securities	Minimum Pension Liability Adjustment	Accumulated Other Comprehensive Loss
Balance at December 31, 2003	$ 226	$ 2	$ (359)	$ (131)
Change	256	(5)	(179)	72
Balance at December 31, 2004	482	(3)	(538)	(59)
Change	(293)	(1)	(14)	(308)
Balance at December 31, 2005	$ 189	$ (4)	$ (552)	$ (367)

In connection with its employee stock incentive plans, the Company issued 4.5 million, 7.6 million and 3.7 million shares of treasury stock at a cost of $252 million, $458 million and $257 million during 2005, 2004 and 2003, respectively. The difference between the cost and fair value at the date of issuance of such shares has been recognized as a charge to retained earnings of $166 million, $278 million and $154 million in the consolidated statements of shareholders' equity and comprehensive income (loss) during 2005, 2004 and 2003, respectively.

Income Taxes

The Company provides for deferred taxes under the asset and liability method. Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be reversed. The deferral method is used to account for investment tax credits. Valuation allowances are recorded to reduce deferred tax assets to an amount whose realization is more likely than not. Income taxes payable are recorded whenever there is a difference between amounts reported by the Company in its tax returns and the amounts the Company believes it would likely pay in the event of an examination by taxing authorities. The Company accrues interest on such amounts and includes the associated expense in provision (benefit) for income taxes in the accompanying consolidated statements of operations. Income taxes payable are classified in the accompanying consolidated balance sheets based on their estimated payment date.

Statements of Cash Flows

The Company considers the following asset classes with original maturities of three months or less to be cash equivalents: certificates of deposit, commercial paper, repurchase agreements and money market funds.

Use of Estimates

The preparation of the consolidated financial statements in conformity with generally accepted accounting principles in the United States requires management to make estimates, judgments and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Because of the use of estimates inherent in the financial reporting process, actual results could differ from those estimates. Areas in which significant judgments and estimates are used include, but are not limited to, cost estimation for Construct Service elements, projected cash flows associated with recoverability of deferred contract costs, contract concessions and long-lived assets, liabilities associated with pensions and performance guarantees, receivables collectibility, and loss accruals for litigation, exclusive of legal fees which are expensed as services are received. It is reasonably possible that events and circumstances could occur in the near term that would cause such estimates to change in a manner that would be material to the consolidated financial statements.

Concentration of Credit Risk

Accounts receivable, net, from General Motors ("GM") and its affiliates totaled $256 million and $292 million as of December 31, 2005 and 2004, respectively. In addition, the Company has several large contracts with major U.S. and foreign corporations, each of which may result in the Company carrying a receivable balance between $50 million and $100 million at any point in time. At December 31, 2005 and 2004, the Company had net operating receivables of $162 million and $152 million, respectively, and investments in leveraged leases of $55 million and $99 million, respectively, associated with travel-related industry clients, primarily airlines. Other than operating receivables from GM and aforementioned contracts, concentrations of credit risk with respect to accounts receivable are generally limited due to the large number of clients forming the Company's client base and their dispersion across different industries and geographic areas.

The Company is exposed to credit risk in the event of nonperformance by counterparties to derivative contracts. Because the Company deals only with major commercial banks with high-quality credit ratings, the Company believes the risk of nonperformance by any of these counterparties is remote.

Reclassifications

The Company purchases assets to be sold in sales-type lease transactions under certain contracts with customers and occasionally sells lease receivables associated with these transactions to third parties. Payments for assets to be sold to customers under sales-type leases and proceeds from associated lease receivables related to these transactions were reported as payments for and proceeds from investments and other assets in the investing section of the statement of cash flows in previous periods. During 2005, the Company began to report cash flows related to these transactions as changes in prepaid and other assets in the operating section of the statement of cash flows in accordance with guidance recently issued by the SEC. Cash flows associated with reacquired sales-type lease receivables and their subsequent collection continue to be classified as payments for and proceeds from investments and other assets in the investing section of the statement of cash flows. The respective amounts contained in the consolidated statements of cash flows for 2004 and 2003 have been reclassified to conform to the 2005 presentation.

Certain other reclassifications have been made to the 2004 and 2003 consolidated financial statements to conform to the 2005 presentation, including reclassification of balances associated with discontinued operations.

NOTE 2: MARKETABLE SECURITIES

Following is a summary of current available-for-sale marketable securities at December 31, 2005 and 2004 (in millions):

	2005			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value
Government and agency obligations	$ 192	$ –	$ (1)	$ 191
Obligations of states and political subdivisions	19	–	–	19
Corporate debt securities	319	–	(2)	317
Mortgage-backed securities	306	–	(4)	302
Asset-backed securities	454	–	(4)	450
Total debt securities	1,290	–	(11)	1,279
Equity securities	43	–	(1)	42
Total current available-for-sale securities	$ 1,333	$ –	$ (12)	$ 1,321

	2004			
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Estimated Fair Value
Government and agency obligations	$ 226	$ –	$ –	$ 226
Obligations of states and political subdivisions	12	–	–	12
Corporate debt securities	359	–	(1)	358
Mortgage-backed securities	381	–	(2)	379
Asset-backed securities	438	–	(3)	435
Total debt securities	1,416	–	(6)	1,410
Equity securities	42	1	–	43
Total current available-for-sale securities	$ 1,458	$ 1	$ (6)	$ 1,453

The amortized cost and estimated fair value of current available-for-sale debt securities at December 31, 2005, by contractual maturity, are shown below (in millions). Expected maturities may differ from contractual maturities because the issuers of the securities may have the right to repay obligations without prepayment penalties.

	Amortized Cost	Estimated Fair Value
Debt securities:		
Due in one year or less	$ 257	$ 256
Due after one year through five years	258	256
Due after five years through ten years	2	2
Due after ten years	13	13
Mortgage-backed securities	306	302
Asset-backed securities	454	450
Total debt securities	$ 1,290	$ 1,279

Following is a summary of sales of available-for-sale securities for the years ended December 31, 2005, 2004 and 2003 (in millions). Specific identification was used to determine cost in computing realized gain or loss.

	2005	2004	2003
Proceeds from sales	$ 1,434	$ 956	$ 548
Gross realized gains	1	3	3
Gross realized losses	(8)	(4)	(3)

NOTE 3: PROPERTY AND EQUIPMENT

Following is a summary of property and equipment at December 31, 2005 and 2004 (in millions):

	2005	2004
Land	$ 86	$ 118
Buildings and facilities	1,599	1,792
Computer equipment	4,620	4,938
Other equipment and furniture	424	440
Subtotal	6,729	7,288
Less accumulated depreciation	(4,762)	(5,107)
Total	$ 1,967	$ 2,181

During 2005, the Company sold sixteen domestic and international real estate properties in connection with its efforts to improve its cost competitiveness and enhance workplace capacity usage. Net proceeds from the sale were $178 million. Fourteen properties involved in the sale have been leased back by the Company for various extended periods. A deferred net gain of $14 million has been allocated to the various leased properties and will be recognized by the Company over the respective term of each lease. The Company recognized a net gain of $3 million on the sale of the remaining properties which is included in other income in the 2005 consolidated statement of operations.

The Company recorded a non-cash impairment charge of $375 million in 2004 to write-down long-lived assets used on the Company's Navy Marine Corps Intranet ("NMCI") contract to estimated fair value. The impairment charge is reported as a component of cost of revenues in the consolidated statement of operations and is reflected in the results of the NMCI segment. Fair value was measured by probability weighting future contract pre-tax cash flows discounted at a pre-tax risk free discount rate. The decline in the fair value of these assets is primarily a result of lower estimates of future revenues as a result of several events occurring during 2004. Such events include the failure to meet seat cutover schedules, a revision of the timeline for meeting performance service levels contained in a contract amendment signed September 30, 2004, a deceleration in customer satisfaction improvement rates, and delays in signing certain anticipated contract modifications and additions. Remaining long-lived assets and lease receivables associated with the contract totaled approximately $240 million and $408 million, respectively, at December 31, 2005.

The Company had a significant commercial contract under which it provided various IT services using the legacy IT systems acquired from the client while developing and deploying a new IT system dedicated to that client. This contract experienced delays in its development and construction phases, and milestones in the contract had been missed. Throughout the contract period, the Company negotiated with the client to resolve critical issues, including those associated with the pricing and technical specifications for the new IT system. In July 2004, the Company and the client reached an agreement to terminate the existing contract effective as of August 1, 2004, provide transition services for a limited period thereafter and settle each party's outstanding claims. During 2004, the Company recognized impairment charges of $128 million to write-down certain assets to fair value. In addition, the Company recognized $14 million of shutdown costs during 2004 to record contract-related vendor commitments and employee severance obligations associated with the contract. All of the aforementioned amounts associated with this contract are included in cost of revenues in the consolidated statements of operations and are reflected in the results of the Outsourcing segment.

NOTE 4: DEFERRED CONTRACT COSTS

The Company defers certain costs relating to construction and set-up activities on client contracts. Following is a summary of deferred costs for the years ended December 31, 2005 and 2004 (in millions):

	Gross Carrying Amount	Accumulated Amortization	Total
Balance at December 31, 2003	$ 1,528	$ (658)	$ 870
Additions	126	(298)	(172)
Other	158	(148)	10
Balance at December 31, 2004	1,812	(1,104)	708
Additions	161	(138)	23
Other	(56)	(37)	(93)
Balance at December 31, 2005	$ 1,917	$ (1,279)	$ 638

During 2005, the Company identified deterioration in the projected performance of one of its commercial contracts based on, among other things, a change in management's judgment regarding the amount and likelihood of achieving anticipated benefits from contract-specific productivity initiatives, primarily related to the length of time necessary to achieve cost savings from planned infrastructure optimization initiatives. The Company determined that the estimated undiscounted cash flows of the contract over its remaining term were insufficient to recover the contract's deferred contract costs. As a result, the Company recognized a non-cash impairment charge of $37 million in the second quarter of 2005 to write-off the contract's deferred contract costs. The impairment charge is reported as a component of cost of revenues in the 2005 consolidated statement of operations and is included in the results of the Outsourcing segment. Remaining long-lived assets associated with this contract totaled $143 million at December 31, 2005. The current estimate of cash flows includes cost reductions resulting from the expected optimization of the contract's service delivery infrastructure based on project plans and anticipated vendor rate reductions based on historical and industry trends. Some of the project plans have near-term milestones that are critical to meeting overall cost reduction goals. It is reasonably possible that these milestones may not be met or actual cost savings from these and other planned initiatives may not materialize in the near-term and, as a result, remaining long-lived assets associated with this contract will become fully impaired. The Company continues to pursue several opportunities to improve the financial performance of this contract, including leveraging the infrastructure through the addition of new business opportunities with the client.

The "other" line item in the table above includes asset write-downs, including the write-off associated with a commercial contract in 2005 referred to above, and changes associated with foreign currency translation adjustments. Estimated amortization expense related to deferred costs at December 31, 2005 for each of the years in the five-year period ending December 31, 2010 and thereafter is (in millions): 2006 – $211; 2007 – $121; 2008 – $96; 2009 – $77; 2010 – $51; and thereafter – $82.

NOTE 5: INVESTMENTS AND OTHER ASSETS

Following is a summary of investments and other assets at December 31, 2005 and 2004 (in millions):

	2005	2004
Lease contracts receivable (net of principal and interest on non-recourse debt)	$ 52	$ 58
Estimated residual values of leased assets (not guaranteed)	22	22
Unearned income, including deferred investment tax credits	(25)	(29)
Total investment in leveraged leases (excluding deferred taxes of $18 million at December 31, 2005 and 2004)	49	51
Leveraged lease partnership investment	55	99
Investments in equipment for lease	182	411
Investments in joint ventures and partnerships	58	50
Deferred pension costs	72	59
Other	268	389
Total	$ 684	$ 1,059

The Company holds interests in various equipment leases financed with non-recourse borrowings at lease inception accounted for as leveraged leases. The Company's investment in leveraged leases is comprised of a fiber optic equipment leveraged lease with a subsidiary of MCI signed in 1988. For U.S. federal income tax purposes, the Company receives the investment tax credit (if available) at lease inception and has the benefit of tax deductions for depreciation on the leased asset and for interest on the non-recourse debt. All non-recourse borrowings have been satisfied in relation to these leases.

The Company holds an equity interest in a partnership which holds leveraged aircraft lease investments. The Company accounts for its interest in the partnership under the equity method. During 2005, the Company recorded write-downs of its investment in the partnership due to uncertainties regarding the recoverability of the partnership's investments in aircraft leased to Delta Air Lines which filed for bankruptcy on September 14, 2005, and the proposed sale of certain lease investments in the partnership. These write-downs were partially offset by the accelerated recognition of previously deferred investment tax credits associated with the investment. These write-downs total $35 million and are reflected in other income (expense) in the Company's 2005 consolidated statement of operations. During 2004, the Company recorded a write-down of $34 million of its investment in the partnership due to a reduction in the expected cash flows from the partnership. This reduction included a renegotiation of leases with a U.S. airline. These write-downs are reflected in other income (expense) in the Company's 2004 consolidated statement of operations. The carrying amount of the Company's remaining equity interest in the partnership was $55 million at December 31, 2005. The partnership's remaining leveraged lease investments, subsequent to the proposed sale, will include leases with American Airlines and one international airline. The Company's ability to recover its remaining investment in the partnership is dependent upon the continued payment of rentals by the lessees and the realization of expected future aircraft values. In the event such lessees are relieved from their obligation to pay such rentals as a result of bankruptcy, the investment in the partnership would be partially or wholly impaired.

Investments in securities, joint ventures and partnerships includes investments accounted for under the equity method of $35 million at December 31, 2005 and 2004. The Company recognized impairment losses totaling $1 million in 2005 and 2004 due to other than temporary declines in the fair values of certain non-marketable equity securities. These losses are reflected in other income (expense) in the Company's consolidated statements of operations.

Investments in equipment for lease is comprised of equipment to be leased to clients under long-term IT contracts and net investment in leased equipment associated with such contracts. The net investment in leased equipment associated with the NMCI contract was $408 million and $717 million at December 31, 2005 and 2004, respectively. Future minimum lease payments to be received under the NMCI contract were $358 million at December 31, 2005. In addition, the unguaranteed residual values accruing to the Company were $78 million, and unearned interest income related to these leases was $28 million at December 31, 2005. The net lease receivable balance is classified as components of prepaids and other and investments and other assets in the consolidated balance sheets. Future minimum lease payments to be received at December 31, 2005 were as follows: 2006 – $250 million; 2007 – $108 million.

NOTE 6: GOODWILL AND OTHER INTANGIBLE ASSETS

Following is a summary of changes in the carrying amount of goodwill for the Outsourcing segment for the years ended December 31, 2005 and 2004 (in millions):

	Outsourcing
Balance at December 31, 2003	$ 3,448
Additions	54
Deletions	(11)
Other	144
Balance at December 31, 2004	3,635
Additions	416
Deletions	(45)
Other	(174)
Balance at December 31, 2005	$ 3,832

Goodwill additions resulted from acquisitions completed in 2005 and 2004 (see Note 16) and include adjustments to the preliminary purchase price allocations. Goodwill deletions resulted from divestitures completed in 2005 and 2004 (see Notes 17 and 19). Other changes to the carrying amount of goodwill were primarily due to foreign currency translation adjustments. The Company conducted its annual goodwill impairment tests as of December 1, 2005 and 2004. No impairment losses were identified as a result of these tests.

Intangible assets with definite useful lives are amortized over their respective estimated useful lives to their estimated residual values. Intangible assets with indefinite useful lives are not amortized but instead tested for impairment at least annually. All of the Company's intangible assets at December 31, 2005 and 2004 had definite useful lives. Following is a summary of intangible assets at December 31, 2005 and 2004 (in millions):

	2005		
	Gross Carrying Amount	Accumulated Amortization	Total
Software	$ 2,101	$ (1,665)	$ 436
Customer accounts	192	(90)	102
Other	393	(291)	102
Total	$ 2,686	$ (2,046)	$ 640

	2004		
	Gross Carrying Amount	Accumulated Amortization	Total
Software	$ 2,093	$ (1,662)	$ 431
Customer accounts	294	(174)	120
Other	300	(227)	73
Total	$ 2,687	$ (2,063)	$ 624

Amortization expense related to intangible assets, including amounts pertaining to discontinued operations, was $445 million and $591 million for the years ended December 31, 2005 and 2004, respectively. Estimated amortization expense related to intangible assets subject to amortization at December 31, 2005 for each of the years in the five-year period ending December 31, 2010 and thereafter is (in millions): 2006 – $317; 2007 – $171; 2008 – $72; 2009 – $22; 2010 – $14; and thereafter – $44.

NOTE 7: ACCRUED LIABILITIES

Following is a summary of accrued liabilities at December 31, 2005 and 2004 (in millions):

	2005	2004
Accrued liabilities relating to:		
Contracts	$ 609	$ 789
Payroll	694	565
Restructuring activities	66	208
Property, sales and franchise taxes	266	363
Other	795	848
Total	$ 2,430	$ 2,773

NOTE 8: LONG-TERM DEBT

Following is a summary of long-term debt at December 31, 2005 and 2004 (in millions):

	2005		2004	
	Amount	Weighted-Average Rate	Amount	Weighted-Average Rate
Senior notes due 2013	$ 1,087	6.50%	$ 1,085	6.50%
Senior notes due 2009	700	7.12%	700	7.12%
Convertible notes due 2023	690	3.88%	690	3.88%
Notes payable due 2006 to 2029	497	7.01%	1,047	6.93%
Other, including capital lease obligations	279	–	304	–
Total	3,253		3,826	
Less current portion of long-term debt	(314)		(658)	
Long-term debt	$ 2,939		$ 3,168	

In June 2003, the Company completed a private offering of $1.1 billion aggregate principal amount of 6.0% unsecured Senior Notes due 2013. Interest on the notes is payable semiannually. In the event the credit ratings assigned to the notes fall to below the Baa3 rating of Moody's or the rating BBB– of S&P, the interest rate payable on the notes will be increased to 6.5%. On July 15, 2004, Moody's lowered the Company's long-term credit rating to Ba1 from Baa3. As a result of Moody's rating action, the interest rate payable on $1.1 billion of the Company's senior unsecured debt was increased from 6.0% to 6.5%. Further downgrades in the Company's credit rating will not affect this rate. However, in the event the Company's credit rating is subsequently increased to Baa3 or above by Moody's and its S&P credit rating remains at or above BBB–, this rate will return to 6.0%. The Company may redeem some or all of the notes at any time prior to maturity. In conjunction with the issuance of the Senior Notes, the Company entered into interest rate swaps with a notional amount of $1.1 billion under which the Company receives fixed rates of 6.0% and pays floating rates equal to the six-month LIBOR (4.70% at December 31, 2005) plus 2.275% to 2.494%. These interest rate swaps are accounted for as fair value hedges (see Note 1).

In June 2003, the Company completed a private offering of $690 million aggregate principal amount of 3.875% unsecured Convertible Senior Notes due 2023. Interest on the notes is payable semiannually. Contingent interest is payable during any six-month period beginning July 2010 in which the average trading price of a note for the applicable five trading day reference period equals or exceeds 120% of the principal amount of the note as of the day immediately preceding the first day of the applicable six-month period. The five trading day reference period means the five trading days ending on the second trading day immediately preceding the relevant six-month interest period. The notes are convertible by holders into shares of the Company's common stock at an initial conversion rate of 29.2912 shares of common stock per $1,000 principal amount, representing an initial conversion price of $34.14 per share of common stock, under the following circumstances: a) during any calendar quarter, if the last reported sale price of EDS common stock for at least 20 trading days during the period of 30 consecutive trading days ending on the last trading day of the previous calendar quarter is greater than or equal to 120% or, following July 15, 2010, 110% of the conversion price per share of EDS common stock on such last trading day; b) if the notes have been called for redemption;

c) during any period in which the credit ratings assigned to the notes by either Moody's or S&P is lower than Ba2 or BB, respectively, or the notes are no longer rated by at least one of these rating services or their successors; or d) upon the occurrence of specified corporate transactions. The Company may redeem for cash some or all of the notes at any time on or after July 15, 2010. Holders have the right to require the Company to purchase the notes at a price equal to 100% of the principal amount of the notes plus accrued interest, including contingent interest and additional amounts, if any, on July 15, 2010, July 15, 2013 and July 15, 2018, or upon a fundamental change in the Company's ownership, control or the marketability of the Company's common stock prior to July 15, 2010.

In June 2001, the Company completed the public offering of 32.2 million units of a security, initially referred to as Income PRIDES, each with a stated price of $50 before underwriting discount. Each unit initially consisted of $50 principal amount of EDS senior notes due August 2006 and a purchase contract which obligated the investor to purchase $50 of EDS common stock no later than August 17, 2004 at a price ranging from $59.31 to $71.47 per share. On May 12, 2004, the Company completed an offer to exchange 0.843 shares of EDS common stock plus $1.58 in cash for each validly tendered and accepted Income PRIDES. The Company accepted all of the 28.2 million Income PRIDES tendered pursuant to the offer and issued 23.8 million shares plus $45 million in cash to the holders. The notes relating to the 4.0 million units not tendered totaling $198 million were remarketed on May 12, 2004 at an interest rate of 6.334% per annum and mature on August 17, 2006. Investors who did not tender their Income PRIDES in the exchange offer were obligated to purchase EDS common stock on August 17, 2004. On that date, the Company issued 3.3 million shares of common stock for consideration of $198 million.

As a result of the exchange, the Company increased shareholders' equity by $1,403 million in 2004 for the fair value of the purchase contracts and the fair value of the common stock issued. The remaining consideration was accounted for as an extinguishment of debt. Accordingly, the Company decreased liabilities by $1,418 million for the carrying value of the notes exchanged and the unpaid portion of contract adjustment payments that were recorded when the units were originally issued. In addition, the Company paid cash of $50 million and recognized a loss on debt extinguishment of $36 million in interest expense as a result of the exchange in 2004.

In December 2002, EDS Information Services, LLC, a wholly owned subsidiary of EDS, contributed to the capital of and sold certain trade receivables to Legacy Receivables, LLC, a limited liability company of which it is the sole member (the "LLC"), which then entered into a $500 million revolving secured financing arrangement collateralized by those trade receivables. The secured A/R facility was reduced to $400 million during 2003. There were no amounts outstanding under this facility at December 31, 2004. During 2005, the Company elected to terminate this facility.

During September 2004, the Company entered into a $550 million Three-and-One-Half Year Multi Currency Revolving Credit Agreement with a bank group including Citibank, N.A., as Administrative Agent, and Bank of America, N.A., as Syndication Agent. The facility replaced the Company's five year $550 million revolving credit facility, which expired in September 2004. The new facility may be used for general corporate borrowing purposes and the issuance of letters of credit. The aggregate availability under the new facility, together with the Company's $450 million Three-Year Multi Currency Revolving Credit Agreement entered into in September 2003, is $1.0 billion. There were no amounts outstanding under either of these facilities at December 31, 2005 and 2004. The Company had issued letters of credit totaling $160 million under the $550 million Three-and-One-Half Year Multi Currency Revolving Credit Agreement at December 31, 2005. The new facility includes financial and other covenants of the general nature contained in the facility it replaced, and the $450 million Three-Year Multi Currency Revolving Credit Agreement was amended and restated to include financial and other terms similar to the new facility. The Company pays annual commitment fees of 0.35% of the $450 million facility and 0.30% of the $550 million facility.

The Company's unsecured credit facilities and the indentures governing its long-term notes contain certain financial and other restrictive covenants that would allow any amounts outstanding under the facilities to be accelerated, or restrict the Company's ability to borrow thereunder, in the event of noncompliance. The financial covenants of the Company's unsecured credit facilities were modified in September 2004 with the renewal of its $550 million credit facility discussed above, and include a minimum net worth covenant, a fixed charge coverage requirement and a leverage ratio requirement. The leverage ratio requirement limits the Company's leverage ratio to not exceed 2.25-to-1 from July 2005 through December 2005, and 2.00-to-1 thereafter. The fixed charge coverage covenant requires the Company to maintain a fixed charge ratio of no less than 1.15-to-1 from July 2005 through December 2005, and 1.25-to-1 thereafter. The Company was in compliance with all covenants at December 31, 2005.

In addition to compliance with these financial covenants, it is a condition to the Company's ability to borrow under its unsecured credit facilities that its representations and warranties under those facilities, including among others its representation regarding no material adverse change in its business, be true and correct as of the date of the borrowing. The Company's unsecured credit facilities, the indentures governing its long-term notes and certain other debt instruments also contain cross-default provisions with respect to a default in any payment under, or resulting in the acceleration of, indebtedness greater than $50 million.

Expected maturities of long-term debt for years subsequent to December 31, 2005 are as follows (in millions):

2006	$ 314
2007	82
2008	53
2009	733
2010	698
Thereafter	1,373
Total	$ 3,253

NOTE 9: MINORITY INTERESTS AND OTHER LONG-TERM LIABILITIES

Other long-term liabilities were $337 million and $531 million at December 31, 2005 and 2004, respectively. Other long-term liabilities include liabilities related to the Company's purchased or licensed software, tax liabilities and interest rate swap agreements. Minority interests were $78 million and $184 million at December 31, 2005 and 2004, respectively. The decrease in minority interests in 2005 was primarily due to the Company's purchase of the outstanding minority interest in its Australian subsidiary (see Note 16).

NOTE 10: INCOME TAXES

Following is a summary of income tax expense for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Income (loss) from continuing operations	$ 153	$ (103)	$ (205)
Income (loss) from discontinued operations	(38)	329	66
Cumulative effect on prior years of changes in accounting principles	–	–	(829)
Shareholders' equity	(101)	(20)	68
Total	$ 14	$ 206	$ (900)

Following is a summary of the provision (benefit) for income taxes on income (loss) from continuing operations for the years ended December 31, 2005, 2004 and 2003 (in millions):

	United States			
	Federal	State	Non-U.S.	Total
2005				
Current	$ 127	$ 13	$ 87	$ 227
Deferred	(233)	(29)	188	(74)
Total	$ (106)	$ (16)	$ 275	$ 153
2004				
Current	$ (377)	$ 2	$ 145	$ (230)
Deferred	31	(7)	103	127
Total	$ (346)	$ (5)	$ 248	$ (103)
2003				
Current	$ 72	$ 13	$ (193)	$ (108)
Deferred	(339)	(71)	313	(97)
Total	$ (267)	$ (58)	$ 120	$ (205)

Following is a summary of the components of income (loss) from continuing operations before income taxes for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
U.S. income	$ (170)	$ (814)	$ (782)
Non-U.S. income	609	440	265
Total	$ 439	$ (374)	$ (517)

Following is a reconciliation of income tax expense using the statutory U.S. federal income tax rate of 35.0% to actual income tax expense for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Statutory federal income tax	$ 154	$ (131)	$ (181)
State income tax, net	(10)	(3)	(30)
Foreign losses	75	64	43
Research tax credits	(54)	(45)	(46)
Other	(12)	12	9
Total	$ 153	$ (103)	$ (205)
Effective income tax rate	34.9%	27.5%	39.7%

Following is a summary of the tax effects of significant types of temporary differences and carryforwards which result in deferred tax assets and liabilities as of December 31, 2005 and 2004 (in millions):

	2005		2004	
	Assets	Liabilities	Assets	Liabilities
Leasing basis differences	$ –	$ 178	$ –	$ 186
Other accrual accounting differences	429	21	423	19
Employee benefit plans	337	18	309	33
Depreciation/amortization differences	337	257	365	270
Net operating loss and tax credit carryforwards	996	–	876	–
Employee-related compensation	233	–	215	–
Other	294	269	271	250
Subtotal	2,626	743	2,459	758
Less valuation allowances	(281)	–	(233)	–
Total deferred taxes	$ 2,345	$ 743	$ 2,226	$ 758

The net changes in the valuation allowances for the years ended December 31, 2005 and 2004 were increases of $48 million and $87 million, respectively. Of the net change in 2005, $92 million was an increase in valuation allowances for prior years' losses incurred in certain foreign tax jurisdictions, which increased current year income tax expense from continuing operations. The remaining change in the valuation allowance in 2005 was primarily due to the sale of A.T. Kearney in January 2006 (see Notes 17 and 20) and foreign currency translation adjustments. Approximately one-half of the Company's net operating loss and tax carryforwards expire over various periods from 2006 through 2025, and the remainder are unlimited.

In assessing the realizability of deferred tax assets, the Company considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized and adjusts the valuation allowance accordingly. The ultimate realization of deferred tax assets is dependent on the generation of future taxable income during the periods in which those temporary differences become deductible. Based on the level of historical taxable income and projections for future taxable income over the periods in which the deferred tax assets are deductible, the Company believes it is more likely than not it will realize the benefits of the deductible differences, net of existing valuation allowances at December 31, 2005. The amount of the deferred tax asset considered realizable, however, could be reduced in the near term if estimates of future taxable income during the carryforward period are reduced.

U.S. income taxes have not been provided for $587 million of undistributed earnings of certain foreign subsidiaries, as such earnings have been permanently reinvested in the business. As of December 31, 2005, the unrecognized deferred tax liability associated with these earnings amounted to approximately $86 million.

On October 22, 2004, the President of the United States signed the American Jobs Creation Act of 2004. The Act created a temporary incentive for U.S. corporations to repatriate accumulated income earned abroad by providing an 85 percent dividends received deduction for certain dividends from controlled foreign corporations. The Company determined that the incremental cost of the repatriation did not produce a corresponding economic benefit, and as a result, it did not make a repatriation under this provision.

NOTE 11: STOCK PURCHASE AND INCENTIVE PLANS

Stock Purchase Plan

Under the Stock Purchase Plan, eligible employees may purchase EDS common stock at the end of each fiscal quarter at a purchase price equal to 85% of the lower of the market price on the first or last trading day of the quarter, through payroll deductions of up to 10% of their compensation, not to exceed $25,000 per year in market value. Shares of EDS common stock purchased under the plan may not be sold or transferred within one year of the date of purchase. The number of shares originally authorized for issuance under this plan is 57.5 million. Total compensation expense recognized under this plan was $6 million during the year ended December 31, 2005. See Note 1 for pro forma expense associated with stock-based incentive compensation for the years ended December 31, 2004 and 2003.

PerformanceShare and EDS Global Share Plans

PerformanceShare and Global Share are "broad-based" plans that permit the grant of stock options to any eligible employee of EDS or its participating subsidiaries other than executive officers. As of December 31, 2005, options for 16.0 million shares had been granted under PerformanceShare (principally in a broad-based grant in May 1997) and options for 25.9 million shares had been granted under Global Share (principally in two broad-based grants in July 2000 and February 2002). The number of shares originally authorized for issuance under PerformanceShare and Global Share is 20 million and 27 million, respectively. As of December 31, 2005, no shares were available for future issuance under these plans.

Incentive Plan

The Incentive Plan is authorized to issue up to 136.5 million shares of common stock. The Incentive Plan permits the granting of stock-based awards in the form of stock grants, restricted shares, restricted stock units, stock options or stock appreciation rights to eligible employees and non-employee directors. A restricted stock unit is the right to receive shares. The exercise price for stock options granted under this plan must be equal to or greater than the fair market value on the date of the grant.

Transition Incentive Plan

The Transition Incentive Plan permits the grant of nonqualified stock options to eligible employees. This plan was intended to be used exclusively for the grant of stock options to former employees of Structural Dynamics Research Corporation ("SDRC"), which was acquired in August 2001, and UGS PLM Solutions Inc., which became a wholly owned subsidiary in September 2001, and has been used exclusively for that purpose. UGS PLM Solutions (which was the successor by merger to SDRC) was sold by the Company in May 2004. Such options have an exercise price equal to the fair market value per share of common stock on the grant date, vested in May 2004 in connection with the sale of UGS PLM Solutions, and are exercisable for two years from the date of such sale. The number of options originally authorized for issuance under this plan is 3.7 million.

Transition Inducement Plan

The Transition Inducement Plan permits awards in the form of nonqualified stock options, stock appreciation rights, restricted stock units, restricted stock awards or stock grants to eligible employees. This plan was adopted in October 2002 in anticipation of then proposed New York Stock Exchange rules which provide that awards issued to induce new employment or in exchange for awards under an "acquired" plan are not subject to shareholder approval. All options granted under this plan must have an exercise price not less than the fair market value per share of common stock on the grant date. The maximum number of shares that can be issued under this plan is 7.0 million, of which not more than 2.0 million are available for awards other than in the form of stock options.

Stock Options

The fair value of each stock option award is estimated on the date of grant using the Black-Scholes-Merton valuation model that uses the assumptions noted below. Estimates of fair value are not intended to predict actual future events or the value ultimately realized by employees who receive equity awards, and subsequent events are not indicative of the reasonableness of the original estimates of fair value made by the Company under SFAS 123R. The Company uses historical data to estimate the expected volatility for the term of new options and the outstanding period of the option for separate groups of employees that have similar historical exercise behavior. The risk-free rate used to estimate fair value is based on the U.S. Treasury yield curve in effect at the time of grant. The weighted-average fair values of options granted were $10.46, $8.60 and $4.70 for the years ended December 31, 2005, 2004 and 2003, respectively. The fair value of each option was estimated at the date of grant, with the following weighted-average assumptions for the years ended December 31, 2005, 2004 and 2003, respectively: dividend yields of 1.0%, 2.9% and 3.6%; expected volatility of 60.3%, 61.7% and 45.9%; risk-free interest rate of 4.1%, 2.7% and 2.7%; and

expected lives of 5.0 years, 4.8 years and 4.2 years. The total intrinsic value of options exercised during the years ended December 31, 2005, and 2004 were $23 million and $13 million, respectively, resulting in tax deductions of $8 million and $5 million, respectively. No options were exercised during the year ended December 31, 2003. During 2005, the Company issued new shares and utilized treasury shares to satisfy share option exercises and the vesting of restricted share awards. The Company plans to utilize treasury shares acquired under the repurchase program authorized in February 2006 to satisfy future share option exercises and the vesting of restricted share awards (see Note 20).

Following is a summary of options activity under the Company's various stock-based incentive compensation plans during the years ended December 31, 2005, 2004 and 2003:

	Shares (millions)	Weighted-Average Exercise Price
Fixed options:		
Outstanding at December 31, 2002	73.9	$ 53
Granted	22.5	17
Exercised	–	–
Forfeited and expired	(46.1)	52
Outstanding at December 31, 2003	50.3	38
Granted	33.7	20
Exercised	(2.9)	16
Forfeited and expired	(10.2)	34
Outstanding at December 31, 2004	70.9	31
Granted	1.5	20
Exercised	(4.7)	17
Forfeited and expired	(15.8)	51
Outstanding at December 31, 2005	51.9	26
Exercisable	26.0	29

At December 31, 2005, the weighted-average remaining contractual terms of outstanding and exercisable options were 5.2 years and 4.0 years, respectively, and the aggregate intrinsic values of these options were $211 million and $99 million, respectively. Total compensation expense recognized for stock options was $154 million during the year ended December 31, 2005. See Note 1 for pro forma expense associated with stock-based incentive compensation, including stock options for the years ended December 31, 2004 and 2003. As of December 31, 2005, there was approximately $136 million of unrecognized compensation cost related to nonvested options, which is expected to be recognized over a weighted-average period of 1.6 years.

Certain stock option grants contain market conditions that accelerate vesting if the Company's stock reaches target prices. At December 31, 2005, approximately 3.3 million, 4.3 million and 4.3 million options were outstanding that will become exercisable if the price of the Company's stock at the close of the trading day is above $24.31, $24.93 and $28.76 per share, respectively, for ten consecutive trading days (see Note 20).

Restricted Stock Units

The Company began using restricted stock units as its primary stock-based incentive compensation in March 2005. Prior to such time, stock options were primarily used for stock-based incentive compensation. Restricted stock units granted are generally scheduled to vest over periods of three to ten years. The March 31, 2005 grant consisted of performance-vesting restricted stock units. The number of awards that vest is dependent upon the Company's performance over a three-year period with vesting thereafter.

The fair value of each restricted stock unit is generally the market price of the Company's stock on the date of grant. However, if the shares have a mandatory holding period after the date of vesting, a discount is provided based on the length of the holding period. A discount was applied in determining the fair value of all restricted stock unit awards to adjust for the present value of foregone dividends during the period the award is outstanding and unvested. An additional discount of 15% was applied in determining the fair value of all units subject to transfer restrictions for a one-year period following vesting. This transferability discount was derived based on the value of a one-year average-strike lookback put option.

Following is a summary of the status of the Company's nonvested restricted stock units as of December 31, 2005, and changes during the years ended December 31, 2005, 2004 and 2003:

	Shares (millions)	Weighted-Average Grant Date Fair Value
Nonvested restricted stock units:		
Nonvested at December 31, 2002	5.7	$ 43
Granted	1.0	19
Vested	(1.5)	42
Forfeited	(0.4)	42
Nonvested at December 31, 2003	4.8	38
Granted	1.2	22
Vested	(2.1)	38
Forfeited	(0.4)	41
Nonvested at December 31, 2004	3.5	33
Granted	7.3	19
Vested	(1.5)	34
Forfeited	(0.4)	18
Nonvested at December 31, 2005	8.9	22

As of December 31, 2005, there was approximately $115 million of total unrecognized compensation cost related to nonvested restricted stock units. Such cost is expected to be recognized over a weighted-average period of 2.2 years. Total compensation expense for restricted stock units was $64 million ($42 million net of tax), $42 million ($27 million net of tax) and $62 million ($40 million net of tax), respectively, for the years ended December 31, 2005, 2004 and 2003. The aggregate fair value of shares vested during the years ended December 31, 2005, 2004 and 2003 were $33 million, $41 million and $26 million, respectively, at the date of vesting, resulting in tax deductions to realize benefits of $12 million, $14 million and $9 million, respectively, as compared to aggregate fair values of $52 million, $80 million and $59 million, respectively, on the dates of their grants.

Executive Deferral Plan

The Executive Deferral Plan is a nonqualified deferred compensation plan established for a select group of management and highly compensated employees which allows participants to contribute a percentage of their cash compensation and restricted stock units into the plan and defer income taxes until the time of distribution. The plan is a nonqualified plan for U.S. federal income tax purposes and as such, its assets are part of the Company's general assets. The Company makes matching contributions on a portion of amounts deferred by plan participants that are invested in EDS stock units. Matching contributions vest upon contribution. The fair market price of common stock on the date of matching contributions is charged to operations in the period made. The Company also makes discretionary contributions that vest over periods up to five years as determined by the Board of Directors. The fair market price of common stock on the date of discretionary contributions is charged to operations over the vesting period. No employer contributions were made to the plan during the year ended December 31, 2005. Employer contributions to the plan during the years ended December 31, 2004 and 2003 were 37 thousand and 584 thousand shares, respectively.

NOTE 12: SEGMENT INFORMATION

The Company uses operating income (loss), which consists of segment revenues less segment costs and expenses (before restructuring and other), to measure segment profit or loss. Segment information for non-U.S. operations is measured using fixed currency exchange rates in all periods presented. The Company adjusts its fixed currency exchange rates if and when the statutory rate differs significantly from the fixed rate to better align the two rates. Prior period segment information presented below has been restated to reflect a change in the fixed exchange rates of certain non-U.S. currencies and other segment attribute changes in 2005. Total segment assets and depreciation and amortization expense as of and for the year ended December 31, 2003 is not readily available under the current reporting structure and has been estimated to conform with the 2005 and 2004 presentation. The "all other" category is primarily comprised of corporate expenses, including stock-based compensation, and also includes differences between fixed and actual exchange rates. Operating segments that have similar economic and other characteristics have been aggregated to form the Company's reportable segments. The accompanying segment information excludes the net results of A.T. Kearney which are included in discontinued operations in the consolidated statements of operations (see Note 17).

Following is a summary of certain financial information by reportable segment, including components of the Outsourcing segment, as of and for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005		
	Revenues	Operating Income (Loss)	Total Assets
Americas	$ 9,239	$ 1,433	$ 4,283
EMEA	5,935	819	3,558
Asia Pacific	1,377	103	529
U.S. Government	2,025	375	519
Other	1	(752)	1,307
Total Outsourcing	18,577	1,978	10,196
NMCI	817	(75)	922
All other	363	(1,361)	5,969
Total	$ 19,757	$ 542	$ 17,087

	2004		
	Revenues	Operating Income (Loss)	Total Assets
Americas	$ 9,251	$ 1,113	$ 3,783
EMEA	6,247	911	3,388
Asia Pacific	1,289	107	532
U.S. Government	2,132	374	520
Other	2	(560)	829
Total Outsourcing	18,921	1,945	9,052
NMCI	761	(862)	1,097
All other	181	(1,185)	7,595
Total	$ 19,863	$ (102)	$ 17,744

	2003		
	Revenues	Operating Income (Loss)	Total Assets
Americas	$ 9,589	$ 1,170	$ 3,100
EMEA	6,517	851	3,411
Asia Pacific	1,274	78	390
U.S. Government	2,167	479	1,317
Other	–	(465)	2,710
Total Outsourcing	19,547	2,113	10,928
NMCI	1,017	(948)	1,071
All other	(806)	(1,420)	6,617
Total	$ 19,758	$ (255)	$ 18,616

Following is a summary of depreciation and amortization and deferred cost charges included in the calculation of operating income (loss) above for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Outsourcing	$ 1,089	$ 1,506	$ 1,453
NMCI	102	186	818
All other	253	234	165
Total	$ 1,444	$ 1,926	$ 2,436

Following is a summary of revenues and property and equipment by country as of and for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005		2004		2003	
	Revenues	Property and Equipment	Revenues	Property and Equipment	Revenues	Property and Equipment
United States	$ 10,349	$ 1,153	$ 10,258	$ 1,186	$ 10,726	$ 1,642
United Kingdom	3,696	325	3,983	339	3,948	433
All other	5,712	489	5,622	656	5,084	707
Total	$ 19,757	$ 1,967	$ 19,863	$ 2,181	$ 19,758	$ 2,782

Revenues and property and equipment of non-U.S. operations are measured using fixed currency exchange rates in all periods presented. Differences between fixed and actual exchange rates are included in the “all other” category.

Following is a summary of the Company’s revenues by service line for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Infrastructure services	$ 11,007	$ 11,435	$ 11,747
Applications services	5,562	5,630	5,879
Business process outsourcing services	2,825	2,617	2,938
All other	363	181	(806)
Total	$ 19,757	$ 19,863	$ 19,758

Revenues of non-U.S. operations are measured using fixed currency exchange rates in all periods presented. Differences between fixed and actual exchange rates are included in the “all other” category.

For the years ended December 31, 2005, 2004 and 2003, revenues from contracts with GM and its affiliates totaled $1.8 billion, $2.0 billion and $2.2 billion, respectively. Revenues from contracts with GM were reported in the Company’s Outsourcing segment.

NOTE 13: RETIREMENT PLANS

The Company has several qualified and nonqualified pension plans (the “Plans”) covering substantially all its employees. The majority of the Plans are noncontributory. In general, employees become fully vested upon attaining two to five years of service, and benefits are based on years of service and earnings. The actuarial cost method currently used is the projected unit credit cost method. The Company’s U.S. funding policy is to contribute amounts that fall within the range of deductible contributions for U.S. federal income tax purposes.

Following is a reconciliation of the changes in the Plans' benefit obligations and fair value of assets (using October 31, 2005 and 2004 measurement dates), and a statement of the funded status as of December 31, 2005 and 2004 (in millions):

	2005	2004
Reconciliation of Benefit Obligation:		
Benefit obligation at beginning of year	$ 7,837	$ 6,544
Service cost	344	321
Interest cost	456	413
Employee contributions	33	31
Actuarial loss	532	354
Curtailments and settlements	(280)	(3)
Foreign currency exchange rate changes	(441)	317
Benefit payments	(223)	(186)
Special termination benefit	15	48
Other	37	(2)
Benefit obligation at end of year	$ 8,310	$ 7,837
Reconciliation of Fair Value of Plan Assets:		
Fair value of plan assets at beginning of year	$ 5,895	$ 4,897
Actuarial return on plan assets	912	575
Foreign currency exchange rate changes	(289)	213
Employer contributions	324	366
Employee contributions	33	31
Benefit payments	(223)	(186)
Settlements	(270)	(5)
Other	22	4
Fair value of plan assets at end of year	$ 6,404	$ 5,895
Funded Status		
Funded status at December 31	$ (1,906)	$ (1,942)
Unrecognized transition obligation	9	13
Unrecognized prior service cost	(185)	(212)
Unrecognized net actuarial loss	1,686	1,771
Adjustments from October 31 to December 31	120	98
Net amount recognized in the consolidated balance sheets (as described above)	$ (276)	$ (272)

Following is a summary of the assets and liabilities reflected on the Company's balance sheets for pension benefits as of December 31, 2005 and 2004 (in millions):

	2005	2004
Prepaid benefit cost	$ 53	$ 32
Accrued benefit liability	(1,183)	(1,145)
Intangible asset	19	27
Accumulated other comprehensive income	835	814
Net amount recognized	$ (276)	$ (272)

The tables above include plans that transitioned to A.T. Kearney in January 2006 (see Notes 17 and 20). The pension benefit liability related to these plans are presented in the consolidated balance sheets as "held for sale" and were $26 million and $27 million at December 31, 2005 and 2004, respectively. The projected benefit obligation, accumulated benefit obligation, and fair value of plan assets for these plans were $63 million, $54 million and $61 million, respectively, at December 31, 2005, and $90 million, $71 million and $54 million, respectively, at December 31, 2004. Net periodic benefit cost for these plans was $8 million, $7 million and $7 million, respectively, for the years ended December 31, 2005, 2004 and 2003.

The Company has additional defined benefit retirement plans outside the U.S. not included in the tables above due to their individual insignificance. These plans collectively represent an additional pension benefit liability of approximately $16 million.

The accumulated benefit obligation for all defined benefit pension plans was $7,542 million and $6,946 million at October 31, 2005 and 2004, respectively.

The projected benefit obligation, accumulated benefit obligation, and fair value of plan assets for the pension plans with accumulated benefit obligations in excess of plan assets were $7,624 million, $6,963 million and $5,721 million, respectively, at December 31, 2005, and $7,282 million, $6,480 million, and $5,328 million, respectively, at December 31, 2004.

Following is a summary of the components of net periodic pension cost recognized in earnings for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Service cost	$ 344	$ 321	$ 290
Interest cost	456	413	353
Expected return on plan assets	(522)	(440)	(339)
Amortization of transition obligation	2	2	1
Amortization of prior-service cost	(32)	(32)	(32)
Amortization of net actuarial loss	55	66	81
Net periodic benefit cost	303	330	354
Curtailment loss	1	3	–
Special termination benefit	15	48	20
Settlement loss	71	2	–
Net periodic benefit cost after curtailments and settlements	$ 390	$ 383	$ 374

Prior-service costs are amortized on a straight-line basis over the average remaining service period of active participants. Gains or losses in excess of 10% of the greater of the benefit obligation and the market-related value of assets are amortized over the average remaining service period of active participants.

As a result of the termination of the Company's service contract with the U.K. Government's Inland Revenue department, the contract's workforce transitioned to the new IT provider in July 2004. Most of the pension liability associated with this workforce also transitioned to the new provider, resulting in the recognition of a settlement loss of $77 million in 2005. The Company recorded special termination benefits of $15 million during 2005 related to reductions in force in the U.K., and $48 million during 2004 related to an early retirement offer in the U.S. In addition, the Company recorded a special termination benefit of $20 million during 2003 related to contractual obligations to its former Chief Executive Officer. These charges are included in restructuring and other in the consolidated statements of operations (see Note 19).

At December 31, 2005 and 2004, the plan assets consisted primarily of equity securities and, to a lesser extent, government obligations and other fixed income securities. The plan assets include EDS common stock with a market value of approximately $13 million at October 31, 2005. The U.S. pension plan is a cash balance plan that uses a benefit formula based on years of service, age and earnings. Employees are allocated the current value of their retirement benefit in a hypothetical account. Monthly credits based upon age, years of service, compensation and interest are added to the account. Upon retirement, the value of the account balance is converted to an annuity. Effective January 1, 2000, the Company allowed employees to elect to direct up to 33% of their monthly credits to the EDS 401(k) Plan. The Company contributed $4 million, $3 million and $3 million to the EDS 401(k) Plan related to these elections during the years ended December 31, 2005, 2004 and 2003, respectively. These amounts are not included in net periodic pension cost shown in the table above.

Following is a summary of the weighted-average assumptions used in the determination of the Company's benefit obligation for the years ended December 31, 2005, 2004 and 2003:

	2005	2004	2003
Discount rate at October 31	5.4%	5.7%	6.0%
Rate increase in compensation levels at October 31	3.2%	3.4%	3.3%

Following is a summary of the weighted-average assumptions used in the determination of the Company's net periodic benefit cost for the years ended December 31, 2005, 2004 and 2003:

	2005	2004	2003
Discount rate at October 31	6.0%	6.0%	6.4%
Rate increase in compensation levels at October 31	3.4%	3.3%	3.5%
Long-term rate of return on assets at January 1	8.6%	8.6%	8.7%

Following is a summary of the weighted-average asset allocation of all plan assets at December 31, 2005 and 2004, by asset category:

	2005	2004
Equity securities	77%	78%
Debt securities	15%	14%
Cash and cash equivalents	1%	1%
Real estate	1%	1%
Other	6%	6%
Total	100%	100%

In determining pension expense recognized in its statements of operations, the Company utilizes an expected long-term rate of return that, over time, should approximate the actual long-term returns earned on pension plan assets. The Company derives the assumed long-term rate of return on assets based upon the historical return of actual plan assets and the historical long-term return on similar asset classes as well as anticipated future returns based upon the types of invested assets. The type and mix of invested assets are determined by the pension investment strategy, which considers the average age of the Company's workforce and associated average periods until retirement. Since the average age of the Company's workforce is relatively low and average periods until retirement exceed fifteen years, plan assets are weighted heavily towards equity investments. Equity investments, while susceptible to significant short-term fluctuations, have historically outperformed most other investment alternatives on a long-term basis. The Company utilizes an active management strategy through third-party investment managers to maximize asset returns. As of December 31, 2005, the weighted-average target asset allocation for all plans was 77% equity; 15% fixed income; 1% cash and cash equivalents; 1% real estate; and 6% other. The Company expects to contribute $100 million to $200 million to its pension plans during fiscal year 2006, including discretionary and statutory contributions.

Estimated benefit payments, which include amounts to be earned by active plan employees through expected future service for all pension plans over the next ten years are: 2006 – $177 million; 2007 – $189 million; 2008 – $206 million; 2009 – $223 million; 2010 – $243 million; and 2011 through 2015 – $1,695 million.

In addition to the plans described above, the EDS 401(k) Plan provides a long-term savings program for participants. The EDS 401(k) Plan allows eligible employees to contribute a percentage of their compensation to a savings program and to defer income taxes until the time of distribution. Participants may invest their contributions in various publicly traded investment funds or EDS common stock. The EDS 401(k) Plan also provides for employer-matching contributions, in the form of EDS common stock, which participants may elect to transfer to another investment option within the EDS 401(k) Plan after two years from the date of contribution. During the years ended December 31, 2005, 2004 and 2003, employer-matching contributions totaled $37 million, $40 million and $41 million, respectively.

NOTE 14: COMMITMENTS AND RENTAL EXPENSE

Total rentals under cancelable and non-cancelable leases of tangible property and equipment included in costs and charged to expenses were $783 million, $799 million and $861 million for the years ended December 31, 2005, 2004 and 2003, respectively. Commitments for rental payments under non-cancelable operating leases of tangible property and equipment net of sublease rental income are: 2006 – $316 million; 2007 – $272 million; 2008 – $181 million; 2009 – $132 million; 2010 – $104 million; and all years thereafter – $365 million.

The Company has signed certain service agreements with terms of up to ten years with certain vendors to obtain favorable pricing and commercial terms for services that are necessary for the ongoing operation of its business. These agreements relate to software and telecommunications services. Under the terms of these agreements, the Company has committed to contractually specified minimums over the contractual periods. The contractual minimums are: 2006 – $976 million; 2007 – $972 million; 2008 – $463 million; 2009 – $453 million; 2010 – $446 million; and all years thereafter – $78 million. Amounts paid under these agreements were $991 million, $821 million and $1,364 million during the years ended December 31, 2005, 2004 and 2003, respectively. To the extent that the Company does not purchase the contractual minimum amount of services, the Company must pay the vendors the shortfall. The Company believes that it will meet the contractual minimums through the normal course of business.

NOTE 15: CONTINGENCIES

During 2001, the Company established a securitization facility under which it financed the purchase of capital assets for its NMCI contract. Under the terms of the facility, the Company sold certain financial assets resulting from that contract to a trust ("Trust") classified as a qualifying special purpose entity for accounting purposes. During 2004, the Company completed agreements with the Trust's lenders to repurchase all financial assets of the Trust for $522 million in cash. Upon completion of the transaction, the Company recognized current lease receivables of $286 million and non-current lease receivables of $236 million associated with this purchase.

In connection with certain service contracts, the Company may arrange a client supported financing transaction ("CSFT") with a client and an independent third-party financial institution or its designee. Under CSFT arrangements, the financial institution finances the purchase of certain IT-related assets and simultaneously leases those assets for use in connection with the service contract.

In a CSFT, all client contract payments are made directly to the financial institution providing the financing. After the predetermined monthly obligations to the financial institution are met, the remaining portion of the customer payment is made available to the Company. If the client does not make the required payments under the service contract, under no circumstances does the Company have any obligation to acquire the underlying assets unless nonperformance under the service contract would permit its termination, or the Company fails to comply with certain customary terms under the financing agreements, including, for example, covenants the Company has undertaken regarding the use of the assets for their intended purpose. The Company considers the likelihood of its failure to comply with any of these terms to be remote. In the event of nonperformance under applicable contracts which would permit their termination, the Company would have no additional or incremental performance risk with respect to the ownership of the assets, because it would have owned or leased the same or substantially equivalent assets in order to fulfill its obligations under its service contracts. Performance under the Company's service contracts is generally measured by contract terms relating to project deadlines, IT system deliverables or level-of-effort measurements.

As of December 31, 2005, an aggregate of $241 million was outstanding under CSFTs yet to be paid by the Company's clients. The Company believes it is in compliance with performance obligations under all service contracts for which there is a related CSFT and the ultimate liability, if any, incurred in connection with such financings will not have a material adverse effect on its consolidated results of operations or financial position.

In the normal course of business, the Company may provide certain clients, principally governmental entities, with financial performance guarantees, which are generally backed by standby letters of credit or surety bonds. In general, the Company would only be liable for the amounts of these guarantees in the event that nonperformance by the Company permits termination of the related contract by the Company's client, which the Company believes is remote. At December 31, 2005, the Company had $521 million outstanding standby letters of credit and surety bonds relating to these performance guarantees. The Company believes it is in compliance with its performance obligations under all service contracts for which there is a financial performance guarantee, and the ultimate liability, if any, incurred in connection with these guarantees will not have a material adverse effect on its consolidated results of operations or financial position. In addition, the Company had $32 million of other financial guarantees outstanding at December 31, 2005 relating to indebtedness of others.

At December 31, 2005, the Company had net deferred contract and set-up costs of $638 million, of which $145 million related to 15 contracts with active construct activities. These active construct contracts had other assets, including receivables, prepaid expenses, equipment and software, of $1.2 billion at December 31, 2005, of which $0.9 billion was associated with the NMCI contract. No contract or set-up costs associated with the NMCI contract have been deferred during 2005 or 2004. Some of the Company's client contracts require significant investment in the early stages which is recovered through billings over the life of the respective contracts. These contracts often involve the construction of new computer systems and communications networks and the development and deployment of new technologies. Substantial performance risk exists in each contract with these characteristics, and some or all elements of service delivery under these contracts are dependent upon successful completion of the development, construction and deployment phases. Some of these contracts, including the NMCI contract, have experienced delays in their development and construction phases, and certain milestones have been missed.

In July 1998, the Company converted its U.S. Retirement Plan benefit formula to a cash balance benefit formula. The Company believes that cash balance plans are legal and do not violate age discrimination laws. However, in July 2003, the U.S. District Court for the Southern District of Illinois ruled that IBM's cash balance conversion violated the age discrimination provisions of the Employee Retirement Income Security Act ("ERISA"). IBM has appealed this decision and in February 2006 the U.S. Court of Appeals for the 7th Circuit heard oral arguments in the case. Based on the Company's understanding of the facts associated with the case, the Company believes the district court decision will ultimately be overturned on appeal and cannot currently estimate the financial impact of any adverse ruling on this matter. No legal proceedings have been commenced to date alleging that the Company's U.S. Retirement Plan is age discriminatory.

The Company provides IT services to Delphi Corporation ("Delphi") through a long-term agreement. On October 8, 2005, Delphi filed for protection under Chapter 11 of the United States Bankruptcy Code. Due to uncertainties regarding the recoverability of certain pre-bankruptcy receivables associated with the Delphi contract, the Company recorded receivable reserves of $17 million during the year ended December 31, 2005. This amount is reflected in cost of revenues in the Company's 2005 consolidated statements of operations. The Company recognized revenues of approximately $160 million under the Delphi services agreement during the year ended December 31, 2005. Total receivables outstanding under the Delphi agreement, excluding reserves, were $44 million at December 31, 2005. In addition, the Company had equipment and other assets with a net

book value of approximately $20 million at December 31, 2005 deployed on the Delphi agreement. The remaining assets associated with the Company's agreement with Delphi are expected to be recovered through collection or future operations.

The Company has received tax assessments from various taxing authorities and is currently at varying stages of appeals regarding these matters. The Company has provided for the amounts it believes will ultimately result from those proceedings. The U.S. Internal Revenue Service ("IRS") has completed its audit of the Company's consolidated federal income tax returns through 1998. The IRS has proposed certain disallowances of research tax credits for the period 1996-2002, and the Company is protesting the disallowance to the Appeals Office of the IRS. If the Company is unable to resolve this matter with the Appeals Office of the IRS, a decision would be made at that time as to whether the Company will litigate the IRS position and the choice of venue, which could impact the amount and timing of the cash payments. The Company believes its position is appropriate under existing U.S. Treasury Regulations and has provided the amounts it believes will ultimately result from these proceedings.

Pending Litigation and Proceedings

The Company and certain of its former officers are defendants in numerous shareholder class action suits filed from September through December 2002 in response to its September 18, 2002 earnings pre-announcement, publicity about certain equity hedging transactions that it had entered into, and the drop in the price of EDS common stock. The cases allege violations of various federal securities laws and common law fraud based upon purported misstatements or omissions of material facts regarding the Company's financial condition. In addition, five class action suits were filed on behalf of participants in the EDS 401(k) Plan against the Company, certain of its current and former officers and, in some cases, its directors, alleging the defendants breached their fiduciary duties under the Employee Retirement Income Security Act ("ERISA") and made misrepresentations to the class regarding the value of EDS shares. All of the foregoing cases have been centralized in the U.S. District Court for the Eastern District of Texas (the "District Court"). In addition, representatives of two committees responsible for administering the EDS 401(k) Plan notified the Company of their demand for payment of amounts they believe are owing to plan participants under Section 12(a)(1) of the Securities Act of 1933 (the "Securities Act") as a result of an alleged failure to register certain shares of EDS common stock sold pursuant to the plan during a period of approximately one year ending on November 18, 2002.

On July 7, 2003, the lead plaintiff in the consolidated securities action and the lead plaintiffs in the consolidated ERISA action each filed a consolidated class action complaint. The amended consolidated complaint in the securities action alleges violations of Section 10(b) of the Securities Exchange Act of 1934 (the "Exchange Act"), Rule 10b-5 thereunder and Section 20(a) of the Exchange Act. The plaintiffs allege that the Company and certain of its former officers made false and misleading statements about the financial condition of EDS, particularly with respect to the NMCI contract and the accounting for that contract. The class period is alleged to be from February 7, 2001 to September 18, 2002. The consolidated complaint in the ERISA action alleges violation of fiduciary duties under ERISA by some or all of the defendants and violation of Section 12(a)(1) of the Securities Act by selling unregistered EDS shares to plan participants. The defendants are EDS and, with respect to the ERISA claims, certain current and former officers of EDS, members of the Compensation and Benefits Committee of its Board of Directors, and certain current and former members of the two committees responsible for administering the plan.

On February 11, 2005, the District Court certified a class in the consolidated securities action of all persons and entities, excluding defendants, who purchased or otherwise acquired EDS securities between February 7, 2001 through September 18, 2002 and who were damaged thereby. On October 24, 2005, the U.S. Fifth Circuit Court of Appeals affirmed the trial court's certification order. On November 1, 2005, the Company entered into a memorandum of understanding with the lead plaintiff and class representative to settle the consolidated securities action, subject to final approval of the settlement by the District Court. The District Court approved that settlement on March 7, 2006. The terms of the settlement provide for a cash payment of $137.5 million. The Company estimates approximately one-half of such payment would be made by its insurers and has recognized the cost of its portion of the settlement in its financial statements as of December 31, 2005.

On November 8, 2004, the District Court certified a class in the ERISA action on certain of the allegations of breach of fiduciary duty, of all participants in the EDS 401(k) Plan and their beneficiaries, excluding the defendants, for whose accounts the plan made or maintained investments in EDS stock through the EDS Stock Fund between September 7, 1999 and October 9, 2002. Also on that date the court certified a class in the ERISA action on the allegations of violation of Section 12(a)(1) of the Securities Act of all participants in the Plan and their beneficiaries, excluding the defendants, for whose accounts the Plan purchased EDS stock through the EDS Stock Fund between October 20, 2001 and November 18, 2002. On December 29, 2004, the Fifth Circuit Court of Appeal granted the Company's petition to appeal the class certification order from the District Court, and oral arguments were heard on the appeal on April 5, 2005. On May 5, 2005, the Company reached an agreement with the class representatives in the ERISA action to settle that action, subject to final approval of the settlement by an independent fiduciary and the District Court and receipt of certain assurances from the Department of Labor. Under the terms of the settlement, $16.5 million would have been paid entirely by one of the Company's insurers. In addition, the Company would have agreed to continue to make a matching contribution under the 401(k) Plan through 2006 and to make certain changes to the Plan. However, on June 30, 2005, the District

Court denied the motions of the Company and the class representatives to approve the settlement. The Company intends to defend this action vigorously.

In addition, there are three derivative complaints filed by shareholders in the District Court of Collin County, Texas against certain current and former Company directors and officers and naming EDS as a nominal defendant. The actions allege breach of fiduciary duties, abuse of control and gross mismanagement based upon purported misstatements or omissions of material facts regarding the Company's financial condition similar to those raised in the class actions described above. These cases have been consolidated into a single action. This action will be defended vigorously.

On February 25, 2004, a derivative complaint was filed by a shareholder against certain current and former directors and officers of the Company in the District Court. The plaintiff relies upon substantially the same factual allegations as the consolidated securities action discussed above. However, the plaintiff brings the suit on behalf of the Company against the named defendants claiming that they breached their fiduciary duties by failing in their oversight responsibilities and by making and/or permitting material, false and misleading statements to be made concerning the Company's business prospects, financial condition and expected financial results which artificially inflated its stock and resulted in numerous class action suits. Plaintiff seeks contribution and indemnification for the claims and litigation resulting from the defendants' alleged breach of their fiduciary duties. This action has been stayed pending the outcome of the consolidated securities action. This action will be defended vigorously.

In October 2004, two derivative complaints were filed in the District Court by shareholders against certain current and former directors and officers of the Company. The allegations against the Company include breach of fiduciary duties, abuse of control, gross mismanagement, constructive fraud, waste and unjust enrichment based upon purported misstatements or omissions of material facts regarding the Company's financial condition similar to those raised in the class actions described above. Plaintiffs seek damages, disgorgement by individual defendants, governance reforms, and punitive damages. The actions have also been stayed pending resolution of the above referenced securities action. These actions will be defended vigorously.

The Company is not able to determine the actual impact of these actions on its consolidated financial statements. However, it is reasonably possible that the Company may be required to pay judgments or settlements and incur expenses in aggregate amounts that could have a material adverse effect on its liquidity and financial condition.

The SEC staff is conducting a formal investigation of matters relating to the Company's derivatives contracts in connection with its program to manage the future stock issuance requirements of its employee stock incentive plans, the Company's NMCI contract, a contract with a client of the Company that contained a prepayment provision, and the Company's guidance and other events leading up to its third quarter 2002 earnings announcement. The SEC has deposed current and former members of the Company's management and the NMCI account team as well as other witnesses regarding these issues. The SEC staff is also investigating allegations that a former employee working in India for a branch of a former subsidiary of the Company made questionable payments allegedly to further that entity's business in India, a matter which the Company self-reported to the SEC staff and other relevant governmental authorities. The SEC staff's investigation is ongoing and the Company will continue to cooperate with the SEC staff. The Company is unable to predict the outcome of the investigation, the SEC's views of the issues being investigated or any action that the SEC might take.

In July 2004, the Company voluntarily reported to the SEC staff a matter regarding a transaction with a third party, which was subsequently identified as Delphi. The transaction was not material to the Company. In September 2004, Delphi reported that in August 2004 it had received a formal order of investigation from the SEC indicating the staff had commenced an inquiry regarding, among other things, payments made and credits given by the Company to Delphi during 2000 and 2001 and certain payments made by Delphi to the Company for system implementation services in 2002 and in early 2003. In addition, Delphi reported that the staff was also reviewing the accounting treatment of other suppliers of IT services to Delphi. The SEC has formally requested documents and witness interviews relating to the Company's transactions with Delphi. The Company has been cooperating with the SEC staff regarding this matter and will continue to do so.

The Company provided IT services to the U.K. government's Inland Revenue department, now known as Her Majesty's Revenue and Customs ("HMRC"), pursuant to a 10-year contract that ended in June 2004. Commencing in February 2004, HMRC alleged it incurred losses resulting from problems and alleged defects in IT systems developed for it by the Company and alleged losses in varying significant amounts. In November 2005, the Company and HMRC settled the dispute. Such settlement did not have a material adverse effect on the Company's financial position or results of operations.

On December 19, 2003, Sky Subscribers Services Limited ("SSSL") and British Sky Broadcasting Limited ("BSkyB"), a former client of the Company, served a draft pleading seeking redress for the Company's alleged failure to perform pursuant to a contract between the parties. Under applicable legal procedures, the Company responded to the allegations. Despite the response, on August 17, 2004, SSSL and BSkyB issued and served upon the Company a pleading alleging the following damages, each presented as an alternative cause of action: (1) pre-contract deceit in 2000 in the amount of £320 million (approximately $550

million); (2) pre-contract negligent misrepresentation in 2000 in the amount of £127 million (approximately $220 million); (3) deceit inducing the Letter of Agreement in July 2001 in the amount of £261 million (approximately $450 million); (4) negligent misrepresentation inducing the Letter of Agreement in July 2001 in the amount of £116 million (approximately $200 million); and, (5) breach of contract from 2000 through 2002 in the amount of £101 million (approximately $175 million). On November 12, 2004, the Company filed its defense and counterclaim denying the claims and seeking damages in the amount of £4.7 million (approximately $8.1 million). On December 21, 2005, SSSL and BSkyB filed a Re-Amended Particulars of Claim alleging the following damages, still as alternative causes of action: (1) pre-contract deceit in the amount of £480 million (approximately $830 million); (2) pre-contract negligent misrepresentation in the amount of £480 million (approximately $830 million); (3) deceit inducing the Letter of Agreement and negligent misrepresentation inducing the Letter of Agreement of £415 million (approximately $715 million); (4) breach of contract in the amount of £179 million (approximately $310 million). The principal stated reason for the increases in amount of damages is that the claimants have now taken the opportunity to re-assess their alleged lost profits and increased costs to deliver the project in light of the extended timetable they now require. Claimants say they will further re-assess these alleged losses prior to trial. The dispute surrounds a contract the Company entered into with BSkyB in November 2000, which was terminated by the Company in January 2003 for BSkyB's failure to pay its invoices. The contract had an initial total contract value of approximately £61 million. The Company intends to defend against these allegations vigorously. Discovery is ongoing in this matter and trial is scheduled for October 2007. Although there can be no assurance as to the outcome of this matter, the Company does not believe it will have a material adverse effect on our consolidated results of operations or financial condition.

There are other various claims and pending actions against the Company arising in the ordinary course of its business. Certain of these actions seek damages in significant amounts. The amount of the Company's liability for such claims and pending actions at December 31, 2005 was not determinable. However, in the opinion of management, the ultimate liability, if any, resulting from such claims and pending actions will not have a material adverse effect on the Company's consolidated results of operations or financial position.

NOTE 16: ACQUISITIONS

On May 19, 2005, the Company purchased the outstanding minority interest in its Australian subsidiary for a cash purchase price of approximately $135 million. The transaction was accounted for as an acquisition by the Company, and the excess carrying value of the minority interest liability over the purchase price paid was allocated as a reduction to property and equipment – $(19) million; deferred contract costs – $(2) million; and other intangible assets – $(3) million.

On March 1, 2005, the Company and Towers Perrin entered into a joint venture whereby Towers Perrin contributed cash and its pension, health and welfare administration services business and the Company contributed cash and its payroll and related human resources ("HR") outsourcing business to a new company, known as ExcellerateHRO LLP. Upon closing of the transaction, Towers Perrin received $417 million in cash and a 15% minority interest, representing total consideration paid by the Company to Towers Perrin, and the Company received an 85% interest in the new company. The acquisition enabled the Company to offer a comprehensive set of HR outsourcing solutions across the core areas of benefits, payroll, compensation management, workforce administration and relocation, recruitment and staffing, and workforce development. The consolidated statements of operations include the results of the acquired business since the date of acquisition. The transaction was accounted for as an acquisition by the Company with the purchase price preliminarily being allocated as follows: property and equipment – $25 million; other intangibles – $48 million; goodwill – $413 million; other assets – $5 million; accrued expenses – $4 million; and minority interest – $70 million. Factors contributing to a purchase price that resulted in recognition of goodwill included the Company's and its advisors' projections of operating results of the new company, the ability to accelerate the Company's growth in the HR outsourcing market and the competitive differentiation offered by the relationship with Towers Perrin. Towers Perrin may require the Company to purchase its minority interest in the joint venture at any time after March 1, 2010, or prior to that date upon the occurrence of certain events (including the breach by the Company of certain transaction related agreements, the failure of the joint venture to achieve certain financial results or certain events related to the Company), at a price based on the fair market value of such interest, with a minimum purchase price based on the joint venture's annual revenue. In addition, the Company may require Towers Perrin to sell its minority interest in the joint venture to the Company at any time after March 1, 2012, or prior to that date upon the occurrence of certain events (including the breach by Towers Perrin of certain transaction related agreements or certain events related to Towers Perrin), at a price based on the fair market value of such interest, with a minimum purchase price based on the joint venture's annual revenue. Had the Company completed the acquisition as of the earliest date presented, results of operations on a pro forma basis would not have been materially different from actual historical results.

On January 9, 2004, the Company acquired The Feld Group, a privately held technology management firm that specialized in reorganizing and realigning technology organizations to better meet the needs of their enterprises. The acquisition enhanced the Company's offerings and expertise in the transformational business process outsourcing/business transformation services market and enabled the Company to finalize appointments to its executive management team. The aggregate purchase price of The Feld Group was $53 million, comprised of $50 million in cash payments and warrants with a fair value of $3 million. In addition, the Company issued contingent warrants with a fair value of $4 million in connection with the acquisition. The

aggregate purchase price of The Feld Group will be adjusted if and when the contingencies associated with these warrants are resolved. The excess of the aggregate purchase price over the fair value of acquired assets and assumed liabilities of $47 million was allocated to goodwill in the Outsourcing segment. The Company also issued restricted stock awards and options to acquire EDS common stock with an aggregate fair value of $40 million to certain employee shareholders of The Feld Group who became employees of the Company. Such awards and options vest over three years and are contingent upon the continuing employment of these individuals.

NOTE 17: DISCONTINUED OPERATIONS

During the third quarter of 2005, the Company approved a plan to proceed with a transaction to sell 100% of its ownership interest in its A.T. Kearney subsidiary. The net assets of the subsidiary are classified as "held for sale" at December 31, 2005 and 2004 and its results for the years ended December 31, 2005, 2004 and 2003 are included in income (loss) from discontinued operations. A.T. Kearney's results for the year ended December 31, 2005 include a pre-tax impairment charge of $118 million to write-down the carrying value of its long-lived assets, including tradename intangible, to estimated fair value less cost to sell. The estimated fair value was determined based on the terms of the sale as documented in the agreement executed on January 20, 2006 by the Company and an entity formed by the management buyout group (see Note 20). The impairment charge is partially offset by the recognition of $8 million of previously unrecognized tax assets that will be realized as a result of the sale.

Income (loss) from discontinued operations also includes the results of the Company's UGS PLM Solutions subsidiary and its Soft Solution business sold during 2004 and its Technology Solutions and subscription fulfillment businesses sold during 2003. A.T. Kearney and UGS PLM Solutions were previously reported as separate segments by the Company. Soft Solution, Technology Solutions and subscription fulfillment were previously included in the Company's Outsourcing segment. No interest expense has been allocated to discontinued operations for any of the periods presented.

Following is a summary of assets and liabilities of A.T. Kearney at December 31, 2005 and 2004 which are reflected in the consolidated balance sheets as "held for sale" (in millions):

	2005	2004
Marketable securities	$ 23	$ 37
Accounts receivable, net	217	199
Prepaids and other	34	51
Deferred income taxes	14	–
Property and equipment, net	26	35
Investments and other assets	3	2
Goodwill	–	22
Other intangibles, net	28	133
Assets held for sale	$ 345	$ 479
Accounts payable	105	62
Accrued liabilities	138	171
Deferred revenue	–	1
Pension benefit liability	26	25
Minority interest and other long-term liabilities	6	8
Liabilities held for sale	$ 275	$ 267

Following is a summary of income (loss) from discontinued operations before income taxes, excluding gains and losses, for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Revenues	$ 780	$ 1,171	$ 1,839
Costs and expenses	846	1,144	1,720
Operating income (loss)	(66)	27	119
Other income (expense)	2	(8)	(3)
Income (loss) from discontinued operations before income taxes	$ (64)	$ 19	$ 116

Income from discontinued operations includes net gains (losses) of $(92) million, $433 million and $(9) million, net of income taxes, in 2005, 2004 and 2003, respectively. Income (loss) from discontinued operations in 2005 includes after-tax net gains of $18 million related to the settlement of contingencies associated with sales of certain businesses classified as discontinued operations in prior years. Net assets sold in 2004 included goodwill of $969 million related to UGS PLM Solutions.

NOTE 18: SUPPLEMENTARY FINANCIAL INFORMATION

Following is supplemental financial information for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Property and equipment depreciation (including capital leases)	$ 831	$ 1,058	$ 1,044
Intangible asset and other amortization	450	618	619
Deferred cost amortization and charges	175	298	866
Cash paid for:			
Income taxes, net of refunds	378	343	346
Interest	232	328	319

The Company acquired $160 million, $112 million and $155 million of equipment utilizing capital leases in 2005, 2004 and 2003, respectively.

NOTE 19: RESTRUCTURING AND OTHER

Following is a summary of restructuring and other charges for the years ended December 31, 2005, 2004 and 2003 (in millions):

	2005	2004	2003
Employee separation and exit costs, net	$ 68	$ 226	$ 232
Early retirement offer	–	50	–
Asset write-downs	–	–	36
CEO severance	–	–	48
Pre-tax gain on disposal of businesses:			
European wireless clearing	(93)	–	–
U.S. wireless clearing	–	(35)	–
Automotive Retail Group	–	(66)	–
Credit Union Industry Group	–	–	(139)
Other	(1)	(5)	(2)
Total	$ (26)	$ 170	$ 175

Restructuring and other employee reduction activities:

During 2005 and 2004, the Company continued initiatives to align its workforce with customer demands and utilize technology to generate efficiencies. As a result, 2005 and 2004 restructuring and other expense includes estimated severance costs of $100 million and $80 million, respectively, related to the involuntary termination of an estimated 1,500 and 1,500 employees, respectively, throughout the Company in managerial, professional, clerical, consulting and technical positions. In addition, 2004 restructuring and other expense also includes estimated pension expenses of $50 million related to approximately 1,500 employees who accepted an early retirement offer in the U.S. While the Company plans to continue its efforts to generate efficiencies through technology-driven initiatives in 2006, no future costs are expected to be incurred associated with the 2005 and 2004 restructuring initiatives.

The following table summarizes accruals associated with restructuring and other employee reduction programs for the years ended December 31, 2005, 2004 and 2003 (in millions):

	Employee Separations	Exit Costs	Other Employee Reductions	Total
Balance at December 31, 2002	$ 22	$ 8	$ –	$ 30
2003 activity	228	4	–	232
Amounts utilized	(85)	(3)	–	(88)
Balance at December 31, 2003	165	9	–	174
2003 Plan charges	146	–	–	146
Amounts utilized	(240)	(2)	–	(242)
Other employee reductions programs	–	–	80	80
Balance at December 31, 2004	71	7	80	158
Amounts incurred	–	–	100	100
Amounts utilized	(47)	(3)	(103)	(153)
Reversal of prior years' accruals	(8)	(4)	(20)	(32)
Balance at December 31, 2005	$ 16	$ –	$ 57	$ 73

During 2003, the Company began implementation of an initiative to reduce its costs, streamline its organizational structure and exit certain operating activities. These efforts were designed to improve the Company's cost competitiveness and involved the elimination of excess capacity, primarily in Europe, and the consolidation of back-office capabilities. The Company completed the initiative in 2004 and a total of 5,800 employees were involuntarily terminated pursuant to the initiative, consisting of individuals employed throughout the Company in managerial, professional, clerical, consulting and technical positions. As a result of the initiative, the Company recorded restructuring charges of $146 million and $232 million during 2004 and 2003, respectively. These amounts primarily resulted from the involuntary termination of approximately 2,100 and 3,700 employees during 2004 and 2003, respectively.

During the first quarter of 2003, the Company recognized a one-time severance charge totaling $48 million related to the termination of employment of its former CEO. This charge was comprised of a $12 million cash payment, a non-cash charge of $16 million associated with previously deferred compensation for 344,000 restricted stock units and retirement benefits with a present value of $20 million.

Restructuring actions contemplated under restructuring plans prior to 2003 are essentially complete as of December 31, 2005 with remaining accruals of $16 million comprised of future severance-related payments to terminated employees.

Included in the 2003 amount are costs incurred for executive severance, $4 million from the exit of certain business activities and the consolidation of facilities, and asset write-downs of $36 million.

Other activities:

During 2005, the Company sold its European wireless clearing business which resulted in a pre-tax gain of $93 million. In connection with the sale, the Company recognized a $32 million valuation allowance related to deferred tax assets in certain European countries that may no longer be recoverable as a result of the sale. Net assets of the business included goodwill of $45 million. During 2004, the Company sold its U.S. wireless clearing business and its Automotive Retail Group ("ARG") which resulted in pre-tax gains of $101 million. During 2003, the Company sold its Credit Union Industry Group ("CUIG") which resulted in a pre-tax gain of $139 million. The net results of the European wireless clearing business, the U.S. wireless clearing business, ARG and CUIG are not included in discontinued operations due to the Company's level of continuing involvement as an IT service provider to the businesses.

NOTE 20: SUBSEQUENT EVENTS

The Company completed the sale of its A.T. Kearney subsidiary to the firm's management effective January 20, 2006. The subsidiary is classified as "held for sale" at December 31, 2005 and 2004 and its results for the years ended December 31, 2005, 2004 and 2003 are included in income (loss) from discontinued operations (see Note 17). Proceeds from the sale include a 10-year promissory note from the buyer valued at $52 million. The cash portion of the purchase price was offset by the cash transferred with the divested business and transaction costs. A.T. Kearney's results for the year ended December 31, 2005 include a pre-tax impairment charge of $118 million to write-down the carrying value of its long-lived assets, including tradename intangible, to net realizable value. The net realizable value was determined based on the terms in the final sale document dated January 20, 2006. The impairment charge is partially offset by the recognition of $8 million of previously unrecognized tax assets that will be realized as a result of the sale. Upon consummation of the transaction in January 2006, the Company recorded an equity translation benefit of approximately $24 million and a stock compensation charge of approximately $20 million.

On February 21, 2006, the Company announced that its Board of Directors had authorized the repurchase of up to $1 billion of its outstanding common stock over the next 18 months in open market purchases or privately negotiated transactions. The Company subsequently entered into a contract with a third-party institution under which approximately 15 million shares were repurchased at $26.61 per share through an Accelerated Share Repurchase arrangement. The final amount to be paid under such arrangement will be determined by the actual cost incurred by the financial institution for the purchase of such shares in open market transactions over a period of four months. All share repurchases are being financed by currently available cash.

During January and February 2006, approximately 7.6 million outstanding stock option grants became exercisable when the Company's stock reached certain target prices (see Note 11), resulting in acceleration in the recognition of compensation expense of $25 million during the first calendar quarter of 2006.

NOTE 21: QUARTERLY FINANCIAL DATA (UNAUDITED)

(in millions, except per share amounts)

	Year Ended December 31, 2005[1][2][3][4][5]				
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Year
Revenues	$ 4,737	$ 5,000	$ 4,874	$ 5,146	$ 19,757
Gross profit from operations	456	550	594	735	2,335

Cash dividends per share of common stock	0.05	0.05	0.05	0.05	0.20

	Year Ended December 31, 2004[1][6][7][8]				
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Year
Revenues	$ 4,987	$ 5,034	$ 4,754	$ 5,088	$ 19,863
Gross profit from operations	396	360	176	707	1,639
Restructuring and other	(12)	37	(4)	149	170
Income (loss) from continuing operations	(36)	(133)	(169)	67	(271)
Income (loss) from discontinued operations	24	403	16	(14)	429
Net income (loss)	(12)	270	(153)	53	158
Basic earnings per share of common stock:					
Income (loss) from continuing operations	$ (0.07)	$ (0.27)	$ (0.33)	$ 0.13	$ (0.54)
Net income (loss)	(0.02)	0.54	(0.30)	0.10	0.32
Diluted earnings per share of common stock:					
Income (loss) from continuing operations	$ (0.07)	$ (0.27)	$ (0.33)	$ 0.13	$ (0.54)
Net income (loss)	(0.02)	0.54	(0.30)	0.10	0.32
Cash dividends per share of common stock	0.15	0.15	0.05	0.05	0.40

(1) Previously reported quarterly results have been restated to reflect the impact of discontinued operations (see Note 17).

(2) The Company adopted Statement of Financial Accounting Standards No. 123R, Share-Based Payment, as of January 1, 2005 (see Notes 1 and 11). This statement requires the recognition of compensation expense when an entity obtains employee services in stock-based payment transactions. This change in accounting resulted in the recognition of pre-tax compensation expense of $53 million, $37 million, $43 million and $27 million, respectively, in the first, second, third and fourth quarters of 2005.

(3) Includes a pre-tax charge of $77 million recognized in the second quarter associated with the settlement of pension obligations for employees transitioned to a third party in connection with the termination of the Company's services contract with U.K. Inland Revenue as of June 2004.

(4) Includes a pre-tax charge of $37 million recognized in the second quarter for the impairment of deferred costs associated with a large IT commercial contract.

(5) Includes a pre-tax charge of $24 million recognized in the third quarter related to reserves established for shareholder litigation.

(6) Includes a pre-tax charge of $375 million recognized in the third quarter to write-down long-lived assets related to the NMCI contract.

(7) Includes pre-tax charges of $37 million recognized in the first quarter and $135 million recognized in the second quarter related to the termination of a significant commercial contract.

(8) Includes pre-tax credits of $17 million recognized in the third quarter and $13 million recognized in the fourth quarter reversing a portion of charges taken in the second quarter of 2004 related to the termination of a significant commercial contract.

50.2.11 Section K—Oral Presentations and Demonstrations

RFP Reference: 50.2.11 Section K—Oral Presentations and Demonstrations, Pages 284-287

EDS looks forward to the opportunity to describe our new operations using the Replacement Medicaid Management Information System (MMIS) and to demonstrate the baseline interChange MMIS' many proven features and capabilities. We started preparing for both events in late July, at the time of the request for proposal (RFP) release, and will be ready and excited to present as soon as we receive notification from the North Carolina Department of Health and Human Services (the State).

EDS acknowledges that we understand and agree to perform the requirements of the oral presentations and system demonstrations as represented in Section K of the RFP, as described in this section.

50.2.11.1 Oral Presentations

RFP Reference: 50.2.11.1 Oral Presentations, Pages 284-285

We are preparing a two-day presentation of no more than 160 total printed/displayed slides that will summarize the proposed offering in the following areas:

- An overview of the technical proposal (equivalent to the executive summary in the written technical proposal)
- A presentation of key aspects of the proposed technical solution

- Our project management approach during the DDI Phase
- A discussion of how EDS plans to work with the State during the DDI Phase
- A presentation of key aspects of EDS' integrated master plan (IMP) and integrated master schedule (IMS), which will include a discussion of the development strategy
- A presentation of key aspects of the proposed operations solution
- Our operations management approach
- A discussion of how EDS plans to work with the State during the Operations Phase
- Our training approach
- Our deployment and rollout approach
- Our change management approach
- A presentation of the initial risk assessment
- A review of the technical and architectural aspects of the system design
- Our software development and systems engineering methodologies

These topics map directly to sections of the technical proposal. We believe that by presenting these topics directly and in person, you will better understand the full breadth and depth of the interChange application, our proven operational approach, and the value we bring to the State's four divisions.

50.2.11.2 System Demonstrations

RFP Reference: 50.2.11.2 System Demonstrations, Pages 285-286

During the three days designated for the system demonstration, EDS will use the baseline interChange MMIS to demonstrate the following topics, as suggested by the RFP:

- Key elements of the business areas
- Claim life cycle
- How providers and recipients will access the Replacement MMIS

We plan for this to be an interactive session and welcome the State's clarifying questions. Through the demonstration and your clarifying questions, you will achieve the demonstration's stated objectives, as follows:

- Provide a better understanding of the baseline system to supplement our written proposal

- Evaluate the compatibility of EDS' baseline system to the State's requirements and objectives to help the State to understand the level of effort and risk required for EDS to transform our baseline system into the required system
- Provide an understanding of different solutions to the common MMIS requirements across states to widen the pool of potential solutions that could meet the State's requirements and objectives

Required Statements

The baseline interChange MMIS is installed and operational in five states: Oklahoma, Kansas, Tennessee, Pennsylvania, and, most recently, Kentucky. These implementations have been certified back to day one for all states except Kentucky, whose certification will occur in 2008 based on the mid-2007 implementation.

Besides the five operational installations, the baseline interChange MMIS is being installed in Wisconsin, Oregon, Alabama, Florida, Connecticut, Massachusetts, and Ohio.

The desktop solution to be used is the .NET user interface.

The operating systems and versions to be used are as follows:

- Solaris 10 for the UNIX servers
- Windows 2003 R2 Enterprise Edition for the Windows operating systems
- VMWare ESX 3 for the virtualization platform operating system

The signed Appendix 50, Attachment H appears in proposal Section A—Transmittal Letter and Execution Page.

50.2.11.3 Resources

RFP Reference: 50.2.11.3 Resources, Page 287

EDS has a substantial local presence in the Raleigh area, within 15 miles of the Office of MMIS Services (OMMISS) location at 3101 Industrial Drive. We will host the oral presentation and system demonstration from our proposed new account site on Wycliff Drive. As directed in the RFP, this location will be of sufficient size to host 30 State personnel plus the EDS presentation team and any required equipment. EDS will provide the required hardware, software, and presentation equipment, as well as 30 printed copies of the oral presentation only, with no additional handouts for the system demonstration.
